LIST OF TRANSLITERATIONS

SYSTEM OF TRANSLITERATION OF ARABIC CHARACTERS:

Consonants						*Long Vowels*		*Diphthongs*	
ء	ʾ (except when initial)	ز	z	ق	ḳ	ا ى	ā	ـَوْ	aw
ب	b	س	s	ك	k	و	ū	ـَيْ	ay
ت	t	ش	sh	ل	l	ي	ī		
ث	th	ص	ṣ	م	m			ـِيّ	iyy (final form ī)
ج	dj	ض	ḍ	ن	n	*Short Vowels*			
ح	ḥ	ط	ṭ	ه	h	ـَ	a	ـُوّ	uww (final form ū)
خ	kh	ظ	ẓ	و	w	ـُ	u		
د	d	ع	ʿ	ي	y	ـِ	i		
ذ	dh	غ	gh						
ر	r	ف	f						

ة a; at (construct state)

ال (article), al- and ʾl- (even before the antero-palatals)

PERSIAN, TURKISH AND URDU ADDITIONS TO THE ARABIC ALPHABET:

پ	p	ژ	zh	ٹ	t́	ڑ	ŕ
چ	č	ڭ or گ	g (sometimes ñ in Turkish)	ڈ	d́		

Additional vowels:

a) Turkish: e, ı, o, ö, ü. Diacritical signs proper to Arabic are, in principle, not used in words of Turkish etymology.

b) Urdu: ē, ō.

For modern Turkish, the official orthography adopted by the Turkish Republic in 1928 is used. The following letters may be noted:

c = dj	ğ = gh	j = zh	k = k and ḳ	t = t and ṭ
ç = č	h = h, ḥ and kh	ş = sh	s = s, ṣ and th	z = z, ẓ, ḍ and dh

SYSTEM OF TRANSLITERATION OF CYRILLIC CHARACTERS:

а	a	е	e	к	k	п	p	ф	f	щ	shč	ю	yu
б	b	ж	ž	л	l	р	r	х	kh	ы	ı	я	ya
в	v	з	z	м	m	с	s	ц	ts	ь	ʾ	ѣ	ě
г	g	и	i	н	n	т	t	ч	č	ъ	ʿ		
д	d	й	y	о	o	у	u	ш	sh	э	é

P. 539^a^, l. 43, Djazīrat al-ʿArab, *for* The boundary .... general way. *read* The boundary between Saudi Arabia and Kuwayt and the boundaries of their neutral zone were agreed upon between Britain and the then Sultan of Nadjd (later King of Saudia Arabia) in the convention of al-ʿUḳayr of 1922 but were not demarcated on the ground.
P. 548^a^, l. 49, *add* Recently discovered inscriptions indicate that the hypothesis set forth in this article with respect to the starting point of the "Sabaean era" is untenable, and that certain changes should be made in the chronology for Southern Arabia; see G. Ryckmans in *Muséon*, lxvi (1953); J. Ryckmans in *Muséon*, lxvi (1953); idem, *La persécution des chrétiens himyarites au sixième siècle*, Istanbul 1956.
P. 554^b^, l. 28, Djazīrat al-ʿArab, *for* In the latter part .... two years of rule. *read* In the latter part of his reign he devoted most of his attention to his East African possessions, but their independence under a younger line of his descendants was recognised in 1277/1861 by an arbitration award of Lord Canning, Viceroy of India. The only Ibāḍī Imam elected during the century, ʿAzzān

b. Kays, failed to win recognition by the British and was killed in battle in 1287/1871 after two years of rule.

P. 555ª, l. 15, DJAZĪRAT AL-ʿARAB, *for* but in.......... sides. *read* though the Sultan did not relinquish his claim to sovereign rights over the whole of ʿUmān. Thus in 1955, when the Imam, Ghālib b. ʿAlī, sought independent membership of the Arab League, the Sultan held this to be an infringement of the terms of the Treaty of al-Sīb and advanced into the interior of ʿUmān.

P. 556ᵇ, DJAZĪRAT AL-ʿARAB, *Bibliography*: *add* Eric Macro, *Bibliography of the Arabian Peninsula*, University of Miami Press, 1960; idem, *Bibliography on Yemen with notes on Mocha*, University of Miami Press, 1960.

AARON [see HĀRŪN]

ĀB [see TAʾRĪKH]

ʿABĀʾ [see KISĀʾ]

ʿABĀBDA (sg. ʿABBĀDĪ), an Arabic-speaking tribe of Bedja [*q.v.*] origin in Upper Egypt with branches in the northern Sudan. The northern limis of their territory in Egypt is the desert road leading from Ḳena to Ḳusayr, and their nomad sections roam the desert to the east of Luxor and Aswān. The original ʿAbābda stock is most truly represented by the nomads but there are also sedentary sections who have intermarried with the *fallaḥīn* and adopted much of their way of life. On the Red Sea coast there is a small clan of fisher-folk, the Ḳiraydjāb, who by some are not recognized as true ʿAbābda.

Like the rest of the Bedja the ʿAbābda claim Arab descent, and the genealogical table of ʿAbbād, their eponymous ancestor, begins with Zubayr b. al-ʿAwwām, a famous companion of the Prophet. Some of the tribesmen living in the Sudan believe that they are descended from Salmān, an Arab of the Banū Hilāl. Though doubtlessly fictitious in respect of the tribe as a whole this claim to Arab descent yet embodies a genuine memory of the process by which Djuhayna and Rabīʿa Arabs acquired an ascendancy in the Sudan through marriages with the daughters of Bedja chiefs, amongst whom descent was originally reckoned in the female line. This process which according to Ibn Khaldūn led to the passing of the Nubian kingdom into the hands of the Djuhayna must also have taken place in the case of the Bedja.

The Abābda have been affected by Arab influence more strongly than those Bedja who still retain their Hamitic tongue, so much so that in the Sudan they are not easily distinguished from the Sudan Arabs of the Djaʿliyyīn group. They may in fact be held to occupy an intermediate position between the Bedja proper and the fully arabicized elements who have become integrated in the Sudan Arabs. In their physical characteristics, nevertheless, the ʿAbābda together with the Tigrē-speaking Banī ʿĀmir bear a closer resemblance to the proto-Egyptian inhabitants of the Nile valley than the other Bedja. The Arabic spoken by the ʿAbābda is quite distinct from that of the *fallāḥīn*, and the word lists collected by H. A. Winckler contain an appreciable number of Bedja words.

In their material culture and their customs the ʿAbābda agree more closely with the Bedja proper than with the Arabs. Certain wide-spread customs which they share with the Sudan Arabs, such as the infibulation of girls and the ceremonial respect of in-law-relations, are of Hamitic origin. The ʿAbābda use the typically Bedja style of hairdressing (*dirwa*) which has given rise to the nickname Fuzzy-wuzzy, though this custom now tends to die out. Their tents of palm-matting are quite unlike the Arab "houses of hair". Their marriages, like those of the Bedja proper, are matrilocal but their women do not enjoy the freedom which is allowed to their sisters of the Bishāriyyīn. The ʿAbābda moreover share with the Bedja, but not the Arabs, certain taboos connected with milk: only men may do the milking, for which only gourds and wicker vessels may be used, and no man may drink of the milk he has drawn until someone else has drunk.

The influence of Islam, which nominally is the religion of all the ʿAbābda, has made a marked impression only on the more sophisticated elements; in the life of the majority religion, as distinct from traditional beliefs and superstitions, plays no important part. They venerate shaykh Abu 'l-Ḥasan al-Shādhilī as their patron saint, and his tomb in the Atbai desert is a place of pilgrimage at which sacrifices are offered. It is also common to dedicate the milk of a beast to al-Shādhilī, and the milk of such animals is always milked into separate wicker vessels. When slaying an animal a piece of the victim's right ear is reserved for al-Shādhilī or some other well-known saint and hung on the tent-pole. The celebration of the *ʿīd al-kabīr* at the tomb of al-Shādhilī is the most important religious event of the year. Sacrifices are also offered at the tomb of the eponymous ancestor ʿAbbād near Edfū, and there is a cult of a female saint (*faḳīra*) who lived some fifty years ago and was famous for gifts of divination. The ʿAbābda like the Bishāriyyīn believe that an animal sacrificed at the tomb of a *walī* turns into a gazelle or ibex, and that such animals are protected by the *walī*. They also observe certain taboos about birds and will not eat the flesh of the sandgrouse or the desert-partridge, and both ʿAbābda and Bishāriyyīn are particularly afraid of killing the bearded vulture (Gypactus barbatus).

The most important section of the Egyptian ʿAbābda, of whom there are some 14,000, are the ʿAshshābāb, who are divided into a number of clans. Their paramount shaykhs are descended from one Djabrān who flourished towards the end of the 18th century, and beyond whom there is no reliable historical tradition. The largest and best known sections in the Sudan are the Fuḳarā and the Milaykāb who, according to tradition, were brought to their present habitat by the Fundj kings of Sennār in order to protect the caravan routes between Egypt and the Sudan. A small contingent of ʿAbābda, characterized by Cailliaud as the worst

soldiers in the army, were employed as irregulars by Ismāʿīl Pas͟ha during the invasion of the Sudan. During the 19th century the ʿAbābda are often mentioned by travellers as guides and camel men between Korosko and Abū Ḥamad, and their chiefs of the K͟halīfa family held posts of distinction under the Egyptian government. Ḥusayn K͟halīfa was *mudīr* of Berber at the time of the Mahdist rebellion, and ʿAbābda irregulars shared in the fighting against the Darwishes. Apart from traditions about wars with neighbouring tribes there are no data for their early history.

Bibliography: H. A. MacMichael, *History of the Arabs in the Sudan*, Cambridge 1922; C. G. Seligman, *Races of Africa*, London 1930; G. W. Murray, *Sons of Ishmael*, London 1935; H. A. Winckler, *Ägyptische Volkskunde*, Stuttgart 1936 (full bibliography). (S. Hillelson)

ABAD originally means time in an absolute sense and is synonymous with *dahr* [*q.v.*; see also Zamān]. When under the influence of Greek philosophy the problem of the eternity of the world (see ḳidam) was discussed in Islam, *abad* (or *abadiyya*) became a technical term corresponding to the Greek term ἀφθαρτός, incorruptible, eternal *a parte post*, in opposition to *azal* (or *azaliyya*) corresponding to the Greek term ἀγενητός, ungenerated, eternal *a parte ante*. (Ibn Rus͟hd—cf. ed. Bouyges, index—uses *azaliyya* for "incorruptible"]. [For *azal* see ḳidam.] As to the problem concerned, viz. if the world is incorruptible, the philosophers of Islam subscribed to the Aristotelian maxim that *azal* and *abad* imply each other, that what has a beginning must have an end and what has no beginning cannot have an end. According to this theory time, movement and the world in general are eternal in both senses. Among the theologians who all believe in the temporal creation of the world, only Abu 'l-Hud͟hayl, one of the earlier Muʿtazilites, admitted the Aristotelian maxim mentioned. (He applied the theory "that what has a first term must have a last one" even to God's knowledge and power, saying that God having arrived at the final term of His power, would not be able any more to create even an atom, to move a leaf or to resuscitate a dead mosquito. See al-K͟hayyāṭ, *al-Intiṣār*, ed. Nyberg, 8 ff.; Ibn Ḥazm, iv, 192-3). The theologians opposed the Aristotelian dictum by the argument that if the world were without a beginning, at the present moment an infinite past would have been traversed, which is impossible [cf. ḳidam]; in the future, however, there is no such impossibility, since in the future no infinite will ever be traversed. Besides, the series of integers needs a first term but no final one, and a man may have eternal remorse, although his remorse must have a beginning (al-Maḳdisī, *al-Badʾ wa-l-Taʾrīk͟h*, ed. Huart, i, 125, cf. ii, 133). They concluded therefore that there is no rational proof either for the incorruptibility of the world or its opposite. According to the Ḳurʾān, xxxix, 67, on the Day of Judgment "the whole earth shall be His handful and the heavens will be rolled up in His right hand". It became the orthodox view that the annihilation of the whole world (including the destruction of heaven and hell, which, however, will not happen, as is known by revelation) is possible, *d̲jāʾiz*, considered as something in God's power (al-Bag͟hdādī, *Farḳ*, 319). This world (*dunyā*) will be destroyed, but not heaven and hell.

Bibliography: The problem is treated in extenso by al-G͟hazzālī in ch. ii of his *Tahāfut al-Falāsifa*, ed. Bouyges, 80 ff.; cf. Ibn Rus͟hd, *Tahāfut al-Tahāfut*, ed. Bouyges, 118 ff., tr. by S. van den Bergh, 69 ff. (with notes); cf. also S. Pines, *Beiträge zur islamischen Atomenlehre*, 15, note 1. (S. van den Bergh)

ĀBĀDAH, a small town in Persia, on the eastern (winter) road from S͟hīrāz to Iṣfahān. By the present-day highway Ābādah lies at 280 km. from S͟hīrāz, at 204 km. from Iṣfahān, and by a road branching off eastwards (via Abarḳūh) at 100 km. from Yazd. In the present-day administration (1952) Ābādah is the northernmost district (*s͟hahristān*) of the province (*astān*) of Fārs. The population is chiefly engaged in agriculture and trade (opium, castor-oil, sesame-oil). Iḳlīd (possibly **kilīd* "key [to Fārs]") is another small town belonging to Ābādah. The whole district counts 223 villages with 82,000 inhabitants. In history it is chiefly mentioned in the 14th century. The town must be distinguished from several homonymous villages in Fārs (Ābāda-yi Tas͟hk in the Nīrīz district, etc.).

ĀBĀDĀN [see abbādān]

ABĀḌITES [see ibāḍiyya]

ABĀḲA [see ilk͟hāns]

ABĀN [see taʾrīk͟h]

ABĀN b. **ʿABD** al-**ḤAMĪD** al-Lāḥiḳī (i.e. son of Lāḥiḳ b. ʿUfayr), also known as al-Raḳās͟hī, because his family (originally from Fasā) were clients of the Banū Raḳās͟h, Arabic poet, died about 200/815-6. He was a court poet of the Barmakids and wrote panegyrics in their praise and the praise of Hārūn al-Ras͟hīd. He also defended in some verses the ʿAbbāsids against the pretensions of the ʿAlids. In the usual manner of the epoch he engaged in vigorous exchanges of lampoons with his fellow poets (among them Abū Nuwās). His enemies accused him, without justification, it seems, of Manicheism (see G. Vajda, in *RSO*, 1937, 207 f.). His most important achievement was the versification in couplets (*muzdawid̲j*, *q.v.*) of the popular stories of Indian and Persian origin: *Kalīla wa-Dimna* [*q.v.*; samples in al-Ṣūlī], *Bilawhar wa-Yūdasf* [*q.v.*], *Sindbād* [*q.v.*] *Mazdak* [*q.v.*] and the romanced stories of Ardas͟hīr and of Anus͟hirwān. He wrote also original poems in *muzdawid̲j*; such as a poem on cosmology and logic (*D͟hāt al-Ḥulal*) and one on fasting (sample in al-Ṣūlī). Many members of his family, his son Ḥamdān for instance, were also known as poets.

Bibliography: Ṣūlī, *al-Awrāḳ*, ed. Heyworth Dunne, Section on Poets, 1-73 (pp. 1-12 being a collection of passages about Abān by the editor); *al-Ag͟hānī*[1], xx, 73-8; D̲jahs͟hiyārī, *al-Wuzarāʾ*, 259; al-K͟haṭīb, *Taʾrīk͟h Bag͟hdād*, vii, 44; *Fihrist*, 119, 163; I. Goldziher, *Muh. Studien*, i, 198; ii. 101; A. Krimsky, *Aban al-Lahiki* (in Russian), Moscow 1913; Brockelmann, S i, 238-9; K. A. Fariq, in *JRAS*, 1952, 46-59. (S. M. Stern)

ABĀN b. **ʿUT͟HMĀN** b. ʿAffān, governor, son of the third caliph. His mother was called Umm ʿAmr bint D̲jundab b. ʿAmr al-Dawsiyya. Abān accompanied ʿĀʾis͟ha at the battle of the Camel in D̲jumāda I 36/Nov. 656; on the battle terminating otherwise than was expected, he was one of the first to run away. On the whole, he does not seem to have been of any political importance. The caliph ʿAbd al-Malik b. Marwān appointed him as governor of Madīna. He occupied this position for seven years; he was then dismissed and his place was taken by His͟hām b. Ismāʿīl. Abān owes his celebrity not so

much to his activity as an official in the service of the Umayyads as to his wonderful knowledge of Islamic traditions. The *Kitāb al-Maghāzī*, sometimes ascribed to him, is, however, according to Yāḳūt (*Irshād*, i, 36) and al-Ṭūsī (*Fihris*, 7) of Abān b. ʿUthmān b. Yaḥyā (see J. Horovitz, in *OLZ*, 1914, 183).

Abān was struck with apoplexy and died a year later at Madīna in 105/723-4 according to report, at any rate during the reign of Yazīd b. ʿAbd al-Malik.

Bibliography: Ibn Saʿd, v, 112 ff.; Nawawī, 125 ff. (K. V. ZETTERSTÉEN)

ABANŪS (variants: ĀBINŪS, ĀBUNŪS, ABNŪS and ĀBNŪS), ebony. The word is derived from the Greek *ebenos*, which passed to the Aramean (*abnūsā*) and from there to Arabic, Persian, Turkish etc. Although ebony had been already known in the old days in the East, where it was imported from India and Ethiopia, it was very little used at the early times of Islam, on account of its rarity and the scanty demand for artistic goods. Absolute faith must not be given to the story according to which, when the Mosque of the Rock was being built at Jerusalem under the Umayyad caliph ʿAbd al-Malik, the venerable rock was enclosed with a palisade of ebony. It is certain that this wood had been already used under the caliphs together with ivory in the manufacture of chess-men [see SHATRANDJ] and dice, in mosaics of the sort very often used later with great skill on furniture, doors, latice work and wainscots [see KHASHAB].

As a medicine, ebony was known to the Muslims as early as the ninth century from the translations of Dioscorides and Galen. It was considered to be a useful astringent for phylactenous inflammation and chronic catarrh of the eyes; it was also taken internally in the form of a powder for the bowels and stomach, and was dusted over burns. According to Dioscorides, Abyssinian ebony was generally considered to be more efficacious than Indian. To the former were ascribed the properties which at the present time are only found in the wood of the *Diospyros* and the Maba kinds of the East Indies, of Indonesia, of Madagascar, and of Mauritius, i.e. an intense black colour and a fineness of grain that almost makes it impossible to distinguish the fibre. The African species of ebony which the Arabs prefer, are nowadays rightly held in little estimation. In particular the ebony tree of Abyssinia (*shadjar babanūs*), is according to A. E. Brehm (*Reisesk. aus Nordostafrika*), more of a brush than a tree. Its wood, though not of an excellent quality, can be used, but if left unused, dries and rots.

Bibliography: Abū Manṣūr Muwaffaḳ, *al-Abniya* (Seligmann), 31; Ibn al-Bayṭār, Būlāḳ 1291, 8; transl. Leclerc, *Notices et Extraits*, xxiii/1, 16; Ḳazwīnī (Wüstenfeld), i. 247. (J. HELL)

ABARḲUBĀDH, one of the sub-districts (*ṭassūdj*) of ʿIrāḳ, according to the Sāsānid division adopted by the Arabs, belonging to the district (P. *astān*, A. *kūra*) Khusra Shādh Bahmān (the district of the Tigris) and comprising a tract of land along the western frontier of Khuzistān, between Wāsiṭ and Baṣra. The name is derived from the Sāsānid king Kawādh (Ḳubādh) I. The first part of the name is probably *Abar* (P. *abar* or *abr* "cloud" is often seen at the beginning of place-names) and not *Abaz* or *Abādh* as the Arab geographers have it. Some Arab authors give Abarḳubādh as the name of the district in which Arradjān is situated, but that seems to spring from a mistake.

Bibliography: Ibn Khurradādhbih, 7; Ḳudāma, *al-Kharādj* (de Goeje), 235; Yāḳūt, i, 90; Balādhurī, *Futūḥ*, 344; Ibn Saʿd, vii/i 3; Ṭabarī, i, 2386, ii, 1123; Th. Nöldeke, *Gesch. d. Perser u. Araber z. Zeit d. Sasaniden*, 146, n. 2; M. Streck, *Babylonien n.d. Arab. Geogr.*, i, 15, 19. (M. STRECK)

ABARḲŪH, a small town belonging to Yazd and lying on the road from Shīrāz to Yazd (at 39 farsakhs from the former and at 28 fars. from the latter) and also connected by a road with Ābādah [*q.v.*]. It lies in a plain, and according to Mustawfī, *Nuzha*, 121, its name ("on a mountain") refers to its earlier site. In 443/1051 Ṭughrīlbeg gave Yazd and Abarḳūh to the Kākūyid Farāmarz (Ibn al-Athīr, ix, 384) as a compensation for the loss of Iṣfahān. His successors continued to rule these towns as *atābeks*. In the 8th/14th century Abarḳūh is frequently mentioned in the history of the Muẓaffarids. The oldest of the numerous ruins of Abarḳūh is the mausoleum built in 448/1056 by Fīrūzān, a descendant of the well-known condottiere of the 4th/10th century, Fīrūzān of Ashkawar (in Gīlān). The so-called mausoleum of Ṭāʾūs al-Ḥaramayn was built (or rebuilt) in 718/1318 by a descendant (in the fifth generation) of a Madjd al-Dunyā wa-l-Dīn Tādj al-Maʿālī Abū Bakr Muḥammad (a Muẓaffarid).

Bibliography: Le Strange, 284, 294, 297; P. Schwarz, *Iran*, i, 17; A. Godard, in *Āthār-i Īrān*, 1936, 47-72; Maḥmūd Kutbī, *History of the Muẓaffarids*, in *GMS*, xiv, see Index in xiv/2; Ḳāsim Ghanī, *Taʾrīkh-i ʿAṣr-i Ḥāfiẓ*, i, 1321/1942, index. (V. MINORSKY)

ABARSHAHR, the more ancient name of Nīshāpur [*q.v.*], was the capital of one of the four quarters of the province of Khurāsān. Its name in Persian, according to the Muslim geographers, is said to mean "Cloud-city", but Marquart's etymology (*Ērānšahr*, 74), the "district of the 'Απαρνοι" (comparing Armenian Apar ašχart) is more reliable. It was sometimes given the honorific title of Īrān-Shahr "City of Īrān". Its mint-signature on Sassanian coins is *Apr*, *Aprš* or *Apršs*, forms which continue to appear on the dirhams of Arab-Sassanian type struck by the Muslim conquerers (from 54/673-4 to 69/688-9). Under the Umayyads its Arabic name appears on the Post-Reform dirhams from 91/709-10 to 97/715-6. The names of the Umayyad governors Ziyād b. Abī Sufyān and his sons ʿUbayd Allāh and Salm as well as ʿAbd Allāh b. Khāzim all figure on the coins of Abarshahr. The later mint activities of the place continued under the name of Nīsābūr.

Bibliography: Le Strange, 383; J. Marquart, *Ērānšahr*, Berlin 1901 (*Abh. G. W. Gött, N.S.*, III/ii), 66, 68, 74; J. Markwart, *A Catalogue of the Provincial Capitals of Eranshahr*, Rome 1931 (*Analecta Orientalia*, iii), 52-3; J. Walker, *A Catalogue of the Arab-Sassanian Coins*, London 1941, p. ci-cii, cvi, 36, 72, 74, 87-8; E. Herzfeld, in *Transactions of the Intern. Congress of Numismatists*, 1936, 423, 426. (J. WALKER)

ABASKŪN (or ĀBASKŪN), a harbour in the south-eastern corner of the Caspian. It is described as a dependency of Djurdjān/Gurgān (Yāḳūt, i, 55: 3 days' distance from Djurdjān; i, 91: 24 farsakhs). It might be located near the estuary of the Gurgān river (at Khodja-Nefes?). Al-Istakhrī, 214 (Ibn Ḥawḳal, 273) calls Abaskūn the greatest of the (Caspian) harbours. The Caspian itself was sometimes called *Baḥr Abaskūn*.

Abaskūn possibly corresponds to Ptolemy's Σωχανάα in Hyrcania (Gurgān). Several times Abas-

kūn was raided by Rūs pirates (some time between 250-70/864-84, and in 297/909, see Ibn Isfandiyār, *Taʾrīkh-i Ṭabaristān*, ed. A. Eghbal, 266 [E. G. Browne's transl., 199], cf. also Masʿūdī, ii. 18; *circa* 300/912). In 617/1220 the Khwārizm-shāh ʿAlā al-Dīn, tracked by the Mongols, sought refuge on "one of the islands of Abaskūn", (see al-Djuwaynī, ii, 115), and died there. According to Ibn al-Athīr, xii, 242, he possessed in Ab-sukūn (*sic*) a castle surrounded by water. The islands of Abaskūn apparently correspond to the Ashur-ada group of islands and spits of land, divided from the Gurgān estuary by a strait.

ĀBĀZA, Turkish name for the Abazes (see ABKHĀZ), given as a surname to many persons in Ottoman history who descended from those people.

1) Ābāza Pasha, taken prisoner at the defeat of the rebel Djanbulād, whose treasurer he was, was brought before Murād Pasha and had his life spared only through the intercession of Khalīl, agha of the Janissaries, who, having become *ḳapūdān-pasha*, gave him the command of a galley, and conferred upon him the government of Marʿash when he was promoted to the dignity of grand vizier. Later he became governor of Erzerūm and planned to destroy the Janissaries; those in his province lodged a complaint against him; he was deposed, but refused to obey the orders of the Porte (1032/1623); he levied taxes and raised troops on the pretext of avenging the death of the sultan ʿUthmān II, marched upon Anḳara and Sīwās, and took Brusa, but did not succeed in seizing the citadel. In 1033/1624, the grand vizier Ḥāfiẓ Pasha defeated him in a battle near Ḳaysāriyya, at the bridge across the Ḳara-ṣū, owing to the defection of Ṭayyār Pasha and the Turkomans. Ābāza took refuge at Erzerūm, of which he succeeded in having himself made governor on condition that he should admit a guard of Janissaries into the fortress. In 1036/1727, suspecting that the expedition against Akhiska was in reality directed against himself, he massacred a great number of the Janissaries belonging to the army. His old master Khalīl besieged Erzerūm in vain and was obliged to retreat because of the snow (1037/1627). In the following year, the Bosnian Khusrew Pasha, having been made grand vizier, again besieged him and forced him to capitulate after a fortnight's siege; the rebel was granted his pardon and the government of Bosnia. There he again persecuted his enemies, the Janissaries, was deposed and went to Belgrade, where on a hill to the south of the town he erected Ābāza Kʾöshki. Then he was sent to Widdin and commanded the troops who invaded Poland (1633). Being honored with the confidence of Murād IV, he accompanied him to Adrianople when preparations were made for a new campaign against Poland; but his success excited envy; reports against him cleverly disseminated, estranged the sultan, who had him executed (29 Ṣafar 1044/24 August 1634).

Bibliography: Hammer-Purgstall, iv, 569, 582; v, 26, 83, 173 ff., 189 ff.; Muṣṭafā Efendi, *Natāʾidj al-Wuḳuʿāt*, ii, 48, 82; Ewliya Efendi, *Travels*, i, 119 ff.

2) Ābāza Ḥasan had been given the command of the Turkomans of Asia Minor as a recompense for his capture of the rebel Ḥaydar-eghlu. Having been dismissed for no reason, he revolted in his turn, held the country between Gerende and Bolu, defeated the old bandit Ḳatirdji-oghlu who had been sent to fight against him, and submitted on condition that he should have the title of *voivode* of the Turkomans; later as the result of complaints lodged against him, he was imprisoned in the Seven Towers and was only released by the elevation of Behayī to the position of Shaykh al-Islām (1062/1652); his friend conferred on him the sandjaḳ of Okhri. When Ipshīr Pasha, who was also one of the Abaza nation, was made grand vizier by Muḥammad IV, he sent for him. At his execution he remained faithful to him, returned to Asia Minor with the remainder of his troops and regained the office of *voivode* of the Turkomans (1065/1655). He settled at Aleppo and committed such ravages in Syria that the Dīwān wanted to have him banished from the empire; the grand vizier, Sulaymān Pasha, however, confirmed him in his position of governor and entrusted the defenses of the Dardanelles to him. In 1066/1656 he was sent to Diyār Bakr as governor. Two years later he rebelled, put himself at the head of a considerable army under the pretext of demanding the dismissal of Muḥammad Köprülü, at that time grand vizier, and threatened Brusa. In the neighborhood of Ilghin he completely defeated Murtaḍā Pasha, who had been sent against him (15 Rabīʿ I 1069/11 Dec. 1658); but he fell into a trap which had been set for him, left ʿAynṭāb for Aleppo to make terms for his submission and was treacherously assassinated there.

Bibliography: Hammer-Purgstall, v, 481, 560 ff., 563, 575, 634; vi, 35 ff., 51 ff.

3) Ābāza Muḥammad Pasha was the *beylerbey* of Marʿash when, during the campaign against the Russians (1183/1769), he was ordered to act in concert with the khān of the Crimea. He commanded the fortress of Bender and received the third *tūgh* in recompense for the part he had taken in raising the siege of Choczim. Having been entrusted with the defense of this place and seeing himself abandoned by the Ottoman troops, he fled and was commissioned to defend Moldavia, which he failed to accomplish. At the battle of Kaghul (1 Aug. 1770), he commanded the right wing; after the defeat of the Turks he feed to Ismāʿīl. Having been made governor of Silistria, he was dismissed after he had squandered the money given to him for the purpose of raising troops, and was exiled to Kustendil. At the time of the conquest of the Crimea and the flight of Selīm-Girāy he refused to land the few troops he was bringing up and returned to Sinope; he was decapitated (1185/1771).

ʿABBĀD b. MUḤAMMAD [see ʿABBĀDIDS]

ʿABBĀD b. SULAYMĀN al-Ṣaymarī (or al-Ḍaymarī), one of the Muʿtazila of Baṣra, died *c.* 250/864. He was a pupil of Hishām b. ʿAmr al-Fuwaṭī (*fl.c.* 210/825), like his father criticizing the main tendency of the school of Baṣra (that of Abu 'l-Hudhayl), and being in his turn criticized by Abu 'l-Hudhayl's successors, al-Djubbāʾī and Abū Hāshim. Our knowledge of his distinctive views comes mainly from al-Ashʿarī's *Maḳālāt*.

He emphasized the difference between God and man, admitting that God might be called a "thing" in the sense that He was "other" (*l.c.*, 519). In particular he insisted that God is eternal, and that what

He eternally is must be independent of transient mundane things. Thus God is not eternally "hearing" and "seeing", since that involves objects heard and seen (*ib.* 173, 493); He is not "before all things" (*ib.* 196, 519); no accident (such as an apparently supernatural event) can afford a proof of God, in view of its transient character (*ib.* 225). In this way he came to distinguish between God's "active attributes" (*ṣifāt al-fiʿl*) and His eternal attributes (*ib.* 179, 186, 495-500), being perhaps the first to work out this distinction which was later adopted by orthodox theologians.

He went to extremes in insisting that God does nothing that is evil in any respect, even denying that God made unbelief vile (*ḳabīḥ*; *ib.* 227-8, 537-9), and maintaining that His punishment of the wicked in Hell is not evil. His political views (*ib.* 454, 458-9, 467) seem to aim at a reconciliation of various contemporary political groups, but the point has not been adequately studied.

ʿABBĀD b. ZIYĀD b. Abī Sufyān, Abū Ḥarb, Umayyad general. Muʿāwiya appointed him governor of Sidjistān, where he stayed seven years; in the course of his expeditions to the East, he conquered Ḳandahār. In 61/680-1 he was dismissed by Yazīd b. Muʿāwiya who appointed in his place his brother Salm b. Ziyād to be governor of Sidjistān and Khurāsān. In 64/684, he joined in the battle of Mardj Rāhiṭ [*q.v.*], at the head of a contingent formed by his own *gens*. Afterwards he wished to retire to Dūmat al-Djandal, but he was obliged to combat a lieutenant of al-Mukhtār b. Abī ʿUbayd [*q.v.*]. The date of his death is unknown.

ʿABBĀDĀN (Ābādān) stands on the south-west side of the island of the same name, on the left bank of the Shaṭṭ al-ʿArab. It is believed to have been founded by a holy man named ʿAbbād in the 8th or 9th century A.D. (the people of Baṣra used to add the termination "ān" to a proper name in order to change it into a place name). In those days ʿAbbādān was on the sea coast, but with the gradual extension of the delta of the Shaṭṭ al-ʿArab, it is now over 30 miles from the head of the Persian Gulf. In the early ʿAbbāsid period ʿAbbādān was a center of ascetics living in *ribāṭ* (L. Massignon, *Essai*, 135; Abu 'l-Atāhiya, *Dīwān*, 218).

ʿAbbādān is described in the *Ḥudūd al-ʿĀlam*, 139 (cf. also 392) as "a flourishing and prosperous borough on the sea coast. All the ʿAbbādānī mats .... come from there, and therefrom comes the salt for Baṣra and Wāsiṭ." Three and a half centuries later, when Ibn Baṭṭūta visited ʿAbbādān, it was no more than a large village; it stood on a salty, uncultivated plain. In later times the inhabitants eliminated the salt from the soil bordering the river and planted the palm-groves which are now such a feature of both banks of the Shaṭṭ al-ʿArab and of those of the Bahmashīr river on the north-east side of ʿAbbādān island. ʿAbbādān, however, remained a village until it was chosen, in 1909, as the site of the refinery of the Anglo-Persian Oil Co. Since that time, it has increased enormously in size; in 1951 its population was nearly 200,000 and the refinery had become the largest in the world.

About 1935 Riḍā Shāh, in pursuance of his policy of Persianizing Arabic names, changed ʿAbbādān into Ābādān.

al-ʿABBĀDĪ, Abū ʿĀṣim Muḥ. b. Aḥmad b. Muḥ. b. ʿAbd Allāh b. ʿAbbād, often called al-Ḳāḍī al-Harawī, a well-known Shāfiʿite jurisconsult. He was born in 375/985 in Harāt, studied there and in Nīsābūr, and undertook extensive journeys on which he met numerous scholars. He finally became *ḳāḍī* of Harāt and died there in 458/1066. He was notorious for his dark and difficult style of expression. Of his works, which al-Subkī enumerates, there have survived the *Ṭabaḳāt al-Shāfiʿiyyīn* (used by al-Asnawī) in several manuscripts, and the *Adab al-Ḳaḍāʾ* in the commentary which his disciple Abū Saʿd (or Saʿīd) b. Abī Aḥmad b. Abī Yūsuf al-Harawī (d. about 500) wrote under the title *al-Ishrāf ʿalā Ghawāmiḍ al-Ḥukūmāt* (Subkī, iv, 31). His son Abu l-Ḥasan is the author of a *K. al-Raḳm*.

Bibliography: Subkī, *Ṭabaḳāt*, iii, 42 (with extracts from his works and a discussion of his style); Ibn Khallikān, no. 558; F. Wüstenfeld, *Schâfiʿiten*, no. 408; Brockelmann, i, 484; S i, 669. (J. Schacht)

ʿABBĀDIDS (Banū ʿAbbād), dynasty of Arab race which reigned for most of the 5th/11th century over the S.-W. of al-Andalus, with its capital at Seville [cf. ishbīlya].

It was at the moment of the disintegration of the Caliphate of Cordova and of the political dismemberment of the country by the petty kings known as the *taifas* (*mulūk al-ṭawāʾif*) that the *ḳāḍī* of Seville, Abu 'l-Ḳāsim Muḥammad b. ʿAbbād, succeeded in being proclaimed ruler in 414/1013. The son of a celebrated Spanish-Muslim jurist of Lakhmid origin, Ismāʿīl b. ʿAbbād, he began, on first seizing power, by recognizing the suzerainty of the Ḥammūdid king Yaḥyā b. ʿAlī, but soon threw off this wholly nominal mark of subordination. There is relatively little information on the details of his reign, which was mostly occupied in settling by force of arms his disputes with the Djahwarids [*q.v.*] of Cordova and the lesser baronies in southern Andalusia. He died in 433/1042.

His son, Abū ʿAmr ʿAbbād b. Muḥammad succeeded, in a reign of nearly thirty years (433-460/1042-69), in enlarging the territory of the principality of Seville to a considerable size by posing as the champion of the Andalusian Arabs against the Spanish Berbers, whose numbers, already large in the Iberian peninsula in the 10th century, had greatly increased since the period of the ʿĀmirid dictators.

On succeeding his father, the new king of Seville, then 26 years of age, took the princely title of *ḥādjib*, following the custom of the time, but a little later adopted the honorific *laḳab* of al-Muʿtaḍid biʾllāh, by which he is generally known. Gifted with real political qualities, it was not long before he showed his true character, that of an authoritarian ruler, as ambitious as he was cruel, and with few scruples in the choice of means to achieve his ends. Immediately after his accession he conti-

nued the struggle opened by his father against the minor Berber dynasty of Carmona [cf. ḲARMŪNA], Muḥ. b. ʿAbd Allāh al-Birzālī and the latter's son and successor Isḥāḳ. At the same time al-Muʿtaḍid was preoccupied in extending his kingdom to the west, between Seville and the Atlantic Ocean. With this end in view he attacked and defeated successively Ibn Ṭayfūr, lord (*ṣāḥib*) of Mertola, and Muḥ. b. Yaḥyā al-Yaḥṣubī, lord of Niebla [cf. LABLA], who, notwithstanding his Arab descent, had unblushingly allied himself with Berber chiefs. In face of the success of the king of Seville, the other *mulūk al-ṭawāʾif*, distrustful of him, formed against him a kind of league, which was joined by the princes of Badajoz [cf. BAṬALYAWS], Algeciras [cf. AL-DJAZĪRA AL-KHAḌRĀʾ], Granada [cf. GHARNĀṬA] and Malaga [cf. MĀLAḲA]. War broke out soon afterwards between the ʿAbbādid of Seville and the Afṭasid [*q.v.*] al-Muẓaffar of Badajoz; it was prolonged over many years, in spite of the efforts at mediation of the Djahwarid prince of Cordova, which bore fruit only in 443/1051. In the interval, while continuing to harass the frontiers of the kingdom of Badajoz, al-Muʿtaḍid did not remain inactive; he defeated, one after the other, Muḥ. b. Ayyūb al-Bakrī, lord of Huelva [cf. WALBA] and of Saltes [cf. SHALṬĪSH] (whose son was the celebrated geographer), the Banū Muzayn, lords of Silves [cf. SHILB], and Muḥ. b. Saʿīd b. Hārūn, lord of Santa Maria de Algarve [cf. SHANTAMARIYAT AL-GHARB] and annexed their principalities. In order to justify these annexations al-Muʿtaḍid employed a somewhat clumsy stratagem: he claimed to have found the caliph Hishām II, who had died in obscurity some years earlier, and to be devoting himself tirelessly to restoring to him his former empire, entirely submissive and pacified. In order to protect themselves against the assaults of the king of Seville, the majority of the minor Berber chiefs in the mountains in the south of Andalusia acquiesced in this theatrical pretence, and paid homage both to the ʿAbbādid and to the Commander of the Faithful; miraculously restored to light to serve the interests of al-Muʿtaḍid but at the same time carefully kept in seclusion by him. But their efforts were in vain. One day the ʿAbbādid invited all these minor Berber princes and their attendants together to his palace at Seville and suffocated them to death in a bath-house whose openings he has walled up; by this means he appropriated Arcos [cf. ARKUSH], seat of the principality of the Banu Khizrūn, Moron [cf. MAWRŪR], ruled by the Banū Dammar, and Ronda [cf. RUNDA], capital of the Banū Ifran (445/1053).

This action was enough to unloose the fury of the most powerful Berber prince in Spain, Bādīs b. Ḥabbūs the Zīrid [*q.v.*] at Granada, who alone seemed capable of standing up to al-Muʿtaḍid. When the war began, however, the latter found fortune still smiling on him and soon afterwards seized Algeciras from the Ḥammūdid prince al-Ḳāsim b. Ḥammūd. He then tried to capture Cordova, and for this purpose despatched an expedition under the command of his son Ismāʿīl; but Ismāʿīl sought to profit from the occasion to rebel and to create a kingdom of his own, with Algeciras as his capital. This venturesome project cost him his life. It also opened the political career of al-Muʿtaḍid's other son, Muḥammad al-Muʿtamid, who was to succeed him on his death. On his father's orders, Muḥammad set out with an army to give support to the Arabs of Malaga, who had revolted against the tyrannical rule of the Berber despot of Granada, Bādīs. But Bādīs routed the army of Seville, and the prince, in sad plight, threw himself into Ronda, whence he solicited and obtained his father's pardon. Al-Muʿtaḍid had long since discarded the fable of the pseudo-Hishām, which he no longer needed; he was by far the most redoubtable and most feared of the Spanish sovereigns; he had had no enemies but the Berbers, Muslims like himself, but far further removed from his Spanish-Arab social ideals than his Christian neighbours of the north. In other places, he might have been given the title of *Berberoktonos*.

When the powerful sovereign of Seville died in 461/1069, his son, Muḥammad b. ʿAbbād, better known by his honorific laḳab of al-Muʿtamid [*q.v.*], took possession of his greatly enlarged kingdom, which now embraced most of the S.W. part of the Iberian peninsula.

Already in the second year of his reign, al-Muʿtamid was able, despite the ambitions of the king of Toledo, al-Maʾmūn [*q.v.*], to annex to his kingdom the principality of Cordova, formerly ruled by the Djahwarid princes. The young prince ʿAbbād was appointed governor of the former capital of the Umayyads. But on the instigation of the king of Toledo, an adventurer, named Ibn ʿUkkāsha, succeeded in seizing Cordova by surprise in 468/1075, and put the young ʿAbbādid prince and his general Muḥ. b. Martīn to death. Al-Maʾmūn took possession of the city, where he died six months later. Al-Muʿtamid, wounded both in his paternal affections and his royal pride, endeavoured for three years in vain to reconquer Cordova. He gained his object only in 471/1078; Ibn ʿUkkāsha was put to death, and all that part of the kingdom of Toledo lying between the Guadalquivir and the Guadiana was conquered by the armies of Seville. Yet at the same time it needed all the skill of the vizier Ibn ʿAmmār [*q.v.*] to bring an expedition of Alfonso VI of Castille against Seville to a peaceful conclusion, in return for the payment of a double tribute.

This was, in fact, the moment when, thanks to the tenacious vigour of the Christian princes in seeking to profit from the sanguinary conflicts waged against one another by the Muslim *mulūk al-ṭawāʾif*, the *reconquista*—which had been arrested for a time and had even receded under the last Umayyads and the first ʿĀmirid dictators—resumed its advance towards the south of the peninsula. Notwithstanding their successes, blazoned by the Muslim chroniclers, it must not be forgotten that from the middle of the eleventh century many Spanish Muslim dynasties were reduced to trying to gain, by means of heavy tributes, the temporary neutrality of their Christian neighbours. Shortly before the resounding capture of Toledo by Alfonso VI, in 478/1085, al-Muʿtamid began to find himself enmeshed in serious difficulties. On the imprudent advice of Ibn ʿAmmār, he attempted, after the annexation of Cordova, to annex further the principality of Murcia [cf. MURSIYA], then governed by a ruler of Arab origin, Muḥ. b. Aḥmad Ibn Ṭāhir. In 471/1078, Ibn ʿAmmār paid a visit to the count of Barcelona, Ramon Berenguer II, and asked for his assistance in conquering Murcia in return for the sum of 10,000 dinars, as surety for the payment of which a son of al-Muʿtamid, al-Rashīd, would serve as hostage. After a series of agitated comings and goings, which ended in the payment to the count of Barcelona of a sum thrice as large, Ibn ʿAmmār resumed his project of conquering Murcia, and soon realised it, thanks to the assistance of the lord of the castle of Bildj (now Vilches), Ibn Rashīḳ. It was not long,

however, before Ibn ʿAmmār in Murcia made himself intolerable to his sovereign. Betrayed by Ibn Rashīḳ, he was forced to flee from Murcia, and sought refuge successively at Leon, Saragossa and Lerida. On returning to Saragossa he endeavoured to assist its prince, al-Muʾtamin b. Hūd [cf. HŪDIDS], in his expedition against Segura [cf. SHAKŪRA], but was captured and handed over to al-Muʿtamid, who, notwithstanding the ties of friendship which had for so long bound them together, killed him with his own hand.

In the meantime Alfonso VI began to disclose openly his designs on Toledo, which he had begun to invest since 473/1080. Two years later, having sent a deputation to collect the annual tribute which al-Muʿtamid was paying to him, he learned that its members had been molested and that the Jewish treasurer Ibn Shalīb, who had accompanied it, had been put to death because of his refusal to accept money of low standard. Thereupon he made an incursion into the kingdom of Seville, raided the flourishing townships of the Aljarafe [cf. AL-SHARAF], struck across the district of Sidona [cf. SHADŪNA] as far as Tarifa [cf. ṬARĪF, DJAZĪRAT], where he pronounced a celebrated phrase in which he boasted of having trodden the furthest bounds of Spain.

The capture of Toledo by Alfonso VI was a heavy blow to Islam in Spain. The king of Castille at once demanded of al-Muʿtamid the return of his possessions which had formerly been part of the kingdom, of the Dhu 'l-Nūnids, i.e. part of the present provinces of Ciudad Real and Cuenca. Throughout Muslim Spain his ever-increasing demands caused a particularly difficult situation. In spite of their unwillingness, the princes of Spain, with al-Muʿtamid at their head, were compelled to implore the aid of the Almoravid sulṭan, Yūsuf b. Tāshufīn (see AL-MURĀBIṬŪN), who had recently seized the whole of Morocco in an irresistible advance. It was decided to send him an embassy composed of the vizier Abū Bakr b. Zaydūn and of the ḳāḍīs of Badajoz, Cordova and Granada. The negotiations were successfully concluded, though not without difficulty; Yūsuf b. Tāshufīn finally crossed the Straits of Gibraltar, and inflicted on the Christian troops, on 22 Radjab 479/23 October 1086, the bloody defeat of al-Zallāḳa [*q.v.*], not far from Badajoz. It need here only be briefly recalled that Yūsuf b. Tāshufīn, compelled to return to Africa, was unable to gain from his victory all the advantages for which the Spanish Muslim princes had hoped, while they, owing to the decisive influence exerted by the Spanish-Muslim *faḳīhs* on the Almoravid, rapidly lost all prestige in his eyes. After his withdrawal the Christian troops began again to harass the Muslim possessions, to such effect that al-Muʿtamid had this time to present himself in person before Yūsuf b. Tāshufīn in Morocco, to ask him to recross the Straits with his troops. Yūsuf agreed to his request and disembarked at Algeciras in the following spring (480/1088). He set out to besiege the fortress of Aledo (Ar. ALĪṬ), without success, but under the stimulus of popular sentiment and the counsels of the *faḳīhs* concluded that it would be of greater advantage to him to pursue the *djihād* in Spain on his own account. From that time, he set himself to dethrone and dispossess the princes who had solicited his intervention, and it was not long before he was carrying his arms into the kingdom of Seville in order to take possession of it. An army commanded by the general Sīr b. Abī Bakr by the end of 1090 seized Tarifa, then Cordova (where a son of al-Muʿtamid, Fatḥ al-Maʾmūn, was killed), Carmona, and finally Seville, which was taken in spite of a heroic sortie by al-Muʿtamid. The vanquished prince, made prisoner by the Almoravid, was at first sent with his wives and children to Tangier, then to Meknes, and after several months to Aghmāt, not far from Marrākush. He passed a miserable existence there for some years, and died there in 487/1095, aged fifty-five years. With him, in these lamentable circumstances, ended the dynasty of the ʿAbbādids, which may be regarded, notwithstanding the excesses and cruelty of its princes, as the most brilliant of the dynasties of the *taifas* and indubitably that under which the arts and letters shone most brightly in Muslim Spain of the eleventh century.

(E. LÉVI-PROVENÇAL)

ʿABBĀS I, styled the Great, king of Persia of the Ṣafawī dynasty, second son and successor of Muḥammad Khudābanda, was born on 1 Ramaḍān 978/27 January 1571, and died in Māzandarān on 24 Djumādā I 1038/19 January 1629, after a reign of 42 solar (43 lunar) years. In 980/1572-3 he remained at Harāt when his father moved to Shīrāz. In 984/1576-7 Ismāʿīl II put to death the *lala* (tutor) of ʿAbbās, and appointed ʿAlī Ḳulī Khān Shāmlū governor of Harāt with orders to execute ʿAbbās himself. ʿAlī Ḳulī procrastinated, and, when the death of Ismāʿīl II (985/1577-8) rendered the order null and avoid, was made himself *lala* to ʿAbbās by Muḥammad Khudābanda. Three years later ʿAlī Ḳulī read the *khuṭba* at Harāt in the name of ʿAbbās, but, when threatened by the royal army, he re-affirmed his allegiance to Muḥammad Khudābanda at Ghūrīyān. Shortly afterwards his protégé ʿAbbās fell into the hands of his rival Murshid Ḳulī Khān Ustādjlū, governor of Turbat, and in 995/1587 the latter marched on Ḳazwīn. Muḥammad Khudābanda was deposed, and ʿAbbās became Shāh at the age of 16, with Murshid Ḳulī as his *wakīl-i dīwān-i ʿālī*.

ʿAbbās, faced with the twofold task of enforcing his authority over the Ḳizilbāsh amīrs, and of checking the encroachment on Persian territory of the Ottomans in the West and the Uzbegs in the East, at once created from the ranks of Georgian prisoners converted from Christianity a cavalry corps of *ghulāmān-i khāṣṣa-yi sharīfa*, paid direct from the royal treasury. With their aid, and by a successful appeal to the loyalty of the *shāhī-sewen* [*q.v.*], he crushed a revolt of amīrs, and followed this by ridding himself of the now too-powerful Murshid Ḳulī. The importance of the *ghulāms* gradually increased.

The appointment of Allāhwardī Khān to be governor of Fārs elevated a *ghulām* to equality of status with the Ḳizilbāsh amīrs, and eventually *ghulāms* filled some 20% of the high administrative posts. ʿAbbās systematically pacified the provinces of ʿIrāḳ-i ʿAdjam, Fārs, Kirmān and Luristān. The local rulers of Gīlān and Māzandarān were subjugated. In order to avoid fighting on two fronts, ʿAbbās signed in Constantinople in 998/1589-90 a peace treaty most unfavourable to Persia. The regions of Ādharbāydjān, Ḳarabāgh, Gandja, Ḳaradjadāgh, with Georgia and parts of Luristān and Kurdistān, were to remain in Ottoman hands, and a interdict was placed on the Shīʿite objurgation of the early Caliphs.

ʿAbbās entrusted to Allāhwardī Khān the reorganisation of the army on the lines suggested by Robert Sherley, an English adventurer then at the Persian Court. A new corps of 12,000 musketeers (*tufangčī*), for the most part mounted, was recruited locally from the peasantry; the strength of the *ghulāms* was raised to 10,000 by further recruitment from the Georgian converts; 3000 more were selected as *mulāzimān* or personal bodyguard to the Shāh; and a corps of artillery, comprising 12,000 men and 500 guns, was also recruited from the *ghulāms*, cannon being cast under the supervision of Sherley. ʿAbbās thus had a standing army of some 37,000 men.

After the death of the Shaybānids ʿAbd Allāh b. Iskandar [*q.v.*] and ʿAbd al-Muʾmin, dynastic rivalries distracted the Uzbegs, and ʿAbbās was able to inflict on them a severe defeat at Harāt (1007/1598-9), and to recover Mashhad and Harāt after ten years of Uzbeg occupation. In a attempt to stabilise the North-East frontier, ʿAbbās installed at Balkh, Marw and Astarābād Uzbeg chiefs subservient to himself. But Bāḳī Muḥammad, the new khān of Transoxania, re-occupied Balkh (1009/1600-1), and though ʿAbbās led a force of 50,000 men against him, he was outmanoeuvred and forced to retreat (1011/1602-3), losing large numbers of men through sickness, and abandoning most of his new artillery. At this point hostilities in the East were suspended, but in the West ʿAbbās invaded Ādharbāydjān in 1012/1603-4, and occupied Nakhčiwān and Eriwan. The Ottomans under Čighālazāda suffered a signal defeat at Sīs near Tabrīz (1014/1605-6), with the loss of 20,000 men. Gandja and Tiflīs were taken by the Ṣafawids. Internal disorders in Turkey contributed to the haphazard conduct of the war against Persia. Successive Turkish invasions of Ādharbāydjān were hampered by the Persian policy of devastating the regions of Čukhūr Saʿd and Nakhčiwān and evacuating the inhabitants. Peace was eventually concluded at Sarāb in 1027/1617-8, but was broken by ʿAbbās in 1033/1623-4, when he took Baghdād and Diyār Bakr from the Ottomans.

In other directions too ʿAbbās expanded Ṣafawid territory. Baḥrayn was annexed in 1010/1601-2, Shīrwān was reconquered in 1016/1607-8. With British aid, the island of Hurmuz was taken from the Portuguese in 1030/1620-1, but a long series of bitter wars in Georgia failed to result in permanent annexation, and ʿAbbās was finally forced to recognize the Georgian prince Taymuraz. Military necessity was often the pretext for the transference of large bodies of people to other regions. Some 20,000 Armenians from the Erzerum region were enrolled in the *ghulāms*: a further 3000 families were moved from Djulfa to Iṣfahān: the Ḳaramānlū tribe of Ḳarabāgh was moved to Fārs in 1023/1614-5: and the influx of Georgians from Kakhetia—130,000 prisoners were taken in the expedition of 1025/1616-7 alone—was a major factor in achieving that admixture of races and creeds by which ʿAbbās planned to offset the power of the Ḳizilbāsh.

Diplomatic contacts with European countries and with India were numerous during ʿAbbās's reign, but all his efforts to create a European alliance against the Ottomans failed. Though careful to keep on good terms with the Mughal Emperors Akbar and Djahāngīr, he always regarded Ḳandahār, seized by Akbar in 999/1590-1, as Persian territory, and in 1031/1621-2 he re-occupied the city. ʿAbbās maintained friendly relations with the princes of Muscovy and the Tatar khāns of the Crimea. Foreign monastic orders, like the Carmelites, the Augustinians and the Capuchin Friars, were accorded permission to operate without hindrance. In 1007/1598-9 Sir Anthony Sherley, brother of Robert, was dispatched to Europe accompanied by a Persian envoy, Ḥusayn ʿAlī Beg Bayāt, and visited Prague, Venice, Rome, Valladolid and Lisbon. Return embassies were sent by the Spaniards, the Portuguese and the English. The latter's envoy, Sir Dodmore Cotton, was the first accredited English ambassador to the Persian Court.

ʿAbbās improved communications by the construction of roads (notably the coast road through Māzandarān), bridges and caravanserais. He enriched Iṣfahān, which became his new capital in 1006/1597-8, with mosques, palaces and gardens: but he also built palaces at Ḳazwīn, and at Ashraf and Faraḥābād on the Caspian, where he spent an increasing amount of time in his later years. He explored the possibility of diverting some of the head-waters of the Kārūn into the basin of the Zāyanda-Rūd.

Although endowed with great qualities, ʿAbbās could be ruthless, and his family fell victims to his desire for security. His father, Muḥammad Khudābanda, and two brothers, Abū Ṭālib and Ṭahmāsp, were blinded and incarcerated at Alamūt; a son, Muḥammad Bāḳir Mīrzā, was executed on a charge of treason in 1022/1613, and another, Imām Ḳulī, was made heir-apparent in 1030/1620 during an illness of ʿAbbās, but was blinded on the latter's recovery. Throughout his reign, ʿAbbās attached great importance to maintaining the *pīr u-murshid* relationship with his subjects: hence he made frequent visits to the Shīʿite shrines at Ardabīl, Mashhad, where he repaired the damage caused by the Uzbegs, and, after their capture from the Ottomans, to those at Karbalāʾ and Nadjaf.

ʿABBĀS II and **III** [see ṢAFAWIDS]

AL-**ʿABBĀS** B. **ʿABD** AL-**MUṬṬALIB**, with the *kunya* Abu 'l-Faḍl, half-brother of Muḥammad's father, his mother being Nutayla bint

Djanāb of al-Namir. The ʿAbbāsid dynasty took its name from him, being descended from his son ʿAbd Allāh. Consequently there was a tendency for historians under the ʿAbbāsids to glorify him, and in his case it is particularly difficult to distinguish fact from fiction. He was a merchant and financier, more prosperous than his half-brother Abū Ṭālib, who, in return for the extinction of a debt, surrendered to him the office of providing pilgrims to Mecca with water (*siḳāya*) and perhaps also with food (*rifāda*). Though he owned a garden in al-Ṭāʾif, he was not so wealthy as the leading men of the clans of ʿAbd Shams and Makhzūm. There is no clear evidence of any *rapprochement* between him and Muḥammad until 7/629 when he gave in marriage to Muḥammad Maymūna, the uterine sister of his wife, Umm al-Faḍl Lubāba. Stories purporting to show that prior to this he supported Muḥammad are suspect. Thus he is said to have acted as protector of Muḥammad at the Assembly of ʿAḳaba, and, while it is conceivable that he protected him during his last year or two in Mecca, there is no evidence that the clan of Hāshim revoked Abū Lahab's refusal to give protection. Al-ʿAbbās fought against the Muslims at Badr, was taken prisoner and then released, though whether with or without a ransom is disputed. He joined Muḥammad as he was marching on Mecca in 8/630, but his conversion was less influential than that of Abū Sufyān. Muḥammad welcomed him, and after the submission of Mecca confirmed in his family the inherited office of the *siḳāya*. He is said to have acted bravely at Ḥunayn, and by his stentorian shout to have turned the tide of battle. He settled at Medina. Though one of those who contributed to the finances of the expedition to Tabūk, he possibly did not campaign in Syria, as is sometimes said. He was not on good terms with ʿUmar, but made a gift of his house for ʿUmar's extension of the mosque in Medina. Muḥammad is said to have given him an annuity from the produce of Khaybar, and ʿUmar, in revising the pension roll, made him the equal of the men of Badr; but he was never given any administrative post. He died about 32/653 aged about 88.

(W. MONTGOMERY WATT)

ʿABBĀS B. **ABI 'L-FUTŪḤ** YAḤYĀ B. TAMĪM B. MUʿIZZ B. BĀDĪS AL-ṢINHĀDJĪ, AL-AFḌAL RUKN AL-DĪN ABU 'L-FAḌL, Fāṭimid vizier, a descendant of the Zīrids [*q.v.*] of North Africa. He seems to have been born shortly before 509/1115, for in that year he was still a nursling. His father was then in prison and was banished in 509 to Alexandria, whither his wife Bullāra and the little ʿAbbās accompanied him. After Abu 'l-Futuḥ's death his widow married Ibn Sallār [see AL-ʿĀDIL IBN SALLĀR], commandant of Alexandria and al-Buḥayra, one of the most powerful generals of the Fāṭimid empire. When, in 544/1149-50, the caliph al-Ẓāfir appointed Ibn Maṣāl to the position of vizier, which had for some time been vacant, Ibn Sallār revolted, marched on Cairo at the head of his troops and forced the caliph to invest him with the vizierate. It was during these troubles that ʿAbbās appeared for the first time on the political scene. He took the side of his step-father and was entrusted by him with the pursuit of Ibn Maṣāl who had taken to flight. Ibn Maṣāl fell, and on 23 Dhu 'l-Ḳaʿda 544/24 March 1150, Ibn Sallār made his entry into Cairo. During the following years ʿAbbās lived at the court of Cairo and his son, Nāṣir al-Dīn Naṣr, became a favourite of the caliph. In the beginning of 548/spring 1153, ʿAbbās was made commander of the garrison of ʿAsḳalān, the last place the Fāṭimids still possessed in Syria. Before reaching Syria, however, at Bilbays, he decided—rumour had it, at the instigation of Usāma b. Munḳidh (the various historians who mention Usāma's role evidently follow one common source, cf. Cahen, 19, note 2)—to assassinate his step-father and seize the vizierate. Naṣr, ʿAbbās's son, returned secretly to Cairo, obtained the consent of the caliph, who idolized him, and assassinated Ibn Sallār, 6 Muḥarram 548/3 April 1153. ʿAbbās returned as fast as he could and took possession of the vizierate, whilst ʿAsḳalān fell into the hands of the Franks, 27 Djumādā I 548/20 August 1153. ʿAbbās did not enjoy the position he had won for long. According to Usāma (who was an intimate companion of Naṣr and took part in the events which he relates) ʿAbbās and his son Naṣr were deeply suspicious of each other, ʿAbbās thinking that the caliph was urging Naṣr to assassinate him. Usāma claims to have acted as a conciliator between father and son, who resolved together to kill the caliph. Naṣr lured the caliph to his house and assassinated him on the last day of Muḥarram 549/16 April 1154. Thereupon ʿAbbās charged the nearest male relations of the caliph with the crime. They were put to death and the minor son of al-Ẓāfir was placed upon the throne under the name of al-Fāʾiz bi-Naṣr Allāh. These proceedings stirred up the court and the population; a message was sent to Ṭalāʾiʿ b. Ruzzīk [*q.v.*], governor of Usyūṭ. ʿAbbās, together with Naṣr, fled before him to Syria, but the Franks, warned by the enemies of ʿAbbās, surprised them near al-Muwayliḥ and ʿAbbās was killed, 23 Rabīʿ I 549/7 June 1154. Naṣr was captured and delivered into the hands of the Fāṭimid government and executed, Rabīʿ II 550/June-July 1155. (The text of the *sidjill* announcing his arrival in Cairo is preserved in MS Brit. Mus., *Suppl.* 1140, fol. 67v.).

Massé, 89-90, 92-5; Ibn al-Athīr, xi, 93-4, 122, 125-8; Abū Shāma, *Kitāb al-Rawḍatayn*, Cairo 1287-8, i, 97 ff.; Ibn Khaldūn, *al-ʿIbar*, iv, 74 ff.; Abu 'l-Fidāʾ, iii, 29-30; Ibn Taghrībirdī, vol. iii; Ibn Khallikān, nos. 496, 522; Maḳrīzī, *al-Khiṭaṭ*, ii, 30; F. Wüstenfeld, *Gesch. der Fatimiden-Chalifen*, 314 ff.; Lane-Poole, *History of Egypt*, 174; H. Derenbourg, *Ousâma ibn Mounkidh*, i, 220 ff., 238-58. For the criticism of the sources of the historians see Cl. Cahen, *Quelques chroniques anciens relatives aux derniers Fatimides*, *BIFAO*, 1937-8, 19, note 2. Poems concerning the affair of ʿAbbās are quoted in ʿImād al-Dīn, *Kharīdat al-Ḳaṣr*, Egyptian poets (Cairo 1951), i, 119, 190. (C. H. BECKER—S. M. STERN)

AL-**ʿABBĀS** B. AL-**AḤNAF**, ABU 'L-FAḌL, amatory poet of ʿIrāḳ, died, it seems, after 193/808. His family belonged to the Arab clan of Ḥanīfa, from the district of Baṣra, but had emigrated to Khurāsān. It seems, however, that the father of al-ʿAbbās returned to Baṣra, where he is said to have died in 150/767 (al-Khaṭīb al-Baghdādī, 133). Al-

ʿAbbās was born about 133/750. He grew up in Baghdād (this must be the meaning of the passage of Ibn Ḳutayba, 525, and of the words of al-Ṣūlī quoted by al-Khaṭīb, 128, or of those of al-Akhfash repeated in *Aghānī* [3], viii, 353). We do not know anything about his adolescence or his studies. He must have started writing poetry very early, as Bashshār b. Burd (d. 167/783) speaks of his beginnings and calls him *fatā*, or *ghulām* (*Aghānī* [3], v, 210 and al-Khaṭīb, 130). The only details we know about his career show him as a favourite of the caliph Hārūn al-Rashīd, who employed him, however, not as a panegyrist, but rather as one to amuse him in his hours of leasure (see e.g. *Aghānī* [3], viii, 355 ft., and al-Khaṭīb, 131). It seems certain that the poet accompanied the caliph in his campaigns in Khūrāsān and Armenia, but, overcome by nostalgia, received his permission to return to Baghdād (*Aghānī* [3], viii, 372). Al-ʿAbbās was also connected with the high officials of the Barmakid family, especially with Yaḥyā b. Djaʿfar (*Aghānī*[3], v, 168, 241). One can assume that his verses were highly enjoyed by certain ladies of the caliph's harem, e.g. by Umm Djaʿfar, who made him presents (*Aghānī* [3] viii, 369). The favour shown to al-ʿAbbās by the men in power seems to have given him an influential position: a nephew of his, Ibrāhīm al-Ṣūlī (d. 243/857), himself a poet, was "secretary" of the Chancery (see on him al-Masʿūdī, *Murūdj*, vii, 237-45 and al-Khaṭīb, 129; it is to be noted that through him al-ʿAbbās was the great-uncle of the famous Abū Bakr al-Ṣūlī [*q.v.*]). Almost nothing has come down to us about the literary contacts of al-ʿAbbās. He seems to have been on bad terms with Muslim b. al-Walīd (al-Khaṭīb, 128) and the Muʿtazilite Abu 'l-Hudhayl al-ʿAllāf (*Aghānī*, v, 354). Various dates are given for his death: 188/803 according to *Aghānī*, V, 254, repeated by al-Khaṭīb, 133; or 192/807, idem 133 and Yāḳūt, IV, 283; or after 193/808, according to one of his friends who is said to have met him in Baghdad after the death of al-Rashīd, which occurred in that year (al-Khaṭīb, 133 and Ibn Khallikān). Al-ʿAbbās would have been at that time about 60 years old. He is said to have died while on pilgrimage and to have been buried in Baṣra (al-Khaṭīb, 132-3 and al-Masʿūdī, vii, 247).

The work of al-ʿAbbās was collected after his death by Zunbur, and subsequently, in the form of extracts, by Abū Bakr al-Suli (*Fihrist*, 163, 151); al-Ṣūlī wrote also a biography of the poet (*ib.* 151), which was extensively used by Abu 'l-Faradj al-Iṣfahānī in the article in the *Aghānī*. We have no information about the versions that circulated in Khurāsān during the lifetime of ʿUbayd Allāh b. Ṭāhir (d. 300/912; cf. *Aghānī*, viii, 353). One cannot exclude the hypothesis that verses by unknown authors were wrongly included in these versions; cf. the detail quoted by al-Marzubānī, 292. At any rate Yāḳūt, iv, 284 points out that the manuscripts of his time were divergent. The work of al-ʿAbbās is preserved only in two manuscripts of the selection made by al-Ṣūlī; on a third one, now lost (?), was based the unsatisfactory edition, Istanbul 1298/1880 (reproduced in Cairo-Baghdad 1367/1947; cf. A. Khusraji, *Dīwān d'al-ʿAbbās b. al-Aḥnaf*, thesis submitted to the Faculty of Letters, Paris, in 1953). The existing collection consists of pieces that are generally short and some of which are perhaps only fragments of longer poems.

Al-ʿAbbās, as all his Muslim biographers have noted, cultivated only one genre, the *ghazal* [*q.v.*], i.e. erotico-elegiac poetry (cf. e.g. Ibn Ḳutayba, 525; *Fihrist*, 132; *Aghānī* [3], viii, 352). In their present state, the pieces that are available confirm this fact Al-ʿAbbās appears in them as a follower of the poets of al-Ḥidjaz, namely ʿUmar b. Abī Rabīʿa and especially Djamīl, al-Aḥwaṣ and al-ʿArdjī, in whose work the tendencies of the school began to take a fixed form. In his poems there reappears not only the psychological scheme of the submissive lover, but also the fictitious personages of the *raḳīb* and *wāshī*. The woman whom he extols is presented in a stylised manner, so that we are unable to say if the poet is merely combining *clichés* or starting from a real experience. Not all the poems, however, are expressions of ideal love; we find (*Dīwān*, Istanbul, 148-50), the description of an orgy with singing girls. On the whole, however, the poetry of al-ʿAbbās stands in contrast to that of Abū Nuwās [*q.v.*], which is permeated with the carnal cult of the beloved. The art of al-ʿAbbās is highly conventional and his inspiration is monotonous. On the other hand, his style avoids the use of gimcrack rhetoric and his language, simple and fluent without being vulgar, is akin to that of Abū Nuwās.

The vogue enjoyed by the poetry of al-ʿAbbās from the very first cannot be explained solely by some hellenistic influence or by respect for an old Arab tradition. The society in which the poet lived must also be taken into consideration. Chiming with the dilettantism of al-Rashīd and the taste of the women of the court, the poems of al-ʿAbbās were ready-made material for composers and singers, like Ibrāhīm al-Mawṣilī (cf. *Aghānī* [3], vi, 182, viii, 361, 354-6). Nevertheless the favour shown to them by men of letters like al-Djāḥiẓ, Ibn Ḳutayba, or al-Masʿūdī, by a music-lover like the caliph al-Wāthiḳ, by a *bel esprit* like Abū Bakr al-Ṣūlī, or finally by a rigorist like Salama b. ʿĀṣim (cf. Ibn Ḳutayba, *al-Shiʿr*, 525 ff., and especially *Aghānī* [3], viii, 354 ff.), shows that these poetical productions could be enjoyed by a public of greatly varying tastes.

It is difficult to define the importance of al-ʿAbbās b. al-Aḥnaf in the history of Arabic poetry. If Muslim Spain really appreciated this oriental poet (cf. Ibn Ḥazm, *Ṭawḳ al-Ḥamāma* (Bercher), 285; Péres, *La poesie andalouse en arabe classique au XIe siècle*, 54, 411), one might see in him one of the poets who influenced the erotic-elegiac poetry so highly valued in that country. In this case, his role in the development of the genre would be of the greatest importance. Recently, oriental critics like F. Rifāʿī and Bahbītī have tried to discover what in the work of al-ʿAbbās retains a lasting value. In two penetrating studies, Hell and Torrey placed the poet in his milieu and noted his influence in Arabic literature.

(R. Blachère)

AL-ʿABBĀS B. ʿAMR AL-GHANAWĪ, famous general and governor of the ʿAbbāsid caliphs at the end of the third century/c. 900. In 286/899 he fought against the Arab tribes in ʿIrāḳ. In 287/900 he was appointed by the caliph al-Muʿtaḍid governor of Yamāma and Baḥrayn, with orders to fight against the Ḳarmaṭian chief of Baḥrayn, Abū Saʿīd al-Djannābī. He left Baṣra with an army of regular soldiers, volunteers from Baṣra and beduin auxiliaries, was left in the lurch in the first battle by the beduins andt he volunteers and next day, after a bloody battle, he was taken prisoner together with about 700 men (end of Radjab 287/July 900). The prisoners were executed, but al-ʿAbbās was spared by the Ḳarmaṭian, who charged him with a message to the caliph, in which he set forth the dangers and the uselessness of a new campaign against him. One can find in M. J. de Goeje's *Memoire sur les Carmathes de Bahrain*, 37-41, an account of the battle and its consequences, after al-Ṭabarī, as well as the anecdote, told among others by al-Tanūkhī (*al-Faradj baʿd al-Shidda*, Cairo 1903, i, 110-1), concerning the liberation of al-ʿAbbās, a matter of astonishment to contemporaries as well as his the historians. Al-ʿAbbās was one of the generals who in 289/901-2 abandoned the commander-in-chief, Badr, at the instigation of the new caliph al-Muktafī. According to Ibn al-Athīr he was governor of Ḳumm and Kāshān in 296/908-9. He accompanied the army of Muʾnis that defended Egypt, in 303-3/914-5, from a Fāṭimid attack (Ibn Taghrībirdī, Cairo, iii, 186). At the end of his life, we find him as military and civil governor of Diyār Muḍar, residing in al-Raḳḳa, where he died in 305/917. He came, no doubt, from that district, and gave his name to a Ḳaṣr al-ʿAbbās, situated between Nisibis and Sindjār (Yāḳūt, iv, 114).

There does not seem to be sufficient reason to assume, as has been done in the first ed. of this Encyclopaedia, that there was at the same epoch another al-ʿAbbās b. ʿAmr, different from ours.

ʿABBĀS B. FIRNĀS B. WARDŪS, ABU 'L-ḲĀSIM, Andalusi scholar and poet, belonging to the entourage of the Hispano-Umayyad amīrs al-Ḥakam I, ʿAbd al-Raḥmān II and MuḥammadI, in the 3rd/9th century. No biographical data about him are available, and we only know that he was an Umayyad *mawlā* of Berber origin, that he came from the *kūra* of Tākurunnā, i.e. the district of Ronda, and that he died in 274/887. His strong personality is now fully manifest, thanks to the newly found volume of Ibn Ḥayyān's *al-Muḳtabis* concerning the Andalusi amirate, where a long passage is devoted to him and a great number of his verses are quoted. ʿAbbās b. Firnās, who managed, thanks to his panagyrics, to keep his position at the court of Cordova during three successive reigns, is chiefly represented as a uan ef curious and inventive mind. He is said to have made a journey to ʿIrāḳ and to have brought back to Spain the *Sindhind*. He was the only one in Cordova to be able to explain the contents of al-Khalīl b. Aḥmad's treatise on metrics. To him is attributed the invention of the fabrication of crystal. He constructed, and offered to his masters, a clock (*manḳāna*) and an armillary sphere (*dhāt al-ḥalaḳ*). He was even a distant precursor of aviation, thinking out a sheath furnished with feathers and mobile wings; had the courage to put it on, to jump from the top of a precipice and to hover in the air for a few seconds before falling—escaping death by a miracle. He was occasionally accused of *zandaḳa*, but without success.

AL-ʿABBĀS B. AL-ḤUSAYN AL-SHĪRĀZĪ, ABU 'L-FAḌL, vizier. At the death of al-Muhallabī in 352/963, al-ʿAbbās, head of the Dīwān of Expenses, was charged by the Būyid Muʿizz al-Dawla with the functions of a vizier, together with another secretary, Ibn Fasāndjas, but without succeeding to the title. After the death of Muʿizz al-Dawla in 356/967, he was appointed vizier by the son and successor of Muʿizz al-Dawla, Bakhtiyār. He succeeded in suppressing the rebellion of another son of Muʿizz al-Dawla. Owing to the enmity of the chamberlain Subuktakīn, the financial difficulties, and the intrigues of Ibn Fasāndjas who hoped to extract money from al-ʿAbbās, he was deposed in 359/969-70 and put into the hands of his rival. The latter, however, was not more successful in his office and al-ʿAbbās managed to recover his freedom in 360/971, to be re-appointed as vizier and to eliminate definitely Ibn Fasāndjas. His extortion of money, to pay the troops, made him again the butt of hatred, especially that of Bakhtiyār's omnipotent majordomo, Ibn Baḳiyya. In 362/973 he was arrested owing the machinations of Ibn Baḳiyya, and the latter was appointed vizier. Al-ʿAbbās was confined in the house of an ʿAlid in Kūfa and died soon afterwards, probably from poison.

Al-ʿAbbās possessed a palace in Baghdad, called Khākān, which was destroyed by order of Bakhtiyār. On this palace, the festivals held in it, and the other buildings of al-ʿAbbās, see al-Ḥusrī, *Dhayl Zahr al-Ādāb*, Cairo 1353, 275 f.

Bibliography: Miskawayh, ii, 121, 198 ff., 310 f.; Tanūkhī, *Nishwār al-Muḥāḍara*, i, 215; Ibn al-Athīr, viii, 405 f. (M. CANARD)

AL-ʿABBĀS B. AL-MAʾMŪN, pretender to the throne under al-Muʿtaṣim. His father, the caliph al-Maʾmūn, appointed him in 213/828-9 a governor of al-Djazīra and the neighbouring frontier district, and he then showed great bravery in fighting the Byzantines. On the death of al-Maʾmūn in 218/833, his brother, Abū Isḥāḳ Muḥammad al-Muʿtaṣim bi-'llāh, by choice of the deceased, ascended the throne of the ʿAbbāsids. The army which al-Maʾmūn had collected against the Greeks, however, proclaimed al-ʿAbbās caliph, although he himself was not in the least disposed to comply with the wishes of his troops and took the oath of fealty to his uncle. After that, he went back to his army and succeeded in appeasing its discontent. Then the caliph, in order to strengthen his position, took many measures of precaution; he had the fortress of Ṭuwāna (Tyana) razed, stopped the war against the Byzantines and disbanded the army. Later, having organized some Turkish regiments as his guard, he loaded them with honours to an extent wbich disaffected the Arab troops, who had shown themselves sufficiently ill-disposed ever since the death of al-Maʾmūn. ʿUdjayf

b. ʿAnbasa, an Arab general in the service of al-Muʿtaṣim utilized this discontent for the purpose of organizing a conspiracy, the object of which was to assassinate the caliph and to put al-ʿAbbās on the throne. The latter allowed himself to be persuaded; but the plot was discovered, and the conspirators paid for their attempt with their lives. Al-ʿAbbās died in prison at Manbidj in 223/838.

(K. V. ZETTERSTÉEN)

AL-ʿ**ABBĀS** B. **MIRDĀS** B. ABĪ ʿĀMIR B. HĀRITHA B. ʿABD ḲAYS, of Sulaym, Arabian poet of the *mukhaḍramīn*. A *sayyid* in his tribe by noble descent on both sides, he won renown as a warrior as well as a poet; although he did not come up to the fame of his stepmother, the celebrated al-Khansāʾ, his poetical achievements surpassed those of his brothers and his sister all of whom displayed literary gifts and two of whom lived to compose elegies on his death. Impelled, so the story goes, by two dream experiences or epiphanies in which his family idol, Ḍimār (not Ḍimād, cf. *TA*, iii, 353) announced its own downfall and the rise of the true prophet, al-ʿAbbās went to Medina to embrace Islam. Muḥammad, who was at the time preparing for the conquest of Mecca, arranged for al-ʿAbbās to meet him with his tribesmen at al-Ḳudayd. Al-ʿAbbās returned to the Banū Sulaym and burned his idol while his wife, Ḥabība, returned to her people in indignation over her husband's conversion. Al-ʿAbbās kept his word and joined in the *fatḥ Makka* (8/630) with some 900 fully armed warriors. He was among the *muʾallafa ḳulūbuhum*, those influential men whose loyalty Muḥammad endeavored to secure by lavish gifts, but demurred when on the distribution of the booty taken from the Hawāzin at the battle of Ḥunayn (630) his present turned out substantially smaller than that of other leaders. As a result of a *ḳaṣīda* of protest Muḥammad satisfied al-ʿAbbās by increasing his share. After the *fatḥ* he withdrew to the territory of the Sulaym. He lived into the reign of ʿUmar before whom he is reported to have appeared in a quarrel with another poet. Ibn Saʿd reports that he settled near Baṣra, often coming into town where the Baṣrians would take traditions from him. His son Djulhuma, too, appears as a transmitter of *ḥadīth* from the Prophet. His offspring settled in and near Baṣra.

Al-ʿAbbās's poetical fame would seem to be due as much to his colourful personality as to the actual merits of his verse. His *muhādjāt* with his fellow-tribesman Khufāf b. Nadba, his poem upon his burning Ḍimār and accepting Islam, his protest against the Prophet's inadequate donation, and finally a *ḳaṣīda* (*Aṣmaʿiyyāt*, XXXVIII; cf. introduction, 12) originating in connection with a successful raid into the Yaman are perhaps the best-known of his poems, which it seems were never collected into a *dīwān*. The available material gives evidence of a certain forcefulness but does not betray unusual talents. Some of his lines are interesting because of dialectical peculiarities, others because of the manner in which they reflect his experience of Islam.

AL-ʿ**ABBĀS** B. **MUḤAMMAD** B. ʿALĪ B. ʿABD ALLĀH, brother of the caliphs Abu l-ʿAbbās al-Saffāḥ and Abū Djaʿfar al-Manṣūr. ʿAbbās helped to retake Malaṭya in 139/756, and three years later was appointed by al-Manṣūr as governor of al-Djazīra and the neighbouring frontier district. He was dismissed in 155/772, but his name continues to figure frequently in the history of the following years, however little important his political part may have been. He especially and often distinguished himself in the wars against the Byzantines. In 159/775-6 he was put at the head of the troops which the caliph al-Mahdī mustered for an expedition against Asia Minor, and it was with great success that he acquitted himself of the charge committed to him. He died in 186/802.

ʿ**ABBĀS** B. **NĀṢIH** AL-THAḲAFĪ, Andalusi poet of the 3rd/9th century. He stayed for a long time in Egypt, Ḥidjāz and ʿIrāḳ, acquiring a broad culture. A confidant of the amīr al-Ḥakam I, who appointed him as ḳāḍī of his native Algeciras, he soon made a name for himself both as a philologist and a jurist. The *Muḳtabis* of Ibn Ḥayyān has preserved numerous specimens of his poetry. He died at the end of the reign of ʿAbd al-Raḥmān II, circa 238/852.

Bibliography: Ibn Ḥayyān, *al-Muḳtabis*, i (in press), fol. 129 f.; Ibn al-Faraḍī, *Tāʾrīkh*, no. 879; Maḳḳarī, *Nafḥ*, index.

(E. LÉVI-PROVENÇAL)

AL-ʿ**ABBĀS** B. AL-**WALĪD**, Umayyad general, son of the caliph al-Walīd I. Al-ʿAbbās owes his celebrity principally to the energetic part he took in the continual struggles of the Umayyads with the Byzantines. Concerning the details, the Arabic and Byzantine sources do not always agree. In the early part of the reign of al-Walīd I, he and his uncle Maslama b. ʿAbd al-Malik, took Ṭuwāna, the most important fortress of Cappadocia. The Muslims had begun to be discouraged and ʿAbbās had to display the greatest energy to succeed in stopping the fugitives and renewing the battle. The Greeks were forced to retire into the town, which was immediately invested and had to surrender after a long siege. Arab historians give Djumāda II 88/May 707 as the date of the fall of the fortress, but the Byzantines put it two years later. For the following period, the Arabic chronicles mention many military expeditions undertaken by the two Umayyad generals, sometimes jointly, sometimes by one of them independently of the other. The most remarkable events were the taking of Sebastopol in Cilicia by ʿAbbās, and of Amasia in Pontus by Maslama, in 93/712. In the following year, ʿAbbās seized Antioch in Pisidia. He continued to support Maslama faithfully in subsequent battles. When, after the death of ʿUmar II in 101/720, Yazīd b. al-Muhallab, the governor of ʿIrāḳ, fomented a dangerous insurrection, ʿAbbās was sent against him, first alone, then he and Maslama together. Yazīd was killed in a battle against the caliph's troops in 102/720, and peace was soon restored. In the reign of Walīd II, he first was intelligent and loyal enough to oppose the plot of his brother Yazīd, whom he

warned, together with the other Marwānids, not to let loose by their revolts the *fitna*, which would prove fatal to the dynasty. But at the end he had to give in to violence and join the coup d'état of 126/744. Later he was thrown into prison by the last Umayyad caliph, Marwān II. He died in prison in Ḥarrān, in an epidemic, in 132/750.

ʿABBĀS EFENDI [see BAHĀʾĪS]

ʿABBĀS ḤILMĪ I, viceroy of Egypt, born in 1813, son of Aḥmad Ṭūsun (1793-1816) and grandson of Muhammad ʿAlī [*q.v.*]. He succeeded to his uncle Ibrāhīm, who died 10 Nov. 1848. From his very accession he showed great hostility to foreigners. The reforms undertaken during the preceding period he chose to consider as dangerous and blameworthy innovations that were best abandoned. Most of the schools opened by Muhammad ʿAli were closed, as well as the factories, workshops and sanitary institutions; he even gave orders to destroy the works of the Delta dam. Many foreign, especially French, officials were dismissed. The result was, from the beginning of his reign, the decline of French influence; on the other hand, he drew nearer to Great Britain. Great Britain offered him its support in the conflict with the Ottoman government about the application in Egypt of the *tanẓīmāt* [*q.v.*]. In exchange for this support, Great Britain obtained on 18 July 1851 the authorisation to construct the railway between Alexandria and Cairo. The opening of this line, which was planned to be extended to Suez, was meant to counteract the French project to cut the isthmus of Suez.

Distrustful, brutal, hard, and sometimes cruel, by nature, ʿAbbās quickly became unpopular. It must be noted, however, that at least in the first years of his reign, his aversion to the reforms inspired by the West, helped, by a considerable decrease of the expenses, to relieve the poorest classes of the population. They were granted some remission of taxes and had less to suffer from corvée and conscription. Moreover, certain western and Egyptian historians haye tried to explain the reactionary and xenophobe policy of ʿAbbās by an ardent patriotism, which, allegedly, induced him to limit by all means the foreign influence of the consequences of which he was afraid; Sammarco, however, has refuted this assertion.

ʿAbbās, impelled by his mistrustful character to live in isolation, retired to his palace in Benha. He was strangled there by two of his servants, on 13 July 1854, in circumstances which were never wholly cleared up. He was succeeded by his uncle Muh. Saʿīd [*q.v.*].

Hanotaux, *Histoire de la nation égyptienne*, vol. vi, Paris 1936; J. Heyworth-Dunne, *Introduction to the History of Education in Modern Egypt*, London [1939], 285-312 and index. (M. Colombe)

ʿABBĀS ḤILMĪ II, khedive of Egypt, born in Alexandria, 14 July 1874, died in Geneva 20 Dec. 1944. He studied in the Theresianum in Vienna together with his brother Muḥ. ʿAlī (b. 9 Nov. 1875) and succeeded to his father, Muḥ. Tawfīḳ [*q.v.*], on 8 Jan. 1892. He soon came into conflict with the diplomatic agents and consuls general of England in Cairo, first Sir Evelyn Baring (Lord Cromer), and then Lord Kitchener [see MIṢR].

When in August 1914 the world war broke out, ʿAbbās Ḥilmī was in Istanbul, where he had arrived in the summer. Having been wounded on 25 July in an attempt on his life, he remained in the Ottoman capital for treatment. From there he addressed to the Egyptians and Sudanese, on Turkey entering the war on the side of the Central Powers, an appeal to fight against the occupiers of his country. On the same day the state of siege was declared in Cairo. A month later, on 18 Dec., the British Government decided to put Egypt under their protectorate; on 19 Dec., the khedive was deposed and replaced by prince Ḥusayn Kāmil, the eldest of the princes of the family of Muḥ. ʿAlī.

During the war, ʿAbbās Ḥilmī, kept in the background by the Young Turks, lived first in Istanbul and then in Vienna, whence he made several journeys to Switzerland. He spent in that country the last part of his life. In 1922, when Egypt became a sovereign and independent state (British declaration of 28 Febr. 1922), and the sultan Fuʾād [*q.v.*], successor of Ḥusayn Kāmil, who died in 1917, took the title of king (15 March 1922), the ex-khedive was declared to have lost all his rights to the throne (this measure was not applied to "his direct and legitimate masculine descendants"; royal rescript of 13.4.1922, Official Journal of Egypt of 15.4, no. 38, extraordinary). His property was liquidated and he was forbidden to enter Egypt. Nevertheless, ʿAbbās Ḥilmī had for some time many partisans in Egypt and it was only in May 1931 that he renounced "all pretension to the throne".

The ex-khedive had two sons, Muḥ. ʿAbd al-Munʿim and Muḥ. ʿAbd al-Ḳādir. The first (b. 20 Febr. 1899) was appointed, on the abdication of king Fārūḳ (26 July 1952) as a member of the regency council, and became, on Oct. 1952, sole regent of the kingdom until the proclamation of the Republic in June 1953.

Hanotaux, *Histoire de la nation égyptienne*, vol. vii; Hasan Chafik, *Statut juridique international de l'Egypte*, Paris 1928; Mohamed Seif Alla Rouchdi, *L'Hérédité du trône en Egypte contemporaine*, Paris 1943; Abbas Hilmi II, *A few words on the Anglo-Egyptian settlement*, London 1929. (M. Colombe)

ʿABBĀS MĪRZĀ, son of Fatḥ ʿAlī S̲h̲āh, born in D̲h̲u 'l-Ḥid̲j̲d̲j̲a 1203/Sept. 1789, in the small town of Nawā, died on 10 D̲j̲umādā II 1249/25 Oct. 1833. Although not the eldest son, he was made heir to the throne because his mother also belonged to the Ḳād̲j̲ār family. Europeans who knew him were unanimous in their praise of his bravery, generosity and other excellent qualities. R. G. Watson (*History of Persia*, 128-9) describes him as "the noblest of the Kajar race". He was passionately devoted to the military art, and, with the aid of, successively, Russian, French, and British officers and men, introduced European tactics and discipline amongst his troops in Ad̲h̲arbayd̲j̲ān, of which province he was Governor-General for many years. Despite his military reforms, he failed in his campaigns against the Russians, but he was successful in the war against Turkey in 1821-3.

He died at Mas̲h̲had during his father's lifetime; on Fatḥ ʿAlī S̲h̲āh's death in the following year (1834), ʿAbbās Mīrzā's son Muḥammad succeeded to the throne.

ʿABBĀSA, daughter of the caliph al-Mahdī, sister of the caliphs Hārūn al-Ras̲h̲īd and al-Hādī; it is to her that the locality Suwayḳat al-ʿAbbāsa owes its name. She had three husbands in succession, who all predeceased her; this inspired Abū Nuwās to write some satirical verses, in which he recommanded the caliph, should he want to have a traitor killed, to marry him to ʿAbbāsa. Her name is connected with the fall of the Barmakids through the amorous intrigue with D̲j̲aʿfar b. Yaḥyā al-Barmakī, with which she is credited. According to al-Ṭabarī, Hārūn could not deprive himself of the society of either his sister or D̲j̲aʿfar, so that, in order to have them both with him at the same time, he made them contract a purely formal marriage. They, however, were not contented with the form alone; and when Hārūn learned that they had children, and was convinced that the reports in circulation about them were true, he caused D̲j̲aʿfar to be executed.—Some earlier historians than al-Ṭabarī do not mention this fact; especially it must be noticed that the commentaries on the verses of Abū Nuwās give the names of ʿAbbāsa's husbands without mentioning that of D̲j̲aʿfar. Further, al-Ṭabarī, like the other chroniclers who repeat this story, only mentions it as *one* of the events which were reported to have caused D̲j̲aʿfar's execution. Later chroniclers amplify the love-story of D̲j̲aʿfar and ʿAbbāsa more and more, until Ibn K̲h̲aldūn calls its truth in question, even if on grounds which are not very conclusive for us. If one detail, found in the Persian Ṭabarī, must be believed, ʿAbbāsa was already forty years old when her relations with D̲j̲aʿfar began. It is quite certain that her second husband died eleven years before D̲j̲aʿfar, and these figures put all ideas of a youthful romance out of the question. We may then reasonably look upon this anecdote as the product of popular imagination, to give a poetic aura to the fall of this favorite minister. This is the more likely in that pagan Arab stories contain a remarkably similar episode of the marriage of the minister of a king with the latter's sister (see D̲J̲AD̲H̲ĪMA AL-ABRAS̲H̲); it was very easy to transfer to D̲j̲aʿfar the motif of this story. What the greater number of authorities report on the subject of ʿAbbāsa is reported by some about two other fictitious sisters of Hārūn, Maymūna and Fāk̲h̲ita! The older authorities say nothing about what happened to ʿAbbāsa after the death of D̲j̲aʿfar; it is only the later writers who have woven mysterious horrors about her end. The love of ʿAbbāsa and D̲j̲aʿfar has frequently appealed to the imagination of European as well as Arabian authors: in 1753 a French romance appeared, and again more recently, in 1904 (Aimé Giron and Albert Tozza, *Les nuits de Bagdad*).

ʿABBĀSA, town in Egypt, the name of which derives from that of ʿAbbāsa, daughter of Aḥmad b. Ṭūlūn. The princess had pitched her camp on its place and it was there that she said good-bye to Ḳaṭr al-Nadā, daughter of K̲h̲umārawayh, who was going to marry the caliph al-Muʿtaḍid. Around this casual encampment buildings were raised and Ḳaṣr ʿAbbāsa, the "palace of ʿAbbāsa", became the township of ʿAbbāsa. It was at that time the last town on the road to Syria, situated as it was at the entrance of the Wādī Ṭūmīlāt, that narrow strip of vegetation that reaches to the East as far as the Bitter Seas, and was called in the Middle Ages Wādī al-Sadīr and even Wādī ʿAbbāsa.

The town was, therefore, destined to play a military role and, in effect, it was a rallying point for troops during the last period of the Ṭūlūnids and again under the Mamlūks. A customs-house was established to collect duty on goods imported from Syria; it is mentioned in connection with certain adjustments of rates ordered by the sultan Barḳūḳ.

The Fāṭimids did not often leave their capital, but nevertheless, according to al-Maḳdisī, ʿAbbāsa had smarter houses than Fusṭāṭ, with protruding balconies. It was embellished especially by the Ayyūbid al-Malik al-Kāmil, who paid the town long visits. He had gardens laid out and pavilions built. The ruler came to hunt and to fish, and couriers on dromedaries brought him from Cairo the political and administrative news.

ʿAbbāsa kept until the end of the Mamlūk period its role as a meeting-place for hunts, and even Ḳāʾitbay used to visit it from time to time. The town had long since lost its strategic importance owing to the foundation of Ṣāliḥiyya about 35 miles to the North-East, and later that of Ẓāhiriyya, in the immediate neighbourhood of ʿAbbāsa.

The district was inhabited by beduin Arabs, who nomadized in the Wādī Ṭūmīlāt, and whose chief, according to some authorities, resided in ʿAbbāsa. Nevertheless, ʿAbbāsa is no longer mentioned in the Ottoman period and its name does not appear in al-D̲j̲abartī's chronicle. It was from Ṣāliḥiyya that the troops of Bonaparte watched the desert road. ʿAbbāsa is today an unimportant township, between Abū Ḥammād and Tall al-Kabīr.

ʿABBĀSĀBĀD, name of numerous places in Persia. The best-known is a fortified borough lying by the Čas̲h̲me-yi-gaz on the K̲h̲urāsān road, between Sabzawār (circa 75 miles) and S̲h̲āhrūd

(circa 68 miles), where Shāh ᶜAbbās I [*q.v.*] settled a colony of some hundred families of Georgians. In 1934 there remained only one old woman who remembered Georgian. Another ᶜAbbāsābād was built by Prince ᶜAbbās Mīrzā [*q.v.*] on the left bank of the Araxes (near Nakhčuwān). Together with its *tête-de-pont* on the right bank, it was ceded to Russia by the treaty of 1828. (V. MINORSKY)

ᶜABBĀSĪ [see SIKKA]

ᶜABBĀSIDS (BANU 'L-ᶜABBĀS), the dynasty of the Caliphs from 132/750 to 656/1258. The dynasty takes its name from its ancestor, al-ᶜAbbās b. ᶜAbd al-Muṭṭalib b. Hāshim, the uncle of the Prophet.

The story of the origins and nature of the movement that overthrew the Umayyad Caliphate and established the ᶜAbbāsid dynasty in its place was for long known only in the much-revised version put about when the dynasty had already attained power, and, with it, respectability. A more critical version was proposed by G. van Vloten (*De opkomst der Abbasiden in Chorasan*, Leiden 1890, and *Recherches sur la domination arabe, le chiitisme et les croyances messianiques sous le califat des Omayyades*, Amsterdam 1894), and developed by J. Wellhausen (in the final chapter of his *Das Arabische Reich und sein Sturz*, Berlin 1902; English transl., Calcutta 1927). His findings, with some modifications, have been confirmed by subsequent research, and more especially by the new information that has come to light in recent years on the early history of the Shīᶜa sects, notably in the *Firaḳ al-Shīᶜa* of al-Nawbakhtī (ed. H. Ritter, Istanbul 1931). They were to a remarkable degree anticipated by Ibn Khaldūn in his history.

The ᶜAbbāsid party that won power from the Umayyads was known as Hāshimiyya. According to the later chronicles, this name referred to Hāshīm, the common ancestor of al-ᶜAbbās, ᶜAlī and the Prophet, and it has been taken as asserting a claim to the succession based on kinship with the Prophet. In fact the name was of a quite different significance, and reveals very clearly the true origins of the ᶜAbbāsid party. During the Umayyad period the large number of Shīᶜite and pro-Shīᶜite sects and parties that flourished in different parts of the Empire, but especially in Southern ᶜIrāḳ, may be broadly divided into two main groups. One of them followed the pretenders of the line of Fāṭima, and was, generally speaking, moderate, differing from the dominant faith chiefly by its support, on legitimist grounds, for the political claims of the house of ᶜAlī. The other first appeared in the revolt of al-Mukhtār, who rose in 66/685 in the name of Muḥammad, a son of ᶜAlī by a Ḥanafī woman. For the next sixty or seventy years the claims of Muḥammad b. al-Ḥanafiyya and his successors were advanced by a series of sects of a more extreme character, deriving their main support from the resentful and imperfectly Islamised *mawālī* and embodying in their teachings many ideas brought by these converts from their previous religions. After the death of Muḥammad b. al-Ḥanafiyya in 81/700-1, his followers split into three main groups, one of which followed his son Abū Hāshim ᶜAbd Allāh [*q.v.*], and was known after him as Hāshimiyya. On the death of Abū Hāshim without issue in 98/716, his followers again split into several groups, one of which maintained that Abū Hāshim had bequeathed the Imamate to Muḥammad b. ᶜAlī b. ᶜAbd Allāh b. al-ᶜAbbās, just before he died in the house of Muḥammad b. ᶜAlī's father in Palestine. This group continued to be known as Hāshimiyya, and also as Rāwandiyya (cf. S. Moscati, *Il testamento di Abū Hašim*, *RSO* 1952, 28 ff.). It may be noted in passing that the doctrine that the Imamate can be bequeathed or transferred by the Imām to another person is by no means infrequent in early Shīᶜism (see B. Lewis, *The origins of Ismāᶜīlism*, Cambridge 1940, 25 ff. and 44 ff.).

Whether or not the story of the bequest of Abū Hāshim is, as has been suggested, fictitious, the main fact remains clear: that Muḥammad b. ᶜAlī took over the claims of Abū Hāshim, and, with them, the sect and propaganda organisation of the Hāshimiyya, which he then proceeded to transform into the instrument of the ᶜAbbāsid party. He seems to have lost little time in using it. The accounts given by the historians of the first ᶜAbbāsid missions are incomplete and in part contradictory. Broadly, they indicate that intensive propaganda began from about 100/718. From headquarters in Kūfa, the Hāshimiyya sent emissaries to Khurāsān, one of whom, Khidāsh, won considerable success, but was executed in 118/736 after prematurely showing his hand. The moderate Shīᶜa, whose support Muḥammad b. ᶜAlī was still seeking, were alienated by the extreme doctrines taught by Khidāsh, and after his death Muḥammad deemed it advisable to disavow him and place his own organisation in Khurāsān under the control of the Shīᶜite chief missionary, Sulaymān b. Kathīr [*q.v.*]. A period of inactivity followed, during which Muḥammad died in 125/743. His son Ibrāhīm [*q.v.*] succeeded to his claims and was accepted by the followers in Khurāsān, including Sulaymān b. Kathīr. With Ibrāhīm a new phase of activity began. In 128/745-6 Ibrāhīm sent his *mawlā* Abū Muslim [*q.v.*] as his personal representative to Khurāsān. The sources differ on the origin of Abū Muslim, but agree that he was a Persian, and a freedman of Ibrāhīm. The use of the *kunya* was at that time a privilege rarely enjoyed by non-Arabs, and its employment by Persian emissaries of the ᶜAbbāsids like Abū Muslim, his lieutenant Abū Djahm, and his rival Abū Salama al-Khallāl is not without significance. Considered in the light of the statements in some sources that Abū Muslim claimed or was granted membership of the ᶜAbbāsid house, it may well be an example of the practice, common among the extreme Shīᶜa, of granting to favoured supporters adoptive membership of the house of the Prophet, and thus, incidentally as it were, of the Arab nation. A modified form of this method of adoption later became part of the dynastic policy of the ᶜAbbāsid caliphs (see ABNĀ').

Abū Muslim's mission to Khurāsān achieved a rapid and resounding success. While his main appeal was to the Persian *mawālī*, he also found important support among the Yemenite Arabs, and is said to have won over many of the Zoroastrian and Buddhist *dihḳāns*, some of whom were now converted to Islam for the first time. Opinions differ as to the nature of Abū Muslim's teachings. Two things are clear however—that he was a loyal agent of the Hāshimiyya, and that they were a part of the extremist wing of the Shīᶜa. It seems likely therefore that the doctrines he taught were of the kind current among the extreme Shīᶜa—probably including elements of Iranian origin, and thus the more acceptable to those whom he addressed. The hoisting of the black flags, later accepted as the emblem of the house of ᶜAbbās, had at this stage a messianic significance. Black flags were among the signs and portents listed in the eschatological prophecies current at the time, and had been used

as emblems of religious revolt by earlier rebels against the Umayyads. Their use by Abū Muslim was thus an appeal to messianic expectations. His activities aroused some opposition among the more moderate Arab Shīʿa, led by Sulaymān b. Kathīr, but a tactical withdrawal of Abū Muslim from Khurāsān was sufficient to demonstrate that no effective movement was possible without him and his policies, and led to his return as undisputed leader of the mission. By Ramaḍān 129/May-June 747 he was ready to show his hand. The time and the place were auspicious. The moderate Shīʿa and the Khawāridj, the two most important opposition movements against the Umayyads, had both shot their bolt — the former in the risings of 122/740 and 126/744, the latter in the rebellion of 127/745. These served the double purpose of weakening the Umayyad regime and, by their failure, eliminating possible rivals to the Hāshimī succession. ʿIrāḳ, the main centre of previous anti-Umayyad movements, was exhausted, and was moreover subject to special Umayyad surveillance. In concentrating their attention on Khurāsān, the ʿAbbāsids were breaking new grounds. Their choice was good. An active and warlike Persian population, imbued with the religious and military traditions of the frontier, was deeply resentful of the inequalities imposed by Umayyad rule. The Arab army and settlers, half Persianized by long residence, were sharply divided among themselves, and even during the triumphal progress of Abū Muslim diverted their own energies and those of the Umayyad governor, Naṣr b. Sayyār [*q.v.*], to Arab inter-tribal strife. Soon Abū Muslim was able to take Marw, and then, ably seconded by his general Ḳaḥṭaba [*q.v.*], an Arab of the tribe of Ṭayy, seized all Khurāsān from the crumbling Umayyad power. From Khurāsān the ʿAbbāsid forces advanced to Rayy and then, after defeating a relieving Umayyad army from Kirmān, captured Nihāwand. The way was now open to ʿIrāḳ. In 132/749 the ʿAbbāsid army crossed the Euphrates some 30 or 40 miles north of Kūfa, and engaged and defeated another Umayyad army led by Ibn Hubayra [*q.v.*]. Ḳaḥṭaba fell on the field of battle, but his son, al-Ḥasan b. Ḳaḥṭaba, took command, and following up the victory, took possession of the city of Kūfa. Ibrāhīm al-Imām had fallen into the hands of the Caliph Marwān in 130/748, and died shortly after. It was therefore his brother, Abu 'l-ʿAbbās [*q.v.*] who was hailed as Caliph by the Hāshimī troops in Kūfa in 132/749, with the title al-Saffāḥ. The accession of the first ʿAbbāsid Caliph was accompanied by the first breach with the revolutionaries, when the missionary Abū Salama [*q.v.*] was put to death in obscure circumstances, allegedly for attempting to bring about the replacement of the ʿAbbāsids by the ʿAlids. Abū Muslim undertook his removal, perhaps in return for ʿAbbāsid acquiescence in the death of Sulaymān b. Kathīr. Meanwhile another ʿAbbāsid army, led by Abū ʿAwn, advanced from Nihāwand towards Mesopotamia. In 131/749, in the neighbourhood of Shahrazūr, east of the Lesser Zāb river, he inflicted a crushing defeat on an Umayyad army led by ʿAbd Allāh, the son of the caliph Marwān. Marwān now himself took the field, and marched across the Tigris towards the Greater Zāb river, to engage the army of Abū ʿAwn. The latter had meanwhile handed over his command to ʿAbd Allāh, the uncle of al-Saffāḥ, who had arrived from Kūfa with considerable reinforcements. The battle of the Greater Zāb, in 132/750, sealed the fate of the Umayyad Caliphate. The defeated Marwān fled to Syria, where he tried in vain to organize further resistance. The victorious ʿAbbāsid troops advanced through Ḥarrān, the residence of Marwān, into Syria, occupied Damascus, and then pursued Marwān into Egypt, where he was killed and his head sent to al-Saffāḥ in Kūfa. The authority o the new ʿAbbāsid caliph was now established all over the Middle East.

Much has been written about the historical significance of the ʿAbbāsid revolution, which historians have rightly seen to be something more than a mere change of dynasty. Many nineteenth century orientalists, unduly influenced by the racial theories of Gobineau and others, saw in the struggle a conflict between the Aryanism of Iran and the Semitism of Arabia, ending in a victory for the Persians over the Arabs, the destruction of what Wellhausen called the "Arab Kingdom" of the Umayyads, and the establishment of a new Iranian Empire under a cloak of Persianized Islam. There is at first sight much to support this view: the undoubted role of the Persians in the revolution itself, the prominent place of Persian ministers and courtiers in the new regime, the strong Persian elements in ʿAbbāsid government and culture. It is not surprising to find some statements to the same effect in the Arabic sources (Cf. al-Masʿūdī, *Murūdj*, viii, 292; al-Djāḥiẓ, *al-Bayān wa 'l-Tabyīn*, iii, 181 and 206; etc.). More recent writers have however made important modifications in the theories both of Persian victory and of Arab defeat. Shīʿism, for long regarded as an expression of the "Iranian national consciousness", was of Arab origin, and had its main centre among the mixed Arab, Aramaean and Persian population of southern ʿIrāḳ. It was taken to Persia by Arabs, and remained strongest in areas of Arab settlement like Ḳumm. The revolt of Abū Muslim was directed against Umayyad and Syrian rather than Arab rule as such, and won the support of many Arabs, especially among the Yemenites. There were many Arabs even among its leaders, including the redoubtable general Ḳaḥṭaba. Though racial antagonisms no doubt played their part in the movement, and though Persians were prominent among the victors, they nevertheless served an Arab dynasty, and, as the fate of Abū Muslim, Abū Salama and the Barmakids shows, received short shrift if they fell foul of their masters. Many high offices under the state were at first reserved to Arabs, Arabic was still the sole official language, Arabian land remained fiscally privileged, and the doctrine of Arab superiority remained strong enough, on the one hand, to induce Persians to provide themselves with fabricated Arab pedigrees, on the other to provoke the nationalist reaction of the Shuʿūbiyya [*q.v.*]. What the Arabs had lost was the exclusive right to the fruits of power. Persians as well as Arabs came to the ʿAbbāsid court, and the favour of the ruler, often expressed in the form of "adoption" into the Royal household, rather than pure Arab descent, came to be the passport to power and prestige. If a term must be set to the Arab Kingdom, it must be sought in the gradual cessation of the allowances and pensions formerly paid as of right to the Arab warriors and their families, and in the rise to power of the Turkish guards from the time of al-Muʿtaṣim.

The real significance of the ʿAbbāsid victory must be sought in the facts of the change that followed it, rather than in dubiously documented hypotheses on the movement that produced it. The first and most obvious change was the transfer of the centre of gravity from Syria to ʿIrāḳ, the traditional centre

of the great cosmopolitan Empires of the ancient Middle East, and of the civilisation to which Toynbee has given the name "Syriac". The first ʿAbbāsid caliph al-Saffāḥ set up his capital in the small town of Hāshimiyya, which he built on the east bank of the Euphrates near Kūfa. Later he transferred the capital to al-Anbār. It was his brother and successor, al-Manṣūr, in many ways the real founder of the ʿAbbāsid Caliphate, who established the permanent capital of the Empire in a new city on the west bank of the Tigris, near the ruins of Ctesiphon and at the intersection of several trade-routes. Its official name was Madīnat al-Salām, but it is usually known by the name of the small town that previously occupied the site—Baghdād.

From this city or its neighbourhood the ʿAbbāsid dynasty first ruled, and later reigned, as heads of the greater part of the Islamic world for five centuries. The period of their sovereignty, covering the great epoch of classical Islamic civilisation, may be conveniently considered in two parts. The first, from 132/750 to 334/945, saw the gradual decline of the authority of the caliphs and the rise of military leaders ruling through their troops. During the second, from ca. 334/945 to 656/1258, the caliphs, with one exception, retained a purely nominal suzerainty, while real power, even in Baghdād itself, was exercised by dynasties of secular sovereigns.

The main events of these two periods will be treated under the names of the various caliphs, dynasties, places, etc. Here only the broad outline of events will be given, and an attempt made to describe the main characteristics of each period.

1. 132/750—334/945

The ʿAbbāsid Caliphate in the days following its establishment must have seemed very insecure to contemporary eyes. Rebels rose against it on every side and for a long time every new caliph had to face risings in and around even the metropolitan province of ʿIrāḳ. In Syria, Arab supporters of the deposed Umayyads gave trouble, and found encouragement in the growing legend of the Sufyānī, a messianic figure of the house of Umayya who competed with the ʿAlid pretenders for the support of the discontented. The ʿAlids themselves, temporarily disorganised by the frustration of their hopes, and kept under close surveillance, were for a time in eclipse, but soon reappeared as the most dangerous and determined opponents of ʿAbbāsid rule. Even the Khawāridj remained an active, if minor, opposition force. Nor were the ostensible supporters of the dynasty wholly reliable. In the prevailing atmosphere of mistrust, only members of the ʿAbbāsid family were appointed to the highest positions —but when Abu 'l-ʿAbbās al-Saffāḥ died and his brother Abū Djaʿfar succeeded as Caliph with the title al-Manṣūr, their uncle, ʿAbd Allāh b. ʿAlī, commanding the troops and raiders on the Byzantine frontier, revolted and proclaimed himself caliph, and this serious threat was averted thanks in the main to Abū Muslim. There remained the problem of Abū Muslim himself and the Hāshimiyya. The ʿAbbāsids, like others before and after them who had come to power on the crest of a revolutionary movement, soon found themselves faced with a conflict between the tenets and objectives of the movement on the one hand and the needs of government and Empire on the other. The ʿAbbāsids chose continuity and orthodoxy, and had to face the angry disappointment of some of their followers. Abū Salama had already been destroyed. Abū Muslim himself was put to death as soon as al-Manṣūr felt strong enough to dispense with his uncomfortable presence. These steps, and the suppression of the more consistent wing of the Rāwandiyya [*q.v.*], alienated the extremist following of the ʿAbbāsids, some of whom found an outlet in a series of religio-political revolts in Īrān, while others later joined the ranks of the Ismāʿīlīs, the extremist wing of the Fāṭimid Shīʿa that grew up in the course of the 2nd/8th and 3rd/9th centuries. At the same time, however, the changes reassured the orthodox, thus helping al-Manṣūr to meet the dangers of rebellion and foreign war, and during his long and brilliant reign, to lay the foundations of ʿAbbāsid government. In this task, and especially in the elaboration of the centralised administrative structure, al-Manṣūr was ably seconded by a family that was to play a vital role during the first half century of ʿAbbāsid rule. The Barmakids [*q.v.*] are usually described as Persians, but they were of a very different kind from the Khurāsānian rebels who followed Abū Muslim. Their religion before conversion to Islam was neither Zoroastrianism nor any of its heresies, but Buddhism, and they belonged to the aristocratic, landowning priesthood of the Central Asian city of Balkh, an ancient capital whose imperial and commercial traditions provided a fund of experience to the ruling class of its citizens. It was after the foundation of Baghdād that Khālid al-Barmakī appeared as the righthand man of al-Manṣūr, and thereafter he and his descendants developed and directed the administration of the Empire, until the dramatic and still unexplained fall of the Barmakids from power under Hārūn al-Rashīd in 187/803. With the transfer of the centre of the Empire to the East, the destruction of the Arab aristocratic monopoly of high office, and the firm establishment in power of the Barmakids, Persian influences became stronger and stronger. Sasanid Persian models were followed in the court and the government, and Persians began to play an increasingly important part in both political and cultural life. This process of Persianisation continued during the reigns of al-Mahdī and al-Hādī; the prejudice against the employment of *mawālī* in high places gradually disappeared. To replace the weakening bond of Arab nationality the caliphs laid increased stress on Islamic orthodoxy and conformity, trying to weld their cosmopolitan Empire into a unity based on a common faith and a common way of life. Al-Manṣūr's renunciation of the heterodox origins of the ʿAbbāsid movement was followed under his successors by a deliberate policy of wooing the orthodox theologians and makers of opinion, and laying a greater stress on the religious element in the nature of the authority exercised by the caliphs. This policy, when contrasted with the dissolute lives led by many of the caliphs and their courtiers, often led to charges of hypocrisy, but was in the main successful in achieving its object. Mecca and Medina were rebuilt, the pilgrimage from ʿIrāḳ organised on a regular basis, and orthodoxy reinforced by an inquisitorial persecution of the various heretical movements and of Manichaeism, which at this time became prominent, under the name of Zandaḳa, as a revolutionary movement of the poorer classes (see ZINDĪḲ). For a time an attempt was made to impose the Muʿtazilī doctrine, which, if H. S. Nyberg's attractive hypothesis is correct (see EI[1] AL-MUʿTAZILA), was an official ʿAbbāsid attempt at a compromise with the Shīʿa. From the

time of al-Mutawakkil this attempt was abandoned, and thereafter the ʿAbbāsids adhered, formally at least, to the most rigid orthodoxy.

The reign of Hārūn al-Rashīd is generally regarded as the apogee of ʿAbbāsid power, but it is at this time that the first portents of decline are seen. In Persia, the series of religious revolts that had followed the martyrdom of Abū Muslim became ever more threatening, and challenged ʿAbbāsid authority in the Caspian provinces as well as in Khurāsān. In the west, ʿAbbāsid authority disappeared almost completely. Spain had rejected the ʿAbbāsids and become independent under an Umayyad prince as far back as 138/756. After the death of Yazīd b. Ḥātim, the last effective ʿAbbāsid governor of North Africa, in 170/787, independent dynasties arose, first in Morocco and then in Tunisia, and the authority of Baghdād was never again asserted west of Egypt. The Aghlabids of Tunisia, exercising hereditary and independent rule under the nominal suzerainty of the caliph, set the pattern for a whole series of subsequent local hereditary governorships, whose encroachments eventually reduced the effective sovereignty of the Caliphate to central and southern ʿIrāḳ. Another danger-sign showed the weakness of the defences of the Empire. By ʿAbbāsid times the frontiers of Islam were more or less stabilised. The only foreign wars of any importance were with the Byzantines, and even these seem to have been of more show than effect. The inconclusive campaigns of Hārūn were the last major offensives launched against Byzantium by the Caliphate. Thereafter Islam was on the defensive. Byzantine armies sought out weak points in Syria and Mesopotamia, while Khazar invaders entered Islamic territory in the Caucasus and Armenia. Perhaps the most serious factor of weakness was the obscure internal convulsion that culminated in the degradation of the Barmakids and the assumption by Hārūn of the reins of power in his own not too competent hands. This step seems to have shaken the alliance with the Persian aristocratic wing of the movement that had brought them to power, which the early ʿAbbāsids had maintained long after shedding the more extremist elements. After Hārūn's death, smouldering conflicts burst into civil war between his sons al-Amīn and al-Maʾmūn. Al-Amīn's strength lay mainly in the capital and in ʿIrāḳ, al-Maʾmūn's in Persia, and the civil war has been interpreted as a national conflict between Arabs and Persians, ending in a victory for the latter. The same objections can be raised to this explanation as to the corresponding theory concerning the ʿAbbāsid revolution itself. The civil war was more probably a continuation of the social struggles of the immediately preceding period, complicated by a regional rather than national conflict between Persia and ʿIrāḳ. Al-Maʾmūn, relying on eastern support, for a while projected the transfer of the capital from Baghdād to Marw, but some time after his victory wisely decided to return to the Imperial city. Thereafter Persian aristocratic and regional aspirations found an outlet in local dynasties. In 205/820 Ṭāhir, the Persian general of al-Maʾmūn, made himself virtually independent in Khurāsān, and founded a dynasty. His example was followed by others, who, while for the most part still recognizing the suzerainty of the caliphs, deprived them of all effective authority in most of Persia.

While the power of the caliphs in the provinces was gradually being reduced to the granting of diplomas of investiture to the *de facto* rulers, their authority even in ʿIrāḳ itself was dwindling. A spendthrift court and a inflated bureaucracy produced chronic financial disorder, aggravated by the loss of provincial revenues and, subsequently, by the exhaustion or loss to invaders of gold and silver mines. The caliphs found a remedy in the farming out of state revenues, eventually with the local governors as tax-farmers. These farmer-governors soon became the real rulers of the Empire, the more so when tax-farms and governorships were held by army commanders, who alone had the force to impose obedience. From the time of al-Muʿtaṣim and al-Wāthiḳ, the caliphs became the puppets of their own generals, who were often able to appoint and depose them at will. Al-Muʿtaṣim is usually credited with the introduction of the practice of using Turks from Central Asia as soldiers and officers, and from his time the dominant military caste became mainly Turkish. In 221/836 he built a new residence at Sāmarrā, some 60 miles north of Baghdād. Sāmarrā remained the Imperial residence until 279/892, when al-Muʿtamid returned to Baghdād. Its foundation illustrates the growing gulf between the caliph and his praetorians on the one hand and the people of Baghdād on the other. Its art and architecture illustrate the emergence of a new ruling caste with different tastes and traditions. Under al-Wāthiḳ the power of the Turks continued to grow. A serious attempt to reassert the supremacy of the Caliphate was made by his successor al-Mutawakkil, who tried to break the power of the Turkish guards and to rally support against them among the theologians and the civil population, whose orthodox fanaticism he sought to placate by renouncing and suppressing the Muʿtazilī doctrines of his predecessors and enforcing the regulations against the Christians and Jews. The attempt ended in failure. The murder of al-Mutawakkil in 247/861 was followed by a period of anarchy. During an interval of nine years four caliphs succeeded one another, but all were helpless in the hands of the Turkish guards, whose control of the court and the capital grew firmer, while the provinces relapsed into anarchy or, at best, autonomy. In Southern ʿIrāḳ a revolt broke out among the negro slaves, known as Zandj [*q.v.*], who worked on the salt marshes near Baṣra. This rapidly developed into a major threat to the Empire. The Zandj leader, who displayed brilliant generalship, defeated several imperial armies, and was able to establish effective control over much of Southern ʿIrāḳ and South West Persia. The lines of communication linking Baghdād with Baṣra, and therefore with the Persian Gulf and the trade route to the East, were cut, and by 264/877 Zandj parties were raiding within 17 miles of Baghdād itself. But meanwhile a period of greater stability had begun in the capital. The caliph al-Muʿtamid, who succeeded in 256/870, was not a very effective ruler, but his brother al-Muwaffaḳ soon became the real master of the capital, and during the twenty years of his rule did much to restore the failing strength of the house of ʿAbbās. His first task was to restore order and stability in Baghdād itself, then to tackle the problems presented by the Zandj and by the encroachments of provincial leaders, especially the Ṣaffārids in Persia and the Ṭulūnids in Egypt and Syria. By 269/882 he had expelled the Zandj from all their conquests, and in 270/883 finally crushed them. Though failing to destroy the Ṣaffārids and Ṭulūnids, he did succeed in checking their ambitions, and facilitated the task of his successors. On the

death of al-Muwaffaḳ in 278/891, he was succeeded as real ruler by his son al-Muʿtaḍid, who became caliph on the death of al-Muʿtamid in the following year. Al-Muʿtaḍid and his successor al-Muktafī were both able and energetic rulers. In Persia and Egypt the authority of the Caliphate was for a time reasserted, leaving the government free to deal with the menace of Shīʿism, now active again in a militant and extreme form. After the rise of the ʿAbbāsids and the consequent disappearance of the Ḥanafī line of pretenders, it was the Fāṭimid line of Imāms who commanded the support of most of the Shīʿa. After the death of Djaʿfar al-Ṣādiḳ in 148/765, these split into two groups, one of which, known as Ismāʿīlī, inherited many of the functions, doctrines and followers of the vanished Ḥanafiyya. The transformation of the Caliphate in the 8th and 9th centuries from an agrarian, military state to a cosmopolitan Empire with an intensive commercial and industrial life, the growth of large cities and the concentration of capital and labour, subjected the loose social structure of the Empire to grave strain, and engendered widespread discontent. The rapid growth of the intellectual life of Islam, and the clash of cultures and ideas resulting from outside influence and internal development, again helped to prepare the way for the spread of heretical movements which, in a theocratic society, were the only possible expression of moral or material dissent from the existing order. The endemic disorders and upheavals of the late 9th and early 10th centuries brought these strains to breaking point, and the caliphs were called upon to deal with a series of challenges ranging in form from the revolutionary violence of the Ḳarmaṭians [*q.v.*] in Baḥrayn, Syria-Mesopotamia and Southern Arabia, to the more subtle and ultimately more effective criticism of peaceful moralists and mystics in Baghdād itself. Al-Muʿtaḍid died after a defeat at the hand of the Ḳarmaṭians, but his successor al-Muktafī managed to crush the Ḳarmaṭian revolt in Syria and Mesopotamia, and, at the time of his death in 295/908, was leading a successful counter-attack against the Byzantines, who had sought to exploit the anarchy of the Muslim Empire. The Shīʿite danger was however far from ended. After a brief struggle for power, al-Muktafī was succeeded by his brother al-Muḳtadir, still a boy of 13. During his minority, and the long and ineffective reign that followed it, the destructive tendencies halted by the regent al-Muwaffaḳ and his two successors reappeared. The Ḳarmaṭians resumed their activities, and from their bases in Baḥrayn threatened the life-lines of the Caliphate, while in the west another wing of the Ismāʿīlī movement established a Fāṭimid anti-Caliphate in Tunisia. In North Syria the beduin Ḥamdānid dynasty established itself, while in Persia another Shīʿite family, the Būyids, began to build a new dynasty that soon threatened even ʿIrāḳ. In the capital, growing disorder and confusion culminated in the death of the caliph, while fighting his general Muʾnis. Under his successors al-Ḳāhir and al-Rāḍī, the decay of the authority of the Caliphate was completed. The event that is usually taken to symbolise this process was the grant to the governor of ʿIrāḳ, Ibn Rāʾiḳ, of the title *amīr al-umarāʾ*—Commander of Commanders. This title, apparently intended to assert the primacy of the military commander of Baghdād over his colleagues elsewhere, served at the same time to give formal recognition to the existence of a supreme temporal authority, exercising effective political and military power, and leaving the caliph only as formal head of the state and the faith and representative of the religious unity of Islam. In 344/945 came the ultimate degradation, when the Būyid Amīr Muʿizz al-Dawla entered Baghdād, and the title of *amīr al-umarāʾ*, and with it the effective control of the city of the caliphs, passed into the hands of a Shīʿite dynast.

Almost two centuries had passed between the enthronement of al-Saffāḥ and the arrival of Muʿizz al-Dawla. Though most of the period still awaits adequate investigation, certain broad lines of development can be discerned. In government, the early ʿAbbāsid caliphs continued along the lines of the late Umayyads, with far less break in continuity than was at one time believed. Certain changes, begun under the preceding dynasty, continued at an accelerated pace. From an Arab super-shaykh governing by the intermittent consent of the Arab aristocracy, the caliph became an autocrat, claiming a divine origin for his authority, resting it on his armed forces, and exercising it through a vast and growing bureaucratic organisation. Stronger in this respect than the Umayyads, the ʿAbbāsids were nevertheless weaker than the old oriental despots, in that they lacked the support of an established feudal caste and a priestly hierarchy, and were themselves theoretically subject to the Holy Law, of the authority of which their office was the supreme embodiment. With the transfer of the capital to the East and the entry of increasing numbers of Persians into the service of the caliphs, Persian influences grew in the court and the administration, which was organised in a series of *dīwāns* [*q.v.*] or ministries, under the supreme control of the *wazīr* [*q.v.*]. Provincial government was carried on jointly by the *amīr* [*q.v.*] (Governor) and *ʿāmil* [*q.v.*] (financial administrator), under the general surveillance of the capital, exercised through the agents of the *ṣāḥib al-barīd* (Director of Posts and Intelligence) (see BARĪD). In the army the Arab element gradually lost its importance, and the pensions formerly paid to Arabs were discontinued except for serving soldiers. The core of the early ʿAbbāsid army consisted of the Khurāsānīs, a term that is to be understood in a regional rather than national sense, and covering both Arabs and Persians from Khurāsān. In time these gave way to the Turkish slave troops, who from the time of al-Muʿtaṣim onwards became the main element in the army and, in consequence, the main source of political authority for the various amīrs and commanders whose power replaced that of the caliphs.

The ʿAbbāsids came to power through a religious movement, and sought in religion the basis of unity and authority in the Empire they ruled. While broadly successful in this purpose, they had throughout to contend with a series of religious opposition movements, and with the mistrust or reserve of the more conscientious elements among the Sunnī religious leaders.

The political breakdown of the 9th and 10th centuries, resulting in the fragmentation of power in the Empire as a whole and the decline and eventual collapse of authority in the capital, had no immediate ill-effects on the economic and cultural life of the Caliphate. The ʿAbbāsid accession had been followed by a great economic revival, based on the exploitation of the resources of the Empire through industry and trade, and the development of a vast network of trade relations both within the Empire and with the world outside. These changes brought

important social consequences. The Arab warrior caste was deposed, and replaced by a ruling class of landowners and bureaucrats, professional soldiers and *literati*, merchants and men of learning. The Islamic town was transformed from a garrison city to a market and exchange, and in time to the centre of a flourishing and diversified urban culture. The literature, art, theology, philosophy and science of the period is examined elsewhere (in individual articles). Here it need only be remarked that this was the classic age of Islam, when a new, rich and original civilisation, born of the confluence of many races and traditions, came to maturity.

2. 334/945—656/1258

During the long period from the Būyid occupation of Bāg͟hdād to the conquest of the city by the Mongols, the Caliphate became a purely titular institution, representing the headship of Sunnī Islam, and acting as legitimating authority for the numerous secular rulers who exercised effective sovereignty, both in the provinces and in the capital. The caliphs themselves, except for a brief revival towards the end, were at the mercy of the secular rulers, who appointed and deposed them at will, and only one of them, al-Nāṣir, has left any mark on history. The appointment of Ibn Rāʾiḳ as *amīr al-umarāʾ* was the first of a long series, and marked the formal recognition of the office of secular sovereign. The main history of the period will be found in the articles on the various dynasties that held it.

In the second quarter of the 10th century a number of princes of the S͟hīʿite Persian house of Būya (or Buwayh), originating in the highlands of Daylam, extended their rule over most of western Persia, and forced the caliphs to grant them legal recognition. In 334/945 the Būyid prince Muʿizz al-Dawla entered Bag͟hdād, and wrung from the caliph al-Mustakfī the title of *amīr al-umarāʾ*. For over a century the caliphs were compelled to submit to the final humiliation of accepting these S͟hīʿite mayors of the palace as absolute masters. Despite their S͟hīʿism, the Būyids made no attempt to install an ʿAlid caliph—the twelfth Imām of the It͟hnā-ʿas͟harī S͟hīʿa had disappeared some 70 years earlier—but gave outward homage to the ʿAbbāsids, retaining them as an orthodox cover for their own power and an instrument of their policy in the Sunnī world. It was from the extremist S͟hīʿa that the real threat to the ʿAbbāsids came. In 356/969 the Ismāʿīlī Fāṭimids from Tunisia conquered Egypt, and were soon able to extend their power into Syria and Arabia. For the first time a powerful independent dynasty ruled in the Middle East that did not recognize even the titular authority of the ʿAbbāsids, but on the contrary founded a Caliphate of their own, challenging the ʿAbbāsids for the headship of the whole Islamic world. The political and military power of the Fāṭimids was supported by an elaborate religious organisation, commanding a multitude of agents, propagandists and sympathisers in the ʿAbbāsid dominions, and also by a skilful economic policy aimed at diverting the Eastern trade from the Persian Gulf to the Red Sea, and thus at the same time strengthening Egypt and weakening ʿIrāḳ. (See B. Lewis, *The Fatimids and the Route to India*, *Istanbul Iktisat Fak. Mecm.*, 1950, 355-60). It is indeed arguable that the diversion of S͟hīʿite energies due to the predominance of the Būyids in the East was one of the factors that saved the ʿAbbāsid Caliphate from extinction at this time (see H. A. R. Gibb, *The Caliphate and the Arab States*, in *History of the Crusades*, Univ. of Pennsylvania Press, vol. i.).

In time the Būyid Empire broke up into a number of smaller states, under Būyid and other rulers, while in Persia the power of a new dynasty, the Seld͟juḳs, was steadily growing. By the middle of the 11th century Būyid power was at an end, and a Turkish general called al-Basāsīrī was able to occupy Bag͟hdād and proclaim the *k͟huṭba* in the name of the Fāṭimid caliph. This brief episode was the high water mark of Fāṭimid power. In 447/1055 the Seld͟juḳ Ṭug͟hrīl-beg entered Bag͟hdād, and had himself proclaimed as Sulṭān. This title is often attributed by the chroniclers to earlier rulers who exercised a sovereignty not greatly different from that of the Seld͟juḳs. The Seld͟juḳ sulṭāns of Bag͟hdād appear however to be the first to have used the title officially and inscribed it on their coins. In effect the Seld͟juḳ Great Sultanate, which lasted about a century, was the logical development of the office of *amīr al-umarāʾ*, and the title has remained in use ever since for the holder of supreme secular power. The Seld͟juḳs brought several important changes. Unlike their predecessors they were Turks and Sunnīs, and with their advent the power of the Turks, that had been growing intermittently since the time of al-Muʿtaṣim, was finally established. By now the Turks in the Middle East were no longer all slave or freed soldiers, imported from Central Asia; whole clans of free, nomadic Turks began to migrate westwards, playing an increasingly important role and in time changing the ethnic configuration of the Middle East. The replacement of a S͟hīʿī by a Sunnī ruler increased the prestige though not the power of the caliphs, as did also the extension of the rule of the central government, and therefore of the nominal sovereignty of the caliphs, over many hitherto independent lands. The period of the Seld͟juḳs, and of the Seld͟juḳid and Atābeg dynasties that followed the break-up of the Great Sultanate, brought two major changes. One was the regularisation of the economic and social changes that had been taking place in the preceding period, and the elaboration of a new social and fiscal order of quasi-feudal character; the other was the campaign against the S͟hīʿite menace, both on the political and military level through the suppression of S͟hīʿite dynasties and movements, and on the intellectual level through the creation of a network of *madrasas* [*q.v.*] to serve as centres for the formulation and defence of Sunnī orthodoxy against the S͟hīʿite propagandists. Both changes encountered a vigorous reaction in the form of the Assassins (see NIZĀRĪS), an active and energetic revolutionary movement that rose from the ruins of the Fāṭimid *daʿwa* and offered a bitter and sustained challenge to Seld͟juḳ rule and Sunnī orthodoxy. The Assassins ultimately failed, and thereafter S͟hīʿism was never again a major political factor until the rise of the Ṣafawids.

After the break-up of the Great Sultanate, ʿIrāḳ fell under the domination of a local dynasty of Seld͟juḳ princes, the last of whom was Ṭug͟hrīl II (573-590/1177-1194). The collapse of his power and the absence of any alternative enabled the ʿAbbāsid caliph al-Nāṣir to make a final attempt to restore the lost authority of the Caliphate. The moment was favourable—of the two major dynasties of the Middle East, the Ayyūbids in Egypt and Syria were preoccupied with the struggle against the Crusaders, the K͟hʷārizm-s͟hāh in the East with his wars against other Turkish dynasties and then against the Mongols. In this power vacuum, al-Nāṣir attempted

to create a kind of State of the Church for the Caliphate in Baghdād and ʿIrāḳ, and to buttress his authority by seeking popular support through the *futuwwa* [*q.v.*] organisations and making adroit use of pro-ʿAlid sentiment. It was however only the diversion of their energies to meet the Mongol threat in the East that saved him from destruction by the Khwārizm-shāhs. Al-Nāṣir's successors were weak and incompetent, and when the Mongol general Hūlākū, having already conquered Persia, appeared before Baghdād in 656/1258, the last caliph al-Mustaʿṣim was unable to offer any serious resistance.

The Mongol conquest of Baghdād and the destruction of the Caliphate are usually described as a major catastrophe in the history of Islam. Certainly they mark the end of an epoch—not only in the outward forms of government and sovereignty, but in Islamic civilisation itself, which after the transformation wrought by the great wave of Tatar invasion flows in new channels, different from those of the preceding centuries. But the immediate moral effects of the destruction of the Caliphate have been overrated. The Caliphate had long ceased to exist as an effective institution, and the Mongols did little more than lay the ghost of something that was already dead. To the real organs of temporal power the Mongol invasions made little difference, the only change being that the Sultanate now began to acquire *de jure* recognition, and sultans began to arrogate to themselves titles and prerogatives formerly reserved to the caliphs.

The ʿAbbāsid Caliphs of Egypt

The establishment by Baybars of an ʿAbbāsid shadow-Caliphate in Cairo in 659/1261 has been explained by R. Hartmann as follows: the disappearance of the Caliphate in Baghdad created a political vacuum, affecting not so much the theologians as the secular rulers, who still felt the need for a legitimating authority. Abū Numayy, the Sharīf of Mecca, gave formal recognition to the Ḥafṣid ruler of Tunisia Abū ʿAbd Allāh, who had assumed the title of caliph, with the regnal name of al-Mustanṣir, in 650/1253. This assumption, made before the fall of Baghdād, was not in the Sunnī juristic sense of the word caliph, but in that of North Africa, conditioned by Almohad claims and practices. It acquired a new value from Abū Numayy's recognition, confirmed by Mamlūk action in sending a report on the victory of ʿAyn Djālūt to Abū ʿAbd Allāh and addressing him as *amīr al-muʾminīn*—Commander of the Faithful. Baybars, stronger than his predecessor, preferred not to give this recognition to a powerful and possibly dangerous neighbour, and instead solved the problems of legitimacy and continuity by installing an ʿAbbāsid refugee as caliph in Cairo, with the same regnal name of al-Mustanṣir.

For the next two and a half centuries a line of ʿAbbāsids succeeded one another as nominal caliphs under the rule of the Mamlūk Sultans in Cairo. Except for a brief interval in 815/1412, when the caliph al-Mustaʿīn became a stop-gap ruler for six months in the course of a feud between rival claimants to the Sultanate, the caliphs in Cairo were completely helpless and powerless, being in effect little more than minor court pensioners with purely ceremonial duties to perform on the accession of a new sultan. Attempts by the Mamlūk sultans to use their ʿAbbāsid protegés as a means of gaining recognition in other Muslim countries met with some limited success, notably in India and in the Ottoman Empire where Bāyezīd I applied to the Cairo caliph in 1394 for a diploma granting him the title of sulṭān. But the Ottoman view of the Cairo Caliphate is perhaps best expressed by the 15th-century historian Yazīdjī-oghlu ʿAlī, who in describing the role of the patriarch at the Byzantine court calls him "the caliph of the Christians"—a comparison that is far nearer the truth than the more common one between the caliph and the Pope (cf. P. Wittek, in *BSOS*, 1952, 649 f.).

In 1517 the last caliph al-Mutawakkil was deposed by Selīm I, the Ottoman conquerer of Syria and Egypt, and the ʿAbbāsid shadow-Caliphate abolished. A story that al-Mutawakkil transferred his title to Selīm, and through him, to the Ottoman house, was first published by Mouradgea d'Ohsson in 1788 (*Tableau général de l'Empire Ottoman*, i, 269-70), and thereafter won wide acceptance. Barthold however showed this story to be completely without foundation, and it is now generally rejected by scholars [see KHALĪFA].

The sources for the history of the ʿAbbāsid Caliphate are too numerous for anything more than a general statement to be possible. A fuller discussion of the literature will be found in J. Sauvaget, *Introduction a l'histoire du monde musulman*, Paris 1943, 126 ff., and of the historians in D. S. Margoliouth, *Lectures on Arabic Historians*, Calcutta 1930 (cf. TAʾRĪKH). The first group to be considered are the chroniclers. While a large proportion of these have been published, especially for the earlier period, surprisingly little use has been made of them, and most of the ʿAbbāsid period still awaits its monographers. Still less attention has been paid to the *adab* literature, perhaps the best expression of the outlook and attitude of the secular literate classes who administered the Empire, and a fruitful source of historical information. Travel and geography, poetry, theology and law all have an important contribution to make to historical knowledge, and except for the first two, have been little used. To the vast Muslim literature may be added the smaller but still valuable literatures of the Christians and Jews, in Arabic, Syriac, Hebrew, and some other languages. Finally, there remains archeology. A useful summary and bibliography of archeological work will be found in the above-mentioned book of Sauvaget.

No general history of the ʿAbbāsids has been produced for many years, and the reader must still have recourse to early and out-of-date works like G. Weil, *Geschichte der Chalifen* 5 vols., Mannheim-Stuttgart 1846-62; idem, *Geschichte der islamischen Völker*, Stuttgart 1866 (abridged English translation by S. Khuda Bukhsh, Calcutta 1914); A. Müller, *Der Islam im Morgen- und Abendland*, 2 vols. Berlin 1885-7; W. Muir, *The Caliphate, its Rise Decline and Fall*, revised by T. H. Weir, Edinburgh 1915 and 1924. More recent but more summary treatments are given by P. K. Hitti, *History of the Arabs*, London 1937 and later editions; C. Brockelmann, *Geschichte der islamischen Völker und Staaten*, Munich-Berlin 1939 (English and French translations); Gaudefroy-Demombynes and Platonov, *Le monde musulman et byzantin jusqu'aux Croisades*, Paris 1931; Ch. Diehl and G. Marçais, *Le monde oriental de* 395 *a* 1081, Paris 1936. Many interesting and provocative ideas on the nature of the ʿAbbāsid state and society will be found in A. J. Toynbee, *A study of history*, London 1934 ff.

Only the accession and the first few reigns have been monographed in any detail. On the ʿAbbāsid revolution Van Vloten and Wellhausen are mentioned in the article. Th. Nöldeke's *Orientalische Skizzen* Berlin 1892 (English translation by J. S. Black, London 1892), includes studies on al-Manṣūr, the Zandj rising, and the Ṣaffārids. The most valuable work to date on the early ʿAbbāsid period will be found in the studies of F. Gabrieli (al-Amīn, al-Maʾmūn) and S. Moscati (Abū Muslim, al-Mahdī, al-Hādī), which, with other monographs, will be found listed under the appropriate articles. For two studies by S. Moscati on particular problems connected with the ʿAbbāsid victory see *Il "Tradimento" di Wāsiṭ*, *Muséon* 1951, 177-86, and *Le massacre des Umayyades*, *ArO* 1951, 88-115. Reference may also be made to Nabia Abbott, *Two queens of Baghdad*, Chicago 1937, dealing with the mother and wife of Hārūn al-Rashīd and giving a description of some aspects of court life, and A. F. Rifāʿī, *ʿAṣr al-Maʾmūn*, Cairo 1927. The period from 892 to 946 has been studied in great detail by H. Bowen, *The life and times of ʿAlī ibn ʿĪsā*, Cambridge 1928. This must now be supplemented by an important additional source—the *Akhbār al-Rāḍī wa l-Muttaḳī* of al-Ṣūlī (ed. J. H. Dunne, Cairo 1935; annotated French translation by M. Canard, 2 vols. Algiers 1946-50). Two important works of a more general character deal with the middle period: A. Mez, *Die Renaissance des Islams*, Heidelberg 1922 (English translation by S. Khuda Bukhsh and D. S. Margoliouth, London 1938), and ʿAbd al-ʿAzīz al-Dūrī, *Studies on the economic life of Mesopotamia in the 10th century*, (in Arabic), Baghdad 1948. Reference may also be made to general works in Arabic by Aḥmad Amīn, ʿA. ʿA. Dūrī, Ḥasan Ibrāhīm Ḥasan and others.

On the Cairo Caliphate see R. Hartmann, *Zur Vorgeschichte des ʿAbbasidischen Schein-Chaliphates von Cairo, Abhandlungen der deutschen Akademie der Wissenschaften zu Berlin*, Phil.-hist. Kl. 1947, nr. 9, Berlin 1950, and Annemarie Schimmel, *Kalif und Kadi im spätmittelalterlichen Ägypten*, *WI*, 1943, 3-27. (B. LEWIS)

ʿABBĀSID ART [see SĀMARRĀ]

AL-ABBĀSIYYA, old town of Ifrīḳiya (Tunisia), three miles to the S.E. of al-Ḳayrawān. It was also known by the name of Ḳaṣr al-Aghāliba and al-Ḳaṣr al-Ḳadīm. It was built by Ibrāhīm b. al-Aghlab, the founder of the Aghlabid dynasty, in 184/800, the same year in which he was appointed amīr of Ifrīḳiya, after the revolt of some leaders of the Arab *djund*. He gave his foundation the name al-ʿAbbāsiyya in honour of the ʿAbbāsids, his masters. The town contained baths, inns, *sūḳs* and a Friday-mosque with a minaret of cylindrical form, built of bricks and adorned by small columns arranged in seven storeys. After the example of the great mosque of Ḳayrawān, a *maḳṣūra* of carved wood, adjoining the *miḥrāb*, was reserved to the amīr and high dignitaries. The town had several gates, the following being the most important: Bāb al-Raḥma (of Mercy), Bāb al-Ḥadīd (of Iron), Bab Ghalbūn (attributed to al-Aghlab b. ʿAbd Allāh b. al-Aghlab, relative and minister of Ziyādat Allāh I) and Bāb al-Rīḥ (of Wind)—all these in the east; and Bāb al-Saʿāda (of Happiness), to the west. In the middle of the town there was a large square called al-Maydān (Hippodrome), where the parades and reviews (*ʿarḍ*) of the troops took place. Not far away was the palace of al-Ruṣāfa, recalling by its name those of Damascus and Baghdad. It was in this palace that Ibrāhīm I received the ambassadors of Charlemagne who came to ask for the relics of St. Cyprian and delivered the gifts destined for the caliph Hārūn al-Rashīd. It was also there that the truce (*hudna*) of ten years and the exchange of prisoners was arranged with the envoys of Constantine, patrician of Sicily (189/805). Many other embassies also of the Franks, Byzantines and Andalusians, were received there by subsequent Aghlabid rulers. From its foundation, al-ʿAbbāsiyya had a mint (*dār al-ḍarb*) where gold *dīnārs* and silver *dirhams*, bearing the town's name, were coined. An official factory of textiles (*ṭirāz*) produced the robes of honour (*khilʿa*) and the standards. Under the successors of Ibrāhīm I, al-ʿAbbāsiyya was provided with monuments of public and private utility. Abū Ibrāhīm Aḥmad built a large reservoir (*sahrīdj* or *faskiyya*) of which important remains have been preserved. The basin had an abundant supply of water, which was carried to Ḳayrawān in the summer, when the cisterns of the capital were exhausted.—The town of Raḳḳāda, founded in 264/877 by Ibrāhīm II, some miles further to the south, replaced al-ʿAbbāsiyya as residence. Al-ʿAbbāsiyya sank to the level of a township, inhabited by *mawālī* and tradesmen, but continued to exist in a modest way until the Hilālian invasion (middle of the 5th/11th century) when it disappeared for good. A cursory excavation, in 1923, of the hill (*tell*) where al-ʿAbbāsiyya was situated, brought to light many potsherds belonging to the Aghlabid period. This white pottery with large black, green and blue decoration was no doubt inspired by oriental models coming from ʿIrāḳ (Sāmarrā, Raḳḳa) and Egypt (Fusṭāṭ). It is worth mentioning that al-ʿAbbāsiyya was the birth-place of several scholars, notably of Abu ʾl-ʿArab [*q.v.*] Muḥ. b. Aḥmad b. Tamīm, first historian of al-Ḳayrawān (d. 333/945).

Bibliography: Balādhurī, *Futūḥ*, 234; Bakrī, *al-Masālik* (de Slane), 24; Idrīsī (de Goeje, *Descriptio al Magribi*), 65-7; Ibn ʿIdhārī, *al-Bayān al-Mughrib*, Leiden 1948, I, 84; Desvergers, *Hist de l'Afr. et de la Sicilie* (transl. of Ibn Khaldūn), Paris 1841, 86-8; G. Marçais, *Manuel de l'Art Musulman*, Paris 1926, I, 40.

(H. H. ABDUL-WAHAB)

AL-ʿ**ABBĀSIYYA** [see ṬUBNA]

ʿ**ABD** is the ordinary word for "slave" in Arabic of all periods (the usual plural in this sense is *ʿabīd*, although the Ḳurʾān has *ʿibād*: xxiv, 32), more particularly for "male slave", "female slave" being *ama* (pl. *imāʾ*). Both words are of old Semitic stock; Biblical Hebrew uses them in the same meaning. Classical Arabic also expresses the idea of "slave", in the singular of both genders and in the collective, by the generic term *raḳīḳ*, which however is not found in the Ḳurʾān. On the other hand, the Ḳurʾān frequently uses the term *raḳaba*, literally "neck, nape of the neck", and, still more frequently, the periphrasis *mā malakat aymānukum* (*-hum*), "that which your (their) right hands possess". The *ʿabdan mamlūkan* of xvi, 75 is to be regarded in the light of this formula: it should properly be rendered "a slave, who is (himself) a piece of property". Hence, no doubt, the development in the classical language of *mamlūk* as a noun meaning "slave" (later also "ex-slave"). In the course of the history of Arabic, as of other languages, various vicissitudes have been undergone by euphemisms literally denoting "boy, girl" or "manservant, maidservant": *fatā* (fem. *fatāt*), which is Ḳurʾanic, *ghulām* for "male slave", *djāriya* for "female slave", both very common, *waṣīf* particularly for men (the fem. *waṣīfa* is also found), and *khādim* particularly for women (also, at an early date, for "eunuch"). Both these last have in some countries finally come to mean "negro, negress". Another term sometimes used for "slave" is *asīr*, properly "captive".

The abstract "slavery" is expressed by *riḳḳ* or by a derivative of *ʿabd*, such as *ʿubūdiyya*. The "master" is *sayyid*; he may also be referred to as "patron" (*mawlā*) or, in legal parlance, "owner" (*mālik*). The opposite of slave, "free man or woman". is *ḥurr* (fem. *ḥurra*).

Turkish has, as equivalents for "slave", *kul* or *köle*, as well as loan-words from Persian: *bende*, and from Arabic: *esir* (*asīr*), *gulam* (*ghulām*) for the masculine, *cariye* (*djāriya*) and *halayik* (*khalāʾiḳ*, properly "creatures") for the feminine. Besides *banda*, Persian has *ghulām* for the masculine and *keniz* for the feminine.

1. BEFORE ISLAM

Slavery was practised in pre-Islamic Arabia, as in the remainder of the ancient and early mediaeval world. But it must be admitted that the sparse and controversial data available to us for the pre-Islamic period are insufficient to provide reliable answers to most of the problems presented by the institution. It may be allowed that, immediately before the Hijra, the great majority of slaves in western Arabia, a plentiful commodity at Mecca, by whose sale merchants grew rich (ʿAbd Allāh b. Djudʿān [*q.v.*]; cf. Lammens, *La Mecque....*, Beirut 1924, *passim*), were coloured people of Ethiopian origin (*Ḥabasha*). Some of them must have formed the nucleus of the *Aḥābish*, the Meccan militia (Lammens, *JA*, 1916 = *L'Arabie occidentale avant l'hégire*, Beirut, 1928, pp. 237-293). Bilāl, the first muezzin of Islam, was one such slave. There were some white slaves of foreign race, far less numerous, who were no doubt brought by Arab caravaneers (slave-dealers as far back as the Bible story of Joseph), or were the product of beduin captures (legend of the Persian Salmān Pāk). Finally, there are no objective grounds for denying the existence of Arab slaves, although the ransoming of captives among nomad tribes was a matter of common prac-

tice. We have the example of the Kalbite Zayd b. Ḥāritha, who became the adopted son of Muḥammad: a valuable example, even if it has been touched up in the manner of Tradition (see the decision attributed to ʿUmar, *infra*, as plausible evidence pointing the same way). We have, however, nothing conclusive on the existence of enslavement for debt or the sale of children by their families: the late and rare accounts of such occurrences (*Aghānī*[2], iii, 97; xix, 4) show them to be abnormal.

It would moreover be unwise to stretch the scanty information we have on the condition of slaves in the Ḥidjāz before Islam, to fit every locality and every social division. Nomads and sedentaries, in particular, may have shown evidence of quite a different attitude, even in those days: we shall come to the modern period later. The abiding scorn of slave ancestry, even if only on the mother's side, the satire aimed at the man who marries a captive girl (G. Jacob, *Altarab. Beduinenleben*, Berlin 1897, pp. 137-8, 213; Bichr Farès, *L'honneur chez les Arabes avant l'Islam*, Paris 1932, p. 71) are perhaps characteristic of beduin mentality, rather than indicative of the general outlook of town-dwellers. The biography in literary form of the renowned warrior-poet ʿAntara, son of a beduin and an Ethiopian slave-girl, who has to perform dazzling feats of arms before his father will consent to legitimize him, is a *roman à thèse* (Lammens, *Le berceau de l'Islam*, Rome 1914, p. 299) against disinheriting the children of such unions, indeed against keeping them in slavery: proof that the question had some immediacy and demanded a liberal answer, at any rate in some quarters.

It is probable that the usual practice of the pre-Islamic Arabs was influenced by an ancient Semitic distinction between two classes of slave, never perhaps reduced to a strict legal principle (I. Mendelsohn, *Slavery in the Ancient Near East*, New York, 1949, pp. 57-8) and never ratified by Muslim law, but which has left traces here and there in the code of behaviour of Islamicized lands: in contrast with the purchased slave (*ʿabd^u^ mamlukat^un^*), the slave born in his master's house (*ʿabd^u^ ḳinn^in^*; a term later applied to the slave over whom one has full and complete rights of ownership) was, in the ordinary course of events, unlikely to be sold or otherwise disposed of by the master (*LA*, xvii, 227-8; Djurdjani, *Taʿrīfāt*, *ḳinn*). We are on firmer ground—because the practice is expressly condemned in the Ḳu'rān, xxiv, 33—in accepting it as fact that in pre-Islamic times female slaves were prostituted for the benefit of their masters, again in accordance with a Near Eastern custom of great antiquity (Mendelsohn, *op. cit.* p. 54).

2. The Ḳor'ān. The Religious Ethic

a.—Islam, like its two parent monotheisms, Judaism and Christianity, has never preached the abolition of slavery as a doctrine, but it has followed their example (though in a very different fashion) in endeavouring to moderate the institution and mitigate its legal and moral aspects (for the part played in this by Christianity, see M. Bloch, in *Annales*, 1947, and Imbert, in *Mélanges F. de Visscher*, Brussels, 1949, vol. i). Spiritually, the slave has the same value as the free man, and the same eternity is in store for his soul; in this earthly life, failing emancipation, there remains the fact of his inferior status, to which he must piously resign himself.

The Ḳur'ān regards this discrimination between human beings as in accordance with the divinely-established order of things (xvi, 71, 75; xxx, 28). But over and over again, from beginning to end of the Preaching, it makes the emancipation of slaves a meritorious act: a work of charity (ii, 177; xc, 13), to which the legal alms may be devoted (ix, 60), or a deed of expiation for certain felonies (unintentional homicide: iv, 92, where "a *believing* slave" is specified; perjury: v, 89; lviii, 3); consent must be readily given to contractual emancipation (xxiv, 33). The unemancipated slave is mentioned among those who should be treated "kindly" (*iḥsān^an^*, iv, 36). Furthermore, his dignity as a human being is shown in certain ordinances relating to the sexual side of social relationships. We have already mentioned the ban on the prostitution of female slaves (xxiv, 33); nobody may lawfully enjoy them except their master (xxiii, 6; xxxiii, 50; lxx, 30) or their husband, for legal marriage is open to slaves, male and female. Masters have the moral duty to marry off their "virtuous" slaves of both sexes (xxiv, 32); if need be it is even permissible for *Muslim* slaves to marry free Muslims (ii, 221; iv, 25). The slave-woman who, obtaining her master's consent, which is essential, marries a free man, is entitled to "a reasonable dowry" from her husband. She is obliged to remain faithful to him; but if she commits adultery her slave status re-emerges in the curious provision that she is liable to only one-half of the punishment reserved for the free married woman (iv, 25). Finally, the Ḳur'ān protects the slave's life, to some extent, by the law of retaliation, but the formula "the free for the free, the slave for the slave" (ii, 178) shows clearly how in penal matters the principle of inequality is maintained.

b.—The more or less official Muslim ethic, expressed in the ḥadīths, follows the line of Ḳur'anic teaching; it even lays perceptible stress on the humanitarian tendencies of the latter in the question with which we are dealing. Al-Ghazālī, in the *Iḥyā'*, ed. 1346 A.H., ii, 195-7 (*ḥuḳūḳ al-mamlūk*) (transl. G.-H. Bousquet, AIEO 1952, 423-7) had only to string together a number of well-known hadiths to produce what amounts to a lecture on ethics for slave-owners, illustrated by examples.

Tradition delights in asserting that the slave's lot was among the latest preoccupations of the Prophet. It has quite a large store of sayings and anecdotes, attributed to the Prophet or to his Companions, enjoining real kindness towards this inferior social class. "Do not forget that they are your brothers"; at any rate when they are Muslims, as some texts specify.—"God has given you the right of ownership over them; He could have given them the right of ownership over you". —"God has more power over you than you have over them". Thus the master is recommended not to show contempt for his slave; not to say "my slave" but "my boy, my servant" (*v. supra*), to share his food with him, to provide him with clothing similar to his own, to set him no more than moderate work, not to punish him excessively if he does wrong, to forgive him "seventy times a day", and finally to sell him to another master if they cannot get on well together.

Manumission is commended as a happy solution in many cases and is suggested as a way for the master to make amends for excessive chastisement of his slave. It is recommended, in the same category

as alms-giving, at the time of an eclipse, and is included among the various possible ways of expiating a voluntary breaking of the fast of Ramaḍān (the Ḳurʾān prescribes no more than "the feeding of a poor man": ii, 184). A twofold reward in heaven is promised to the man who educates his slavegirl, frees her and marries her. A famous ḥadīth affirms: "The man who frees a Muslim (v. l. 'a believer') slave, God will free from hell, limb for limb".

It is the duty of the slave, for his part, to give loyal service. He is "the shepherd of his master's wealth" and will be asked for an account of it in the next world. His reward in paradise will be twofold if, in addition to performing the usual religious obligations, he has the especial merit of having given good advice to his master.

If the Ḳur'ān and Tradition show a certain favouritism towards such slaves as are Muslims, another direction is shown in ḥadīths forbidding the keeping of male Arabs in slavery; they invoke a decision to this effect said to have been given by the caliph ʿUmar, in favour of disposing of instances of slavery against the payment of a ransom, where these were the result of "pre-Islamic practices" (see especially Ibn Sallām, *K. al-Amwāl*, pp. 133-4).

3. Fiḳh

Under the heading of *fiḳh* properly so-called, we shall have recourse to the main provisions agreed on by the great Sunnī schools. Thereafter we shall note very briefly some typical solutions adopted by Imāmī Shīʿism.

a.—Apart from the occasionally operative distinction between Muslim and non-Muslim slaves, Muslim law recognizes only one category of slaves, regardless of their ethnic origin or the source of their condition. The institution is kept going by only two lawful means: birth in slavery or capture in war, and even of these the latter is not applicable to Muslims, since though they may remain enslaved they cannot be reduced to slavery. Legally therefore, the only Muslim slaves are those born into both categories or who were already slaves at the time of their conversion to Islam. Their number tends to diminish both through emancipation, particularly recommended in such cases, and through the following provision: whereas the usual principle of Muslim law is that the child assumes at birth his mother's status, free or slave, an exception, of all the more importance in view of its wide application, is made in favour of the child born of a free man and a female slave belonging to him; such a child is regarded as free-born (otherwise he would be his father's slave). What this amounts to is that slavery could scarcely continue to exist in Islam without the constantly renewed contribution of peripheral or external elements, either directly captured in war or imported commercially, under the fiction of the Holy War, from foreign territory (*dār al-ḥarb*).

It is pleasing to see that in the eyes of Muslim jurists slavery is an exceptional condition: "The basic principle is liberty" (*al-aṣl huwa 'l-ḥurriyya*). Consequently, for the majority of them, the presumption is in favour of freedom; on the whole they have come down on the side of regarding as free the foundling (*laḳiṭ*) whose origin remains unknown. But it may fairly be stated that, despite the strictness professed by certain doctors of the law, the *fiḳh* has never evolved an adequately clear system of sanctions to suppress the kidnapping or sale of free persons, Muslim or non-Muslim. Still less do we see any positive denunciation of the practice of castrating young slaves, although it was condemned in principle.

b.—On the juridico-religious level, the slave has a kind of composite quality, partaking of the nature both of thing and of person. Considered as a thing, he is subject to the right of ownership—indeed it is in this that the strict definition of slavery lies—exercised by a man or woman, and he may be the object of all the legal operations proceeding from this position: sale, gift, hire, inheritance and so on. In this respect he is "a mere commodity" (*silʿa min al-silaʿ*). In the various classes of property distinguished by the *fiḳh*, he generally ranks with the animals and his lot is like theirs: the new-born slave, for instance, is the "fruit" (*ghalla*) of his mother, like the young of cattle, and belongs to her master; in the theoretical treatises on public law, the *muḥtasib* is given the duty of ensuring that masters treat their slaves and their animals properly. The slave may (as among the Romans and in Christian Europe) belong to two or more owners at the same time: he is then said to be "held in common" (*mushtarak*); such joint ownership gives rise to some extremely complex legal positions, which provide abundant material for the casuistry of the doctors. Again, it should be noted that the law lays down the amount of the reward which may be claimed by the one who restores a runaway slave (*ābiḳ*) to his master.

Yet the slave, even from the point of view of the right of ownership, of which he is the object, is not always treated exactly like other property. Mālikī law, for example, allows, in towns where it is the customary usage, an automatic guarantee of three days, at the expense of the seller of the slave, against any "faults" (*ʿuyūb*) in the latter (one year in the case of madness or leprosy). The fact that a master may legally have sexual relations with his female slaves gives rise to a system of regulating these relations, which has repercussions elsewhere on his exercise of the right of ownership: thus a distinction is sometimes drawn between costly female slaves, intended for cohabitation, and ordinary female slaves (e.g. *Mudawwana*, vi, 192 *seqq.*, concerning a clause of non-guarantee in sale), between female slaves within and outside the prohibited degrees of relationship to the interested party (e.g. in the matter of the loan of consumption, *ḳarḍ*, except among the Ḥanafīs, who forbid it with all living things). Further, the regard for kinship has an even more striking effect. It is forbidden to separate a slave mother and her young child, up to about the age of seven, by their becoming the property of different different masters (a ḥadīth runs: "Whoever separates a mother from her child, God will separate him from his dear ones on the Day of Resurrection"), under pain of nullity of the legal transaction; the Ḥanafīs, more reluctant to impose legal sanctions, brand as "objectionable" the separating of a slave, not yet arrived at puberty, from any close blood-relative within the prohibited degrees, whether the latter is of age or not. Emancipation follows automatically, except in the Ẓāhirī school, when a slave becomes the property of a very close relative: according to the Shāfiʿīs, only in the ascending and descending lines: the Mālikīs add brothers and sisters too, while the Ḥanafīs extend the rule to all relatives within the prohibited degrees. Religious affiliation is also taken into account, inasmuch as non-Muslims cannot

keep Muslim slaves; they must either free them or dispose of them to Muslim masters.

If the master fails to meet his moral obligation of providing for the physical maintenance (*nafaḳa*) of his slave, the law requires in the last resort that the latter be sold, a solution also enjoined, except by the Ḥanafīs, in the case of animals. The Mālikīs hold that emancipation is compulsory (cf. *Exodus*, xxi, 26-7) when the master carries his ill-treatment of his slave to the point of mutilation or disfigurement. Later, when we come to deal with personal rights, we shall meet with other instances of curtailment of the absolute right of ownership, as of other features of penal law.

c.—On the personal rights of the slave, that is, on his juridico-religious competence, it is interesting to see whether the classical jurists have ever attempted a general theory that would bring out the principles underlying the solutions scattered under the various headings of *fiḳh*. One such attempt is to be found in the works of the Ḥanafī al-Pazdawī (d. 482/1089), commented on and imitated in the later treatises on *uṣūl al-fiḳh*; the basic ideas, Ḥanafī of course, are as follows (*Uṣūl*, ed. Istanbul 1307 A.H., pp. 1401-1426): slave-status is incompatible with "patrimonial ownership" (*mālikiyyat al-māl*), whence it follows for example, that the slave cannot take a concubine, but is compatible with "non-patrimonial ownership" (*mālikiyyat g͟hayr al-māl*), whence it follows, for example, that the slave may marry. His status does not debar the slave from administering property and laying claim to the "possession" (*yad*) of it, but is incompatible with the full exercise of the higher legal faculties of the human being: his *d͟himma* (abstract financial responsibility) and his *ḥill* (freedom of action in sexual matters) are reduced, and all *wilāyāt* (public or private offices of authority) are forbidden to him. More recent works, of the type of the *As͟hbāh wa-Naẓā'ir* by the S͟hāfi'ite Suyūṭī and the Ḥanafite Ibn Nud͟jaym, merely give dry and rather disjointed lists of the manifold rules about what slaves may and may not do.

d.—The Muslim slave has a religious status (*ʿibādāt*) theoretically identical with that of his free coreligionists (the contrary opinion is exceptional; e.g. in one solitary Mālikī, cf. Ibn Farḥūn, *Dībād͟j*, 1329 268); but some derogations were more or less inevitable on certain points. Most authorities hold that his dependence on a master absolves him from the strict necessity of performing such pious acts as involve freedom of movement: the Friday prayer, pilgrimage, the Holy War. Another consequence of this dependence is that the master is responsible for the annual payment of his "alms at the breaking of the fast" (*zakāt al-fiṭr*). The Muslim slave-woman is not under as strict an obligation to "hide her nakedness" (*satr al-ʿawra*) at the ritual prayer as the free woman. The slave is not forbidden to act as leader (*imām*) of congregational prayer, although the Ḥanafīs disapprove of the practice, and some other authorities do not permit him to become a salaried *imām*, or at any rate they prefer a free man to hold the office, if one is available of the required competence. The question of his acting as imām at the midday prayer on Fridays and the two canonical festivals is more debatable, especially if this office is regarded as an emanation from the public authority; even within the various schools there is disagreement about whether or not it is allowable. On the whole, however, the affirmative answer seems to have prevailed, except among the Ḥanbalīs. The slave is no more qualified to hold a position of religious magistrature (judgeship, *ḥisba*) than an official position of secular authority; he is nevertheless acceptable as a subordinate officer in the revenue department.

e.—In matters of law in the strict sense (*muʿāmalāt*), the slave's incompetence to act (*ḥad͟jr*) is assumed in principle, but is not absolute. If he is a Muslim, the *fiḳh* confirms and expressly states his competence to contract a marriage, as clearly laid down in the Ḳur'ān (*v. supra*); but the master's consent is required both for male and female slaves (according to the Mālikīs, the male slave of full age may marry of his own accord, but the master then has the right either to ratify the marriage or to terminate it by repudiation) and it is the master who acts as "guardian for matrimonial purposes" (*walī*) of his female slaves. The master can even marry off by "compulsion", (*d͟jabr*) a male slave, not yet of age, or a female slave (the father of a family has a similar right over his children); the schools of Abu Ḥanīfa and Mālik concede him the same power over a male slave of full age. The Ḥanbalīs alone, on the other hand, hold that the slave may insist on his master's marrying him off. Notwithstanding reservations and restrictions based on the words of the Ḳur'ān, and in spite of the customary requirement of "compatability" (*kafā'a*) between the parties, the jurists admit and lay down rules for marriage between Muslims of whom one is a slave and the other free. We have convincing evidence that, in the course of the centuries, such unequal marriages occurred (to the advantage to the slave, male or female, concerned) more often than one might think. A slave wife, on being emancipated, has the right to opt for divorce if her husband is a slave and, according to the Ḥanafīs, even if he is free.

A Muslim cannot be the husband or wife of his or her slave (nor even, some would add, of the slave belonging to his or her son); there is an absolute incompatibility, for the same persons, between *connubium* and ownership. In contradistinction to the other rites, the Ḥanafīs permit a Muslim, even a free Muslim, to marry a Jewish or Christian slave-girl. The slave is entitled to a maximum of two wives, except in the Mālikī view, which grants him four, just like a free man. The Mālikīs are also alone in conceding that a slave-wife has the right to share in her husband's nights on equal terms with a free co-wife; the other jurists allow her only one night in three. The obligation, which is generally recognized as incumbent on a slave-husband, to maintain his wife, gives rise to various solutions if he is not legitimately possessed of adequate means.

Although the majority of authorities deny that the male slave of full age can contract a valid marriage of his own free will, yet all agree that he has the husband's usual right of repudiation (*ṭalāḳ*) as he thinks fit. But in accordance with the general tendency to reduce by one-half, in the case of the slave, all figures prescribed for free men, he may only take back his wife after one single formula of repudiation, instead of the two which the Koran (ii, 229) lays down as a maximum. Consequently a twofold repudiation on his part has the same decisive result as a threefold repudiation by a free man; the Ḥanafīs alone, who in the matter of repudiation have more consideration for the woman than for the man, apply this reduction if it is the wife who is a slave, whether or not her husband is a free man. The Ḥanafīs also set themselves apart from the other schools in not permitting the married male slave to use the device of "cursing" (*liʿān*), instituted by the

Ḳurʾān (xxiv, 6-9) to the advantage of the husband who may accuse his wife of adultery with no legal proof.

The "legal period of withdrawal" (*ʿidda*) which must be observed by widows or repudiated woman (Ḳurʾān, ii, 228, 234; lxv, 4) is also halved when the woman in question is a slave: 1) two months and five days for a widow, instead of four months and ten days; 2) two menstrual or intermenstrual periods (depending on the school) instead of three (one could hardly say one-and-a-half) for the repudiated woman who is usually regular, except that the Ẓāhirīs keep the figure at three; 3) one month and a half for the repudiated woman who is not usually regular, except according to the Mālikīs, who oddly enough, as Averroes remarks (*Bidāya*, ed. 1935, ii, 93; tr. Laïmèche, 233-4), here hold to the figure of three.

f.—Far more important in practice, on account of its wide application and great bearing on social life, is the system of legal concubinage. In *fiḳh* as in the Ḳurʾān, extramarital cohabitation is permissible only between a man and his own female slave; he is forbidden to cohabit with a slave belonging to his wife, even with the latter's consent (contrary to the Biblical custom), but indulgence is shown if he has relations with a slave belonging to his son. Co-owners of a female slave may not cohabit with her, nor may a sole owner cohabit with a married female slave. When the concubine (*surriyya*) has a child by her master, she enjoys the title of ***umm walad*** [*q.v.*] and an improved status in that she cannot be sold and becomes free on her master's death (compare the Code of Hammurabi, para. 170; but for the fluctuations in old Islamic practice see J. Schacht, in E.I.[1] s.v., and *The Origins of Muhammadan Jurisprudence*, Oxford, 1950, 264-6); that child and any others she may subsequently have are born free. There is no limit to the number of concubines as there is to the number of wives, but almost all the authorities teach that there are the same bars to cohabitation as to marriage: natural or acquired kinship, two sisters together, the woman's professing a heathen religion.

With the especial aim of avoiding confusion over parentage, in the absence of any initial ceremony or *ʿidda*, the jurists have prescribed a temporary ban on sexual relations, in the case of a slave-woman, for "verification of non-pregnancy" or *istibrāʾ*, when for any reason she becomes the property of a new master or changes her status (emancipation, marriage). If she is pregnant, this ban lasts till her confinement, as with the *ʿidda*; if not, its duration is one menstrual period. If she is not yet regular in her periods or has ceased to be regular, the authorities differ: one month or three months is the usual rule. Mālikis and Ḥanbalis make the seller of the slave-woman share in the responsibility of the *istibrāʾ*; the former entrust her (*muwāḍaʿa*) to the supervision of a third person. There is considerable difference of opinion on points of detail in the numerous cases where the *istibrāʾ* would appear to be no longer obligatory, as serving no purpose; to avoid it, recourse is had to certain devices of procedure, particularly by the Ḥanafi devotees of "circumventions of the law" (*ḥiyal*) (well-known anecdote of Hārūn al-Rashīd and the *ḳāḍī* Abū Yūsuf, which has found its way into the Arabian Nights).

The children born of legal concubinage are legitimate and, in the matter of succession to their father's estate, are on the same footing as children born in wedlock. But it is harder to establish legally the paternity of a master, with all its legal and social consequences, than that of a husband; besides, the old ʿIrāḳī jurists were loth to declare it officially if there was no expression of willingness on the part of the master concerned. The Ḥanafīs too stand apart from the other schools in not fathering a child on the master unless the latter acknowledges it, and in permitting him to disown it if there is a legal presumption in favour of his paternity inasmuch as the concubine is already ***umm walad***. In the other schools, the master of an unmarried female slave is legally regarded as the father of her child, not only if he acknowledges it as his own but also if he makes an implicit admission of having had relations with her, as is obviously the case if she is already ***umm walad***. It is open to him to deny paternity only if cohabitation was manifestly impossible within the—very wide—officially recognized limits of the term of pregnancy, or if he takes an oath that he put his concubine in *istibrāʾ* at least six months before the date of the birth, and that he has not cohabited with her since. The ascription of paternity becomes complicated in such abnormal situations as when two co-owners of a slave cohabit with her during the same intermenstrual period, or when two entitled parties in succession have had relations with her without *istibrāʾ*; recourse is then had to the ruling of the "physiognomists" (*ḳāʾif* pl. *ḳāfa*), an ancient Arabian expedient difficult of application at certain times. Failing this, the child is left to choose for himself at puberty. Here again the Ḥanafīs stand alone in refusing to ratify this archaic institution; they prefer, if the decision proves to be rationally impossible, to set up a kind of two-fold paternity.

g.—Most authorities deny the slave-woman the right of custody (*ḥaḍāna*) over her children to which the free woman is entitled, nor do they permit the male slave to be a "guardian for matrimonial purposes" (*walī*). The Shāfiʿī and Ḥanafī schools (who have not ratified the partial tolerance of Abū Ḥanīfa) refuse to allow the slave to act as executor of a will (*waṣī*). The testimony (*shahāda*) of a slave is not admissible in court, except among the Ḥanbalīs, and even they do not accept it in connection with the most serious punishable offences. His affirmation (*iḳrār*) is generally accepted in matters affecting his person (apart from restrictions imposed by certain authorities) but not in matters of property.

h.—All the schools agree that the master can do as he likes with property in the possession of his slave and is at liberty to take it away from him. In the eyes of third parties, the ordinary slave has no patrimony of his own: his business activities, which are severely restricted, are on behalf of his master, who alone is financially competent to act. Nevertheless the Mālikīs take up the remarkable position (for an interesting justification see ʿAbd al-Wahhāb, *Ishrāf*, i, 270) of recognizing the slave's "ownership" (***milk***) of his ***peculium***, whose source is mainly from gifts or bequests which it is permissible for him to accept on his own account, although the ownership here is precarious and may not be disposed of without consent. Two important consequences of this doctrine are that, according to the Mālikīs, the slave may lawfully have concubines without giving rise to any theoretical difficulties, and that on gaining his freedom he may keep his ***peculium***, unless his master has formally announced his wish to retain it.

Finally, apropos of patrimony, there is quite a common practice, known from remote Semitic anti-

quity and from the Classical world, which provides the slave with a real, though not unrestricted, legal competency: it consists in the master's putting his slave in charge of a business or of certain specified business dealings, entrusting him with a capital sum where necessary. The slave is then said to be "authorized" (*maʾdhūn* or *maʾdhūn lah*). The effects of this "authorization" (*idhn*), which may nevertheless be revoked, are conceived in more or less generous terms by different jurists. The recipient always in fact becomes relatively independent, so as to be able to deal quite freely with third parties. The authorities are well-nigh unanimous in not making the master responsible for the debts of his "authorized" slave; the Ḥanafīs, followed with some hesitation by the Ḥanbalīs, allow them to be recovered on the "physical person" (*raḳaba*) of the slave debtor, if the capital at his disposal is inadequate; in other words he may be sold to pay them. On the other hand, the Mālikīs and Shāfiʿīs recognize his "abstract responsibility" (*dhimma*); the "obligation to pay" (*dayn*) they leave standing to the account of those creditors whom the assets are insufficient to satisfy, while deferring the "exaction of payment" (*muṭālaba*, "Haftung") till such time as the slave is emancipated.

i.—It is in connection with punishments (*ʿuḳūbāt*) that the hybrid and indeterminate character of the legal nature of the slave, who is simultaneously a thing and a person of inferior status, breaks through the complicated web of solutions presented by the *fiḳh*. Here is a curious example, of an unusual kind but mentioned as clearly showing this ambivalence: the "legal compensation" (*diya*) for the foetus aborted by a free woman is a young slave of either sex, technically known as *ghurra*, whereas the compensation for victims duly born is reckoned in camels or money.

To what extent is the law of retaliation (*ḳiṣāṣ*) applied to slaves, on the basis of Ḳurʾān, ii, 178 (*v. supra*)? In a case of intentional homicide it works against the slave, whether the victim be bond or free (if he is free, it is no doubt not precisely the idea of retaliation which underlies the punishment); but the schools object to putting a free man to death for killing a slave, with the noteworthy exception of the Ḥanafīs (and also of that illustrious, albeit somewhat dissident, Ḥanbalī, Ibn Taymiyya; cf. Laoust, *Essai*, 418, 438), and even they exempt the man who kills his own slave or one belonging to his son. The Mālikīs are almost alone in conferring on the victim's next-of-kin the ownership of the guilty slave (again with a great many reservations), to do with him as he pleases: he may put him to death, keep him in slavery or set him free. This may be a survival of an archaic solution, elsewhere replaced by the simple choice, as in the case of free men, between retaliation and compensation according to the tariff. In cases of deliberate wounding the Shāfiʿīs apply retaliation between the same persons as in cases of homicide; Mālikīs and Ḥanbalīs insist on equality of status, slave or free, between the guilty party and his victim; the Ḥanafīs forego retaliation altogether.

What of the monetary compensation, according as the slave is guilty of or is the victim of bloodshed? —1) Slave victim: The compensation goes to the master. The *diya* is the responsibility of the guilty person alone, except that the Shāfiʿīs are undecided whether or not to bring in the "group jointly responsible for the bloodwit" (*ʿāḳila*), which is the Ḥanafī rule in cases of homicide only. This *diya* is not fixed, as for the free man, but is calculated, in the event of death, on the market value (*ḳīma*) of the victim; the Ḥanafīs alone set an upper limit to it, namely the *diya* of a free man less a token reduction of ten dirhams. If there is only wounding, of a type specified in the tariff laid down by the Law for a free man, the majority of authorities hold that the market value of the injured slave should be reduced by the amount of the difference between the figure shown in the legal scale for an identical wound and the maximum compensation for a free man. The Mālikīs and some Ḥanbalīs teach, though with certain reservations, that the sum paid should exactly equal the depreciation in the market value of the slave.

2) Slave guilty: The majority of authorities give the master the choice between surrendering the culprit (*dafʿ*, *noxalis deditio*) and paying the appropriate *diya*. But the Shāfiʿīs, followed by several Ḥanbalīs, regard the *diya* as incumbent on the "physical person" (*raḳaba*) of the slave in question, whom his master will therefore sell, and hand over the price received in exchange for him, up to the amount of the *diya*, unless he prefers to pay the sum due without selling him.

The slave guilty of theft and the Muslim slave guilty of apostasy are punished in the same way as free men: by cutting off the hand in the former case, by death in the latter, when the necessary conditions for these punishments are fulfilled.

Fornication (*zinā*) committed by a slave of either sex does not legally involve the death penalty, in consequence of the Ḳurʾanic ordinance (*v. supra*) and because neither male nor female slaves are held capable of acquiring the particular legal condition of a *muḥṣan(a)* spouse, which the *fiḳh* restricts to free persons who have consummated marriage and which it regards as necessary before a death-sentence can be imposed for a sexual offence. As laid down in the Ḳurʾān, the punishment is half of that decreed (xxiv, 2) for the free person who is not *muḥṣan(a)*; viz. fifty lashes instead of one hundred, to which some authorities would add the further penalty of banishment. It should be noted that Ḥanafīs and Ḥanbalīs refuse to regard as *muḥṣan* the spouse of anybody who is not *muḥṣan*: so, according to them, the husband or wife of a slave cannot be executed for adultery. As part of the general tendency to mitigate the punishment for sexual offences involving slaves, certain cases of unlawful cohabitation with a female slave (e.g. by a co-owner or the master's father) are not looked upon as *zinā*.

Finally, the slave who is guilty of a "false charge of fornication" (*ḳadhf*) against a free person is liable, here again, to half the penalty decreed by the Ḳurʾān (xxiv, 4) against the slanderer who is free; viz. forty lashes instead of eighty. But the slave who is the victim of such a slander has no right at all to any such satisfaction, since the Law, which to a certain extent protects the person of the slave, does not go so far as to regard him or her as a man or woman of honour.

The vast field of the "arbitrary punishments" (*taʿzīr*), left to the judge's discretion, almost completely defies investigation through the study of written sources. We are conscious of our inability to make a sufficiently close study of how, in matters of punishment, the slave's position really compares, throughout history, with that of the free man, in the eyes of the judicial authorities of Islam.

j.—The emancipation (*ʿitḳ*, *ʿataḳa*, *iʿtāḳ*) of the slave is a work of piety; it is a unilateral act on the part of the master, consisting in an explicit or implicit declaration; in the former case it is not necessary

to show intention. In principle, emancipation cannot be revoked, nor may the beneficiary refuse it. If, however, instead of being immediate, it is to take effect at some fixed future date or subject to certain conditions, all authorities but the Mālikīs permit the slave to be sold in the meantime. This destroys the effect of the emancipation (except, some say, if the slave is then re-acquired by his former owner). The children of a female slave, born or unborn, as a rule become free on her emancipation. The partial enfranchisement of a slave by his sole master is equivalent to his total enfranchisement (Abū Ḥanīfa formulates a reservation, but is not followed by his disciples). The question is more involved when the slave is held in joint ownership and one of the owners enfranchises him insofar as his own share is concerned; if this owner is well-to-do, the enfranchisement is total and he will compensate his fellow-owners for the value of their shares. If the emancipator is not wealthy enough for this, the slave remains "partial" (*mubaʿʿaḍ*), except according to the Ḥanafīs, who free him and allow the other owners to recover their share out of the income from his work (*siʿāya*). There is another point on which the Ḥanafīs reject the solution readily accepted by the other schools: they do not permit recourse to the drawing of lots (*ḳurʿa*) to determine which of several slaves is to be enfranchised when circumstances make it necessary to choose; their rejection of this procedure dictates certain of their rulings.

A grant of enfranchisement with effect from the master's death, a desirable practice for the Faithful and one for which they have often shown partiality, is known as *tadbīr*, from the expression *ʿan dubur^in minnī*, "after me" (this is the view of the Mālikīs, who insist on a formula containing a word from the root *dbr*). The Shāfiʿīs also apply the term to an enfranchisement to take effect from a date after the master's death, which for the other schools would count as no more than a revocable testamentary disposition. *Tadbīr* itself is in principle irrevocable, in the eyes of all the authorities, but here too the Shāfiʿīs and Ḥanbalīs allow it to be made void by the sale of the *mudabbar* slave. The Ḥanafīs permit this only if the *tadbīr* is limited (*muḳayyad*) by a condition connected with the emancipator's death. It is permissible for a master to cohabit with his *mudabbara* slave; and her children, except in the dominant Shāfiʿī view, follow the condition of their mother. On the master's death, the *mudabbar*, being regarded as part of his estate, is subject to the rule of the disposable third and on this rule depends the manner of his effective liberation, which is different for each school. Except according to the Ḥanafis, he remains in slavery if the debts of the deceased cannot be settled without selling him.

Contractual enfranchisement is of great doctrinal and practical importance. It is recommended by the Ḳur'ān (xxiv, 33: the interpretation of the text as implying a strict obligation has not generally prevailed). It consists in the master's granting the slave his freedom in return for the payment of sums of money agreed between them. Some call this conditional enfranchisement, according to others it is ransom by the slave of his own person: a divergence which entails solutions differing in detail. The transaction is known in the Ḳur'ān as *kitāb*, the verbal noun of the third form. In the classical language, no doubt to distinguish this from *kitāb* = "letter, book", it has been replaced by its morphological equivalent *mukātaba* or by *kitāba*.

Although the payments are usually spaced out (*munadjdjama*) and the majority of jurists regard settlement by instalments as essential to the contract, the Ḥanafis accept one single and immediate payment; the Mālikīs are satisfied with one instalment, while Shāfiʿīs and Ḥanbalīs insist on a minimum of two. The sums to be paid are of course deducted from the *peculium* of the slave, who is *ipso facto* "authorized" to engage in business; the granting of *kitāba* to a female slave who has no honest source of income is frowned upon. The *mukātab* is set free only when his payments are completed (on some archaic divergences, see Schacht, *Origins*, 279-80). But the master is forbidden to sell him in the meantime, except by the Ḥanbalīs, who nevertheless hold the purchaser to the terms of the contract of enfranchisement. The Mālikīs give the master a limited right to dispose in advance of the total of the sums which the *mukātab* undertakes to pay (they are known as *kitāba*, like the contracts itself). Concubinage with a "contractually emancipated female slave" is unlawful. A grant of *mukātaba* may be superimposed on one of *tadbīr*, to the same person's advantage. When the *mukātab* reaches the end of his payments, a "rebate" (*ītā'*) is usually accorded to him, in compliance with the Ḳur'anic text: fixed or discretionary, obligatory or merely recommended, according to the different authorities.

k.—Once he has gained his liberty, the freedman (*ʿatīḳ, muʿtaḳ*) immediately enjoys the same full legal capacity as the freeborn. But both he and his male descendants in perpetuity remain attached to the emancipator (*muʿtiḳ*), and to his or her family, by a bond of "clientship" or *walā'*, a term equally denoting the converse side of the relationship: "patronage". "Patron" and "client" are both referred to as *mawlā* (pl. *mawālī*) in relation to each other; if necessary they are differentiated by means of epithets: "higher" (*al-aʿlā*) for the former and "lower" (*al-asfal*) for the latter. The Ḥanafīs alone maintain, besides this *walā'* which originates in slavery, a legal institution known as *walā' al-muwālāt* between free men, which is outside the scope of the present discussion.

A saying, applied with slight variations in the different schools, runs: "Patronage belongs to the emancipator" (*al-walā' li-man aʿtaḳ*); it cannot be made over to a third party by any negotiation or shift at the moment of emancipation. The *fiḳh*, moreover, which insists on assimilating patronage to natural kinship (ḥadīth: *al-walā' luḥma ka-luḥmat al-nasab*), has succeeded in making it inalienable and untransferable, whereas cases of sale were not unknown before and even under Islam (cf. Aḥmad Amīn, *Fadjr al-Islām*, i, 110; Schacht, *Origins*, 173). Nevertheless, on the strength of the peculiar concept of "attraction of patronage" (*djarr al-walā'*), this right may be transferred in certain cases; for example, from the immediate emancipator to the one who emancipated him, or from the emancipator of the mother to the subsequent emancipator of the father, subject to certain conditions. Mālikīs and Ḥanbalīs sanction, not without much wavering, and under very different final forms, an ancient type of enfranchisement without patronage, known as *ʿitḳ al-sā'iba* in reference to the pre-Islamic custom, condemned indeed in the Ḳur'ān (v, 103), which consisted in turning loose in complete freedom one particular she-camel of the herd, protected by taboos.

The patron and his "agnates" (*ʿaṣaba*), or those of the patroness, stand in the position of agnates, except according to the Ẓāhirīs, to the emancipated slave who has no natural agnates, particularly in

connection with tutelage for purposes of matrimony and with joint responsibility in penal matters. In return, the property of the emancipated slave or of his or her descendants in the male line who die leaving neither priority heirs nor agnates, reverts to the patron or patroness or to their agnatic heirs, in accordance with a system of devolution (by successive generations among the kin; maxim: *al-walāʾ li-l-kubr*) more archaic than in usual cases of succession (see R. Brunschvig, in *Revue Historique de Droit*, 1950). A woman is absolutely excluded from this "inheritance of patronage" (*mīrāth al-walāʾ*): she can be patron only of her own freedmen or the freedmen of the latter; her sons inherit the patronage, while they are not counted among her agnates for purposes of joint responsibility in penal matters, a particularly conservative institution. One ancient isolated opinion notwithstanding, the jurists have not granted the freedman the right to inherit the property of the patron who dies without heirs.

Bibliography: Apart from references in the text, all the collections of hadith and treatises on *fiḳh*, not forgetting the works on *ikhtilāf*. Studies in European languages: Weckwarth, *Der Sklave im Muham. Recht*, Berlin 1909, mentioned for the sake of completeness; Abd Elwahed, *Contributions à une théorie sociologique de l'esclavage*, Paris 1931, is more important, but biassed. For the three main Sunnī schools only, see first of all: D. Santillana, *Istituzioni*, i [2], 141-160; Juynboll, *Handleiding* [4], 232-40, Bergsträsser-Schacht, *Grundzüge*, 38-42; and, for penal law, L. Bercher, *Les délits et les peines de droit commun prévus par le Coran*, Tunis 1926, *passim*. On the Mālikī view of paternity in legal concubinage, Lapanne-Joinville, in *Revue Marocaine de Droit*, 1952.

l.—The strictly juridical statute of slavery among the Imāmī Shīʿites, for which one may refer to the classic work of al-Ḥillī, *Sharāʾiʿ al-Islām* (tr. Querry, 2 vols., Paris 1871-2) is indicative of attitudes sometimes considerably removed from the great Sunnī principles. Among the solutions it offers we shall confine ourselves to the following, as being particularly revealing of some interesting legal or social viewpoints.

The child born in wedlock does not follow the status of his mother, bond or free, but failing any stipulation to the contrary, is born free if either of his parents is free. If both are slaves but not of the same master, he belongs jointly to the masters of both parents. The master of a female slave may grant a third party the "use" of her, for purposes of work or sexual relations. There is a great deal of controversy about the permissibility of manumitting a non-Muslim slave; on the other hand it is recommended that the Muslim slave should be freed after seven years' service (compare with *Exodus*, xxi, 2; *Deut.*, xv, 12). Manumission is of right, according to most authorities, when the slave is mutilated by the master, as the Mālikīs hold, or if he is smitten with blindness, leprosy or paralysis in the course of his slavery. The concubine who has borne a child is not automatically freed on her master's death unless her child is still alive; her value is then deducted from this child's share of the inheritance. Enfranchisement with effect from a master's death may be revoked, just like a legacy; it does not prevent sale of the slave, which is tantamount to a revocation. Contractual enfranchisement is of two kinds: "conditional", which leaves in total slavery the slave who defaults in his debts, as among the Sunnīs; "unconditional", which gives the slave his freedom in proportion to the amount he pays.

In penal law, there is no retaliation on the freeman for the murder of a slave. The *walī* of a freeman killed by a slave can, as in Mālikī law, claim the possession of the guilty slave. The *diya* of the slave may not exceed (whereas the Ḥanafīs say: amount to) that of a free person of the same sex.

Some of these provisions show an independent development of doctrine, while others clearly echo ancient solutions which the Sunnīs as a whole have not retained (see two examples in J. Schacht, *Origins*, 265, 279).

The Practice of Slavery

A) In the Middle Ages

Throughout the whole of Islamic history, down to the 19th century, slavery has always been an institution tenacious of life and deeply rooted in custom. The Turks, who were to come to the relief of the Arabs in the victorious struggle against Christianity, seem to have practised it but little in their primitive nomadic state (Üçok, in *Revue Historique de Droit français*, 1952, 423): after providing for so long their unwilling quota, through kidnapping or purchase, to the slave class of the Muslim world, they became themselves supporters of the institution in an ever-increasing degree, as they adopted Islam and the sedentary way of life.

The wars of conquest, which, after the fulgurous expansion of Islam in the first century of the hidjra, continued throughout the Middle Ages to further its spread in one direction or another despite setbacks elsewhere, provided the conquerors with an almost ceaseless stream of prisoners of both sexes, many of whom remained in slavery. Even in those places where the frontiers of the *dār al-Islām* were, for the time being, established, armed raids into enemy country, organized by the central power or individual groups, continued to put into practice the principle of the "Holy War", when no official truce or momentary alliance happened to be in force; and these raids brought back captives. Piracy in the Mediterranean, coupled with the privateering war from which it was often barely distinguishable, both augmented by grim razzias against the Christian seaboard, contributed to the supply of slaves to the adjacent Muslim lands, to an extent which varied at different periods but was always considerable.

Mediterranean Christendom, from Spain to Byzantium, paid this aggressive Islam in its own coin, by land and by sea. A curious chapter in the economic and social history of these Christian countries is afforded by the periodic influxes to their territory of "Moors" or "Saracens", reduced to slavery, then closely watched, employed as labourers, sometimes escaping or being ransomed but usually blending, little by little, into the local population, after their slow conversion to Christianity (see Ch. Verlinden's detailed study, in *L'Esclavage dans le monde ibérique médiéval*, in *Anuario Historia Derecho Español*, 1934; *idem*, on Catalonia, in *Annales du Midi*, 1950, and his useful bibliography, for various countries, in *Studi....G. Luzzatto*, Milan, 1949, while awaiting his book on *L'Esclavage dans l'Europe Médiévale*; due to appear in 1954; interesting documentation on one particular society is to be found in A. González Palencia, *Los Mozárabes de Toledo en los siglos XII y XIII*, Madrid 1930, prel. vol., 242-6; on the quasi-ritual invitation of Muslim captives to the Emperor of Constantinople's banquet, in the 10th century, see M. Canard, in Vasiliev, *Byzance et les Arabes*, vol. ii, part 2, Brussels 1950, 387-8).

It sometimes happened, admittedly on a restricted scale, that Muslims made slaves of other Muslims. This was the case, for example, when members of fanatical sects regarded the rest of mankind as beyond the pale of Islam and consequently did not scruple to attack them and, if they spared their lives, to keep them in captivity. There was an exceptional instance in 1077, when thousands of women of a revolted Berber tribe were publicly sold in Cairo. What happened more frequently, on the borders of Muslim states, was that official or private razzias against populations still largely pagan carried off indiscriminately human beings, particularly children, who might belong to Islam. With the spread of Islam in negro Africa and the intensification of Moroccan pressure in this direction, beginning in the last centuries of the Middle Ages, the question of the legality of subsequent sales had to be put to some great jurists; they answered circumspectly, giving the dealers the benefit of the doubt as to the origin of individuals offered for sale (in 15th century, al-Wansharīsī, *Miʿyār*, vol. ix, 171-2, tr. *Archives Marocaines*, xiii, 426-8; towards 1600, Aḥmad Bābā of Timbuktu, quoted in P. Zeys, *Esclavage et guerre sainte*, Paris 1900).

The import of slaves by peaceful means tended, from an early date, to compete with the forcible method. Slaves were included in the well-known *baḳt* [*q.v.*] (Latin *pactum*?) or annual Nubian tribute, unquestionably a continuation of an ancient tradition, which was furnished to Egypt well-nigh regularly for many hundreds of years. But, in the ordinary course of events, it was trade that brought a plentiful flow of slaves from outside into the markets of the *dār al-Islām*. The slavers' caravans went into the heart of Africa or of Asia to acquire their human merchandise, bought or stolen; on the Dark Continent, the slaving propensities and internal struggles of the natives facilitated the business of the dealers. Not only Negroes and Ethiopians, Berbers and Turks were the objects of this international trade; there were in addition, chiefly in the early Middle Ages, various European elements, above all, the "Slavs", whose name has given rise to our term "slave" and has also been extended in Arabic (*Ṣaḳāliba*) to cover other ethnic groups of central or eastern Europe, their geographical neighbours. The traffic was carried on by sea as well as by land; the Red Sea has never ceased to provide a way from Africa to Arabia; the Mediterranean, with its appendage the Black Sea, offers a route, that has always been frequented, from Christian or pagan Europe to the Muslim world. Certain ports seem to have had a bigger share than others, at various times, in the reception of this merchandise: Almeria in Muslim Spain, Faramā and later Alexandria in Egypt. Darband (*Bāb al-Abwāb*), on the shores of the Caspian, was from quite an early date a very busy frontier-market for slaves, as were Bukhārā and Samarḳand in the interior.

From the middle of the 8th century, the Venetians, to the great indignation of the Papacy, began their career as purveyors of slaves—sometimes Christian—to the Islamic lands. In the 9th and 10th centuries, Jewish merchants played an important part in the traffic of "Slavs" across central and western Europe (including a celebrated eunuch-"factory" at Verdun) and their distribution throughout Islam (the famous passage from Ibn Khurradādhbih on the Radhāniyya is reproduced and translated by Hadj-Sadok, in *Bibliothèque arabe-française*, vi, Algiers 1949, 20-3). At a later date, the Mamlūks of Egypt, with the consent of the Byzantine emperor, imported new slaves, to serve or to replace them, from the Genoese or Venetian trading-posts of the Crimea or the Sea of Azov.

Even within the Muslim world, there were considerable movements of slaves, of every racial origin, in the Middle Ages; tribute sent to the caliphs by provincial governors and vassal amīrs, or commercial traffic. We do not know all the details of the organization of this traffic, but we are acquainted with certain aspects of it. Every big town had its public slavemarket, which in some countries was called the "place of display" (*maʿriḍ*). The one at Sāmarrā, in the 9th century, is described as being a vast quadrilateral, with internal alleys and onestorey houses, containing rooms and shops (al-Yaʿḳūbī, *Buldān*, 260 = tr. Wiet, Cairo 1937, 52). The slave-merchant, who was known as "importer" (*djallāb*) or "cattle-dealer" (*nakhkhās*), inspired at the same time contempt for his occupation and envy for his wealth: he used in fact to draw huge profits, often through clever faking of his merchandise, if he did not actually hoodwink the unsophisticated customer in a quite outrageous fashion. Some remarkable details in this connection are to be found from the pen of the eastern Christian doctor Ibn Buṭlān, towards the middle of the 11th century (see Mez, *Renaissance*, 156-7) and in the writings of the conscientious Muslim al-Saḳaṭī of Malaga, towards 1100 (*Manuel de Ḥisba*, ed. Colin and Lévi-Provençal, Paris 1931, 47-58).

I do not consider that it would serve any useful purpose here to quote selling-prices, particularly if the prices in question are exceptional. Such figures have no real meaning unless subjected to criticism and compared with the commercial value of other commodities — a study which has yet to be made and the materials for which, it seems, could be assembled with no great difficulty. But it is already clear and well-known that there were differences in the same market as between the various categories of slave, according to their place of origin, their sex, age, physical condition and abilities; these differences seem vast in the case of choice items, particularly females: young, handsome, talented. As a rule, whites were worth more than blacks; the ascending order of value among them, in 11th-century Spain, was: Berbers, Catalans, Galicians. At Alexandria, in the 15th century, Tartars and Circassians were prized above Greeks, Serbs and Albanians. An elementary and traditional kind of comparative psycho-physiology decides the typical qualities and defects assigned, in popular lore, to representatives of the various races and, in consequence, the functions for which they are considered best suited. Berber women, for instance, are esteemed for housework, sexual relations and childbearing; negresses are thought to be docile ("one would say they born for slavery"), robust and excellent wet-nurses; Greek women may be trusted to look after precious things; Armenian and Indian women do not take kindly to slavery and are difficult to manage.

Almost all female slaves are destined for domestic occupations, to which may be added, when they are physically attractive, the gratification of the master's pleasures. Herein indeed lies the commonest motive—lawful in Muslim eyes—for their purchase. Those of them who show an aptitude for study may be given a thorough musical or even literary education, by the slave-dealer or a rich master, and beguile by their attainments the leisure hours of high society (the slave-girl musician is called *ḳayna*).

Some again are found here and there given over to prostitution, despite the Ḳur'anic prohibition.

Male slaves have a wider range of duties, from the beginning of their captivity. A great number form the personal bodyguards or the enormous slave-militias, black or white, frequently in rivalry, which speedily reinforce or replace the Arab, Berber and Iranian fighting-men. This military function was the chief reason for the Egyptian and North African recruitment of slaves in the land of the negroes and for the introduction into ʿIrāḳ, by the caliphs of Bāghdād, of Turkish slaves, employed in the same way by the Sāmānids of Bu<u>kh</u>ārā (details on their formation and career in Niẓām al-Mulk, *Siyāset-nāma*, ed. tr. Schefer, Paris 1891-3, 95/139 f.). But certainly the most remarkable regime in this respect, remarkable both for the extent of the phenomenon and for the great ethnic variety of white warrior-slaves involved in it, must have been that of the Mamlūks [*q.v.*].

Other male slaves have domestic duties—sometimes of a questionable nature—in the homes of people of moderate means, as well as in those of the great. Among them were the eunuchs who, chiefly on the model of Byzantium, filled the palaces of the caliphs, the amīrs and all the nobles, at first as guardians of the *ḥarīm*. They are rarely referred to by their specific appellation of "castrate" (*<u>kh</u>aṣī*) or "eunuch" (*ṭawā<u>sh</u>ⁱⁿ*); they are more usually designated by a neutral term: "servant" (*<u>kh</u>ādim*), or, as a mark of high honour, "master" in the sense of "teacher" (*ustā<u>dh</u>*; see Canard, *Histoire d'ar-Rāḍī*, Algiers 1946, 210), which also indicates the function performed by some of them. In the early Middle Ages, the proportion of "Slavs" among the eunuchs imported and then re-exported by Muslim Spain was so high that *ṣiḳlabī* (var. *siḳlabī*) was often used there in the sense of "eunuch" (Dozy, *Suppl.*, i, 663). In the 9th century, the illustrious writer al-<u>D</u>jāḥiẓ states that the majority of white eunuchs in ʿIrāḳ were "Slavs", and in the course of the remarkable essay which he devotes to the effects of castration on men, he asserts that in these "Slavs", as opposed to the blacks, the operation encourages the development of all the natural aptitudes (*al-Ḥayawān*, Cairo 1938, i, 106 seqq., tr. Asín Palacios in *Isis*, 1930, 42-54). For the following century, interesting details are to be found in the work of the geographer Maḳdisī, on the categories of eunuchs and the processes of castration (re-ed. Pellat, Algiers 1950, 56-9; see also Ibn Ḥawḳal, i, 110). Whereas the blacks were usually submitted to a complete and barbarous amputation, "level with the abdomen", as the later expression ran, the whites, who were operated on with a little more care, retained the ability to perform coitus (this distinction is also vouched for in modern times); some of them took concubines or even wives, as the Ḥanafī school allowed.

Outside the house, many slaves served as assistants in business, or carried on business themselves, in accordance with their legal position, with a considerable measure of independence. Others cultivated their masters' fields. Examples are found of monumental building-works carried out by slave-labour, especially by prisoners-of-war in government service. But it must be emphasized that mediaeval Islam seems scarcely to have known the system of large-scale rural exploitation based on an immense and anonymous slave labour-force. One big attempt along these lines, carried out by the ʿAbbāsids in order to revivify the lands of ʿIrāḳ, the centre of their empire, ended, during the second half of the 9th century, in the prolonged and terrible revolt of the *Zan<u>dj</u>* [*q.v.*] slaves, who had been imported from the eastern coast of Africa to bring the swamps of Lower Mesopotamia under cultivation.

The vast majority of slaves therefore escaped the system of collective forced labour, which condemns a man to one of the most distressful of all existences. This does not mean that they were one and all contented with their lot; the number of runaways, which seems very high at certain periods, would indicate the reverse. But setting aside the suffering caused by the slave traffic (all the more if castration was performed), and taking into account the general harshness of the times, the condition of the majority of slaves with their Muslim masters was tolerable and not too much at variance with the quite liberal regulations which the official morality and law had striven to establish. Despite the obvious points of inferiority, it was even known for them to attain happy and enviable positions, in material prosperity and influence, especially in rich and highly-placed families and, even more, in the immediate entourage of the sovereign. They had, in addition, the prospect of liberation, which it was not always overbold to hope for.

This liberation, in the case of prisoners-of-war or victims of razzias by land or sea, might result from negotiations between the powers concerned: an exchange of captives or restoration in return for a ransom. History is full of such negotiations, sometimes futile, sometimes crowned with success, between Christian and Muslim states. Many were the captives ransomed, in both directions, thanks to collections of an official nature, but also more and more by ordinary individuals. In the latter case, Jews often played a useful part as go-betweens; in Spain they were sometimes referred to as "alfaqueques" (Ar. *fakkāk*, "liberator"). Further, great Catholic religious Orders, organized for the most part since the end of the 12th century and the beginning of the 13th, devoted themselves to succouring and ransoming their co-religionists who were captives in Muslim countries: in discharging this duty, Trinitarians and Mercedarians were to have a long and fruitful career, which their eulogists, ancient and modern, have regrettably deemed it necessary to embellish still further by means of exaggerated figures.

Also worthy of consideration, for their number and for their effects on Muslim society, were the compulsory manumissions, under the conditions imposed by the Law, of concubines who had borne children, as well as the voluntary manumissions of slaves of both sexes, especially Muslims, by their Muslim masters. Thus apostasy was rendered attractive for Christians; though not, as a rule, imposed on them, it was insistently suggested. We have already said that enfranchisement is an act of piety, widely practised; it is frequently the result of a vow or oath (conditional oath, expiation for a violated oath). The beneficiary ranks unreservedly as a free man or woman; the bond of clientship which continues to exist, and whose existence is felt, presents not so much a slight moral derogation as an inestimable advantage in the reality of a highly compact social structure. From ʿAbbāsid times onward, more than one freedman rose very high indeed in the military and political hierarchy, even to the most exalted ranks to which a free Muslim might attain. Their very names, which they continued to bear, betraying to the world their former servitude and even their irremediable condition as eunuchs (some of them commanded armies), were

no obstacle to such a rise. In the 4th/10th century, such men as Muʾnis in Baghdād and the negro Kāfūr in Egypt afford a remarkable illustration of the system. A number of Muslim dynasties, in Spain as well as in Egypt and the heart of Asia, have an avowedly servile origin. A Turkish "slave" dynasty reigned at Dihlī in the 13th century [see DIHLĪ SULTANATE]. The "mamlūk" sultans of Cairo actually made such an origin a condition of coming to power, through a recognized *cursus honorum* (see G. Wiet, in Hanotaux, *Histoire de la Nation Egyptienne*, vol. iv, 1937, 393-5; D. Ayalon, *L'Esclavage du Mamelouk*, Jerusalem 1951, and MAMLŪKS). As for maternal ancestry, reigning sovereigns almost everywhere, including the ʿAbbāsid caliphs, were commonly sons of slave concubines, of widely varying provenance.

It is therefore easy to imagine the importance of slavery in that mingling of populations to which Muslim institutions have been so favourable. The number of new slaves introduced into the great cities in certain years could be reckoned in thousands; the slave element formed a considerable part of the urban population and had a marked tendency to blend with it, not only through enfranchisement but also through sexual intermixing, which was commonplace. Crossbreeding with blacks may have had ethnological consequences, which it is not within our competence to analyse. The slave-trade was of prime importance in economic life; the taxes imposed on it were a source of profit to the authorities. Although slave-labour was for the most part employed in household duties and was not generally applied to productive work, yet the military function of large numbers of male slaves was one of the salient features of this civilization, and had repercussions on the foreign and domestic policies of many mediaeval states (see M. Canard, on a treaty between Byzantium and Egypt in the 13th century, in *Mélanges Gaudefroy-Demombynes*, Cairo 1935-45, 197 ff.).

B) *In the Modern Period*

The practice of slavery among the Muslims seems to have undergone no radical changes during the modern period, down to the last century. The main sources and the mediaeval routes of the slave-trade were modified only to a limited extent by the disappearance of Islam from Spain and on the other hand its expansion or consolidation in the Balkans, India and Indonesia. Far more considerable must have been the effect of the position adopted by European Christendom; having almost entirely suppressed slavery on its own ground, it must have ceased to contribute to the commercial supply of white human merchandise long before it adopted the worldwide policy of abolitionism, whose effects are still perceptible in our own days. Christendom nevertheless busied itself with supplying its American colonies with African negroes, thrown into cruel bondage. Among these unfortunates, Muslims seem to have been particularly numerous in Brazil, where from 1807 to 1835 they fomented the great slave revolts, rigorously quelled, which shook Bahia (on their cultural influence and their disappearance, see R. Ricard and R. Bastide, in *Hesperis* for 1950 and 1952 respectively). In the Mediterranean, where the corsairs and "Barbary" pirates continued their ravages, perhaps to an even greater extent, after the establishment of Ottoman supremacy (see O. Eck, *Seerauberei im Mittelmeer*, Munich-Berlin 1940), the bordering Christian powers retaliated almost down to the end of the 18th century, as they had done previously, by numerous captures. In this work the Knights of Malta took an active part: during the first half of the century, they sold to the French navy the men it needed as rowers on the galleys. More than ten thousand Muslim slaves attempted a revolt on the island in 1749; Bonaparte liberated the two thousand Barbary slaves whom he found there in 1798 (see Godeschot and Emerit, in *R.Afr.*, 1952, 105-13).

On the lot of Christian captives or slaves in the hands of the Barbary corsairs, there is abundant European documentation; perhaps even too abundant, in view of its not being always of good quality. If Cervantes' captivity at Algiers is a matter of certainty and had a felicitous result on his work, that of St. Vincent de Paul at Tunis is scarcely plausible. The information provided in what might be termed the classic accounts of the subject, such as those of Friar Haedo or Father Dan (17th century, the heyday of the corsairs), must be carefully checked against other data, preferably derived, where possible, from consular archives (for all aspects of slavery at Algiers, see the solid study by H. D. de Gramont, in *Revue Historique*, 1884-5, to be supplemented by Venture de Paradis, ed. Fagnan, Algiers 1898, and Lespès, *Alger*, Paris 1930, ii, chaps. 3-5; for Tunisia, we have a judicious statement of the facts by J. Pignon in *R.T.*, 1930; see also, as a more recent publication, Garcia Navarro, *Redenciones de cautivos en África*, ed. Vazquez Pajaro, Madrid 1946). It is important to distinguish particularly between slaves held to ransom, who were rich and well-treated, and the slave workers, whose widely-varying destinies might hold in store for them a bitter life in the galleys, or wretched toil in the countryside, or an often much easier life in or just outside the city. Barbary at that time abounded in "matamores" (Ar. *maṭmūra*: "silo") and "bagnios" (Ital. *bagno*: "bath") in which the slaves were penned. The Atlantic itself was scoured by the Moroccan corsairs, from their base at Rabat-Salé (see Penz, *Les captifs français du Maroc au XVIIe siècle*, Rabat 1944). As in the Middle Ages, the liberationist religious Orders and the Jews took an active part in procuring releases by ransom. Renegades attained high positions in the fleet or in the army. But at the beginning of the 19th century, after a slow decline that was hastened by increased pressure on the part of the European powers, the number of Christian captives was considerably diminished. At the time of the French conquest in 1830, Algiers had no more than 122, as against several thousands two centuries earlier.

North Africa remained an outlet for the traffic in negroes, on the other hand, right down to the French occupation. In this traffic Morocco played a preponderant part, especially at that period in the second half of the 17th century, when the sultan Mūlāy Ismāʿīl raised a veritable army of negroes and half-breeds (*ʿabīd al-Bukhārī*, in consequence

of the oath they took on this collection of "authentic" traditions; see H. Terrasse, *Histoire du Maroc*, ii, Casablanca 1950, 256-7). Black slaves of both sexes continued to be imported into Morocco until well into the 20th century, with some pretence at secrecy since the open traffic from Timbuktu and public sale (the fairs of Sīdī Aḥmad u-Mūsā on the southern borders; at Fez and Rabat the special market was called *birka*, as in Tunisia) had become impossible. It should be pointed out how much their presence colours the family and social life of the cities (see R. Le Tourneau, *Fès avant le Protectorat*, Casablanca 1949, 200-3, with references; and, under the Protectorate, J. and J. Tharaud, *Fez ou les bourgeois de l'Islam*, Paris 1930, 17-43).

Towards 1810, a competent observer, Dr Louis Frank, made a special study of the importation of slaves at Tunis (*L'Univers Pittoresque, Tunis*, 115 seqq.) as he had done in Egypt ten years previously under Bonaparte (his *Mémoire sur le commerce des nègres au Kaire*, Paris 1802). The general organization of the traffic, the focus of which was public sales, recorded in writing, was much the same in both places, with the difference that whereas Cairo was supplied solely by big caravans (two annual, one from Sennār and one from Dārfūr—see also J. S. Trimingham, *Islam in the Sudan*, Oxford 1949, *passim*—, and one biennial, from Bornu or Fezzān), Tunis used to receive some isolated consignments, apart from one big caravan every year from Fezzan or beyond (see also J. Despois, *Géographie humaine du Fezzan*, Paris 1946, 35-7, with references): an annual total of some three thousand for Cairo and one thousand for Tunis. In the latter city the male black slaves came under the authority of the agha or chief eunuch of the bey, while the negresses had "a forewoman to rule and protect them." In Egypt, the mortality of these negroes was high; in Tunis, according to Dr. Frank, their infants survived only if they were of mixed blood (on the blacks in present-day Tunisia, see Zawadowski, in *En terre d'Islam*, 1942). In the time of Muḥammad ʿAlī, towards 1835, the Egyptian army used to make up its strength by yearly razzias from bases in Dārfūr and Kordofān; it would enrol the sturdiest of the captives and hand the rest over to the inhabitants of those provinces and to the dealers, some of whom were themselves black converts to Islam (see T. F. Buxton, *De la traite des esclaves en Afrique*, French tr., Paris 1840, 70-5).

The moral and social condition of slaves in an urban environment, in the 19th century, seems to have been fairly uniform in such diverse cities as Tunis, Cairo and Mecca (a great centre for the traffic on the occasion of the annual pilgrimage). White slaves had become rare since the beginning of the century; they were expensive and in little demand except by exalted personages or rich Turks; white female slaves were preferably Caucasians, famed for their beauty. Arabia could muster a small number of Indonesians. The bulk of the slaves were black, but in the east a distinction was drawn between Ethiopians, who were paler and more highly prized, and negroes in the strict sense. Eunuchs were imported already castrated; in Mecca, the majority of them were in the service of the mosques. All the European writers lay stress on the good treatment these blacks customarily received at the hands of their town-dwelling masters, in contrast to the dreadful conditions of their capture and subsequent transportation under the lash of the Arab or Arabicized slavers. They readily adopted Islam and became deeply attached to it (some even thanked God for having led them to the true Faith through their captivity: Doughty, *Arabia Deserta*², i, 554-5), though their new faith did not prevent them from performing their traditional songs and dances, or even their African rites of exorcism (the *zār* [*q.v.*]; see Trimingham, *op. cit.*, 174-7; similar facts in Barbary). They formed, one may say, part of the family and, especially as concubines, the slave-girls came to be of one blood with it. Enfranchisements were usual, but it was not unknown for a concubine who had borne a child to seek from her master a denial of paternity, since there were more advantages for her in remaining a slave than in marrying and running the risk of repudiation (see especially Lane, *Manners and Customs*, London 1895, 147, 168, 194-7; Burckhardt, *Voyages en Arabie*, French tr., Paris 1835, i, 251-2; Snouck Hurgronje, *Mekka*, ii (The Hague 1889), 11-24, 132-6). It is therefore not surprising that, round about 1860, the Swiss Henry Dunant, founder of the Red Cross, who knew Tunisian society, laid great stress on the customary mildness of urban servitude among the Muslims, as compared with the methods of American slave-holders.

At the end of the 18th century, Mouradgea d'Ohsson, to whom we owe so much of our information on the structure of the Ottoman empire, declared: "There is perhaps no nation where the captives, the slaves, the very toilers in the galleys are better provided for or treated with more kindness than among the Mohammedans" (*Tableau général de l'empire othoman*, iv/1, 381).

Under the sultans of Constantinople, slavery perpetuated the mediaeval traditions of the Islamic peoples: it furnished domestics, concubines, officials and soldiers. For the use of private persons, for example, the slave-dealers (*esirciler*), who were under the supervision of a *kâhya*, had at their disposal a public building in the capital, not far from which lived the expert matrons who acted as go-betweens if the purchasers so desired. Every slave, after passing the frontier, had a document of civic status bearing his name, which remained as a title-deed in the hands of his successive owners. People of quality, who imitated the court on a reduced scale, had *ḥarīms* of close on a hundred slave-women. The sultan's *ḥarīm* numbered several hundred, classified in a strict hierarchy of five ranks, only the two highest of which (those of *kadın*, "lady" and, below them, of *gedikli*, "privileged"), were attached to the person of the sovereign. Some of the women of the highest rank were former slaves whom the sultan had freed and subsequently married informally. Although for many years none of the sultan's wives had been freeborn, these former slaves had no difficulty in wielding very great influence at court. Besides this female element, there lived at the seraglio numerous eunuchs, conventionally known as "aghas" (Turkish also uses in this sense the Arabic *khādim* > *hadım*). The black eunuchs, under the "agha of the girls" (*kızlar ağası*), vied with the white eunuchs, under the "agha of the gate" (*kapı ağası*) for precedence and power; in the upshot it was the former who carried the day. Finally we must note the importance in all public services, civil and military, of slaves of various origins, "slaves of the gate" (*kapıkulları*), who, often converted to Islam of their own accord and enfranchised, attained the most desirable posts. From the 15th century, when the number of white slaves brought in by war and purchase had dwindled, almost down to the middle of the 17th century, there functioned the system,

contrary to the Sacred Law, of *devşirme* [see DEWSHIRME], or forced enrolment of young Christians of the empire, mainly from the Balkans, as slaves of the government. These involuntary yet devoted servants of the Porte used to receive a training suited to their abilities; the most gifted would enter the palace or the higher administration; the rest were turned over to the navy or various military corps, including the Janissaries, whose brilliant reputation was due to them (see M. d'Ohssòn, *op. cit.*, vi and vii, and H. A. R. Gibb and H. Bowen's solid and well-documented *Islamic Society and the West*, i/1, Oxford 1950, 42-4, 56-60, 73-82, 329-33).

Further east, in modern Persia, it is essentially in the domestic form that slavery has been practised. There one meets with the general characteristics already noted: usually good treatment, integration in the family, ease of enfranchisement, with some modifications belonging to Imāmī Shīʿite law (*v. supra*). Seventeenth-century European travellers were struck by the high number of eunuchs and the power they had, both at the Ṣafawid court and in the houses of the great; according to Chardin (*Voyages en Perse*, Amsterdam 1711, ii, 283-5) there were some 3,000 of them in the service of the sovereign, while the nobles and even rich private citizens had staffs of eunuchs. They were given the considerate appellation of "tutor, master" (*khōdja*, equivalent to *ustādh* which we have met above). Their purchase price was extremely high; the majority were white and came mostly from the Malabar coast of India. In the first half of the 19th century, under the Ḳādjārs, white slaves became few and soon disappeared altogether, except for the pretty Caucasian girls who continued to enter the *ḥarīms*; but, contrary to the most widespread Muslim practice, their children could not succeed to the throne, which was reserved for sons whose mothers were of royal blood. The numbers of the black slaves had increased; they were either Ethiopians who had crossed Arabia, or Zandj of east Africa, who came by way of Zanzibar, Mascat and Bushire (on this traffic, in Arab hands, see R. Coupland, *The Exploitation of East Africa*, London 1939, 136-46, with references), to draw custom to the market of Shīrāz. The high mortality which overtook these coloured men in Persia prevented their forming an important element in the population (see Polak, *Persien*, Leipzig 1865, i, 248-61, 661; E. Aubin, *La Perse d'aujourd'hui*, Paris 1908, 148).

The Persians, in the course of their armed conflicts with the Sunnī inhabitants of Turkestan, were sometimes reduced to slavery, as being heretics. In the middle of the 19th century, it was still possible for so many thousands of them, prisoners of war, to be sold at once in the market at Bukhārā that prices slumped. Some of them in this same town, having won their masters' regard and being enfranchised, rose to every official position of honour. Others, however, less well endowed, went from there to swell the number of the slaves on whose shoulders fell the greater portion of the agricultural work in the khanate of Khīwa (see A. Vambéry, *Travels in Central Asia*, London 1864, 192-3, 331, 371).

Among the relatively rare examples of an essential agricultural task performed by a compact slave labour-force, we may cite that of the region of Zanzibar itself, where, in the 19th century, there was kept a body of blacks gathered from almost as far as the great lakes and destined in the mass for export. The harsh life of toil in the sugar- or clove-plantations, run by Arab or Indian planters, all along the coast, was quite devoid of the amenities of urban servitude. The lot of thousands of slaves employed in pearl-fishing in the Persian Gulf also seems to have been a very harsh one over a long period.

Much less burdensome, certainly, but wildly discriminatory, is the slavery which still obtains today in the desert: in the Sahara on the one hand, in Arabia on the other, for the benefit of the nomad tribes. Tuareg society, divided into three rigid castes, used to keep on the lowest level, beneath the nobles and their vassals, the slave-groups (*akli*, pl. *iklān*), enfranchised or not, almost all of them black, who were utilized by the dominant clans either as tillers of the soil or as servants to men and beasts. Among the beduin of the Arabian peninsula and its fringes (see especially A. Jaussen, *Coutumes des Arabes au pays de Moab*, Paris 1908, 26, 60-1, 125-6; A. Musil, *The Manners and Customs of the Rwala Bedouins*, New York 1928, 276-8), black slaves may intermarry and acquire property, but however intimate they may be with the master and his family, however great the advantages custom permits them to enjoy, they are never regarded as equals, even after enfranchisement: they are *ʿabīd*, and *ʿabīd* they remain; and marriage with the sons or daughters of them is considered a come-down, by the lowliest of whites.

Abolition

Although Islam, in teaching and in actuality, has favoured the emancipation of slaves, it was only under an overwhelming foreign influence that it began, about a hundred years ago, an evolution in doctrine and in practice towards the total suppression of slavery, its abolition in law and custom. This evolution, which has continued, is in some regions still incomplete. Here we have one of the most typical examples of the transformation that the Muslim world has undergone, through European pressure or example, from the mid-19th century down to our own day.

The European powers concerned were themselves, to some extent, novices in this field: they had long favoured the traffic and maintained slavery in their colonies. One of them, Russia, had maintained serfdom on her own soil. The French "philosophers" of the 18th century, beginning with Montesquieu, had condemned the very principle of slavery: its short-lived suppression under the First Republic was unfortunately a check. But, from 1806 onward, Britain took the lead in the movement for the suppression of the slave-trade and then of slavery itself. She may be accused of having more than once let her maritime and colonial interests dictate her interventionary zeal or, on other occasions, the mildness of her actions. Yet, when all is said, she stands out as a great pioneer of abolition over the whole surface of the earth, including the lands of Islam.

The diplomatic history of the 19th century, since 1814-15, is dotted with treaties and other international agreements aimed at banning the traffic in negroes, by sea and across the continent of Africa, in increasingly precise terms. The suppression of slavery as such is mentioned only towards the end of the century, and then timidly. But measures in this direction had already been adopted in several portions of the Muslim world, particularly those under the authority of European states. Britain, having emancipated the slaves in her colonies by

the famous Bill of 28 Aug. 1833, made in 1843 the first general decision to abolish slavery in India (completed by a series of other Acts down to 1862). France completely abolished slavery in all her oversea territories, including Algeria, by a decree of the Second Republic on 27 April 1848; the Netherlands did the same for their Indonesian possessions by the laws of 1854-59, with effect from 1 Jan. 1860 (3 years before their colonies in the West Indies); and Russia for her Central Asian dependencies on 12 June (O.S.) 1873, before even having completed the conquest of Turkestan.

Parallel with this direct and radical action by the Powers, the Muslim states which, while remaining independent, were most subject to Western pressure and had most contacts with European civilization, were slowly and cautiously embarking on restrictive measures. As early as 1830, the Ottoman sultan had enfranchised *en bloc* those white slaves of Christian origin who remained true to their religion, while expressly keeping the Muslims in slavery (G. Young, *Corps de droit ottoman*, ii, Oxford 1905, 171-2). To Tunisia belongs the honour of having been the first to promulgate a general edict of emancipation for black slaves (*ipso facto*, of Muslim slaves: there were practically no white slaves in the Regency). By a decree of 23 Jan. 1846, the same year in which he was to make his sensational journey to France, the bey Aḥmad ordered that letters of enfranchisement should be granted to every slave who so wished, and that every instance of slavery of which the religious magistrates might be apprised should be referred to him. The preamble to this decision, which was approved by the two highest dignitaries of the Ḥanafī and Mālikī rites in the country, is worth dwelling on: in it, slavery is declared to be lawful in principle but regrettable in its consequences. Of the three considerations particularized, two are of a religious nature, the third political (*maṣlaḥa siyāsiyya*): the initial enslaving of the people concerned comes under suspicion of illegality by reason of the present-day expansion of Islam in their countries; masters no longer comply with the rules of good treatment which regulate their rights and shelter them from wrong-doing. It is therefore befitting to avoid the risk of seeing unhappy slaves seeking the protection of foreign authorities (M. Bompard, *Législation de la Tunisie*, 398; Arabic text in Sanūsī, *Madjmūʿāt al-Ḳawānīn al-Tūnusiyya*, fasc. 1, p. 4).

Thirty years later, in the treaty concluded with England on 19 July 1875, the bey Muḥammad al-Ṣādiḳ undertook not only to see that the decree of 1846 was given full effect, but also to do everything in his power to suppress slavery and punish any infraction. Under the French protectorate, various Tunisian ministerial circulars (1887-91) and the bey's decree of 28 May 1890 completed the formal prohibition of slavery in the Regency and the organization of the freeing of black slaves on the judicial and administrative planes (M. Bompard, *op. cit.*, 472; P. Zeys, *Code annoté de la Tunisie*, i, 384-6).

At Istanbul, the first imperial firmāns against the slave-trade date from the period of the *Tanẓīmāt*, under ʿAbd al-Madjīd, and especially from the years of close understanding with France and Great Britain: Oct. 1854 for the whites, Feb. 1857 for the blacks (a religiously-inspired reservation exempted the Ḥidjāz from the reform). How little effect these documents had at first in preventing the import of blacks, is apparent from the multiplicity of decisions of the same sort, the circulars and instructions which continued to repeat one another, in terms ever more insistent and explicit, till round about 1900. The agreement entered upon with Great Britain in 1880 but not applied till 1889, followed by Turkey's adhesion to the general Act of the Brussels Conference of 1890, constituted an important double step towards the suppression of the traffic, already much reduced by abolitionist action in Africa and the Red Sea: till then "more or less clandestine", it was to assume thenceforth "the nature of smuggling and was treated as such" (G. Young, *op. cit.*, 172-206). Moreover, foreign consuls secured from the Ottoman authorities the enfranchisement of slaves who sought refuge with them. The Constitution of 1876, guaranteeing the personal liberty of all subjects of the empire remained a dead letter until it was put in force by the Young Turks in 1908. At this time there were only a very few slaves, all of them domestic, in the capital and those provinces under the effective control of the central power (cf. Dr. Millant, *L'esclavage en Turquie*, Paris 1912).

Egypt was nominally included in the Ottoman territories within the scope of the oldest firmān forbidding the traffic in negroes. Indeed it needed to be, for this traffic had expanded just at the moment when the Egyptians installed themselves in the heart of the Sudan. Pashas subordinate to the Porte organized some anti-slaving expeditions in the south; the results were but mediocre (cf. J. Cooper, *Un continent perdu*, Fr. tr. Paris 1876, 25-8). Under the khedive Ismāʿīl, a mission of this type entrusted to Sir Samuel Baker (1869-73) was equally disappointing (S. Baker, *Ismaïlia*, London 1874, Fr. tr. Paris 1875), whereas after 1874 the fight against slavery was intensified, hand in hand with the Egyptian expansion, under Colonel Charles George Gordon and his European colleagues (cf. P. Crabitès, *Gordon, the Sudan and Slavery*, London 1933; H. Dehérain, in Hanotaux, *Histoire de la nation égyptienne*, vi, 481-552). At this period, the khedive, under the terms of his agreement with England of 4 Aug. 1877, was formally banning all trade in negroes and then opening enfranchisement offices in the various provinces. But it was only towards the end of the century, under the English *de facto* protectorate, that the most energetic measures were taken: since 1895, any infringement of the freedom of the individual has been classed as a crime in Egypt, while since 1898 the slave-trade, with the defeat of the Mahdist movement which had revived it in the Sudan, has been no more than an infrequent and clandestine phenomenon.

It was again the British who attacked, with notable persistence, one of the most productive sources of Muslim slavery: that of east Africa. The traffic there, by land and sea, had assumed terrifying proportions since Saʿīd, the Imām of Mascat, had succeeded in gaining a foothold on the coast of Africa, at the beginning of the 19th century. The stages through which English diplomatic activity passed are symptomatic: in 1822, after ten years of parleying, Saʿīd consented merely to forbid his subjects to export slaves *outside* the maritime lane joining Africa to Oman; in 1845, he prohibited the export of slaves from Africa to Arabia and beyond, while all the time insisting on the lawfulness of the import of slaves and of the slave-traffic within African territory. His son Barghash, sultan of Zanzibar, was to go further, in consequence of Sir Bartle Frere's famous mission to him: by the treaty of 5 June 1873 he prohibited the maritime traffic and the public slave-markets; then, in 1876, he declared the traffic by land illegal (see R. Coupland,

East Africa and its Invaders, Oxford 1938; *idem*, *The Exploitation of East Africa*, London 1939); if this did not stop it immediately, it was at any rate a considerable embarrassment for the trade. Next, under the British protectorate, a decree of the sultan in 1897 granted their freedom to any slaves who should ask for it, and forbade the courts to concede the claims of slave-owners. On 6 July 1909, a final decree abolished the status of slave in its entirety. The same thing had happened two years before in British East Africa (now Kenya), against an indemnity to be paid to the owners (the matter was settled in 1916).

It is safe to say that, towards the end of the 19th century and the beginning of the 20th, the export of negroes was at a very low ebb. We may add that Persia, one of the receiving countries, had also publicly renounced this trade in her 1882 treaty with England, and her newly-created National Assembly adopted in Oct. 1907 a "fundamental law" in favour of individual freedom (E. Aubin, *La Perse d'aujourd'hui*, Paris 1908, 210); if slavery was not suppressed by these measures, it did suffer a severe blow. In Africa itself, the greater part of the vast zone wherein the Muslim slaver held sway, extending from the Atlantic to Wadai, east of Lake Chad, was conquered piecemeal and occupied by France; this has been followed by the almost complete disappearance of the slave-trade from this immense area and slavery has been abolished almost everywhere within it. Italy, the latest comer of the colonial powers, conducted an identical policy in the territories she administered in the east (Somaliland, Eritrea) and north (Tripolitania, Cyrenaica) of the continent. But the last independent state in Africa, Ethiopia, still governed by a Christian dynasty, remained (despite the negus's edicts against the traffic) a notable stronghold of the slavers, facing the Sudan and Arabia and exporting whenever possible; in the provinces, islamization and the intensification of the slave trade often went hand in hand (Trimingham, *Islam in Ethiopia*, Oxford 1952, 203-4 and *passim*). During the 1914-18 war, the relinquishment of Fezzān by the Italians, who had just taken it from the Turks, and its occupation by the Sanūsīs, allowed the traffic to resume much of its activity: a slavemarket was held every week at Murzūk (Petragnani, in *L'Italia in Oriente*, Feb. 1921, tr. in *L'Afrique française*, April 1922).

At the end of the first world war, when the victors had visions of organizing the peace and of securing, in accordance with their Convention of St. Germain of 10 Sept. 1919, "the complete suppression of slavery in all its forms", long experience gave them advance information on the problems that were bound to be raised by a task of this nature; on the successes that might be hoped for and the resistance that might be expected in Muslim lands. The suppression of the traffic, which had become for the most part clandestine, was a troublesome affair, demanding the use of powerful forces and involving, by sea, the risk of provoking legal conflict between nations (France and Great Britain, 1905, in the Indian Ocean). Yet making an end of the trade does not mean putting a stop to slavery or to the transfer of slaves from one owner to another. As for official abolition, it is not always easy to secure under a protectorate; nor is it always equivalent in practice to positive and immediate suppression.

The fact is that, if slavery is such a firmly-rooted institution in certain Islamic countries, it is due far more to social conservatism than to a collective economic need. We established above that the part played by slave-labour in those lands is rarely essential for productive work. This explains why an abolitionist policy, so long as it is not applied too high-handedly, provokes no serious disturbance there, nor any violent reaction. The prevailing wish in the minds of slave-owners is to enjoy the comfort afforded by having a large domestic staff, kept under strict control; from which, moreover, lawful concubines may be recruited. They have on their side not only the tacit consent of the majority of their slaves but also an extensive public opinion and the religious tradition of Islam. The domestic slave is in his master's power through fear and respect, through self-interest, through affection. We must bear in mind that he is generally well-treated; we may reflect that he lives in a family atmosphere, without thought for the morrow. To the slave-woman, concubinage offers, besides various advantages for herself and her children, the chance of an ascent in the social scale, of which an untimely emancipation would rob her. Even when freed, the slave is often likely to remain close to his master. If he has procured his freedom against the latter's wishes, or if he has been snatched from the claws of the slaver, he is woefully without resources in a hostile environment, unless he benefits by the special measures which governments ought to take—and which they have occasionally taken—with a view to his social readjustment.

The fact, brought out in the Ḳurʾān, that slavery is in principle lawful, satisfies religious scruples. Total abolition might even seem a reprehensible innovation, contrary to the letter of the holy Book and the exemplary practice of the first Muslims. Nevertheless, contact with the realities of the modern world and its ideology began to bring about a discernible evolution in the thought of many educated Muslims before the end of the 19th century. They may be fond of emphasizing that Islam has, on the whole, bestowed an exceptionally favourable lot on the victims of slavery. Yet they are ready to see that this institution, which is linked to one particular economic and social stage, has had its day. The reformer Sayyid Aḥmad K͟hān in India, goes so far as to maintain, in a special work, *Ibṭāl-i G͟hulāmī*, which appeared in 1893, translated into Arabic in 1895, that the Ḳurʾān (xlii, 4) forbade the making of new slaves (Baljon, *The Reforms ... of Sir Sayyid Aḥmad K͟hān*, Leiden 1949, 28-29). Without going so far, his illustrious compatriot Ameer Ali (*The Spirit of Islam*, London, 1st ed. 1893; ed. 1935, 262) includes slavery among the preIslamic practices which Islam only tolerated through temporary necessity, while virtually abolishing them: man-made laws were later to complete the abrogation of it, which could not have been done formerly by a sudden and total emancipation (cf. the Egyptian Ahmed Chafik, on much the same lines: *L'esclavage au point de vue musulman*, Cairo 1891, 2nd ed. 1938). This thesis gradually found its way, to a varying extent, into the circle of the *ʿulamā* (for the school of Muḥammad ʿAbduh, see *Tafsīr al-Manār*, xi, 288 ff.), already open to the older arguments of the Tunisian muftīs, which were more restrained and more legalistic. But obviously it could not gain the support of the Wahhābīs of Arabia, those uncompromising restorers of the *sunna* of the Prophet; up to the present day they have vigorously maintained their downright antagonism towards abolition.

The League of Nations, from the very outset of its work, displayed an active interest in all problems

relating to slavery. This interest was notably expressed in the adoption of the international Geneva Convention of 25 Sept. 1926, in which the legal definition of slavery is formulated ("status or condition of a person over whom any or all of the powers attaching to the right of ownership are exercised", which squares with the concepts of Muslim law) and the signatories pledge themselves "to bring about, progressively and as soon as possible, the complete abolition of slavery". One by one, almost all the States concerned adhered to this Convention, but not Saudi Arabia or the Yaman. From then on, a consultative committee of experts worked indefatigably, gathering official returns (some of which, furnished mainly by the British and Italian governments, are highly instructive) and publishing copious reports. Legal measures multiplied, independently of this international organization as well as under its aegis. Abolition came as a matter of course in the new Turkish Republic, which repudiated every trace of Muslim law, as in the Levant territories severed from the old Ottoman empire and directly administered by France or Great Britain. In Egypt, the 1923 Constitution confirmed the guarantee of individual liberty. One after another, Afghānistān (1923, 1931), ʿIrāḳ (1924), Kalāt (1926), Persia [Īrān] and Transjordan (1929) suppressed the legal status of slave. Baḥrayn followed suit in 1937.

In Africa, an order of 1922, coupled with penal sanctions in 1930, abolished slavery in Tanganyika (the former German East Africa) under British mandate; the Anglo-Egyptian Sudan took steps, as far-sighted as they were vigorous, to put an end by degrees to the vestiges of the traffic and to assist the freed slaves. In Northern Nigeria, under British administration, abolition, which began in 1907 and suffered a momentary check towards 1933 from a new offensive on the part of the trade, was accomplished by an order of 1936. In Morocco, a circular from the French Protectorate administration in 1922 suppressed public slave-dealing and granted their freedom to all who should ask for it. The pacification of the Sahara frontiers of Morocco by the French army, round about 1930, made it possible to put an end to what remained of the traffic in negroes. The Italians reoccupied Fezzān in 1929 and secured respect once more for abolition. Finally, Ethiopia showed evidence of good will: edicts of 1923, 1924 and 1931 forbade the capture of free persons or the disposal of slaves, while ordering many of them to be freed. A move was made to carry out these measures; enfranchisement offices were set up, from August 1932. The undertaking was immense and difficult. The Italians hurried things up by their armed intervention; they abolished slavery in Ethiopia by a decree of 12 April 1936.

The sole remaining resort of slavery was Arabia (outside the British colony of Aden). But it must be noted that, even in Arabia, European and particularly British persistence with the local authorities was not without effect. King Ibn Saʿūd, master of the Ḥidjāz and Nadjd, had abolished the customs-duty formerly levied on the import of slaves by the sharif Ḥusayn; in 1927 he officially confirmed to the British legation at Djidda a general right to manumit all slaves who claimed their freedom (there were some 150 of them between 1930 and 1935). Great Britain renounced this right the day following the promulgation in Saudi Arabia of the regulation on slavery of 2 Oct. 1936, which forbade the import of slaves by sea (the reason being that the religious law prohibits the capture or purchase of subjects of countries to which one is bound by treaty; but this same regulation declares servile status to be lawful and organizes it according to the strict letter of Muslim law; see Nallino, *Scritti*, i, 43, 124-5 and *Appendice*). In Feb. 1934, the Imām of the Yaman entered upon an undertaking with Great Britain to prohibit the entry of slaves coming from Africa. From the sultans and shaykhs of the southern coast (Eastern Aden Protectorate) and the Persian Gulf, Britain obtained similar decisions, reinforcing any made previously. A further step forward was taken in March 1935, when the sultan of Lahidj forbade all sale of slaves. In 1938, two sultans of the Ḥaḍramaut and the shaykh of Kuwayt declared all traffic in slaves to be illegal, and authorised slaves to claim their liberty (v. H. Ingrams, *Arabia and the Isles*, London 1942, 349-50; and U. N. Economic and Social Council, *Official Records*, Sept. 1951, 644).

Under cover of the second World War (1939-45) there seems to have been some retrogression, with a small-scale resumption of the trade, particularly in certain Ethiopian provinces. At the time of writing, it is usually acknowledged that there is practically no transport of slaves any longer from Africa to Arabia. Nevertheless the legal status of slave persists in the peninsula. It is evidently the example of the neighbouring independent states of Saudi Arabia and the Yaman that prevents Britain from increasing her pressure on the states under her control with a view to total abolition. Other considerations, no doubt, keep France from having slavery abolished by law in Morocco, where there are in any case only mild survivals in the cities or the southern oases (see, for the bend of the Dra, Dj. Jacques-Meunié, in *Hespéris* 1947, 410-2); resistence to a final solution does not come from the class of *ʿulamā* (for the present-day legal aspect, see *Gazette des Tribunaux du Maroc*, 1944, 5-7; and *Revue Marocaine de Droit*, 1952, 154-6; 183-5). In the Sahara, the French administration which as early as 1916 deprived the Tuareg of their agricultural slaves, took their house slaves away from them in 1946 (R. Capot-Rey, *Le Sahara français*, Paris 1953, 288-9). The United Kingdom of Libya (a former Italian possession), in its constitution of Oct. 1951, laid down as a principle the personal liberty of its subjects.

The United Nations Organization (U.N.O.), the moral heir of the League of Nations, has resumed the study of slavery and has condemned it, in no uncertain terms, in its "Universal Declaration of Human Rights", voted by the General Assembly on 10 Dec. 1948 (though not ratified by every State): "Art. 4. No one shall be held in slavery or servitude. Slavery and the slave trade are prohibited in all their forms". An *ad hoc* Committee on Slavery, under the Economic and Social Council, is proceeding with enquiries by means of questionnaires addressed to governments and recognized associations (Saudi Arabia and the Yaman, both members of U.N.O., have not replied) and is proposing concerted solutions. Its Report of 4 May 1951 (ref. E./1988) advocates making a start by abolishing the legal status of slave and demands that every State concerned should assist emancipated slaves to fashion a new life for themselves. As yet no resolution has been passed by the United Nations, who are divided on this point as on so many others and are far more preoccupied with the serious forms of servitude which continue to exist, or have come into existence in the world of today, than with the last vestiges of Muslim slavery, which are doubtless bound to disappear quietly in the reasonably near future.

ʿABD ALLĀH B. AL-ʿABBĀS (frequently Ibn ʿAbbās, without the article), Abu l-ʿAbbās, called *al-Ḥibr* 'the doctor' or *al-Baḥr* 'the sea', because of his doctrine,is considered one of the greatest scholars, if not the greatest, of the first generation of Muslims. He was the father of Ḳurʾanic exegesis; at a time when it was necessary to bring the Ḳurʾān into accord with the new demands of a society which had undergone a profound transformation, he appears to have been extremely skilful in accomplishing this task.

He was born three years before the hid̲j̲ra, when the Hās̲h̲imite family was living shut up in 'the Ravine' (*al-S̲h̲iʿb*); and, as his mother had become a Muslim before the hid̲j̲ra, he also was regarded as a Muslim.

From his youth he showed a strong inclination towards accurate scholarly research, in so far as such a conception was possible at that time. We know indeed that the idea soon occurred to him to gather information concerning the Prophet by questioning his Companions. While still young, he became a master, around whom thronged people desirous to learn. Proud of his knowledge, which was not based only on memory, but also on a large collection of written notes, he gave public lectures, or rather classes, keeping to a sort of programme, according to the days of the week, on different subjects: interpretation of the Ḳurʾān, judicial questions, Muḥammad's expeditions, pre-islamic history, ancient poetry. It is because of his habit of quoting lines in support of his explanations of phrases or words of the Ḳurʾān that ancient Arabic poetry acquired, for Muslim scholars, its acknowledged importance. His competence having been recognized, he was asked for *fatwās* (especially famous is his authorization of *mutʿa* marriage, which he later had to vindicate). The Ḳurʾanic explanations of Ibn ʿAbbās were soon brought together in special collections, of which the *isnāds* go back to one of his immediate pupils (*Fihrist*, 33); his *fatwās* were also collected; today there exist numerous manuscripts and several editions of a *tafsīr* or *tafsīrs* which are attributed to him (whether rightly or wrongly cannot be said, as no study of this material has yet been made (Goldziher, *Richtungen*, 76; cf. also Brockelmann, i, 190, S i, 331).

The importance of the role played by Ibn ʿAbbās in the political and military events of his time should not be exaggerated, as his Muslim biographers have tended to do, influenced by the fact that he was the grandfather of the ʿAbbāsids. He followed the Muslim armies in several campaigns: into Egypt (between 18 and 21 H.), into Ifrīḳiya (27 H.), into D̲j̲urd̲j̲ān and Ṭabaristān (30 H.), and, much later (49 H.), he accompanied Yazīd on his expedition against Constantinople (with ʿAbd Allāh b. ʿUmar b. al-K̲h̲aṭṭāb). At the battles of the Camel (36 H.) and of Ṣiffīn (37 H.), he commanded a wing of ʿAlī's troops. For want of resounding exploits and important offices to record, Ibn ʿAbbās is presented to us later, by his biographers, as a counsellor whom the caliphs ʿUmar and ʿUt̲h̲mān valued highly, and as a counsellor too—unfortunately litte heeded—of ʿAlī and his son al-Ḥusayn. The truth is that Ibn ʿAbbās did not enter political life until after ʿAlī came to power, and took an active part in it for only three or four years at the most. A single official mission had been, in fact, entrusted to him by ʿUt̲h̲mān, that of conducting the pilgrimage to Mecca the year the caliph was besieged in his house at Medīna. It was for this reason that Ibn ʿAbbās was not in the capital at the time of the assassination of ʿUt̲h̲mān. When he returned some days later, he paid homage to ʿAlī. From that time he was charged with important missions and, after the occupation of Baṣra (36 H.), appointed governor of that town. He was one of the signatories of the convention of Ṣiffīn (37 H.), which handed over to two arbitrators the task of settling the quarrel between ʿAlī and Muʿāwiya, and in a discussion with the Ḥarūrites (see ḤARŪRĀʾ) he pleaded in support of the legal validity of that arbitration. But the relations between Ibn ʿAbbās and the caliph suddenly became strained, with the result that Ibn ʿAbbās withdrew to Mecca, abandoning his seat of government, and that ʿAlī no longer regarded him as his representative at Baṣra. The sources assign different dates to this defection of Ibn ʿAbbās: 38, 39, 40, but there is good reason to believe that it took place in 38 H. (it is possible to follow the movements of Ibn ʿAbbās during that year, and in the succeeding years he no longer appears in the foreground). The traditions which assert that Ibn ʿAbbās was consistently faithful until the death of the caliph are not worthy of credence. What were the reasons for the defection? Some Arabic sources say that Ibn ʿAbbās took offence because ʿAlī reproached him for defalcations which he was alleged to have committed as governor; but the true motive of his relinquishment of office, which coincided with that of many other supporters of ʿAlī, has to be related to other much more important events of the period: the massacre of the K̲h̲arid̲j̲ites at al-Nahrawān, which Ibn ʿAbbās, 'according to certain men', had stigmatised, and the false position of ʿAlī, who maintained his claim to be caliph when, according to the verdict of the arbitrators, he was no longer recognized as such by the majority of Muslims.

Later, Ibn ʿAbbās took a step which one might be tempted to judge severely, were it not that the precise circumstances are completely unknown: he carried off the provincial funds of Baṣra, probably when he returned to the town some time after his defection. Was this seizure criminal? When one observes that this act did not diminish the esteem in which Ibn ʿAbbās was held by the Muslim community, one may suppose that there were some fairly valid motives to justify it. Similarly, the events in which Ibn ʿAbbās was involved immediately after the death of ʿAlī are far from clear. Al-Ḥasan appointed him general of his troops, but Ibn ʿAbbās established contact with Muʿāwiya: whether on his own initiative or at the invitation of al-Ḥasan is obscure; perhaps it was he who successfully brought about the agreement between the two claimants to the Caliphate; he maintained that, as a reward for his good offices, Muʿāwiya had recognized his right to appropriate the money which he had seized (part

of the treasury of Baṣra). All these machinations of Ibn ʿAbbās seemed to certain *rāwī*'s imcompatible with the dignity of such a personage; and so they transferred them, obviously wrongly, to his brother, ʿUbayd Allāh. During the long reign of Muʿāwiya, Ibn ʿAbbās lived in the Ḥidjāz; he went fairly frequently to the Damascus court, mainly, it seems, to defend the interests of the Hāshimites, which were also his own.

The troubled events of the years which followed the deaths of the first and second Umayyads brought Ibn ʿAbbās once again, perhaps against his will, on to the political scene. Although the information which we possess is fragmentary, it can be deduced from it that ʿAbd Allāh b. al-Zubayr, having raised the standard of revolt at Mecca, became violently incensed with Ibn ʿAbbās who, with the son of ʿAlī Ibn al-Ḥanafiyya, refused to recognise him as caliph. Both were banished from Mecca; in 64, the year of the siege of the town, they returned, but they persisted in their opposition to Ibn al-Zubayr, with unfortunate results: they were imprisoned. Al-Mukhtār, informed of their dangerous situation, sent from Kūfa a large troop of horse, which delivered them by a surprise attack. It was thanks to Ibn ʿAbbās that on that occasion bloodshed was avoided in the holy city. Under the protection of this troop, the liberated men went to Minā, then to al-Ṭāʾif, where Ibn ʿAbbās died some time later (68/686-8).

The verdicts which Caetani and Lammens have given on Ibn ʿAbbās are in contrast to the respect which Muslims of all periods have shown him. But Caetani's arguments can easily be disproved by fair and careful criticism (it is specially important not to confuse accounts from Muslim biblical history with the *ḥadīths* concerning the Prophet), and grave doubts can be cast on the resemblance to the original of the portrait sketched by Lammens.

Bibliography: Biographies by Arab authors (numerous, but often repeat the same information, and mainly concerned with Ibn ʿAbbās's scholarly activity): Ibn Saʿd, ii/2, 119-23, 125; iv/2, 4; v, 74-5, 216-7, 231 and Index; Balādhurī, *Ansāb*, ms. ʿABD ALLĀH B. ʿABD AL-ḲĀDIR (Malay pronunciation Abdullah bin Abdulkadir), surnamed MUNSHIʾ, i.e. teacher of languages, was "the greatest innovator in Malay letters" (R. O. Winstedt, *A history of Malay literature*, *JMBRAS*, 1940, ch. xii). He was born in 1796 in Malacca, where his grandfather, the son of Shaykh ʿAbd al-Ḳādir, who came originally from Yaman, had settled. At an early age, ʿAbd Allāh received lessons in Malay from his father, who is said to have been an expert Malay scholar, and endeavoured to make himself fully master of this language by reading Malay writings and by associating with educated Malays. As he learned foreign languages and continually came into contact with Europeans, as for instance, Farquhar, Raffles, and the missionaries Milne, Morrison and Thomson, his culture increased regularly.

Shortly after the founding of Singapore (1819), he established himself in that town and earned his living in many different ways. He acted as an interpreter, gave lessons in Malay, wrote letters, and assisted the American missionaries North, Keasberry and others in translating mission books and school books.

In 1838 was published at Singapore under the title *Bahwa ini Kĕsah Pŭ-layar-an Abdullah, ben Abdulkadir, Munshi, deri Singapura ka-Kalantan*, a description of a journey to the Malay States on the east coast of the Peninsula of Malacca, giving most important information concerning them. This book inaugurated a new and free Malay prose style; its author may be considered a pioneer of the literary movement which, continued by authors of the 20th century, ultimately led to the development of Malay into the national language of Indonesia.

ʿAbd Allāh's principal work is the *Hikayat Abdullah*, his Memoirs, in which *inter alia* he mentions politically important personages, such as Farquhar and Raffles (whose secretary he was), and emphasizes the advantages of a European administration over an Indian one, even though he at the same time sharply criticizes the administrative measures of the English and Dutch. The work was finished in 1843 and lithographed with a few additions in 1849. Some copies of this first edition have an English dedication to Governor Butterworth, in which the work is called a "humble attempt to revive Malay literature". In his Memoirs ʿAbd Allāh mentions several works written by him. Among these is a poem describing a fire in Singapore, in which the author lost all his possessions. It was entitled *Shaʿir Singapura dimakan api* and printed in Malay as well as in Latin characters (1843). The Mss. described in the catalogues under this title do not contain this

poem, but a similar one, entitled *Shaʿir Kampong Gĕlam tĕrbakar*, published after a fire in 1847.

The periodical *Čĕrmin Mata* contains some contributions by ʿAbd Allāh. He died in 1854 during a pilgrimage to Mecca, shortly after his arrival in that city. The notes of his voyage as far as Dj̲idda were published in *Čĕrmin Mata*.

Besides these original works ʿAbd Allāh translated the Tamil redaction of *Pančatantra* (a collection of Indian fables) into Malay under the title of *Hikayat Pandja Tandĕran*, and edited the Malay Chronicles (*Sĕdjarah Mĕlayu*).

(C. A. van Ophuysen—P. Voorhoeve)

ʿABD ALLĀH B. ʿABD AL-MALIK B. Marwān, son of the caliph ʿAbd al-Malik b. Marwān [*q.v.*], was born about the year 60/680-1, perhaps somewhat earlier, as he is said to have been 27 years old in the year 85/704. He grew up in Damascus and accompanied his father in several campaigns. We first meet him as an independent general in the year 81/700-1, in one of the usual razzias against the Eastern Romans. Then in the year 82/701-2, he was sent with Muḥammad b. Marwān to help al-Ḥadjdjādj against al-Ashʿath and played a part in the negotiations of Dayr al-Djamādjim. Thereupon he again led expeditions against the Eastern Romans, and in the year 84/703-4 conquered al-Maṣṣīṣa, which he converted into a military camp. After the death of his uncle ʿAbd al-ʿAzīz b. Marwān, he was appointed governor of Egypt in the year 85/704. On 11 Djumādā II he made his entry into Fusṭāṭ. He was to wipe out all traces of ʿAbd al-ʿAzīz, and therefore changed all the officials. His administration left a bad record in the tradition, because he accepted bribes and embezzled public moneys. The only really important achievement of his rule was the introduction of the Arab language into the *dīwāns* of the capital. His administration gave offence in Damascus; in the year 88/706-7 he made there a passing visit, and in 90/708-9 he was definitely recalled. He departed to Syria with many presents, but they were taken from him in the province of al-Urdunn by order of the caliph. Thereupon he disappeared from the political arena. Only al-Yaʿḳūbī has the information that he was executed when the ʿAbbāsids come to power. He is said to have been crucified by al-Saffāḥ in the year 132/749-50 in al-Ḥīra.

(C. H. Becker)

ʿABD ALLĀH B. ʿABD AL-MUṬṬALIB of B. Hāshim of Ḳuraysh, father of the prophet Muḥammad. The earliest and most reliable sources give little information about him. His mother was Fāṭima bint ʿAmr of B. Makhzūm. Al-Kalbī places his birth in the 24th year of the reign of Anūshirwān (554), but he is usually said to have been twenty-five when he died (? 570). According to a well-known story, picturesque but probably with little factual basis, ʿAbd al-Muṭṭalib vowed that, if he had ten sons who reached maturity, he would sacrifice one; he attained this and selected ʿAbd Allāh by lot, but eventually sacrificed 100 camels instead. His marriage to Āmina bint Wahb has been much embellished in legend. It may have marked an alliance between ʿAbd al-Muṭṭalib and Āmina's clan, B. Zuhra, as he himself married a woman of this clan at the same time. During a trading expedition ʿAbd Allāh fell ill and died at Medīna among the clan of his father's mother, B. ʿAdī b. al-Nadjdjār, being buried in Dār al-Nābigha. His death took place either shortly before Muḥammad's birth or a few months after; the word "orphan" in Ḳ. xciii, 6, doubtless refers to Muḥammad's early loss of his parents.

Bibliography: Ibn Hishām, 97-102; Ibn Saʿd, i/1, 53-61; Ṭabarī, i, 967, 979-80, 1074-81; Caetani, *Annali*, i, 65-7, 118-20. (W. Montgomery-Watt)

ʿABD ALLĀH B. ABĪ ISḤĀḲ al-Ḥaḍramī, grammarian and Ḳurʾān-reader from Baṣra, died in 117/735-6. His "exceptional" (*shādhdha*) reading continued the tradition of Ibn ʿAbbās and, in turn, influenced the readings of ʿĪsā b. ʿUmar al-Thaḳafī and of Abū ʿAmr b. al-ʿAlāʾ. It seems now established that he was the earliest of the real Arab grammarians (cf. Ibrahim Mustafa, *Actes du XXI Congrès des Orient.*, 278-9). He is said to have extended the use of inductive reasoning (*ḳiyās*) and the detail is handed down that in case of doubt he opted for the accusative (*naṣb*). Nothing else is known about him beyond the facts that, being of

non-Arabic origin himself, he felt some hostility towards the Arabs, and that he was the object of a stinging riposte by al-Farazdak, whose mistakes he had pointed out.

Schulen*, 29; cf. also *Fihrist*, 9, 30, 41, 42; *Aghānī* [1], xi, 106.

(Ch. Pellat)

ʿABD ALLĀH b. AḤMAD [see saʿdids].

ʿABD ALLĀH b. AḤMAD b. ḤANBAL [see aḥmad b. ḥanbal].

ʿABD ALLĀH b. ʿALĪ, uncle of the caliphs Abu l-ʿAbbās al-Saffāḥ and Abū Djaʿfar al-Manṣūr. ʿAbd Allāh was one of the most active participants in the struggle of the ʿAbbāsids against the last Umayyad caliph, Marwān II. He was commander-in-chief in the decisive battle at the Greater Zāb, where Marwān lost his crown, and when the latter took to flight, ʿAbd Allāh pursued him, quickly captured Damascus and marched on to Palestine, whence he had the fugitive caliph pursued to Egypt. He was even more implacable than his brother Dāʾūd b. ʿAlī in waging war on the members of the Umayyad house, and shrank from no method to exterminate them root and branch. During his stay in Palestine, he had about eighty of them murdered at one time. Such cruelties naturally caused ill-will against the new ruler, and a dangerous rebellion in Syria broke out under the leadership of Abū Muḥammad, a descendant of Muʿāwiya I, and Abu ʾl-Ward b. al-Kawthar, the governor of Ḳinnasrīn. The rebels at first inflicted a defeat on the ʿAbbāsid troops, but were beaten by ʿAbd Allāh in 132/750 at Mardj al-Akhram. As governor of Syria, ʿAbd Allāh later threatened the safety of the new dynasty. After the death of al-Saffāḥ he made claims to the Caliphate, which he could base on his important services in the war against the Umayyads, and on the promise he claimed to have received from al-Saffāḥ. Moreover he had at his disposal a considerable army, which in reality he was to lead against the Byzantines. When he learned that the powerful governor of Khurāsān, Abū Muslim, had declared for the caliph al-Manṣūr and was marching against him, he is said to have killed 17,000 Khurāsānians in his army, because he feared they would never fight against Abū Muslim, and with his remaining troops proceeded against the latter. He was, however, in Djumādā II 137/Nov. 754 defeated at Nisibis and had to flee to his brother Sulaymān, the governor of Baṣra. After a couple of years, the latter was dismissed, and ʿAbd Allāh was arrested by order of the caliph al-Manṣūr. He remained some seven years in prison, then in the year 147/764 he was taken into a house that had been purposely undermined; it fell down on him and buried him under the ruins. At his death he is said to have been 52 years old.

(K. V. Zetterstéen—S. Moscati)

ʿABD ALLĀH b. ʿĀMIR, governor of Baṣra, was born in Mecca in 4/626. He belonged to the Ḳurayshite clan of ʿAbd Shams and was a maternal cousin of the caliph ʿUthmān. In 29/649-50 he was appointed by ʿUthmān to the governorship of Baṣra, in succession to Abū Mūsā al-Ashʿarī, and immediately took the field in Fārs, completing the conquest of that province by the capture of Iṣṭakhr, Darābdjird and Djūr (Fīrūzābād). In 30-31/651 he advanced into Khurāsān, defeated the Ephthalites, and occupied the whole province up to Marw, Balkh and (in 32/635) Harāt. After making the Pilgrimage, during which he distinguished himself by lavish munificence to the Meccans and Anṣār, he returned to Baṣra, leaving the government of Khurāsān in the hands of deputies. In 35/656 he attempted in vain to support ʿUthmān, and subsequently assisted ʿĀʾisha, Ṭalḥa and al-Zubayr in organizing the resistance to ʿAlī at Baṣra. After their defeat in the Battle of the Camel he took refuge with a man of the Banū Ḥurḳūṣ and made his way to Damascus, where he joined Muʿāwiya. In 41/661 he was one of Muʿāwiya's delegates to treat with al-Ḥasan b. ʿAlī, and at the end of the same year he was reappointed to the governorship of Baṣra. In 42-43/662-4 his lieutenants reconquered Khurāsān and Sidjistān, which had been lost to the Arabs during the civil war, and an expedition was sent into Sind. But his lenience towards the tribesmen appeared too dangerous to Muʿāwiya, who replaced him in 44/664 by a more energetic governor; thereafter Ibn ʿĀmir appears to have lived in retirement until his death at Mecca in 59/680, or in 57 or 58.

ʿAbd Allāh b. ʿĀmir was celebrated not only for his military abilities, but also for his generosity and other personal qualities and especially for his numerous public works. Among these were the construction of two canals at Baṣra and the canal of Ubulla, plantations in al-Nihādj and Ḳaryatayn, and improved water supplies for the pilgrims at ʿArafa.

Spuler, *Iran in früh-islamischer Zeit*, Wiesbaden 1952, 17 ff.; J. Walker, *Catalogue of the Arab-Sassanian Coins (in the B.M.)*, London 1941, index. (H. A. R. Gibb)

ʿABD ALLĀH b. BULUGGĪN b. Bādīs b. Ḥabūs b. Zīrī, third and last ruler of the kingdom of Granada, of the Ṣinhādjī Berber family of the Banū Zīrī [see zīrids of spain]. Born in 447/1056, he was appointed at the death of his father Buluggīn Sayf al-Dawla, in 456/1064, as the presumptive heir of his grandfather Bādīs b. Ḥabūs. He succeeded him on the throne of Granada, while his brother Tamīm al-Muʿizz became independent ruler of Malaga. His reign consisted of a long series of troubles inside his kingdom, of armed conflicts with his Muslim neighbours, and of compromises with Alfonso VI, king of Castille. At the time of the Almoravid intervention in Spain he took part in the battles of al-Zallāḳa [*q.v.*] and Aledo, but his negotiation with the Christian king soon cost him his throne. He was besieged in his capital in 483/1090 by Yūsuf b. Tāshufīn, was dethroned and sent into

forced residence in Aghmāt, in Southern Morocco, where he ended his days.

It was during his exile in Morocco that ʿAbd Allāh composed his "Memoirs", the almost complete text of which was found by the author of the present article in successive fragments, at intervals of several years, in the library of the Djāmiʿ al-Ḳarawiyyīn in Fes. This autobiography, called *al-Tibyān ʿan al-hāditha al-kāʾina bi-dawlat Banī Zīrī fi Gharnāṭa*, is the most considerable and the least deformed document on the history of Spain in the second half of the 11th century. In spite of the long digressions in which the author tries to justify his political position in face of the dangers menacing his kingdom, these "Memoirs" give a very detailed chronicle of all the events that led in 478/1085 to the taking of Toledo by Alfonso VI, and, in the next year, to the arrival of the Almoravids in the Peninsula. At the same time it is a psychological document of the first order, that mirrors, much better than the chronicles of the Andalusi *ṭawāʾif*, the state of social and political decomposition in which Muslim Spain was found at the end of the 11th century, and the progress made by that time by the efforts of the *Reconquista*. The account of the events prior to the reign of the author is also new and important. The "Memoirs" of ʿAbd Allāh must be considered as the guiding thread that allows us to find our bearings through the maze of the history of Muslim Spain at the moment it was about to fall into the power of the North African dynasties.

Several fragments of the *Tibyān* were published, with an annotated translation by the author of this article, in *And.*, 1935, 233-344; 1936, 29-145; 1941, 231-93. The whole of the Arabic text, now recovered, will be published soon. A Spanish translation, by E. Lévi-Provençal and E. García Gómez (*Las "Memorias" de ʿAbd Allāh, último rey zīrī de Granada*) is due to be published in 1953.

Bibliography: The biographical articles about ʿAbd Allāh by Ibn ʿIdhārī and Ibn al-Khaṭīb have been reproduced in *And.*, 1936, 124-7; see also Ibn al-Khaṭīb, *Aʿmāl al-Aʿlām* (Lévi-Provençal), 268-70; Nubāhī, *al-Marḳaba al-ʿUlyā* (Lévi-Provençal), 93-4; R. Menéndez Pidal, *La España del Cid*[3], Madrid 1947, indices; idem, *Leyendo las "Memorias" del rey zirī ʿAbd Allāh*, *And.* 1944, 1-8; E. Lévi-Provençal, *Esp. Mus.*, iv.

(E. Lévi-Provençal)

ʿABD ALLĀH B. DJAʿFAR B. Abī Ṭālib, nephew of the caliph ʿAlī. ʿAbd Allāh's father had gone over to Islam very early, and took part in the emigration of the first believers to Abyssinia, where, according to the common belief, ʿAbd Allāh was born. On his mother's side he was a brother of Muḥammad b. Abī Bakr; the mother's name was Asmāʾ bint ʿUmays al-Khathʿamiyya. After some years the father returned to Medīna taking his son with him. ʿAbd Allāh became known chiefly on account of his great generosity, and received the honorific surname of *Baḥr al-Djūd*, "the Ocean of Generosity". He appears to have played no very important part in politics, although his name crops up from time to time in history during ʿAlī's time and that following. When Muʿāwiya tried to throw suspicion on Ḳays b. Saʿd, the valiant governor of Egypt, to damage him in ʿAlī's eyes, ʿAbd Allāh advised the removal of Ḳays; ʿAlī allowed himself to be persuaded and took the fateful step of replacing him by Muḥammad b. Abī Bakr, who in a very short time brought the whole of Egypt into the greatest confusion. This took place in the year 36/656-7. When in the year 60/680, after Yazīd's accession, the Shīʿites of Kūfa summoned Ḥusayn b. ʿAlī to proceed to that city to have himself proclaimed caliph, ʿAbd Allāh amongst others endeavoured to dissuade him from this dangerous enterprise, but without success. The date of ʿAbd Allāh's death is generally given as 80 or 85, but 87 and 90 are also recorded.

Bibliography: Ṭabarī, i, 3243 ff.; ii, 3 ff.; iii, 2339 ff.; Ibn al-Athīr, iii, 224 ff.; Nawawī, 337 ff.; Yaʿḳūbī, ii, 67, 200, 331; Masʿūdī, *Murūdj*, iv, 181, 271 f., 313, 329, 434; v, 19, 148, 383 ff.; Lammens, *Études sur le règne du calife omaiyade Moʿâwia Ier*, in *MFOB*, index.

(K. V. Zetterstéen)

ʿABD ALLĀH B. DJAḤSH, of Banū Asad b. Khuzayma, a confederate (*ḥalīf*) of Banū Umayya of Ḳuraysh. His mother was Umayma bint ʿAbd al-Muṭṭalib, Muḥammad's aunt. An early Muslim along with his brothers, ʿUbayd Allāh and Abū Aḥmad, he took part with the former in the migration to Abyssinia. ʿUbayd Allāh became a Christian and died there, but ʿAbd Allāh returned to Mecca and was the most prominent of a group of confederates, including his sister Zaynab [*q.v.*], who all migrated to Medina. He led the much-criticized raid to Nakhla where Muslims first shed Meccan blood, and fought at Badr. At his death at Uḥud he was between 40 and 50.

Bibliography: Ibn Saʿd, iii/1, 62-4; Ibn al-Athīr, *Usd*, iii, 131; Ibn Ḥadjar, *Iṣāba*, s.v.

(W. Montgomery Watt)

ʿABD ALLĀH B. DJUDʿĀN, Ḳurayshite notable of the clan of Taym b. Murra, at the end of the 6th c. A.D. He acquired such wealth from the caravan and slave trade that he possessed one of the largest fortunes in Mecca (Ps.-Djāḥiẓ, *Maḥāsin* (van Vloten), 165; Ibn Rusta, 215; Masʿūdī, *Murūdj*, vi, 153 ff.; Lammens, *La Mecque à la veille de l'Hégire*, index). He surrounded himself with unusual luxury (being nick-named *ḥāsī 'l-dhahab*, because he used to drink from a golden cup), and was the owner of the two singing-girls called "Locusts of ʿĀd" (*Djarādatā ʿĀd*) whom he offered to Umayya b. Abi 'l-Ṣalt. In giving magnificent banquets, he showed a generosity that became proverbial (*Aghānī*[1], viii, 4; Thaʿālibī, *Thimār*, 487, in connection with the expression: *djifān Ibn Djudʿān*). Thus he won the favour of the poets, but also drew on himself some invectives (al-Djāḥiẓ, *Ḥayawān*[2], i, 364; ii, 93). His prestige enabled him to play a certain role in politics (*Aghānī*, xix, 76), and he seems to have been the promoter of the Meccan confederacy known as *ḥilf al-fuḍūl* (Ibn Hishām, 85; Yaʿḳūbī, ii, 16; Lammens, *op. cit.*, 54 ff.).

Already before the 3rd/9th c., his unusual wealth, and the wish of the Meccans to explain it otherwise than by the slave trade, gave rise to his identification with the hero of a Yamanite legend, discoverer of the tomb of Shaddād b. ʿAmr [*q.v.*] (Wahb b. Munabbih, *Tīdjān*, 65 ff.). Thus he is represented as a *ṣuʿlūk* banished by his clan, wandering in the desert and enriched by a treasure of precious stones and gold which he finds in an old tomb (al-Hamdānī, *Iklīl*, viii, 183 sqq.; al-Damīrī, s.v. *Thuʿbān*; al-Djāḥiẓ, *Bayān*, ed. Sandūbī i, 31). According to an isolated and no doubt apocryphal tradition, he is buried in a place in Yaman called Birk al-Ghumād (Yāḳūt, i, 589).

Bibliography: Add to the references quoted in the art.: Ṭabarī, i, 1187, 1330; Maḳdisī, *al-Badʾ wa-l-Taʾrīkh*, ed. Huart, iv, 128, v, 103; Thaʿālibī, *Thimār*, 539; *Aghānī*[1], viii, 2-6; Ibn Durayd,

Rescher, *Qaljûbî's Nawâdir*, Stuttgart 1920, no. 101. (Ch. Pellat)

ʿABD ALLĀH b. ḤAMDĀN [see Ḥamdānids].

ʿABD ALLĀH b. HAMMĀM al-Salūlī, Arab poet of the 1st/7th century (he is said to have died after 96/715), who played a political role under the Umayyads. He was attached from 60/680 to Yazīd b. Muʿāwiya, condoled with him upon the death of his father and congratulated him at his accession. He persuaded Yazīd to proclaim his son Muʿāwiya as heir presumptive and later he was the first to greet al-Walīd b. ʿAbd al-Malik with the name of caliph (86/705). During the reign of ʿAbd al-Malik (65-86/685-705), the only information we have about his activity shows him to have had relations with the Shīʿite agitator al-Mukhtār [*q.v.*] and his entourage, as well as with the anticaliph ʿAbd Allāh b. al-Zubayr [*q.v.*]. To the latter he addressed a poem criticising the conduct of Muṣʿab [*q.v.*], who was in effect temporarily deposed soon afterwards by al-Zubayr (67/686-7).

Bibliography: Balādhurī, *Ansāb*, v, index; Djumaḥī, *Ṭabaḳāt*, (Hell) 135-6; Djāḥiẓ, *Ḥayawān*², index; idem, *Bayān* (Sandūbī), ii, 66, 67; Ibn Ḳutayba, *Shiʿr* (de Goeje), 412-3; Ibn ʿAbd Rabbih, *ʿIḳd*, Cairo 1940, iii, 254 (= iv, 173 = v, 136), 306; vii, 140-1; Abū Tammām, *Ḥamāsa* (Freytag), 507; Ṭabarī, ii, 636-42 and passim; Mubarrad, *Kāmil*, 34, 309; Masʿūdī, *Murūdj*, v, 126, 153-5; *Aghānī*¹, xiv, 120-1, 170; C. Pellat)

ʿABD ALLĀH b. ḤAMZA [see al-Manṣūr bi'llāh].

ʿABD ALLĀH b. ḤANẒALA b. Abī ʿĀmir al-Anṣārī, one of the leaders of the revolution that broke out in Medīna against the caliph Yazīd I. Posthumous son of a Companion killed at Uḥud and surnamed Ghasīl al-Malāʾika, ʿAbd Allāh is also known as Ibn al-Ghasīl. In 62/682 he took part in the deputation sent to Damascus by the governor of Medina, ʿUthmān b. Muḥammad, to bring about a reconciliation between the malcontents of Medina and the Umayyads. Yazīd showed special consideration for the envoys, but they, nevertheless, spoke ill of the caliph and described him as unfit for the caliphate. Ibn al-Ghasīl made himself prominent by his attacks and when the Anṣār openly revolted soon afterwards, it was he whom they choose as their chief, while ʿAbd Allāh b. Muṭīʿ [*q.v.*] took the leadership of the city's Ḳurayshites. After the Umayyads of Medina had been driven out, the caliph was compelled to punish the rebels by force of arms. About the end of 63/683 he sent troops under the command of Muslim b. ʿUḳba, who occupied favourable positions on the Ḥarra, to the east of Medina, and after waiting three days, engaged the Medinese in a bloody battle which ended with the complete defeat of the rebels (Dhu 'l-Ḥidjdja 63/Aug. 683). ʿAbd Allāh showed remarkable bravery in the battle, but finally fell under the blows of the Syrians. His head was cut off and brought to Muslim, and the two soldiers who killed him received, it is said, high rewards from the caliph.

(K. V. Zettersteen-Ch. Pellat)

ʿABD ALLĀH b. al-ḤASAN b. al-Ḥasan, chief of the ʿAlids. ʿAbd Allāh was treated with great favour by the caliphs of the Umayyad dynasty, and when he visited the first ʿAbbāsid caliph Abu 'l-ʿAbbās al-Saffāḥ at Anbār, the latter received him with great distinction. Thence he returned to Medīna, where he soon fell under the suspicion of the successor of al-Saffāḥ, al-Manṣūr. Yet ʿAbd Allāh owed his misfortune not so much to himself as to his two sons Muḥammad and Ibrāhīm. Al-Manṣūr began to suspect them in 136/754, when he led the pilgrimage to Mecca and they did not appear with the other Hāshimites to salute him, but his suspicions fell more especially on Muḥammad. After his accession al-Manṣūr tried to sound the Hāshimites as to Muḥammad's real opinions, but they spoke only good of him and endeavoured to excuse his absence. Only al-Ḥasan b. Zayd advised the caliph to beware of this dangerous ʿAlid. In order to remove all doubts, al-Manṣūr ordered ʿUḳba b. Salm to get into ʿAbd Allāh's confidence by means of presents and forged letters from Khurāsān, the recognised centre of ʿAlid propaganda. At first ʿAbd Allāh was very cautious but finally fell into the trap, and when ʿUḳba asked him for an answer for his supposed companions in Khurāsān, he did indeed refuse to give one in writing, but asked him to inform them by word of mouth that he greeted them and that his two sons would rise in revolt in the near future. When ʿUḳba had in this manner convinced himself of the rebellious intentions of the ʿAlids, he at once informed the caliph, and when the latter in the year 140/758 again made a pilgrimage, he invited ʿAbd Allāh to come to him, and asked him if he could really count on his fidelity. ʿAbd Allāh assured him of his honorable sentiments, but when ʿUḳba suddenly appeared, he understood that he had been betrayed and took refuge in entreaties. Al-Manṣūr, however, had him arrested. ʿAbd Allāh's relatives shared his fate, but the caliph was not able to seize his two sons. When he again came to Medīna in the year 144/762 after making another pilgrimage, he took the prisoners back with him to al-ʿIrāḳ, and soon afterwards ʿAbd Allāh died there in prison at the age of 75. According to current report, he was murdered by al-Manṣūr's orders.

Bibliography: Ṭabarī, ii, 1338 ff.; iii, 143 ff.; Ibn al-Athīr, 172 ff.; Weil, *Gesch. d. Chalifen*, ii, 40 ff. (K. V. Zettersteen)

ʿABD ALLĀH b. HILĀL al-Ḥimyarī al-Kūfī, a magician of Kūfa, contemporary of al-Ḥadjdjādj, with whom he was in relations after the building of the palace in Wāsiṭ (Yāḳūt, iv, 885; cf. also an adventure with a concubine of the caliph, Ibn Ḥadjar, *Lisān al-Mīzān*, iii, 372-3). *Aghānī*¹, i, 167 quotes verses by ʿUmar b. Abī Rabīʿa that bear witness to a connection between the poet and the magician. He abtained his powers from a magic ring given to him by Satan to thank him for having defended him from children who were insulting him. He was also thought to receive his inspiration from Iblīs, because he was descended from Iblīs in the maternal line; hence his nicknames of *ṣadīḳ Iblīs*, *ṣāḥib Iblīs*, *khatan Iblīs* or *sibṭ Iblīs* (al-Djāḥiẓ, *al-Ḥayawān*², i, 190; al-Bayhaḳī, *al-Maḥāsin*, 109; al-Thaʿālibī, *Thimār*, 57); he is clearly described as *makhdūm* by al-Djāḥiẓ, *al-Ḥayawān*², vi, 198 (cf.

WZKM, vii (1893), 235-6). The *Fihrist*, 310 (reproduced in al-S̲h̲iblī, *Ākām al-Murd̲j̲ān*, 101-2) mentions him among those that follow *al-ṭariḳa al-maḥmūda*; on the other hand he is considered as the master of al-Ḥallād̲j̲, accused of practising diabolic magic (L. Massignon, *Ḥallâd̲j̲*, 792). Al-D̲j̲awbarī declares that he had read his books of magic (ZDMG, xx, (1866), 487; the passage is missing in the Cairo ed. of *al-Muk̲h̲tār fi Kas̲h̲f al-Asrār*) and refers to Fak̲h̲r al-Dīn al-Rāzī, *al-Sirr al-Maktūm*. (CH. PELLAT)

ʿABD ALLĀH B. AL-**ḤUSAYN**, Amīr of Transjordan (S̲h̲arḳ al-Urdunn), afterwards king of Hās̲h̲imite Jordan (al-Mamlaka al-Urdunniyya al-Hās̲h̲imiyya), second son of the s̲h̲arīf al-Ḥusayn b. ʿAlī [*q.v.*] king of Ḥid̲j̲āz. Born in Mecca, in 1882, he studied in Istanbul. After the revolution of 1908, he represented for some time the Ḥid̲j̲āz in the Ottoman parliament. Just before the first world war he joined the Arab Union, an association founded in Cairo by the Syrian Muḥammad Ras̲h̲īd Riḍā [*q.v.*]. In April 1914 he had interviews in Egypt with Lord Kitchener and Ronald Storrs and thus took part in the negotiations that led to the proclamation of "Arab Revolt" announced by his father in Mecca, 9 S̲h̲aʿbān 1334/10 June 1916. During the hostilities he played only a minor role. On 8 March 1920 an "ʿIrāḳī Congress", which met in Damascus, proclaimed him "constitutional king of ʿIrāḳ". But he never took possession of the throne, which was given by the English, in June 1921, to his brother Fayṣal, who had been expelled from Damascus by the French troops of General Gouraud (24-27 July 1920). In March 1921 ʿAbd Allāh met in Jerusalem W. Churchill, then colonial secretary. It was during that interview that it was orally agreed to create in Transjordan, separated from the rest of Palestine placed under British mandate, a "national Arab government" headed by ʿAbd Allāh (28 March). On 28 August 1923 this government was recognized by the High Commissioner for Palestine. Its relations with Great Britain were fixed by a treaty signed in Jerusalem 20 February 1928 (modified by the agreements of 2 June 1934 and 9 July 1941).

In 1946 Great Britain recognized Transjordan "as a completely independent state" (treaty of 22 March 1946, modified by the treaty of 15 March 1948). ʿAbd Allāh was crowned as king in ʿAmmān, 25 May 1946, and Transjordan, constituted a kingdom, took the name of "Hās̲h̲imite Kingdom of Jordan". After the war in Palestine (15 May 1948-3 April 1949), ʿAbd Allāh annexed the territories occupied by the Arab Legion to the west of the Jordan (April-May 1950). He was assassinated in Jerusalem on 20 July 1951.

In the last years of his life, he visited successively Turkey (Jan. 1947), Iran (July-August 1949) and Spain (Sept. 1949). His journeys were followed by the signature of treaties of friendship with these countries (Turkey, 11 Jan. 1947; Iran, 16 Nov. 1949; Spain, 7 Oct. 1950). On the other hand he tried to overcome the hostility of the Arab League to his projects of territorial expansion. He died, however, without accomplishing the great ideal of his reign: grouping round his throne the Arab lands of Syria (project of Greater Syria).

He was the author of memoirs, only the first part of which has been published.

ʿABD ALLĀH B. **IBĀḌ** [see IBĀḌIYYA].

ʿABD ALLĀH B. **IBRĀHĪM** [see AG̲H̲LABIDS].

ʿABD ALLĀH B. **ISKANDAR**, a S̲h̲aybānid [*q.v.*], the greatest prince of this dynasty, born in 940/1533-4 (the dragon year 1532-3 is given, probably more accurately, as the year of the cycle) at Āfarīnkent in Miyānkāl (an island between the two arms of the Zarafs̲h̲ān). The father (Iskandar K̲h̲ān), grandfather (D̲j̲ānī Beg) and great-grandfather (K̲h̲ʷād̲j̲a Muḥammad, son of Abu 'l-K̲h̲ayr [*q.v.*]) of this ruler of genius are all described as very ordinary, almost stupid men. D̲j̲ānī Beg (d. 935/1528-9) had at the distribution of 918/1512-3 received Karmīna and Miyānkāl; Iskandar was at the time of his son's birth lord of Āfarīnkent; later, probably after the death of one of his brothers, he emigrated to Karmīna. There ʿAbd Allāh first proved his ability as a ruler in 958/1551; the country had been attacked by Nawrūz Aḥmed K̲h̲ān of Tas̲h̲kend and ʿAbd al-Laṭīf K̲h̲ān of Samarḳand; Iskandar had fled across the Āmū; ʿAbd Allāh assumed his father's duties and successfully repulsed the attack. In the following years ʿAbd Allāh tried to extend his possessions westward in the direction of Buk̲h̲ārā and south-eastward in the direction of Ḳars̲h̲ī and S̲h̲ahr-i Sabz, at first without permanent success; in 963/1555-6 he was even obliged to evacuate the lands inherited by his father and flee to Maymana. In the same year (D̲h̲u 'l-Ḳaʿda/September-October 1556) there died his powerful enemy Nawrūz Aḥmed K̲h̲ān, k̲h̲ān of the Özbegs and lord of Tas̲h̲kend since 959/1552. ʿAbd Allāh immediately reasserted his supremacy in Karmīna and S̲h̲ahr-i Sabz, and in Rad̲j̲ab 964/May 1557 conquered Buk̲h̲ārā, from that time his capital. There he had his uncle Pīr Muḥammad declared as deposed and his weak-minded father proclaimed in S̲h̲aʿbān 968/April-May 1561 k̲h̲ān of all the Özbegs, in order to rule himself in the latter's name. Only in 991/1583, after the death of his father (1 D̲j̲umādā II/22 June), did he accept the vacant throne. After severe fighting against insubordinate supporters of the ruling house he subjugated Balk̲h̲ in 981/1573-4, Samarḳand in Rabīʿ II 986/June 1578, Tas̲h̲kend and the remaining country north of the Syr in 990/1582-3, and Farg̲h̲āna in 991/1583. In addition to these conquests, ʿAbd Allāh also made a raid in the first half of the year 990/spring 1582 into the steppes as far as Ulug̲h̲ Ṭag̲h̲. In the year 996/1587-8 a stubborn insurrection was suppressed in Tas̲h̲kend, and the enemy again pursued far into the steppes. In the south-east Badak̲h̲s̲h̲ān was conquered, in the west K̲h̲urāsān, Gīlān and K̲h̲ʷārizm, the last-named first in 1002/1593-4 and then, after an insurrection, reconquered in 1004/1595-6. An expedition to East Turkistān resulted only in the laying waste of the provinces of Kās̲h̲g̲h̲ar and Yārkand. ʿAbd Allāh's last years were darkened by a quarrel with his only son ʿAbd al-Muʾmin, who ruled in Balk̲h̲ from the end of 990/autumn 1582 in the name of his father. As ʿAbd Allāh had been the real ruler under

Iskandar, in the same way ʿAbd al-Muʾmin wanted to occupy the same position in relation to his now aging father. ʿAbd Allāh would, however, not hear of any diminution of his power, and only the mediation of the clergy prevented an open breach between father and son, and compelled ʿAbd al-Muʾmin to yield. On hearing of the strained relations between father and son, the nomads had penetrated into the region of Ta<u>sh</u>kend and had defeated between Ta<u>sh</u>kend and Samarḳand an army sent against them. At the beginning of a punitive expedition against this enemy ʿAbd Allāh was overtaken by death in Samarḳand (end of the "hen year", 1006/beginning of 1598).

ʿAbd al-Muʾmin was murdered only six months later by his subjects. The conquests in <u>Kh</u>urāsān and <u>Kh</u>ʷārizm were lost, and in the Özbegs' own country the power fell into the hands of another dynasty. Of greater permanence were the results of ʿAbd Allāh's activity in internal affairs; the administration, especially the coinage system, was remodelled by him, many public works (bridges, caravanseras, wells, etc.) were completed. Even at the present day popular folklore ascribes all such monuments either to Tīmūr or to ʿAbd Allāh.

Bibliography: The life of this ruler up to the year 996/1587-8 is described in detail by his eulogist Ḥāfiẓ Tānī<u>sh</u>: *<u>Sh</u>araf-nāma-yi <u>Sh</u>āhī* (Persian), usually called *ʿAbd Allāh-nāma*. Much information (especially about the last few years) is given by ʿAbd Allāh's Persian contemporary Iskandar Mun<u>sh</u>īʾ in *Taʾrī<u>kh</u>-i ʿĀlam Ārā-yi ʿAbbāsī* (biography of <u>Sh</u>āh ʿAbbās I, Teheran 1897). Extracts from both works are in Welyaminow-Zernow, *Izslyedowaniya o kasimowski<u>kh</u> tsarya<u>kh</u> i tsarewiča<u>kh</u>*, ii (in the *Trudi wostoč. otd. imper. ar<u>kh</u>eol. ob<u>sh</u>č.*, x.; German transl. Leipzig 1867), and before that in his *Moneti bu<u>kh</u>arskiya i <u>kh</u>iwskiya*. See also my extracts from the little known *Baḥr al-Asrār* by Maḥmūd b. Walī in the *Zapiski wostoč. otd. imper. rusk. ar<u>kh</u>eol. ob<u>sh</u>č.*, xv. On the *Baḥr al-Asrār* comp. Ethé, *India Office Cat.*, No. 575. The information given by Vambéry, *Gesch. Bochara's*, and by Howorth, *Hist. of the Mongols*, ii. div. 2, who follows him, is to be accepted with great caution.

(W. BARTHOLD)

ʿABD ALLĀH B. ISMĀʿĪL, ʿAlawid [*q.v.*] sultan of Morocco, whose first reign started 4 <u>Sh</u>aʿbān 1141/5 March 1729, while his last ended with his death 27 Ṣafar 1171/10 Nov. 1757.

This sovereign was in fact deposed several times, five times according to the Arabic historians, and as often recalled to power. For the good order established in Morocco under Mawlāy Ismāʿīl [*q.v.*] was at that time but a memory. When ʿAbd Allāh assumed power, two of his brothers, Aḥmad al-<u>Dh</u>ahabī and ʿAbd al-Malik, had been fighting for it for two years, and had roused, by their mutual bids and their weakness, violent antagonism between the black army of their father, the *ʿabīd al-Bu<u>kh</u>ārī*, and the *gī<u>sh</u>* [*<u>dj</u>ay<u>sh</u>*, *q.v.*] tribe of Ūdāya and the Berbers of the Middle and Central Atlas. When it is added that the sons of Mawlāy Ismāʿīl were numerous and that several of them aspired to power, and that, on the other hand, ʿAbd Allāh showed himself from the beginning to be capricious and cruel, then it is plain why Morocco was at this time the scene of constant disorders.

Raised to power by the *ʿabīd*, who had been won over by his mother, ʿAbd Allāh immediately stirred up against himself the city of Fez, whose resistance was overcome only after a siege of six months. He then tried to pacify his kingdom, but in consequence of a disastrous campaign in the Central Atlas, excited the enmity of the *ʿabīd* and had to flee, on 29 Sept. 1734, to the Wādī Nūn, to his mother's tribe. Replaced by his brother ʿAlī al-Aʿra<u>dj</u>, he was recalled in 1736, but was again expelled a few months later by the *ʿabīd*. He took refuge with the Berber Ait Idrāsan and was replaced successively by two of his brothers, Muḥ. b. al-ʿArabiyya and al-Mustaḍīʾ. Recalled in 1740, he fought against al-Mustaḍīʾ and his ally, the pa<u>sh</u>a of Tangier, Aḥmad al-Rīfī, when another son of Ismāʿīl, Zayn al-ʿĀbidīn, was elevated to the throne by the *ʿabīd*. ʿAbd Allāh found new supporters among the Berbers, with whose help he regained power in the same year. He then suceeeded in defeating al-Mustaḍī and al-Rīfī and made an effort to pacify Morocco. New revolts, however, followed each other without interruption and the sultan constantly changed his allies, relying sometimes on the *ʿabīd*, sometimes on the Ūdāya, sometimes on the Berbers. He was deposed yet again (1748) in favour of his son Muḥammed governor of Marrāku<u>sh</u>. His son, however, remained loyal and assured the reign of ʿAbd Allāh until his death, but in the midst of continual disorders. ʿAbd Allāh resided partly in Meknes, and partly in a country house near Fez, Dār Dbība<u>gh</u>.

(R. LE TOURNEAU)

ʿABD ALLĀH B. <u>KH</u>ĀZIM AL-SULAMĪ, governor of <u>Kh</u>urāsān. On the first expedition of ʿAbd Allāh b. ʿĀmir [*q.v.*] into <u>Kh</u>urāsān in 31/651-2, Ibn <u>Kh</u>āzim commanded the advance-guard which occupied Sara<u>kh</u>s. According to some accounts, he put down a rebellion led by Ḳārin in 33/653-4 and was rewarded with the governorship of the province, but this is probably an anticipation of the events of 42/662. During Ibn ʿĀmir's second governorship of Baṣra (41/661), Ḳays b. al-Hay<u>th</u>am al-Sulamī was appointed to <u>Kh</u>urāsān, and ʿAbd Allāh b. <u>Kh</u>āzim and ʿAbd al-Raḥmān b. Samura were despatched to recover Bal<u>kh</u> and Si<u>dj</u>istān. When Ḳays showed himself unable to deal with an Ephthalite revolt which broke out in the following year, Ibn ʿĀmir replaced him as governor by ʿAbd Allāh b. <u>Kh</u>āzim, who remained in <u>Kh</u>urāsān until recalled by Ziyād in 45/665.

Ibn <u>Kh</u>āzim returned to <u>Kh</u>urāsān with the army of Salm b. Ziyād (61-2/680-2), and when the latter withdrew after the death of Yazīd I Ibn <u>Kh</u>āzim persuaded him to nominate him as governor of the province (64/684). Having gained possession of Marw after defeating its Tamīmite governor, he then attacked, with the aid of Tamīm, the Bakrite governors of Marw al-Rū<u>dh</u> and Harāt, and overcame them after a long struggle. The victory was followed by repeated risings of the Tamīm against Ibn <u>Kh</u>āzim, now nominally governor on behalf of Ibn al-Zubayr. In 72/692 he received, but indignantly rejected, an offer by ʿAbd al-Malik to confirm him as governor for seven years; the offer was then made to and accepted by his deputy in Marw, the Tamīmite Bukayr b. Wi<u>sh</u>āḥ, who overtook and killed him (probably

in 73/692-3) as he was attempting to join his son Mūsā in the stronghold which he had previously prepared at Tirmidh. The career of Ibn Khāzim was afterwards embellished with saga-like accretions, which make it difficult to establish many details with precision.

ʿABD ALLĀH b. MASʿŪD [see ibn masʿūd].

ʿABD ALLĀH b. MAYMŪN, client of the family of al-Ḥārith b. ʿAbd Allāh b. Abī Rabīʿa al-Makhzūmī (Ibn al-Zubayr's governor in Baṣra, cf. al-Ṭabarī, index), known in the Twelver Shīʿite literature as a transmitter of traditions from Djaʿfar al-Ṣādiḳ (al-Kulīnī, Ibn Bābūya, al-Ṭūsī, passim, cf. Ivanow, *Alleged Founder*, 11-60; see also the Shīʿite books of *ridjāl*: al-Kashshī, *Maʿrifat Akhbār al-Ridjāl*, 160; al-Nadjāshī, *al-Ridjāl*, 148; al-Ṭūsī, *Fihrist*, 197; he appears also in Sunnī books of *ridjāl*: al-Dhahabī, *Mīzān al-Iʿtidāl*, ii, 81, who quotes the earlier Sunnī authorities; Ibn Ḥadjar, *Tahdhīb al-Tahdhīb*, vi, 149). Since Djaʿfar al-Ṣādiḳ died in 148/765, ʿAbd Allāh belongs to the middle and the second half of the 2nd/8th century. His father Maymūn al-Ḳaddāḥ ("sharpener of arrows"—so al-Nadjāshī—rather than "oculist") is also mentioned in the Twelver sources as a companion of Djaʿfar's father, Muḥ. al-Bāḳir. Ismāʿīlī sources, too, speak of Maymūn and ʿAbd Allāh as companions of al-Bāḳir and Djaʿfar al-Ṣādiḳ (cf. Lewis, *Origins*, 65-7).

The anti-Ismāʿīlī writers, from the beginning of the 4th/10th century on, have a long and colourful tale to tell of ʿAbd Allāh as the founder of Ismāʿīlism. The source of all these accounts is that of Ibn Rizām (beg. of the 4th/10th century), quoted in the *Fihrist*, 186. According to this story, Maymūn al-Ḳaddāḥ, a Bardesanian (hence in later sources "son of Daysan"; the name of the "father" seems to owe its existence to the alleged adherence of Maymūn to Ibn Dayṣān, Bardesanes) was an extremist, follower of Abu 'l-Khaṭṭāb [*q.v.*], and founded the sect called Maymūniyya. His son ʿAbd Allāh claimed to be a prophet, supported his claims by conjuring tricks and, driven by the ambition of securing worldly power, founded a movement, instituting seven grades of beliefs that culminated in shameless atheism and libertinism. He pretended to work on behalf of Muḥ. b. Ismāʿīl, as expected Mahdī. ʿAbd Allāh came from Ḳūradj al-ʿAbbās near Ahwāz, but transferred his headquarters first to ʿAskar Mukram, then to Baṣra, and finally to Salamiya in Syria, where he remained in hiding until his death. His lifetime is put by Ibn Rizām, anachronistically, in the middle of the 3rd/9th century. His successors stayed in Salamiya, until ʿUbayd Allāh al-Mahdī [*q.v.*] claimed to be a descendant of Muḥ. b. Ismāʿīl, and fled to Ifrīḳiya to found there the Fāṭimid dynasty. This story of Ibn Rizām proved a great success, was copied by all the subsequent anti-Ismāʿīlī writers (the chief of them being Akhū Muḥsin—preserved in excerpts by al-Nuwayrī and al-Maḳrīzī—and Ibn Shaddād, who gives Maymūn the *kunya* Abū Shākir, cf. Ibn al-Athīr, viii, 21, presumably in order to identify him with the *zindīḳ* Abū Shākir, for whom see al-Khayyāṭ, *al-Intiṣār*, 40, 142; *Fihrist*, 337 and the Twelver legends quoted by Ivanow, *Alleged Founder*, 91 ff. and G. Vajda, *RSO*, 1937, 192, 196, 224), and became, with certain additions and variations (cf. Lewis, *Origins*, 54-63) the standard account of Sunnī authors about the rise of Ismāʿīlism. This is not the place to discuss in detail the vexed and apparently insoluble problem of the antecedents of the Fāṭimids (see fāṭimids and also ismāʿīliyya) yet it must be pointed out that the view that the Fāṭimids descended from Maymūn al-Ḳaddāḥ seems to have been entertained not only by Ibn Rizām, a great enemy of Ismāʿīlism, but also by certain sections of the Ismāʿīlī movement itself, and the Imām al-Muʿizz had to polemize against some of his followers who considered him as a descendant of Maymūn (see the letter of al-Muʿizz quoted by ʿImād al-Dīn Idrīs and printed by Ivanow in the *J. of the Bombay Branch of the RAS*, 1940, 74-6, and, confirming and completing that piece of information, a passage in al-Nuʿmān's *al-Madjālis wa 'l-Musāyarāt*, MS of SOAS, London, 25434, fol. 76 ff., to be published by the author of this article). W. Ivanow (*The rise of the Fatimids*, Bombay 1942, see especially 127-56; *The Alleged Founder of Ismailism*, Bombay 1946) denies the truth of any connection between Ismāʿīlism and Maymūn and ʿAbd Allāh, or their descendants, considering the whole story as freely invented by their enemies—although it is difficult to see why they have picked out just Maymūn and ʿAbd Allāh for the role and how early Ismāʿīlī circles could come to accept them, merely on the authority of scandal invented by their enemies, as the ancestors of the leaders to whom they paid allegiance. B. Lewis, *The origins of Ismailism*, Cambridge 1940 (see especially 49-73), admits, on the whole, the historicity of the role of Maymūn and ʿAbd Allāh as leaders of the extremist movement out of which grew Ismāʿīlism. The evidence is as yet not sufficient for a definite solution of this problem, and it would seem possible that the basis for the story about Maymūn and ʿAbd Allāh is to be sought in the role that some descendants of ʿAbd Allāh b. Maymūn may have played in the Ismāʿīlī movement in its beginnings about 260/873, and that the story was spun out of this knowledge of the connection of some "Ḳaddāḥids" with Ismāʿīlism.

(S. M. Stern)

ʿABD ALLĀH b. MUʿĀWIYA, ʿAlid rebel. After the death of Abū Hāshim, a grandson of ʿAlī, claims were laid to the Imamate from several quarters. Some asserted that Abū Hāshim had formally transferred his right to the dignity of Imām to the ʿAbbāsid Muḥammad b. ʿAlī. Others said that he had spoken in favor of ʿAbd Allāh b. ʿAmr al-Kindī and wanted to proclaim him Imām. As he, however, did not come up to the expectations of his followers, they turned from him and declared ʿAbd Allāh b. Muʿāwiya, a great-grandson of ʿAlī's brother Djaʿfar, to be the rightful Imām. The latter asserted that both the godhead and the prophetic office were united in his person, because the spirit of God had been transferred from the one to the other and had finally come to him. In accordance with this his followers believed in metempsychosis and denied the resurrection. In Muḥarram 127/Oct. 744, ʿAbd Allāh revolted in Kūfa where he was joined by many followers, especially from amongst the Zaydites [*q.v.*]. The latter captured the citadel and expelled the

prefect. In a short time, however, ʿAbd Allāh b. ʿUmar b. ʿAbd al-ʿAzīz, the governor of ʿIrāḳ, put an end to his manœuvres. When it came to fighting, the ever unreliable Kufans deserted; only the Zaydites fought bravely and continued the battle till ʿAbd Allāh was granted an unimpeded retreat. From Kūfa he proceeded at first to Madāʾin and then to al-Djibāl. His power was in no way broken. From Kūfa and from other places numbers of people flocked to him and he soon succeeded in winning over several important strongholds in Persia. After residing for some time in Iṣfahān, he went to Iṣṭakhr. Owing to the temporary weakness of the government in Persia, as a result of the disorders in ʿIrāḳ and Khurāsān, he had no difficulty in extending his rule over a great part of al-Djibāl, Ahwāz, Fārs and Karmān. The Khāridjites, who had fought against Marwān II on the Tigris, withdrew into ʿAbd Allāh's domain and other opponents of the caliph also joined him, including some ʿAbbāsids. In the end, however, he was unable to maintain his power. ʿĀmir b. Ḍubāra, one of Marwān's generals, who had been entrusted with the pursuit of the Khāridjites, led an army into ʿAbd Allāh's domains and brought his rule to a sudden end. In the year 129/746-7, ʿAbd Allāh was defeated at Marw al-Shādhān and forced to flee to Khurāsān, where Abū Muslim, the celebrated general of the ʿAbbāsids, had him executed. After his death, some of his followers, called al-Djanāḥiyya [*q.v.*], maintained that he was still alive and would return; on the other hand, others, the so-called Ḥārithites, believed that his spirit was reincarnated in Isḥāḳ b. Zayd b. al-Ḥārith al-Anṣārī.

ʿABD ALLĀH b. MUḤAMMAD, Sharīf of Mecca [see makka].

ʿABD ALLĀH b. MUḤAMMAD b. ʿAbd al-Raḥmān al-Marwānī, seventh Umayyad Amīr of Cordova. He succeeded his brother al-Mundhir on the latter's death before Bobastro, centre of ʿUmar b. Hafṣūn's rebellion, on 15 Ṣafar 275/29 June 888. The circumstances of al-Mundhir's death arouse the suspicion that the new sovereign was not quite innocent of it. At his accession, ʿAbd Allāh, born in 229/844, was forty-four years old. His reign, which lasted for a quarter of a century, until his death on 1 Rabīʿ I 300/16 Oct. 912, was described in detail by the chronicler Ibn Ḥayyān, in that part of his *Muḳtabis* which has been preserved in an Oxford manuscript, long since known and utilized, and published in a somewhat faulty edition by M. M. Antuña, Paris 1937.

His biographers present a flattering portrait of the Amīr ʿAbd Allāh and omit to mention his cruelty and his lack of scruples. They extol his sobriety, his piety and his Islamic culture. It may be granted to him as an undoubted merit that he maintained, in a difficult period, the Hispano-Umayyad dynasty and contrived to counter a multitude of internal dangers, notably the Andalusian revolt fomented by the *muwallads* and the particularist tendences of the Arab gentry of Seville and Elvira. For further details see umayyads oe spain.

(E. Lévi-Provençal)

ʿABD ALLĀH b. MUḤAMMAD al-TAʿĀʾISHĪ (his name is invariably pronounced as ʿAbdullāhi), the successor of Muḥammad Aḥmad [*q.v.*], the Sudanese Mahdī. He belonged to the Awlād Umm Ṣurra, a clan of the Djubarāt section of the Taʿāʾisha, a tribe of cattle-breeding Arabs (Baḳḳāra) in Dārfūr. His great-grandfather is said to have been a Tunisian *sharīf* who married a woman of the tribe. His father Muḥammad b. ʿAlī Karrār bore the nickname of Tōr Shayn (Ugly Bull). Religious pretensions were hereditary in the family, and both father and son were *fakis* of repute. Zubayr Raḥma, the famous merchant-adventurer and conquerer of Dārfūr, relates that ʿAbdullāhi narrowly escaped execution at his hands, when taken prisoner during the Dārfūr fighting in 1873, and that even then he was in search of the Expected Mahdī. Tōr Shayn died among the Djimʿa tribe in Kordofān and, according to the legend, he enjoined on his son to seek out Muḥammad Aḥmad the future Mahdī. ʿAbdullāhi adhered to him in the Djazīra before he had manifested himself, and was the first to believe in his mission. He was his closest adviser during the years of propaganda and fighting (1881-85), and his gifts of leadership largely contributed to the successes which culminated in the fall of Kharṭūm (26 Jan. 1885). In an epistle, dated 17 Rabīʿ I 1300/26 Jan. 1883, the Mahdī nominated him as his *khalīfa* with the title of al-Ṣiddīḳ, and as *amīr* of the Mahdist army. On the Mahdī's death at Omdurman (22 June 1885) ʿAbdullāhi assumed control of the new Mahdist state. A convinced believer in the Mahdī's mission and himself claiming supernatural gifts, he rigorously upheld the religious ordinances of the Mahdiyya, without neglecting the temporal aim of establishing his personal and absolute rule. With this end in view he deprived the Mahdī's blood-relations (the Ashrāf) of all influence and successfully crushed the opposition of powerful tribal chiefs and of rival religious pretenders. Not himself a military leader, ʿAbdullāhi was served by a number of capable *amīrs* who, in the first year of his reign, captured the last posts still held by the Egyptian garrisons. His governor of the eastern province, the redoutable ʿUthmān Digna [*q.v.*] fought numerous actions with varying success against the Anglo-Egyptian forces based on Suakin. Between 1887 and 1889 there was intermittent warfare with the Abyssinians (sack of Gondar by the Mahdists in 1887; battle of Ḳallabāt 9 March 1889 when an Abyssinian victory was turned into rout by the death in battle of King John). In the execution of his policy ʿAbdullāhi relied largely on the Baḳḳāra tribesmen of Kordofān and Dārfūr, whom he brought to the Central Sudan where they incurred much unpopularity as a privileged and predatory class. ʿAbdullāhi's most trusted associate was his brother Yaʿḳūb and he seems to have intended his eldest son ʿUthmān Shaykh al-Dīn to be his successor.

The first serious reverse of his reign was the defeat at Toshkī (3 Aug. 1889) of the Mahdist army under ʿAbd al-Raḥmān al-Nadjūmī which attempted the invasion of Egypt with quite inadequate forces. The country over which ʿAbdullāhi still ruled with absolute power was now devastated by incessant warfare and by the terrible famine of 1889. The end came when the British government, then in virtual control of Egypt, decided on the re-conquest of the

Sudan. The occupation of Dongola (1896) by Anglo-Egyptian forces was followed by their advance to Omdurman and the decisive defeat of the Mahdist army (2 Sept. 1898). ʿAbdullāhi fled to Kordofān where he maintained himself with a considerable body of followers for another year. In the final battle of Umm Dubaykarāt (24 Nov. 1899) he met death with courage and dignity.

The Mahdī and his successor professed to re-live the life of the Prophet and of early Islam, and ʿAbdullāhi's epistles, in which he exhorted the Sultan of Turkey, the Khedive of Egypt, and Queen Victoria to embrace the Mahdist faith, vividly display the anachronistic spirit of the Mahdiyya. Ruthless towards external enemies and suspected rivals, and governing without regard for the material welfare of his country, ʿAbdullāhi yet remained true to his fanatical faith and to the primitive code of a Baḳḳārī Arab. In contrast to European writers who stress the cruel and barbaric character of his reign, Sudanese tradition credits him with the virtues of simplicity in his private life, generosity as a host, and bravery as a fighter. From his numerous household of legal wives and concubines he had 21 sons and 11 daughters, not counting those who died in infancy.

ʿABD ALLĀH b. al-**MUḲAFFAʿ** [see IBN AL-MUḲAFFAʿ].

ʿABD ALLĀH b. **MŪSĀ** b. NUṢAYR, eldest son of Mūsā b. Nuṣayr [*q.v.*] the conqueror of the Mag͟hrib and Spain. When his father left for Spain, he was charged with the administration of Ifrīḳiya (93/711). When Mūsā, denounced to the caliph al-Walīd by Ṭāriḳ, left for the East, whence he never returned, he again left ʿAbd Allāh as his lieutenant. Involved in his family's disgrace by the caliph Sulaymān, who saw not without disquiet Ifrīḳiya governed by one son of Mūsā (ʿAbd Allāh), Spain by a second (ʿAbd al-ʿAzīz) and the Mag͟hrib by a third (ʿAbd al-Malik), he was deposed in 96/714-5 and replaced by Muḥ. b. Yazīd, who assumed his office in 97/715. It is uncertain what happened to him; he is said to have been accused of having instigated the murder of Yazīd b. Abū Muslim and to have been executed in 102/720 by Bis͟hr b. Ṣafwān, on the orders of the caliph Yazīd b. ʿAbd al-Malik.

ʿABD ALLĀH b. **MUṬĪʿ** b. al-ASWAD al-ʿADAWĪ, was, together with ʿAbd Allāh b. Ḥanẓala [*q.v.*], one of the chiefs of the revolt against the caliph Yazīd I in Medīna. When he saw that after the accession of Yazīd the Umayyad government was rousing increasing opposition, Ibn Muṭīʿ proposed to leave Medīna, but ʿAbd Allāh b. ʿUmar [*q.v.*] advised him to remain, and he gave in to Ibn ʿUmar's arguments. When the inhabitants of Medīna revolted against the new caliph, he became the leader of the Ḳurays͟hite elements in the city and took part in the battle of the Ḥarra in D͟hu 'l-Ḥid͟dja 63/August 683. Escaping from the general rout, he took refuge in Mecca with the anti-caliph ʿAbd Allāh b. Zubayr, who appointed him in Ramaḍān 65/April 685 governor of Kūfa. Shortly afterwards he was attacked by the S͟hīʿite adventurer al-Muk͟htār b. Abī ʿUbayd [*q.v.*]. Abandoned, besieged in his palace and probably betrayed by his own general Ibrāhīm b. al-As͟htar, he relinquished his post, withdrew to Baṣra, and then joined Ibn al-Zubayr in Mecca. There he joined Ibn al-Zubayr's forces and was killed together with him in 73/692.

Lammens, *Le califat de Yazid Ier*, 214 ff. (= *MFOB*, v, 212 ff.); Caetani-Gabrieli, *Onomasticon*, ii, 922. (K. V. ZETTERSTÉEN—CH. PELLAT)

ʿABD ALLĀH b. **RAWĀḤA**, a K͟hazrad͟jite, belonging to the most esteemed clan of the Banu 'l-Ḥārit͟h. At the second ʿAḳaba assembly in March 622, ʿAbd Allāh was one of the 12 trustworthy men, whom the already converted Medinians, conformably to the Prophet's wish, had chosen. When Muḥammad had emigrated to Medīna, ʿAbd Allāh proved himself to be one of the most energetic and upright champions of his cause. Muḥammad appears to have thought a great deal of him, and often entrusted him with honorable missions. After the battle of Badr in the year 2/623, in which the Muslims were victorious, ʿAbd Allāh together with Zayd b. Ḥārit͟ha hastened to Medīna to bring the tidings of victory. During the so-called "second campaign of Badr", in D͟huʾl-Ḳaʿda 4/Apr. 626, ʿAbd Allāh remained behind in Medīna as lieutenant-governor. When in 5/627, at the commencement of the siege of Medīna, the fidelity of the Banū Ḳurayẓa, his allies, was suspected, the Prophet sent ʿAbd Allāh together with three other influential Medinians to find out the real sentiments of his allies. After K͟haybar had been conquered in the year 7/628 and its territory divided, Muḥammad appointed ʿAbd Allāh as appraiser of its yield. On sending out the Muʾta expedition in the year 8/629, ʿAbd Allāh was appointed by the Prophet as second in succession to the commander of the army, and when both his superiors had fallen, he sought and met his death as they had done fighting for the Faith.

Besides his military talents ʿAbd Allāh possessed other qualities which made him valuable to his master; he was one of the few pre-Islamic men who could write, and was for that reason, together with other faithful followers, chosen as secretary by the Prophet. Muḥammad appears to have esteemed him very highly, more especially on account of his poetical gifts. In the *Ag͟hānī* it is expressly stated that the Prophet considered his poems equal to those of his "court" poets Ḥassān b. T͟hābit and Kaʿb b. Mālik. It is characteristic of ʿAbd Allāh's "literary tendency" that he attacked the Ḳurays͟h more especially for their unbelief, whilst the two other poets always reproached them with their impious deeds. Only about 50 verses of his have been preserved and they are for the most part to be found in Ibn His͟hām.

ʿABD ALLĀH b. SABAʾ, reputed founder of the Shīʿa. Also called Ibn al-Sawdāʾ, Ibn Ḥarb, Ibn Wahb. "Sabaʾ" appears also as Sabāʾ; the name of the associated sect appears as Sabaʾiyya, Sabāʾiyya, or, corrupted, as Sabāyiyya, Sabābiyya.

In the Sunnī account he was a Yamanite Jew converted to Islam, who about the time of ʿAlī first introduced the ideas ascribed to the more extreme wing of the Shīʿa [*ghulāt*, *q.v.*]. Especially attributed to him is the exaltation of ʿAlī himself: that ʿAlī stood to Muḥammad as divinely appointed heir, as Joshua did to Moses (the *wiṣāya* doctrine); that ʿAlī was not dead, but would return to bring righteousness upon earth (the *radjʿa*); that ʿAlī was divine, exalted to the clouds, and the thunder was his voice. To Ibn Sabaʾ's conspiratorial cunning was ascribed by Sunnīs after al-Ṭabarī the first breach in a perfect harmony among the *Ṣaḥāba* (cf. al-Maḳrīzī, *Khiṭaṭ*, ii, 334). He is said to have roused the Egyptians against ʿUthmān on the ground of ʿAlī's special rights; and the bloodshed between ʿAlī and Ṭalḥa and Zubayr is then ascribed to these same murderers of ʿUthmān under the name of *Sabaʾiyya*.

For the Shīʿa he sometimes figured as type of the extremist, the *ghālī*, being so cursed by Djaʿfar (Kashshī, *Maʿrifat Akhbār al-Ridjāl*, 70). Ibn Sabaʾ became the subject of traditions used by both in attacking and in defending the extremer Shīʿa. ʿAlī is said to have had him or his followers burned for declaring him (ʿAlī) God. An Ismāʿīlī source cites the incident in Ibn Sabaʾ's favour, claiming that he suffered only in appearance (cf. al-Maḳdisī, *Badʾ al-Khalḳ*, ed. Huart, v, 181; and the *Haft Bāb-i Bābā Sayyid-nā*, ed. Ivanow, in *Two early Ismaili treatises*, Bombay, 1933, 15).

It is not clear what historical person or persons lay behind this figure. Al-Ṭabarī's source, Sayf b. ʿUmar, is the chief authority for his political activity against ʿUthmān. Al-Dhahabī notes a general condemnation of Sayf as a traditionist (quoted by Friedländer, *ZA*, 1909, 297), a condemnation supported on other grounds by Wellhausen (*Skizzen und Vorarbeiten*, vi, 6); and surer sources seem to exclude Ibn Sabaʾ from any major rôle there. Friedländer suggests that Ibn Sabaʾ's chief rôle was not to proclaim ʿAlī's divinity, but to deny ʿAlī's death, teaching that he died only in appearance (docetism), and would in the end come again from the clouds (messianism)—perhaps with the background of a Yamanite Judaism related to that of the Falashas of Ethiopia. Caetani would make Ibn Sabaʾ in origin a purely political supporter of ʿAlī, around whom later generations imagined a religious conspiracy like that of the ʿAbbāsids. Massignon considers the Sabaʾiyya of al-Mukhtār's time as one of the *ʿayniyya* sects (Massignon, *Salmān Pāk*, Paris 1934, 37, 40).

Already in the earliest sources available contradictory teachings are ascribed to Ibn Sabaʾ and the Sabaʾiyya (cf. Khushaysh al-Nasāʾī [d. 253], reported in al-Malaṭī, 118, 120). We may suppose that personally Ibn Sabaʾ, perhaps together with a separate Ibn al-Sawdāʾ, was a supporter of ʿAlī, who denied ʿAlī's death. He was probably not a Jew (Levi Della Vida, *RSO*, 1912, 495). He was either founder or hero of one or more sects called Sabaʾiyya, which exalted ʿAlī's religious position.

(M. G. S. Hodgson)

ʿABD ALLĀH b. SAʿD, Muslim statesman and general. Abū Yaḥyā ʿAbd Allāh b. Saʿd b. Abī Sarḥ al-ʿĀmirī belonged to the clan of ʿĀmir b. Luʾayy of Ḳuraysh and was as foster brother of the subsequent caliph ʿUthmān a chief partisan of the Umayyads. He was less a soldier than a financier. The judgements of historians on his character vary greatly. His name is connected in many ways with the beginnings of Islam. First he is mentioned as one of Muḥammad's scribes: he is supposed to have arbitrarily altered the revelation, or at least he boasted of doing so after his apostasy from Islam, and thereby incurred the hatred of the Prophet. For this reason the latter desired to have him executed after the capture of Mecca, but ʿUthmān obtained, though with difficulty, the Prophet's pardon. This story afterwards became very famous. ʿAbd Allāh later on showed himself grateful to ʿUthmān for his rescue by agitating for the latter's election as caliph. He was one of the Hidjra-Companions who took part in the conquest of Egypt under ʿAmr b. al-ʿĀṣī [*q.v.*] and appears to have governed Upper Egypt independently under ʿUmar, after the latter's quarrel with ʿAmr. It is impossible exactly to fix the date when he was appointed governor of the whole of Egypt; according to Ibn Taghrībirdī, as early as the year 25/645-6, and therefore before the revolt of Alexandria under Manuel. As he was not able to suppresss this rising, ʿAmr was recalled, who, however, immediately after his victory had to restore the government to ʿAbd Allāh. ʿUthmān desired to confirm ʿAbd Allāh as financial prefect and to appoint ʿAmr as military governor, but the latter declined. ʿAbd Allāh now succeeded in considerably increasing the state revenues of Egypt, much to the satisfaction of the caliph. Although his principal aim was the administration of the finances, he also became renowned as a general. ʿAbd Allāh regulated the relations between the Muslims and the Nubians and supported Muʿāwiya's expedition against Cyprus. He himself undertook several expeditions against Roman Africa, the first probably in the year 25/645-6, the most important and most successful certainly in the year 27/647-8. He subjected the territory of Carthage to Islam. His most important military performance, however was the naval battle of Dhāt al-Ṣawārī, comparable in significance to the battle of the Yarmūk [*q.v.*], in which the Roman fleet was completely destroyed. This battle took place in the year 34/655, although different dates are given in some sources. Soon afterwards the agitations against ʿUthmān began in many parts of the empire. ʿAbd Allāh appears as the principal champion of the regime represented by the caliph. He endeavoured to warn the caliph and even left Egypt in order to support him. His lieutenant al-Sāʾib b. Hishām was expelled by the Egyptian revolutionary party under Muḥammad b. Ḥudhayfa and ʿAbd Allāh himself was prevented from returning to Egypt. On the frontier ʿAbd Allāh learned of the murder of the caliph, and fled to Muʿāwiya. Shortly before the latter's march to Ṣiffīn, he died in Askalon or Ramla (in 36 or 37/656-8). His supposed participation

in the battle of Ṣiffīn and his late death in the year 57/676-7 belong to the numberless myths connected with the battle of Ṣiffīn.

ʿABD ALLĀH b. SALĀM, a Jew of Medīna, belonging to the Banū Ḳaynuḳāʿ and originally called al-Ḥusayn (on the name Salām, see Ibn Khaṭīb al-Dahsha, *Tuḥfa*, ed. Mann, 69). Muḥammad gave him the name of ʿAbd Allāh when he embraced Islam. This conversion is said to have taken place immediately after Muḥammad's arrival at Medīna, or, according to others, when Muḥammad was still in Mecca. Another account which makes him accept Islam in the year 8/629-30 is worthy of more credence—though Muslim critics think it badly accredited—for his name is sought in vain in the battles which Muḥammad had to wage in Medīna. The few unimportant mentions in the *Maghāzī* may well have been inserted in order to remove the glaring contradiction with the generally accepted tradition. He was with ʿUmar in Djābiya and Jerusalem, and under ʿUthmān took the latter's side against the rebels, whom he in vain endeavoured to dissuade from murdering the caliph. After ʿUthmān's death he did not do homage to ʿAlī and implored him not to march to ʿIrāḳ against ʿĀʾisha; legend brings him into relation with Muʿāwiya also. He died in 43/663-4. In Muslim tradition he has become the typical representative of that group of Jewish scribes which honored the truth, admitting that Muḥammad was the Prophet predicted in the Torah, and protecting him from the intrigues of their co-religionists. The questions which ʿAbd Allāh is made to ask Muḥammad and which only a prophet could answer, the contents of the ḥadīths which the works on tradition ascribe to him, and the story of Bulūḳyā which Thaʿlabī puts into his mouth, mostly have their origin in Jewish sources; if they do not really come from ʿAbd Allāh himself, they certainly come from Jewish renegade circles. While his contemporaries often reproached him with his Jewish origin, later on traditions were circulated, in which Muḥammad assures him of entry into Paradise, or in which the Prophet and celebrated Companions give him high praise. Certain verses of the Ḳurʾān are also said to refer to him. The "questions" which he put to Muḥammad were subsequently enlarged to whole books, and in the same manner several other works were foisted on him, which are partly based on what is related by him in Ḥadīth. As well as his sons Muḥammad and Yūsuf, Abū Hurayra and Anas b. Mālik also handed down his traditions. Ṭabarī took more especially Biblical narratives from him into his Chronicle.

ʿABD ALLĀH b. ṬĀHIR, born 182/798, died 230/844, was a poet, general, statesman, confidant of caliphs and, as governor of Khurāsān, almost an independent sovereign. His father, Ṭāhir b. al-Ḥusayn, had founded the powerful Ṭāhirid [*q.v.*] dynasty which ruled over a territory extending from al-Rayy to the Indian frontier, with its capital at Naysābūr.

In 206/821-2 the caliph al-Maʾmūn appointed ʿAbd Allāh b. Ṭāhir governor of the region between al-Raḳḳa and Egypt and at the same time he was placed in command of the caliph's troops in the campaign against Naṣr b. Shabath, a former partisan of al-Amīn, who was endeavoring to gain control of Mesopotamia. After subduing Naṣr ʿAbd Allāh went in 211/826-7 to Egypt, where for ten years refugees from Spain had been further weakening an already weak state, and he swiftly captured the leaders and restored order.

While he was at Dīnawar, in al-Djibāl, busy raising troops to quell a revolt of Bābak the Khurramite, his brother, Ṭalḥa, died and in 214/829-30 he was appointed by al-Maʾmūn to succeed Ṭalḥa as governor of Khurāsān. He proved to be an exceedingly wise ruler, establishing a stable government in his domains, protecting the poor against abuses by the upper classes and bringing education to the masses; no boy, however poor, was denied the means to acquire knowledge. As a result of litigations in Naysābūr he ordered an investigation into the use of water for irrigation, and the *Book of Canals*, which was the outcome of this, established legal rules for water utilization which served as a guide for several centuries (cf. A. Schmidt, *Islamica*, 1930, 128).

During the caliphate of al-Muʿtaṣim, ʿAbd Allāh subdued the revolt of the ʿAlid pretender, Muḥammad b. al-Ḳāsim, in 219/834-5; and in 224/838-9 in Ṭabaristān, which was under his jurisdiction as governor of Khurāsān, he quelled the far more alarming revolt of its *iṣbahbad*, al-Māziyār [*q.v.*], incited to rebel by al-Afshīn.

Gardīzī relates that al-Muʿtaṣim so hated ʿAbd Allāh b. Ṭāhir for a personal criticism that ʿAbd Allāh had expressed about him that when he became caliph he attempted to poison ʿAbd Allāh by sending him a slave girl with a gift of poisoned cloth, but the attempt failed because the slave girl fell in love with ʿAbd Allāh and revealed the plot. However that may be, ʿAbd Allāh seems to have enjoyed the caliph's esteem. His most implacable enemy, al-Afshīn, during his own heresy trial, testified bitterly to the high regard the caliph had for him, and al-Muʿtaṣim himself referred to ʿAbd Allāh as one of the four great men (curiously enough, all of them Ṭāhirids) of his brother's reign and regretted that he had not been able to foster any men of the same noble calibre.

Like all Ṭāhirid rulers, ʿAbd Allāh was enormously wealthy; his magnificent palace in Baghdād enjoyed

the royal right of sanctuary and served as a residence for the governor of the city, which remained under Ṭāhirid domination for a long time (Le Strange, *Baghdad*, 119).

He was a man of wide culture with a deep love and respect for learning; in the controversy regarding the relative merits of Arabic *vs.* Persian culture, which engaged the keenest minds of that day, ʿAbd Allāh strongly supported all things Arabic. In his own right he was an accomplished musician and a poet of note, as well as a sympathetic patron of the poet Abū Tammām, the compiler of the *Ḥamāsa*, who sang his praises in many poems.

At the age of 48 ʿAbd Allāh b. Ṭāhir died as a result of quinsy after an illness of three days, on Mon. 11 Rabīʿ I, 230/Nov. 26, 844, according to most Arab historians (but Nov. 26 was Wed.) and, in true dynastic fashion, he was succeeded by his son, Ṭāhir. At the time of his death the taxes from the provinces under his control amounted to 48 million dirhams.

ʿABD ALLĀH b. THAWR [see abū fudayk].

ʿABD ALLĀH b. UBAYY b. Salūl (Salul being Ubayy's mother), chief of Ba ʾl-Ḥublā (also known as Sālim), a section of the clan of ʿAwf of the Khazradj, and one of the leading men of Medīna. Prior to the hidjra he had led some of the Khazradj in the first day of the Fidjār at Medīna, but did not take part in the second day of the Fidjār nor the battle of Buʿāth since he had quarreled with another leader, ʿAmr b. al-Nuʿmān of Bayāḍa, over the latter's unjust killing of Jewish hostages, perhaps because he realized the need for justice within a community and feared ʿAmr's ambition. But for the coming of Muḥammad he might have been "king" of Medīna, as the sources suggest. When all but a small minority of the Medinans accepted Islam, Ibn Ubayy followed the majority, but he was never a whole-hearted Muslim. In 2/624 when Muḥammad attacked Banū Ḳaynuḳāʿ, Ibn Ubayy pleaded for them since they had been in league with him in pre-Islamic times; he probably urged their importance as a fighting unit in view of the expected Meccan onslaught. In the consultations before Uhud (3/625) he supported the policy originally favoured by Muḥammad of remaining in the strongholds. When Muḥammad decided to go to meet the enemy, Ibn Ubayy disapproved, and eventually with 300 followers retired to the strongholds. This move may have stopped the Meccans from attacking Medīna itself after the battle, but it showed cowardice and lack of belief in God and the Prophet (cf. Ḳurʾān, iii, 166-8 [160-2]). Up to this point Ibn Ubayy had done little but criticize Muḥammad verbally, but for the next two years he also intrigued against him. He tried to persuade Banū al-Naḍīr not to evacuate their homes at Muḥammad's command, even promising military support. On the expedition to Muraysīʿ he used the occasion of a quarrel between Emigrants and Anṣār to try to undermine Muḥammad's position and make men think of expelling him; and immediately afterwards he was active in spreading scandal about ʿĀʾisha. Muḥammad called a meeting and asked to be allowed to punish him (without incurring a feud). There was high feeling between the Aws and the Khazradj, but it was clear that Ibn Ubayy had little backing. His reputation of being leader of the Hypocrites (*munāfiḳūn*) or Muslim opponents of Muḥammad is based on these incidents. After this year there is no record of his actively opposing Muḥammad or intriguing against him. He took part in the expedition of Ḥudaybiya, but stayed away from that to Tabūk, doubtless because of ill health, since he died shortly afterwards (9/631). He was probably not involved in the intrigues connected with the "mosque of dissension" (*masdjid al-ḍirār*), since Muḥammad himself conducted his funeral. Throughout his dealings with Ibn Ubayy Muḥammad showed great restraint.

Ibn Ubayy had a son ʿAbd Allāh b. ʿAbd Allāh and several daughters who became good Muslims.

ʿABD ALLĀH b. ʿUMAR b. ʿABD al-ʿAZĪZ, son of the caliph ʿUmar II. In the year 126/744 ʿAbd Allāh was appointed governor of ʿIrāḳ by Yazīd III, but in a short time aroused the discontent of the Syrian chiefs in that place, who felt that they were unfavorably treated by the new governor compared with the inhabitants of ʿIrāḳ. After the accession of Marwān II, ʿAbd Allāh b. Muʿāwiya [*q.v.*], a descendant of ʿAlī's brother Djaʿfar, rebelled in Kūfa in Muḥarram 127/Oct. 744, but was expelled by ʿAbd Allāh b. ʿUmar, whereupon he transferred his propaganda to other parts. When Marwān transferred to al-Naḍr b. Saʿīd al-Ḥarashī the governorship of ʿIrāḳ, ʿAbd Allāh energetically refused to leave his post. Al-Naḍr appeared at Kūfa, whilst ʿAbd Allāh remained in Ḥīra and hostilities broke out between them. Soon after, however, a common enemy appeared in the person of the Khāridjite chief al-Ḍaḥḥāk b. Ḳays, and then the two adversaries had to come to terms and even to join forces. In Radjab 127/April-May 745 they were defeated by al-Ḍaḥḥāk and ʿAbd Allāh withdrew to Wāsiṭ, whilst the victor captured Kūfa. Then the old enmity between the two governors again broke out, but for a second time al-Ḍaḥḥāk put an end to their quarrels. After a siege lasting several months ʿAbd Allāh was obliged to make peace with al-Ḍaḥḥāk. Subsequently Marwān had ʿAbd Allāh arrested. According to the usual account, he died of plague in the prison of Ḥarrān in the year 132/749-50.

ʿABD ALLĀH b. ʿUMAR b. al-KHAṬṬĀB, one of the most prominent personalities of the first generation of Muslims, and of the authorities most frequently quoted for Traditions. He derived his reputation not only from being a son of the Caliph, but also because his high moral qualities compelled the admiration of his contemporaries. At a time when the Muslims were being carried by their passions into civil war, Ibn ʿUmar was able to maintain himself aloof from the conflict; furthermore, he followed the precepts of Islām with such scrupulous

obedience that he became a pattern for future generations, to such a degree that information was collected as to how he dressed, how he cut and dyed his beard, etc. The biographies of him are full of anecdotes and charming touches which serve to illustrative his native wit, his deep piety, his gentleness, modesty, propriety and continence, his determination to detach himself from all that he loved most. Some of these stories may have been invented, but his nobility of soul is incontestable. As a transmitter of Tradition, he has been regarded as the most scrupulous in neither adding to nor omitting anything from the *ḥadīths* narrated by him. The Caliphate was offered to him three times: immediately after the death of ʿUthmān (35/655); during the negotiations of the two arbiters appointed at Ṣiffīn to resolve the dispute between ʿAlī and Muʿāwiya (37-8/657-8); and after the death of Yazīd I (64/683). On each occasion he refused, because he would have desired his election to be unanimous and wished to avoid bloodshed in securing it. Whether or not this was due to narrowmindedness (as Lammens has suggested), it is undeniable that Ibn ʿUmar was lacking in energy, and his own father recognized this defect in him.

The following are the events recorded on the life of Ibn ʿUmar. Born before the *hidjra*, at an unspecified date, he embraced Islām with his father and emigrated to Medīna some time before him. The Prophet sent him back on account of his age when he presented himself to fight at Badr and at Uḥud, but accepted him at the siege of Medina known as the Battle of the Moat, when he was about fifteen years old (this served as a precedent later in analogous cases). Afterwards he took part in the disastrous expedition to Muʾta (7), in the conquest of Mecca (8), in the wars against the false prophets Musaylima and Ṭulayḥa (12), in the Egyptian campaign (18-21), in the battle of Nihāwand (21), in the expedition of the year 30 to Djurdjān and Ṭabaristān, and in Yazīd's expedition against Constantinople (49). In political affairs, he appears for the first time as adviser to the Council appointed by the dying ʿUmar to choose from among its own members the future Caliph; he had, however, no right of voting and was not eligible. At the elections of the other Caliphs who came to power during his lifetime he conformed to the will of the majority of the Muslims, and if he refused to pay homage to ʿAlī it was because he was waiting for the community to reach agreement on his election. As agreement was not reached and civil war broke out, he remained neutral. If later he refused to recognize Yazīd as heir-presumptive—he obviously disapproved of the innovation introduced by Muʿāwiya into the settlement of the succession—he showed no hesitation in paying homage to him after the death of his father. Ibn ʿUmar held no important office in the administration of the empire, except a few missions. Perhaps he deliberately held aloof, devoting himself to religious practices. It is related that he would not accept the office of *ḳāḍi*, fearing that he might not be able to interpret the divine law correctly.

Ibn ʿUmar died of septicaemia in 73/693, well over eighty years of age, as the result of a wound in the foot inflicted by one of the soldiers of al-Ḥadjdjādj with the lower end of his lance, in the throng of pilgrims returning from ʿArafāt. When al-Ḥadjdjādj visited him during his illness and asked if he knew the man who had wounded him, so that he could be punished, Ibn ʿUmar reproached him for allowing his men to carry arms in the holy places and for having been, in this way, the cause of his injury. This reproach probably gave rise to the story found in certain of the later sources, that al-Ḥadjdjādj commissioned an assassin to wound Ibn ʿUmar with the poisoned tip of a lance.

(L. VECCIA VAGLIERI)

ʿABD ALLĀH B. WAHB AL-RĀSIBĪ, Khāridjite leader, a *tābiʿī* of the Badjīla tribe, noted for his bravery and piety and surnamed *dhu 'l-thafināt*, "the man with the callosities", on account of the callosities on his forehead etc. resulting from his many prostrations. He fought under Saʿd b. Abī Waḳḳāṣ in ʿIrāḳ and under ʿAlī at Ṣiffīn, but broke with him over the decision to arbitrate and joined the dissidents at Ḥarūraʾ. Shortly before their final departure from Kūfa in Shawwāl 37/March 658, the Khāridjites elected ʿAbd Allāh as their commander (*amīr*, not *khalīfa*, as usually stated), and he was killed in the ensuing battle at Nahrawān, 9 Ṣafar 38/17 July 658.

(H. A. R. GIBB)

ʿABD ALLĀH B. YĀSĪN [see AL-MURĀBIṬŪN].

ʿABD ALLĀH B. AL-ZUBAYR, anti-Caliph, son of al-Zubayr b. al-ʿAwwām [*q.v.*], of the ʿAbd al-ʿUzza clan of Ḳuraysh, and Asmāʾ [*q.v.*], daughter of Abū Bakr and sister of ʿĀʾisha. He was born at Medina twenty months after the hidjra (c. Dhu 'l-Ḳaʿda 2/May 624), and killed in battle against the Syrian troops under al-Ḥadjdjādj, 17 Djumādā I or II, 73/4 Oct. or 3 Nov., 692. Some sources (Ibn Ḳutayba, *Maʿārif*, 116; Ibn Ḥabīb, *Muḥabbar*, 275; etc.) state that he was the first child born to the Muhādjirīn at Medina. The close kinship which linked him to the family of the Prophet on both sides was a factor which contributed to building up his reputation, both as against the Umayyads and also (it would seem) against the ʿAlids.

He is reported to have been present, though still a boy, with his father at the battle of the Yarmūk (Radjab 15/Aug. 636), and accompanied him when he joined the forces of ʿAmr b. al-ʿĀṣ in Egypt (19/640). He took part in the expedition of ʿAbd Allāh b. Saʿd b. Abī Sarḥ in 26-7/647 against the Byzantines in Ifrīḳiya and is said to have killed the exarch Gregory with his own hand. On returning

to Medina to announce the news of the victory, he is credited with an eloquent description of this exploit (*Aghānī*, vi, 59, on which most of the later narratives depend). He accompanied Saʿīd b. al-ʿĀṣ in his campaigns in northern Persia (29-30/650), and was subsequently nominated by ʿUthmān to be one of the commission charged with the official recension of the Ḳurʾān (*Gesch. des Qorans*, ii, 47-55). After the assassination of ʿUthmān he accompanied his father and ʿĀʾisha to Baṣra and commanded the infantry in the battle of the Camel (10 Dj. II, 36/4 Dec. 656); after the battle he returned with ʿĀʾisha to Medina, and took no further part in the civil war, except to attend the Arbitration at Dūmat al-Djandal (or rather Adhruḥ), where he is said to have advised ʿAbd Allāh b. ʿUmar to bribe ʿAmr b. al-ʿĀṣ (Naṣr b. Muzāḥim, *Waḳʿat Ṣiffīn*, Cairo 1365, 623).

During the reign of Muʿāwiya I, ʿAbd Allāh, who had inherited a considerable fortune from his father, remained in the background, biding his time, but refused to take the oath to Yazīd as heir-presumptive. On Muʿāwiya's death (60/680), he, together with Ḥusayn b. ʿAlī [*q.v.*], again refused to swear allegiance to Yazīd, and to escape the threats of Marwān they fled to Mecca, where they remained unmolested. When, however, after the expedition of Ḥusayn and his death at Karbalāʾ, Ibn al-Zubayr began secretly to enrol adherents, a small force was sent from Medina under the command of his brother ʿAmr to arrest him. ʿAmr was defeated and taken prisoner, beaten and incarcerated in a cell until he died, and his body was exposed on a gibbet (61/681). ʿAbd Allāh now publicly declared Yazīd deposed, and his example was followed by the Anṣār at Medina, who elected ʿAbd Allāh b. Ḥanẓala [*q.v.*], known as Ibn al-Ghasīl (Ibn Saʿd, v, 46-9) as their chief. Yazīd, realizing that he had temporized too long, despatched a Syrian army under Muslim b. ʿUḳba, which defeated the Medinians in the battle of the Ḥarra (27 Dhu 'l-Ḥidjdja 63/27 Aug., 683) and proceeded (notwithstanding Muslim's death) to besiege ʿAbd Allāh b. al-Zubayr in Mecca (26 Muḥ. 64/24 Sept. 683). Sixty-four days later, on receiving the news of Yazīd's death, the Syrian forces desisted, and the commander, Ḥusayn b. Numayr, tried to persuade Ibn al-Zubayr to accompany them back to Syria, but he determined to stay in Mecca.

The ensuing confusion in Syria and the outbreak of civil war gave Ibn al-Zubayr his chance. He proclaimed himself *amīr al-muʾminīn*, and the opponents of the Umayyads in Syria, Egypt, southern Arabia and Kūfa recognized him as Caliph. But his authority remained almost wholly nominal. The victory of Marwān I [*q.v.*] at Mardj Rāhiṭ (end of 64/July 684) and the revolt of Mukhtār [*q.v.*] at Kūfa fifteen months later, placed his supporters in Syria, Egypt and ʿIrāḳ on the defensive; and although al-Muhallab's support of Musʿab b. al-Zubayr at Baṣra and subsequent victory over Mukhtār (67/687) restored a Zubayrid government in ʿIrāḳ, Musʿab was to all intents an independent ruler. At the same time, the Bakrite Khāridjites, who had separated from Ibn al-Zubayr after the death of Yazīd and had established themselves in eastern Nadjd under the command of Nadjda, occupied the province of Baḥrayn (i.e. al-Ḥasā), and in 68/687-8 seized al-Yaman and Ḥaḍramawt, followed next year by the occupation of Ṭāʾif, thus completely isolating him in the Ḥidjāz. At the Pilgrimage of 68/688 no fewer than four different leaders presided over their separate groups of partisans: Ibn al-Zubayr, a Khāridjite, an Umayyad, and Muḥammad b. al-Ḥanafiyya. Finally, after the Umayyad reoccupation of ʿIrāḳ, 72/691, ʿAbd al-Malik despatched al-Ḥadjdjādj to deal with Mecca. The siege began on 1 Dhu 'l-Ḳaʿda 72/25 March, 692, and lasted for more than six months, during which the city and the Kaʿba were under bombardment. When at length his supporters gave way, and even his own sons surrendered to al-Ḥadjdjādj, ʿAbd Allāh, urged on by his mother, returned to the field of battle and was slain. His body was placed on a gibbet on the spot where his brother ʿAmr had been exposed, and some time later was given back by orders of ʿAbd al-Malik to his mother, who buried it in the house of Ṣafiyya at Medina.

ʿAbd Allāh is the principal representative in history of the second generation of the noble Muslim families of Mecca, who resented the capture of the Caliphate by the Umayyad house and the gulf of power which this had created between the clan of ʿAbd Shams and the other Meccan clans. This resentment is still clearly visible as a groundtheme in the numerous anecdotes on his relations with Muʿāwiya (see *Bibl.* under Balādhurī), in spite of their later elaboration and of Muslim idealization of this challenger of Umayyad rule, which has transformed a brave, but fundamentally self-seeking and self-indulgent man, into a model of piety (see especially *Ḥilya al-Awliyāʾ*, i, 329-337). On the other hand, many sources portray him as avaricious, jealous, and ill-natured, and reproach him particularly for his harsh conduct towards his brother, Muḥammad b. al-Ḥanafiyya, and ʿAbd Allāh b. ʿAbbās.

ʿABD ALLĀH DJEWDET [see DJEWDET].

ʿABD ALLĀH AL-GHĀLIB BIʾLLĀH ABU MUḤAMMAD, Saʿdid sultan, son of one of the founders of the dynasty, Maḥammad al-Shaykh al-Mahdī. He was born Ramaḍān 933/June 1527 and, designated as heir presumptive, was recognized as sultan on his father's death, assassinated by his Turkish guardsmen 29 Dhu'l-Ḥidjdja 964/23 Oct. 1557. His reign lasted till his death, due to a crisis of asthma, 28 Ramaḍān 981/21 Jan. 1574.

His reign as a whole was peaceful. Yet the sultan showed himself uneasy in expectation of an eventual intervention of the Turks, who had killed his father, immediately afterwards invaded the North of Morocco, whence they had been repulsed, and who offered asylum to three of his brothers: al-Maʾmūn, ʿAbd al-Malik and Aḥmad. Thus he sought an alliance with the Spanish. These preoccupations formed the background to the cession of the Peñon de Velez (1564), the taking of Shafshawān (1567) and the embarrassed attitude of the sultan at the time of the revolt of the Moriscos (1568-71). He had relations with other European powers also. He negotiated

with Antoine de Bourbon, king of Navarre, and was prepared to cede to him al-Kaṣr al-Ṣaghīr in exchange for 500 soldiers, and entered into commercial relations with England. He tried to conquer the fortress of Mazagan, which was in the hands of the Portuguese, dispatching against it a numerous army under the command of his son Muḥammad, his heir. The siege lasted from 4 March to 30 April 1562 and ended with the failure of the Saʿdid troops, who suffered heavy losses.

In internal affairs he consolidated the work of his father, without meeting any serious opposition. He seemed to have feared especially the members of his family; he had his brother al-Maʾmūn assassinated in Tlemcen and put to death his nephew Muḥ. b. ʿAbd al-Ḳādir, whose popularity roused his ill-will (975/1567-8). He also seems to have suspected some of the religious leaders: he imprisoned, or put to death, several members of the Yūsufiyya order and had crucified in Marrākush the *faḳīh* Abū ʿAbd Allāh Muḥ. al-Andalusī, accused of heresy (15 Dhu'l-Ḥidjdja 980/19 April 1573). He constructed several important buildings in Marrākush, such as the Ibn Yūsuf madrasa. Diego de Torres also attributes to him the establishment of the *mallāḥ* of Marrākush in its present location. He also built a fortress to protect the harbour of Agadir.

ʿABD ALLĀH PASHA MUḤSIN-ZĀDE ČELEBI, Ottoman statesman and general, son of Muḥsin Čelebi, descended from a family of merchants at Aleppo. He started his career in 1115/1703 in the financial administration with the post of supervisor (*emīn*) of the Mint (*ḍarb-khāne*), the *defterdār* of which was his brother, Meḥmed Efendī. He became son-in-law (*dāmād*) of the Grand-Vizier Čorlulu ʿAlī Pasha (1707-10) and enjoyed the favour of the court. On the revolt of Ḳaytās Beg, he was sent to Egypt in 1126/1714, succeeded in subduing the rebel and sent his head to the Porte. Between 1715 and 1737 he filled several administrative and military posts: *defterdār* in Morea, governor (*muḥāfiẓ*) of Lepanto (Aynabakhtī), chief of the *ḳapudjī* with the rank of a Pasha, head of the imperial chancery (*nishandjī*), *agha* of the Janissaries, Beylerbey of Vidin, of Rumeli and of Bosnia. He was commander (*ser-ʿasker*) at Bender, in Bessarabia, when Russia invaded the Crimea (1736) and Austria threatened to intervene on the Danube. Negotiations at Niemirov (Poland) led to no results. Appointed by Sultan Maḥmūd I (1730-54) as Grand-Vizier (6 Rabīʿ II, 1150/August 3rd, 1737), ʿAbd Allāh Pasha directed the war operations, without achieving the results hoped for by the court. Recalled to Istanbul after four months, he had to hand over the seal of office to the new Grand-Vizier Yegen Pasha (Dec. 19th, 1737). He continued to fill posts as commander of fortresses and governor of provinces and died in Rabīʿ ii, 1162/spring 1749 in Trikala, Thessaly, at the age of 90 years. His son Meḥmed Pasha Muḥsin-Zāde signed the peace of Küčük Ḳaynardje (1174).

ʿABD ALLĀH SARI [see SARI ʿABD ALLĀH EFENDI].

ʿABD AL-ʿAZĪZ (ABDÜLAZIZ), the thirty-second Ottoman sultan. Born on 9 Feb. 1830, the third son of sultan Maḥmūd II [*q.v.*], he succeded his brother ʿAbd al-Madjīd [*q.v.*], 20 June 1861. His reign was marked by revolts and insurrections in the Balkan provinces (Montenegro, Serbia, Bosnia, Herzegovina and Bulgaria) and in Crete, which brought about the intervention of the great powers. From 1870 onwards, the influence of Russia, supplanting that of France and England, preponderated in Istanbul, and General Ignatief, the Russian ambassador, often imposed his views on the grand vizier Maḥmūd Nadīm Pasha. Russia also made efforts to stir up the discontent of the subjects of the Porte: Slavs, Albanians, and even Arabs and Egyptians.

In spite of internal crises, the policy of reforms, called *tanẓīmāt* [*q.v.*], was not abandoned. The administration of the provinces was reorganized (law of *wilāyets* modeled on French law, 1867) and some attempts were made to reform the institution of the *waḳfs* (1867). On French advice, a council of justice (*shūrā-yi dewlet*), composed of Muslims and Christians, and a council of justice (*dīwān-i aḥkām-i ʿadliyye*) were set up (1868). Public education was reorganized after the French model and a *lycée* was opened in Galata-saray. It was open to all Ottoman subjects and instruction was given in French by French teachers (1868). A university (*dār ül-fünūn*) was established. At the same time, the army, and especially the navy, were reorganized. Foreigners acquired the right to possess immovable property (1867). Other attempts at economic reforms remained fruitless: in 1877, the deficit of the budget reached 112 millions. The government, judging itself unable to face its obligations, followed the advice of the Russian ambassador, reduced by half the payment of interest on the debt and had to declare itself bankrupt. The deplorable state of the national economy, the financial crisis, the revolts and insurrections in the Balkan provinces, made it particularly difficult to apply the reforms, with which the great powers were dissatisfied, while the Old Turks considered them incompatible with religion and the Young Turks insufficient. This resulted in general discontent against the sultan, who was deposed on 30 March 1876 and committed suicide a few days later.

ʿABD AL-ʿAZĪZ B. AL-ḤĀDJDJ IBRĀHĪM AL-THAMĪNĪ AL-ISDJANĪ, celebrated Ibāḍī scholar, b. c. 1130/1717-8, probably at Wardjlān (Ouargla), d. Radjab 1223/August 1808, at Banū Isdjan (Beni Isguen) in the Mzab, where, at the age of about forty, he had begun his studies under the shaykh Abū Zakariyyāʾ Yaḥyā b. Ṣāliḥ, of Djarba. ʿAbd al-ʿAzīz is held by the Ibāḍīs to-day to be one of the greatest scholars who ever lived in the Mzab, where he has left the reputation of a man of fervent piety, remarkable sagacity, great imperturbability, perfect self-control, and astonishing assiduity.

He devoted himself to the composition of a dozen works on theology and jurisprudence. His most important work is *K. al-Nīl wa-Shifāʾ al-ʿAlīl*, autographed at Cairo 1305/1887-8. This treatise, conceived on the plan of the *Mukhtaṣar* of *Khalīl*, but less concise in style, is a complete exposition of Ibāḍī legislation, put together from the most authoritative works of Ibāḍī scholarship in ʿUmān, Djabal Nafūsa, Djarba and the Mzab, all of which can be identified without difficulty. It was on this work that E. Zeys drew for his studies on this subject. The other works of ʿAbd al-ʿAzīz are the following: *Takmilat al-Nīl*, published at Tunis some 25 years ago; *al-Ward al-bassām fi Riyaḍ al-Aḥkām*, a précis of jurisprudence devoted chiefly to questions of judgment; *Maʿālim al-Dīn*, a reasoned exposition of the Ibāḍī creed, along with refutation of the arguments put forward by the defenders of the other sects (unpublished); *Mukhtaṣar al-Miṣbāḥ min K. Abī Masʾala waʾl-Alwāḥ*, on questions of inheritance; *ʿIḳd al-Djawāhir*, a summary of *Ḳanāṭir al-Khayrāt* of al-Djayṭālī, on worship and religion in general (unpublished); *Mukhtaṣar Ḥuḳūḳ al-Azwādj*, on the rights and duties of husband and wife (unpublished); *Tādj al-Manẓūm min Durar al-Minhādj al-Maʿlūm*, abridgement of a voluminous ʿUmanī work of jurisprudence (unpublished); *Taʿāẓum al-Mawdjayn* (or *Dhuʾl-Nūrayn*) *ʿalā Mardj al-Baḥrayn* (unpublished); *al-Asrār al-Nūrāniyya*, on prayer and the accompanying rites (autographed in Egypt 1306/1888-9); *al-Nūr*, on the principal dogmas of the Faith (autographed in Egypt 1306/1888-9); *Mukhtaṣar Ḥawāshī al-Tartīb*, résumé of several Ibāḍī works on *ḥadīth*.

Bibliography: E. Zeys, *Législation mozabite, son origine, ses sources, son présent, son avenir*, Paris 1886; idem, *Le mariage et sa dissolution dans la législation mozabite*, in *Rev. alg. de lég. et de jurisp.*, Algiers 1887-8; M. Smogorzewski, *ʿAbd al-ʿAzīz, ses écrits et ses sources* (unpublished).

(A. de Motylinski-T. Lewicki)

ʿABD AL-ʿAZĪZ B. AL-ḤADJDJĀDJ B. ʿABD AL-MALIK, Umayyad general. He was a faithful partisan of his cousin Yazīd III and one of his most eminent assistants. Already in al-Walīd II's reign he helped Yazīd, who headed the malcontents, to enlist troops against the caliph. When they had succeeded in getting together an army in Damascus, ʿAbd al-ʿAzīz received the supreme command and marched against al-Walīd. Yazīd's brother ʿAbbās, who was about to go to the caliph's assistance, was attacked and forced to pay homage to Yazīd. Shortly afterwards ʿAbd al-ʿAzīz stormed the castle of Bakhrāʾ, whither al-Walīd had withdrawn, and put the caliph to death. This was in the year 126/744. Yazid was now proclaimed caliph; the inhabitants of Ḥimṣ (Emesa), however, stoutly refused to do homage to the usurper and marched against Damascus. Yazīd sent two army divisions against them, and while the rebels were engaged with one division, ʿAbd al-ʿAzīz advanced with the other and decided the combat, whereupon the rising was suppressed. In the same year Yazīd died after settling the succession on his brother Ibrāhīm and after him on ʿAbd al-ʿAzīz. The inhabitants of Ḥimṣ, however, again refused to do homage to the new ruler, who for that matter was hardly recognized outside the capital. On Ibrāhīm's orders ʿAbd al-ʿAzīz therefore began to lay siege to the town, but withdrew when Marwān b. Muḥ., then governor of Armenia and Ādharbaydjān, advanced against him. Ḥimṣ opened its gates to Marwān, the followers of the late caliph were defeated in Ṣafar 127/Nov. 744 at ʿAyn al-Djarr, and Marwān had himself proclaimed caliph in Damascus. As soon as he had entered the town, ʿAbd al-ʿAzīz b. al-Ḥadjdjādj was murdered by clients of al-Walīd II.

Bibliography: Ṭabarī, ii, 1794 ff.; Ibn al-Athīr, v, 215 ff.; G. Weil, *Gesch. d. Chalifen*, i, 669 ff.; see also AL-WALĪD B. YAZĪD.

(K. V. Zettersteen)

ʿABD AL-AZĪZ B. AL-ḤASAN, sultan of Morocco from 1894 to 1908. He was born, according to Weisgerber, on 24 Feb. 1878, according to Doutté and Saint-René Taillandier 18 Rabīʿ I 1298/18 Feb. 1881, of the sultan Mawlāy al-Ḥasan and Lālla Ruḳayya, of Circassian origin. When his father died on a campaign, 9 June 1894, ʿAbd al-ʿAzīz was proclaimed sultan in Rabat, thanks to the *ḥādjib* Aḥmad b. Mūsā, called Bā Aḥmad, who had been in charge of his education, and received as reward the title of Grand-Vizier. ʿAbd al-ʿAzīz left the management of affairs in the hands of Aḥmad until his death on 13 May 1900. During this period Morocco continued to live more or less in its traditional way.

After the death of his mentor, ʿAbd al-ʿAzīz fell under the influence of a small group of Europeans, including Sir Harry McLean, instructor of the Sherifian infantry, who encouraged the natural taste of the ruler for modernism, so that very soon the Sherifian palaces housed photographic cameras, billiards, etc. All this shocked the conservative feelings of the Moroccans and cost money. Moreover, in Sept. 1901, ʿAbd al-ʿAzīz contemplated an equitable reform of taxes, *tartīb*, in order to abolish the privileges and immunities of the existing system. In consequence, an agitator (*rūgī*), called Djilālī b. Idrīs al-Zarhūnī al-Yūsufī, nicknamed Bū Ḥmāra (Abū Ḥamāra), rose in the district of Taza, gave himself out as a brother of the sultan and quickly became master of the region to the east of Fez (1902), threatening the capital itself in 1903.

On the other hand, the European powers exerted a strong pressure upon the Sherifian government, to protect the Europeans established in Morocco,

repress frontier incidents (region of Figuig), and obtain a guarantee for the considerable sums lent to the sultan by various European groups. These pressures, marked by various incidents, such as the visit of the German Emperor William II to Tangier (31 March 1905), led to the conference of Algeciras. The Act of Algeciras (7 April 1906), interpreted as an admission of surrender to the demands of the European powers, made ʿAbd al-ʿAzīz even more unpopular in Morocco. Anarchy and discontent increased equally, and the sultan was unable to bring about any improvement. One of his brothers, Mawlāy ʿAbd al-Ḥāfiẓ, was proclaimed sultan in Marrākus̲h̲ on 16 August 1907, immediately after the disembarkation of French troops in Casablanca.

ʿAbd al-ʿAzīz tried to resist by organizing an expedition to Marrākus̲h̲ in July 1908. His army broke up and was defeated by the troops of his brother on 19 August at Bū Ad̲j̲ība on the Wadi Tassāʾūt. ʿAbd al-ʿAzīz took refuge in Casablanca and there abdicated on 21 August 1908. After a short stay in France, he established himself in Tangier, where he lived, without mixing in politics, until his death, 10 June 1943.

(R. LE TOURNEAU)

ʿABD AL-ʿAZĪZ B. MARWĀN, son of the caliph Marwān I and father of ʿUmar b. ʿAbd al-ʿAzīz. ʿAbd al-ʿAzīz was appointed governor of Egypt by his father, and the appointment was confirmed by ʿAbd al-Malik, when he ascended the throne. During his twenty years' sojourn in Egypt, ʿAbd al-ʿAzīz proved himself a capable governor, who really had the welfare of his province at heart. When in the year 69/689, ʿAbd al-Malik, after the assassination of his rebellious lieutenant ʿAmr b. Saʿīd, intended to have the latter's relatives executed as well, ʿAbd al-ʿAzīz interceded for them and persuaded the incensed caliph to spare their lives. Towards the end of his life ʿAbd al-ʿAzīz suffered from the ill will of his brother ʿAbd al-Malik. Marwān had nominated him to succeed ʿAbd al-Malik, but the latter wished to secure the throne for his two sons, al-Walīd and Sulaymān, and therefore cherished the project of removing his brother from his governorship and excluding him from the succession to the throne, when in the year 85/754 news suddenly reached Damascus that ʿAbd al-ʿAziz was dead.

Bibliography: Balād̲h̲urī, *Ansāb*, v, 183-5; Ibn Saʿd, v, 175; Ṭabarī, ii, 576 ff.; Ibn al-At̲h̲īr, iv, 156 ff.; Ya ʿḳūbī, ii, 306 ff.; G. Weil, *Gesch. d. Chalifen*, i, 349 ff.; A. (K. V. ZETTERSTÉEN)

ʿABD AL-ʿAZĪZ B. MUḤAMMAD B. IBRAHĪM AL-ṢINHĀD̲J̲Ī AL-FIS̲H̲TĀLĪ, Moroccan writer, b. 956/1549, d. at Marrākus̲h̲ 1031/1621-2, was head of the chancery (*wazīr al-ḳalam al-aʿlā*) and official historiographer (*mutawallī taʾrīk̲h̲ al-dawla*) of the Saʿdid sultan Aḥmad al-Manṣūr al-D̲h̲ahabī [*q.v.*]. Of his literary and historical works, which were considerable, there survive only lengthy quotations, especially by the chronicler al-Ifrānī [*q.v.*] in his *Nuzhat al-Ḥādī*. Al-Fis̲h̲tālī, who was a contemporary and friend of al-Maḳḳarī [*q.v.*], the author of *Nafḥ al-Ṭīb*, composed annals of the Saʿdid dynasty down to his own times, under the title of *Manāhil al-Ṣafāʾ fī ak̲h̲bār al-Mulūk al-S̲h̲urafāʾ*. He was the author also of many panegyrical poems, more particularly *mawlūdiyyāt* [*q.v.*]. The verses used for the epigraphic decoration of the palace of al-Badīʿ at Marrākus̲h̲ were of his composition.

Bibliography: Ibn al-Ḳāḍī, *Durrat al-Ḥid̲j̲āl* (ed. Allouche), Rabat 1936, no. 1056; Ifrānī, *Nuzhat al-Ḥādī* (ed. Chorfa*, 92-97; Brockelmann, S II, 680-1.

(E. LÉVI-PROVENÇAL)

ʿABD AL-ʿAZĪZ B. MŪSĀ B. NUṢAYR, first governor of al-Andalus, after the departure to the East of his father Mūsā b. Nuṣayr, the famous conqueror of the Iberian peninsula, in 95/714. Mūsā, on leaving, gave him instructions to pursue the Muslim advance and to pacify the regions which had come under Muslim control. According to certain traditions, it was under his government that part of what is now Portugal, including the towns of Evora, Santarem and Coimbra, and the sub-pyrenean regions from Pamplona to Narbonne were conquered. He himself took Malaga and Elvira, and then subdued the land of Murcia, concluding with a Gothic lord, Theodemir (who gave his name to the district, Tudmīr [*q.v.*]) a treaty, the more or less authentic text of which has survived.

ʿAbd al-ʿAzīz married the widow of the last Visigothic king Roderic, Egilón, who is said to have adopted Islam and taken the name of Umm ʿĀṣim. This princess gained so much influence over the governor that he soon became suspect to his compatriots and was accused of abusing his power. He was assassinated in Seville, where he had fixed his residence, by a certain Ziyād b. ʿUd̲h̲ra al-Balawī, at the beginning of Rad̲j̲ab 97/March 718, and was succeeded by his maternal cousin, Ayyūb b. Ḥabīb al-Lak̲h̲mī.

Bibliography: Lévi-Provençal, *Hist. Esp. Mus.*, i, 30-34 and references cited ibid., i, 8, n. 1.

(E. LÉVI-PROVENÇAL)

ʿABD AL-ʿAZĪZ ĀL SAʿŪD [see SAʿŪDIDS].

ʿABD AL-ʿAZĪZ B. AL-WALĪD, son of the caliph al-Walīd I. In 91/709-10, he took part in the campaign against the Byzantines, under the orders of his uncle, Maslama b. ʿAbd al-Malik, and during the following years, he also participated in the battles against the same enemies. In 96/714-5, al-Walīd, whose designated successor was Sulaymān b. ʿAbd al-Malik, tried to exclude Sulaymān from the succession in favour of his son ʿAbd al-ʿAzīz, but his attempt failed. After the death of Sulayman at Dābiḳ, 99/717, ʿAbd al-ʿAzīz wanted to claim the crown, but learning that ʿUmar II b. ʿAbd al-ʿAzīz had been proclaimed as caliph, he betook himself to him and paid him homage. He died in 110/728-9.

Bibliography: Ṭabarī, ii, 1217 ff.; Ibn al-At̲h̲īr, iv 439 ff.; Yaʿḳūbī, ii, 435 ff.; G. Weil, *Gesch. d. Chalifen*, i, 511 ff.; A. Müller, *Der Islam im Morgen- und Abendland*, i, 436; Caetani-Gabrieli, *Onomasticon*, ii, 986. (K. V. ZETTERSTÉEN)

ABD AL-ʿAZĪZ EFENDI KARA ČELEBIZĀDE [see ḲARA ČELEBIZĀDE].

SHĀH **ʿABD AL-ʿAZĪZ AL-DIHLAWĪ**, the eldest son of Shāh Walī Allāh al-Dihlawī [*q.v.*], a noted Indian theologian and author of several religious works in Arabic and Persian, was born at Delhi in 1159/1746 (hence his chronogrammatic name Ghulām Ḥalīm) and died there in 1239/1824. He studied mainly with his father, after whose death in 1176/1762 he soon began to teach as the head of the Madrasa Raḥīmiyya, founded by his grandfather. As a teacher, preacher and writer, he exercised a considerable influence on the religious thought of his time. His chief works are as follows. In Arabic: (1) *Sirr al-Shahādatayn* (Dihli 1261), in which he sets forth the ingenious view that the Prophet vicariously acquired the merit and distinction of *shahāda* or martyrdom through the tragic death of his grandson, Ḥusayn son of ʿAlī. One of his pupils, Salāmat Allāh wrote a commentary on it in Persian (Lucknow 1882). (2) *ʿAzīz al-Iḳtibās fī Faḍāʾil Akhyār al-Nās*, a collection of traditions on the virtues of the first four Caliphs (Dihli 1322/1904, with Persian and Urdu translations). (3) *Mīzān al-ʿAḳāʾid*, a concise statement of the Muslim creed with the author's own commentary on it (Dihli 1321 A. H.). In Persian: (4) *Tuḥfa ithnā-ʿAshariyya* (edited by Muḥammad Ṣādiḳ ʿAlī Riḍawī, Lucknow 1295 A. H.), in which he refutes the Shīʿite doctrines and thus continues the controversial work of his father, *Izālat al-Khafāʾ ʿan Khilāfat al-Khulafāʾ*. It has also been translated into Urdu. (5) *ʿUdjāla Nāfiʿa* (Dihli 1312, 1348 A. H.), an introduction to the science of Ḥadīth. (6) *Bustān al-Muḥaddithīn* (Dihli 1898), a bibliography of Ḥadīth literature, giving descriptions of books together with brief biographies of their authors. (7) *Fatāwā* (in 2 parts, Dihli 1341 A. H.), a collection of opinions and formal decisions on questions of law and doctrine. There is also an Urdu translation of part I by M. Nawwāb ʿAlī and ʿAbd al-Djalīl (Haydarabad Deccan 1313; also Cawnpore). (8) *Fatḥ al-ʿAzīz*, commonly known as *Tafsīr ʿAzīzī*, a commentary in Persian on Suras i and ii, and sections 29 and 30 of the Ḳurʾān. Sections 29 and 30 were both printed at Calcutta; the former bears the date 1248 A. H., while that of the other is not traceable. There are several other prints. Urdu translations of all the various parts have been published. (9) *Malfūẓāt Shād ʿAbd alʿAzīz*, the *obiter dicta* of the author, originally collected in Persian in 1233 A. H. and later translated into Urdu by ʿAẓmat Ilāhī in 1315/1897 and lithographed at Meerut.

Bibliography: Ṣiddīḳ Ḥasan Khān, *Itḥāf al-Nubalāʾ*, 296; Muḥammad b. Yaḥyā al-Tirhutī, *al-Yāniʿ al-Djanī fī Asānīd al-Shaykh ʿAbd al-Ghanī*, lithographed on the margin of *Kashf al-Astār ʿan Ridjāl Maʿānī al-Āthār* (Deoband 1349 A. H.), 73-5; Raḥmān ʿAlī, *Tadhkira ʿUlamāʾ Hind* (Lucknow 1914), 122; Raḥīm Bakhsh, *Ḥayāt Walī* (in Urdu), Dihli 1319 A. H., 338-42; idem., *Ḥayāt ʿAzīzī*; Storey, *Persian Literature*, i, 24; Zubaid Ahmad, *The contribution of India to Arabic literature*, Jullundur, 1946, Index; Bashīr al-Dīn, *Tadhkira ʿAzīziyya*, Meerut 1934. ʿABD AL-BAHĀʾ [see BAHĀʾĪS].

ʿABD AL-DJABBĀR B. ʿABD AL-RAḤMĀN AL-AZDĪ, governor of Khurāsān. In 130/747-8 and 133/750-1 he was a supporter of the ʿAbbāsids in their conflict with the Umayyads, and was appointed to command the *shurṭa* during the caliphates of al-Saffāḥ and al-Manṣūr. The latter sent him to Khurāsān as governor in 140/757-8. On arrival in the province, he began a violent persecution against the local aristocracy, whom he accused of partiality for the ʿAlids; but it seems that his measures affected also some of the partisans of the ʿAbbāsids (as is stated in the Persian version of al-Ṭabarī). This was apparently the reason why the caliph came to suspect him of rebellion. A cunning exchange of letters, which followed, only confirmed these suspicions, and eventually in 141/758-9 al-Manṣūr sent an army against him under the command of his son al-Mahdī. On the approach of the troops the population of Marw al-Rūdh rose and delivered up ʿAbd al-Djabbār, who was brought before al-Manṣūr, tortured, and put to death, probably at the beginning of 142/759-60.

Bibliography: Yaʿḳūbī, index; Ṭabarī, index; *Chronique de Tabari* (Persian), tr. H. Zotenberg, iv, 378-80; S. Moscati, *La rivolta di ʿAbd al-Ǧabbār*, in *Rend. Linc.*, 1947, 613-5. (S. MOSCATI)

ʿABD AL-DJABBĀR B. AḤMAD B. ʿABD AL-DJABBĀR AL-HAMADHĀNĪ AL-ASADĀBĀDĪ, Abu 'l-Ḥasan, Muʿtazilite theologian, in law a follower of the Shāfiʿī school. Born about 325, he lived in Baghdad, until called to Rayy, in 367/978, by the *ṣāḥib* Ibn ʿAbbād, a staunch supporter of the Muʿtazila. He was subsequently appointed chief ḳāḍī of the province; hence he is usually referred to in later Muʿtazilī literature as *ḳāḍī al-ḳuḍāt*. (For some anecdotes on his relations with Ibn ʿAbbād see Yāḳūt, *Irshād*, ii, 312, 314). On the death of Ibn ʿAbbād, he was deposed and arrested by the ruler, Fakhr al-Dawla, because of a slighting remark made by him about his deceased benefactor (*Irshād*, i, 70-1, ii, 335). No details seem to be available about his later life, and we do not seem to know, for instance, whether he was re-instated in his office. He died in 415/1025.

His main dogmatic work is the enormous al-*Mughnī*, of which the greater part has been preserved (in Sanʿā, see: *Fihris Kutub al-Khizāna al-Mutawakkiliyya*, 103-4; some volumes in Cairo, brought from Ṣanʿā, see: Kh. Y. Nāmī, al-*Baʿtha al-Misriyya li-Taṣwīr al-Makhṭūṭāt al-ʿArabiyya*, Cairo 1952, 15). Another important handbook of his dogmatics, *al-Muḥīṭ bi'l-Taklīf*, was compiled by his pupil Ibn Mattawayh [*q.v.*]. Several volumes in Ṣanʿā, *Fihris*, 102 (vol. i, Berlin 5149; Taymūriyya, ʿAḳaʾid 357; fragments in Leningrad, see A. Borisov, *Les manuscrits muʿtazilites de la Bibliothèque publique de Leningrad*, *Bibliografiya Vostoka*, 1935, 63-95). His monograph on prophecy (*Tathbīt Dalāʾil Nubuwwat Sayyidinā Muḥammad*, Shehīd ʿAlī Pasha 1575, cf. H. Ritter, *Isl.*, 1929, 42) contains also important discussions of the views of other schools, especially those of the Shīʿa. Another important dogmatic treatise seems to be his *Sharḥ al-Uṣūl al-Khamsa* (Vat. 1028). For other writings that have come down to us, cf. Brockelmann. It is not only from his own works, however, that his system can be reconstructed. All the writings of the latter Muʿtazila—including the Zaydī writers on dogmatics; as a matter of fact, his own books, too, have been preserved mainly by the Zaydīs of Yaman—are full of reports on his opinions. He was the chief figure in the last phase of Muʿtazilism, but his teaching has not yet been studied.

Bibliography: Abū Saʿīd al-Bayhaḳī, *Sharḥ ʿUyūn al-Masāʾil*, MS Leiden, Landberg 215, fol. 123v—125v, whence Ibn al-Murtaḍā, (*al-Muʿtazila*, Arnold), 66 ff.; al-Khaṭīb al-Baghdādī,

Taʾrīkh Baghdād, xi, 113 ff.; al-Subkī, *Ṭabaḳāt*, iii, 114, 219-20; Ibn al-Athīr, viii, 510-1, ix, 77-8, 235, x, 95; I. Goldziher, *Isl.*, 1912, 214; M. Horten, *Die plilosophischen Systeme*, 457-62; A. S. Tritton, *Muslim Theology*, 191-3. — ʿAbd al-Djabbār's *Ṭabaḳāt al-Muʿtazila* was the main source of Abū Saʿīd al-Bayhaḳī's important historical account of the Muʿtazila in the introduction of his *Sharḥ ʿUyūn al-Masāʾil*. Al-Bayhaḳī's account was taken over, in a slightly abbreviated form, by Ibn al-Murtaḍā (ed. Th. W. Arnold). (S. M. STERN)

ʿABD AL-FATTĀḤ FŪMANĪ, Persian historian, lived probably in the 16th-17th centuries. Entering into government service in Fūman, the old capital of Gīlān (Ch. Schefer, *Christ. pers.*, ii, 93) he was appointed controller of accounts by the vizier of the place, Behzād-beg, about 1018 or 1019/1609-10. After serving under several other vizers, he was taken to ʿIrāḳ by ʿĀdil Shāh. He wrote in Persian *Taʾrīkh-i Gīlān*, a history of Gīlān from 923/1517 to 1038/1628. This book, published by B. Dorn (with a résumé in his introduction), completes the histories of Ẓahīr al-Dīn [*q.v.*] and ʿAlī b. Shams al-Dīn [*q.v.*].

Bibliography: *ʿAbdu'l-Fattâh Fûmeny's Geschichte von Gîlân* (vol. iii of B. Dorn, *Muhamm. Quellen zur Geschichte d. südl. Küstenländer des Kaspischen Meeres*). (CL. HUART—H. MASSÉ)

ʿABD AL-GHANĪ B. ISMĀʿĪL AL-NĀBULUSĪ, a mystic, theologian, poet, traveller, and voluminous writer on a variety of subjects, born in Damascus 5 Dhu 'l-Ḥidjdja 1050/19 March 1641, and the leading figure in the religious and literary life of Syria in his time. His family, traditionally Shāfiʿī (though his father had changed to the Ḥanafī rite), had long been settled in Damascus and Muḥibbī describes his great-grandfather as "*shaykh mashāʾikh al-Shām*" (*Khulāṣa*, ii, 433). He early showed an interest in mysticism, joining the Ḳādirī and Naḳshbandī ṭarīḳas, and as a young man shut himself up in his house for seven years, studying the works of Ibn al-ʿArabī, Ibn Sabʿīn and ʿAfīf al-Dīn al-Tilimsānī, and bringing on himself by his unconventionnal behaviour charges of antinomianism. An early work, a *badīʿiyya* in praise of the Prophet, was of such virtuosity that his authorship was doubted, until he vindicated himself by writing a commentary on it. In 1075/1664 he made his first journey to Istanbul, and in 1100/1688 he visited the Biḳāʿ and Lebanon, in 1101/1689 Jerusalem and Hebron, in 1105/1693 Egypt and Ḥidjāz, and in 1112/1700 Tripoli, and wrote accounts of all these travels except the first. His works number (including short treatises) from 200 to 250. His pupils were innumerable, the most important probably being Muṣṭafā al-Bakrī [*q.v.*]. He died in Damascus on 24 Shaʿbān 1143/5 March 1731.

His works fall into three main categories: ṣūfī, poetry, travels. His ṣūfī writings are mostly in the form of commentaries on the works of Ibn al-ʿArabī, al-Djīlī, Ibn al-Fāriḍ and others. In these commentaries he does not merely paraphrase and epitomize, but develops the thought in the tradition of the great commentators by original, if sometimes far-fetched, interpretation, which, as it is not exclusively mystical, is an important source for his religious and theological thought in general. In several of his commentaries ʿAbd al-Ghanī represents a convergence of two trends of mystical thought, the Andalusian-Maghribī trend (Abū Madyan, Ibn Mashīsh, Shushtari, Sanūsī) and the Perso-Anatolian trend (Awḥad al-Dīn Nūrī, Maḥmūd Uskudārī, Muḥammad Birgalī). He wrote also on the orders to which he belonged, as well as on the Mawlawī order. In his original writings he seems to be dominated by the concept of *waḥdat al-wudjūd*; of these original works the most important is the first volume of his great dīwān.

The *Diwān al-dawāwīn*, which contains the main body of his poetical output, comprises, as well as the first volume on mysticism (published Cairo 1302 etc.), three other volumes, all unpublished, containing eulogies of the Prophet, general eulogies and correspondence, and love-poems respectively. This by no means represents the whole of his poetical output, many of his other works also being written in verse form, and his interest in poetry is reflected in his commentary on the poems of Ibn Hāniʾ al-Andalusī. During his lifetime and after he had a great reputation as a poet (see Amīr Ḥaydar, *Le Liban* (ed. Rustum) i, 8 ff., 22 ff., and for his use of the *muwashshaḥ*, Hartmann, *Muwaššaḥ*, 6).

In his narratives of his travels (see above) it was not ʿAbd al-Ghanī's intention to present a description of topographical or architectural detail. They are rather records of his own mystical experiences; but at the same time they throw a considerable amount of light on the religious and cultural life of the age. They are important also because they served as models for later travellers, such as the Damascene Muṣṭafā al-Bakrī and the Egyptian Asʿad al-Luḳaymī. In addition, he wrote works, some of them vast and encyclopaedic, on tafsīr, ḥadīth, kalām, fiḳh, interpretation of dreams (a mine of information on the spiritualism and superstitions of his age), agriculture, the lawfulness of tobacco, and many other subjects.

Bibliography: Murādī, *Silk al-durar*, ii, 30-8; Djabartī, *ʿAdjāʾib al-Āthār*, i, 154-7; Muṣṭafā al-Bakrī, *al-Fatḥ al-tariyy fī ... al-shaykh ʿAbd al-Ghanī* (Ms. in the writer's possession); Ibn al-ʿArabī, *Fuṣūṣ al-ḥikam*, ed. ʿAfīfī (Cairo, 1946), i, 23; A. S. Khālidī, *Riḥla ilā diyār al-Shām* (Jaffa, 1946); ʿAbboud, *Ruwwād al-nahḍa al-ḥadītha* (Bairut, 1952), 34 ff.; R. A. Nicholson, *Studies in Islamic mysticism* (Cambridge, 1921) 143 ff.; L. Massignon, *La Passion de al-Hallaj*, passim. (W. A. S. KHALIDI)

ʿABD AL-ḤAKK ABŪ MUḤAMMAD [see MARĪNIUS].

ʿABD AL-ḤAḲḲ B. SAYF AL-DĪN AL-DIHLAWĪ al-Bukhārī, Abu l-Madjd, with the *takhalluṣ Ḥaḳḳī*, Indian author in Arabic and Persian, born Muḥarram 958/Jan. 1551, died 2 Rabīʿ II 1052/30 June 1642. He spent some time in Fatḥpūr, studying with Fayḍī and Mīrzā Niẓām al-Dīn Aḥmad, but fell out with them (cf. Badāʾūnī, iii, 113, 115 ff.; *al-Makātib wa l-Rasāʾil*, on marg. of *Akhbār al-Akhyār*, Delhi, 1332, 160; ʿAbd al-Ḥaḳḳ's book on the writers of Delhi, cf. below, p. 20; *Haft Iḳlīm*, s. v. Dihli). He left for the Ḥidjāz in 996 (*Adhkār-i Abrār*, Urdu transl. of Ghawthī's *Gulzār-i Abrār*, Agra 1326, 559), studying for several years with the famous scholars there (of whom he gave an account in his *Zād al-Muttaḳīn*). On his return, he taught for half a century in Delhi. He won the favour of Djahāngīr (who praises him in the *Tūzuk-i Djahāngīrī*, Aligarh 1864, 282) and Shahdjahān. ʿUbayd Allāh Khʷeshgī, *Mukhtaṣar Maʿāridj al-Wilāya*, Panjab Univ. Libr. MS. fol. 258 v., quotes a *risāla* by ʿAbd al-Ḥaḳḳ against the "ecstatic phrases" (*shaṭḥiyyāt*) of Aḥmad Kābulī (*Mudjaddid-i alf-i thānī*, d. 1034), but ultimately

the controversy was settled peacefully (Ṣiddiḳ Ḥasan Khān, *Tiḳṣār Djuyūd al-Aḥrār*, Bhopal 1298, 185). The tomb of ʿAbd al-Ḥaḳḳ is in the Ḥawḍ-i Shamsī in Delhi. An inscription on the wall of the *ḳubba* gives a sketch of his life; it is quoted fully in Ghulām ʿAlī Āzād, *Maʾāthir al-Kirām*, Agra 1328, 201; *Akhbār al-Akhyār*, 6; W. Beale, *Miftāḥ al-Tawārīkh*, Cawnpur 1867, 246; Bashīr al-Dīn Aḥmad, *Wāḳiʿāt-i Ḥukūmat-i Dihlī*, Agra 1919, iii, 305. According to the *Wāḳiʿāt*, ʿAbd al-Ḥaḳḳ's descendants in Dehli were still celebrating every year his *ʿurs* at the tomb.

In his *Taʾlīf Ḳalb al-Alīf bi-Kitābati Fihrist al-Tawālīf*, appended to his treatise on the writers and poets of Delhi (cf. the Urdu periodical *Tārīkh*, Haydarabad-Deccan, vol. i, part 3-4), ʿAbd al-Ḥaḳḳ gives a list of his forty-nine works in Arabic and Persian. The following are the most important of his works: a *Dīwān* (cf. *Ṣubḥ-i Gulshan*, Bhopal 1295, 141); *Lamaḥāt al-Tanḳīḥ*, Arabic commentary on al-Tibrīzī's *Mishkāt al-Maṣābīḥ*; *Ashiʿʿat al-Lamaʿāt*, a fuller, Persian, commentary on the *Mishkāt*, Lucknow 1277; *Akhbār al-Akhyār*, lives of saints, mostly Indian; *Zubdat al-Āthār*, biography of ʿAbd al-Ḳādir al-Djīlānī; *Miftāḥ al-Futūḥ*, Persian translation, with commentary, of al-Djīlānī's *Futūḥ al-Ghayb*; *Dhikr al-Mulūk*, a sketch of Indian history from the Ghūrids to Akbar; *Djadhb al-Ḳulūb*, a history of Medina, based mainly on al-Samhūdī; *Madāridj al-Nubuwwa*, a biography of the Prophet (Urdu transl.: *Manāhidj al-Nubuwwa*, Lucknow 1277). His main contribution is his share of the popularization of the study of Ḥadīth in India.

Bibliography: Autobiography in *Akhbār al-Akhyār* and another in the treatise on the writers of Delhi; *Ṭabaḳāt-i Akbarī* (Engl. Transl.), Calcutta 1936, 692; ʿAbd al-Ḥamīd, *Bādshāh-nāma*, i, 341; M. Ṣāliḥ, *ʿAmal-i Ṣāliḥ*, iii, 384; *Ithāf al-Nubalāʾ*, Cawnpur 1289, 303; *Tiḳṣār*, 112; *Āthār al-Ṣanādīd*, Cawnpur 1904, 65; *Cat. Peshawar Libr.*, 48, 173, 203 ff., 277; Brockelmann, ii, 549, S. i, 778, 277, 603; Storey, 194 ff., 181, 214, 427, 441; Zubaid Ahmad, *The contribution of India to Arabic literature*, index. (MOHAMMAD SHAFI)

ʿABD AL-ḤAKḲ ḤĀMID (ABDÜLHAK HÂMIT), Turkish poet, born 2 Febr. 1852. He belonged to an old family of scholars which came from Izmīr, but resided for some time in Egypt before returning to Istanbul in the second half of the 18th century. His grandfather, ʿAbd al-Ḥaḳḳ Molla, was chief court physician, and a great favourite during that later period of Maḥmūd II's reign which began in 1826 and brought renewal to the Empire. He had a great part in the opening of the new School of Medicine, wrote occasional poetry and left a diary (*Tārīkh-i Liwāʾ*) describing the Sultan's sojourn in 1828 (during the Russian war) in the barracks of Rami, supervising the training of the new army. (His two brothers were also authors). Ḥāmid's father, Khayrullāh Efendi, was one of the best historians of his day. He also wrote a journal of his visit to Paris (unpublished to this day) and was the author of the first Turkish play, *Ḥikāye-yi Ibrāhīm Pāshā*.

Ḥāmid grew up in this cultured environment; the childhood reminiscences of his mother, a Circassian slave girl, added to this intellectual background a fairy tale touch and Ḥāmid's work was to remain to the end marked by this dual influence. He began his studies in one of the newly founded state schools and continued them in Paris, where he went together with his father when he was eleven years old. Back in Istanbul, and later in Teheran, where his father was ambassador, he took private lessons, especially in Arabic and Persian. Among his tutors it was Taḥsīn Efendi who made the deepest impression on him. It was his influence that made Ḥāmid's early works (among them a narrative in verse, *Gharām*) interesting records of the first clash between Western science and philosophy and Muslim faith.

After his father's death Ḥāmid went back to Istanbul and entered the Civil Service; in 1876 he was appointed second secretary to the embassy in Paris. He had married in 1871, in Edirne, Fāṭma Khānīm, of the well-known Pirizade family. In Paris he met the ex-Prime Minister Midḥat Pāshā. Letters and works written in that period testify to the intellectual crisis he was then going through. On his return he was appointed consul in Poti (Russia), then in Golos (Greece), finally in Bombay. On his way back in 1885 his wife died; her death affected deeply Ḥāmid and his poetry. In 1885 he was appointed first secretary in London, then minister in The Hague, returning as secretary, then counsellor, to the London embassy. In 1908 Ḥāmid, then ambassador in Brussels, became a member of the Senate, and acted, during the first world war, as a deputy president. When the Senate was dissolved, he went to Vienna, returning towards the end of the war of independence. He was elected to the National Assembly in 1928. He died in 1937 and was given a national funeral.

His works before going to Europe (1873-6): *Mādjerā-yi ʿAshḳ*, *Ṣabr ü Thebāt*, *Ičli Ḳïz*, *Dukhter-i Hindu*, *Nazīfe*. Between his journey to Europe and his wife's death (1876-85): *Nesteren*, *Ṭāriḳ yahut Endülüs Fātiḥi*, *Ṣaḥrā*, *Tezer*, *Eshber*. 1885-1908: *Maḳber*, *Ölü*, *Ḥadjle*, *Bunlar o dur*, *Diwānelīklerim yahut Belde*, *Bir Sefīlenin Ḥasb-i Ḥāli*. 1908-23: *Zeyneb*—written 1887, *Baladan bir ses*, *Ilkhān*, *Liberté*, *Wālidem*, *Turkhān*, *Ilhām-i Waṭan*, *Mektuplar I, II*, *Abdullāh-i Ṣaghīr*, *Finten*—1887, *Ṭayīflar Gečidi*, *Yādigar-i Ḥarp*, *Ibn-i Mūsā*—1881, *Yabandji dostlar*, *Arziler*, *Ḳaḥbe* (*Bir Sefīlenin Ḥasb-i Ḥāli*), *Khāḳān*. *Hep weya Hic*—first collection of poems, the play *Djünūn ü ʿAshḳ* and some letters, as well as the last play, *Ḳānūnīnin Widjdān Azabi*, remained unpublished; the memoirs that have appeared in various newspapers have not come out in book form.

Ḥāmid's first drama, *Mādjerāʾyi ʿAshḳ*, is a youthful attempt which contains already the romantic elements to be developed later on by him. *Ṣabr ü Thebāt* and *Icli Ḳïz* are of local inspiration, full of comedy and rich in elements of folklore. Influenced also by his relative Aḥmed Wefīḳ Pashā [*q.v.*], it was from the school of Shināsī [*q.v.*] that his personality received its first strong stamp. Ḥāmid belongs to the second generation of innovators, the first being that of Shināsī. Too young to join the Young Turks around Nāmiḳ Kemāl [*q.v.*], he was strongly influenced by the literature of that movement. But although Ḥamīd followed Nāmiḳ Kemāl in his search of the ideal man, his real function may be seen in his achievement of a new Turkish poetry. In a short poem inserted in his play *Dukhter-i Hindu*, Ḥāmid changed the long established rhyme scheme, abandoned the conventional poetic themes and images and enlarged the horizon of his poetry by bringing it into direct contact with life. In the collections of poems *Belde* and *Ṣaḥrā*, partly written in Paris, this revolution is even deeper. In his third collection of poems *Bunlar o dur* he already appears as master of a new and better

literary form and while sometimes still hesitating, finally strikes a happy harmony between thought and language. His works reflect his joy in rediscovering nature, to which he no doubt owes the pantheistic strain of his poetry.

Nowhere, however, can Ḥāmid's personality be so clearly perceived as in the poems written on his wife's death: *Maḳber, Olü, Hadjle.* Obsession with death, already present in *G͟harām,* is here still more persistent and the problems of human destiny are treated with genuine anguish. The influence of a society which had lost the purity of its peaceful faith in Islam and looked with apprehension at the changing world, and the literary influence of Ziyā pas͟ha's two poems *Terkib-i Bend* and *Terdjiʿ-i Bend* which Ḥāmid had read in his youth with great admiration, contributed to strengthen this feeling of anguish. *Maḳber* is doubtlessly Ḥāmid's masterpiece. Fāṭma's image seems never to have been absent from his mind and it is significant that his second wife Nelly, whom he married in England, resembled greatly his dead wife. Ḥāmid's poems written in this second period show affinities of thought, if not of vision, with those of V. Hugo, especially with such pieces as *Dieu* and *La Fin de Satan.* In the poetry written after his appointment to London, there is less philosophical searching, but the inspiration is of a clearer perfection. For example, his poem "On passing through Hyde Park" is one of the best ever written in Turkish on the subject of nature and freedom. However, ʿAbd al-Ḥāmid's prohibition of the publishing of his poems in the Istanbul newspapers put an end to this third period of his literary career.

In his preface to *Duk͟hter-i Hindu* Ḥāmid exposed his preference for the romantic and exotic drama; from then onwards, in all his plays, even in plays such as *Es͟hber, Nesteren* or *Tezer* that seem by their very subject to be nearer to the French classical theatre, he remained faithful to this conception. A despair born of political reasons and of the realization that his plays would never see the stage, make these pieces overloaded with speculation, while the dramatic situation is either absent or lost under the wealth of incident. Though a play like *Finten* pretends to be a picture of English life, though the dialogues of *Rūḥlar* and *Ṭaylflar Gečidi* are dealing with the problem of man's destiny, most of the plays are historical. They deal with ancient India, Greece (*Es͟hber*), Mesopotamia (*Sardānāpāl*), Turkish history in Central Asia, history of Andalusia. *Es͟hber,* supposed to be influenced by Racine's *Alexandre* and by Corneille, is an apology of pacifism and patriotism, while *Ṭāriḳ* is the expression of Nāmiḳ Kemāl's ideology. A peculiar feature of these plays is Ḥāmid's endeavour to assign to woman her place in life. In *Zeyneb,* in *Ibn-i Mūsā,* sequel of *Ṭāriḳ* and in *Finten,* Ḥāmid appears as a follower of Shakespeare.

Ḥāmid has deeply influenced Turkish poetry. The generations both of *T͟herwet-i Fünūn* and *Fedjr-i Āti* were under the impact of Ḥāmid, and followed the creative and revolutionary lead which he had given in language and form. He not only employed new metres unknown in Turkish poetry up to his day, but also quantitative verse. He even tried a sort of blank verse. In his drama he came nearer to spoken language. As, however, his works written after 1885 were not published at the time, he had little share in the developments that took place afterwards. His real influence, starting in 1885, can be said to have stopped already in 1905.

(A. Hamdi Tanpinar)

ʿABD AL-ḤAMĪD I (Abdülhamid), Ottoman Sultan, born 5 Radjab 1137/20 March 1725, succeeded his brother Muṣṭafā 8 D͟hu l-Ḳaʿda 1187/ 21 January 1774.

ʿAbd al-Ḥamīd succeeded to the throne during a war with Russia, in which financial difficulties, rebellions in various provinces, and the weariness aroused by ill success made the cessation of hostilities an absolute necessity for Turkey. At the same time Russia also had been placed by the Pugačev revolt in a position to welcome peace. The new Sultan, however, was unwilling to end the war without some kind of victory, and the Porte accordingly refused to accept the Russian proposals for peace talks; hostilities were reopened, and the Turkish army was defeated at Kozludja. The rout spread to the headquarters at S͟humla of the Grand Vizier Muḥsin-zāde Meḥmed Pās͟hā, who was forced to sue for peace from the Russian commander Rumjancev.

The treaty by which the war was terminated, and which was dictated by the Russians, was signed on 12 Djumādā I, 1188/21 July 1774 at Kučuk Kaynardje [*q.v.*] and is known by the name of that town. By its terms the Crimea was to become an independent state; and Russia obtained the fortresses on the coast of the Sea of Azof (Azāḳ), the lands of Lesser and Greater Kabartay, the area between the rivers Dniepr and Bug, freedom of navigation in the Black Sea, and the right to pass merchant ships through the Straits. Its most dangerous feature for Turkey was the wording of some of the clauses in such a way as to lead Russia to claim the right to protect Turkish subjects belonging to the Orthodox church; in return, however, Russia recognized a somewhat vaguely stated claim by the Sultan, as *k͟halīfa,* to religious authority over all Muslims. After this treaty Austria too took advantage of the weakness of Turkey and annexed Bukovina, hitherto part of the principality of Moldavia (1775).

In 1774 war broke out also between Turkey and Persia, following a Persian invasion of Kurdistān. Ottoman forces were despatched to Bag͟hdād in 1175, with the object of putting an end to the rule of the Mamlūks, but the Porte was forced to recognize their administration, and in the following year Baṣra fell to the Persians. In 1779 it was evacuated in consequence of internal disturbances in Persia, and reoccupied by the mamlūk Sulaymān Ag͟hā, who was then granted the three pas͟halīks of al-ʿIrāḳ (1180).

The peace of Kučuk Kaynardje proved to be no more than an armistice between Turkey and Russia. Catherine II continued to aim at the annexation of the Crimea, whereas the Porte was trying to bring the principality back to its former status. For this reason the Crimea became an area of conflict and of Russian intervention under various forms; and

in addition, the clauses concerning the Straits and the Orthodox Christians in Turkey were subjects of contention between the two countries. Although it seemed at one time that war was imminent over the Crimean question, the terms relating to the Crimea in the treaty of Kučuk Kaynardje were interpreted and reaffirmed by a Convention, in which France acted as mediator, signed at Istanbul in the pavilion of Aynali-Kawak on 10 March 1779.

Nevertheless, Catherine II, after forming an alliance against Turkey with Joseph II (who had succeeded Maria Theresa on the throne of Austria), stirred up a revolt in the Crimea against the Khān Shāhīn Girāy, and on this pretext sent an army to the Crimea and annexed it to Russia. ʿAbd al-Ḥamīd I, though deeply mortified by this action, could not, being aware of the weakness of his empire, envisage going to war. When, however, the Czarina began to form far-reaching schemes for the setting up of a Greek state with her grandson Constantine Pavlovič at its head, the Porte could no longer tolerate the menacing demonstrations against Turkey provoked by her and her ally Joseph II.

In spite of the Sultan's love of peace, war was declared against Russia and Austria by the Grand Vizier Ḳodja Yūsuf Pasha (1787), when a request for the return of the Crimea was rejected, and Sweden subsequently joined in on the side of Turkey. An attack by the Turkish fleet in the direction of Kilburun was unsuccessful, and the Russians laid siege to the fortress of Očakov. The Turkish army, however, attached more importance to the Austrian campaign and after twice defeating, at Vidin and Slatin, the Austrian armies which had taken the offensive along the Danube, invaded the Banat. On the other hand, the Turkish fleet failed in its attempt to relieve Očakov, and after a long resistance the fortress fell and its population was put to the sword. ʿAbd al-Ḥamīd, whose health was already undermined by the worries of the war, died of a stroke on reading the news, 11 Radjab 1203/7 April 1789.

Although ʿAbd al-Ḥamīd I, who succeeded to the throne at an advanced age after spending most of his life in the seclusion of the palace, cannot be considered an energetic and successful sovereign, he is noted for his zeal, humanity, and benevolence. He gave wide powers, for that time, to his Grand Viziers and left them free in their conduct of affairs, and he endeavoured to strengthen the central government against rebel forces within the empire; e.g. he sent a punitive expedition under Djezāʾirli Ḥasan Pasha against Ẓāhir al-ʿUmar, who had acquired great influence in Syria, and against the rebellious Mamlūk beys in Egypt. It may be observed that whereas during his reign the Porte followed a special policy towards Caucasia by trying to civilize the Circassian tribes and to attach them to Turkey and, in order to further this object, developed Sogudjuk and Anapa, the Russians, in opposition to this policy, supported the Georgians.

The most important of the Grand Viziers of ʿAbd al-Ḥamīd I was Khalīl Ḥamīd Pasha, who was a supporter of reforms and, in order to put them into effect, tried to dethrone the old Sultan and to put the young prince Selīm (afterwards Selīm III) in his place. During the tenure of office of this enlightened Grand Vizier, who paid for his attempt with his life, the corps of Cannonneers, Bombardiers and Miners were reorganized.

The opening of the Imperial Naval Engineering School (*Muhandiskhāne-yi baḥri-yi humāyun*), for the education of trained officers, and the reopening of Ibrāhīm Muteferriḳa's [*q.v.*] printing house, which had been allowed to fall into disuse, are among the achievements of ʿAbd al-Ḥamīd I. He also founded the Beylerbeyi and Mirgūn mosques on the Bosporus, as well as a number of benefactions such as libraries, schools, soup-kitchens, and fountains.

(M. CAVID BAYSUN)

ʿABD AL-ḤAMĪD II (GHĀZĪ) (ABDÜLHAMID), 36th Ottoman sultan, fifth child of thirty of ʿAbd al-Madjīd (Abdülmecid) [*q.v.*], born Wednesday, 21 September 1842. He is traditionally represented as a reserved child, easily offended, and, in spite of his keen intelligence, not given to study. It is said that, after a stormy youth, he led a thrifty family life, which earned him the undeserved nickname 'Pinti Ḥamīd', Ḥamīd the Skinflint, taken from a comedy by Kaṣṣab. He early showed a great liking for the company of devout persons (Pertewniyāl, a distortion of Pertew-nihāl, *wālde sulṭān* of ʿAbd al-ʿAzīz) and for mystics, soothsayers, and wonder-workers (the *shaykh* ʿAbd al-Raḥmān al-Sūr of Ṣaydā, prototype of the astrologer Abu-ʾl-Hudā, who later exerted so great an influence on ʿA.).

On 1 September 1876 he succeeded his brother Murād V, who had been deposed, with the support of the Young Turks, whose leader, the celebrated Midḥat (Mithat) Pasha [*q.v.*], was a former grand vizier of Sultan ʿAbd al-ʿAzīz. The Porte was then engaged in victorious war with Milan, prince of Serbia, and Nicholas I of Montenegro. To put a stop to the intervention of the powers, ʿA., in agreement with Midḥat, initiated an international conference at Istanbul, and on the very day of its opening (23 December 1876) a *khaṭṭ-i hümāyūn* promulgated the first Constitution or *ḳānūn-i* (*kanunu*) *esāsī*, a 'fundamental Law' instituting a two-Chamber parliamentary system. This Parliament, summoned to meet on 17 March 1877, and presided over by the famous Aḥmed Wefiḳ Pasha [*q.v.*], was prorogued *sine die* on 13 February 1878 (actually for a period of thirty years).

In the course of his reign Turkey had to wage two wars, one with Russia (1877-8), the other with Greece (18 April-5 June 1897); finally the inextricable Macedonian imbroglio, in which the most varied races were bitterly engaged, led to interventions by the Concert of Europe which precipitated the Young Turk revolution. On 5 July 1908 the vice-major (*ḳol-aghasi*) Niyāzi Bey took to the mountains at Resna and seized Monastir. On the 23rd, the major (*bin-bashi*) Enwer Bey, former military attaché in Berlin, rose in revolt at Salonika. The sultan gave way, and the Constituent Assembly, which had never disappeared from the official Year-book (*sāl-nāme*), was simply revived on 24 July (which was later kept as a national holiday). After

the coup de force carried out by the reactionaries and by troops roused to fanaticism, on 13 April 1909, the 3rd army corps of Macedonia, commanded by Marshal Maḥmūd Shewket, which had for that occasion become an "investing" or "marching" army (*ḥareket ordusu*), brought back the fugitive Young Turks and the Constitution to Istanbul (24 April).

ʿAbd al-Ḥamīd was deposed by a decision (*karār-nāme*) of the two Chambers, meeting as a National Assembly on 28 April 1909, based on a *fatwa* of the same day, a document in which appeared in particular the strange imputation that he had "forbidden and burnt the books of the religious Law". The brother of ʿAbd al-Ḥamīd, Muḥammad (Meḥmet) Reshād, succeeded him as Muḥammad V.

ʿAbd al-Ḥamīd was exiled to Salonika. When the Balkan war broke out, in 1912, he was moved to the palace of Beylerbeyi (on the Bosphorus). He died there of pneumonia, on Sunday, 10 February 1918, at the age of 75, and was buried in the *turbe* of his grandfather, Maḥmūd II.

The two salient points of Abd al-Ḥamīd's political system were absolutism and Panislamism.

1) Absolutism (*istibdād*).—Although their power was unlimited, ʿAbd al-Ḥamīd's predecessors interfered relatively little in the affairs of government. They usually left it to their plenipotentiary representative, the grand vizier (*Ṣadr aʿẓam*), who was regarded as their *wekīl-i muṭlaḳ* (a term which has sometimes been translated as 'vicar absolute'). The government was "the (Sublime) Porte" of the grand vizier. ʿAbd al-Ḥamīd wished to create an instrument of domination carrying even closer personal control, and he gave great importance to "the Palace" or "the Court". In Turkish, this was termed the *Mābey(i)n*, an Arabic term which means literally "that (which is) between (the private apartments and the Porte)". It was a separate building (within the precincts of Yīldīz), and contained the offices of the chamberlains (*mābeyndji*) and of the rapporteurs or referendaries (*āmedji* or *āmedī*). Hence the power of the first secretary of the *Mābeyn* (of the sultan, in actual fact)—Taḥsīn Pasha, for instance—or of a second secretary such as ʿIzzet ʿAbed, a Syrian who was the object of public execration. The palace of Yīldīz, usually shortened to Yīldīz [*q.v.*], with its ḥarem and its administrative departments, became a sort of town with several thousand residents—a town half shrouded in secrecy, which long haunted and terrified people's imaginations, often without cause.

This system, carried on at a time when there existed a strong revolutionary ferment, was not calculated to discourage conspiracies, and it was only by miraculous good fortune that ʿAbd al-Ḥamīd escaped an Armenian bomb in 1905. This only intensified the fear and suspicion which dominated all his life. He encouraged informing and espionage, which developed into an incredibly complicated network. The name *khafiyye*, which means literally "secret (police)" finally came to include the whole range of informers and spies, from the highest social levels to the lowest. Written denunciations were known as *djurnal*, from an expression borrowed formerly from Muḥammad ʿAlī of Egypt, and which meant originally "daily administrative report".

The severity of the censorship reached a degree of ineptitude that seems incredible, but is proved by authentic documents. The censor struck out words like *waṭan*, "fatherland", because it was a conception that implied rivalry to dynasty and religion, and other words, such as liberty, explosion, bomb, regicide, murder, plot, etc.

2) Panislamism.—ʿAbd al-Ḥamīd had a deep sense of the importance of his role (which was, however, debatable) of *khalīfa*, by virtue of which he was protector of the religion of Islam (art. 3 of the Constitution of 1876). He greatly esteemed Djamāl al-dīn al-Afghānī [*q.v.*], who had held out to him the bright prospect of bringing the Shīʿites themselves back into the bosom of Sunnism. This sterile and even dangerous policy was largely based on the illusion that he could count on the loyalty of the Arabs, his spoilt children.

Strangely enough, the Turcologist Arminius Vambéry, a Hungarian Jew who was on terms of friendship with ʿAbd al-Ḥamīd, encouraged him in these tendencies. They had one useful result at least, in that they prompted ʿAbd al-Ḥamīd to build the Ḥidjāz railway to the holy places of Islam. This undertaking, which had also strategic value because of the frequent troubles in the Yaman, and of which ʿAbd al-Ḥamīd was justly proud, was paid for by collections made exclusively among Muslims, and by the revenue from the "Ḥidjāz-stamp". The railway was begun on 1 September 1900, on the 25th anniversary of the Sultan's accession. It was also the indirect cause of the Anglo-Turkish dispute over Taba and the Gulf of ʿAḳaba, in which England appeared for the first time (1906) as the official defender of Egyptian interests. The line reached Medīna in 1908.

Another manifestation of Panislamism was less successful. This was the sending to Japan of the screw training ship Ertogrul, a wooden vessel that went down within sight of the Japanese coast (25 September 1890).

The European press and caricaturists accused ʿAbd al-Ḥamīd of blind fanaticism, and branded him with the name of 'Red Sultan' because of the role attributed to him in the suppression of revolts or of bloody conflicts in Macedonia and Crete, and especially Armenia (risings in 1894 and 1895, raid on the Ottoman Bank in 1896). The least that can be said, indeed, is that he did little or nothing to prevent horrible massacres (just as he did nothing to prevent extortion). On the other hand, the atrocities had begun before his time, and did not stop after his disappearance. The Turkish population, fanaticized for these occasions, was not the only one to take part. There were also other Muslims: the Circassian immigrants from the Caucasus, and the Kurds.

It would be unjust to judge ʿAbd al-Ḥamīd, who has so often been accused of obscurantism, without giving him credit for all the institutions established during his reign.

Physically, ʿAbd al-Ḥamīd had regular features, an aquiline nose and lightcoloured eyes, but as he grew older his appearance became that of a bent and hunted old man. He had a loud, deep voice, and knew how to be agreeable. In his dress he was quiet, very simple, and distinguished. He was a man of contrasts. Very approachable, unlike most of the Ottoman sultans, he was given to sudden fits of anger, which were, however, quickly suppressed. Authoritarian to the point of despotism, very intelligent, and possessed of an excellent memory, he had an exceptional capacity for work, and liked to deal with all affairs himself—a paralysing trait in the head of a State.

The numerous articles in periodicals are not given. (J. DENY)

ʿABD AL-ḤAMĪD B. YAḤYĀ B. SAʿD, the founder of Arabic epistolary style, *mawlā* of the Ḳurashī clan of ʿĀmir b. Luʾayy. He was probably a native of al-Anbār, and is said to have been a travelling pedagogue before he was employed in the Umayyad secretariat under Hishām's chief secretary, the *mawlā* Sālim; he was then attached to Marwān b. Muḥammad, whom he continued to serve as chief secretary after Marwān's accession to the Caliphate. He refused to desert his master in misfortune and is generally said to have shared his fate at Būṣīr on 26 Dhu 'l-Ḥidjdja 132/5 August 750. According to another account he took refuge in the house of his disciple Ibn al-Muḳaffaʿ, but was traced and seized. His descendants continued to live in Egypt under the name of Banu 'l-Muhādjir and furnished secretaries to Aḥmad b. Ṭūlūn.

The surviving compositions of ʿAbd al-Ḥamīd, comprising six formal *rasāʾil* and a few chancery pieces and private letters, exhibit a remarkable divergence of styles. His most elaborate *risāla*, a long epistle addressed to Marwān's son and heir ʿAbd Allāh, with advice on personal conduct, ceremonial, and the conduct of war, is composed in a language and style based on the idioms, rhythms, and vivid metaphors of Arabic poetry and rhetoric, but elaborated by the addition of often lengthy sequences of qualifying clauses. Since the same style appears in most of his other official *rasāʾil*, it can only be conjectured (in the absence of earlier secretarial documents) that this feature—unusual in both earlier and later Arabic style—is to be traced to Greek influences in the Umayyad secretariat.

His most famous *risāla*, on the other hand, that addressed to the Secretaries (*kuttāb*), setting forth the dignity of their office and their responsabilities, is fluent, simple and straightforward. A comparison of its contents with the writings of Ibn al-Muḳaffaʿ and later quotations from Persian works shows clearly that it is inspired by the tradition of the Sāsānid secretariat, and largely reproduces with an Islamic gloss the maxims of the Iranian *dibhērs* (see A. Christensen, *L'Iran sous les Sassanides*², Copenhagen, 1944, 132 ff.). Also of Persian inspiration, and quite distinct from the traditional Arabic presentation of the subject, is his *risāla* describing the incidents of a hunt, evidently written for the entertainment of the court. A large proportion of the maxims addressed to the prince in the first *risāla* mentioned above are also derived from Sāsānid court ceremonial and usages, although the military instructions are more probably influenced by Greek tactics, either through literary channels or from actual experience in the Byzantine wars.

It would appear, therefore, that both views expressed by later Arabic critics in regard to ʿAbd al-Ḥamīd are justified, in spite of their apparent incompatibility. On the one hand is the statement (e.g. al-ʿAskarī, *Dīwān al-Maʿānī*, ii, 89) that "ʿAbd al-Ḥamīd extracted from the Persian tongue the modes of secretarial composition which he illustrated, and transposed them into the Arabic tongue". On the other hand there is the description of him (e.g. Ibn ʿAbd Rabbih, *al-ʿIḳd al-Farīd*, ii, 169 (1321) = iv, 165 (1944/1363) as having been "the first to open up the buds of rhetoric, to smooth out its ways, and to loosen poetry from its bonds". He was also a master of pithy epigram, several examples of which are recorded in the *adab* works.

(H. A. R. GIBB)

ʿABD AL-ḤAMĪD LĀHAWRĪ, Indo-Persian historian, died 1065/1654-5, author of the *Pādshāh-nāma*, an official history of the Indian sultan Shāh Djahān. The work is composed of three parts, each containing the history of one decade. Only the first two parts, comprising the years 1037-1057, were written by ʿAbd al-Ḥamīd; the last part was arranged by his pupil Muḥammad Wārith. Parts I and II were published in the *Bibliotheca Indica*, 1866-72.

Bibliography: Elliot and Dowson, *History of India*, vii, 3 ff.; Storey, ii, fasc. 3, 574-7.

ʿABD AL-ḤAYY, ABU 'L-ḤASANĀT MUḤAMMAD, the son of Mawlawī ʿAbd al-Ḥalīm, an Indian theologian of the Ḥanafī school, associated with the famous seminary of Farangī Maḥall, Lucknow, was born at Bānda in Bundelkhand in 1264/1848. He studied with his father and another scholar till the age of seventeen, when he began to assist his father as a teacher. He twice made the pilgrimage to Mecca, where he met the Muftī Aḥmad b. Zaynī Dahlān [*q.v.*], from whom he obtained *idjāza* for a large number of works. He wrote glosses and annotations on a large number of text-books current in the Indian madrasas, besides numerous works chiefly on religious and legal topics, mentioned by himself in his *al-Nāfiʿ al-Kabīr* and in his introduction to his edition of al-Shaybānī's recension of the *Muwaṭṭaʾ* (Delhi 1297, 27-9). As a work of general interest and utility, special mention is due to his *al-Fawāʾid al-Bahiyya fī Tarādjim al-Ḥanafiyya* (Delhi 1293; Cairo 1324), which is an abridgement, with additional biographical notices, of Maḥmūd b. Sulaymān al-Kaffawī's *Katāʾib Aʿlām al-Akhyār*. He was a distinguished and influential teacher, whose lectures were attended by a large number of students, who achieved prominence as teachers and scholars in their own turn. One of his pupils, Mawlawī Ḥafīẓ Allāh wrote his biography under the title of *Kanz al-Barakāt*. He died at Lucknow in 1304/1886.

Bibliography: Raḥmān ʿAlī, *Tadhkirat ʿUlamāʾ Hind* (in Persian, Lucknow 1894 and 1914), 114-7; Zubaid Aḥmad, *The Contribution of India to Arabic Literature* (Jullundur 1946), 114, 186; Sarkis, *Dictionnaire de bibliographie Arabe* (Cairo 1928), col. 1595-7; Brockelmann, S II, 857-78 (where works nos. 18 and 19 are wrongly ascribed to the subject of this article).

(SH. INAYATULLAH)

ʿABD AL-ḲĀDIR B. GHAYBĪ AL-ḤĀFIẒ AL-MARĀGHĪ, the greatest of the Persian writers on music. Born at Marāgha, about the middle of the 8th/14th century, he had become one of the minstrels of al-Ḥusayn, the Djalāʾirid Sultan of ʿIrāḳ, about 781/1379. Under the next Sultan, Aḥmad, he was appointed the chief court minstrel, a post which he held until Tīmūr captured Baghdād in 795/1393, when he was transported to Samarḳand, the capital of the conqueror. In 801/1399 we find him at Tabrīz in the service of Tīmūr's wayward son Mīrānshāh, for whose erratic conduct his "boon companions" were blamed. Tīmūr acted swiftly with the sword, but ʿAbd al-Ḳādir, being forewarned, escaped to Sultan Aḥmad at Baghdād, although he once more fell into Tīmūr's hands when the latter re-entered Baghdād in 803/1401. Taken back to Samarḳand, he became one of the four brilliant men who shed lustre on the court of Shāhrukh. In 824/1421, having written a music treatise for the Turkish Sultan Murād II, he set out for the Ottoman court to present it in person in 826/1423. Later he returned to Samarḳand, dying at Harāt in 838/March 1435.

Of the fame of ʿAbd al-Ḳādir in his day, and since, there can be little doubt. Muʿīn al-Dīn-i Isfizārī, the author of the *Rawḍat al-Djannāt*, eulogizes him for his threefold talents as musician, poet, and painter, but it was more especially for his skill in music that he was called "the glory of the past age". In addition to being a deft performer on the lute (*ʿūdī*) and a prolific composer (*taṣnīfī*), he excelled as a music theorist. His most important treatise on music is the *Djāmiʿ al-Alḥān* ("Encyclopaedia of Music"), autographs of which are preserved at the Bodleian Library and the Nūru ʿOthmāniyya Library, Istanbul. The first of these, written in 808/1405 for his son Nūr al-Dīn ʿAbd al-Raḥmān, was revised by the author in 816/1413. The second, dated 818/1415, carries a dedication to Sultan Shāhrukh. Several abridgments of this work by the author also exist, notably a shorter one, an autograph, without title, dated 821/1421, which is at the Bodleian. It was written, evidently, for Bāysunghur. A longer version in the same library, called the *Maḳāṣid al-Alḥān* ("Purports of Music"), written about 834-7/1421-3, was dedicated to the Turkish Sultan Murād II,

according to the Leiden copy. A third treatise on music, the *Kanz al-Tuḥaf* ("Treasury of Music") which contained the author's notated compositions, has not survived. His last work, the *S͟harḥ al-Adwār* ("Commentary on the [*Kitāb al-*] *Adwār*" [of Ṣafī al-Dīn]), is to be found in the Nūru ʿOt͟hmāniyya Library. At Leiden there is a short *Kitāb al-Adwār* in Turkish bearing his name. These works are of great importance in the history of Persian, Arabian, and Turkish music. Although only a few of his musical compositions have survived in the *D͟jāmiʿ*, many have been handed down *viva voce* in a form known in Turkish as the *kʿār*.

A son, ʿAbd al-ʿAzīz, who is thought to have settled at the Ottoman court after 1435, was the author of a music treatise, the *Naḳāwāt al-Adwār* ("The Select of the Modes"), dedicated to the Turkish Sultan Muḥammad II (d. 886/1481), whilst a grandson, Maḥmūd, who lived under Bāyazīd II (d. 918/1512), compiled a *Maḳāṣid al-Adwār* ("Purports of the Modes"). both mss. being at the Nūru ʿOt͟hmāniyya Library.

FARMER)

ʿABD AL-ḲĀDIR B. MUḤYI AL-DĪN AL-ḤASANĪ, the Amīr Abd el-Kader, descended from a family which originated in the Rīf and had settled among the Hās͟him, was born in 1223/1808 at the guetna of the Wadi al-Ḥammām, some twenty kilometres west of Mascara. Studies at Arzew, then at Oran, marriage, and a pilgrimage to Mecca in 1244/1828-9 were the most outstanding events in a youth that was devoted to the reading of sacred books and to physical exercises, under the direction of his father, who, by his piety and charity, had acquired a great influence.

The indecision shown by the French after the capture of Algiers (5 July 1830) in the organization of their conquest favoured Muḥyī al-Dīn in Orania, and he took the initiative in the strunggle against the Christians, but soon yielded first place to his son, who was proclaimed sultan of the Arabs on 5 Rad͟jab 1248/22 November 1832 by the Hās͟him, the Banū ʿĀmir, and the G͟harāba. In spite of the opposition of certain elements of the population and the failure of his supporters before Oran and Mostaganem (1833), ʿAbd al-Ḳādir's action prevented the pacification of the country. This state of affairs prompted General Desmichels to treat with his adversary (4 and 26 February 1834). Thus officially recognized the new Amīr of the Faithful extended his authority to the gates of Algiers (April 1835), but his claims provoked the renewal of hostilities. First Clauzel and then Bugeaud avenged the defeat on the Macta (28 June) by burning Mascara (6 December), occupying Tlemcen (13 January 1836), and winning a great victory on the Wadi Sikkak (6 July); but these successes were fruitless. Three times abandoned by his troops, ʿAbd al-Ḳādir immediately regrouped them. The position of the French remained precarious, with their towns invested, their columns ceaselessly harassed, and their allies receiving heavy punishment. The desire to be secured against attacks in the west while an expedition against Constantine was being carried out led Louis-Philippe's government to negotiate. By the signature of the treaty of the Tafna (30 May 1837) Bugeaud repeated, in a worse form, the mistake made by Desmichels. Though the French kept Oran, Arzew, Mostaganem, Blida, and Kolea, the Amīr obtained the whole province of Oran, part of that of Algiers, as well as the whole *baylīk* of Titteri.

From June 1837 to November 1839 ʿAbd al-Ḳādir used the cessation of hostilities to organize the territories that had been handed over to him. After establishing his capital at Tagdempt, he travelled about his new state, imposing chiefs, by force if necessary, on all the tribes between Morocco in the west and Kabylia in the east, and gaining recognition for his domination as far as the Sahara.

In the course of these journeys ʿAbd al-Ḳādir, taking advantage of the faulty wording of the Treaty of the Tafna, had gone beyond the boundaries that had been assigned to him; Marshal Valée therefore submitted to him a draft of an additional treaty which accurately indicated, and reduced, the territories over which France recognized his rights, but he refused to ratify it. The 'Iron Gates' expedition, in the course of which the Duke of Orleans linked Constantine to Algiers, provided the Amīr with a pretext for restarting the war. On 20 November 1839 his forces invaded the Mitīd͟ja, sacking farms and massacring settlers. Algiers was threatened. The occupation of Miliana, then of Medea (May-June 1840) by the French did not ease their difficulties, for the supplying of their garrisons made necessary the movement of convoys which were exposed to continual attack.

The nomination of Bugeaud as governor-general (29 December 1840) changed the course of events; he realized that Algeria would never be pacified until the power of ʿAbd al-Ḳādir was crushed and until the tactics of 'active columns' took the place of 'limited occupation'. Between 1841 and 1843 he seized the towns of Tagdempt, Mascara, Boghar, Taza, Saida, Tlemcen, Sebdou and Nedroma, and sent out expeditions with instructions to capture his enemy and destroy his supporters. The capture of the *smala* (16 May 1843), the travelling capital of the Amīr, was a serious blow to him. The tribes submitted to France. Hunted and weakened, ʿAbd al-Ḳādir took refuge at the end of the year on the borders of Morocco, to obtain shelter, to recruit soldiers, and to compromise French relations with that empire.

His hopes were not deceived. The occupation of Lalla Mag͟hnia by la Moricière stirred up a conflict, but the bombarding of Tangier and Mogador (6 and 15 August 1844) and the victory of the Isly (14 August) compelled the Sultan Mawlāy ʿAbd al-Raḥmān to refuse his guest any support and to declare him an outlaw. ʿAbd al-Ḳādir appeared again in Algeria in 1846 to take the lead in the insurrections which were breaking out on all sides. His first successes (Sidi-Brahim, 23 September) seemed to promise final triumph for his cause. No less than eighteen columns were needed to stem the revolt and to throw the Amīr back into Morocco

(July 1846), where he was now the object of the hostility of the Sultan, who feared in him a dangerous rival. Attacked by the tribes, and pursued by the Sharifian troops, ʿAbd al-Ķādir crossed the Algerian frontier again. Finding all lines of escape towards the south closed to him, he gave himself up to the Duc d'Aumale on 23 December 1847.

In spite of the promise to him that he would be transported to Acre or to Alexandria, ʿAbd al-Ķādir was, with his suite, interned successively at Toulon, at Pau, and then at Amboise. Released by the Prince-President Louis-Napoleon on 16 October 1852, the former leader of Algeria in revolt now received a pension from the France of which he had become the loyal subject, and went to live in retirement first at Brusa (1853) and then at Damascus (1855). It was in this town that he proved in a very special way the sincerity of his loyalty, by delivering the French consul and saving several thousand persons when the Druses tried to massacre the Christian population (July 1860). He died there in the night of 25 to 26 May 1883, having passed his time during his exile in meditation, the practice of his faith, and charity.

ʿABD AL-ĶĀDIR BADĀ'ŪNĪ [see BADĀ'ŪNĪ].

ʿABD AL-ĶĀDIR B. ʿUMAR AL-BAGHDĀDĪ, a well-known philologist, born in Baghdad in 1030/1621 and died in Cairo in 1093/1682. His early education began in Baghdād, which from 941/1534 had been the scene of a fierce struggle between the Ṣafawids and the ʿUthmānlis. When in 1048/1638 it was retaken by the Turks, under the personal direction of Murād IV, ʿAbd al-Ķādir left for Damascus. He had by that time acquired a thorough acquaintance with Arabic, Persian and Turkish. He studied Arabic in Damascus with Muḥ. b. Kamāl al-Dīn al-Ḥusaynī, the *naķīb* of Syria, and with Muḥ. b. Yaḥyā al-Farā'iḍī. In 1050/1640 he went to Cairo and studied, in al-Azhar, the religious and foreign sciences, particulary with al-Khafādjī and Yāsīn al-Ḥimṣī. Due to his extensive reading, even al-Khafādjī used to consult him about difficult questions. On the death of al-Khafādjī in 1069/1659, ʿAbd al-Ķādir acquired the greater part of his shaykh's library, and developed it further. It is said to have contained a thousand *dīwāns* of the pure Arabs (*al-ʿArab al-ʿĀriba*), enriched by various scholars with their scholia. His library was unique for those times, cf. *Khizāna*, i, 2. In Dhu 'l-Ķaʿda 1077 he visited Istanbul, but returned to Cairo after less than four months, in 1078. In the same year, he made the acquaintance of Ibrāhīm Pāsha Katkhudā, governor of Egypt, who treated him with great respect and made him his associate and boon-companion. Some years later, when Katkhudā was deposed from the governorship and returned home through Syria (reaching Damascus in 1085), ʿAbd al-Ķādir accompanied him and sojourned in Adrianople. He made the acquaintance of the learned grand-vizier of Turkey, Aḥmad Pāsha al-Fāḍil Köprülü-zāde, and dedicated to him his masterly gloss on Ibn Hishām's *Sharḥ Bānat Suʿād*. Al-Muḥibbī, son of an old friend of ʿAbd al-Ķādir, who saw him in Adrianople, records that he enjoyed, in this period, the highest regard and respect of the important personages of Turkey. But after a while he was attacked by a disease, and as a cure could not be affected by the physicians, he left for Cairo in disgust, though he came back later. This time he caught a disease of the eye and almost lost his sight. He returned to Cairo and died there shortly after.

He knew by heart the *Maķāmāt* of al-Ḥarīrī, many Arabic *dīwāns* and numerous Persian and Turkish verses. He had a fine critical sense and a profound knowledge of Arabic philology, Arabic poetry, the history of the Arabs and Persians, Arabic proverbs and anecdotes.

He wrote a number of useful books. Among these are: 1) The *Khizānat al-Adab wa Lubb Lubāb Lisān al-ʿArab* (Cairo, 1299/1882, 1347/1928-9 [publication stopped in 1353 after *shāhid* 331]), a commentary on the 957 *shawāhid* quoted by al-Raḍī al-Astarabādī (d. 686/1287) in his *Sharḥ* on Ibn al-Ḥādjib's *Kāfiya*. It was begun in Cairo in 1073/1663 and finished there in 1079/1668 (after a brief interruption due to his visit to Istanbul) and dedicated to Muḥammad IV (1058-99/1648-87). It seems originally to have been divided into eight volumes (see al-Muḥibbī). 2) A commentary on the *shawāhid* cited in al-Raḍī's *Sharḥ* of Ibn Ḥādjib's *Shāfiya*. To this he appended a *Sharḥ* of the *shawāhid* of the *Sharḥ* of al-Djārabardī on the *Shāfiya*. 3) Gloss on Ibn Hishām's *Sharḥ Bānat Suʿād* (MS in Rāmpur I. 583). 4) *Sharḥ al-Maķṣūrat al-Duraydiyya*. 5) *Lughat-i Shāh-nāma*, edited by C. Salemann, St. Petersburg 1895. 6) *Sharḥ al-Tuḥfa al-Shāhidiyya bi 'l-Lugha al-ʿArabiyya*. For these and other works and for their existing MSS. see Brockelmann, S ii, 397, and the preface to the *Khizāna*, ed. of 1347.

Bibliography: Abū ʿAlawī Muḥ. b. Abī Bakr b. Aḥmad Djamāl al-Dīn al-Shillī al-Ḥaḍramī, *ʿIķd al-Djawāhir* (Rāmpur I, 641, No. 173, p. 445); al-Muḥibbī, *Khulāṣat al-Athar*, ii, 451-4; I. Guidi, *Sui poeti citati nell'opera Khizānat al-adab*, in the *Atti Acad. Lincei*, 1887; ʿAbd al-ʿAzīz Maymanī, *Iķlīd al-Khizāna* (index of titles of works occuring in the *Khizānat al-Adab*), Lahore 1927; list of the *shawāhid*, arranged alphabetically, according to initial letters (also of ʿAynī) compiled after 1299 A.H., (my MS. acquired at Mecca); Sāmī Bey, *Ķāmūs al-Aʿlām*, iv, 3083; Brockelmann, II, 286, S II, 397. (MOHAMMAD SHAFI)

ʿABD AL-ĶĀDIR DIHLAWĪ, Indian theologian, the third son of Shāh Walī Allāh Dihlawī [*q.v.*], born at Dilhi (Dehlī) in 1167/1753-4. He is chiefly remembered for his Urdu translation of the Ķurʾān, accompanied by explanatory notes. Its title *Mūḍiḥ-i Ķur'ān* ("Interpretation of the Ķur'an")

is the chronogram for 1205/1790-1, the date of the completion of the work. It was published at Houghly in 1245/1829; other editions, Lucknow 1263/1847 and Bombay 1270/1853-4. Since then, it has been repeatedly lithographed interlineally along with the Arabic text. It is generally regarded as more faithful than the one prepared by his brother Shāh Rafīʿ al-Dīn. He died in 1228/1813.

(SH. INAYATULLAH)

ʿABD AL-ḲĀDIR AL-DJĪLĀNĪ (or AL-DJĪLĪ), MUḤYĪ AL-DĪN ABŪ MUḤ. B. ABĪ ṢĀLIḤ DJENGĪ DŌST, Ḥanbalite theologian, preacher and Ṣūfī, who gave his name to the order of the Ḳādiriyya [*q.v.*]; b. 470/1077-8, d. 561/1166. The authors of the monographs about him considered him to be the greatest saint of Islam and their accounts of his life and activity were written out of edifying and missionary, rather than historical interest. Their writings have, therefore, little to contribute to a historical account of his life and only a small proportion of their data can be considered reliable. Apart from Abu 'l-Maḥāsin (*al-Nudjūm al-Zāhira*, ed. Juynboll, i, 698), who names as the birth-place of ʿAbd al-Ḳādir Djīl, a village between Baghdad and Wāsiṭ, all authorities are unanimous in stating that he was a Persian from Nayf (Nīf) in Djīlān, south of the Caspian Sea. The Persian name of his father not only supports this statement, but at the same time contradicts the common assertion that he was descended in the paternal line directly from al-Ḥasan, the grandson of the Prophet. Baghdād, where he came to study at the age of eighteen, remained the scene of his activities up to his death.

Apart from numerous other teachers, he studied philology under al-Tibrīzī (d. 502/1109), Ḥanbalite law under Abu 'l-Wafāʾ b. al-ʿAḳīl, who had come over from the Muʿtazila to the Ḥanbalite ***madhhab*** (d. 513/1121), and under the ḳāḍī Abū Saʿd al-Mubārak al-Mukharrimī, ***ḥadīth*** under Abū Muḥ. Djaʿfar al-Sarrādj, author of the ***Maṣāriʿ al-ʿUshshāḳ*** (d. 500/1106). It was Abu 'l-Khayr Ḥammād al-Dabbās (d. 523/1131) who introduced him to ṣūfism. This "syrup (*dibs*)-monger", who apparently never wrote any book, seems to have been in his time a highly appreciated master of ṣūfism, whose ascetic piety and the strict discipline which he exercised over his novices are celebrated also by Ibn al-Athīr (x, 472). The ***khirḳa***, the ṣūfī robe, was bestowed upon him, as the sign of the end of his noviciate, by al-Mukharrimī. He was fifty years old when he first appeared (521/1127) in public as a preacher. His fame as preacher and teacher seems to have spread quickly. Six years after his first appearance, the school of his old teacher al-Mukharrimī was given into his charge and was enlarged with financial aid from the rich and free labour from the poor. Here he was active as ***muftī***, teacher of Ḳurʾān-exegesis, ***ḥadīth*** and ***fiḳh***, and especially as a far-famed preacher. His reputation attracted numerous pupils from all parts of the Islamic world, and his persuasive discourses are said to have converted to Islam many Jews and Christians. The financial support which he received from his admirers enabled him, by making him independent, to exercise criticism that was heeded even at the court of the caliph, and to help the poor. His school was continued, with the help of pious endowments, by ʿAbd al-Wahhāb, one of his numerous sons, and by his descendants [see ḲĀDIRIYYA].

ʿAbd al-Ḳādir lived at a time when ṣūfism was triumphant and expanding. In the century preceding him a conflict, that had existed long before, assumed an acute form and became the concern of every individual. The consciousness of the individual as well as the whole of society was torn by the breach between secularism, religiously indifferent or religious only in a conventional way, on the one hand, and an intellectualist religion, at odds over theological doctrine, on the other. Innumerable are the complaints in literary works that express despair in face of the vanity of the "world", but also the emptiness of the legalistic religion, "dead knowledge handed down by dead people" (Abū Yazīd al-Bisṭāmī). In such a situation ṣūfism, as the embodiment of emotional religion, became in the generations preceding ʿAbd al-Ḳādir, a wide-spread movement. The historical process pushed one problem into the foreground: how to reconcile the ascetic and mystic elements with religious law. Ibn ʿAḳīl [*q.v.*], ʿAbd al-Ḳādir's teacher, met ṣūfism, as befitted the zealous Ḥanbalite convert, with a definite no. The same attitude was later taken again and again by strict Ḥanbalites. This was not, however, the only possible way for them. Al-Anṣārī al-Harawī [*q.v.*] (d. 481/1088), who conducted disputations in the strictest accordance with the school of Aḥmad b. Ḥanbal (which he extolled with the motto ***madhhab Aḥmad aḥmad madhhab***), wrote ṣūfī books appealing to the emotions, and Ibn al-Djawzī [*q.v.*], who made violent attacks on the orgiastic piety of the ṣūfī meetings, himself held, according to the testimony of Ibn Djubayr, meetings that are paradigmatic for ṣūfī cult practice.

This is the period in which ʿAbd al-Ḳādir was active. He appears as a teacher of theology in his ***al-Ghunya li-Ṭālibī Ṭarīḳ al-Ḥaḳḳ*** (Cairo 1304). Starting with an exposition of the ethical and social duties of a Sunnī Muslim, it sets forth in the form of a Ḥanbalite handbook the knowledge necessary for the believer, including a short exposé of the seventy-three sects, and ends with an account of the particular way of ṣūfism. Extreme Ḥanbalites have criticised the special duties taken upon themselves by the ṣūfis. According to Ibn Taymiyya, the particular litanies for certain days, taken over in the ***Ghunya*** from Makkī's ***Ḳūt al-Ḳulūb***, are reprehensible if they assume the character of a legal duty. Conflicts with the religious law, however, such as Ibn al-Djawzī, in his ***Talbīs Iblīs***, finds among contemporary ṣūfīs, do not occur in the writings of ʿAbd al-Ḳādir. The unquestioning submission to the message of Muḥammad, as it is set forth in the Ḳurʾān and the ***sunna***, excludes on the part of the ṣūfī any claim to inspired revelation. The fulfilment of works of supererogation assumes the prior fulfilment of the demands of divine law. Ecstatic practices, though not forbidden, are allowed only with certain restrictions. Ascetism is limited by the duties towards family and society. The perfect ṣūfī lives in his divine Lord, has a knowledge of the mystery of God, and yet this saint, even if he reaches the highest rank, that of a ***badal*** or a ***ghawth***, cannot reach the grade of the prophets, not to speak of surpassing it, as some ṣūfīs were teaching. In the personality of ʿAbd al-Ḳādir the ṣūfī is not at variance with the Ḥanbalite.

This appears also in his sermons contained in the

collections *al-Fatḥ al-Rabbānī* (62 sermons; Cairo 1302) and *Futūḥ al-Ghayb* (78 sermons; on the margin of al-Shaṭṭanawfī) ʿAbd al-Ḳādir often directs the attention of his audience to the perfect saint. Yet both the contents and the style show that the sermons were not addressed to exclusive ṣūfī circles. The plain manner, avoiding ṣūfī terminology, and the often very simple moral admonishment suggest that they were delivered before a large audience. Before men, who experience the power of fate as a permanent threat, he sets the ideal figure of man: the saint, who has overcome his accidental self and reached his essential being, conquering the fear of fate and death, because he participates in Him who orders fate and death. Ṣūfism as taught by the Ḥanbalite ʿAbd al-Ḳādir consists in fighting, in a *djihād* greater than the holy war fought with weapons, against self-will; in thus conquering the hidden *shirk*, i.e. the idolatry of self and, in general, of creaturely things; in recognizing in all good and evil the will of God and living, in submission to His will, according to His law.

Al-Shaṭṭanawfī's work on ʿAbd al-Ḳādir, *Bahdjat al-Asrār*, from which several other writers derived their information, was written just over a hundred years after ʿAbd al-Ḳādir's death. His account, rejected as untrustworthy already by al-Dhahabī (*JRAS*, 1907, 267 ff.), presents him as the supreme saint. He is not described according to the ideal of the saint conceived by ʿAbd al-Ḳādir himself. He is not a man who serves as a symbol for cosmic resignation, whose example can be followed by resigning this and the next world, by accepting in both of them the lot given by God. The figure of ʿAbd al-Ḳādir as a saint, as it is drawn by al-Shaṭṭanawfī, is the outcome of a piety which relinquished the hope of being able to put the ideal into practice.

According to the legend, ʿAbd al-Ḳādir himself, by the sentence which remained closely associated with his name: "My foot is on the neck of every saint of God", laid claim to the highest rank and obtained the consent of all the saints of the epoch. A poem ascribed to him, *al-Ḳaṣīda al-Ghawthiyya*, speaks, in a style that is very different from that of his authentic writings, of his mystery that has the power to extinguish fire, raise the dead, crush mountains, dry up seas, and of the exaltedness of his position. In the ʿAbd al-Ḳādir of legend, the inconceivable, incomprehensible majesty of God has become manifest. From his earliest childhood, when he marked the beginning of the fast by refusing the breast of his mother, his life is a chain of miracles. His appearance, his knowledge and his power are all miraculous. He punishes distant sinners and assists the oppressed in a miraculous manner, walks upon water and moves through air. Nothing is impossible for him. Angels and *djinns*, "people of the hidden world", and even Muḥammad himself, appear at his meeting and express their appreciation. When Ibn al-Djawzī recommends his hearers to confine themselves to the study of the religious sources and the literature dealing with them, but to read also edifying books, he does so because he realizes the danger of legalistic intellectualism. The sober Ḥanbalite, who "fought with passion against passion", had, however, in mind the biographies of the pious and exemplary people of the past. The literature about ʿAbd al-Ḳādir does not describe a man who can be an example to other men. The subject of their description is the concrete presence of the Divine with its inconceivable and miraculous quality. In a situation in which it seemed that the claims of religion could not be complied with, the saint was experienced as the presentiality of that which was unattainable to human effort. The saint does not make demands, but bestows grace for men who worship the inconceivable. In this capacity, ʿAbd al-Ḳādir became one of the best known mediators in Islam. His tomb, over which sultan Sulaymān had a beautiful *turba* built in 941/1535, has remained to the present day one of the most frequented sanctuaries of Islam in Baghdād.

Bibliography: The collection of legends by al-Shaṭṭanawfī was used among others by Muḥ. b. Yaḥyā al-Tādafī, *Ḳalāʾid al-Djawāhir*, Cairo 1331. Other works by ʿAbd al-Ḳādir and on him, Brockelmann, I, 560, S I, 777. Carra de Vaux, *Gazali*, Paris 1902 (European bibliography); D. S. Margoliouth, *Contributions to the biography of ʿAbd al-Ḳādir* (after al-Dhahabī), *JRAS*, 1907, 267-310; W. Braune, *Die Futūh al-Ġaib des ʿAbd al-Qādir*, Berlin 1933; G. W. J. Drewes and Poerbatjaraka, *De mirakelen van Abdoelkadir Djaelani*, Bandoeng 1938; *Futūḥ al-Ghayb*, English transl. by Aftab ud-Din Ahmad (with uncritical introduction), Lahore, n. d. (W. BRAUNE)

ʿABD AL-ḲĀDIR B. ʿALĪ B. YŪSUF AL-**FĀSĪ**, the most famous representative of the Moroccan family of the Fāsiyyūn, b. in al-Ḳaṣr al-Kabīr 1077/1599, d. 1091/1680. He was the head of the *zāwiya* of the Shādhiliyya in al-Ḳaṣr al-Kabīr. He wrote a *fahrasa* and some books on *ḥadīth*, but he is best known as one of the main representatives of Moroccan ṣūfism at the beginning of the 17th century. His descendants form today a very numerous and important branch of the religious and scholarly aristocracy of Fez (the inhabitants of the town being called, in order to avoid a confusion with the family of the Fāsiyyūn, *ahl Fās*).

Bibliography: E. Lévi-Provençal, *Hist.Chorfa*, 264-5 (with references). (E. LÉVI-PROVENÇAL)

ʿABD AL-ḲĀDIR AL-ḲURASHĪ, MUḤYĪ AL-DĪN ʿABD AL-ḲĀDIR B. MUḤAMMAD B. MUḤAMMAD B. NAṢR ALLĀH B. SĀLIM B. ABĪ ʾL-WAFĀʾ, Egyptian professor of Ḥanafite jurisprudence and biographer, born Shaʿbān 696/May-June 1297, died 7 Rabīʿ I 775/27 August 1373.

He is best known for his collection of alphabetically arranged brief biographies of Ḥanafites, *al-Djawāhir al-Muḍiyya fī Ṭabaḳāt al-Ḥanafiyya* (Ḥaydarābād 1332/1913-4), a valuable reference work, generally considered to be the first to deal with its particular subject. Written in a country in which the Ḥanafite school was weakly represented, and in a period just preceding its renaissance, the work has little firsthand information but preserves much material, especially from Persian local histories.

In addition, ʿAbd al-Ḳādir wrote a biography of Abū Ḥanīfa (*al-Bustān fī Manāḳib Imāminā al-Nuʿmān*, used in *Djaw*. i, p. 26 ff.) and a collection of biographies of persons who died between 696/1297 and 760/1359. His other publications (most complete lists in Ibn Ḳutlūbughā ed. Flügel, p. 28, and Ibn Ṭūlūn) belong to the ordinary run of juridical textbooks, commentaries, and indexes.

Bibliography: Brockelmann, II, 96 f., S II, 89. Additional biographies in Ibn Ḥadjar, *Inbāʾ*, *anno* 775; Ibn Ṭūlūn, *Ghuraf* (ms. Shelud ʿAlī 1924, fols. 141b-142a); Ibn al-ʿImād, *Shadharāt*, vi, 238. References to his life and activities in *Djaw*., for instance: i, 21, 93 f., 292, 304, 323, 346, 353, 367; ii, 121, 127, 187, 204, 229 f., 428, 431 f., 440, 444, 445 f. (F. ROSENTHAL)

ʿABD AL-KARĪM BUKHĀRĪ, a Persian historian, wrote in 1233/1818 a short summary of the geographical relations of Central Asiatic countries (Afghānistān, Bukhārā, Khīwā, Khoḳand, Tibet and Kashmīr), and of historical events in those countries from 1160 (accession of Aḥmad Shāh Durrānī) down to his own times. ʿAbd al-Karīm had already left his native country in 1222/1807-8 and accompanied an embassy to Constantinople; he remained there till his death, which took place after 1246/1830, and wrote his book for the master of ceremonies ʿĀrif Bey. The only manuscript was obtained by Ch. Schefer from ʿĀrif Bey's estate and published in the *PELOV* (the text was printed in Būlāḳ, 1290/1873-4, the French translation in Paris in 1876). The *Histoire de l'Asie Centrale* is a most important authority for the recent history of Central Asia, especially for Bukhārā, Khīwa and Khōḳand.

(W. BARTHOLD)

ʿABD AL-KARĪM, ḲUṬB AL-DĪN B. IBRĀHĪM AL-**DJĪLĪ**, a Muslim mystic, descendant of the famous ṣūfī ʿAbd al-Ḳādir al-Djīlānī, was born in 767/1365 and died about 832/1428. Little is known of his life, as the biographical works do not mention him. According to some of his own statements in *al-Insān al-Kāmil*, he lived from 796/1393 until 805/1402-3 in Zabīd in Yaman together with his shaykh Sharaf al-Dīn Ismāʿīl al-Djabartī. In 790/1387 he was in India. He wrote about thirty books and treatises, of which *al-Insān al-Kāmil fī Maʿrifat al-Awākhir wa 'l-Awāʾil* is the best known (several editions printed in Cairo). An analysis of its contents has been given by R. A. Nicholson: *The Perfect Man* (*Studies in Islamic Mysticism*, Cambridge 1921, Ch. ii). Al-Djīlī is an adherent of the well-known pantheistic mystic Ibn ʿArabī, to whose *Futūḥāt* he wrote a commentary and whose doctrines he developed and modified. According to his ontological doctrine exposed in his *al-Insān al-Kāmil* and his *Marātib al-Wudjūd*, nothing really exists but the Divine Essence with its creative (*ḥaḳḳī*) and creaturely (*khalḳī*) modes of being. Absolute Being develops in a scale (*marātib*) of individualisations or "descents" (*tanazzulāt*). The most important of these are the following: *ʿamā*, the simple hidden pure Essence before its manifestation (*tadjallī*); *aḥadiyya*, the first descent from the darkness of *ʿAmā* to the light of the manifestation, the first manifestation of Pure Essence (*dhāt*) exclusive of Divine attributes, qualities or relations; *wāḥidiyya*, the manifestation of the Essence with the attributes and qualities and their effects under the aspect of unity. It is plurality in unity. On this scale there is no distinction between the attributes, they are identical with each other and with the One. Opposites coincide—Mercy and Vengeance are the same. *Ilāhiyya* is higher than the above-mentioned manifestations. It comprehends both Being and Non-being in all degrees, the "places of manifestation and the manifested" (*al-maẓāhir wa 'l-ẓāhir*), i.e. the Creator and the Creature (*al-ḥaḳḳ wa 'l-khalḳ*). At the same time it is the principle of order for the whole series of individualisations and maintains each of them in its proper place. All opposites exhibit their relativity in the greatest possible perfection, they do not coincide any longer. *Raḥmāniyya* manifests the creative attributes (*al-ṣifāt al-khalḳiyya*) exclusively, whereas *ilāhiyya* comprehends both the creative and the creaturely. The first Mercy (*raḥma*) of God was His bringing the Universe into existence from Himself. God is the substance (*hayūlā*) of the Universe. The Universe is like ice, and God is the water of which the ice is made. *Rubūbiyya* comprehends those attributes that require an object and are shared by man, as knowing, hearing, seeing. The differentiation of the phenomena of the Universe is caused by their mutual relations to the respective divine attribute through which God manifests Himself. In his *al-Insān al-Kāmil* al-Djīlī deals with most of the cosmic, metaphysical, religious and psychological notions current in his time. He establishes their place in his system and explains their relations to the respective divine attribute. In doing so he has succeeded in giving many new, unexpected and highly interesting interpretations of well-known theologoumena. Thus he builds a phantasmal cosmology which differs widely from orthodox views: e.g. Adam ate the forbidden fruit because his soul manifested a certain aspect of Lordship (*rubūbiyya*), for it is not in the nature of Lordship to submit to a prohibition; for the people in Hell God creates a natural pleasure of which their bodies become enamoured; Hell at last will be extinguished and replaced by a tree named Djirdjīr; Iblīs will return to the presence and grace of God; all infidels worship God according to the necessity of their essential natures and all will be saved, etc. Al-Djīlī's doctrine of the Perfect Man (*al-Insān al-Kāmil*), the Logos, is almost the same as that of Ibn ʿArabī (cf. H. S. Nyberg, *Kleinere Schriften des Ibn al-ʿArabī*, Leiden 1919, 104). He is Muḥammad the Prophet who may, however, assume the form of any holy man. So al-Djīlī met him in 796 in Zabīd in the form of his shaykh. He is a copy of God, who becomes visible in him, and at the same time, he is a copy of the Universe, which is brought into existence from him. His whole being is sensible of a pervasive delight and contemplates the emanation of all that exists from himself, etc. Al-Djīlī had many auditions and visions. He talked with angels and cosmic beings. When in 800 he stayed in Zabīd, he met all the prophets and saints; he wandered through Heaven and Hell, in which he met Plato. In the *Marātib al-Wudjūd* forty degrees of Being are enumerated, the first being *al-dhāt al-ilāhiyya* or *al-ghayb al-muṭlaḳ*, the last *al-insān*. The other books and treatises of al-Djīlī have not yet been studied by European scholars. They are listed in Brockelmann, II, 264-5, S II, 283-4.

(H. RITTER)

ʿABD AL-KARĪM KASHMĪRĪ B. ʿĀḲIBAT MAḤMŪD B. BULĀḲĪ B. MUḤ. RIḌĀ, Indo-Persian historian. From autobiographical references in his *Bayān-i Wāḳiʿ* we learn that he was living in Dihlī at the time of its sack by Nādir Shāh (1151/1739), and entered the service of Nādir as a *mutaṣaddī*. He accompanied Nādir on his march from Dihlī to Ḳazwīn, reaching Ḳazwīn in 1154/1741. From there he travelled to Mecca and returned to India by sea in 1156/1743. He died in 1198/1784.

He is the author of a history of his own times from Nādir Shāh's invasion of India to 1198/1784 (the India Office copy, Ethé 566, comes down to 1199/1785), including an account of his own travels, entitled *Bayān-i Wāḳiʿ*. He gives much information obtained from Nādir's courtiers, including ʿAlawī Khān, the *ḥakīm bāshī*, or based on personal observation, and is not afraid to criticise Nādir. The text has not been printed so far; a condensed translation was published by F. Gladwin, *The Memoirs of Khoja Abdulkurreem*, Calcutta 1788, 1812, London 1793; abridged version of this by L. Langles, *Voyages de l'Inde à la Mecque*, Paris 1797. To the MSS enumerated by Storey can be added: The *Panjab Public Library Cat.* (*Persian*), Lahore 1942, p. 51,

copied 1230/1815; Panjab Univ. Library Shayrānī MS (1185/1771); MS in the possession of the writer (1214/1800, from a copy made in 1193/1779).

Bibliography: Elliot and Dowson, *History of India*, viii, 124-39; Ch. Rieu, *Cat. of Pers. MSS* (Brit. Mus.), 382; Storey, ii/2, 326-7; L. Lockhart, *Nadir Shah*, London 1938, 301.

(MOHAMMAD SHAFI)

ʿABD AL-KARĪM MUNSHĪ, or more fully MUNSHĪ MAWLAWĪ MUḤ. ʿABD AL-KARĪM ʿALAWĪ, Indo-Persian historian of the middle of the 19th century. He may have lived in Lucknow (*Taʾrīkh-i Pandjāb*, 2, *Muḥāraba* 21) or Cawnpūr (*Muḥāraba*, 3). He was fond of studying history, and during his retirement rendered from Arabic into Persian al-Suyūṭī, *Taʾrīkh al-Khulafāʾ*, and *Taʾrīkh Miṣr*, and prepared an abridged version of Ibn Khallikān in Persian. He also translated astronomical and geographical works from English into Persian and Urdu, as well as story-books, the whole of the Arabian Nights, a history of Bengal etc. In Beale, *Oriental Biogr. Dic.*, Calcutta 1881, 4, it is said that the Munshī had "died about thirty years ago", which places the date of his death not much later than the end of 1851 (he is spoken of as alive in the *Muḥāraba* (preface) in 1848 and Sept. 1851). Of his Persian works, the following three, on contemporary history, have been lithographed. He is praised for his careful and objective writing of history and his simple, vivid and clear narrative.

(i) *Muḥāraba-yi Kābul wa-Ḳandahār*, lith. Lucknow 1264/1848 and Cawnpūr 1267/1851, describes the Afghān War down to General Pollock's expedition (Sept.-Oct. 1842). The author had prepared a rough draft of the history of the Kābul and Ḳandahār expedition at the time, but in 1263/1847 he made suitable additions and emendations in his work after studying the *Akbar-nāma*, a Mathnawī poem in the style of the *Shāh-nāma* and quoted passages from it on occasions. This fairly long poem (comprising 8632 *bayts* in all) which is called *Ẓafar Nāma* in its Daftar 1, Section 5 (*madḥ-i Shāh-i djamdjāh*), was finished in 2 daftars, in 1260/1844 by Munshī Ḳāsim Djān ("*Mirza Ḳāsim Beg mutawaṭṭin balda-yi Shāh Djihānābād*" in one of the three Panjāb University Mss., which was transcribed in Agra, in 1847). The poet had himself taken part in the expedition (for details see the *Muḥāraba*, 4, based on the *Khātima* of the *Akbar-Nāma*, Daftar 1).

Ḳāsim's *Akbar-Nāma* (for MSS. other than those noted above and for the Agra ed. of 1272 see Storey, ii/2, 402) is not to be confounded, as has been done by Ivanow (*Descript. Cat. of the Pers. Mss. in the Curzon collection*, 12, no. 22) with Ḥamīd Kashmīrī's *Akbar-Nāma* (Kābul, 1320 shamsī), a similar work in theme and metre and date (it also was finished in 1260).

The Curzon collection of the A.S.B. (see Ivanow's Cat. mentioned above) has a ms. of the *Muḥāraba*.

(ii) *Taʾrīkh Pandjāb Tuḥfat*[an] *li-l-Aḥbāb* (or *Tuḥfa-yi Aḥbāb*) lith. Maṭbaʿ Muḥammadī (prob. Lucknow), 1265/1849, deals with the Anglo-Sikh Wars. It is divided into two *ḥamla's*, the first relating to the first Sikh War (1845-6) and the second to the second Sikh War (1848-9), written in order to show that the English had won the wars (Preface).

It is based on the statement of English officers and the accounts published in contemporary Urdū newspapers, duly checked. The work contains some curious documents such as a statement of the revenues of the Pandjāb in the Sikh period, texts of Anglo-Sikh treaties and texts or summaries of British public announcements in the Pandjāb at the time, inscriptions on the Sikh guns etc.

(iii) *Taʾrīkh-i Aḥmad* (or *Taʾrīkh Aḥmadshāhī*), lith. Lucknow 1266/1850 (for the mss. of the work see Storey ii/2, 403). Having completed the history of Shudjāʿ al-Mulk Durrānī (see ii above) who left Ludhiānā and with the help of the British Government regained the throne of his ancestors in 1255/1841, the author decided to write a complete history of the Durrānīs. Till 1212/1797 (about the middle of the reign of Zamān Shāh) he based it on the *Ḥusaynshāhī* or the *Taʾrīkh Ḥusaynī* (see Rieu, *Cat. Pers. Mss. Br. Mus.*, iii, 904b) by Imām al-Dīn who had lived for a long time in Afghānistān. A very brief history of the subsequent period up to the fall of the dynasty he based on the information received from well-informed, trustworthy and truthful visitors of his from Kābul, Ḳandahār and vicinity (*Aḥmadshāhī*, 3, 51). After stating the genealogy of the Abdālīs he gives the history of Aḥmad Shāh and his successors. In the last quarter of the work is given an account of the chief amīrs of Zamān Shāh, a geographical note on the Pandjāb and the stages of the route Kābul-Ḳandahār-Harāt-Čisht (with a list of the tombs of the Čishtī saints), and a chapter on Turkistān and its ruler Narbūta Bey. The last event mentioned is the death of Shudjāʿ al-Mulk and the recall of the British troops from Afghānistān, to which is appended a list of the 17 sons of Pāʾinda Khān.

This work and the *Muḥāraba* are among the sources of the *Sirādj al-Tawārīkh* (Kābul 1337), a history of Afghānistān compiled under the orders of the Amīr Ḥabīb Allāh Khān.

An Urdū version of the *Taʾrīkh Aḥmad* by Mīr Wārith ʿAlī Sayfī and entitled *Waḳiʿāt-i Durrānī* was lith. in Cawnpūr. 1292/1875.

E. Edwards, *Cat. of the Persian Printed Books in the British Mus.*, London 1922, 21, ascribes to him: *A dictionary of Anglo-Persian homogeneous words* etc., Bombay 1889.

Bibliography: Storey, ii/2, 402-4, ii/3, 673; O. Mann, *Quellenstudien zur Geschichte des Aḥmed Šâh Durrâni*, in *ZDMG*, 1898, 106 ff.; Fr. transl. of the chapter on Turkistān in Ch. Schefer, *Histoire de l'Asie Centrale par Mir Abdoul Kerim Boukhary*, Paris 1876, 280 ff.

(MOHAMMAD SHAFI)

ʿABD AL-ḲAYS (rarely ʿAbd Ḳays), i.e. "Servant of (the god) Ḳays", old Arabian tribe in East Arabia. The *nisba* is ʿAbdī and ʿAbḳasī.

ʿAbd al-Ḳays belongs to a group of tribes once settled in the modern province of al-ʿĀriḍ, whence it advanced to the North-West as far as present-day Sudayr and to the South-East as far as al-Khardj. This group was later, in the genealogy of the Northern Arabs, given the name of Rabīʿa [*q.v.*]. Already in the 5th century parts of this group detached themselves and started to nomadize partly within, partly beyond the arch of the Ṭuwayḳ. To the latter belonged ʿAbd al-Ḳays, which in the 6th century penetrated into the two great oasis districts of Eastern Arabia, namely al-Baḥrayn inland, and al-Ḳaṭīf on the coast. The oasis of al-Baḥrayn (known since the 10th century as al-Aḥsāʾ, and only since the 19th as al-Ḥasā [*q.v.*]) is plentifully watered by wells and natural and artificial streams, the greatest of which is called (ʿAyn) Muḥallim. The district reached in the north as far as ʿAynayn (= al-ʿUyūn), badly sanded already in the 12th century, and in the south as far as the village of al-Kathīb, which survived till the Middle Ages. The capital was

Hadjar, with its citadel al-Mushaḳḳar. Another fortified place was Djuwāthā. The oasis district on the coast reached from Ṣafwā (a name that does not occur before the Middle Ages) in the north to Ẓahrān in the south, its capital being Zāra near Ḳaṭīf.

ʿAbd al-Ḳays was divided into two groups, Shann and Lukayz. Lukayz comprised the tribes of Nukra, al-Dīl, ʿIdjl and Muḥārib b. ʿAmr. The last three were distinguished by the denomination al-ʿUmūr from their "brothers" the Anmār. These latter consisted of the tribes of ʿĀmir b. al-Ḥārith (with the sub-tribes of Banū Murra and Banū Mālik) and Djadhīma b. ʿAwf (in which the branches ʿAbd Shams, Ḥiyay and ʿAmr confederated, under the name Barādjim, against the stronger Ḥāritha).

The Muḥārib lived in the villages of the oasis of al-Baḥrayn. Hadjar itself was inhabited by a mixed population, not bound by tribal ties. The same was probably the case in Zāra and other towns of the coastal oasis, where there existed also a considerable population of non-Arabic origin (Persians, Indians, Jews, Mandaeans), and it can be assumed that this was the case in Hadjar as well, though to a smaller extent. Ḳaṭīf was inhabited by the Djadhīma b. ʿAwf and Ẓahrān by the Nukra. In regard to land-ownership, we know only that in Ṣulāṣil, in the East Arabian Djawf (around Dārā = al-Dār = ʿAyn Dār) a certain ʿĀmir was the owner, *rabb*, of the oasis. In the summer, the northern ʿAbd al-Ḳays: Shann, ʿĀmir b. al-Ḥārith and al-ʿUmūr used to nomadize together inland around Wādī Farūḳ, while the Nukra grazed between Ẓahrān and the district of Baynūna, S.-E. from Ḳaṭar (where also the last village of the tribe, Luʿbā, is to be looked for).

Emigration from the over-populated oases started at an early date, directed partly towards the other coastal lands of Arabia, ʿUmān (fractions of Nukra and Dīl, ʿAwaḳa, "brothers" of the ʿUmūr and Anmār, etc.), and partly towards the Persian coast.

When ʿAbd al-Ḳays penetrated into Eastern Arabia, they are said to have found there remnants of Iyād, who were at that time migrating towards ʿIrāḳ. Later, they had as their northern neighbours those of the Ḳays b. Thaʿlaba (of Bakr-Rabīʿa) who had left their dwellings in ʿĀriḍ and were grazing along the line Thādj—Kāẓima—Faldj = al-Bāṭin. The enemies of ʿAbd al-Ḳays were the Saʿd, a group of Tamīm, who roamed on both sides of the Dahnāʾ as far as Wādī Farūḳ and Wādī al-Sahbā.

The oases of the coast were from the time of Shāpūr II (310-79) under direct Persian rule. The country inland belonged at the beginning of the 6th century to the kingdom of Kinda, while after its fall about 530 a lateral line of that dynasty reigned in Hadjar. After its extinction, al-Baḥrayn was conquered, no doubt with the consent of the Persians, by the Lakhmids of al-Ḥīra. Under al-Nuʿmān III (579-601) the resistance of the Shann and Lukayz was broken by plundering expeditions. After the fall of the Lakhmids the land was ruled by a Persian *ispahbadh* residing in Mushaḳḳar and assisted by an Arabian person of trust. The cordial reception given by the governors and later also by the ʿAbd al-Ḳays to Muḥammad's envoys and letters can be probably explained by the fact that the two governors had lost the support of the home country owing to the strife over the succession to the throne that broke out in Persia in 628. During the *ridda* part of the ʿAbd al-Ḳays, under al-Djārūd (of the Ḥāritha—Djadhīma) remained faithful to Medina, while others, led by the chief of Ḳays b. Thaʿlaba, proclaimed a Lakhmid as their ruler. The Muslims were besieged in Djuwāthā, but held out. After the arrival of reinforcements, made available by the victory over Musaylima, they took the initiative and attacked (12/633). It was not before the autumn of 634 that the Persian garrison of Zāra was forced to surrender.

With the Muslim conquest starts a new movement of emigration. Labūʿ (an older tribe than Shann and Lukayz) took part in a expedition across the Gulf against Fārs and settled mainly in Tawwadj. The emigration was directed mainly towards Baṣra; in Kūfa, the ʿAbd al-Ḳays were not so strongly represented. With the troops of Kūfa they reached Mosul, with those of Baṣra Khurāsān, where their strength in 715 was four thousand men. The ʿAbd al-Ḳays took no prominent part in the politics of the newly conquered provinces. They more often, with a few exceptions, adapted themselves to local conditions, were ʿAlid in ʿAlid Kūfa, and participated in Baṣra and Khurāsān in the feuds between the tribes. In Baṣra, Harim b. Ḥayyān, one of the earliest pietists of Islam and a forerunner of al-Ḥasan al-Baṣrī, belonged to this tribe.

In their native country the ʿAbd al-Ḳays tried to withstand, but without success, the Khāridjite movement of Nadjda, centered in the Yamāma (67/686-7). At the same time, the tribal distribution there begins to change. Of the tribes of ʿAbd al-Ḳays only Djadhīma b. ʿAwf and Muḥārib remained in their old sites—Muḥārib occupying also the harbour of ʿUḳayr, and ʿAmr b. al-Ḥārith remaining in Ẓahrān and on one of the smaller islands of Baḥrayn (Sitra ?). The rest of their territory was occupied by the Saʿd—Tamīm, who penetrated into Baḥrayn itself and built there the village of al-Aḥsāʾ. Azd from ʿUmān established themselves on the coast, probably at the same time as in Baṣra, i.e. about 60/680. Some of them settled, together with ʿAbd al-Ḳays, in the oasis of Tuʾām = Tawam/Tuwaym in Sudayr.

In the IXth century an oasis principality was set up in East Arabia. An Azdite ruled in Zāra, one Ibn Mismār of the Djadhīma b. ʿAwf in Ḳaṭīf, the Banū Ḥafṣ, also belonging to ʿAbd al-Ḳays, in Ṣafwā. Baḥrayn was divided into the principalities of Hadjar and Djuwāthā under al-ʿAyyāsh al-Muḥāribī and al-ʿUryān (of the Banū Mālik), respectively. In the years 249-54/863-8 an ʿAlid, or pseudo-ʿAlid, rebelled in Baḥrayn. He tried his luck first in Hadjar, then in al-Aḥsāʾ among the Saʿd. Finally he withdrew into the desert and collected an army consisting of Tamīm and of tribes which had newly immigrated from the west. It cost al-ʿUryān much trouble, with help of the other chiefs of ʿAbd al-Ḳays, to expel the rebel, who soon afterwards started the great rising of the Zandj [*q.v.*] slaves in Baṣra.

The immigrants just mentioned and beduins who infiltrated afterwards, as well as good families from Ḳaṭīf, became in the next generation the supporters of the Ḳarmaṭian missionary Abū Saʿīd al-Djannābī. The revolution broke out in 268/899. Ḳaṭīf fell first, Zāra was burned, and finally Hadjar too was taken, notwithstanding the Caliph's intervention. Al-Aḥsāʾ became the capital of the East-Arabian state of the Ḳarmaṭians [*q.v.*]. This was overthrown in 469/1076-7 by the ʿUyūnids [*q.v.*] i.e. the Āl Ibrāhīm, belonging to the Banū Murra of al-ʿUyūn. The new dynasty soon showed signs of decline, interrupted only by a short period of recovery at the end of the 12th century. About 1245 this last dynasty of the ʿAbd al-Ḳays collapsed.

The attempt of the ʿUyūnid ʿAlī b. Muḳarrab to revive the ancient glory of the tribe by his poems miscarried, partly because the old Arabian world had long since become petrified, partly because also the oases of East Arabia were permeated by new immigrants.

Before the ʿAbd al-Ḳays accepted Islam, the tribe seems to have been overwhelmingly Christian. Only a few names bear witness to its original pagan religion: ʿAmr al-Afkal from S̲h̲ann, ʿAbd S̲h̲ams, ʿAbd ʿAmr (?). The office of the *afkal* (from Babylonian *apkallu*, "priest") was taken over, as in other tribes, from the early Arabian town civilisation. Tradition, ignorant of this fact, made of ʿAmr al-Afkal a representative of *hybris*.

The genealogy of the ʿAbd al-Ḳays is, compared with that of other tribes, remarkably incomplete, to judge by Ibn al-Kalbī's *Muk̲h̲taṣar* (Table A of Wüstenfeld contains many, Ibn Ḥazm's *D̲j̲amhara* some errors, the latter not only in the printed text, but also in the good MSS of Rampore and Bankipore). Firstly, many units, known from other sources, are missing; secondly, the position of the "Companions", or the members of the embassy of the tribe to the Prophet, varies up to five generations, and an officer of the caliph al-Manṣūr is put higher than some of them.

Similar uncertainty exists concerning the poets of the tribe, viz. al-Mut̲h̲aḳḳib and al-Mumazzaḳ of Nukra, Yazīd and Suwayd b. al-K̲h̲ad̲h̲d̲h̲āk of S̲h̲ann. Yazīd (according to others al-Mumazzaḳ) described, as an onlooker, his own burial; this is something new. Al-Ṣalatān, the poet from Baṣra, a contemporary of D̲j̲arīr, belongs to S̲h̲ann; Ziyād al-Aʿd̲j̲am, who lived in Persia, was a *mawlā* of the ʿĀmir b. al-Ḥārit̲h̲.

Al-Mut̲h̲aḳḳib uses several Persian loan-words, not current otherwise, and some difficult expressions, but they are not peculiarly dialectal. At any rate, the dialect of the ʿAbd al-Ḳays must not be identified with that of al-Baḥrayn (here used, as generally in later times, as the name of the province), considered by the Arab philologists as an inferior one. Striking are the three forms for the personal and tribal name Dīl, Dūl, Duʾil, "weasel", among the ʿAbd al-Ḳays, Bakr and Kināna.

ʿABD AL-LAṬĪF AL-BAG̲H̲DĀDĪ, MUWAFFAḲ AL-DĪN ABŪ MUḤAMMAD B. YŪSUF, also called IBN AL-LABBĀD, a versatile scholar and scientist, born at Bag̲h̲dād in 557/1162-3, died there in 629/1231-2. In Bag̲h̲dād he studied grammar, law, tradition etc. (giving in his autobiography a vivid picture of contemporary methods of study) and was persuaded by a Mag̲h̲ribī wandering scholar to devote himself to philosophy, mainly according to the system of Ibn Sīnā, and to natural science and alchemy. In 585/1189-90 he went to Mosul (where he studied the works of al-Suhrawardī al-Maḳtūl, but found them inept), next year to Damascus, then to the camp of Saladin outside ʿAkkā (587/1191), where he met Bahāʾ al-Dīn b. S̲h̲addād and ʿImād al-Dīn al-Iṣfahānī, and acquired the patronage of al-Ḳāḍī al-Fāḍil, and then to Cairo. Here he made the acquaintance of Mūsā b. Maymūn and a certain Abu 'l-Ḳāsim al-S̲h̲āriʿī, who introduced him to the works of al-Fārābī, Alexander of Aphrodisias and Themistius, which turned him away from Ibn Sīnā and alchemy. In 588/1192 he met Saladin in Jerusalem, then went to Damascus, whence he returned to Cairo. After some years he went to Jerusalem and then, in 604/1207-8, again to Damascus. Some time later he went via Aleppo to Erzind̲j̲ān, to the court of ʿAlāʾ al-Dīn Dāʾūd. When the Sald̲j̲ūḳid Kayḳubād̲h̲ conquered Erzind̲j̲ān, ʿAbd al-Laṭīf, after a journey to Erzerum, returned from Erzind̲j̲ān to Aleppo via Kamāk̲h̲, Diwrigi and Malaṭiya (626/1228-9), and soon afterwards returned to his native Bag̲h̲dād where he died.

His numerous writings covered almost the whole domain of the knowledge of those days. Of those extant, *al-Ifāda wa'l-Iʿtibār*, a short description of Egypt, was widely known in Europe and was translated into Latin, German, and French; cf. S. de Sacy, *Relation de l'Egypte par Abd al-Latif*, Paris 1810; the others are on philology, tradition, medicine, mathematics and philosophy. (For his work on metaphysics cf. P. Kraus, in *BIE*, 1941, 277.) His account of the Mongol invasion was taken over by al-D̲h̲ahabī (cf. J. de Somogyi, *Isl.*, 1937, 106 ff.) His notes are quoted by Ibn Abī Uṣaybiʿa for information on personalities in Bag̲h̲dād (cf. index).

Bibliography: Ibn Abī Uṣaybiʿa, ii, 201-13 (based on his autobiography); Kutubī, *Fawāt*, ii, 9 ff.; D̲h̲ahabī, *Taʾrīk̲h̲ al-Islām*, MS Oxford, i, 654, fol. 16-7; L. Leclerc, *Hist. de la médecine arabe*, ii, 182; Brockelmann, i, 632, S i, 880. (S. M. STERN)

ʿABD AL-LAṬĪF ḲASTAMUNILĪ [see LAṬĪFĪ].

ʿABD AL-MAD̲J̲ĪD I (ABDÜLMECID), Ottoman sultan, son of Maḥmūd II and his second *ḳadin* Bezm-i ʿĀlem (a remarkable woman), born on Friday, 14 (not 11) S̲h̲aʿbān 1238/25 April 1823. He succeeded his father, whose reforms he was to continue, on 19 (not 25) Rabīʿ II 1255/1 July 1839, a few days after the defeat of Nīzīb (24 June) inflicted on the Turks by Ibrāhīm Pas̲h̲a [*q.v.*]. The concert of the powers, which included, for the first time, Turkey, but not France, saved, however, the Ottoman Empire (Convention of London, 15 July 1840).

The most important events of his reign were the proclamation of the *k̲h̲aṭṭ-i sherīf*, or *k̲h̲aṭṭ-i hümāyūn*, of Gülk̲h̲āne (26 S̲h̲aʿbān 1255/3 Nov. 1839) and the Crimean war, which began in 1853 and was ended by arbitration in the Treaty of Paris (30 March 1856). For the proclamation see TANẒĪMĀT, GÜLK̲H̲ĀNE, K̲H̲AṬṬ-I HÜMĀYŪN, ʿUT̲H̲MĀNLIS, for the Crimean war ʿUT̲H̲MĀNLIS and, in general, the handbooks on history. It is worth mentioning here that the famous defence of Silistria, on the Bulgarian Danube (19 May-23 June 1854) was the subject of a famous poem by Nāmiḳ Kemāl [*q.v.*].

There was also a whole series of troubles, insurrections and massacres: in Kurdistan (1847), in the Danubian principalities (1848), in Bosnia (1850-51),

in Montenegro (1852-3), in the Lebanon (1849), in Djidda, in the Lebanon and in Syria (1860), not to speak of Bulgaria and Albania.

Apart from his legislative work, ʿAbd al-Madjīd was the author of important reforms, in regard to the administration (in the *eyālets* or *wilāyets*, "provinces"), the army (law of 6 Sept. 1843; see REDĪF), education (*iʿdādī*, "military preparatory" schools, 1845; *rüshdiyye*, "higher primary" schools for boys and girls, 1847; *dār ül-maʿārif*, 1849; *mekteb-i ʿothmānī*, "Ecole ottomane" in Paris 1855), and the coinage (money of good alloy, carefully coined, especially the pieces called *medjīdiyye*, of 20 piastres; issued from 1844). To him is due the building of hospitals and other edifices, such as the palace of Dolma Baghče 1853), the restoration of the Aya Sofiya mosque by Fossati (20 July 1849), the first depositary for the state archives, *Khazine-yi Ewrāḳ* (1845), the first theatre (French Theatre or "Crystal Palace", by Giustiniani), the first *sāl-nāme*, or "imperial year-book" (1847).

It was from his reign onwards that the imperial princes (*shāh-zāde*) bore the simple title of *efendi*. ʿAbd al-Madjīd was the first sultan to speak a Western language (French). He was a subtle and polished person, lightly built, but of weak health undermined by the abuses of drink and harem. He was a spendthrift. Capricious, but courageous, he gained universal respect by his refusal to hand over to the Austrians, in 1849, Kossuth and the other Hungarian political refugees. "The annals of Turkey have as yet no record of a sovereign more humane, of such gentle manners, animated by such civilizing tendencies; his mild and attractive features revealed a generous soul" (Mgr. Louis Petit—(pseudonym: Kutchuk Efendi), Catholic bishop of Athens, *Les Contemporains*, no. 333, Maison de la Bonne Presse, 1899).

He died young, on 17 Dhu 'l-Ḥidjdja 1277/25 June 1861, in the middle of the financial crisis of the country. He was buried in a modest *türbe* near the mosque of Sulṭān Selīm.

For three out of the ten Grand-Viziers of his reign, see RASHĪD PASHA, ʿALĪ PASHA, KHUSRAW PASHA.

The foreign diplomat who played during the reigh of this sultan the most important role in Istanbul was Stratford Canning (Lord Stratford de Redcliffe).

(J. DENY)

ʿABD AL-MADJĪD II (ABDÜLMECIT), last Ottoman caliph, son of ʿAbd al-ʿAzīz [*q.v.*]. He was elected caliph by the Great National Assembly, 18 Nov. 1922, and succeeded, in this quality only, his cousin Muḥammad VI, who, after the abolition of the sultanate (1 Nov. 1922) took refuge on board a British warship and left Istanbul. During some months, all the opponents of the regime established in Anḳara by Muṣṭafā Kemāl rallied round the caliph, who had, in reality, no power at all. Muṣṭafā Kemāl put an end to these intrigues by proclaiming the republic, 29 Oct. 1923. A little more than four months afterwards, 3 March 1924, the Great National Assembly resolved upon the abolition of the caliphate. The next day ʿAbd al-Madjīd left Istanbul. He died in Paris, 23 August 1944.

Bibliography: *Discours du Ghazi Moustafa Kemal, président de la République turque*, Leipzig 1927; COC, 1944-5, 105.

ʿABD AL-MALIK B. MUḤAMMAD B. **ABĪ ʿĀMIR** AL-MAʿĀFIRĪ ABŪ MARWĀN AL-MUẒAFFAR, son and successor of the famous "major domo" (*ḥādjib*) al-Mansūr [*q.v.*] under the reign of the Umayyad caliph of al-Andalus Hishām II al-Muʾayyad biʾllāh. He was the real sovereign of Muslim Spain after the death of his father in Medinaceli (Madīnat Sālim) in 392/1002.

ʿAbd al-Malik, second son of al-Manṣūr, was born in 364/975; his mother, an *umm walad* called al-Dhalfāʾ, survived him several years. Even before succeeding his father he gained experience as general in several campaigns, both in the North of Spain, against the Christians, and in Morocco. He was appointed by his father as a kind of viceroy of Morocco in 388/998, and took up his residence in Fez, but was recalled to Cordova the next year. On the career of ʿAbd al-Malik as sovereign we are informed in sufficient detail by the newly discovered Hispano-Arabic chronicles. One gets the impression that ʿAbd al-Malik b. Abī ʿĀmir, without having the genius of his father, was not lacking in certain statesmanlike qualities. At any rate, the seven years during which he held power are represented as the last favourable period of the history of al-Andalus before the fall of the Umayyad calipahate of the West.

The "majordomo", remaining faithful to the line followed by al-Manṣūr, continued his policy of harassing the Christian enemy beyond the frontier zones (*thughūr*). For this purpose he undertook year after year an expedition to one or the other of the marches of al-Andalus. In 393/1003 he directed his army towards the Hispanic March (*bilād al-Ifrandj*), ravaged the surroundings of Barcelona and laid waste thirty-five fortresses of the enemy. In 394/1004, he attacked the territory of the count of Castille, Sancho García, who asked for an armistice and in the following year helped ʿAbd al-Malik in his campaign against Galicia and Asturias. In the summer of 396/1006, ʿAbd al-Malik started an

offensive against the Frankish county of Ribagorza. His most famous expedition, however, was that of the following year, aimed against the fortress of Clunia, which was taken and destroyed. This victory gained for the ʿĀmirid *ḥādjib* the honorific title of al-Muẓaffar. In 398/1007 he had again to take up arms against Sancho García and Castille, and yet again in the following year. While he was preparing to set out against Castille, he succumbed to a disease of the chest, near Cordova, on the Guadimellato (Wādī Armilāṭ), 16 Ṣafar 399/20 Oct. 1008.

During the seven years of his rule, ʿAbd al-Malik al-Muẓaffar preserved for the State of Cordova its strong administrative structure, by favouring the Slavonic dignitaries (*ṣaḳāliba*) against the Arab aristocracy. Nevertheless, several attemps were made on his person. There are reasons to assume that his brother, ʿAbd al-Raḥmān Sanchuelo, who succeeded him, was not without his share in the unexpected and premature death of the second ʿĀmirid.

(E. LÉVI-PROVENÇAL)

ʿABD AL-MALIK B. ḲAṬAN AL-FIHRĪ, governor of al-Andalus. He succeeded in this office ʿAbd al-Raḥmān b. ʿAbd Allāh al-Ghāfiḳī [*q.v.*], when the latter was killed during his expedition into Gaul, 114/732. He had to surrender his office, in 116/734, to ʿUḳba b. al-Ḥadjdjādj al-Salūlī, but resumed it in 123/740. Belonging to the Medinese party, he evinced a rather unfavourable attitude towards the caliph of Damascus. Almost at once, however, he was confronted with grave difficulties caused by the Berbers who revolted in the Iberian peninsula and soon afterwards menaced Cordova. In face of this danger, and in view of the insufficiency of his own military resources, ʿAbd al-Malik had to appeal, whether he liked it or not, for the services of a group of Arabs belonging to various *djunds* [*q.v.*] of Syria, who were besieged in the North-African fortress of Ceuta, and gave them permission to cross the Straits under the command of their chief Baldj [*q.v.*]. Thanks to this reinforcement and to three successive defeats which they inflicted upon the rebellious Berbers, he suceeded in allaying the danger that menaced him. The Syrian troops, however, confident in their strength, had no difficulty in removing ʿAbd al-Malik b. Ḳaṭan and put in his place as *wālī* of al-Andalus their own general Baldj, at the beginning of Dhu 'l-Ḳaʿda 123/Sept. 741. One of the first actions of the new governor was to order the execution of his predecessor, who was then a very old man.

Bibliography: E. Lévi-Provençal, *Hist. Esp. mus.*, i, 41, 43-7. (E. LÉVI-PROVENÇAL)

ʿABD AL-MALIK B. MARWĀN, fifth Caliph of the Umayyad line, reigned 65-86/685-705. According to general report he was born in the year 26/646-7, the son of Marwān b. al-Ḥakam [*q.v.*], his mother being ʿĀʾisha bint Muʿāwiya b. al-Mughīra. As a boy of ten he was an eye-witness of the storming of ʿUthmān's house, and at the age of sixteen Muʿāwiya appointed him to command the Madinian troops against the Byzantines. He remained at Medina until the outbreak of the rebellion against Yazīd I (62-3/682-3). When the Umayyads were expelled by the rebels, he left the town with his father, but on meeting the Syrian army under Muslim b. ʿUḳba he returned with him, after giving Muslim information concerning the town and its defences. This was followed by the battle of the Ḥarra and the total defeat of the Madinians (27 Dhu 'l-Ḥidjdja 63/27 Aug. 683). After the assassination of his father (Ramaḍān 65/April-May 685), ʿAbd al-Malik was recognized as Caliph by the partisans of the Umayyads, but he was faced with serious difficulties. Although the battle of Mardj Rāhiṭ had reaffirmed Umayyad control of Syria, and Egypt had been recovered and was strongly held by his brother ʿAbd al-ʿAzīz [*q.v.*], Zufar b. Ḥārith held out in the north at Ḳirḳīsiyya, with the support of the Ḳays, until 71/690-1, and the Byzantines were giving much trouble on the frontiers, even reoccupying Antioch in 68/688, as well as giving aid to the Mardaites within Syria itself. In Mecca, ʿAbd Allāh b. al-Zubayr [*q.v.*] had been proclaimed Caliph, and was at least nominally recognized in most provinces of the empire. Nevertheless, ʿAbd al-Malik showed himself equal to the task, and within a few years succeeded in restoring the unity of the Arabs under Syrian leadership.

At first, however, ʿIrāḳ and the East had to be abandoned. The governor, ʿUbayd Allāh b. Ziyād, driven out by the tribesmen after the death of Yazīd, was unable, in spite of his success in defeating an attack by Kūfan forces in Mesopotamia (Ramaḍān 65/May 685), to reoccupy Kūfa and Baṣra. Kūfa was shortly afterwards seized by the Shīʿite leader Mukhtār [*q.v.*], whose partisans, after an indecisive engagement with the Syrians (Dhu 'l-Ḥidjdja 66/July 686), totally defeated ʿUbayd Allāh on the Khāzir river in the following month under the command of Ibrāhīm b. al-Ashtar. For the next five years ʿIrāḳ remained under the rule of Muṣʿab b. al-Zubayr, whose general al-Muhallab b. Abī Ṣufra, with the troops of Baṣra, defeated Mukhtār's forces at Ḥarūrā in Ramaḍān 67/April 687 and reoccupied Kūfa. In order to free his hands for dealing with Irāk, ʿAbd al-Malik in 69/689 made a ten years' truce with the Greek Emperor, by which, in return for an annual tribute, the latter removed the Mardaites from Syria into Greek territory. Immediately afterwards ʿAbd al-Malik set out from Damascus against Musʿab, but was obliged to return in order to deal with a revolt in the capital led by his kinsman ʿAmr b. Saʿīd al-Ashdaḳ [*q.v.*]. ʿAmr fortified himself in the residence, but on the Caliph's arrival he capitulated on promise of life and liberty. Nevertheless, ʿAbd al-Malik was unable to trust him, and soon afterwards had him seized and executed him, according to the general statement, with his own hand. In the following year (70/690) the campaign against Muṣʿab was renewed, but both armies faced one another in Mesopotamia without result. In the third year, ʿAbd al-Malik opened his campaign by besieging Zufar in Ḳirḳīsiyya for some months. After its capture he reoccupied Upper Mesopotamia, and reinforced by the Ḳays marched into ʿIrāḳ. At Dayr al-Djathālīḳ, near Maskin, Musʿab and Ibn al-Ashtar were defeated and slain (Djumādā I or II, 72/Oct.-Nov., 691). Al-Muhallab with the troops of Baṣra was engaged in the struggle with the Khāridjites, and most of the ʿIrāḳīs were weary of the conflict, which had brought them little but hardships and loss. Immediately after the Caliph's entry into Kūfa, where he received the homage of the province, a force of 2000 Syrians was despatched under al-Ḥadjdjādj to deal with Ibn al-Zubayr at Mecca. After a halt at Ṭāʾif, al-Ḥadjdjādj laid siege

to Mecca on 1 Dhu 'l-Ḳaᶜda 72/25 March 692; it was a little more than six months before Ibn al-Zubayr was killed on the field and the city surrendered (17 Dj. I or II, 73/4 Oct. or 3 Nov., 692). Al-Ḥadjdjādj was rewarded with the governorship of the Ḥidjāz.

The recovery of ᶜIrāḳ involved ᶜAbd al-Malik in the necessity of organizing immediate measures against the Khāridjites. After an initial failure, the combined forces of Kūfa and Baṣra defeated the Nadjdiyya of Yamāma at Mushaḥḥar in 73/692-3, but the more dangerous and fanatical Azāriḳa in Persia set a tougher problem. Even under the command of al-Muhallab, the war-weary *muḳātila* showed little stomach for this task until in 75/694 ᶜAbd al-Malik transferred al-Ḥadjdjādj to the government of Kūfa. With his ruthless and energetic backing al-Muhallab was able to hunt down the Azāriḳa in a three-years' campaign. In the meantime a fresh Khāridjite rising broke out among the Rabīᶜa tribesmen in Mesopotamia, who, under the leadership of Shabīb, swept down on the territories of Kūfa and seized Madā'in (76-7/695-6). When the *muḳātila* of Kūfa, recalled from Persia, proved unable to prevent Shabīb from investing their city, al-Ḥadjdjādj obtained the services of 4000 Syrian troops, who, after driving off the attackers and killing Shabīb (end of 77/beg. of 697) went on to break up the Arab section of the Azāriḳa in Ṭabaristān. Following on an outbreak of disorder in Khurāsān in the same year (78/697), ᶜAbd al-Malik added this province also to the government of al-Ḥadjdjādj, who appointed al-Muhallab to govern it as his deputy. Al-Muhallab reopened shortly afterwards the campaigns towards Central Asia, but few positive gains are recorded before his death in 82/701-2, when he was succeeded by his son Yazīd. At the same time ᶜAbd al-Raḥmān b. Muḥammad b. al-Ashᶜath, who had been appointed to Sidjistān, was engaged in Afghānistān with the troops of Kūfa and Baṣra. Enraged by the criticisms directed against them by the plebeian viceroy, Ibn al-Ashᶜath and the *ashrāf* revolted (81/700-1) and marched back into ᶜIrāḳ. The small body of Syrian troops and their supporters were unable to withstand the united forces of the province, and for a time the situation was critical; but with the aid of reinforcements from Syria the rebels were defeated at Dayr al-Djamādjim (Dj. II, 82/July 701) and again routed at Maskin on the Dudjayl (Shaᶜbān 82/Oct. 701), and the remnants were pursued into Sidjistān and Khurāsān, where they were dispersed by Yazīd b. al-Muhallab (83/702). In the same year al-Ḥadjdjādj built a new garrison city for the Syrian troops at Wāsiṭ. This episode proved to be a turning-point in the history of the Umayyad Caliphate and the Arab empire. Henceforward a permanent Syrian army of occupation garrisoned ᶜIrāḳ, and the *muḳātila* of Kūfa and Baṣra were never again called out on a war footing. For twelve years more the heavy hand of al-Ḥadjdjādj maintained order and security, and laid the foundations of future economic prosperity in ᶜIrāḳ, but at the cost of much bitter resentment amongst the tribesmen, especially in Kūfa.

The war with the Byzantines was renewed in 73/692, in consequence of the Emperor's refusal to accept the new Muslim gold currency struck by ᶜAbd al-Malik. Despite some initial successes in their raids into Anatolia and Armenia, the Syrian troops, commanded by the Caliph's brother Muḥammad, gained little territory, but prepared the way for the expeditions of the next reign. In North Africa, however, the *muḳātila* of Egypt, under Ḥassān b. al-Nuᶜmān, after regaining the southern part of Ifrīḳiya, advanced on Carthage with naval support (78/679). A reinforcing Greek fleet was defeated, Carthage occupied, and a secure base established at Ḳayrawān for further conquests.

In the midst of these preoccupations with internal conflicts and external wars, ᶜAbd al-Malik found time to develop the administrative efficiency of his empire. The answer to the disintegrating tendencies of tribalism was centralization, and various reforms were put in hand to this end. The most important was the substitution of Arabic for Greek and Persian in the financial bureaux; this was a first step towards the reorganization and unification of the diverse tax-systems in the provinces, and also a step towards a more definitely Muslim administration. This appears even more clearly in the decision to issue an Islamic gold coinage, replacing the Byzantine *denarius* with its image of the Emperor by a Muslim *dīnār* with Ḳur'ānic texts. Despite the hostility which later tradition displayed towards the Umayyads and al-Ḥadjdjādj in particular, it cannot be doubted that already the influence of Islam was strongly felt in this, the first generation of Muslim rulers who had been brought up from childhood in the Muslim faith. Another, and even more far-reaching reform was the re-edition of the ᶜUthmānic text of the Ḳur'ān with vowel-punctuation, a measure generally attributed to al-Ḥadjdjādj, but which enraged the pietists of Kūfa who held to the "reading" of Ibn Masᶜūd. ᶜAbd al-Malik was also the builder of the Ḳubbat al-Ṣakhra [*q.v.*] at Jerusalem.

The last years of his reign were on the whole years of prosperity and peaceful consolidation, but for his anxiety over the succession. Marwān had appointed as successor to ᶜAbd al-Malik his brother ᶜAbd al-ᶜAzīz, but ᶜAbd al-Malik wished to exclude him in favour of his own sons al-Walīd and Sulaymān. A split was avoided just in time, by the death of ᶜAbd al-ᶜAzīz in Egypt in Dj. I, 86/May 705, only five months before the death of ᶜAbd al-Malik (Shawwāl 86/Oct. 705). He was succeeded by his eldest son al-Walīd [*q.v.*].

ᶜABD AL-MALIK B. NŪḤ [see SĀMĀNIDS].

ᶜABD AL-MALIK B. ṢĀLIḤ B. ALĪ, cousin of the caliphs Abu 'l-ᶜAbbās al-Saffāḥ and Abū Djaᶜfar al-Manṣūr. In the reign of Hārūn al-Rashīd ᶜAbd al-Malik led several campaigns against the Byzantines, in 174/790-1, in 181/797-8, and according to some authorities also in 175/791-2, although other sources assert that in this year the forces were commanded not by ᶜAbd al-Malik but by his son ᶜAbd al-Raḥmān. He was also for some time governor of Medina and held the same office in Egypt. At length, however, he could not escape the Caliph's suspicion; in 187/803 he was, for no adequate reason, thrown into prison and remained there until al-Rashīd's death in 183/809. The new Caliph, al-Amīn, restored him to liberty and appointed him in 196/811-2 governor of Syria and Upper Mesopotamia. ᶜAbd al-Malik set out at once for al-Raḳḳa, but fell ill and died in that town shortly afterwards (the year

of his death, 196/811-2, is confirmed by al-Masʿūdī, *Tanbīh* 348; but the same author, Murūdj, iv, 437, gives 197, while Ibn Khallikān indicates 193 (trans. de Slane, i. 316) and even 199 (ibid., iii, 665, 667). Some years later the caliph al-Maʾmūn ordered his tomb to be destroyed, it is said, because ʿAbd al-Malik had sworn, during the civil war between al-Amīn and al-Maʾmūn, never to pay homage to the latter.

ʿABD AL-MUʾMIN B. ʿALĪ B. ʿALWĪ B. YAʿLĀ AL-KŪMĪ ABŪ MUḤAMMAD, successor of the Mahdī Ibn Tūmart [*q.v.*] in the leadership of the reformist movement of *tawḥīd*, known as the Almohad movement (see AL-MUWAḤḤIDŪN), and founder of the Muʾminid dynasty, which in the West, in the 6th/12th century, took the place of the kingdoms of Ifrīḳiya and of the Almoravid dynasty of Morocco and of Spain, with its capital at Marrākush [*q.v.*].

The history of the origins of the Almohad movement and of the reign of ʿAbd al-Muʾmin has been illuminated and in large measure reinterpreted since the present author had the good fortune to find, in a miscellaneous collection in the Escurial library, some extracts from an anonymous *Kitāb al-Ansāb* devoted to the principal protagonists of the religious and political system set up by Ibn Tūmart, and especially the extremely lively and certainly authentic 'Memoirs' of a companion of the Mahdī and of his successor, Abū Bakr b. ʿAlī al-Ṣinhādjī, called al-Baydhaḳ (E. Lévi-Provençal, *Documents inédits d'histoire almohade*, Paris 1928). This extremely important find was followed by the discovery of a volume of the *Naẓm al-Djumān* by Ibn al-Ḳaṭṭān on the beginnings of the movement (published in part by E. Lévi-Provençal, *Six fragments inédits d'une chronique du début des Almohades*, in *Mélanges René Basset*, Paris 1925, ii, 335-93), and also of a collection of official letters from ʿAbd al-Muʾmin and his immediate successors (E. Lévi-Provençal, *Trente-sept lettres officielles almohades*, Rabat 1941; *Un recueil de lettres officielles almohades*, analysis and historical commentary, Paris 1941). It has thus become possible, without having to rely only on later Arabic historians, to attempt a detailed critical account of this period which covered a large part of the 6th/12th century and coincided with an unprecedented revolution in the history of the Islamic West—an account which, however, still remains to be written.

The circumstances of the meeting of Ibn Tūmart and of his disciple ʿAbd al-Muʾmin might have been regarded as legendary were they not confirmed by al-Baydhaḳ, who was a witness. ʿAbd al-Muʾmin, a humble student, of the Arabicized Berber tribe of the Kūmya, of the ethnic group of the Zanāta, settled in the north of what is now the province of Oran, not far from Nedroma, made no attempt to claim, as did his master, an Arab and even Prophetic ancestry until very much later. Still a young man—the year of his birth has not been ascertained—he had, with his uncle Yaʿlū, left his native village of Tāgrā to visit the East, or possibly Ifrīḳiya only, in order to complete his studies there. But this peregrination for the purpose of *ṭalab al-ʿilm* was to take him no further than Bougie (Bidjāya). It was in a suburb of that town, Mallāla, that Ibn Tūmart, the '*faḳīh* of the Sūs', as he was then called, who was on his way back to Morocco, encountered the man who was to be his successor. He persuaded him to join the small group of disciples who accompanied him, and taught him his "unitarian" doctrine, during the few months that he remained at Bougie. This meeting probably took place in the course of the year 511/1117.

From this time onwards and until the death of the Mahdī in 524/1130, ʿAbd al-Muʾmin plays an extremely active part at the side of his master, who attached him by adoption to his own tribe, the Hargha, and gave him a place in his "Council of Ten". He took part in all the expeditions, had a say in the deliberations of the Almohad general staff, and found a far-seeing protector in the person of the most active member of the movement, Abū Ḥafs ʿUmar al-Hintātī [*q.v.*]. It was the latter who, at the death of Ibn Tūmart, imposed on the Berber hillsmen of Tīnmallal acceptance of the choice made by the Mahdī of his own successor. Three whole years were, however, to elapse before ʿAbd al-Muʾmin was proclaimed. He then received from all his new subjects the *bayʿa* of allegiance, but had at the same time to face an uncertain political situation. Events were to reveal his outstanding qualities as a statesman, as a general, and as chief of a coalition which was still, in spite of appearances, heterogeneous. His first task was, leaving aside all other business, to break down the Almoravid structure, whose foundations were already undermined. Fortune favoured him to a degree beyond his highest hopes.

The career of ʿAbd al-Muʾmin as a sovereign began on the day of his proclamation, in 527/1133, and continued until his death in 558/1163. Here we shall merely summarise its principal stages.

The first stage was to secure for the Almohads the whole of Morocco. The conquest proved long and difficult. ʿAbd al-Muʾmin first of all attacked the Sūs and the Dra (Wādī Darʿa [*q.v.*]), then the line of Almoravid fortresses which in the North encircled the Grand Atlas, preventing access to the plains and to the capital, Marrākush. Then he swung towards the northeast, took the fortified towns of Damnāt and Dāy, and step by step secured possession of the middle Atlas and of the oases of the Tāfīlālt during the years 534-35/1140-41. Then the Almohad columns debouched into northern Morocco, and, from their base in the mountain massif of the Djebala, occupied the fortresses in the region of Tāzā. Thence, they went on to win over to the movement the sub-Mediterranean tribes of the Wādī Lāw, and of Bādis, Nakūr, Melilla, and the North-Oranian region; to his own village of Tāgrā, ʿAbd al-Muʾmin returned as a conqueror.

From this moment, ʿAbd al-Muʾmin, at the head of considerable forces, felt himself strong enough to abandon the guerrilla operations in hilly country which had hitherto been his tactics, and to confront the Almoravids in the plain. The carrying out of this intention was made all the easier for him by the death of the Almoravid amīr, ʿAlī b. Yūsuf b. Tāshufīn, which took place in 537/1134, leaving a tottering throne to his son Tāshufīn, and open rivalry between the Lamtūna and Massūfa chiefs in regard to the succession to the amirate. Another untoward circumstance for the Almoravids was the tragic death of one of their most devoted and skilful generals, the Catalan Reverter (al-Ruburtayr), leader of their Christian militia, who was killed in an engagement with the Almohads, in 539/1145, in eastern Morocco.

Finally, the adhesion of the Zanâta to the *tawḥīd* further inclined the balance in favour of the rebel movement. The armies of ʿAbd al-Muʾmin and of Tās̲h̲ufīn b. ʿAlī met before Tlemcen, and the Almoravid was forced to fall back on Oran, but he died as a result of a fall from his horse in the same year, 539. Now the road to Fez was open: first Oujda (Wad̲j̲da) and then Guercif (Ad̲j̲arsīf) were taken, and the capital of north Morocco fell after a siege of nine months in 540/1146, followed by Miknāsa (Meknès) and Salé.

This series of victories was quickly followed up by the capture of Marrākus̲h̲. The Almoravid capital made some attempt to resist the attackers, but was soon forced to capitulate, in spite of the heroic defence made by the garrison of the *ḳaṣaba* (S̲h̲awwāl 541/April 1147), and there was great slaughter of the Almoravids, among the dead being the young prince Isḥāḳ b. ʿAlī b. Yūsuf. Henceforward the Muʾminid dynasty had the capital of its choice. The Almoravid palace was selected as his personal residence by ʿAbd al-Muʾmin, who gave orders for the erection in its vicinity of the monumental Mosque of the Booksellers (*D̲j̲āmiʿ al-Kutubiyyīn*), whose imposing minaret still towers above Marrākus̲h̲ today.

The final destruction of Almoravid power made it possible for ʿAbd al-Muʾmin to organise his new empire, using as a basis the political system of the Almohad community, but broadened and adapted to his purpose. He carried out a new scrutiny of his supporters, thousands of whom, judged to be of doubtful loyalty or lacking in religious fervour, were put to the sword. Then it seemed to him that the time had come to extend his conquests beyond the boundaries of the Almoravid possessions in the Mag̲h̲rib, and he prepared to annex Ifrīḳiya.

Ifrīḳiya was in any case an easy prey at that moment. The Ṣinhād̲j̲ian dynasties of Bid̲j̲āya and Kayrawān were thoroughly undermined, and the wave of beduin incursions was swamping the whole country, while the Normans, led by Roger II, king of Sicily, were gaining a foothold in the principal ports of Ifrīḳiya. An Almohad expedition against Ifrīḳiya could therefore be regarded as all the more justified, in that it could claim to be a *d̲j̲ihād* against the infidel. ʿAbd al-Muʾmin concentrated his troops at Salé, in 546/1151, then, in the course of an irresistible thrust towards the east, took possession one after another of Algiers, Bougie and of Ḳalʿat Banī Ḥammād, and utterly routed near Setif the nomadic Arabs, formerly in the service of the Ḥammādids of Bougie; after which he did not scorn to accept their services, and for the time being refrained from advancing any further towards Tunisia.

Ifrīḳiya properly so called was not conquered until eight years later. ʿAbd al-Muʾmin, leaving as his lieutenant in the Mag̲h̲rib Abū Ḥafs ʿUmar al-Hintātī, arrived before Tunis, after a journey of six months, in D̲j̲umādā II 554/June 1159. Having taken the town, he went on towards al-Mahdiyya and attacked this fortified town, which was in the hands of Roger II of Sicily, with powerful forces; the town fell in Muḥarram 555/January 1160. In the course of this campaign he also secured possession of Sūsa, Ḳayrawān, Sfax, Gafsa, Gabes, and Tripoli. Then the ruler returned to Marrākus̲h̲, whence he left for Spain in 556/1161.

The establishment of the Almohads in the Iberian peninsula had begun in 539/1145, immediately after the capture of Tlemcen. In the next year the Almoravid admiral Ibn Maymūn, who had gone over to ʿAbd al-Muʾmin, contributed his part by taking Cádiz. In 541/1157 an Almohad army took successively the fortified towns of Jerez, Niebla, Silves, Beja, Badajoz, Mertola, and finally Seville. In 549/1154 Granada was surrendered to the new masters of the country by its Almoravid governor. In 552/1157 Almeria was recaptured from the Christians, who had seized it, and whose designs on al-Andalus became ever more obvious. It was in these circumstances that ʿAbd al-Muʾmin decided to cross the Straits himself, and established his head-quarters at Gibraltar (D̲j̲abal Ṭāriḳ, afterwards D̲j̲abal al-Fatḥ), whose reconstruction he had ordered in the previous year. He remained there for two months of winter, and sent out his columns towards Jaén, where the mercenaries of Ibn Mardanīs̲h̲ [*q.v.*] had engaged in raiding.

ʿAbd al-Muʾmin returned to Morocco at the beginning of 558/1162. He proceeded to concentrate his troops in the huge enceinte built opposite Salé, the *Ribāṭ al-Fatḥ*, now Rabat, with a view to another expedition to the Iberian peninsula. But he had to take to his bed, and, after a long and painful illness, died in the month of D̲j̲umādā II 558/May 1163. (All the historians agree as to the month and the year, but not as to the actual day). His remains were taken from Salé to Tīnmallal and buried near the tomb of the Mahdī Ibn Tūmart.

In all probability, it was at the time of the capture of Marrākus̲h̲ that ʿAbd al-Muʾmin had allowed his entourage to confer on him the exalted title of *amīr al-muʾminīn*, whereas the Almoravids had used only the title *amīr al-muslimīn*, recognising the spiritual suzerainty of the ʿAbbāsid caliphate of the East. Also, breaking with the Almoravid tradition, which itself had been inspired by the Hispano-Umayyad organisation, he set up an administrative system which took into account the political needs of his great empire, as well as his desire not to give offence to his entourage of Berbers, "Almohads from the very beginning". Many regulations that formed part of this system are still in existence in the organisation of the *mak̲h̲zen* [*q.v.*] of modern Morocco. But he had also to turn to Andalusian experts for his chancellery, mostly to men who had formerly been secretaries at the Almoravid court. He cleverly secured his succession in the direct line, and in 549/1154 had his eldest son Muḥammad nominated as heir presumptive. In 551/1156 he appointed his other sons to governorships of the principal towns of his empire, posting with each one, as mentors, men of the highest rank in the Almohad hierarchy.

Various estimates have been given of ʿAbd al-Muʾmin, who was in no way marked out for the brilliant career that he made for himself. If, at the beginning and during the years that followed the death of Ibn Tūmart, he seems to have been somewhat timid and to have allowed himself to be led by his principal collaborator Abū Hafs ʿUmar Īntī, it appears that he later manifested in increasing measure not only strategic but also political qualities, handling tactfully his susceptible entourage of Almohad Berbers, winning the good will of the Arabs of Ifrīḳiya after subjugating them, and carrying out with great intelligence and energy, and also cruelty, his role as head of a State and guardian of the doctrine of the Mahdī, to whom he owed his own fortune and that of his dynasty.

ʿABD AL-MUṬṬALIB B. HĀS͟HIM, paternal grandfather of Muḥammad. Passing through Medina on trading journeys to Syria, Hās͟him b. ʿAbd Manāf married Salmā bint ʿAmr of the clan of ʿAdī b. al-Nad̲j̲d̲j̲ār of the K͟hazrad̲j̲, by whom he had two children, ʿAbd al-Muṭṭalib (or S͟hayba) and Ruḳayya. The mother and her son remained in her house in Medina, this apparently being the practice of her family in accordance with a matrilineal kinship system. Some time after Hās͟him's death his brother al-Muṭṭalib tried to strengthen his deteriorating position in Mecca by bringing his gifted nephew from Medina to help him. The common explanation that the youth was called ʿAbd al-Muṭṭalib because he was mistaken for the slave of al-Muṭṭalib is not acceptable; the name has probably a religious significance. Arabic sources give the impression that ʿAbd al-Muṭṭalib was the leading man in Mecca (*sayyid Ḳuraysh*), whereas some Western scholars have tried to show that he was insignificant. It seems more probable that he was a leader of a political group within Ḳuraysh which had developed out of the alliance of the Muṭayyabūn (B. ʿAbd Manāf, B. Asad, B. Zuhra, B. Taym, B. al-Ḥārit͟h b. Fihr) by the secession of B. Nawfal b. ʿAbd Manāf and B. ʿAbd S͟hams b. ʿAbd Manāf. It is significant that ʿAbd al-Muṭṭalib is said to have had disputes with Nawfal and with the grandson of ʿAbd S͟hams. Moreover it is doubtless as leader of this group that he negotiated with the leader of an Abyssinian army invading Mecca, perhaps hoping thereby to obtain some advantage over Meccan rivals. He also appears to have been in alliance with tribes from the neighbourhood of Mecca, K͟huzāʿa, Kināna and T͟haḳīf, and to have owned a well at al-Ṭāʾif. The basis of his prosperity was trade, especially with Syria and the Yemen, coupled with the *siḳāya* and *rifāda* (the privilege of supplying pilgrims to Mecca with water and food), which he had inherited from Hās͟him. He is credited with having dug several wells, notably that of Zamzam at the Kaʿba. Fāṭima bint ʿAmr (of B. Mak͟hzūm) was mother of most of his children, including ʿAbd Allāh [*q.v.*] (Muḥammad's father) and Abū Ṭālib; he had other wives from B. Zuhra of Ḳuraysh, al-Namir, ʿĀmir b. Ṣaʿṣaʿa and K͟huzāʿa, mothers respectively of Ḥamza, al-ʿAbbās, al-Ḥārit͟h and Abū Lahab. On the death of Muḥammad's mother he took the boy of six to his own house. While the stories about ʿAbd al-Muṭṭalib have been subject to tendentious shaping, there may be more fact underlying them than sceptical Western scholars have allowed.

MIRZĀ **ʿABD AL-RAḤĪM K͟HĀN**, K͟HĀN-I K͟HĀNĀN, general, statesman and scholar, was born in Lahore, 14 Ṣafar 964/16 Dec. 1556, the son of Akbar's first *wakīl*, Bayram K͟hān [*q.v.*]. He belonged to the Bahārlu, a branch of the Ḳara Ḳoyunlu Turkmens, and his mother was a daughter of D̲j̲amāl K͟hān Mewātī, whose elder daughter the emperor Humāyūn had married. When he was four his father was murdered and he was thereafter brought up by Akbar himself, who gave him an excellent education and training, and from whom he received the title of Mirzā K͟hān. In 1572 he accompanied Akbar to Gud̲j̲rāt and then had assigned to him, under the tutelage of Sayyid Aḥmad of Bāraha, the district of Patan, within which his father had been murdered.

In D̲j̲umādā I 981/Aug. 1573 he accompanied Akbar on his historic forced march to Gud̲j̲rāt and he shared the command of the centre in the battle of Sarnāl which destroyed the power of the rebel Mirzās. In 1576 he was appointed governor of Gud̲j̲rāt, Wazīr K͟hān Harawī being entrusted with the actual administration of the province. He was deputed in the same year to the Mewār expedition and assisted in the conquest of Gogunda and Kumbhalmēr in 1578. As a mark of great confidence the emperor appointed him, in 1581, *mīr ʿarḍ*, an office which was previously held by seven officers jointly. He was also given the *d̲j̲āgīr* of Ranthambore and ordered to pacify the area. In 1582 he was appointed *atālīḳ* to Akbar's son Salīm, then a boy of thirteen. In 1583 he was deputed to suppress the revolt of Muẓaffar S͟hāh Gud̲j̲rātī, which he broke by defeating Muẓaffar against heavy odds in Muḥarram 992/Jan. 1584, at the two battles of Sarkhēd̲j̲ and Nādōt. In recognition of his victories he was given the title of K͟hān-i K͟hānān and raised to what was till then the highest *manṣab*, of 5,000. He remained in command of Gud̲j̲rāt, pursued Muẓaffar into Kāthiawār, and subjugated Nawānagar. In 1585, during his temporary absence at the court, Muẓaffar again raised the banner of revolt. He quickly returned to Gud̲j̲rāt and pacified the province. In the following year, when the system of joint governors was instituted, Ḳulid̲j̲ K͟hān was associated with him in the government of the province. In 1587 he was permitted to return to the court while retaining nominally the governorship. In 1589, Gud̲j̲rāt was taken from him and given to Mirzā ʿAzīz Kūka, the brother of his wife, Māh Bānū.

In the same year he was appointed to the highest office at the court, that of *wakīl*, and given D̲j̲awnpūr as *d̲j̲āgīr*. In that year he presented to the emperor his Persian translation of *Bābur-nāma*, entitled *Wāḳiʿāt-i Bāburī*. In 1590-1 his *d̲j̲āgīr* was transferred against his wishes from D̲j̲awnpūr to Multān and Bhakkar and he was appointed to command the army sent to conquer Ḳandahār and to annex Thatta, then held by Mirzā D̲j̲ānī Beg Tark͟hān. ʿAbd al-Raḥīm decided, according to Abu 'l-Faḍl, to proceed against Thatta in preference to Ḳandahār in the hope of getting more booty. Consequently the command of the Ḳandahār expedition was entrusted to Akbar's son Daniyāl. In 1000/1591-2 the conquest of Thatta was completed. Mirzā D̲j̲ānī Beg married one of his daughters to ʿAbd al-Raḥīm's son, S͟hāh Nawāz K͟hān (Irid̲j̲), and came to the court along with ʿAbd al-Raḥīm.

In 1593 he was appointed to assist the prince

Daniyāl who was given the command of an expedition to the Deccan, but on his advice the expedition was cancelled. Two years later, when the conquest of the Deccan was entrusted to another of Akbar's sons, Murād, ʿAbd al-Raḥīm was given Bhilsa as *djāgīr* and ordered to assist the prince. From this time his services were directed to the Deccan, except for short breaches, for nearly thirty years. In consequence of his delay, he was received discourteously by Murād and did not take an active part in the campaign except when he defeated a largely outnumbering force under Suhayl Khān of Bidjāpūr in an important battle fought in 1597. His relations with the prince remained strained and in 1598 he was recalled from the Deccan.

On the death of Murād, Daniyāl was appointed to the Deccan in 1599; ʿAbd al-Raḥīm was ordered to join him and besiege Aḥmadnagar, which was being heroically defended by Čānd Bībī. After the fall of Aḥmadnagar Daniyāl was appointed to its government and was married to Djāni Bēgum, ʿAbd al-Raḥīm's daughter. In 1601 ʿAbd al-Raḥīm was ordered to repair to Aḥmadnagar and pacify the territory and in the following year the command of Berār, Pathrī and Telingāna was made over to him.

When Salīm ascended the throne with the title of Djahāngīr, ʿAbd al-Raḥīm was in the Deccan. He was confirmed in his post and the emperor especially sent Muḳarrab Khān to reassure him. When Malik ʿAnbar, the commander of the Niẓām Shāhī dynasty of Aḥmadnagar, made a bold bid to recover the territory lost to the Mughals, ʿAbd al-Raḥīm promised the emperor quick victory provided he received adequate assistance. A strong army under the command of Djahāngīr's son Parwīz was despatched to assist him, but largely as a result of lack of cooperation among the generals, ʿAbd al-Raḥīm was compelled to conclude a dishonourable treaty with Malik ʿAnbar in 1610. He was recalled to the court in disgrace and accused of mismanagement and treachery. He was soon forgiven and in the following year received Kālpī and Ḳannawdj as *djāgīr* with the responsability of suppressing revolts in those districts.

Since, however, Mughal fortunes in the Deccan did not improve, ʿAbd al-Raḥīm was again appointed to the Deccan in 1021/1612, but could do little more than retrieve the situation, until in 1616 Parwīz was replaced by the prince Khurram (later Shāh Djahān) who was sent with a large force. Malik ʿAnbar was defeated and concluded in 1617 a treaty restoring the Mughal conquests, but again attacked Mughal territory in 1620 and was again defeated by Shāh Djahān. In 1622 Shāh Djahān was recalled from the Deccan along with ʿAbd al-Raḥīm and asked to command the army against the Persians who had conquered Ḳandahār. Shāh Djahān refused to obey the summons and revolted. ʿAbd al-Raḥīm joined him but was arrested for communicating with Mahābat Khān, the commander of the Imperial forces, and subsequently released on the latter's insistence to negotiate terms of peace. When he reached the Imperial army, his communication with the rebel forces was cut off and although he agreed to join the Imperial side, he was placed under surveillance.

In 1625 Djahāngīr called him to the court, restored his title and honours and gave him one lac of rupees as a gift. After the emperor was released from the captivity of Mahābat Khān, who had rebelled, ʿAbd al-Raḥīm asked for the command of the expedition against the rebel general, and towards the close of 1626 was ordered to make preparations for the expedition and was assigned most of the *djāgīrs* formerly held by Mahābat Khān. Before the preparations were completed, he fell ill at Lahore, and died on arrival at Delhi in 1036/1627, at the age of 71. His tomb still stands near that of the *shaykh* Niẓām al-Dīn Awliyā. He survived his four sons, Mirzā Iridj entitled Shāh Nawāz Khān, who rose to be a commander of 5,000 and died in 1619; Mirzā Dārāb entitled Dārāb Khān, also a distinguished commander who was made governor of Bengal by Shāh Djahān during his rebellion, fell into the hands of Mahābat Khān and was executed in 1625-6; Mirzā Raḥmān-dād (d. 1619); and Mirzā Amr Allāh who died young.

Mirzā ʿAbd al-Raḥīm was a distinguished scholar and poet, and was proficient in Arabic, Persian, Turkī and Hindī. Under the pseudonym Raḥīm he composed poetry in all four languages. He is especially famous for his Hindi poetry which is saturated with the emotions of *bhakti*. He was a great patron of arts and letters, and the *Maʾāthir-i Raḥīmī* contains a long list of poets who enjoyed his patronage. His munificence and generosity were proverbial and anecdotes of his liberality are numerous. Though frequently accused of treachery and corruption, he possessed a better grasp of the problems of the Deccan than any other Mughal general.

In his religious views he was professedly a Sunnī. Though religious leaders like *shaykh* Aḥmad Sarhindī and *shaykh* ʿAbd al-Ḥaḳḳ Dihlawī counted him among the orthodox, his religious outlook remained mystical and liberal. The belief that he was suspected of practising *taḳiyya* and of secretly following Shīʿite tenets is not supported by contemporary evidence.

(NURUL HASAN)

ʿABD AL-RAḤMĀN, the name of the **Marwānid prince** who restored the Umayyad dynasty in al-Andalus, and of four of his successors.

1. ʿABD AL-RAḤMĀN I, called *al-Dākhil*, 'the Immigrant', was the son of Muʿāwiya b. Hishām [*q.v.*]. When his relatives were being hunted down by the ʿAbbāsids, ʿAbd al-Raḥmān, still a youth—he was born in 113/731—contrived to escape secretly to Palestine, whence, accompanied by his freedman Badr, he made his way first to Egypt, and then to Ifrīḳiya. At Ḳayrawān, the hostile attitude of the governor, ʿAbd al-Raḥmān b. Ḥabīb, drove him to seek refuge in the Maghrib. He stayed for some time in the region of Tāhart; subsequently he sought hospitality first from the Berber tribe of the Miknāsa, and then from the Nafza tribe, on the Moroccan shore of the Mediterranean, taking ad-

vantage of his family connections—his mother having been a captive woman from that very tribe. But the Berbers did not look with favour on the political schemes of the young Syrian émigré, who with the help of his *mawlā*, decided to try his luck in Spain.

ʿAbd al-Raḥmān b. Muʿāwiya managed most cleverly, and with keen political sense, to turn to account the bitter rivalries which at that time grouped the Arab Ḳaysite party and Yamanite party in the Iberian peninsula in opposed camps. We succeeded similarly in enlisting the support of the numerous Umayyad clients who had come to Spain with Baldj b. Bishr [*q.v.*], and who formed there a local cadre of Syrian *djunds* dominating a large part of the south of Andalusia. The ground having been well prepared by Badr, ʿAbd al-Raḥmān entered the peninsula: he disembarked at Almuñecar (al-Munakkab) on 1 Rabīʿ I 138/14 August 755, and at once put forward his claim to the sovereign power. The governor of al-Andalus, Yūsuf b. ʿAbd al-Raḥmān al-Fihrī, soon had to take up arms against him. ʿAbd al-Raḥmān, whose forces were continually increasing, made his entry into Seville in Shawwāl 138/March 756, defeated Yūsuf al-Fihrī in the outskirts of Cordova on the 10 Dhu 'l-Ḥidjdja following (15 May), and entered the capital, where he was proclaimed amīr of al-Andalus.

The founder of the Umayyad amirate of Cordova was to reign for more than thirty-three years. He spent the greater part of them in consolidating his position in the capital itself. The news of his success spread in the East, and soon a stream of dependents or supporters of the Umayyads was flowing into Spain to help with the restoration in the West of the dynasty that in the East had fallen from power. It was not long before the amīr of Cordova was forced to confront a multitude of political problems. He had first of all to subdue finally the former *wālī* Yūsuf al-Fihrī, who had collected round him a certain number of malcontents and tried to retake Cordova; but he was defeated in 141/758 and in the next year was killed near Toledo. Meanwhile, just as in the time of the former governors, embers of revolt were smouldering in almost every part of the new kingdom; unrest was stirred up not only by the neo-Muslim Spaniards and by the Berbers of the mountainous regions, but also by the mutual hostility of the Arab clans. ʿAbd al-Raḥmān I thus had to stamp out rebellion at many different point: for example, in 146/763, the rising of the Arab chief al-ʿAlāʾ b. Mughīth al-Djudhāmī, and, in 152/769, that of the Berber Shaḳyā in the Santaver district (Shantabāriyya), now the province of Cuenca. Later, a certain number of the Arab chiefs on the eastern side of the Peninsula formed a coalition, and asked for help from Charlemagne. The latter himself crossed the Pyrenees at the head of a Frankish army and laid siege to Saragossa in 162/778; but a sudden recall to the Rhineland compelled him to raise the siege. On the way back his army was attacked in the narrow valley of Roncesvalley by bands of Basques (Bashkunish) and was decimated (episode of Roland, Duke of Brittany). ʿAbd al-Raḥmān in his turn laid siege to Saragossa, and gained possession of it for a time. But he was forced to give up the idea of recapturing other towns that had fallen into the hands of the Christians. Thus it was that Gerona (Djarunda) came under Frankish control in 169/785.

Three years later, on 25 Rabīʿ II 172/30 September 788, ʿAbd al-Raḥmān I died at Cordova before reaching his sixtieth year. The State of Cordova was doubtless still very insecure; but at least he had provided it with an administrative and military organisation similar, on a lesser scale, to that of the former caliphate of Damascus, and which was to last as long as the Marwānids of al-Andalus remained faithful to the 'Syrian tradition'. In any case, the success of the 'Immigrant' made a deep impression in the East, and the ʿAbbāsid caliph Abū Djaʿfar al-Manṣūr gave him the name *ṣaḳr Ḳuraysh*, 'Hawk of Ḳuraysh', as a tribute to his courage and his spirit of enterprise.

Bibliography: E. Lévi-Provençal, *Hist. Esp. mus.*, I, 91-138. The essential Arabic source for the career of ʿAbd al-Raḥmān I is the anonymous compilation entitled *Akhbār Madjmūʿa* [*q.v.*], 46-120. For the other sources and the bibl., see *Hist. Esp. mus.*, I, 91, n. 1.

2. ʿABD AL-RAḤMĀN II b. al-Ḥakam b. Hishām b. ʿAbd al-Raḥmān b. Muʿāwiya, great-grandson of the above, succeeded his father al-Ḥakam I on 25 Dhu 'l-Ḥidjdja 206/21 May 822. He was born at Toledo in 176/792 and was chosen as heir presumptive by his father. The recent discovery of that part of the *Muḳtabis* of Ibn Ḥayyān which deals with the reigns of al-Ḥakam I and ʿAbd al-Raḥmān II has made it possible for the present writer to offer a rather different picture of the latter sovereign and of the kingdom of al-Andalus during his period from that which Dozy based on the documentation available in his time. It now appears that the reign of ʿAbd al-Raḥmān II, which covered a third of a century, was much more prosperous and brilliant than was thought hitherto; in the history of Andalusian civilisation it represented a decisive turning-point, when for the first time there penetrated to Cordova manners and a way of life directly borrowed from Baghdād and from the ʿAbbāsid civilisation which firmly set their stamp on the aristocracy (*khāṣṣa*) of Muslim Spain, and led to a continuous ebbing of the Syro-Umayyad tradition in the Marwānid kingdom.

At the beginning of the reign of ʿAbd al-Raḥmān II some disturbances, which came about as a reaction against the iron rule with which al-Ḥakam I had governed al-Andalus, were easily put down; gradually the Levante territories (Sharḳ al-Andalus) were brought completely under the crown, and a new town, Murcia was founded in 216/831 to replace the former chief town, Ello. A revolt on a considerable scale broke out at Toledo; it was finally put down, and the town taken by storm in 222/837. At the same time the ruler of Cordova took up afresh the struggle against the Christians along the frontiers of al-Andalus, and nearly every year personally led or sent summer expeditions (*ṣāʾifa*) against the Asturio-Leonese kingdom. He also had to deal with the revolt of the Berber Maḥmūd b. ʿAbd al-Djabbār in the region of Merida and with the minor aggressive outbursts of the *muwallad* Banū Ḳasī family [*q.v.*] of Aragon, while at the same time waging war, at regular intervals, against the Basque kingdom of Pamplona and the Hispanic Marches (now Catalonia), which then formed part of the empire of the Franks (Ifrandj; *q.v.*).

Two important political events also took place during the reign of ʿAbd al-Raḥmān II. The first, following upon a recrudescence of nationalist propaganda, was the tenacious revolt of the Mozarab Christians [*q.v.*] of Toledo and Cordova, fomented by certain fanatics. Arabic historiography makes no mention of this revolt, and information about it

can only be obtained from a few contemporary Latin sources. Not without reluctance, the government of Cordova had to deal severely with a large number of Mozarabs, priests and lay persons, men and women, who were guilty of having reviled the religion of the Prophet. At this time there was a disturbing outbreak of voluntary martyrdom, which was brought to an end by a Council held at Cordova and presided over by the Metropolitan of Seville (*maṭrān*) in 238/862. Seven years later the priest Eulogus, who had been the leading spirit of this movement and was trying to reanimate it, was arrested and beheaded, by the orders of amīr Muḥammad I.

Far more serious was the raid of the Norsemen, in 230/844, on Muslim Spain. The flotillas of Norsemen (Urdumāniyyūn), usually called Madjūs [*q.v.*] by the Chroniclers, first made their appearance at Lisbon, then came up the Guadalquivir from its mouth and sacked Seville and all the surrounding country. The counter-stroke was not delayed, and after a bloody battle Seville was recaptured from the pirates at the end of Ṣafar 230/14 November 844. To meet this unexpected menace and to forestall any new attack the navy was reinforced.

ʿAbd al-Raḥmān II instituted friendly relations with three little independent kingdoms of western Barbary: the Rustumid kingdom of Tāhart, the Ṣāliḥid kingdom of Nakūr, and the Midrārid kingdom of Sidjilmāssa, but made no advances to the Aghlabids of Ifrīḳiya, who were partisans of the ʿAbbāsids and had just conquered Sicily. From his reign too dates the opening of diplomatic relations between Cordova and Byzantium. An embassy from the emperor Theophilus arrived in Spain in 225/840 to demand the restitution of Crete, which had been occupied by the Andalusian adventurer Abū Ḥafs ʿUmar al-Ballūṭī [*q.v.*]. The reply was in the negative, but a Cordovan deputation, of which the poet al-Ghazāl [*q.v.*] was a member, went to Constantinople at this time.

ʿAbd al-Raḥmān II was to become particularly renowned as an organiser and builder, and as a patron of letters and the arts. He reorganised the administration of his kingdom on the lines of the ʿAbbāsid system, ordered the construction at Cordova of several works of public utility, and on two occasions undertook the extension of the great mosque in his capital, in 218/833 and 234/848. His court soon became most brilliant, from the time when the musician and singer Ziryāb [*q.v.*], who came to Cordova in 207/822, won acceptance at Cordova for the refined usages of the Baghdad civilisation. Several poets won fame in the entourage of the amīr of Cordova: for example, al-ʿAbbas ibn Firnās [*q.v.*], al-Ghazāl, mentioned above, and Ibrāhīm ibn Sulaymān al-Shāmī. During his reign the Mālikite school of Cordova developed greatly, and several *faḳihs* acquired a reputation in juridical science, in particular the Berber Yaḥyā [*q.v.*] al-Laythī, whose dictates ʿAbd al-Raḥmān II followed in his choice of ḳāḍīs. The end of the amīr's life was darkened by palace intrigues, instigated by his *fatā* Naṣr and by his concubine Ṭarūb. He died at Cordova on 3 Rabīʿ II 238/22 September 852, after a reign that, taken as a whole, can be called glorious, and which should henceforward be assigned the position which it deserves in the history of Umayyad Spain.

Bibliography: E. Lévi-Provençal, *Hist. Esp. mus.*, I, 193-278 (sources and bibliography ibid., 193, n. 1).

3. **ʿAbd al-Raḥmān III b. Muḥ. b. ʿAbd Allāh, the greatest of the Hispano-Umayyad rulers and** first caliph of al-Andalus.

The successor of the amīr ʿAbd Allāh was only twenty-three at the time of his accession; in spite of his youth he had been chosen by his grandfather as heir presumptive because of his high qualities. The choice was fully justified. Indeed, no reign in the annals of Hispanic Islam was more brilliant or more glorious. Its great length—a whole half century, from 300/912 to 350/961—ensured for the policies of ʿAbd al-Raḥmān III the benefits of an unusual degree of continuity, and made it possible for him to subdue one after another all the centres of disaffection in al-Andalus.

The reign of ʿAbd al-Raḥmān III can be divided into two principal periods: first a period of internal pacification, the result of which was the achievement of political unity in the kingdom of Cordova, a unity which had been gravely threatened in the reign of amīr ʿAbd Allāh [*q.v.*]; then a longer period, mainly distinguished by activity in external policy: an offensive against Christian Spain, and a struggle with the Fāṭimid empire for influence in North Africa.

As soon as he came to the throne, ʿAbd al-Raḥmān III mustered all his resources to put an end to the revolt in southern Andalusia, and to neutralise once and for all the aggressive power of the principal instigator of this revolt, ʿUmar b. Ḥafṣūn [*q.v.*]. Until 305/917 he unceasingly harassed the Andalusian rebels and attacked the Arab aristocrats of Seville, Carmona, and Elvira, who were forced to submit. After the death of Ibn Ḥafṣūn, his sons quickly gave up the struggle. Their head-quarters at Bobastro [*q.v.*] were taken by storm in 315/928. Five years later the last centre of resistance, Toledo, fell in its turn.

At the same time the ruler of Cordova took care not to allow himself to be outflanked by sporadic outbursts of aggression by his Christian neighbours. He stopped the advance of the king of Asturio-Leon, Ordoño III, in 308/920, and seized a series of strongholds along the strategic line of the Duero, Osma, San Esteban de Gormaz, and Clunia, particularly after his victory at Juncaria (Valdejunquera). Four years later the victorious operations known as the Pamplona campaign put him in a position to sack the Basque capital, the seat of Sancho Garces I, and to secure his land frontiers for several years. But he was to find a powerful opponent in the new king of Leon, Ramiro II, who, shortly after his accession, took the offensive against Islam and, after a series of encounters in which he was beaten, succeeded in inflicting on the ruler of Cordova, in 327/939, the very serious defeat at the "moat" of Simancas (sometimes wrongly called the battle of Alhandega).

Ten years had already passed since ʿAbd al-Raḥmān III, after the taking of Bobastro, and as a retort to the designs of the Fāṭimids on his realm, had adopted the exalted title ***amīr al-muʾminīn***, and the honorific appellation al-Nāṣir li-Dīn Allāh. He was now to pursue in North Africa a policy of attraction and to combat, particularly in Morocco, the influence of the new masters of Ifrīḳiya. In order to secure from bases of operations on African soil, he occupied certain presidios, Ceuta in particular, which was taken in 319/931. On this battle of influences, which was to continue until the end of the tenth century, see the art. UMAYYADS OF SPAIN.

After the Simancas disaster, ʿAbd al-Raḥmān III quickly succeeded in restoring the situation, especially as his enemy Ramiro II died in 339/951 and his sons Ordoño III and Sancho quarreled over the succession. Al-Nāṣir took full advantage of the civil wars which at that time steeped the kingsdoms of Leon and Pamplona in blood (for fuller details see the art. UMAYYADS).

ʿAbd al-Raḥmān III died at Cordova on 22 Ramaḍān 350/15 October 961, at the height of his fame and power. During the latter part of his reign he had lived in the style of a veritable potentate, and had transferred his residence to his royal establishment of Madīnat al-Zahrā' [*q.v.*], at the gates of Cordova, which he made into a town by itself. Of the kingdom of al-Andalus, which under his predecessors had ever been an object of contention shaken by civil war, the rivalries of the Arab clans, and the clash of ethnic groups in opposition to each other, he had contrived to make a pacified, prosperous, and immensely rich State. From that time Cordova was a Muslim metropolis, a rival to Ḳayrawān and to the great cities of the East. It far surpassed the other capitals of Western Europe, and enjoyed in the Mediterranean world a reputation and a prestige comparable to that of Constantinople.

Bibliography: E. Lévi-Provençal, *Hist. Esp. mus.*, II, 1-164 (Arab. sources and bibl., *ibid.*, 1, note 1).

4. ʿABD AL-RAḤMĀN IV b. Muḥ. b. ʿAbd al-Malik b. ʿAbd al-Raḥmān, grandson of ʿAbd al-Raḥmān al-Nāṣir, Umayyad caliph of al-Andalus, who took at the beginning of his short reign the honorific title of al-Murtaḍā. This personage, who, at the time of the *fitna* of Cordova, had retired to Valencia, was proclaimed at the end of 408/1018, after the assassination of ʿAlī b. Ḥammūd [*q.v.*] by a number of supporters collected together by the lord of Almeria, the Sclavonian *fatā* Khayrān. Al-Murtaḍā, before trying to retake Cordova and to instal himself there, laid siege to Granada, where the Ṣinhādja of Zāwī b. Zīrī [*q.v.*] were in command, and suffered a serious defeat. Betrayed, and abandoned by his own men, he took refuge at Guadix (Wādī Āsh), where he was before long assassinated.

Bibliography: E. Lévi-Provençal, *Hist. Esp. mus.*, II, 328-30.

5. ʿABD AL-RAḤMĀN V b. Hishām b. ʿAbd al-Djabbār, one of the last Umayyad caliphs of al-Andalus, was proclaimed on the 16 Ramaḍān 414/2 December 1023 at Cordova, and took the honorific title of al-Mustaẓhir bi'llāh. He had barely attained his majority, and showed remarkable literary gifts. He surrounded himself with counsellors chosen from among the aristocracy of the capital, men such as the great writer ʿAlī b. Ḥazm, but was able to remain in power for only forty-seven days. The Cordovan mob deposed him in the course of a riot, and replaced him by Muḥammad III al-Mustakfī, on 3 Dhu 'l-Ḳaʿda of the same year/17 January 1024. The first act of his successor was to put ʿAbd al-Raḥmān al-Mustaẓhir to death.

Bibliography: E. Lévi-Provençal, *Hist. Esp. mus.* II, 334-5. (E. LÉVI-PROVENÇAL)

ʿABD AL-RAḤMĀN B. MUḤAMMAD B. **ABĪ ʿĀMIR**, nicknamed Sanchuelo (Shandjwilo), the "little Saucho" (as he was by his mother a grandson of Sancho Garcés II Abarca, Basque king of Pamplona), son of the famous" majordomo" al-Manṣūr [*q.v.*] b. Abī ʿĀmir. He suceeded his elder brother ʿAbd al-Malik [*q.v.*] al-Muẓaffar on his death, 16 Ṣafar 399/20 Oct. 1008, with the consent of the titular caliph, the Umayyad Hishām II al-Mu'ayyad bi'llāh.

Indifferently gifted, vain, debauched, ʿAbd al-Raḥmān Sanchuelo, from the moment that he assumed power in Cordova, made one mistake after the other and alienated public opinion. He started by obtaining from Hishām II his designation as presumtive heir of the crown. The text of the document of investiture, dated Rabīʿ I 399/Nov. 1008, has been preserved. The designation was very badly received by the people of Cordova, who were already exasperated by the pro-Berber feelings of the ʿĀmirid *ḥādjib*. While ʿAbd al-Raḥmān misguidedly decided to go, in the middle of winter, on an expedition against the kingdom of Leon, an opposition party was formed in Cordova. They elevated to the throne the Umayyad Muḥammad b. Hishām b. ʿAbd al-Djabbār, whose first care was to order the sack of the residence of the ʿĀmirids, al-Madīna al-Zāhira [*q.v.*]. The reaction of ʿAbd al-Raḥmān to this news was half-hearted. He turned back in the direction of Cordova, but during his return journey he was abandoned by his troops and arrested, not far from the capital, by emissaries of the Umayyad pretender, who put him to death, 3 Radjab 399/3 March 1009.

ʿABD AL-RAḤMĀN B. **ʿALĪ** [see IBN AL-DAYBAʿ].

ʿABD AL-RAḤMĀN B. **ʿAWF**, originally called ʿAbd ʿAmr or ʿAbd al-Kaʿba, the most prominent early Muslim convert from B. Zuhra of Ḳuraysh. He took part in the Hidjra to Abyssinia and in that to Medina, and fought at Badr and the other main battles. He commanded a force of 700 men sent by Muḥammad in Shaʿbān 6/December 627 to Dūmat al-Djandal; the Christian chief, al-Aṣbagh (or al-Aṣyaʿ) al-Kalbī, became a Muslim and made a treaty, and ʿAbd al-Raḥmān married his daughter Tumāḍir (but cf. Caetani, *Annali*, i, 700). By his shrewdness and skill as a merchant he made an enormous fortune. Politically he was a friend of Abū Bakr and later of ʿĀ'isha. On ʿUmar's death, as one of the Shūrā or council of six who had to choose the new caliph, he played a leading part in the appointment of ʿUthmān. He died about 31/652 aged 75. According to Tradition he was one of the ten whom Muḥammad had assured of Paradise.

(M. TH. HOUTSMA—W. MONTGOMERY WATT)

ʿABD AL-RAḤMĀN B. **HISHĀM**, ʿAlawid [*q.v.*] sultan of Morocco, born in 1204/1789-90. Proclaimed in Fez, 15 Rabīʿ I 1238/30 Nov. 1822, he succeeded his uncle Mawlāy Sulaymān [*q.v.*] who had appointed him as his heir. Recognized without great difficulties, the new sovereign had nevertheless to repress during his reign several revolts of the tribes. Among these were the revolts of Zemmūr, in 1240/1824-5, in 1259/1843, in 1269/1852 and in 1274-5/1857-8, the revolt of Banū Zarwāl in 1241/1825, that of Shidyāma in 1243/1827-8, that of ʿAmir and Zaʿā'ir in 1265/1849 and that of Banū Mūsā in 1269/1853. The two most serious revolts were, however, that of Shrārda in 1244/1828 and that of the *geysh* of Wadāya in 1247-8/1831-2. The sultan besieged Fāz al-Djadīd, where the rebels had fortified themselves, and after taking the city, dismissed them and scattered them near Marrākush, at Rabat and at al-ʿArā'ish (Larache).

The relations of Mawlāy ʿAbd al-Raḥmān with the European nations were marked by a series of failures that made him abandon his earlier plans of aggression and expansion. The blockade of Tangier by the English in 1828 and the bombardment of al-ʿArāʾish (Larache), Arzila and Tiṭṭāwīn undertaken by the Austrians in 1829 as reprisals for the seizure of merchant ships, made an end to an attempted reconstruction of a corsair navy, while the military successes of France in Algeria forced the sultan to renounce all intervention in the territory of the late regency. He tried in 1830-2 to extend his influence to the East of his empire by appointing *khalīfas* in Tlemcen, Miliana and Medea, but had to recall, or disavow, them, because of their troubles and the protest of the French government. From 1832 to 1834 he lent ʿAbd al-Ḳādir, leader of the holy war, his moral and material support and allowed himself to be involved in a conflict with France when his ally took refuge in Morocco in order to continue the struggle. The reverses which he suffered: battle of Isly (14 August 1844), bombardment of Tangier and Mogador (6 and 15 August), obliged ʿAbd al-Raḥmān to outlaw the Amīr (treaty of Tangier, 26 Oct. 1844). In 1847 he decided to expel him from the country, thus compelling him to give himself up to the French. Several incidents, due to the fanaticism of his subjects, such as the murder of the Spanish consular agent Darmon (1843), that of the Frenchman Paul Rey (1855) and pillage of the brig "Courraud Rose" (1851), embarrassed his relations with the foreign powers, but generally he gave in before threats or force (bombardment of Salé, 1851).

During his reign, Portugal (1823), England (1824, 1827), Sardinia (1825), Spain (1825), France (1825, 1844), Austria (1830), the kingdom of Naples (1834), the United States of America (1836), Sweden and Danemark (1844), renewed, or completed, their commercial treaties with Morocco.

A pious ruler and a good administrator, Mawlāy ʿAbd al-Raḥmān had many monuments built or restored: in Fez (Mosque of Mawlāy Idrīs), Meknes, Salé (minaret of the Great Mosque, fortifications), Tangier (harbour), Safi, Mazagan, Marrākush (mosque of Bū Ḥassān, Kannariyya, al-Wusṭā, and the plantation of the Agdāl), etc. He died in Meknes, 29 Muḥarram 1276/28 August 1859.

(PH. DE COSSÉ BRISSAC)

ʿABD AL-RAḤMĀN B. KHĀLID B. AL-WALĪD AL-MAKHZŪMĪ, the only surviving son of the famous Arab general. At the age of eighteen he commanded a squadron at the battle of the Yarmūk. Muʿāwiya subsequently appointed him governor of Ḥimṣ and he commanded several of the later Syrian expeditions into Anatolia. During the civil war, after successfully opposing an ʿIrāḳī expedition into the Djazīra, he joined Muʿāwiya at Ṣiffīn and was made standard-bearer. According to the received tradition, Muʿāwiya, fearing that ʿAbd al-Raḥmān might be a rival of Yazīd for the succession to the Caliphate, had him poisoned in 46/666 by his Christian physician Ibn Uthāl, who was himself killed shortly afterwards by one of his victim's relatives. H. Lammens (see *Bibl.*) has disputed the reliability of this tradition (transmitted from ʿIrāḳī sources) and ascribed its origin to incidents connected with an outbreak of anti-Christian violence at Ḥimṣ.

(H. A. R. GIBB)

ʿABD AL-RAḤMĀN B. MARWĀN B. YŪNUS, called IBN AL-DJILLĪḲĪ ("son of the Galician"), famous chief of insurgents in the West of al-Andalus in the second half of the 3rd/9th century. He belonged to a family of neo-Muslims (*muwalladūn*), originating from the North of Portugal and established in Merida. Although his father had been governor of this town on behalf of the sovereigns of Cordova, ʿAbd al-Raḥmān revolted against the Umayyad Amīr Muḥammad I in 254/868. The Amīr besieged him and forced him, after the capitulation of the city, to reside in Cordova. He remained in the capital until 261/875, when he returned to the region of Merida and threw off his allegiance to the Umayyads. He fortified himself in the castle of Alange (Ḥiṣn al-Ḥanash), but was again forced to surrender by the Amir Muḥammad I, who assigned to him as residence Badajoz. It was not long before Ibn al-Djillīḳī again raised the standard of revolt, supported by the *muwallad* lord of Porto (Burtuḳāl), Saʿdūn al-Surunbāḳī, and by Alfonso III, king of Asturias and Leon. The insurgents laid an ambush for the loyalist general Hāshim b. ʿAbd al-ʿAzīz, in the region of the Serra de Estrella, captured him and delivered him into the hand of the Christian king, who released him only against a high ransom. Fearing, justly, a violent reaction from the government in Cordova, Ibn al-Djillīḳī took refuge with Alfonso III. After staying for eight years in Christian territory, he returned in 271/884 to Badajoz and reached a tacit agreement with Cordova. This allowed him to rule over a veritable principality extending over the valley of the Guadiana and the south of what is now Portugal. Under the reigns of the Amirs al-Mundhir and ʿAbd Allāh, ʿAbd al-Raḥmān practically had a free hand and ruled over his territory as an independent prince, until his death in 276/889. He was succeeded by his son Marwān who only survived him by two months, and after him by a grandson ʿAbd Allāh b. Muḥammad b. ʿAbd al-Raḥmān, who died in 311/923 and was followed by a son, ʿAbd al-Raḥmān. This great-grandson of Ibn al-Djillīḳī was finally compelled to submit to ʿAbd al-Raḥmān III in 318/930.

ʿABD AL-RAḤMĀN B. MUḤAMMAD B. AL-ASH̲ʿATH [see IBN AL-ASH̲ʿATH].

ʿABD AL-RAḤMĀN B. RUSTUM [see RUSTUMIDS].

ʿABD AL-RAḤMĀN B. SAMURA B. ḤABĪB B. ʿABD SH̲AMS B. ʿABD MANĀF B. ḲUṢAYY, Arab general. The name ʿAbd al-Raḥmān was given him by Muḥammad on his conversion in place of his former name ʿAbd al-Kaʿba. His first command was in Sid̲j̲istān in succession to al-Rabīʿ b. Ziyād in the latter years of the caliphate of ʿUth̲mān, when he conquered Zarand̲j̲ and Zamīn-i Dāwar and made a treaty with the ruler of Kirmān. He withdrew after the death of ʿUth̲mān; according to Chinese sources, Pēroz, the son of Yazdigird III, then attempted to establish himself in Sid̲j̲istān (Chavannes, *Documents sur les Tou-kiue occidentaux*, 275, 279). ʿAbd al-Raḥmān b. Samura was, along with ʿAbd Allāh b. ʿĀmir, one of the envoys of Muʿāwiya to al-Ḥasan b. ʿAlī [*q.v.*]. Ibn ʿĀmir, reappointed governor of Baṣra and the East, despatched ʿAbd al-Raḥmān and ʿAbd Allāh b. K̲h̲āzim in 42/662 to restore Arab rule in eastern K̲h̲urāsān and Sid̲j̲istān. In 43/663 ʿAbd al-Raḥmān reoccupied Sid̲j̲istān and captured Kābul after a siege of several months. He then led an expedition to al-Rukh̲kh̲ad̲j̲ (Arachosia) and Zābulistān (region of G̲h̲azna), and again attacked and captured Kābul, which had rebelled, probably in 45/665. Muʿāwiya subsequently made him directly subordinate to the Caliph, but shortly after the appointment of Ziyād as governor of Baṣra he was replaced. He brought back with him a body of captives from Kābul, who built a mosque for him in his *ḳaṣr* at Baṣra in the architectural style of Kābul. He died in 50/670 in Baṣra, where his descendants formed a powerful and influential clan during the next century.

ʿABD AL-RAḤMĀN B. ʿABD AL-ḲĀDIR AL-FĀSĪ, Moroccan scholar, b. at Fez 1040/1631, d. in the same town 1096/1685. He was the pupil of his father, ʿAbd al-Ḳādir b. ʿAlī [*q.v.*] and of numerous other masters. He became a famous polygraph, celebrated by all his biographers for the breadth and the variety of his knowledge. He is said to have compiled more than 170 works on Malikite *fiḳh*, medicine, astronomy and history. But it is especially as a lawyer that he is an authority, and his main works are his great collection on the "customs" of Fez, *al-ʿAmal al-Fāsī*, and a commentary on *al-S̲h̲ifāʾ* by the famous *ḳāḍī* ʿIyāḍ, entitled *Miftāḥ al-S̲h̲ifāʾ*. He is also the author of a long didactic poem in *rad̲j̲az*, *al-Uḳnūm fī Mabādiʾ al-ʿUlūm*.

Bibliography: E. Lévi-Provençal, *Hist. Chorfa* 266-9 (with references); Brockelmann, ii, 612, S ii, 694. (E. LÉVI-PROVENÇAL)

ʿABD AL-RAḤMĀN B. ḤABĪB B. ABĪ ʿUBAYDA (or ʿABDA) AL-FIHRĪ, great-grandson of the famous *tābiʿ* ʿUḳba b. Nāfiʿ, independent governor of Ifrīḳiya at the end of the Umayyad caliphate. His father, Ḥabīb, had sent expeditions against the Sūs, Morocco and Sicily, in which ʿAbd al-Raḥmān, still a youth, took an active part. He was one of the survivors of the bloody defeat inflicted by the Berbers upon the regular Arab troops in 123/741, in which his father and the governor, Kulth̲ūm b. ʿIyāḍ, lost their lives. He crossed over to Spain, but fearing for his life, returned in 127/745 to Ifrīḳiya, where he revolted against the actual governor, Ḥanẓala b. Ṣafwān al-Kalbī, who two years later saw no other choice but to yield the power to him. ʿAbd al-Raḥmān, on becoming master of al-Ḳayrawān, had to suppress several rebellions and undertook several large expeditions, notably against Sicily and Sardinia, in 135/752. His seizure of power was the less contested as it coincided with the fall of the Umayyad caliphate of Syria. It seems that at the beginning he acknowledged the ʿAbbāsid allegiance, but shortly afterwards repudiated it, on the receipt of an insulting message from the caliph al-Manṣūr. No doubt at al-Manṣūr's instigation, two of the brothers of ʿAbd al-Raḥmān decided upon his ruin; he was assassinated by one of them, Ilyās b. Ḥabīb, who took possession of al-Ḳayrawān 137/755). Ḥabīb, son of ʿAbd al-Raḥmān, with the help of another uncle of his, ʿImrān b. Ḥabīb, governor of Tūnis, soon afterwards attacked the usurper and, in turn, made himself master of Ifrīḳiya.

Another ʿAbd al-Raḥmān b. Ḥabīb al-Fihrī, a contemporary of the preceding, who was called, to distinguish him from the former, by the surname of al-Ṣiḳlabī, was a propagandist of the ʿAbbāsids in Spain. Pursued by the Umayyad *amīr* ʿAbd al-Raḥmān I, he was assassinated near Valencia in 162/778-9.

ʿABD AL-RAḤMĀN B. ʿABD ALLĀH AL-G̲H̲ĀFIḲĪ, governor of al-Andalus. He succeeded Muḥammad b. ʿAbd Allāh al-Ashd̲j̲aʿī in this office at the end of 111 or at the beginning of 112/730, and retained it until his death in 114/732. ʿAbd al-Raḥmān, who had already governed Spain provisionally for about two months in 102/721, was a *tābiʿ* reputed for his piety. He is chiefly famous for the incursion into Gaul that cost him his life. His expedition, which was carefully prepared, had for its object the basilica of St. Martin at Tours. He collected a numerous army, and from Pamplona marched through the pass of Roncesvalles on Bordeaux, which he devastated, Duke Eudes of Aquitania being powerless to oppose his advance. He then advanced towards the Loire, but was checked in his progress by the Duke of the Franks, Charles Martel, who engaged him about 20 km. to the north-east of Poitiers and inflicted on him a severe defeat. The battle is known as the "battle of Poitiers" in Frankish historiography, while the Arabs call it *balāṭ al-s̲h̲uhadāʾ*, "causeway of the martyrs of the faith". The Muslim survivors retreated in disorder towards Narbonne, leaving behind on the battlefield many dead, including ʿAbd al-Raḥmān. The date of this memorable encounter can be fixed at the end of Oct. 732/Ramaḍān 114.

ʿABD AL-RAḤMĀN B. ʿUMAR AL-ṢŪFĪ, ABU ʾL-ḤUSAYN, eminent astronomer, born at Rayy

14 Muḥarram 291/8 Dec. 903, died 13 Muḥarram 376/25 May 986. In 337/948-9 he was in Iṣfahān, in attendance on the vizier Abu 'l-Faḍl b. al-ʿAmīd, in 349/960-1 at the court of ʿAḍud al-Dawla, no doubt in the same town. He was the court astronomer of this ruler, who boasted of three of his teachers: in grammar al-Fārisī, in the knowledge of astronomical tables Ibn al-Aʿlam, and in the knowledge of the constellations ʿAbd al-Raḥmān al-Ṣūfī (Ibn al-Ḳifṭī; cf. also Yāḳūt, *Irshād*, iii, 10). His best known work is a description of the fixed stars (*Ṣuwar al-Kawākib al-Thābita*, quoted also by different titles), which he wrote about 355/965 and dedicated to ʿAḍud al-Dawla. The book described the constellations both according to the system of the astronomers (after Ptolemy) and the Arabic tradition of the *anwāʾ*]cf. NAWʾ]. The work was illustrated by drawings, which the author, according to his own declaration, preserved by al-Bīrūnī (see H. Suter, *Beiträge zur Geschichte der Mathematik bei den Griechen und Arabern*, Erlangen 1922, 86), traced from a celestial globe. He also saw, however, as he says in his introduction, an illustrated work on the constellations by ʿUṭārid b. Muḥammad. The earliest extant MS, in the Bodleian Library, was copied and illustrated by the author's son, in 400/1009-10. There are many other manuscripts, illustrated in the styles of the various epochs. (See J. Upton, *Metropolitan Museum Studies*, 1933, 189-99; K. Holter, *Die Islamischen Miniaturhandschriften vor 1350*, *Zentralbl. f. Bibliothekswesen*, 1937, 2-5, cf. *Ars Islamica*, 1940, 10). The text and translation of the introduction was published by Caussin de Perceval, *Notices et Extraits*, xii, 236 ff.; a full translation by H. C. F. C. Schjellerup, *Description des étoiles fixes par Abd al-Rahman al-Sufi*, St. Petersburg 1874. The Arabic text was published, mainly after the Paris MS (being the copy of Ulugh Beg), in Hyderabad 1953, under the editorship of M. Nizamuddin. His other extant works are a handbook of astronomy and astrology and a treatise on the use of the astrolabe. A silver globe made by al-Ṣūfī for ʿAḍud al-Dawla was preserved in the library of the Fāṭimid palace in Cairo (Ibn al-Ḳifṭī, 440). —For an *Urdjūza* on the fixed stars, attributed to a son of his, cf. Brockelmann, S i, 863; it was published at the end of the Hyderabad edition of the *Ṣuwar*.

Bibliography: *Fihrist*, 284; Ibn al-Ḳifṭī, 226; Bīrūnī, *al-Āthār al-Bāḳiya* (Sachau), 336, 358 (Engl. transl., 335, 358); M. (S. M. STERN)

ʿABD AL-RAḤMĀN KHĀN (c. 1844-1901), Amīr of Afghānistān, was the son of Afḍal Khān, the eldest surviving son of Dōst Muḥammad Khān, the founder of the Barakzay dynasty in Afghānistān. In 1853 he proceeded to Afghān Turkistān where his father was serving as governor of Balkh. Despite his youth he took part in a series of operations which extended Dōst Muḥammad's power over Kataghān, Badakhshān, and Derwāz. Before his death in 1863 Dōst Muḥammad had nominated a younger son, Shīr ʿAlī, as his successor to the exclusion of his two elder brothers, Afḍal Khān and Aʿẓam Khān. Shīr ʿAlī's succession was therefore the signal for five years of fratricidal warfare in which at the early age of nineteen ʿAbd al-Raḥmān became involved. After temporary successes his father, Afḍal Khān, was defeated and imprisoned, whereupon ʿAbd al-Raḥmān fled to Bukhārā. In 1866, taking advantage of Shīr ʿAlī's absence at Ḳandahār, ʿAbd al-Raḥmān, with the help of Rafīḳ Khān, a general who had deserted Shīr ʿAlī, seized Kābul. The defeat of Shēr ʿAlī's forces at Saydābād led to the fall of Ghaznī. Afḍal Khān was now proclaimed Amīr and coins were struck in his name. Shēr ʿAlī was once more defeated at Kilāt-i Ghilzay in 1867 and driven from Ḳandahār. In the same year Afḍal Khān died and ʿAbd al-Raḥmān, who had hoped to be accepted as Amīr, found it expedient to support the claims of his uncle Aʿẓam Khān. Their combined forces were defeated by Shīr ʿAlī and his son Yaʿḳūb Khān at Zana-Khān, near Ghaznī, as a result of which ʿAbd al-Raḥmān became a homeless wanderer, first in Wazīristān and later in Persia. From Mashhad he crossed the Ḳara-Kum desert to Khīwa and Samarḳand. At Tashkent he was received by General Kaufmann, the Russian governor-general. His request for assistance against Shīr ʿAlī was refused but he was granted an allowance and permitted to reside at Samarḳand, where he remained for eleven years until the defeat of Shīr ʿAlī by the British in the Second Afghān War of 1878-80. The flight and death of Shīr ʿAlī, the failure of his successor Yaʿḳūb Khān to control his unruly tribesmen, and the assassination of Cavagnari the British Resident necessitated the removal of Yaʿḳūb Khān to India. This left the Afghān throne vacant.

Because of Russian expansion towards the Oxus it was decided to build up a strong, friendly, and united Afghānistān to serve as a buffer state to the British dominions in India. In July 1880, ʿAbd al-Raḥmān Khān, the most powerful candidate in the field, was informed that the British were prepared to recognize him as Amīr of Kābul, provided he acknowledged their right to control his foreign affairs. He was also assured that the British would aid him in repelling unprovoked aggression on his dominions. These terms were accepted by ʿAbd al-Raḥmān at the conference of Zimma, 31 July-1 August 1880 (Foreign Office 65, 1104: Papers printed for the use of the Cabinet). Three years later this promise was renewed by the Marquis of Ripon who bestowed on the Amīr an annual subsidy of twelve lakhs of rupees to be devoted to the payment of his troops and the protection of his north-western frontiers. The British were now pledged to defend a buffer state of unknown limits. Hence the most important event in the reign of ʿAbd al-Raḥmān was the delimitation and demarcation where possible of the boundaries of Afghānistān By 1886, although the Pandjdih incident [*q.v.*] of the previous year had brought Britain and Russia to the verge of war, an Anglo-Russian Boundary Commission had demarcated the northern frontier of Afghānistān from Dhu'l-Fiḳār to the meridian of Dukci, within forty miles of the Oxus. The process of demarcation was completed in 1888. The final boundary dispute with Russia was settled by the Pamir Agreement of 1895 which defined the Afghān boundary between Lake Victoria and the Tagdumbash.

Although pro-British in so far as Russian expansion was concerned, ʿAbd al-Raḥmān's desire to annex the territories of the Paṭhān tribes of the Indian frontier was not calculated to improve Anglo-Afghān relations. The tension was somewhat eased by the Durand Agreement of 1893 which delimited a boundary on the Indo-Afghān frontier across which neither the Amīr nor the Government of India was to interfere in any way. Afghān intrigues

on the Indian side of this frontier still continued and were partly responsible for the Indian frontier conflagration of 1897. In fact, Afg͟hān intrigues were the chief cause of unrest on the Indian frontier from 1890 onwards.

The greatest service rendered by ʿAbd al-Raḥmān to his country was the suppression of internal rebellion. The powerful G͟hilzay tribesmen were crushed in 1886; the rebellion of Isḥāḳ, son of Aʿẓam K͟hān, was suppressed in 1888; and finally, after severe fighting, the turbulent Hazāras of central Afg͟hānistān were forced to acknowledge his authority. In 1896 the territories of the non-Muslim tribes of Kāfiristān to the west of Čitrāl were annexed and the Kāfirs converted to Islam. ʿAbd al-Raḥmān K͟hān died in 1901 and was succeeded by his son Ḥabīb Allāh K͟hān.

Davies, *The problem of the North-West Frontier, 1890-1908*, 1932; W. K. Fraser-Tytler, *Afghanistan*, 1950; M. Longworth Dames, in *EI*[1], s.v. (C. COLLIN DAVIES)

ʿABD AL-RASHĪD B. ʿABD AL-G͟HAFŪR AL-ḤUSAYNĪ AL-MADANĪ AL-**TATTAWĪ**, Persian lexicographer, born in Tatta, but a Sayyid by descent; died after 1069/1658. His principal work is a Persian dictionary, usually called *Farhang-i Ras͟hīdī*, or *Ras͟hīdī Fārsī*, the first critical dictionary, which was compiled in 1064/1683-4 and published in 1875 in the *Bibliotheca Indica*. Splieth revised the preface (*Muḳaddama*): *Grammaticae persicae praecepta ac regulae* (Halle 1846). ʿAbd al-Ras͟hīd dedicated an Arabic-Persian dictionary, *Muntak͟hab al-Lug͟hāt*, or *Ras͟hīdī ʿArabī* (1046/1636-7), to S͟hāhd͟jahān (editions: Calcutta 1808, 1816, 1836; Lucknow 1835, 1869; Bombay 1279/1862).

Bibliography: Blochmann, in *JRAS Bengal*, xxxvii, 20 sqq.; Rieu, *Cat. of Pers. MSS.*, 501, 510; Pertsch, *Verz. d. pers. Handschr. Berlin*, nos. 198-200. (M. TH. HOUTSMA)

ʿABD AL-RAʾŪF B. ʿALĪ AL-D͟JĀWĪ AL-FANṢŪRĪ AL-**SINKILĪ**, religious teacher, b.c. 1620 at Singkel, north of Fanṣūr (west coast of Sumatra), d. after 1693, and buried at the mouth of the Acheh river. He studied for nineteen years in Arabia, was initiated into the S͟haṭṭāriyya *ṭarīḳa* by Aḥmad al-Ḳus͟hās͟hī and his successor Ibrāhīm al-Kūrānī, and returned about 1661 to Acheh, whence this *ṭarīḳa* was propagated by his pupils throughout Indonesia, especially in Java. Directions for "recitation" (*d͟hikr*), as practised by this order, form the most important subject of his writings, the majority of which are in Malay, but a few in Arabic — some with a Malay rendering after each phrase. The subject is dealt with most fully in his *ʿUmdat al-Muḥtād͟jīn ilā Sulūk Maslak al-Mufridīn* which has as introduction a summary of dogma on the same lines as al-Sanūsī's *Umm al-Barāhīn*. He took as a theoretical basis for his mysticism the doctrine of the seven grades and of man as the image of God, which he set out in such works as *Kifāyat al-Muḥtād͟jīn*, *Daḳāʾiḳ al-Ḥurūf* and *Bayān Tad͟jallī*. In this he remained within the bounds of orthodoxy; he rejected the extreme mysticism which flourished in Acheh at the beginning of the 17th century, but at the same time did not associate himself with the violent polemics of al-Rānīrī [*q.v.*]. ʿAbd al-Raʾūf moreover translated the Ḳurʾān into Malay with a concise commentary taken from various Arabic exegetical works (*al-Tard͟jumān al-Mustafīd*) and wrote a Malay handbook of S͟hāfiʿite *fiḳh* which deals only with the *muʿāmalāt* and is plainly intended as a supplement to al-Rānīrī's *al-Ṣirāṭ al-Mustaḳīm* which contains only the *ʿibādāt*. His translations from the Arabic are so literal that they are unintelligible without a knowledge of that language, and moreover not without mistakes. It is not altogether certain whether he was the translator of *al-Mawāʿiẓ al-Badīʿa*, which is a translation into Malay of a popular Arabic collection of 32 *ḥadīth ḳudsī* and eighteen other admonitions. There are some other works ascribed to him, such as the mystical eschatological Malay poem *Shair maʿrifat*, which are certainly not by his hand. After his death, as Teungku di-Kuala, ʿAbd al-Raʾūf enjoyed such veneration that he was even accorded the honour of having been the bearer of Islam to Acheh.

Meursinge, in *Handboek*, 1844; *Tard͟jumān al-Mustafīd*, Istanbul 1302 (2 vols.); *al-Mawāʿiẓ al-Badīʿa* in *D͟jamʿ D͟jawāmiʿ al-Muṣannafāt*, Būlāḳ, n.d.; 4th or 5th imp., Mecca 1310. (P. VOORHOEVE)

ʿABD AL-RAZZĀḲ KAMĀL AL-DĪN B. ABU 'L-G͟HANĀʾIM AL-**ḲĀS͟HĀNĪ** (or KĀS͟HĀNĪ or ḲĀS͟HĪ or KĀSĀNĪ), celebrated Ṣūfī author, died according to Ḥād͟jd͟jī K͟halīfa (ed. Flügel, iv, 427), in 730/1329. Ḥād͟jd͟jī K͟halīfa, however, confusing him with the historian of the same name, the author of the *Maṭlaʿ al-Saʿdain*, says in another place (ii, 175) that he died in 887/1482 and, besides, gives his name as Kamāl al-Dīn Abu 'l-G͟hanāʾim ʿAbd al-Razzāḳ b. D͟jamāl al-Dīn al-Kās͟hī al-Samarḳand͟ī. Little is known of ʿAbd al-Razzāḳ's life; according to D͟jāmī (*Nafaḥāt al-Uns*, quoted by St. Guyard), he was a pupil of Nūr al-Dīn ʿAbd al-Ṣamad and a contemporary of Rukn al-Dīn ʿAlāʾ al-Dawla, with whom he carried on a somewhat acrimonious controversy, and who died in 736/1336. The immediate cause of this correspondence was a conversation which ʿAbd al-Razzāḳ had with a certain amīr Iḳbāl Sīstānī, a pupil of ʿAlāʾ al-Dawla's, on the road to Sulṭānīya on the vexed question of the orthodoxy of Ibn ʿArabī. D͟jāmī then gives a long letter which ʿAbd al-Razzāḳ wrote to ʿAlāʾ al-Dawla on this question, in which he says that he has just read ʿAlāʾ al-Dawla's book, the *ʿUrwa*. As this work was written in 721/1321, the date 730/1329 given as that of his death must be assumed as the correct one. We have then to place ʿAbd al-Razzāḳ in the D͟jibāl province (Kās͟hān) under the Īlk͟hāns of Persia, and especially in the reign of Abū Saʿīd (716—36/1316—35).

He was the author of a large number of works, several of which have been published. So far back as 1828, Tholuck used his *Laṭāʾif al-Iʿlām* in *Die speculative Trinitätslehre des späteren Orients* (13—22, 28 *et seq.*.) and translated some passages, but without knowledge of the author. In 1845 Sprenger published at Calcutta the first half of his *Iṣṭilāḥāt al-Ṣūfīya*, or *Dictionary of the technical terms of the Sufies*. An

analysis of the second part had been given by Hammer-Purgstall, in the *Jahrbücher der Literatur* (lxxxii, 68 ff.). This book also was used by Tholuck, and cited under the author's name (*loc. cit.* 7, 11, 18, 26, 73). It is of special interest because in the preface he states that it was written after he had finished his commentary on the *Manāzil al-Sāʾirīn* of al-Harawī in order to explain the Ṣūfī technical terms which occur but are inadequately explained in that work, and also in his commentary on the *Fuṣūṣ al-Ḥikam* of Ibn ʿArabī (Cairo 1309) and in his *Taʾwīlāt al-Ḳurʾān*. According to Ḥādjdjī Khalīfa (ii, 175) the *Taʾwīlāt* of ʿAbd al-Razzāḳ extend to Sūra xxxviii only, yet Berlin MS. no. 872 covers the entire Ḳurʾān, but apparently in abstract. *Risāla fi'l-ḳaḍāʾ wa'l-ḳadar*, treatise on predestination and free will, first translated into French, (*JA*, 1873; revised edition 1875), then the text published by St. Guyard (1879); it will be dealt with in detail below. The treatise seems to have excited attention, for Ḥādjdjī Khalīfa (iii, 429) gives three answers to it by Ibn Kamāl Pasha, Tāshküprü-zāde and Bālī Khalīfa Ṣūfīyahwī. A commentary on the *Taʾiya* poem of Ibn al-Fāriḍ (Cairo 1310). His works as yet unpublished are: *Risālat al-Sarmadiyya*, on the idea of an eternal Being; *Risālat al-Kumayliyya*, on the traditional answer by ʿAlī to the question of Kumayl b. Ziyād *fi'l-ḥaḳīḳa* (comp. the Berlin MS. no. 3462; Ḥādjdjī Khalīfa iv, 38; *JA* 14, 83); a commentary on the *Mawāḳiʿ al-Nudjūm* of Ibn Arabī and *Tadhkirat al-Ṣāḥibiya*. Ḥādjdjī Khalīfa (v, 587) adds *Miṣbāḥ al-Hidāya*. For MSS. reference will suffice to Brockelmann, ii, 203, 204; S ii, 280-1; the Gotha cat. no. 76, 2, and Palmer's *Trinity College Cat.* 116.

It will already be tolerably clear what ʿAbd al-Razzāḳ's interests and positions were. He was a Ṣūfī of the school of Ibn ʿArabī, the great theosophist of the Western Arabic type, though with touches of independence, and he gave much labor to defence and exposition of his master. In the three great divisions of Muslim theologians, the upholders of tradition (*naḳl*), of reason (*ʿaḳl*), and of the unveiling of the mystic (*kashf*), he took his place with the third. It may be significant that his name never indicates to what legal school he adhered. Like many mystics, he may have regarded such matters as beneath notice, or he may, like Ibn ʿArabī, have been a belated Ẓāhirite in law, as he was evidently a Bāṭinite in theology. The last is plain through the title itself of his exposition of the Ḳurʾān, *taʾwīl*, not *tafsīr*, and is shown in detail in his *Iṣṭilāḥāt* and his treatise on *ḳadar*. In the last we have the normal combination of the Aristotelian universe, the Neo-Platonic metaphysics and theology and the Ḳurʾānic mythology of Muḥammad. These all appear, too, in Ibn ʿArabī, but perhaps ʿAbd al-Razzāḳ is more anxious to keep the last element prominent, and to proclaim thus his essential orthodoxy. Certainly, he strives to avoid the absolute merging of the individual, and the consequent fatalism of Ibn ʿArabī and to lay a possible basis for individual responsibility, for freedom and rewards and punishments hereafter. His method in this is as follows. In order to bring out clearly the forces leading to any event and the close interweaving of all causes and effects to make up the great organism of the universe, he begins with a description of the universe on the Ṣūfī scheme. It is the Neo-Platonic chain. Above is God, the One, the Alone; from him proceeds, by a dynamic emanation, the Universal Reason (*al-ʿaḳl al-awwal*), called also the Primary or Universal Spirit (*al-rūḥ al-awwal*) and the Highest Knowledge (*al-ʿilm al-aʿlā*). This is a spiritual substance and the first of the properties which the divine essence implies. From it two other substances are produced, one spiritual (*rūḥāniyya*) which is the substance of the world of the Universal Reason, considered as apart from God and inhabited by particular intelligences, somewhat as fractions of the Universal Reason, which are the angels of revealed religion; the other is psychical, being the Universal Soul (*nafs*). Finally come the material elements with their natural forces and laws. In the Universal Reason are the types of all things, as universals, and this Reason, with its types, is known directly by God. God's omnipotence (*ḳāhiriyya*) is manifested through these angels or Intelligences, and their world is therefore called the World of Power (*ʿālam al-ḳudra*). But they also, in their perfection, repair the imperfections of other beings. Their world again, therefore, is called the World of Repairing (*ʿālam al-djabarūt*). Some, however, take the other sense of the root *djabar* and render it, the World of Constraint, because they constrain other beings towards perfection. This world is also called the Mother of the Book (*umm al-kitāb*; Ḳurʾān, xiii, 39, xliii, 4), from it comes all knowledge of divine mysteries, it is above all fetters of time and change. The world of the Universal Soul, on the other hand, called the World of Ruling (*ʿālam al-malakūt*), is a step nearer the particular, material world. The types which exist in the Universal Reason become in it general conceptions, and these are further specialized, determined, limited, brought near to what we know, by being engraved on the individual reasonable souls, which are the souls of the heavenly bodies, corresponding to the angelic Intelligences, the fractions of the Universal Reason. This world, from its likeness to the human imagination, is called the Imagination of the World (*khayāl al-ʿālam*) and the Nearer Heaven (*al-samāʾ al-dunyā*). From it issue all beings in order to appear in the World of Sense (*ʿālam al-shahāda*), it moves and directs everything, measuring out matter and assigning causes. The heavenly bodies, then, have reasonable souls just like our own, these are the imaginative faculties of the particular reasonable souls, into which the Universal Soul divides. On their changes all change in this world below depends (comp. al-Ghazālī's scheme, in *JAOS*, 1899, 116 ff.).

Further, this constitution of the universe corresponds to man's body, macrocosm to microcosm. Just as the brain is the seat of man's ruling spirit, so the Universal Spirit or Reason is seated in the throne (*ʿarsh*) above the sphere of the fixed stars. The fourth heaven, the sphere of the sun, which vivifies all, is the seat of the Universal Soul, in man this is the heart, wherein is his particular, reasonable soul. So the fourth sphere is like the breast, and the sun like the physical heart. The individual soul of the sun corresponds to the animal spirit in the heart, which is the source of human life.

Next, as to the place of predestination in this scheme, for that there are three words, *ḳaḍāʾ*, *ḳadar* and *ʿināya*. *Ḳaḍāʾ* means the existence of the universal types of all things in the world of the Universal Reason. *Ḳadar* is the arrival in the world of the Universal Soul of the types of existing things, after being individualized in order to be adapted to matter, these are joined to their

causes, produced by them, and appear at their fixed times. *ʿInāya* is, broadly, Providence and covers both of the above, just as they contain everything that is actual. It is the divine knowledge, embracing everything as it is, universally and absolutely. It is not in any place, for God's knowledge, in His essence, is nothing else than the presence of His essence before His essence, which is essentially one and goes with all the qualities which inhere in Him. Further, while the essence (*ḥaḳīḳa*) of *ḳaḍāʾ* is part of the *ʿināya* of God, its entelechy (*kamāl*) is in the world of the Universal Reason. The Universal Soul is sometimes called the Preserved Tablet (*al-lawḥ al-maḥfūẓ*), for on it are preserved unalterable all the general conceptions which are on their way to the individual heavenly souls.

It is the world, then, of *ḳadar*, of the Soul, which sets everything in motion. This is by the yearning of the reasonable souls of the heavenly bodies towards their spiritual source, the Universal Reason. They try to assimilate themselves to this, to universalize themselves. Step by step, they mount up, and with each advance they receive a new outpouring from that source, drawing them on further. With each movement, there flows from them an influence upon matter according as it is adapted to receive it, and thus there is a series of changes in the material world, corresponding to those in the world of the Soul. These changes may be either absolute of creation and destruction, or, between those extremes, simply of condition. The duration of existence constitues the Ḳurʾānic *adjal*, and all these are fixed by *ḳadar*.

Finally, this exegesis of Ḳurʾān, lii, 1—6 will show how ʿAbd al-Razzāḳ applied Scripture. "By the Mount and by a Book Inscribed in a Parchment Outspread, and by the Frequented House, and by the Raised Roof, and by the Flowing Sea!" The Frequented House is the Spirit of the fourth sphere, that of the sun. Therefore Jesus, the Spirit of God, has been placed there, whose miracle is the raising of the dead. The Mount is the *ʿarsh*, the seat of the Universal Reason. The Book Inscribed is *ḳaḍāʾ*, which is in that Reason: and the Parchment Outspread is the Reason itself. The Raised Roof is the nearest heaven, where are the individual celestial souls; it is mentioned immediately after the Frequented House, because from this heaven the forms descend on the earth, and from the Frequented House comes the breath of the Spirit, by the combination of which the creation of animated beings is achieved. The Flowing Sea is the sea of primary matter which spreads everywhere and is filled with forms.

How, then, is such a scheme related to predestination and free will? It is highly complicated, consisting of a remote first cause and an infinity of intermingling and crossing, nearer, secondary causes. It is possible to look at these last only, and so to assign absolute creative and deciding power to our own wills. Or to look only at the first cause and become fatalists. We must preserve the balance and hold by both. The complete cause of anything into which human will can enter must have as an element in it, among so many others, free will. It sets all the others in movement. Under this conception, though never clearly stated, is evidently implied that man has in him an element of the divine deciding power. If there is freedom in the divine nature, there must be also in its emanations. For Ibn ʿArabī the oneness of the divine nature over against the creation had overcome everything. ʿAbd al-Razzāḳ lays stress on the multitudinous interweaving causes of the world, its constantly developing processes, to show that in life, purpose and will there must be multiplicity. The divine is spread down through the sub-lunar things, it does not simply rule from above. Again, amongst the many causes working in the world and upon men are the restraints and influences of religion, the promises and threatenings of the prophets. These we should permit to have their effects upon us as parts of the whole scheme, the process of training under which we are. But, again, why should training be necessary? Why are there good and bad? Here, again, is an implication, once pretty clearly expressed. Matter is of very differing nature, grosser and finer, It can receive only a corresponding soul, therefore souls also vary. Character and disposition is a combination of both, and it is for the soul to overcome its material body and itself rise. This evidently is the fundamental thought, but ʿAbd al-Razzāḳ does not give much space to it. Rather, he uses the old theological catch. This must be the best possible creation, otherwise God would have created a better. Further, if all things were equal, there could be neither order nor organization. This would also be hard on those less perfect things thus ruled out of existence. All things should have a chance; it is for them to use it. God knows their differences and will allow for them. The most and the greatest sins are from ignorance, and God will so treat them. In the life to come the same thing is to go on. Some will attain felicity, others, because they might have done better, must undergo purification by punishment, but that will not be eternal. Here, perhaps, ʿAbd al-Razzāḳ is most unsatisfactory. He passes over into the normal Muslim conception although it is not at all clear that his system can permit individuality apart from matter. Freed souls, we should expect, would either return into the unity, or else be sent forth again to another material life. Like so many in Muslim theology and philosophy, this tractate was adapted to an audience, and was not perfectly ingenuous. Yet behind its caution of statement the real system is tolerably plain. It is nearer orthodoxy than that of Ibn ʿArabī, but not as near as this eschatology would suggest.

Bibliography: St. Guyard, in *Journ. As.*, 7th ser., i, 125 ff., which is the main source; Brockelmann, ii, 203—2 (treating him as two different persons), S ii, 280-1.

(D. B. MACDONALD)

ʿABD AL-RAZZĀḲ KAMĀL AL-DĪN B. DJALĀL AL-DĪN ISḤĀḲ AL-**SAMARḲANDĪ**, Persian historian, author of the well-known *Maṭlaʿ-i Saʿdayn wa-Madjmaʿ-i Baḥrayn*, born in Harāt Shaʿbān 816/Nov. 1413, died there Djumādā II 887/July-August 1482. His father was *imām* and *ḳāḍī* of the camp (*ḥaḍrat*) of Shāhrukh and read out books and expounded various problems (*masāʾil*) to him (*Maṭlaʿ*, ii, 704, 870, cf. 706). He received the usual type of education, and one of his teachers was his elder brother ʿAbd al-Ḳahhār. He also attended when his father read the two *Ṣaḥīḥ*s to Shams al-Dīn Muḥ. al-Djazarī (d. 833/1429) (ibid., ii, 631-1294) and received an *idjāza*. After the death of his father, he used to attend the court of Shāhrukh with his elder brothers, but when in 841/1437-8 he dedicated his *Sharḥ* on *al-Risāla alʿAḍudiyya* to the king and presented it to him, he was taken into

service and allowed to attend the court regularly. Two years later, he was examined by the *ʿulamāʾ* at the court, and granted a salary and provisions (*marsūm wa-ʿalūfa*) (*ibid.*, ii, 704, 731 f.).

In Ramaḍān 845/Jan. 1441 ʿAbd al-Razzāḳ was sent to India as ambassador and returned in Ramaḍān 848/Dec. 1444. (For his mission and the result obtained see *Maṭlaʿ*, ii, 783; T. W. Arnold, *The Caliphate*, Oxford 1924, 113). He was similarly sent to Gīlān in 850/1446. He was ordered to make ready for a mission to Egypt in the same year, but due to the death of Shāhrukh this was cancelled. In the period following the death of that king he served his successors Mīrzā ʿAbd al-Laṭīf, Mīrzā ʿAbd Allāh and Mīrzā Abu'l-Ḳāsim Bābur, with some as *ṣadr*, with others as *nāʾib* and *khāṣṣ*; see *ibid.*, ii, 1440. Under the last-named prince, who included him among his confidants, he enjoyed many favours (*ibid.*, ii, 1119). In 856/1452 he was in Yazd with Mīrzā Bābur, when the Mīrza interviewed Sharaf al-Dīn ʿAlī Yazdī, and in 856/1452 he was with the same prince when he besieged Samarḳand, in which city ʿAbd al-Razzāḳ had many friends and old acquaintances (*Maṭlaʿ*, ii, 1041, 1078). In 866/1462 he was sent to Asfuzār for fixing taxes (*bunīča bastan*). Soon after, under Sulṭān Abū Saʿīd, on 3 Djumādā I 867/24 Jan. 1463 the vizier Khʷādja Ḳuṭb al-Dīn Ṭāʾūs Simnānī appointed him *shaykh* (governor) of the *khānḳāh* of Shāhrukh (*Maṭlaʿ*, ii, 1270), which post he held till his death.

The *Maṭlaʿ* describes, with a brief mention of the birth (704/1304-5) and accession (716/1316-7) of the Īlkhān Abū Saʿīd, the events of the years 717-875/1317-1471, in chronological order. Up to the year 830/1426-7 use is principally made of the *Zubdat al-Tawārīkh* of Ḥāfiẓ-i Abrū [*q.v.*], which is at times quoted literally. The famous account of the embassy to China in 823-5/1420-2, is also taken from the *Zubda*. For the period from 830 to 875/1426-71 ʿAbd al-Razzāḳ's work is one of the most important original sources of information. Cf. the *taḳrīẓ* of ʿAbd al-Wāsiʿ al-Niẓāmī (for him see *Ḥabīb al-Siyar*, iii, 3, 328) in *Maṭlaʿ*, ii, 1440, which refers to his indebtedness to Ḥāfiẓ-i Abrū for the earlier period and his impartial narrative relating to the period in which he himself lived. An edition of vol. ii was published piecemeal in the *Oriental College Magazine*, Lahore Nov. 1933 onwards, and later a separate edition was published in two parts (Lahore 1360/1941 and 1368/1949). Mss. of the work are to be found in nearly all the larger European collections but they are now rare in the East. The Panjab University Library has an autograph copy of vol. ii, acquired recently. It was completed by the author on 17 Rabīʿ I, 875/13 Sept. 1470, the correction of the copy being completed by him on the 18th Shaʿbān 885/23rd Oct. 1480. E. Quatremère gives extracts from the work in the *Notices et extraits*, xiv, part 1; as also H. M. Elliot in his *History of India*, iv, 89-126, and others (for whom see Storey).

From the *Maṭlaʿ* (ii, 190) we learn that ʿAbd al-Razzāḳ also wrote a work on the history of Harāt and its districts (*bulūkāt*). In some places in the *Maṭlaʿ* (e.g. ii, 951, 1208) he also quotes his own poems.

ʿABD AL-SALĀM B. MASHĪSH AL-ḤASANĪ. Practically nothing is known of this personage, who has become one of the "poles" (*ḳuṭb*, [*q.v.*]) of popular mysticism in Morocco. The only fairly certain fact is that he died in 625/1227-8 by assassination in his hermitage on the Djabal al-ʿAlam, in the territory of the Banū ʿArūs, to the south-east of Tetuan. He is said to have fallen victim to a man of the region, Muḥammad b. Abī Tawādjīn al-Kutāmī, belonging to Ḳaṣr Kutāma, who had rebelled against the decaying Almohad power and was attempting to pass himself off as a prophet, and who assassinated the saint because the latter's prestige was an obstacle to his ambitions. ʿAbd al-Salām was buried at the top of the mountain, at the foot of an oak, and seems to have been for a long time the object of a purely local cult; Ibn Khaldūn does not mention him, nor for that matter the revolt of his murderer.

Besides this account of his death, which seems to be reasonably probable although reported by much later authors, little more is known of the saint than his genealogy, which, through several ancestors with typically Berber names, attaches him to the house of the Prophet. He is said to have been born in the neighbourhood of the Djabal al-ʿAlam, into the tribe of the Banū ʿArūs, and to have gone "in pursuit of learning" to the East at the age of sixteen; then, on his return, to have followed at Bidjāya (Bougie) the instruction of the famous Andalusian mystic Abū Madyan [*q.v.*], and to have come back finally to stay in his native country, where he lived an edifying life as an ascetic in his mountain hermitage.

His teaching is scarcely better known, in spite of the elaborations which it acquired in Moroccan mysticism. "Perform the obligations of the Law and avoid sin", he is said to have advised a disciple who had asked him for a rule of life, "keep your heart aloof from every temporal attachment, accept what God sends you, and put above all else the love of God" (Ibn ʿAyād, *K. al-Mafākhir*, 106). It is related also that he had as a disciple Abu 'l-Ḥasan ʿAlī al-Shādhilī [*q.v.*], who came to him for his initiation into mysticism.

Only from the 15th century, it seems, at the time when the marabout movement connected with al-Shādhilī became active in Morocco, did the fame of ʿAbd al-Salām extend beyond the limits of his tribe into the whole northern part of Morocco. He was then regarded as the "pole" of the West, as ʿAbd al-Ḳādir al-Gīlānī was regarded as the "pole" of the East. A pilgrimage was organized around his tomb in the three days following the *mawlid nabawī*. A colourful description of it, applying to the last years of the 19th century, will be found in *Le Maroc inconnu* of A. Mouliéras.

(R. LE TOURNEAU)

ʿABD AL-ṢAMAD B. ʿABD ALLĀH AL-PALIMBĀNĪ, i.e. of Palembang in Sumatra, was a pupil of Muḥammad al-Sammān (d. 1190/1776), the founder of the Sammāniyya order (cf. Brockelmann, S II, 535 and Nachtr.). He is known chiefly as translator of al-Ghazālī's *Lubāb Iḥyā' ʿUlūm al-Dīn* into Malay, under the title of *Sayr al-Sālikīn ilā ʿIbādat Rabb al-ʿĀlamīn*. It was begun in 1193 and finished at Ṭā'if in 1203. The translation is very free, shortened in some places, enlarged elsewhere by numerous additions, the sources of which are enumerated in book iii, bāb 10. Here we find also an interesting list of ṣūfī literature recommended by the author to three stages of pupils in Ṣūfism. Most of the works in this list are in Arabic, but some in Malay. It seems that ʿAbd al-Ṣamad lived mostly in Arabia. One of his earlier writings, *Zuhrat al-Murīd fī Bayān Kalimat al-Tawḥīd*, is a Malay treatise on *manṭiḳ* and *uṣūl al-dīn*, based on notes which he took during a lecture given at Mecca by Aḥmad al-Damanhūrī (Brockelmann, II, 371) in 1178. His *Hidāyat al-Sālikīn fī Sulūk Maslak al-Muttaḳīn* is a Malay adaptation of al-Ghazālī's *Bidāyat al-Hidāya*, finished at Mecca, 5 Muḥ. 1192. In Arabic he compiled a collection of *awrād* entitled *ʿUrwat al-Wuthḳā wa-Silsilat ūlī'l-Ittiḳā*, a *rātib*, and a treatise entitled *Naṣīḥat al-Muslimīn*. This last work contains fervent admonitions to holy war against infidels. It inspired the author of the Achehnese poem *Hikayat prang sabi*, of which various redactions were circulated in Acheh during the war against the Dutch in the last quarter of the 19th and the beginning of the 20th century.

Bibliography: Ph. S. van Ronkel, *VBG* 57, 383, 400, 429; id., *Suppl. Cat. Arab. Mss. Batavia*, 139, 216; R. O. Winstedt, *A history of Malay literature* (*JMBRAS* 17, III), 103; H. T. Damsté, *Hikajat prang sabi*, in *BTLV* 84, 545 ff.; for the Sammāniyya: C. Snouck Hurgronje, *The Achehnese*, ii, 216 ff. Two of ʿAbd al-Ṣamad's works have been frequently printed: *Sayr al-Sālikīn*, Mecca 1306 (lith.), 1309 etc.; *Hidāyat al-Sālikīn*, Mecca 1287 (lith.), Bombay 1311, etc. On two works of dubious authorship see *TBG* 85, 110. The tract *Anīs al-Muttaḳīn* by ʿAbd al-Ṣamad b. Faḳīh Ḥusayn b. Faḳīh Muḥammad is not the work of an Indonesian author, though on the title-page of the lithographed edition the epithet al-Palimbānī is added to the author's name; its attribution to a Zaydī author (Brockelmann, S II, 966) is equally false. (P. VOORHOEVE)

ʿABD AL-WĀDIDS (BANŪ ʿABD AL-WĀD, or ZAYYĀNIDS, BANŪ ZAYYĀN), a Berber dynasty which, from the first half of the 7th/13th century to the middle of the 10th/16th century had its capital at Tlemcen (Tilimsān, [*q.v.*]) and extended its power, against frequent opposition, over the central Maghrib (from the frontiers of the present Morocco to the meridian of Bougie).

According to the concepts recorded by Ibn Khaldūn, the Banū ʿAbd al-Wād were Zanāta "of the second race". Like the Banū Marīn, B. Tūdjīn, B. Rāshid and B. Mzāb, they belonged to the great Zanāta family of the Banū Wāsīn. Living as nomads, like their neighbours and relatives, the B. Marīn and B. Tūdjīn, they once occupied a more extensive territory, reaching to the vicinity of the Awrās. In consequence of the Hilālī invasion (5th/11th century) these Zanāta nomads, driven eastwards, were forced to abandon their territory to the Arab nomads and to emigrate to the high plateaux of what is now the province of Oran. The conquest of the country by the Almohads, at the beginning of the 6th/12th century, made the fortune of the Banū ʿAbd al-Wād. They proved themselves loyal and useful allies of the caliphs of Marrākush, especially at the time when the terrible ravages of the Almoravid Banū Ghāniya brought destruction upon Ifrīḳiya and the central Maghrib (581-600/1185-1203). The assistance which they gave to the Almohad forces earned its reward. Tlemcen, successfully defended, profited by the ruin of the neighbouring centres and by the emigrations that were depopulating them. In 633/1235 the chief of the Banū ʿAbd al-Wād, Yaghmurāsan (or better: Yaghamrāsan) b. Zayyān, inherited from his brother the command over all the branches of the family. This dignity, ratified by the consent of the tribes, was confirmed by a diploma of investiture issued by the Almohad caliph al-Rashīd.

Yaghmurāsan, the shaykh of an imposing nomad group, who used to lead his tribesmen and their flocks periodically from the desert to the plains of the province of Oran and who could speak only the Berber dialect of the Zanāta, became the sedentary sovereign of a powerful state. He had moreover the qualities of a founder of empire: energy, the ability needed to hold his associates together around him, political insight, a taste for grandeur and the generous gesture. During a reign that lasted not less than 48 years (633-81/1236-83), he already encountered the dangers that never ceased to menace the kingdom of Tlemcen. These arose on the one hand from the legacy of the clan's former life and the rivalries that set Berber against Berber, and on the other hand from the consequences of the new situation in which the ʿAbd al-Wādids found themselves. True to his duty as a vassal, he supported the last Almohad caliphs against the Marīnids, who had become the masters of Fez. The fall of the Almohads in 646/1248 left him face to face with the Marīnids. Between the Marīnids and the ʿAbd al-Wādids there was a long tradition of conflict; it was singularly widened by the establishment of the two kindred kingdons, neighbours and all the more ardently rivals.

These are the main themes which dictated the course of the external history of the ʿAbd al-Wādids. Yaghmurāsan foresaw their development and on his death-bed, so the story goes, he traced for his son ʿUthmān the conduct he should adopt with regard to the other powers: a strictly defensive attitude as against Marīnid Maghrib; attempts at expansion at the expense of the Ḥafṣid kingdom of Tunis, as occasion should offer. In addition to this political testament, his successors could derive lessons from the activities of Yaghmurāsan himself: his firmness in the face of the Zanāta, his relatives in the central Maghrib, namely Maghrāwa and Banū Tūdjīn; in Spain, the triple alliance which he concluded with the sultan of Granada and the Christian king of Castille, in order to thwart the action of the Marīnids, their common enemy, both in North Africa and in the Peninsula.

The struggle of Fez against Tlemcen, the attack on the ʿAbd al-Wādid kingdom—the first objective of their expansion in North Africa—by their western neighbours, the Marīnids, is the principal motif of this history and could serve to mark its stages. The first noteworthy episode was, under ʿUthmān, the son of Yaghmurāsan, the long siege of Tlemcen by the Marīnid sultan Abū Yaʿḳūb al-Manṣūr, who isolated it during eight years (698-706/1298-1306) by a rigorous blockade and began to build the

encampment-town of al-Manṣūra (see ABŪ ZAYYĀN I). This time, Tlemcen did not fall. After expanding eastwards under Abū Ḥammū I [q.v.], the ʿAbd al-Wādids were again attacked by the Marīnid Abu 'l-Ḥasan (see ABŪ TĀSHUFĪN I), and on 30 Ramaḍān 737/2 May 1337 Tlemcen was taken by storm. After ten years of Moroccan domination, Tlemcen was delivered from the foreign yoke in 749/1348 by the two brothers Abū Saʿīd and Abū Thābit, but in 753/1352 was again conquered by the Marīnid Abū ʿInān, and was not regained by the ʿAbd al-Wādids until 760/1359.

These two Moroccan interregnums caused a break in the history of the ʿAbd al-Wādids which was to show itself in all fields of action. Under Abū Ḥammū II (760-91/1359-89 [q.v.]), the kingdom regained a relative freedom of movement, but attempts at expansion in the direction of the Ḥafṣid kingdom were frustrated (the expedition of 767/1366 against Bougie ended in disaster) and Marīnid invasion remained as a periodical threat. The struggle with the Marīnids had also taken on a new character, for various reasons: firstly, because of the role played by the Maʿḳil Arabs of Tāfīlalt and the valley of the Mulūya (Wādī Malwiyya), who supported Tlemcen against Fez; secondly, through the policy of the Marīnids, whose aim was less to annex Tlemcen than to support an ʿAbd al-Wādid pretender and so to reduce the kingdom to a vassal state; thirdly, owing to the incapacity of the sulṭans of Tlemcen to defend their capital, and its temporary abandonment by the sovereign to seek refuge with his nomad allies.

This is, in its main lines, the history of the ʿAbd al-Wādids during the second half of the 8th/14th century. For the further hundred and fifty years

A LIST OF THE ʿABD AL-WĀDIDS

Abū Yaḥyā Yaghamrāsan b. Zayyān (633-81/1236-83)
Abū Saʿīd ʿUthmān I b. Yaghamrāsan (681-703/1282-1303)
Abū Zayyān I Muḥ. b. ʿUthmān (703-7/1303-8)
Abū Ḥammū I Mūsā b. ʿUthmān 707-18/1308-18)
Abū Tāshufīn I ʿAbd al-Raḥmān b. Mūsā (718-37/1318-1337)

First Marīnid interregnum

Abū Saʿīd ʿUthmān II b. ʿAbd al-Raḥmān b. Yaḥyā b. Yaghamrāsan—reigning togetherwith his brother Abū Thābit (749-53/1348-52)

Second Marīnid interregnum

Abū Ḥammū II Mūsā b. Abī Yaʿḳūb Yūsuf b. ʿAbd al-Raḥmān b. Yaḥyā b. Yaghamrāsan (760-91/1359-89)
Abū Tāshufīn II ʿAbd al-Raḥmān b. Mūsā (791-6/1388-93)
Abū Thābit II Yūsuf b. ʿAbd al-Raḥmān (796/1393)
Abu'l-Hadjdjādj Yūsuf b. Mūsā (796-7/1393-4)
Abū Zayyān II Muḥ. b. Mūsā (797-802/1394-9)
Abū Muḥ. ʿAbd Allāh I b. Mūsā (802-4/1399-1401)
Abū ʿAbd Allāh Muḥ. I b. Mūsā (804-13/1401-11)
ʿAbd al-Raḥmān b. Muḥ. (813-4/1411)
Saʿīd b. Mūsā (814/1411)
Abū Mālik ʿAbd al-Wāḥid b. Mūsā (814-27/1411-23)
Abū ʿAbd Allāh Muḥ. II b. ʿAbd al-Raḥmān (827-31/1423-7, 833-4/1429-30)
Abu'l-ʿAbbās Aḥmad b. Mūsā (834-66/1430-61)
Abū ʿAbd Allāh Muḥ. III al-Mutawakkil b. Muḥ. b. Yūsuf (866-73/1461-68)
Abū Tāshufīn III b. Muḥ. al-Mutawakkil (873/1468)
Abū ʿAbd Allāh Muḥ. IV al-Thābitī b. Muḥ. al-Mutawakkil (873-910/1468-1504)
Abū ʿAbd Allāh Muḥ. V al-Thābitī b. Muḥ. IV (910-23/1504-17)
Abū Ḥammū III Mūsā b. Muḥ. III (923-34/1517-27)
Abū Muḥ. ʿAbd Allāh II b. Muḥ. III (934-47/1527-40)
Abū ʿAbd Allāh Muḥ. VI b. ʿAbd Allāh (947/1540)
Abū Zayyān III Aḥmad b. ʿAbd Allāh (947-50/1540-3, 951-7/1544-50)
al-Ḥasan b. ʿAbd Allāh (957/1550)

during which the dynasty continued to exist they never again became masters of their own fate. It is true that they had nothing more to fear from Morocco, where the weak Waṭṭāsids had succeeded to the Marīnids; but the hegemony passed to Tunis. The last two great Ḥafṣids, Abū Fāris (827/1424) and ʿUthmān (871/1466), harking back to the tradition of the first rulers of the dynasty, led victorious expeditions against Tlemcen and imposed in their turn vassal sovereigns of their own choice on the ʿAbd al-Wādid kingdom.

The incurable weakness of this kingdom, its internal quarrels and the cupidity of the foreigners made of the last phase of its history—i.e. the first half of the 10th/16th century—an epoch of submission and decadence. Tlemcen passed successively under the suzerainty of the Spaniards (who had become masters of Oran in 915/1509), then under that of the Turks of Algiers in 923/1517, again from the Spaniards to the Turks, finally under the suzerainty of the Saʿdid sovereigns of Marrākush, from whom it was seized by the Turks in 957/1550.

There can be no doubt that, compared with the kingdom of their Marīnid kinsmen, that of the ʿAbd al-Wādids appears less rich in men, fertile land and cities, and in every respect less well furnished. Thus it was unable to undertake great military enterprises in North Africa or in Spain. Its geographical position exposed it to the attacks of its covetous neighbours to the east and to the west. The place taken by the Arabs, notably by the great Hilālī tribes of the Banū ʿĀmir and Suwayd, who had invaded the plains of the district of Oran, imposed upon it a ruinous collaboration with these nomads. The Arabs, providing troops that could easily be mobilized, and acting as collectors of taxes and repaid in this service, took part in the dynastic crises and always profited by them. The liberation from the Moroccan yoke was due to them. The greater part of the ʿAbd al-Wādid territory passed into their hands, in the form of *iḳṭāʿs*, beneficiary estates.

In spite of these precarious conditions of existence, and in spite of their slighter resources, which did

not allow the rulers of Tlemcen to live a life as sumptuous, or to erect buildings as important, as those of the kings of Fez, the ʿAbd al-Wādids seem to have cut a figure as sovereigns earlier than the Marīnids. From the very reign of Yaghmurāsan, the administrative personnel appears to be more complete and their duties to be better defined than among their western neighbours. At first, the sovereign recruited his viziers among the members of his own family. Under the fourth ruler, Abū Ḥammū I, who according to Ibn Khaldūn (*Berbères*, ii, 142; transl. iii, 384) transformed the kingdom from its patriarchal ways and imposed on it the etiquette of a real court, the vizierate was entrusted to Andalusians; and the same system continued under the fifth sultan. The Marīnid interregnum gave rise to a new system: the vizier, sometimes a relative of the prince, becomes, as at Fez, a commander of the army and a viceroy, who is tempted to abuse the authority granted to him. In regard to the *ḥādjib* (great chamberlain), it is noteworthy that while in Fez this dignitary is often a familiar of the prince, of humble origin and an inglorious past, in Tlemcen he is chosen for his knowledge of law and his financial capacity. After the Marīnid interregnum, the title of *ḥādjib* vanished almost completely. No less markedly than in the military and economic fields, the Moroccan occupation of the middle of the 8th/14th century represents a collapse in the development of the ʿAbd al-Wādid state.

Marçais, *Les monuments arabes de Tlemcen*, Paris 1903; G. Marçais, *Tlemcen* (*Les villes d'art célèbres*), Paris 1950; Zambaur, 77-8.—Owing to the close connection between the history of the ʿAbd al-Wādids and that of the neighbouring dynasties, the chroniclers of these dynasties (cf. the bibliographies under MARĪNIDS and ḤAFSIDS) have frequent references to the ʿAbd al-Wādids.—Cf. also TILIMSĀN. (G. MARÇAIS)

ʿABD AL-WAHHĀB B. ʿABD AL-RAHMĀN B. RUSTUM [see RUSTUMIDS].

ʿABD AL-WĀḤID B. ʿALĪ AL-TAMĪMĪ AL-**MARRĀKUSHĪ**, ABŪ MUḤAMMAD, Maghribi chronicler from the beginning of the 13th century, b. Marrākush 7 Rabīʿ II 581/8 July 1185. We have no information about his life except for a few autobiographical data that allow us to some degree to piece together his career. He left, at an early age, his native town for Fez, where he made his studies, but returned several times to the Almohad capital before going to Spain. He stayed in Seville in 605/1208-9 and stopped for two years in Cordova. After a short visit to Marrākush he established himself at Seville, whose Almohad governor took him into his service. At the end of 613/1217, he undertook a journey to the East, going to Ifrīḳiya and then to Egypt. It seems that he remained in the East till the end of his life; according to his own testimony, he was in 617/1220 in Upper Egypt, three years later in Mecca. It was in 621/1224 that he compiled, probably in Baghdād, his *al-Muʿdjib fi Talkhīṣ Akhbār al-Maghrib*, published by R. Dozy (Leiden 1847, 2nd ed. 1881) under the title *The History of the Almohads* (French transl. by E. Fagnan, Algiers 1893).

The *Muʿdjib* gives an often interesting précis of the history of the Muslim West up to the epoch of the Muʾminid dynasty. The author treats this dynasty at greater length, more often relying on his personal memories than on the official Almohad historiography. For the earlier period, he seems to have had at his disposition certain works of the Andalusian chronicler and traditionist al-Ḥumaydī. The value of the book of ʿAbd al-Wāḥid is enhanced by its rich material concerning literary history, especially of the century of the *mulūk al-ṭawāʾif* in Spain.

(E. LÉVI-PROVENÇAL)

ʿABD AL-WĀḤID AL-RASHĪD [see AL-MUWAḤḤIDŪN].

ʿABD AL-WĀSIʿ DJABALĪ B. ʿABD AL-DJĀMIʿ, Persian poet, one of the panegyrists of the Seldjuḳ sultan Sandjar. He came from the province of Ghardjistān, lived for some time in Harāt, then went to Ghazna to enter the service of the sultan Bahrām Shāh, son of Masʿūd, of the Ghaznawid dynasty. Four years afterwards he took the occasion of sultan Sandjar's coming to Ghazna—to assist Bahrām Shāh, his maternal cousin—to address to him a panegyric. During the last fourteen years of his life he lived at Sandjar's court and is said to have died in 555/1160. He excelled in Arabic and Persian poetry according to ʿAwfī, who quotes, in this connection, two *mulammaʿs*. His *dīwān* (MSS Bodleian, and Brit. Mus. Or. 3320) is mainly composed of *ḳaṣīdas*, often very difficult. The edition, Lahore 1862, is in need of revision.

Bibliography: Dawlat Shāh, *Tadhkirat al-Shuʿarāʾ* (Browne), 73-6; ʿAwfī, *Lubāb* (Browne), ii, 104-10; Riḍā Ḳulī Khān, *Madjmaʿ al-Fuṣaḥāʾ*, i, 185-92; J. Hammer-Purgstall, *Gesch. d. schönen Redekünste Persiens*, 101; H. Ethé, in *Grundr. d. iran. Philol.*, ii, 261. (CL. HUART-H. MASSÉ)

ABDĀL (A.; plur. of *badal*, "substitute"), one of the degrees in the ṣūfī hierarchical order of saints, who, unknown by the masses (*ridjāl al-ghayb* [cf. GHAYB]), participate by means of their powerful influence in the preservation of the order of the universe. The different accounts in the ṣūfī literature show no agreement as to the details of this hierarchy. There is also great difference of opinion as to the number of the *abdāl*: 40, e.g. Ibn Ḥanbāl, *Musnad*, i, 112, cf. v, 322; Hudjwīrī, *Kashf al-Maḥdjūb* (Zhukowsky), 269, (transl. Nicholson, 214), 300 (al-Makkī, *Ḳūt al-Ḳulūb*, ii, 79); 7 (Ibn ʿArabī, *Futūḥāt*, ii, 9). According to the most generally accepted opinion, the *abdāl* take the

fifth place in the hierarchy of the saints which descends from the great *Ḳuṭb* [*q.v.*]. They are preceded after the *Ḳuṭb* by: 2) both assistants of the latter (*al-imāmān*); 3) the five "stakes" or "pillars" (*al-awtād* [*q.v.*] or *al-ʿumud*; 4) the seven "incomparables" (*al-afrād*). After the *abdāl* in the fifth degree come: 6) the seventy "pre-eminents" (*al-nudjabāʾ*); 7) the 300 "chiefs" (*al-nuḳabāʾ*); 8) the "troops" (*al-ʿaṣāʾib*), 500 in number; 9) the "wise", or the "isolated" (*al-ḥukamāʾ* or *al-mufradūn*), of an unlimited number; 10) *al-radjabiyyūn*. Each of these ten classes is located in a particular region and assigned a particular sphere of action. The vacancies which occur in each of the classes are filled by the promotion to that class of a member of the class immediately below it. The *abdāl* (also called *al-ruḳabāʾ*, "the guardians") have their residence in Syria. To their merit and intercession are due the necessary rains, victory over the enemy, and the averting of general calamities.—A single individual of the *Abdāl* is called *badal*; *badīl*, however, which grammatically corresponds to another plural (*budalāʾ*), is the usual form in the singular. In Persian and in Turkish the plural *abdāl* is often used as a singular.

Bibliography: G. Flügel, in *ZDMG*, xx, 38-9 (where the older sources are indicated); Vollers, *ibid.*, xliii, 114 ff. (after Munāwī); Ḥasan al-ʿAdawī, *al-Nafaḥāt al-Shādhaliyya*, ii, 99 ff. (where is to be found the most frequently accepted division of the classes); A. von Kremer, *Gesch. d. herrsch. Ideen*, 172 ff.; Bargès, *Vie du célèbre marabout Cidi Abou-Médien*, Paris 1884, Introduction; Blochet, *Etudes sur l'ésotérisme musulman*, in *JA*, 1902, i, 529 ff. II, 49 ff.; *Concordance de la tradition musulmane*, s.v.; L. Massignon, *Passion d'al-Halladj*, 754; idem, *Essai*, 112 ff. (I. GOLDZIHER*)

In various orders of derwīshes in the Ottoman Empire the name *abdāl*, as well as *budalāʾ* (plur. of *badīl*) was used for the derwīshes, e.g. among the Khalwatiyya (cf. for instance Yūsuf b. Yaʿḳūb, *Menāḳib-i Sherīf we-Ṭariḳat-nāme-yi Pīrān we-Meshāyikh-i Ṭariḳat-i ʿAliyye-yi Khalwetiyye*, Istanbul 1290/1873, 34, where it is expressly stated that Shaykh Sünbül Sinān used to address his derwīshes as *abdāl*). When the esteem enjoyed by the derwīsh orders declined, the word *abdāl*, and *budalāʾ*, used as singulars assumed in Turkish a pejorative meaning: "fool". The derivation of *budalāʾ* from a Turkish word *but*, "plump body" (K. Lokotsch, *Etymologisches Wörterbuch der europäischen Wörter orientalischen Ursprungs*, Heidelberg 1927, 28) is mistaken. *Budalāʾ* occurs, in the same acceptation, also in Bulgarian, Serbian and Rumanian. (H. J. KISSLING)

ABDĀLĪ, the former name of the Afghān tribe now known as the Durrānī; they belong to the Sarbanī branch of the Afghāns. According to their own tradition, they derived their name from Abdāl (or Awdāl) b. Tarīn b. Sharkhabūn b. Ḳays; Abdāl was so called because he was in the service of an *abdāl* or saint named Khʷādja Abū Aḥmad of the Čishtiyya order. The Abdālīs for long inhabited the province of Ḳandahār, but early in the reign of Shāh ʿAbbās I, pressure from the Ghalzay tribe caused them to move to the province of Harāt. Shāh ʿAbbās made Sadō, of the Popalzay clan, head of the tribe, with the title *Mīr-i Afāghina*. Though loyal to Shāh ʿAbbās, they emulated the Ghalzays a century later and made themselves virtually independent. Nādir Shāh [*q.v.*] later subdued the Abdālīs, but treated them with leniency and enrolled many in his army. Amongst these Abdālīs was Aḥmad Khān, the second son of Muḥammad Zamān Khān Sadōzay. The Abdālīs served Nādir well, and he rewarded them by restoring them to their former territory of Ḳandahār. On Nādir's assassination in 1747, Aḥmad Khān had himself crowned in Ḳandahār. Either as the result of a dream or because of the influence of a *faḳīr* named Ṣabar Shāh, Aḥmad Shāh took the title of Durr-i Durrānī ("The Pearl of Pearls"), and the tribe has since that time been known as the Durrānī. The two principal clans were the Popalzay and the Bārakzay; the present royal family of Afghānistān belongs to the latter. (For the history of the Durrānī tribe see DURRĀNĪ and AFGHĀNISTĀN).

Dorn, *History of the Afghans*, ii, 42; L. Lockhart, *Nadir Shah*, London 1938, 3, 4, 16, 29, 31-4, 52-4, 113-4, 120, 201; K. Fraser-Tytler, *Afghanistan* 8, 62. (L. LOCKHART)

ʿABDALĪ, plural ʿABĀDIL, ʿABĀDILA and, in the *Ṭurfat al-Aṣḥāb*, ʿABDILIYYŪN with *i*, is now most commonly used as a collective name for the inhabitants of Laḥdj in S. Arabia. Aḥmad Faḍl believes this usage to date from the time when Shaykh Faḍl b. ʿAlī b. Ṣalāḥ b. Sallām b. ʿAlī al-Sallāmī al-ʿAbdalī, made Laḥdj independent of the Zaydī Imām (1145/1732-3) and founded the dynasty by which it has since been ruled (see LAḤDJ). According to the *Ṭurfat al-Aṣḥāb* (7th/13th cent.) the original clan of the ʿAbādil are descended from Khawlān b. ʿAmr b. Alḥāf b. Ḳuḍāʿa; al-Khazradjī mentions them in southern Yaman (*Pearl Strings*, v, 217) and Landberg concluded from local enquiries that they still lived in their former territories. In the time of Faḍl b. ʿAlī at least, they belonged to the Yāfiʿī confederacy; the Āl Sallām, his own branch, were represented at Khanfar, in Yāfiʿī territory, and at Mukhā. Aḥmad Faḍl states that the majority of the inhabitants of the state were then Aṣābiḥ, descended through Aṣbaḥ b. ʿAmr from Ḥimyar al-Aṣghar; they had been there in al-Hamdānī's time; the rest belonged to various Ḳaḥṭān tribes, ʿAdjālim, Djaḥāfil, Yāfiʿ, ʿAḳārib, Ḥawāshib and ʿĀmira. The capital of the state, al-Ḥawṭa, now has a very mixed population including representatives of many tribes of S. W. Arabia as well as people of African descent. (There is also a branch of the Banū Marwān called ʿAbādil, living on the Saʿūdī side of the southern border of ʿAsīr; see Philby, *Arabian Highlands*),

Bibliography: Al-Malik al-Ashraf ʿUmar b. Yūsuf, *Ṭurfat al-Aṣḥāb*, Damascus 1369; F. M. Hunter and C. W. H. Sealy, *An account of the Arab tribes in the vicinity of Aden*; C. Landberg, *Études sur les dialectes de l'Arabie méridionale*; Aḥmad Faḍl b. ʿAlī Muḥsin al-ʿAbdalī, *Hadiyyat al-Zamān*, Cairo 1351, giving copious quotations. (C. F. BECKINGHAM)

ʿABDĀN, according to the account of Ibn Rizām (see *Fihrist*, 187) and Akhū Muḥsin (quoted in al-Nuwayrī's chapter on the Ḳarmaṭians and in an abbreviated form in al-Maḳrīzī, *Ittiʿāẓ al-Ḥunafāʾ* (Bunz), 103 ff.), also going back, no doubt, to Ibn Rizām, was brother-in-law and lieutenant of Ḥamdān Ḳarmaṭ [*q.v.*], leader of the Ḳarmaṭians [*q.v.*] of southern ʿIrāḳ. When the Ismāʿīlī headquarters in Salamiya changed their policy, ʿAbdān fell away

from their allegiance, but was killed, in 286/899, at the instigation of Zikrawayh, the leader of the loyalists. The account of the evidently well informed Akhū Muḥsin—Ibn Rizām is confirmed by Ibn Ḥawḳal (Kramers), 295. The party of ʿAbdān survived in southern ʿIrāḳ for some years. It seems that Fāṭimid orthodoxy rehabilitated ʿAbdān's memory. He is mentioned by the author of the *Dastur al-Munadjdjimīn* (M. J. de Goeje, *Mémoire sur les Carmathes*, 204) as "one of the most famous helpers of the second hidden Imām". He was made into an author; his nephew, ʿĪsā b. Mūsā, is said to have concocted books in the name of ʿAbdān (Akhū Muḥsin, in al-Nuwayrī, and al-Maḳrīzī, *Ittiʿāẓ*, 130). At any rate, the *Fihrist*, 189, knows numerous books attributed to ʿAbdān. B. Lewis, *The Origins of Ismāʿīlism*, 68, states that several works by ʿAbdān are claimed to be in the possession of Syrian Ismāʿīlī circles; cf. also W. Ivanow, *A Guide to Ismaili Literature*, 31. [See also ḲARMAṬIANS].

(S. M. STERN)

AL-ʿ**ABDARĪ** (i.e. descendant of ʿAbd al-Dār b. Ḳuṣayy, of the tribe of Ḳuraysh), MUḤAMMAD B. MUḤAMMAD B. ʿALĪ B. AḤMAD B. SAʿŪD ABŪ MUḤAMMAD, author of a book of travels bearing the title of *al-Riḥla al-Maghribiyya*. He was staying with the Ḥāḥā, near Mogador, when he started on his journey on 25 Dhu l-Ḳaʿda 688/11 Dec. 1289. The dates of his birth and death are not known: all biographical data are lacking, although he was always held in esteem as the learned author of the *Riḥla*. Ibn al-Ḳāḍī (*Djadhwat al-Iḳtibās*, lith. Fez, 199; *Durrat al-Ḥidjāl*, i, 124) and al-Maḳḳarī, *Analectes*, 789, 866) know of him only from his work. That he had ṣūfī affinities is shown by his interest in the cult of saints; he himself tells that he received the ṣūfī *khirḳa* from the shaykh Abū Muḥammad ʿAbd Allāh b. Yūsuf al-Andalusī in Tunis (MS. Algiers, fol. 154b). In politics he seems to have been a partisan of the Marīnids as against the ʿAbd al-Wādids. It was due, probably, to this circumstance that he was unable, on his return, to publish his book in Tlemcen.

On his journey he received instruction from the following: Sharaf al-Dīn al-Dimyāṭī (al-Dhahabī, *Tadhkira*, iv, 278), the famous traditionist Ibn Daḳīḳ al-ʿĪd (al-Suyūṭī, *Ḥusn al-Muḥāḍara*, i, 143), Zayn al-Dīn b. al-Munayyir (Ibn Farḥūn, *al-Dībādj*, 205; Aḥmad Bābā, *Nayl*, 191), ʿAbd Allāh b. Hārūn al-Ṭāʾī al-Ḳurṭubī in Tunis, Abū Zayd ʿAbd al-Raḥmān b. al-Asadī in Ḳayrawān, Abu ʾl-Ḥasan ʿAlī b. Aḥmad al-Karāfī and others. His son Muḥammad (see IBN AL-ḤĀDJDJ) and Abuʾl-Ḳāsim b. Riḍwān are mentioned as his pupils. He writes approvingly of some, such as al-Dabbāgh (author of *Maʿālim al-Īmān*), while others are treated with devastating criticism (e.g. Abū ʿAbd Allāh b. ʿAbd al-Sayyid of Tripolis).

The importance of his book does not lie in its geographical details. Though he thinks it proper to criticize—with scant justification—some statements of al-Bakrī, he is not a geographer and his summary descriptions of various sights—where he usually follows other geographers—are of no great value. His rhetorical descriptions have no more than literary interest, putting him in the line of similar *Riḥlas* (e.g. that of al-Balawī, who travelled 737-41/1336-40). Al-ʿAbdarī's main concern is with the state of Muslim scholarship and instruction. His notes are important contributions to the history of the scholars of the Maghrib. He shared the customary passion for *idjāzas*, and gives details of the authorities from whom he obtained, both for himself and his son, such certificates of study. Thus his *Riḥla* turns into a specimen of the rich literature about teachers and books (*barnāmadj*, *fahrasa*), from which we gain an insight into the range of works usually studied, classical, post-classical, and contemporary. In Ḳurʾān-reading and grammar the late works of the Andalusians are preferred, in poetry most interest is shown in the famous post-classical product of North Africa. Among the longer poetical pieces quoted are *al-Ḳaṣīda al-Shaḳrāṭisiyya*, by Abū Muḥammad ʿAbd Allāh al-Ḳurashī (d. 466/1073), in praise of the Prophet, and a *takhmīs* of the *Munfaridja*. He quotes also some of his own poems; for instance one to his son, containing moral advice, another addressed to the Sultan Ṣalāḥ al-Dīn Yūsuf b. Ayyūb, praying him to deliver the lands of Islam from the Christian yoke.

The influence of the *Riḥla* (a MS of which was copied as late as 1883) can be traced in the geographical and historical literature of the Maghrib from the 14th to the 18th cent. For instance, Ibn Baṭṭūṭa's description of the Pharos of Alexandria (i, 29-30) is derived from it; other travellers, e.g. al-Balawī, and also biographers like Aḥmad Bābā and Ibn al-Ḳāḍī used it extensively. Finally, its moral purpose, to lay bare the material and spiritual shortcomings of contemporary Ifrīḳiya and Middle Maghrib, makes the *Riḥla* a document of considerable interest.

Bibliography: Brockelmann, I, 634, S I, 883 (add MSS Algiers 1017; Fez, Ḳarawiyyīn 1297); Aḥmad Bābā, *Nayl*, marg. of Ibn Farḥūn, *Dībādj*, 68; *TA*, iii, 379; B. Vincent, in *JA*, 1845, 404-8; M. AL-ʿ**ABDARI ABŪ ʿABD ALLĀH** MUḤAMMAD B. MUḤAMMAD B. MUḤAMMAD B. AL-ḤĀDJDJ AL-FĀSĪ [see IBN AL-ḤĀDJDJ].

ĀBDAST [see WUḌŪʾ].

ʿ**ABDĪ**, Ottoman historian. Among the Ottoman historians who bore the *makhlaṣ* ʿAbdī (cf. Babinger, 432 f.), the secretary (*kātib*) of Yūsuf Agha, chief of the eunuchs, is worthy of mention. He was an eye-witness of the magnificent festivities organized in Adrianople in June and July 1675 on the occasion of the circumcision of the crown-prince Muṣṭafā, son of Muḥammad (Meḥmed) IV, and of the marriage of the princess Khadīdje with the second vizier Muṣṭafā Pasha (cf. Hammer-Purgstall, vi, 307 ff. and 313 ff.), and in which his master took a prominent part. A different account is given in a more concise anonymous description of the same circumcision festival, mostly bearing the title *Medjmaʿ-i Sūr-i Humāyūn* (MS Vienna, 1072, of which a part has been lost since Hammer-Purgstall's time but of which the greater part is still preserved; Hammer's translation, vi, 704, replaces the lost section; Hamburg, cod. or. 269 contains only the list of the presents). Also diverging from ʿAbdī's account is that of an anonymous author in Paris, suppl. turc, 880, bound together with the translation of the *jeune de langues* Étienne Roboly. Of ʿAbdī's book there are MSS in Paris, suppl. turc 501 (incomplete) and 1045 (the best MS), in the private collection of R. Tschudi, Basle, and in Istanbul, Millet Kütübkhānesi, 277 (414).

Bibliography: Babinger, 217 f.; J. H. Mordtmann, in *Isl.*, 1925, 364. (Fr. Babinger)

ʿABDĪ EFENDI, Ottoman historian. The only information about his life is that he worked under the sultans Maḥmūd I and Muṣṭafā III, i.e. about 1730-64. His history, called either simply *ʿAbdī Taʾrīkhi*, or *Taʾrīkh-i Sulṭān Maḥmūd Khān*, deals mainly with the antecedents of Patrona Khalīl's rebellion and with the revolution itself (1730-1) and is one of the main contemporary sources for this event. MSS are to be found in Istanbul, Esʿad Efendī, 2153 and Millet Kütübkhānesi 409.

Bibliography: F. R. Unat, 1730 *Patrona ihtilali hakkında bir eser Abdi tarihi*, Ankara 1943; *Osmanlı Müellefleri*, iii, 106; *Inönü Ansiklopedisi*, i, 31; Ahmed Refik, *Lâle dewri*, Istanbul 1331, 116, 125, 140; *Rāmiz Tedhkiresi*, MS Millet Kütübkhānesi 762, 185; *Sefinet ül-Rüʾasāʾ*, 83 ff., 90 ff.—For the MSS cf. *Istanbul Kütüphaneleri Tarih-Coğrafya Yazmaları Katalogları*, I: *Türkçe Tarih Yazmaları*, 2nd fasc., Istanbul 1944, 103 f. (Fr. Babinger)

ʿABDĪ PASHA, Ottoman historian. ʿAbd al-Raḥmān ʿAbdī Pasha came from Anadolu Hisarī on the Bosporus, was educated in the Serāy, and finally attained the post of imperial privy secretary (*sirr kʿātibi*). In Muḥarram 1080/June 1669 he was promoted to the office of *nishāndji* with the rank of a vizier, and later was appointed *ḳāʾim-maḳām* of the capital. In April 1679 he became governor of Bosnia, next year again *nishāndji*, in March a so-called vizier of the cupola, in August 1684 governor of Baṣra (cf. Hammer-Purgstall, vi, 379). Deposed in 1686, he was in the next year appointed governor of Egypt. In 1688 he was governor of Rumelia, next year governor of Crete, where he died in Radjab 1103/March 1692. ʿAbdī Pasha is usually described, though whether correctly is open to some doubt, as the first officially appointed historiographer (*weḳāʾiʿ-nüwīs*); cf. Ismail Hakkı Uzunçarşılı, *Osmanlī devletinin merkez ve bahriye teşkilatı*, Ankara 1948, 64-8. At any rate he was the author of a history of the Ottoman empire, which starts with the beginning of the reign of Muḥammad (Meḥmed) IV, 1058/1648 and ends with 3 Ramaḍān 1093/5 Oct. 1682. The book, usually called *Taʾrīkh-i Weḳāʾiʿ* (Ḥādjdjī Khalīfa, ed. Flügel, no. 14523), but also *Waḳʿa-nāmeyi ʿAbdī Pasha*, was dedicated to the sultan Meḥmed IV. For the MSS cf. Babinger; additional MSS in Istanbul, *Baghdād Köshkü*, 217, Khāled Ef., 615 (cf. *Isl.*, 1942, 207), and *Istanbul Kütüphaneleri Tarih-Coğrafya Yazmaları Katalogları*, xi: *Türkçe Tarih Yazmaları*, 2nd fasc., Ankara 1944, 111 f. A partial French translation, by Étienne Roboly, is preserved in Paris, suppl. turc, 867 (Blochet, *Cat.*, ii, 78).

Bibliography: Babinger, 227 f. (with further references); *Inönü Ansiklopedisi*, i, 30; Hammer-Purgstall, iii, 558 f. (Fr. Babinger)

ABDJAD (or Abadjad or Abū Djad), the first of the eight mnemotechnical terms into which the twenty-eight consonants of the Arabic alphabet were divided. In the East, the whole series of these *voces memoriales* is ordered and, in general, vocalized as follows: *ʾabdjad hawwaz ḥuṭṭiy kalaman saʿfaṣ ḳarashat thakhadh ḍaẓagh*. In the West (North Africa and the Iberian peninsula) groups no. 5, 6 and 8 were differently arranged; the complete list was as follows: *ʾabadjid hawazⁱⁿ ḥuṭiyⁱⁿ kalamnⁱⁿ ṣaʿfaḍⁱⁿ ḳurisat thakhudh ẓaghshⁱⁿ*. The first six groups of the Oriental series preserve faithfully the order of the "Phoenician" alphabet. The last two, supplementary, groups consisted of the consonants peculiar to Arabic, called, for this reason, *rawādif*, "mounted on the hind-quarters".

From a practical point of view, this arrangement of the alphabet has only one point of interest, namely that the Arabs (like the Greeks) gave each letter a numerical value, according to its position. The twenty-eight characters are thus divided into three successive series of nine each: units (1 to 9), tens (10 to 90), hundreds (100 to 900), and "thousand". Naturally, the numerical value corresponding to each of the letters that belong to groups no. 5, 6 and 8 differs in the Oriental and the Occidental systems.

The use of the Arabic characters as numerals has always been limited and exceptional; the ciphers proper (cf. ḤISĀB) have taken their place. Nevertheless, they are used in the following cases: (i) on astrolabes; (ii) in chronograms, usually versified (epigraphic or otherwise), formed according to the system called *al-djummal* (see ḤISĀB and TAʾRĪKH). (iii) in various divinatory procedures and in composing certain talismans (type of *bdwḥ* = 2.4 6.8. see BUDŪḤ). Even in our own days the *ṭālibs* of North Africa use the numerical value of the letters for certain magical operations, according to the system called *ayḳash* (1.10.100.1000); a specialist in this technique is called in the vernacular *yaḳḳāsh*; (iv) in the pagination, according to the modern convention, of prefaces and tables of contents, where we would use the Roman letters.

This "abecedarian" order of the Arabic letters does not actually correspond to anything, whether from the point of view of phonetics or of graphical representation. To be sure, it is very old. For the first twenty-two letters, it appears already in a tablet discovered at Raʾs Shamra which gives the list of the cuneiform signs that constitute the alphabet of the people of Ugarit in the 14th century B.C. (Ch. Virolleaud, *L'abécédaire de Ras Shamra*, *GLECS*, 1950, 57). Its Canaanite origin, at least, is therefore certain; but moreover, the order was kept in the Hebrew and Aramean alphabet, and was, no doubt, taken over by the Arabs together with the latter. Yet the Arabs, having no knowledge of the other Semitic languages and moreover full of prejudices arising from their strong self-consciousness and their national pride, sought other explanations for the mnemotechnic words *abdjad* etc., handed down by tradition and incomprehensible to them. All that they had to say on this head, however interesting, is but a fable. According to one version, six kings of Madyan arranged the Arabic letters after their own names; according to another tradition, the first six groups are the names of six demons; a third tradition explains them as the names of the days of the week. Sylvestre de Sacy has noted the fact that in these traditions only the first six words are used, and that, e.g., Friday is not called *thakhadh*, but *ʿurūba*; yet it is not admissible to base on such vague traditions the conclusion that the Arabic alphabet had originally only twenty-two letters (J. A. Sylvestre de Sacy, *Grammaire arabe*², ii, par. 9). In fact, even among the Arabs there were some more enlightened grammarians, such as al-Mubarrad and al-Sīrāfī, who, not satisfied with the legendary explanations of *abdjad*, straightforwardly declared that these mnemotechnic words were of foreign origin.

There is, however, one noteworthy detail among

these fabulous indications. One of the six kings of Madyan had the supremacy over the others (*ra'īsuhum*); this was Kalaman, whose name is perhaps somehow connected with the Latin *elementum*.

For the other arrangement of the alphabet which exists alongside this "abecedarian" order and which is the one currently employed, see ḤURŪF AL-HIDJĀ'.

It may be added that in North Africa the adjective *būdjādī* is still alive, with the acceptation of "beginner, tiro, green", literally, "one still at the abecedarian stage" (cf. the Persian-Turkish *abdjad-khwān*, English *abecedarian*, German *Abcschüler*).

ABEL [see HĀBĪL].

ABENCERAGES [see AL-SARRĀDJ, BANŪ].

ABENRAGEL [see IBN ABI 'L-RIDJĀL].

ABESHR (ABECHE), capital of the Sultanate of Wadā'i, Territory of the Tchad, French Equatorial Africa, 14° north. lat. and 21° east. long., to the south of Wara, the old capital. Founded in 1850, chief town of a region and a district of 125,000 inhabitants (119 Europeans). Important center of transit between the Anglo-Egyptian Sudan and the Tchad; many *djallāba* merchants from Omdurman have installed themselves in the town. Center of trade in cattle, meat (freezing installations planned) and karakul sheep, bred in the neighbouring sheepwalk of Abugudam. A Franco-Arabic *medersa* was opened in 1951, the master of which belongs to the Tidjānī order, like all the Wadā'is. The town, built in a vast dry plain, dominated by isolated mountains, comprises five big villages and a European township.

Bibliography: Lt. J. Ferrandi, *Abéché, capitale des Ouadaï* (*Publ. Comité de l'Afr. franç.*), 1913; see also WADĀ'I. (J. DRESCH)

ABHĀ, capital of the Saudi Arabian province of 'Asīr [*q.v.*] situated in Wādī Abhā (c. 18° 13' n. lat. and 42° 30' E. long.) at an elevation of c. 2200 meters. Perhaps 10,000 people, almost all Shāfi'īs, live in its several villages now growing together but retaining distinctive names. One of the largest is Manāẓir, sometimes given as the ancient name of the place; al-Hamdānī (i, 118) fails to mention Manāẓir but names Abhā as a location of the tribe called 'Asīr. Banī Mughayd, dominant in modern Abhā, belong to 'Asīr.

Other communities are al-Ḳarā, perhaps the largest; Muḳābil, joined to the main group by a stone bridge across Wādī Abhā; Na'mān and al-Rubū'; al-Naṣab, where the principal mosque is located; al-Khasha'; and al-Miftāḥa. The focal point of town life is a large open square, where a Tuesday market is held, with the adjacent stone fortress of of Shadā, the center of provincial administration. Most of the houses have mud walls with multiple eaves of flat stone as protection against water erosion. Annual rainfall of c. 30 centimeters, augmented by irrigation from numerous wells, supports grains, fruits, and vegetables grown in terraced plots. Turkish forts crown the prominences ringing the town; two have been repaired and are used by the Sa'ūdī army: Dhira, 125 meters above the town to the SSE, and Shamsān to the north. Motor routes connect Abhā with Mecca, about 840 kilometers to the north via Bīsha, and Ẓahrān and Nadjrān to the south and south-east; there is only animal transport for the steep descent to the Red Sea ports of al-Ḳunfudha and Djīzān.

Little is known of Abhā's history until Wahhābī doctrine swept across the mountains about 1215/1800. The subsequent Turco-Egyptian campaigns brought an army including several Europeans to Manāẓir, which was occupied for about one month in 1250/1834 (Tamisier mentions a nearby village of "Apha"). Āl 'Āyiḍ, the shaykhly clan of Banī Mughayd, thereafter ruled from Abhā, later receiving the blessing of the resurgent Wahhābīs under Fayṣal b. Turkī. In 1287/1871 when the Turks were engaged in reoccupying the Yaman, Muḥammad b. 'Āyiḍ attacked them in the lowlands but they soon overwhelmed him, occupied Abhā, and put him to death. The town became the center of a ḳaḍā in the Yaman wilāyet and remained Turkish until after the 1918 armistice, except for several months in 1328-9/1910-1 when the Idrīsīs [*q.v.*] of Ṣabyā wrested it from Sulaymān Shafīḳ, the Turkish governor. A relief expedition led by Sharīf Ḥusayn of Mecca arrived in Djumādā II 1329/June 1911 to find Abhā once more in Sulaymān's hands.

After the Turkish withdrawal, Āl 'Āyiḍ again became sole rulers, but were promptly challenged, first by Muḥammad al-Idrīsī, then by the Sa'ūdīs, whose two campaigns (one in 1339/1921 and another in 1340-1/1922 led by Fayṣal b. 'Abd al-'Azīz) broke their power. Abhā has since been the seat of a Sa'ūdī governor, increased in importance by the Sa'ūdī acquisition of Idrīsī territory in 1345/1926. The force commanded by Sa'ūd b. 'Abd al-'Azīz in the Yaman War of 1355/1934 was based on Abhā. Two years later Philby found the place still suffering from the ravages of its former insecurity, but under peaceful rule prosperity is returning.

For bibliography see 'ASĪR. (H. C. MUELLER)

ABHAR (in *Ḥudūd al-'Ālam*: Awhar), a small town owing its importance to the fact that it lies half-way between Ḳazwīn (86 km) and Zandjān (88 km.) and that from it a road branched off southwards to Dīnawar. It was conquered in 24/645 by Barā' b. 'Āzib, governor of Rayy. Between 386/996 and 409/1029 it formed the fief of a Musāfirid [*q.v.*] prince. The stronghold of Sar-djahān (in *Rāḥat al-ṣudūr*: Sar-čāhān), lying some 25 km. N.W. of Abhar near a pass leading into Tārom [*q.v.*] played an important rôle under the Saldjūkids.

AL-**ABHARĪ**, ATHĪR AL-DĪN MUFAḌḌAL B. 'UMAR, philosophical writer, about whose life nothing is known; d. in 663/1264 (according to Barhebraeus in 1262). He was the author of two works on scholastic philosophy, which were much in use and often commented: (i) *Hidāyat al-Ḥikma* in three parts, a. Logic (*al-manṭiḳ*), b. Physics (*al-ṭabī'iyyāt*), c. theology (*al-ilāhiyyāt*). The best known commentary is that by Mīr Ḥusayn al-Maybudī, written in 880/1475). (ii) *al-Isāghūdji*, an adaptation of the *Isagoge* of

Porphyry (cf. FŪRFĪRIYŪS). Of the commentaries, that by Shams al-Dīn Aḥmad al-Fanārī (d. 834/1470) has been printed in Istanbul; for other commentaries and glosses, see Brockelmann.

(C. BROCKELMANN)

ABĪB [see TAʾRĪKH].

ʿABĪD [see ʿABD and MAKHZAN].

ʿABĪD B. AL-**ABRAṢ**, pre-Islamic Arab poet, of the tribe of Asad. Very little is known of his life, which must have lain in the first half of the 6th century A.D. The probably legendary story that his death was caused by al-Mundhir III, king of Ḥīra, would fix as a *terminus ante quem* the date of the king's death, 554. The literary tournament with Imruʾ al-Ḳays, attested by the historico-literary tradition and by verses in the *dīwān* of ʿAbīd, shows that the two poets were contemporaries; their joust would have to be placed between 530 and 550. About 530—so Lyall assumes—the Banū Asad revolted against the supremacy of the kings of Kinda and killed king Ḥudjr, father of Imruʾ al-Ḳays; hence the enmity and the rivalry between the two poets.

The *dīwān* of ʿAbīd (edited and translated together with that of ʿĀmir b. al-Ṭufayl by Ch. Lyall, Leiden 1913, GMS xxi) contains thirty more or less complete *ḳaṣīdas* and seventeen fragments. The very distinct archaism in the structure and the language of the *dīwān* is a strong argument for its authenticity. The dominant tone is one of melancholic and sententious austerity, as well as of a proud dignity which finds in individual and tribal *fakhr* the expression that becomes it best.

The sentiment of love appears in a very restrained and already strongly stylized form, so that the *nasīb* is more often devoted to the collective regret for a dispersed group than for an individual woman (e.g. *ḳaṣīda* i, ix, xv, etc.). It is perhaps this melancholic contemplation of life's flight and of its fleetingness, so often expressed with original accents in the poetry of ʿAbīd, that gave rise to the legend that places him amongst the *muʿammarūn* [*q.v.*]. He seems to have died, according to Grunebaum's view (*Orientalia*, 1939, 343, 345), rather young, perhaps even before his fiftieth year. The sententious mind of ʿAbīd is expressed not only in his nostalgia for the past, but also in his praise of himself and of his tribe (iv, vii, xxii, xxiv etc.) and in his virulent polemics against Imruʾ al-Ḳays and other, unknown, poets. The allusions to his poetical talent are especially noteworthy (x and xxiii): they show that he had a clear conscience of his inspiration and his artistic technique. The old Arab critics admired his descriptions of storms and desert tempests, but the modern reader appreciates most among all the poems of his *dīwān* his descriptions of animals, such as the famous scene of an eagle chasing a fox (i) and that of the fish in the sea (xxiii). In these poems and in other celebrated tableaux, ʿAbid appears as one of the most powerful poets of the *djāhiliyya*.

ʿABĪD B. **SHARYA** [see ʿUBAYD B. SHARYA].

ĀBIḲ [see ʿABD].

ĀBISH [see SALGHŪRIDS].

ABĪWARD, or BĀWARD, a town and district on the northern slopes of the mountains of Khurāsān in an area now belonging to the autonomous Turkoman republic which forms part of the U.S.S.R. The whole oasis region including Nasā [*q.v.*], Abīward etc. (known by the Turkish name of *Ātāk* "foothills") played a great part in ancient times as the first line of defence of Khurāsān against the nomads.

In the Arsacid period this region was in the ancestral country of the dynasty. Isidore of Charax, par. 13 (at the beginning of the Christian era) mentions between Παρθυηνή (with the town of Nasā) and Μαργιανή (= Marw) the district of Ἀπαυαρκτική with the town of Ἀπαυαρκτική, cf. Pliny, vi, 46: *Apaortene*, and Justin, xli, 5: *mons* (*Z*)*apaortenon* with the inaccessible town of Dara (= Kalāt?) built by Arsak.

Under the Sāsānians the country remained broken up into little principalities. Ibn Khurradādhbih, 39, has preserved the names of the kings: of Sarakhs: *Zādōya*; of Nasā: *Abrāz* (?), and of Abīward: *B. hm. na* (B. hmiya بهمنه) which is perhaps connected with the name of Mahana, Mayhana (in the district of Khāwarān to the east of Abīward).

Under Maʾmūn, ʿAbd Allāh b. Ṭāhir built the *rabāṭ* of Kūfan, 6 farsakhs west of Abīward.

Perhaps even before the great migration of the Ghuzz [*q.v.*] the district had been occupied by the Khaladj Turks; cf. the *Djahān-numā* of Muḥ. b. Nadjīb Bakrān (written in 1200). Other Turkoman tribes later succeeded the Khaladj.

In the 12th-14th centuries Abīward passed into the hands of the Djūn Ghurbānī princes, of Mongol origin [cf. ṬŪS]. In the time of ʿAbbās I Ātāk was outside the zone of Persian influence. Under Nādir who belonged to this region, Ātāk became the starting point for his remarkable career. At that time the river of Teżen (the Harī-rūd) was regarded as the eastern boundary of the cultivated lands of Abīward (*muntahā-yi maʿmūra-yi sarḥaddāt-i Abīwardāt*; cf. *Taʾrīkh-i Nādirī*, under 1142 A. H. [The same source mentions among the dependencies of Abīward (?): Yangi-ḳalʿa, Ḳalʿa-yi Baghwādā, Zāghčand (?) etc.]). After the disappearance of Nādir from the scene, the semi-independent khāns of Kalāt [*q.v.*] exercised a certain influence in the district down to 1885, when, after the delimitation of the Russo-Persian frontier, Ātāk with its Turkomans was incorporated in Russian territory. The resulting return of security to northern Khurāsān enabled the Persians to develop agriculture on the upper courses of the rivers running into Ātāk. The irrigation of the latter region has suffered considerably as the result.

Antiquities. The ruins of the old town (Kuhna-Abīward) are situated about 5 miles W. of the station of Kahka (Ḳahḳaha) on the Transcaspian railway and cover an area of 14,000 square yards. The central *tell* is 60 feet high and 700 feet round. About 2 miles N. E. of Kuhna-Abīward is the little hill of Namāzgāh and to the north of it the site of some ancient town surmounted by a *pēsh-ṭāḳ* ("gateway") 45 feet high. Another important site is that of Kuhna-Ḳahḳaha, a fortress rebuilt by Tīmūr in 784/1382 (*Ẓafar-nāma*, i, 343). The whole region is very rich in tells (*ḳurghān*): 14 miles S. of Ḳahḳaha are the ruins of Khīwa-ābād which was settled by Nādir with prisoners liberated after the taking of Khīwa; 11 miles S.E. of the station of Artīk are the ruins of a town called Čoghondur (after the *mazār* of a holy man which dates from the 13th century). Several

of these sites must go back to the Arsacid period (Isidore of Charax mentions for example a town of 'Ραγαῦ etc.) and some are even prehistoric; cf. R. Pumpelly, *Explorations in Turkestan*, Washington 1905, excavations at Anau.

(V. Minorsky)

al-**ABĪWARDĪ**, Abu' l-Muẓaffar Muḥammad b. Aḥmad, Arab poet and genealogist, a descendant of ʿAnbasa b. Abī Sufyān (of the Umayyad lineage of the younger Muʿāwiya). He was born in Abīward (Khurāsān), or more exactly in the village of Kawfan (not Kūḳan) near Abīward (he is therefore sometimes called al-Kawfanī), and died from poison in Iṣfahān in 507/1113 (not 557/1161-2). His philological and historico-genealogical works, notably a history of Abīward and a book on the different and identical names of the Arab tribes, are lost; but al-Kaysarānī extensively used the latter work. Of his *dīwān*, the three most important sections: *al-Nadjdiyyāt*, *al-ʿIrāḳiyyāt* (mostly on the caliphs al-Muḳtadī, al-Mustaẓhir and their viziers) and *al-Wadjdiyyāt* are preserved in several MSS. A *dīwān*, arranged according to the alphabetical order of the rhymes, was published in the Lebanon in 1317, but many poems by al-Ghazzī have been erroneously included; a choice of less important poems: *Muḳaṭṭaʿāt al-Abīwardī al-Umawī*, was published in Cairo, 1277/1860-1.

Bibliography: Yāḳūt, i, 111; idem, *Irshād*, vi, 342-58; Subkī, *Ṭabaḳāt*, iv, 62; Suyūṭī, *Bughya*, 16; Ibn Khallikān, no. 646; Abu'l-Fidā', *Mukhtaṣar* vii, 380; Ibn al-Djawzī, *Muntaẓam*, ix, 176-7; Ḳifṭī, *Akhbār al-Muḥammadīn min al-Shuʿarā'*, MS Paris, 10v-12r; Brockelmann, I, 253, S I, 447; a critical study of the poet and his work by Ali Al Tahir, *La Poésie arabe sous les Seldjoukides* (Sorbonne thesis, 1953).

(C. Brockelmann-[Ch. Pellat])

ABḲAYḲ (properly buḳayḳ), a town and oil field in al-Ḥasā Province, Saudi Arabia. The name is taken from that of the shallow water sources (*nabaʿ*) of Buḳayḳ in the sands some 15 miles north of the present town. The names Buḳayḳ and al-Baḳḳa (similar water sources not far to the north) appear to be associated with meanings of the Arabic root *baḳḳa* relating to water rather than bugs. The Bedouins know the location of the town as Aba 'l-Ḳiʿdān, "the place of the young male camels".

Surrounded by the heavy dunes of al-Bayḍā', Abḳayḳ (49° 40′ E. long., 25° 55′ N. lat.) is about halfway between al-Ẓahrān and al-Hufhūf on the main road connecting inner Arabia with the Persian Gulf ports of al-Dammām and Ra's Tannūra, and is also on the Saudi Government Railroad (al-Dammām-al-Riyāḍ). Prior to the discovery of oil in the Abḳayḳ field by California Arabian Standard Oil Company (now Arabian American Oil Company) in 1359/1940, no settlement existed there. In 1372/1952 the population was approximately 15,000, including 1,310 Americans.

The American geologist Max Steineke was primarily responsible for finding oil in this wilderness of dunes. The oil field is about 32 miles long, averages 5 miles in width, and for a time was the most productive field in the world. In 1370/1951 daily production reached about 600,000 barrels (90,000 tons) from only 61 wells. (W. E. Mulligan)

ABKHĀZ. 1. For all practical purposes the term *Abkhāz* or *Afkhāz*, in early Muslim sources covers Georgia and Georgians (properly *Djurzān*, *q.v.*). The reason (cf. below under 2.) is that a dynasty issued from Abkhāzia ruled in Georgia at the time of the early ʿAbbāsids. A distinction between the Abkhāzian dynasty and the Georgian rulers on the upper Kur is made by al-Masʿūdī, ii, 65, 74. The people properly called *Abkhāz* is possibly referred to only in the tradition represented by Ibn Rusta, 139: نوغر, read * اوغز *Awghaz*, see Marquart, *Streifzüge*, 164-76, and *Ḥudūd al-ʿĀlam*, 456. Characteristically, Ibn Rusta places this people at the end of the Khazar dominions.

2. Abkhāz, a smaller people of Western Caucasia on the Black Sea, which called itself *Aps-waà*. It occupies the area between the main range and the sea, between the river Psow (north of Gagri) and the mouth of the Ingur in the south. Since the 17th century (and possibly much earlier) a portion of the tribe has crossed the main ridge and settled on the southern tributaries of the Kuban.

The Abkhāz are mentioned in ancient times as *Abasgoi* (by Arrian) or *Abasgi* (by Pliny), cf. Contarini (A.D. 1475): *Avocasia*, in older Russian: *Obezi*, in Turkish: *Abaza*. According to Procopius (5th cent. A.D.) they were under the sovereignty of the Lazes [*q.v.*], and in those days slaves (eunuchs) were brought to Constantinople from Abkhāzia. Subjugated by Justinian, Abkhāzia was converted to Christianity. According to the Georgian Annals (Brosset, *Histoire de la Géorgie*, i, 237-43), the Arab general *Murwan-Ḳru* ("Murwan the Deaf") having occupied the passes of Darial and Dàrband, invaded Abkhāzia (whither the Georgian kings, Mir and Arčil, had fled), and ruined Tskhum (Sukhum). Dysentery and floods, combined with the attacks of the Georgians and the Abkhāzians, caused great losses to his army and made him retreat. The chronology of the Annals is very uncertain. The name Murwan-Ḳru seems to refer to the Umayyad Muḥammad b. Marwān, or to his son Marwān b. Muḥammad, i.e. to the early part of the 8th century, cf. al-Balādhurī, 205, 207-9. Towards A.D. 800 the Abkhāz won their independence with the help of the Khazars; the prince (*erist'avi*) Leon II, of the local dynasty issued from Ančabad, married to a Khazar princess, assumed the title of king, and transferred his capital to Kutaysi. Under the governor of Tiflīs, Isḥāḳ b. Ismāʿīl (c. 830-53), the Abkhāz are said to have paid tribute to the Arabs. The most prosperous period of the Abkhāz kingdom was between 850 and 950; their kings ruled over Abkhāzia, Mingrelia (Egrisi), Imeretia and Kartlia, and also interfered in Armenian affairs. Since that period Georgian has remained the language of the educated classes in Abkhāzia. In 978 the Georgian Bagratid Bagrat III, son of the Abkhāzian princess Gurandukht, occupied the Abkhāzian throne and by 1010 united all the Georgian lands. As his first successes were based on the hereditary rights of

his mother, and as even in his later title the rank of "king of Abkhāzia" occupied the first place, the Muslims continued to call the Georgian kingdom *Abkhāzian* (down to the 13th century, and occasionally even later).

About the year 1325 the house of Sharvashidze (in Russian: *Shervashidze*, alleged to be descended from the dynasty of the Shīrwān-shāhs, [*q.v.*]) was enfeoffed with Abkhāzia; towards the middle of the 15th century (under king Bagrat VI) the Sharvashidze were confirmed as *erist'avi* of the country. According to a letter from the emperor of Trebizond in the year 1459, the princes of Abkhāz disposed of an army of 30,000 men.

After the settlement of the Ottomans on the east coast of the Black Sea, the Abkhāz came under the influence of Turkey and Islam, although Christianity was but slowly supplanted. According to the Dominican John of Lucca, even in his time (1637) the Abkhāz passed as Christians, although the Christian usages were no longer observed. Since the separation from Georgia the country had been under its own Catholicos (mentioned as early as the 13th century) in Pitzund. Up to the present day the ruins of eight large and about 100 small churches, including chapels, are said to exist in Abkhāzia. The house of Sharvashidze did not embrace Islam until the second half of the 18th century, when Prince Leon recognized Turkish sovereignty. On this account, he was given the fort of Sukhum, which had already been besieged by the Abkhāz about 1725-8. The country was divided politically into three parts: 1) Abkhāzia proper, on the coast from Gagri to the Galidzga under the said Sharvashidze; 2) the highlands of Tzebelda (without any centralized government); 3) the country of Samurzakan on the coast extending from the Galidzga to the Ingur (ruled by a branch of the house of Sharvashidze, subsequently united with Mingrelia).

After the incorporation of Georgia by Russia in 1801, the Abkhāz had also to enter into relation with this new powerful neighbour. The first attempt was made in 1803 by Prince Kelesh-beg, but was abandoned soon afterwards. After the assassination of this prince in 1808, his son Sefer-beg came into closer touch with Russia and claimed her help against his brother, the parricide Arslan-beg. In 1810 Sukhum was taken by the Russians. Sefer-beg, who had become converted to Christianity and assumed the name of George, was installed as prince, but from that time on Sukhum was occupied by a Russian garrison. The two sons of Sefer-beg, Demetrius (1821) and Michael (1822, after poisoning his elder brother) had to be put in power by the Russian armed force. Their rule was limited to the neighbourhood of Sukhum, whose garrison could communicate with headquarters only by sea. By the incorporation of the whole coast-line from Anapa to Poti (Treaty of Adrianople in 1829) Russia's position was naturally strengthened, but even in 1835 only the north-western part of the country, the district of Bzbīb, is said to have been in the possession of Prince Michael. The other parts had remained under the rule of his Muslim uncles. Later on, with the help of Russia, Michael succeeded in establishing his power almost as an absolute ruler, but he too, in spite of his Christian faith, had surrounded himself with Turks.

After the final subjugation of Western Caucasia by the Russians (1864) the dominion of the House of Sharvashidze, like that of the other native princes, came to an end; in November 1864 Prince Michael had to renounce his rights and leave the country. Abkhāzia was incorporated into the Russian empire as a special province (*otdyel*) of Sukhum and divided into three districts (*okrug*)—Pitzund, Očemčiri and Tzebelda. In 1866 an attempt made by the new governor to collect information concerning the economic conditions of the Abkhāz, for the purpose of taxation, led to a revolt, and, subsequently, to a considerable emigration of the Abkhāz to Turkey. In the thirties of the 19th century the population of Abkhāzia was estimated at about 90,000, and the number of all Abkhāz (i.e. including those living in the north outside Abkhāzia) at 128,000 souls. After 1866, the population of Abkhāzia was reduced to c. 65,000. The almost depopulated district of Tzebelda ceased to be a district and was placed under a special "Settlement Curator" (*popečitel naseleniya*). Later the whole of Abkhāzia under the name of district (*okrug*) of Sukhum-Kale (Sukhum-Ḳalʿa) formed a part of the government of Kutais. The population again decreased through emigration, especially after the Abkhāz took part in the rebellion of the mountain tribes caused by the landing of Turkish troops (1877); in 1881 the number of Abkhāz was estimated at only 20,000. No statistics on the Abkhāzians in Turkey are available.

Soviet Abkhāzia. The Soviet power was proclaimed for a short time in 1918, and finally in 1921. In April 1930 Abkhāzia, as an autonomous republic (A.S.S.R.), became part of the Georgian republic (S.S.R.) and its special constitution was confirmed in 1937. The Abkhāzian A.S.S.R. has a population of 303,000, but in this number the Abkhāzians are but a minority. In 1939 the total number of the Abkhāzians in the Soviet Union (i.e. apparently including the northern colonies in Čerkesia) was 59,000. The capital (Sukhum) has 44,000 inhabitants. The territory of the republic has acquired great importance for subtropical cultures. Its water power has been considerably exploited (in 1935, 45 electrical stations).

Since the time when an Abkhāz alphabet was invented by the eminent specialist in Caucasian languages General Baron P. K. Uslar (in 1864), and when a book on Biblical history was compiled by a priest and two officers of Abkhāz nationality, Abkhāzian letters have had a considerable development. In 1910 the founder of the new literature, Dimitri Gulia (born in 1874), published a book of popular poems. He has been followed by writers in prose (G. D. Gulia, Papaskiri), poets (Kogonia 1903-29), L. Kvitsinia) etc. Abkhāzian folklore has been collected and schoolbooks written (Čʿočʿua etc.).

The Abkhāz "polysynthetic" language belongs to the same type as the Čerkes language. It has two basic vowels as against 65 consonants in the northern (Bzīb) dialect, and 57 in the southern (Abžu). The latter has been adopted as the literary language. It is now written in the Georgian alphabet suitably completed.

(W. Barthold-[V. Minorsky])

ʿABLA, sweetheart of ʿAntara [*q.v.*].

al-**ABLAK,** castle of Samawʾal [*q.v.*].

ABLUTION [see ghusl, tayammum, wuḍūʾ].

al-**ABNĀʾ**, "the sons", a denomination applied to the following:

(I) The descendants of Saʿd b. Zayd Manāt b. Tamīm, with the exception of his two sons Kaʿb and ʿAmr. This tribe inhabited the sandy desert of al-Dahnāʾ. (Cf. F. Wüstenfeld, *Register zu den geneal. Tabellen der arab. Stämme*).

(II) The descendants born in Yaman of the Persian immigrants. For the circumstances of the Persian intervention in Yaman under Khusraw Anūshirwān (531-79) and the reign of Sayf b. Dhī Yazan, as told by the Arabic authors, cf. sayf b. dhī yazan. After the withdrawal of the foreign troops Sayf was murdered and the country again subjugated by the Ethiopians, so that the Persian general Wahriz had to return. The power of the Ethiopians was this time definitely broken and Yaman turned into a vassal state of Persia. At the time of the Prophet the Persian governor Bādhām (Bādhān) was, together with his people, converted to Islam and acknowledged the suzerainty of Muhammad. Later, however, troubles broke out in Yaman which led to complete anarchy; it was only under the reign of Abū Bakr that order was restored. (Cf. also al-yaman).

Bibliography: Th. Nöldeke, *Gesch. d. Perser u. Araber zur Zeit der Sassaniden*, 220 ff.; M. J. de Goeje, in the Glossary to Ṭabarī, s.v.

(K. V. Zettersteén*)

(III) *Abnāʾ al-dawla*, a term applied in the early centuries of the ʿAbbāsid caliphate to the members of the ʿAbbāsid house, and by extension to the Khurāsānī and other *mawālī* who entered its service and became adoptive members of it. They survived as a privileged and influential group until the 3rd/9th century, after which they were eclipsed by the growing power of the Turkish and other troops.

(IV) *Abnāʾ al-Atrāk*, a term sometimes used in the Mamlūk sultanate to designate the Egyptian or Syrian-born descendants of the Mamlūks, as an alternative to the more common *awlād al-nās* [*q.v.*].

(V) *Abnā-yi sipāhīyān*, a term sometimes employed in formal Ottoman usage in place of the more common *sipāhī oghlanlarī*—the first of the six regiments (*bölük*) of cavalry of the Ottoman standing army. They were classed as "Slaves of the Gate" (*kapī ḳulu*).

Bibliography: H. A. R. Gibb and H. Bowen, *Islamic Society and the West*, i/1, 69 ff., 326 ff.; Ismail Hakkī Uzunçarşīlī, *Osmanlī Devleti teşkilātīndan Kapī Kulu Ocaklarī*, 1944, ii, 138 ff.

(B. Lewis)

ABRAHA, a Christian king of South Arabia in the middle of the sixth century A. D. In Islamic literature his fame is due to the tradition that he led a Yamani expedition against Mecca (referred to in the Ḳurʾān, cv) in the year of Muḥammad's birth, c. 570 A.D. The details of Abraha's life given by Muslim historians are largely stories of folk-lore origin which have been attached arbitrarily to the name of a famous personage. For authentic information we must turn to Procopius and the Himyaritic inscriptions. According to Procopius, Hellestheaios king of Abyssinia (ʾlʾṣḥh of the inscription Istanbul 7608 bis) invaded South Arabia a few years before 531 A.D., killed its king, appointed a puppet-ruler named Esimiphaios (smyfʿ of the inscriptions), and retired to Abyssinia; subsequently, Abyssinian deserters who had remained in South Arabia revolted against Esimiphaios and set on the throne Abraha, originally the slave of a Byzantine merchant of Adulis; two expeditions sent by Hellestheaios against the rebels were unsuccessful, and Abraha retained the throne; Justinian's attempts to incite Abraha to attack Persia were in vain, for he merely marched a little way northward and then retired; so long as Hellestheaios was alive, Abraha refused to pay tribute to Abyssinia, but agreed to do so to Hellestheaios' successor. Our main epigraphic source is Abraha's long inscription on the Maʾrib dam (*Corpus inscr. sem.*, iv, 541). This records the quelling of an insurrection supported by a son of the dethroned Esimiphaios in the year 657 of the Sabaean era (between 640-650 A.D.); repairs effected to the dam later in the same year; the reception of embassies from Abyssinia, Byzantium, Persia, Ḥīra and Ḥārith b. Djabalat the phylarch of Arabia; and the completion of repairs to the dam in the following year. A further text (Ryckmans 506, see *le Muséon*, 1953, 275-84) discovered at Murayghān, east of the upper Wadi Tathlīth, records a defeat inflicted by Abraha on the North Arabian tribe Maʿadd in 662 of the Sabaean era. The Maʾrib text begins, "By the power and favour and mercy of God and His Messiah and the Holy Spirit (*rḥ qds*)". It is perhaps significant of a sectarian distinction that Esimiphaios, who was no doubt a Monophysite like his Abyssinian patron, uses a different formula, "In the name of God and His Son Christ victorious and the Holy Spirit (*mnfs qds*)"; possibly Abraha had Nestorian leanings. The titulature adopted by Abraha is identical with that of his immediate predecessors, "King of Sabaʾ and Dhū-Raydān and Ḥaḍramawt and Yamanat and their Arabs in the plateau and lowland", but in the Maʾrib text he calls himself in addition *ʿzly mlkn ʾgʿzyn*. The word *ʿzly* is not found elsewhere, and no satisfactory explanation of the phrase has yet been given. Conti-Rossini's rendering "the valiant king, of the (tribe) ʾAgʿazi" is syntactically improbable; and Glaser's "viceroy of the Abyssinian king" is incompatible with the passage later in the inscription where Abraha receives an Abyssinian embassy on the same footing as those of Byzantium and Persia. J. Ryckmans' proposed reading *ʿlly mlkn* "the king's highness" is worth consideration. From here onwards reliable sources are silent, and we have only the probably legendary story in the Islamic sources, which attributes the motive of the Meccan expedition to Abraha's jealousy of the Meccan sanctuary and a futile attempt to substitute his church at Ṣanʿa as the place of pilgrimage for all Arabia. If Abraha really made such an expedition (the Ḳurʾān does not name its leader), a more likely explanation of his aims is that the rapprochement with Abyssinia under Hellestheaios' successor caused Abraha to adopt a more aggressive policy towards Persia, and the expedition was the first move of a projected attack on the Persian dominions. However, it proved a failure, and only provoked the Persians to their invasion under Wahrīz a few years later, which finally destroyed the ancient South Arabian kingdom. The *Martyrium Arethae* asserts

that Abraha was placed on the throne by the Abyssinian king Elesbaas (usually identified with Procopius' Hellestheaios) immediately after the death of Dhū Nuwās. Other ecclesiastical sources, such as the *Leges Homeritarum* attributed to Gregentius bishop of Ẓafār, give similar accounts. This version of events, which conflicts fundamentally with both Procopius and the inscriptions, must be regarded as unhistorical and due either to a confusion of names or to a falsification for polemical reasons.

ABRAHAM [see IBRĀHĪM AL-KHALĪL].

ʿABS [see GHAṬAFĀN].

AL-ABSHĪHĪ [see AL-IBSHĪHĪ].

ABŪ [see KUNYA].

ABU 'L-ʿABBĀS AL-SAFFĀḤ, ʿABD ALLĀH B. MUḤAMMAD B. ʿALĪ B. ʿABD ALLĀH B. AL-ʿABBĀS, the first ʿAbbāsid caliph. The surname al-Saffāḥ means "the bloodthirsty" or "the generous". With the other members of the ʿAbbāsid family, he took refuge in Kūfa in Ṣafar 132/Sept.-Oct. 749, shortly after the occupation of the town by al-Ḥasan b. Ḳaḥṭaba and was proclaimed as caliph in the great mosque on 12 Rabīʿ II/28 November, on which occasion he pronounced a famous speech.

The first task of Abu 'l-ʿAbbās was the total defeat of the Umayyads. The ʿAbbāsid troops, under the command of his uncle ʿAbd Allāh b. ʿAlī, achieved a complete victory on the Upper Zāb (Djumādā II 132/Jan. 750) and flung themselves into the pursuit of Marwān II through Mesopotamia, Syria and Palestine. When Marwān was killed in Egypt (Dhu 'l-Ḥidjdja 132/August 750), the main campaign could be considered as ended. The isolated resistance of Ibn Hubayra [*q.v.*] in Wāsiṭ was soon overcome by treachery, while the revolts that broke out in Mesopotamia and Syria were bloodily repressed. The conquerors abandoned themselves to violent acts of revenge, of which the first in importance was the episode on Nahr Abī Fuṭrus [*q.v.*]. Here ʿAbd Allāh b. ʿAlī, having killed about eighty Umayyad chiefs, laid tables over their bodies, which he afterwards threw to the dogs to eat. Similar scenes occurred in al-Kūfa, al-Baṣra and in the Ḥidjāz. Furthermore, the tombs of the Umayyad caliphs were violated. Similarly, the discontent of the ʿAlids, who, after having supported the cause of the revolt, saw themselves deprived of its fruits, was suppressed in blood: in 133/750-1, the governor of Khurāsān, Abū Muslim, put down a rising on behalf of the ʿAlids in Bukhārā.

In this way, soon after the accession of the ʿAbbasids to the caliphate, the principal sources of opposition, namely the Umayyad and the ʿAlid exenemies, were eliminated. The ʿAbbāsids, however, wanted to go even further, to the elimination of their own political and military chiefs who had gained too great an authority, or who were, rightly or wrongly, suspected of insubordination. With the complicity of Abū Muslim, Abū Salama [*q.v.*] and Sulaymān b. Kathīr [*q.v.*] were suppressed. Afterwards it was the turn of Abū Muslim; the first attempt against him, in connection with the rebellion of Ziyād b. Ṣāliḥ in Transoxania (135/752-3) was unsuccessful; the second, immediately after the the death of Abu'l-ʿAbbās, was carried out successfully by his successor, al-Manṣūr [*q.v.*].

Abu'l-ʿAbbās died in al-Anbār, to which town he had transferred his residence, in Dhu'l-Ḥidjdja 136/June 754. It is difficult to pass a judgment on his personality, as we do not exactly know what was his personal share in the events of his short caliphate. What is certain is that during his reign the ʿAbbāsid movement not only passed from the revolutionary to the legal phase, but also consolidated itself, and the first signs appeared of that political and economic power which were confirmed by the caliphate of al-Manṣūr.

ABŪ ʿABD ALLĀH YAʿḲŪB B. DĀʾŪD, vizier. Belonging to a philo-ʿAlid family, he participated, together with his brother ʿAlī, in the revolt of Ibrāhīm and Muḥammad b. ʿAbd Allāh against the caliph al-Manṣūr in 145/762-3. Imprisoned for this, he was pardoned by the next caliph al-Mahdī in 159/775-6 and succeeded in gaining his favour, it is said, by revealing the plan of escape of another partisan of the ʿAlids. Having become a confidant and counsellor of the caliph, he was appointed vizier in 163/779-80 in place of Abū ʿUbayd Allāh, and used his power in favour of his ʿAlid friends. This policy was the main reason for the suspicion, following upon some court rumours, entertained against him by al-Mahdī. The story goes that the caliph put him on trial by handing over to his charge an ʿAlid with the order to kill him secretly; but he let him escape. When this was discovered, he was deposed and thrown into prison, from which he was released only by Hārūn al-Rashīd. Completely blind by now, his only wish was to be sent to Mecca, where he died, probably in 186/802. His policy was perhaps the expression of an attempt at reconciling the ʿAbbāsids and the ʿAlids; if so, he himself was at the same time the symbol and the victim of the precarious nature of such an attempt.

Bibliography: Ṭabarī, Index; Djahshiyārī, *al-Wuzarā wa 'l-Kuttāb*, Cairo 1938, 114-122; Ibn Khallikān, no. 840; Ibn al-Ṭiḳṭaḳā, *al-Fakhrī* (Dérenbourg), 250-5, 257; S. Moscati, in *Orientalia*, 1946, 164-7. (S. MOSCATI)

ABŪ ʿABD ALLĀH AL-SHĪʿĪ, AL-ḤUSAYN B. AḤMAD B. MUḤ. B. ZAKARIYYĀʾ, sometimes also called AL-MUḤTASIB (he had allegedly been a *muḥtasib*, market overseer, in ʿIrāḳ), the founder of Fāṭimid rule in North Africa. A native of Ṣanʿāʾ, he joined the Ismāʿīlī movement in ʿIrāḳ and was sent to Yaman, where he spent his apprenticeship with Manṣūr al-Yaman (Ibn Ḥawshab), head of the

Ismāʿīlī mission in that country. On the pilgrimage of 279/892 he met in Mecca some Kutāma pilgrims and accompanied them back to their native country, which they reached on 14 Rabīʿ I 280/3 June 893. He first established himself in Īkdjān near Saṭīf. In face of the opposition directed against him by a confederacy of Kutāma clans, Abū ʿAbd Allāh transferred his headquarters to Tāzrūt, where he steadily strengthened his position, captivated Mīla and was able to withstand the attacks of two expeditions sent against him by the Aghlabid government (289/902 and 290/903). On the occasion of a temporary setback, his headquarters were moved back to Īkdjān, which remained his base for subsequent operations. In 289/902 the *imām* al-Mahdī ʿUbayd Allāh [*q.v.*] fled from Syria, attempted to join Abū ʿAbd Allāh, but had to take refuge in Sidjilmāssa, where he was imprisoned. Abū ʿAbd Allāh's brother Abu'l-ʿAbbās Muḥammad, who had accompanied the *imām*, fell into the hands of the Aghlabids. Abū ʿAbd Allāh then took Saṭīf, Ṭubna (293/906) and Billizma (same year), was victorious in the battle of Dār Mallūl, conquered Tīdjis, Bāghāya, defeated the Aghlabid army near Dār Madyan, and seized Ḳasṭiliya and Ḳafsa (296/909). When he took al-Urbus (Laribus), the key of Ifrīḳiya (23 Djumāda II, 296/19 March 909), the Aghlabid *amīr* Ziyādat Allāh fled from Raḳḳāda. Abū ʿAbd Allāh entered the Aghlabid capital on 1 Radjab 296/25 March 909. Leaving his brother Abu'l-ʿAbbās as his lieutenant, Abū ʿAbd Allāh led an expedition against Sidjilmāssa and liberated the *imām*, who triumphantly entered Raḳḳāda on 20 Rabīʿ II 297/6 Jan. 910, and conferred high honours on Abū ʿAbd Allāh and Abu'l-ʿAbbās. The ruler and his powerful servants, however, soon fell foul fo each other and both brothers were murdered on 1 Dhu'l-Ḥidjdja 298/31 July 911.

Bibliography: The main authority, and almost the unique source for the later historians, is al-Ḳāḍī al-Nuʿmān, *Iftitāḥ al-Daʿwa* (MSS preserved among the Bohras). Written in 346/957-8, this book mainly consists of a very detailed account of Abū ʿAbd Allāh's activities. It is quoted in al-Maḳrīzī, *al-Muḳaffā*, transl. E. Fagnan, *Centenario Michele Amari*, i, 35 ff.; an extensive précis in ʿImād al-Dīn Idrīs, *ʿUyūn al-Akhbār*, first half of vol. v. Ibn al-Raḳīḳ, in his lost history of Ifrīḳiya, followed the account of al-Nuʿmān (see the quotation in al-Nuwayrī, beg. of section on the Fāṭimids; cf. J. A. Silvestre de Sacy, *Exposé de la religion des Druzes*, i, p. ccccìii). On Ibn al-Raḳīḳ was based the relevant chapter in Ibn Shaddād's history of al-Ḳayrawān, known from the excerpts in Ibn al-Athīr, viii, 23 ff., al-Nuwayrī, al-Maḳrīzī, *al-Muḳaffā*, transl. Fagnan, 47-53, 67-78. In this way, al-Nuʿmān's narrative entered into the main stream of Islamic general history. (Cf. also Ibn Ḥamādū (Vonderheyden), 7; Ibn Khaldūn, *Hist. des Berb.*, ii, 509 f.; Maḳrīzī, *Khiṭaṭ*, i, 349-50, ii, 10 ff.; Ibn Khallikān, no. 171).—The account of ʿArīb (printed in the editions of Ibn ʿIdhārī, *al-Bayān al-Mughrib*: Dozy, i, 129 ff., Lévi-Provençal and Colin, i, 134 ff.) is independant of al-Nuʿmān; Ibn ʿIdhārī (ed. Dozy, i, 118 ff., ed. Lévi-Provençal and Colin, i, 124 ff.) copies Abū Marwān al-Warrāḳ, 6th/11th century (who ultimately depends upon al-Nuʿmān), and ʿArīb.—Of modern accounts—all of them antiquated by the recovery of the *Iftitāḥ*—that by F. Wüstenfeld, *Gesch. d. Fatimiden-Chalifen*, Göttingen 1881, 8 ff., can be recommended. For the phases of Abū ʿAbd Allāh's career where it touches that of the *imām*, cf. W. Ivanow, *Rise of the Fatimids*, index, and AL-MAHDĪ ʿUBAYD ĀLLAH.

(S. M. STERN)

ABŪ 'L-ʿALĀ' AL-MAʿARRĪ [see AL-MAʿARRĪ].

ABŪ (BŪ) **ʿALI ḲALANDAR** (Shaykh) SHARAF AL-DĪN PĀNĪPATĪ, one of the most venerated of Indian saints, is believed to have died in 724/1324. There is little authentic information about his life and none of the surviving contemporary works even mention him by name. The earliest reference to him is in ʿAfīf's *Ta'rīkh-i Fīrūz-Shāhī* (written in 800/1396), wherein Sulṭān Ghiyāth al-Dīn Tughluḳ's visit to him is recorded. According to the accounts of his life written in the 11th/17th century, he was a native of Pānipat, to which place his father, Sālār Fakhr al-Dīn, had come from ʿIrāḳ. Trained as a theologian, he ultimately renounced scholasticism, threw away his books in the river, and became a *Ḳalandar*. In the ecstasy of divine love, he gave up observing the commandments of God and the Prophetic Traditions, though he subjected himself to great self-mortification. He is supposed to have been a spiritual descendant of Ḳuṭb al-Dīn Bakhtiyār [*q.v.*]; however, it is doubtful if he belonged to any organized ṣūfī order. Numerous legends regarding his life, miracles and death have grown, and it is difficult even to say whether the tomb at Pānīpat or at Karnāl is his, though the former is more famous. The works attributed to him include letters on divine love addressed to Ikhtiyār al-Dīn (Sulayman Coll., Aligarh Univ.); *Ḥikam-nāma* (As. Soc. Bengal, Ivanow: 1196), which is definitely apocryphal; and two *mathnawīs*: *Kalām-i Ḳalandar* (Meerut) and *Mathnawī Bū ʿAlī Shāh Ḳalandar* (Lucknow 1891).

Bibliography: *Akhbār al-Akhyār*; *Gulzār-i Abrār* (As. Soc. Bengal, Ivanow 259, ff. 32-3); *Ṣubḥ-i Ṣādiḳ* (A. S. Coll., Aligarh Univ., iii f. 411a); *Siyar al-Aḳṭāb*; *Mir'āt al-Asrār* (B. M. Or. 216, f. 386a); *Maʿāridj al-Wilāya* (Nizami's MS., Aligarh Univ., 230-5); *Sharaf al-Madjālis* (Sulayman Coll., Aligarh Univ.); *Punjab Dist. Gazetteer*, Karnal 1918, 76, 210-1, 223-4; *Proc. As. Soc. Bengal*, 1870, 125; 1873, 97. (NURUL HASAN)

ABŪ ʿALĪ AL-ḲĀLĪ [see AL-ḲĀLĪ].

ABŪ ʿALĪ MUḤAMMAD B. ILYĀS [see ILYĀSIDS].

ABU 'L-ʿĀLIYA RUFAYʿ B. MIHRĀN **AL-RIYĀḤĪ**, a liberated slave of the Banū Riyāḥ, belonging to the first generation of *tābiʿūn* residing in Baṣra; d. 90/708-9 or 96/714. A commentary on the Ḳur'ān is attributed to him (Ḥādjdjī Khalīfa (Flügel), ii, 352), but he is mainly known as a traditionist and a transmitter of the Ḳur'ān. Having collected in al-Baṣra and in Medina *ḥadīth* transmitted particularly by ʿUmar and Ubayy b. Kaʿb, he was considered thrustworthy (*thiḳa*) and contributed to the training of Ḳatāda, Dā'ūd b. Abū Hind, ʿĀṣim al-Aḥwal and other traditionists of renown. His name figures frequently in the "chains" of transmission of *hadith* admitted into the great collections. In the same way, data put under his name are admitted by al-Ṭabarī, *Tafsīr*, *passim*, e.g. i, 228; cf. al-Bayḍāwī, *Anwār al-Tanzīl* (Fleischer), i, 12[24]. He transmitted his system of "reading" (*ḳirā'a*) to al-Aʿmash and to the readers of Baṣra Abū ʿAmr b. al-ʿAlā' [*q.v.*] and Shuʿayb b. al-Ḥabḥāb al-Azdī (d. 130/747). He played no political role and took no part in the conflict between ʿAlī and his partisans and the Umayyads.

Bibliography: Ibn Saʿd, vii, 81-5; Ibn Ḳutayba, *Maʿārif*, Cairo 1353/1934, 200; Ṭabarī, i, 108-25; Abū Nuʿaym, *Ḥilya*, Cairo 1351-6, ii,

217-24; Ibn ʿAsākir, *Taʾrīkh*, Damascus 1332, v, 323-6; Nawawī, *Tahdhīb al-Asmāʾ* (Wüstenfeld), 738-9; ʿUthmānī, *Ṭabaḳāt al-Fuḳahāʾ*, MS Paris 2093, 43v; Ibn al-Athīr, *Usd*, ii, 186-7, Ibn al-Djazarī, *Ḳurrāʾ*, no. 1272; A. Sprenger, *Leben des Mohammed*, iii, CVII, CXVI. (R. BLACHÈRE)

ABŪ ʿAMR ZABBĀN B. AL-ʿ**ALĀʾ**, a celebrated 'reader' of the Ḳurʾān, regarded as the founder of the grammatical school of Baṣra, died c. 154/770.

This scholar seems to have claimed a genealogy connecting him with the Arab tribe of Māzin of the confederation of Tamīm; see Ibn Khallikān and the other biographers, including Ibn al-Djazarī, who, however, in one isolated statement, links him with Ḥanīfa. His name, Zabbān, has never been fully confirmed, and is only given in preference to a score of others. He is believed to have been born c. 70/689 at the latest, either at Mecca, according to the generally accepted view, including that of Ibn al-Djazarī, i, 292 (citing a disciple of Abū ʿAmr, the 'reader' ʿAbd al-Wārith, d. 180/796), or at Kāzarūn, in southern Persia, according to an isolated piece of evidence in the works of Ibn al-Djazarī, i, 289. If the former is correct, he must have passed his childhood in Ḥidjāz before going to ʿIrāḳ; if the latter, the opposite would be the case. The only established fact is that Abū ʿAmr accompanied his father when the latter, harassed by al-Ḥadjdjadj's police, fled from ʿIrāḳ to seek refuge in southern Arabia; see Ibn al-Djazarī, i, 289 (there appear to be lacunae in the text), and Ibn Khallikān, i, 386 *ad fin*. (Ibn al-Anbārī, 32, merely says that Abū ʿAmr had to flee from al-Ḥadjdjādj, without giving any details). According to his own recollections, Abū ʿAmr was then a little more than twenty (which gives some force to the statements which put his year of birth at 70/689); see Ibn Khallikān, i, 387. It seems permissible to assume, from the passage of Ibn al-Djazarī, I, 289[8], that this journey gave him the opportunity of pursuing further his 'readings' of the Ḳurʾān at Mecca and Medina, studies which he would appear to have continued on his return to ʿIrāḳ. It is difficult, however, to reconcile this assertion with the statement of Ibn Khallikān, i, 387, that Abū ʿAmr and his father returned immediately to ʿIrāḳ upon the death of al-Ḥadjdjādj, in 95/714. However that may be, when Abū ʿAmr had settled in ʿIrāḳ, it appears that he rarely left Baṣra again. If it is indeed he who is praised in a line of al-Farazdaḳ (d. 114/732-3) (see al-Suyūṭī, *Bughya*, 367), he was already before that date a celebrity of some standing in his city of adoption: cf. the flattering comment on him attributed to al-Ḥasan al-Baṣrī (d. 110/728) and handed on by Ibn al-Djazarī, 291. Nevertheless, there is no evidence that reveals anything about his relations with the Umayyad authorities. On the other hand, when the ʾAbbāsids came to power, his celebrity seems to have won him recognition even in governmental circles, since he is said to have had dealings with the uncle of the caliph al-Saffāḥ, Sulaymān (Ibn Khallikān, i, 387), and with the uncle of the caliph al-Mahdī, Yazīd (see *Fihrist*, 50[15]), as well as with the governor of Syria, ʿAbd al-Wahhāb. It was on his return from a visit to the last-named that he died and was buried at Kūfa, c. 154/770 (or 155/771 or 157/773); see Ibn al-Djazarī, 293 (Ibn Khallikān gives also 159/775).

Abū ʿAmr seems to have left no written works, and when Ibn al-Nadīm, 41, states that he saw manuscripts of this master, at al-Ḥaditha, in the 4th/10th century, and when this same author adds, 88, that a *K. al-Nawādir* was handed down in the version left by him, he must have been referring to writings taken down from his oral teaching by his disciples.

Abū ʿAmr belongs to the generation of scholars for whom the study of Arabic was dependent on that of the Ḳurʾān. It is thus an arbitrary distinction if one tries to separate in him the 'reader' of the Koran from the grammarian and the 'transmitter' of poetry.

During his stay in Ḥidjāz, Abū ʿAmr initiated himself into the system of 'reading' in process of formation at Mecca and Medina, following the teaching of Abu 'l-ʿĀliya [*q.v.*] and Ibn Kathīr in particular. In ʿIrāḳ he studied the system of Ibn Abī Isḥāḳ al-Ḥaḍramī and of others (at Baṣra), and that of ʿĀṣim (at Kūfa). A list of his masters is given by Ibn al-Djazarī, 289; cf. also al-Suyūṭī, *Muzhir*, ii, 398, and *Fihrist*, 39. He built up a system of his own in which the Mecca and Medina influences predominate; a complete table of the origins of this system has been drawn up by C. Pellat, *Milieu basrien*, 77 f. The 'reading' of Abū ʿAmr, at Baṣra, displaced all others previously existing in the town, and especially that of al-Ḥasan al-Baṣrī: see Pellat, *op. cit.*, 76; it is said to have been recommended by the 'reader' of Kūfa, Shuʿba (d. 193/808): see Ibn al-Djazarī, 292; it was taught by disciples who later became famous, such as Yūnus b. Ḥabīb, al-Aṣmaʿī, and a large number of others: see the list ibid., 289. In the 4th/10th century, when the reforms of Ibn al-Mudjahid were introduced, this system took its place among the canonical 'Seven readings'. At the time of Ibn al-Djazarī (d. 833/1429) it was the accepted system in Yaman, in Ḥidjāz, and in Syria, a province where it had finally ousted that of Ibn ʿĀmir in the 5th/11th century: see Ibn al-Djazarī, 292. This system of 'reading' was the subject of a treatise by Ibn al-Mudjāhid, see *Fihrist*, 31[18]. Nevertheless, writings of the same order had been composed before that period: see the list, ibid., 28. Another summary is also known, entitled *al-Ḳaṭar al-Miṣrī fī ḳirāʾat Abī ʿAmr b. al-ʿAlāʾ al-Baṣrī*, by ʿUmar b. al-Ḳāsim al-Nashshār (d. 900/1495), which is preserved in Berlin: see Ahlwardt, no. 639. We have, too, an opuscule based on the oral tradition, on the orthography of the Koran: see O. Rescher, in WZKM, 1912, 94 (this opuscule is in a miscellaneous collection, in Aya Sofia, no. 4814). The influence of Abū ʿAmr was of the first importance for the development of grammatical and lexicographical studies at Baṣra. It is less easy to follow, however, than the influence of his system of 'reading'. Among his disciples, the following names are worthy of note: Yūnus b. Ḥabīb, al-Aṣmaʿī (see al-Suyūṭī, *Muzhir*, ii, 323, 329; *Fihrist*, 42; Ibn al-Anbārī, 30), Abū ʿUbayda (see Ibn Khallikān, 387), Khalaf al-Aḥmar (see al-Suyūṭī, ii, 278, 403), and the future founder of the School of Kūfa, al-Ruʾāsī (see id., ii, 400). It is possible that already then, under his stimulus, the method of seeking information from the Beduins, in matters concerning grammar and lexicography, was developed at Baṣra. (see the anecdote recorded by id., ii, 278 and 304).

By his disciples, and especially by Abū ʿUbayda and by such a scholar as al-Djāḥiẓ, Abū ʿAmr was regarded as 'the most learned man in things pertaining to the Arabs, and combining with the accuracy of his auricular transmission the veracity of his statements' (see al-Djāḥiẓ, *Bayān*, i, 255, 256; cf. Abū 'l-Ṭayyib, who expresses a similar view in *Muzhir*, ii, 399). And yet this point raises a very delicate problem. This scholar seems, indeed, like a number

of his contemporaries, to have been an enthusiastic collector of archaic poetry and of accounts of the 'Days of the Arabs'; cf. Blachère, *Histoire de la littérature arabe*, Paris, 1952, i, 101 f. According to an account taken from Abū ʿUbayda by al-Djāḥiẓ, *Bayān*, i, 256 (repeated in a somewhat changed form by Ibn al-Djazarī, 290, Ibn Khallikān, i, 386, and al-Kutubī, i, 164), 'the books which Abū ʿAmr had written by taking the words down from such Arabs as were worthy to serve as informers filled a room in his dwelling. Later on, having devoted himself to 'reading' (of the Ḳuʾrān), he burnt these books'. This piece of evidence, which we have no means of checking, does not say that Abū ʿAmr destroyed the collections of poetry made by himself, as has been too often asserted. Actually, the main point to keep in mind is that after this destruction—if it took place—Abū ʿAmr continued nevertheless to communicate orally the documentation which he had accumulated in his memory. There are many anecdotes which show his knowledge of ancient poetry; see for example, al-Djāḥiẓ, *Bayān*, i, 256, ii, 121; al-Sīrāfī, 30; Ibn al-Anbārī, 31, 34. It is known that on one occasion he did not hesitate to forge a line; see al-Suyūṭī, *Muzhir*, ii, 415. This fact, which he himself admitted, in no way detracted from his acknowledged authority as a 'transmitter' (*rāwī*). His place among Arab lexicographers seems to have been very important, since he is said to have been, in this sphere, the master of al-Khalīl [*q.v.*]; see ibid., ii, 398, and also the numerous references to Abū ʿAmr's lexicographical authority, ibid., ii, 73, 111, 291, 360. The authors of *adab* and the anthologists often quote, too, his judgements on the poets; see for example, ibid., ii, 479, 484, 486.

It is no exaggeration to say that the figure of Abū ʿAmr b. al-ʿAlāʾ dominates the intellectual activity of the centre of Baṣra at the period when the generation of scholars was growing up—men such as al-Khalīl, al-Aṣmaʿī, Abū ʿUbayda—who were to become the masters of the philological and grammatical school of that town.

(R. Blachère)

ABU ʾL-ʿARAB Muḥammad b. Tamīm b. Tammām al-Tamīmī, Malikite *faḳīh*, traditionist, historian and poet from Ḳayrawān. Offspring of a great Arab family (his great-grandfather was governor of Tūnis, seized Ḳayrawān in 183/799 and ended his life in prison in Baghdād), Abu'l-ʿArab, born in Ḳayrawān between 250/864 and 260/873, devoted himself to study under various masters, trained, in his turn, several pupils (notably Ibn Abī Zayd al-Ḳayrawānī), took part in the revolt of Abū Yazīd against the Fatimids, was put in prison and died in 333/945. Of the works on *fiḳh*, *ḥadīth* and history attributed to him, only the *Ṭabaḳāt ʿUlamāʾ Ifriḳiya*, a collection of anecdotical biographies of the scholars of Ḳayrawān and Tūnis, seems to have been preserved (ed. and transl. by M. Ben Cheneb, *Classes des savants de l'Ifrîqîya*, Algiers 1915-20).

Bibliography: Dhahabī, *Tadhkira*, iii, 105; Ibn Farḥūn, *Dībādj*, 233; Ibn Nādjī, *Maʿālim* iii, 42; Ibn Khayr, *Fahrasa* (BAH, ix), 297, 301; H.H. ʿAbd al-Wahhāb, *al-Muntakhab al-Madrasī*², Cairo 1944, 37-8.

(Ch. Pellat)

ABŪ ʿARĪSH, a town in ʿAsīr, about 20 miles from Djīzān. Philby describes it as kite-shaped, nearly a mile across, consisting mainly of brushwood huts (*ʿarāʾish*) and adjoining extensive ruins. The population (about 12,000) grows millet and sesame. The merchants are mostly of Ḥaḍramī origin.

First settled by a shaykh (7th/13th century), it prospered under the Zaydī Imāms who captured it in 1036/1627. In the next century the local *ashrāf* became independent. They temporarily submitted to the Wahhābīs (1217/1802-3) and later to the Egyptians. When the latter abandoned Ḥudayda (1256/1840) Sharīf Ḥusayn occupied the Tihāma, was made Pasha and threatened ʿAdan. Britain protested and the Turks drove him back to ʿAsīr. The power of the *ashrāf*, weakened by civil war and the attacks of Muḥammad b. ʿĀʾiḍ, disappeared when the Turks reoccupied ʿAsīr; Philby could find no trace of them. Abū ʿArīsh has since belonged in turn to the Turks, the Idrīsī and Ibn Saʿūd.

(C. F. Beckingham)

ABŪ ʿARŪBA, al-Ḥusayn b. Abī Maʿshar Muḥammad b. Mawdūd al-Sulamī al-Ḥarrānī, *ḥadīth* scholar of Ḥarrān (b. ca. 222/837, d. 318/930-1).

Practically nothing is known about his life, except the names of his authorities and his students, some of them very famous personalities. He is said to have been judge or *muftī* of Ḥarrān. One source (Ibn ʿAsākir *apud* al-Dhahabī) states that he was a partisan of the Umayyads.

According to the *Fihrist*, 230, Abū ʿArūba wrote only one work, a collection of traditions which were transmitted by his authorities. This work seems to be identical with the *Ṭabaḳāt* which are mentioned as a work of Abū ʿArūba by al-Dhahabī. An excerpt from the *Ṭabaḳāt*, which deals with the men around Muḥammad and their traditions, is preserved in Damascus (cf. Yūsuf al-ʿIshsh, *Fihris Makhṭūṭāt Dār al-Kutub al-Ẓāhiriyya*, Damascus 1947, 169). Abū ʿArūba is also quoted as the author of a history of Ḥarrān (or collection of biographies of scholars of the Djazīra) and a *Kitāb al-Awāʾil*.

Bibliography: Brockelmann, II, 663; *Fihrist*, 322; Samʿānī, *Ansāb*, fol. 161a and passim; Yāḳūt, ii, 232, and *passim*; Ibn al-ʿAdīm, *Bughya* (ms. Topkapusaray, Ahmet III, 2925, iv, fols. 178b-179a); Dhahabī, *Nubalāʾ* (ms. Topkapusaray, Ahmet III, 2910, ix, 545-7); idem, *Taʾrīkh al-Islām*, *anno* 318; Ibn al-ʿImād, *Shadharāt*, ii, 279; F. Rosenthal, *A history of Muslim historiography*, Leiden 1952, 310, 389, 393.

(F. Rosenthal)

ABU ʾL-ASWAD al-DUʾALĪ (or, according to West-Arabic pronunciation al-Dīlī, nomen relativum from al-Duʾil b. Bakr, a clan of the Banū Kināna),

a partisan of ʿAlī. His name (Ẓālim b. ʿAmr) and genealogy are uncertain; his mother belonged to the clan ʿAbd al-Dār b. Ḳuṣayy of Ḳuraysh. He was probably born some years before the Hidjra. In the caliphate of ʿUmar he went to Baṣra. He lived first among his own tribe, then among the Banū Hudhayl, and for some time also among the Banū Ḳushayr, the kinsmen of his favourite wife; but his Shīʿite propensities as well as his obstinacy and avarice made him disagreeable to his neighbours. It is doubtful whether he held any office under ʿUmar and ʿUthmān. In ʿAlī's caliphate he rose to prominence. He is said to have taken part in the unsuccessful negotiations with ʿĀʾisha and in the ensuing "Battle of the Camel", and also fought at Ṣiffīn for ʿAlī. He was employed at Baṣra either as ḳāḍī or as secretary to the governor ʿAbd Allāh b. ʿAbbās, and is even said to have held a military command in the wars against the Khawāridj. When ʿAlī's star was setting, and according to al-Madāʾinī, ʿAbd Allāh b. ʿAbbās planned to leave Baṣra, taking with him the treasury, Abu 'l-Aswad tried to stop him and reported the matter to ʿAlī, who appointed him governor. This post he held, if at all, only for a short time. When ʿAlī was murdered, he made in a poem (no. 59 in Rescher's numbering) the Umayyads responsible for it. But his sentiments were of no consequence, as there was no large Shīʿa element in Baṣra (*Aghānī*[1], xi, 121). He did not realize that he had lost all influence. He had reason to complain about Muʿāwiya's representative ʿAbd Allāh b. ʿĀmir, with whom he had formerly been on good terms (Poems nos. 23, 46), and also tried in vain to gain the favour of the viceroy Ziyād b. Abīh. Relations between them had been strained already in the caliphate of ʿAlī, when Ziyād was in charge of the revenue-office (*Aghānī*[1], xi, 119). He lamented the death of al-Ḥusayn in 61/680 (no. 61) and cried for vengeance (no. 62). The last event mentioned in his poems is his complaint to the "Prince of the Faithful" Ibn al-Zubayr about his representative at Baṣra in c. 67/686 (Ibn Saʿd, v, 19). He died, according to al-Madāʾinī, at Baṣra during the great plague in 69/688.

A collection of his poems, made by al-Sukkarī, is extant, but has been published only in part. They are poor in language and style and artistically and historically insignificant; most of them deal with petty incidents of everyday life; some of the poems are apparently forged. This applies also to the widely circulated allegation—invented most probably by some philologist of the Baṣra school—that is was Abu'l-Aswad who laid down for the first time the rules of Arabic grammar and invented the vocalisation of the Ḳurʾān.

(J. W. Fück)

ABŪ ʿAṬĀʾ AL-SINDĪ, Aflaḥ (or Marzūḳ) b. Yasār, Arabic poet. He owes his surname of al-Sindī to the fact that his father came from Sind; he himself was born in Kūfa and lived there as a client of the Banū Asad. He fought for the declining Umayyad dynasty with pen and sword, praising them and casting scorn on their adversaries. It is true, however, that when the ʿAbbāsids obtained power, he tried to insinuate himself into the favour of the new rulers by singing their praises. But the iron character of al-Saffāḥ was but little sensible to such fawning, and under the reign of his successor, al-Manṣūr, the poet was even obliged to keep himself hidden. Only after al-Manṣūr's death in 158/774 did he again make his appearance. He died, no doubt, shortly afterwards, but the exact date is not known. Abū ʿAṭāʾ was considered a good poet—his elegy on Ibn Hubayra [*q.v.*] being especially famous—although he pronounced Arabic badly and even stammered, so that he was obliged to have his poetry recited by others.

Bibliography: Ibn Ḳutayba, *Shiʿr*, 482-4; Abū Tammān, *Ḥamāsa*, i, 372 ff.; *Aghānī*[1], xvi, 81-7; Marzubānī, *Muʿdjam*, 380; al-Bakrī, *Simṭ al-Laʾālī* (Maimani), 802; al-Kutubī, *Fawāt*, Cairo 1283, i, 937; collection of fragments by Baloch Nabi Bakhsh Khan, *IC*, 1949, 137 f.

(A. Schaade*)

ABU 'L-ʿATĀHIYA, poetic nickname ("father of craziness") of Abū Isḥāḳ Ismāʿīl b. al-Ḳāsim b. Suwayd b. Kaysān, Arabic poet, born in Kūfa (or ʿAyn al-Tamr) 130/748 and died 210/825 or 211/826. His family had been *mawālī* of the ʿAnaza tribe for two or three generations, and were engaged in menial occupations; his father was a cupper, and the poet himself as a youth sold earthenware in the streets. His outlook on life was embittered by a sense of social inferiority; in his later verse he gave vent to his hatred of the governing class and the wealthy; and he was notorious for covetousness and meanness to the end of his life. But like Bashshār b. Burd, he had a natural gift for poetry, and hoped to find in this the door to a larger life. On account of his poverty he had not the time to attend lectures on philology and the poetry of the ancients, and to this we must attribute the freshness and unconventionality of his style. As a young man he associated with the profligate circle of poets grouped around Wāliba b. al-Ḥubāb, and gained a reputation with his *ghazals* and wine-songs; later critics have condemned these productions as poor and effeminate (Ibn Ḳutayba, *Shiʿr*, 497), and only fragments of them have survived. Like most of the spontaneous poets, he showed a preference for simple language and short metres, and first rose to fame by a panegyric on al-Mahdī which, in spite of these unconventional characteristics, gained the caliph's favour. He made himself notorious in Baghdād by his ghazals in praise of ʿUtba, a slave-girl of al-Mahdī's cousin Rayṭa, who hoped to gain the caliph's notice but had no intention of throwing herself away on a penniless nobody. He held the caliph responsible for his failure to win ʿUtba, and some indiscrete verses gained him a flogging and banishment to Kūfa. When al-Mahdī died, he took his revenge in some verses which could be read ambiguously.

Back in Baghdād his fulsome praise of al-Hādī annoyed the latter's successor Hārūn al-Rashīd, who sent him to prison along with his friend Ibrāhīm al-Mawṣilī. Restored to favour, he charmed Hārūn with his love-lyrics, but suddenly renounced the *ghazal* and devoted himself to ascetic poetry (c. 178). Hārūn at first took umbrage at his conversion and imprisoned him, but was reconciled later at the instances of al-Faḍl b. Rabīʿ, and in part also no doubt because of his popularity with the masses. It may be suspected that al-Faḍl's patronage was connected with his intrigue, in association with the queen Zubayda, against the Barmakids, and that Abu 'l-ʿAtāhiya's new "ascetic" productions conveniently served their purposes. However that may be, Abu'l-ʿAtāhiya maintained henceforward a vast

output of sermons in verse, long and short, painting the horrors of all-levelling Death, and directed especially against the rich and the powerful, not excluding the caliph himself. So profitable was it that when Abū Nuwās also began to produce *zuhdiyyāt* Abu'l-ʿAtāhiya warned him not to trespass on the field to which he had established a prescriptive right (*Akhbār Abī Nuwās*, Cairo 1924, 70). Some later critics questioned, not without cause, the sincerity of his conversion, notably the real ascetic Abu'l-ʿAlāʾ al-Maʿarrī, who referred to him as "that astute fellow" (Ibn Faḍl Allāh, *Masālik al-Abṣār*, xv, MS Brit. Mus. 575, fol. 136).

A more frequent accusation brought against Abu'l-ʿAtāhiya is that of heresy, which was a favourite weapon at the time; and it was suggested by Goldziher that one reason for his imprisonments may be sought in the occasionally unorthodox tone of some of his poems. Having no theological education he seems to have been influenced by the modified legacy of Manichaean beliefs still current in ʿIrāḳ, which accounted for the disorders of this world by the existence of two primary substances, good and evil, though Abu'l-ʿAtāhiya held that both were the creation of Allāh. In certain of his verses also, such as "If you would see the noblest of mankind look for a king in the guise of a pauper", there may be suggestions of a concealed attachment to Mūsā al-Kāẓim and the cause of the Shīʿite imāms, still strong in Kūfa.

His astonishing success as a poet was due to the simplicity, spontaneity, and artlessness of his language, which contrasted with the laboured artificiality of some of his contemporaries, and expressed the feelings of the people in verse that they could understand. He was fortunate also, by his friendship with Ibrāhīm al-Mawṣilī, to have many of his poems set to music by the foremost musician of the day. He and his younger contemporary Abān b. ʿAbd al-Ḥamīd [*q.v.*] were the first to use *muzdawidj* (couplet) rhyming verse, and he was the first, according to al-Maʿarrī (*al-Fuṣūl wa'l-Ghayāt*, i, 131), to invent the metre *muḍāriʿ*. He also used a metre consisting of eight long syllables. Owing to his enormous output his entire *dīwān* was never collected. The *zuhdiyyāt* were put together by the Spanish scholar Ibn ʿAbd al-Barr (d. 463/1071).

Bibliography: Ibn Khallikān, no. 91; al-*Aghānī*[2], iii, 126-83 ([3], iv, 1-112); see also Guidi's *Tables* for other references; *Taʾrīkh Baghdād*, vi, 250-60; Goldziher, *Trans. Partial editions of the *dīwān* were published in Bairut 1887, 1909; see also *Madjmūʿa*, ed. F. E. Bustani, Bairut 1927; *Zuhdiyyāt*, trans. O. Rescher, Stuttgart 1928. (A. GUILLAUME)

ABU 'L-AʿWAR ʿAMR B. SUFYĀN AL-**SULAMĪ** general in the service of Muʿāwiya. He belonged to the powerful tribe of Sulaym (hence "al-Sulamī"); his mother was a Christian and his father had fought at Uḥud in the ranks of the Ḳuraysh. The son, who does not seem to have belonged to the closest circle of the Prophet, went, probably with the army commanded by Yazīd b. Abī Sufyān, to Syria. In the battle of the Yarmūk he was in charge of a detachment, and from that time he followed faithfully the fortunes of the Umayyads. He thus exposed himself to the execration of ʿAlī, especially after he had taken part in the battle of Ṣiffīn. He assisted ʿAmr b. al-ʿĀṣī in conquering Egypt for Muʿāwiya and was in command of various military expeditions by sea. In addition, he showed also diplomatic and administrative abilities. At Ṣiffīn, he took part in the negotiations with ʿAlī and prepared the preliminary draft for the conference of Adhruḥ. He was also commissioned to count the *fallāḥs* of Palestine for a new distribution of taxes. Muʿāwiya had in mind to appoint him in Egypt to the post of ʿAmr b. al-ʿĀṣī, who had been guilty of showing a too independent attitude; but this plan came to nothing, and he was appointed to the governorship of the province of al-Urdunn. On the ground of his services the Arabic annalists counted him among the main lieutenants of Muʿāwiya, those who constituted his *shīʿa* or *biṭāna*. He disappeared from the political scene before the end of Muʿāwiya's reign.

Bibliography: Ibn Saʿd, iii/2, 106; Ibn Rusta, 213; Ṭabarī, index; Masʿūdī, *Murūdj*, iv, 351; Michael the Syrian (Chabot), ii, 442, 445, 450; Bayhaḳī, *Maḥāsin*, 149; Ibn al-Athīr, *Usd*, v, 138; Ibn Ḥadjar, *Iṣāba*, iv, 14; H. Lammens, *Etudes sur le règne de Moʿâwia*, 42 ff. (H. LAMMENS*)

ABŪ ʿAWN ʿABD AL-MALIK B. YAZĪD AL-KHURASĀNĪ, general in the service of the ʿAbbāsids. After the outbreak of the rebellion in Khurāsān, 25 Ramaḍān 129/9 June 747, Abū ʿAwn several times took part in the war against the Umayyads. At first he accompanied the ʿAbbāsid general Ḳaḥṭaba b. Shabīb; then he was sent by the latter to Shahrazūr, where on 20 Dhu'l-Ḥidjdja 131/10 August 749, in conjunction with Mālik b. Ṭarīf, he defeated ʿUthmān b. Sufyān. While Abū ʿAwn remained in the vicinity of Mosul, the Umayyad caliph Marwān II marched against him. Under the supreme command of ʿAbd Allāh b. ʿAlī, Abū ʿAwn took part in the battle by the Greater Zāb (11 Djumādā II 132/25 January 750), in the pursuit of Marwān, and in the capture of Damascus. When ʿAbd Allāh remained behind in Palestine, he sent Ṣāliḥ b. ʿAlī together with Abū ʿAwn and a few others to continue the pursuit to Egypt, and it was there that the caliph, after a fresh defeat, was tracked down and killed in the same year. Abū ʿAwn remained in Egypt till further orders as governor. In 159/775-6 he was appointed governor of Khurāsān by al-Mahdī, but deposed in the following year.

Bibliography: Yaʿḳūbī, Ṭabarī, Masʿūdī, *Murūdj*, Indexes; Wellhausen, *Das arabische Reich und sein Sturz*, Berlin 1902, 341-3; L. Caetani, *Chronographia Islamica*, Roma 1912, under the relevant years. (K. V. ZETTERSTÉEN*)

ABU 'L-ʿAYNĀʾ MUḤAMMED B. AL-ḲĀSIM B. KHALLĀD B. YĀSIR B. SULAIMĀN AL-HĀSHIMĪ, an Arabian littérateur and poet. He was born about the year 190/805 in al-Ahwāz (his family came from al-Yamāma) and grew up in Baṣra, where he received instruction from the most famous philologists, Abū ʿUbaida, al-Aṣmaʿī, Abū Zayd al-Anṣārī and others. He was renowned amongst his contemporaries not only for his linguistic attainments, but also for his quickness at repartee. Ibn Abī Ṭāhir collected anecdotes concerning him in a special work entitled *Akhbār Abi 'l-ʿAynāʾ*, many of which are to be found in the *al-Aghānī*. The book itself as well as the collection of his poems have not been preserved. He became blind at the age of 40, later on he emigrated to Bagdad, but returned to Baṣra again and died there in the year 282 or 283/896.

Bibliography: *Fihrist*, 125; Ibn Khallikān, no. 615. (C. BROCKELMANN)

ABŪ AYYŪB KHĀLID B. ZAYD B. KULAYB AL-NADJDJĀRĪ AL-**ANṢĀRĪ**, generally known by his *kunya*, companion of the Prophet. It was in the

house of Abū Ayyūb that the Prophet stayed on his emigration to Medina, before his own mosque and house were built. He took part in all the Prophet's expeditions, was present at all the battles of early Islam and served under the command of ʿAmr b. al-ʿĀṣī during the conquest of Egypt. Later on he was appointed by ʿAlī to the governorship of Medina, but was obliged to rejoin ʿAlī in ʿIrāḳ when Busr b. Abī Arṭāt approched the town with an army of 3000 men put at his disposal by ʿAmr b. al-ʿĀṣī. In ʿIrāḳ Abū Ayyūb al-Anṣārī took part in the battles fought there by ʿAlī. During the reign of Muʿāwiya, he took part in the invasion of Cyprus and the expedition against Constantinople led by Yazīd b. Muʿāwiya. During the siege of the Byzantine capital Abū Ayyūb died of dysentery, in the year 52/672 (the years 50, 51 and 55 are also given as the date of his death). At his own request, he was buried under the walls of Constantinople.

150 *ḥadīths* are attributed to Abū Ayyūb, but only a small number of them (thirteen altogether) have been admitted as authentic by al-Bukhārī and Muslim.

(E. LÉVI-PROVENÇAL)

The tomb of Abū Ayyūb is mentioned for the first time by Ibn Ḳutayba, *al-Maʿārif*, 140 (ed. Cairo 1934, 119); according to al-Ṭabarī, iii, 2324, Ibn al-Athīr, iii, 381, Ibn al-Djawzī and al-Ḳazwīnī, 408, the Byzantines respected it and made pilgrimage to it in time of drought to pray there for rain (*istisḳāʾ*). The—probably legendary—discovery of the tomb by Aḳ Shams al-Dīn [*q.v.*] during the siege of the city by Muḥammad II can be compared to the finding of the Holy Lance by the Crusaders during the siege of Antioch. The Turkish legend is fully reproduced in Leunclavius, *Historiae musulmanae*, Frankfurt 1591, 38 ff. and in the careful monograph by Hādjdjī ʿAbd Allāh, *al-Āthār al-Madjīdiyya fi 'l-Manāḳib al-Khālidiyya*. See also A. M. Schneider, in *Oriens*, 1951, 113 ff.; P. Wittek, *Aywansary*, in *Annales de l'hist. de phil. et d'hist. orientales et slaves*, Bruxelles 1951, 505 ff. (esp. 513 ff.).

(J. H. MORDTMANN*)

A mosque was built on the spot by Muḥammad II in 863/1458; it was enlarged by Etmekdji-zāde Aḥmad Pasha in 1000/1591; two new minarets, each with two galleries, were added in 1136/1273. It was in this mosque that the sultan Maḥmūd II deposited the relics of the Prophet discovered in the treasury of the Sarāy (the imprint of the foot). The grand-vizier Sinān Pasha (d. 1133/1729), Māh Fīrūz Khadīdja (mother of the sultan ʿUthmān III), the grand-vizier Semiz ʿAlī Pasha, Gurdjī Muḥammad Pasha, Lala Muṣṭafā Pasha (the conqueror of Cyprus) and a number of other important persons are buried in the *turba* or in the immediate vicinity of its court-yard. The mosque is situated outside the Byzantine walls, and an important suburb (Eyyüb [see ISTANBUL]) grew up round it. The mosque was the object of special veneration and it was forbidden for non-Muslims to enter it. According to a rather late custom (cf. *Isl.*, 1931, 184 ff. and MAWLAWIYYA) it was in this mosque that the sultan, on his accession, was girded with the sword of his ancestors by the Čelebi Efendi, the head of the Mawlawī order who came especially from Ḳonya to carry out the ceremony.

(CL. HUART*)

ABŪ BAKR, the first caliph.

i. Name, family, and early life.—Abū Bakr was probably born shortly after 570 as he is said to have been three years younger than Muḥammad. His father was Abū Ḳuḥāfa (ʿUthmān) b. ʿĀmir of the clan of Taym of the tribe of Ḳuraysh, and he is therefore sometimes known as Ibn Abī Ḳuḥāfa. His mother was Umm al-Khayr (Salmā) bint Ṣakhr of the same clan. The names ʿAbd Allāh and ʿAtīḳ ('freed slave') are attributed to him as well as Abū Bakr, but the relation of these names to one another and their original significance is not clear. Muḥammad seems to have made a play on the name ʿAtīḳ and to have said that he was 'freed from Hell'. He was later known as al-Ṣiddīḳ, the truthful, the upright, or the one who counts true; the last meaning is supported by the tradition that he alone immediately believed Muḥammad's story of his night-journey (*isrāʾ*, *q.v.*).

In the course of his life he had four wives. (1) Ḳutayla bint ʿAbd al-ʿUzzā of the Meccan clan of ʿĀmir, who bore him ʿAbd Allāh and Asmāʾ (who married al-Zubayr b. al-ʿAwwām); (2) Umm Rūmān bint ʿĀmir of the tribe of Kināna, who bore him ʿAbd al-Raḥmān (originally ʿAbd al-Kaʿba or ʿAbd al-ʿUzzā) and ʿĀʾisha; (3) Asmāʾ bint ʿUmays of the tribe of Khathʿam, who bore him Muḥammad; (4) Ḥabība bint Khāridja, of the Medinan clan of al-Ḥārith b. al-Khazradj, who bore him Umm Kulthūm posthumously. The last two marriages were made late in his life and were doubtless political; Asmāʾ bint ʿUmays was the widow of Djaʿfar b. Abī Ṭālib (who was killed in 8/629). The first two marriages were probably concurrent, since ʿAbd al-Raḥmān was the eldest son, but only Umm Rūmān accompanied Abū Bakr to Medina.

Little is known about Abū Bakr's life before his conversion. He was a merchant (*tādjir*) worth 40,000 dirhams, indicating (according to H. Lammens, *La Mecque à la Veille de l'Hégire*, Beirut 1924, 226-8) that his business was comparatively unimportant. He is not mentioned as having travelled to Syria or elsewhere, but he was an expert in the genealogies of the Arab tribes.

ii. From his conversion to the death of Muḥammad.—Abū Bakr was possibly a friend of Muḥammad before the latter's call to be a prophet and his own conversion. According to some traditions he was the first male Muslim after Muḥammad (Ibn Saʿd, iii/1, 121; al-Ṭabarī, i. 1165-7); but this may simply be a reflection of his later preeminence, since the same claim is made for ʿAlī and Zayd b. Ḥāritha.

Similarly the statement that Abū Bakr was responsible for the conversion of ʿUthmān b. ʿAffān, al-Zubayr, ʿAbd al-Raḥmān b. ʿAwf, Saʿd b. Abī Waḳḳāṣ and Ṭalḥah b. ʿUbayd Allāh is suspicious because these five and ʿAlī constitued the *shūrā* or council to elect a successor to ʿUmar. What is certain is that for some time before the Hidjra, Abū Bakr was the foremost member of the Muslim community after Muḥammad.

He remained in Mecca when many Muslims emigrated to Abyssinia. This is an obscure affair. It has been suggested that the emigrants objected to the policy of the group among the Muslims led by Abū Bakr. The traditional view, however, was that the emigrants went to avoid persecution; and it may be that Abū Bakr's clan of Taym, like others belonging to the group known as Ḥilf al-Fuḍūl, did not persecute its members. It seems, however, that it also lacked the will or the power to defend them, for it allowed Abū Bakr and his fellow clansman Ṭalḥa to be bound together by a man of the Meccan clan of Asad; and at a later date Abū Bakr left Mecca and only returned on receiving the protection (*djiwār*) of Ibn al-Dughunna, the chief of a nomadic group in alliance with Ḳuraysh. The slaves bought and set free by Abū Bakr, notably ʿĀmir b. Fuhayra and Bilāl, suffered bodily violence. The purchase of slaves who professed Islam, though showing Abū Bakr's devotion to the cause, does not completely account for the reduction of his wealth to 5,000 dirhams at the Hidjra, and economic pressure by the leading merchants of Mecca is to be suspected.

Muḥammad chose him to accompany himself on his migration to Medina, an event to which reference is made in Ḳurʾān ix, 40. His family, that is, presumably Umm Rūmān, ʿĀʾisha, Asmāʾ and perhaps ʿAbd Allāh, followed soon afterwards. Abū Ḳuḥāfa, however, remained in Mecca, and Abū Bakr's son ʿAbd al-Raḥmān actually fought against the Muslims at Badr and Uḥud, but was converted to Islam before the conquest of Mecca. In Medina Abū Bakr found a house in the district of al-Sunḥ. His special position in the community was marked by Muḥammad's marriage to his daughter ʿĀʾisha. He was a participant in all the expeditions led by Muḥammad in person, and was constantly at his side, ready to help with advice and information. In critical moments he was steady as a rock and did not lose heart. There seems to have been a remarkable degree of harmony between leader and follower. When others (including ʿUmar who was inseparable from Abū Bakr) questioned Muḥammad's decisions to make peace at al-Ḥudaybiya and to abandon the siege of al-Ṭāʾif, Abū Bakr gave immediate and wholehearted support. He was the first to know the true objective of the expedition which conquered Mecca in 8/630. In other words, he was Muḥammad's chief adviser. He did not have any separate military command, except of a small party detached from a larger expedition in 6/627 and of a minor expedition against the tribe of Hawāzin in 7/628. In 8/629 he served with ʿUmar under the command of Abū ʿUbaydah, probably in order to smooth over political difficulties. By his being appointed to conduct the pilgrimage of A. H. 9 and to lead public prayers in Medina during Muḥammad's last illness, and by other signs of respect, he was marked as successor.

iii. His caliphate, 11/632-13/634.—The day of Muḥammad's death (13 Rabīʿ I, 11/8 June, 632) was a critical one for the young Islamic state. The Anṣār set about appointing a leader from their own number, but were persuaded by ʿUmar and others to accept Abū Bakr. He took the title of Khalīfat Rasūl Allāh, 'deputy or successor of the messenger of God', and after a short time moved to a house in the centre of Medina.

His caliphate of a little over two years was largely occupied in dealing with the *ridda* or 'apostasy'. This phenomenon, as the name given by Arabic historians indicates, was regarded by them as primarily a religious movement; but recent European scholars, especially J. Wellhausen (*Skizzen und Vorarbeiten*, vi, Berlin, 1899, 7-37) and L. Caetani (*Annali*, ii, 549-831) have argued that it was essentially political. More probably it was both. Medina had become the centre of a social and political system, of which religion was an integral part; consequently it was inevitable that any reaction against this system should have a religious aspect. There were six main centres of this reaction. In four of these, the leader had a religious character and is often called a 'false prophet': al-Aswad al-ʿAnsī in the Yemen, Musaylima among the tribe of Ḥanīfa in the Yamāma, Ṭulayḥa in the tribes of Asad and Ghaṭafān, and the prophetess Sadjāḥ in the tribe of Tamīm. The form of the *ridda* in each centre varied according to local circumstances; it involved the refusal to send taxes to Medina and to obey the agents sent out by Medina. In the Yemen the *ridda* began before Muḥammad's death, and when Abū Bakr came to power al-Aswad had been replaced by Ḳays b. (Hubayra b. ʿAbd Yaghūth) al-Makshūḥ. In other places there had presumably existed for some time a movement against the rule of Medina, but it became open revolt only after Muḥammad's death. During the absence of the main Muslim army in Syria under Usāma b. Zayd, some neighbouring tribes tried to surprise Medina, but were eventually defeated at Dhū 'l-Ḳaṣṣa. After the return of the Syrian expedition, a large army commanded by Khālid b. al-Walīd was sent against the rebels. First Ṭulayḥa was defeated in a battle at Buzākha, and the area restored to its allegiance to Islam. Soon afterwards, Tamīm abandoned Sadjāḥ and submitted to Abū Bakr. The most important battle of the *ridda* was the battle of the Yamāma at ʿAḳrabāʾ (about Rabīʿ I, 12/May 633), known as 'the garden of death' on account of the great slaughter on both sides. Here Musaylima, the most serious opponent of the Muslims, was defeated and killed, and central Arabia brought under their control. Subordinate commanders were entrusted with subsidiary operations in al-Baḥrayn and ʿUmān (with Mahra), while Khālid pacified the Yamāma before moving towards ʿIrāḳ. The *ridda* in the Yemen and Ḥaḍramawt was defeated by another commander, al-Muhadjir b. Abī Umayya. In dealing with captured leaders Abū Bakr showed great clemency, and many became active supporters of the cause of Islam. The traditional view was that the *ridda* had been quelled before the end of 11 A.H. (March 633); but Caetani has shown that the events require a much longer time, and that it may have continued into 13/634.

The size of Muḥammad's expeditions along the road to Syria shows that he had realized the urgency of expansion if peace was to be maintained among the Arab tribes. Abū Bakr was aware of this strategic principle. In the first days of his caliphate, despite the threats of rebellion in Arabia, he persisted with Muḥammad's plan of sending a large army under Usāma towards Syria. Again, once the danger from Musaylima in central Arabia was removed, no time

was lost in despatching Khālid towards ʿIrāḳ. Thus was set on foot under Abū Bakr's direction the great 'conquest of the lands'. The traditional account of the conquests and their chronology has been radically revised by European scholars' critique of the sources (Wellhausen, op. cit., 37-113; De Goeje, *Mémoire sur la Conquête de la Syrie*[2], Leiden, 1900; N. A. Miednikoff, *Palestina*, St. Petersburg, 1897-1907 [in Russian]; Caetani, *Annali*, ii, iii). By the time of Abū Bakr's death the position would seem to be as follows. Khālid, joining a force of B. Bakr b. Wāʾil under al-Muthannā b. Ḥāritha, had advanced plundering into ʿIrāḳ and threatened al-Ḥīra, which paid 60,000 dirhams to be left alone. While al-Muthannā remained on this sector, Khālid carried out a celebrated march to Damascus and linked up with three Muslim columns which, under Yazīd b. Abī Sufyān, Shuraḥbīl b. Ḥasana and ʿAmr b. al-ʿĀṣ, had been operating with success in Palestine, but were now retiring before a superior Byzantine army. The united Muslim forces defeated the enemy at al-Adjnādayn (probably a corruption of al-Djannābatayn) between Jerusalem and Gaza at the end of Djumādā I (July 634). Thus the expansion into the Persian empire was initiated by Abū Bakr, but he still laid most emphasis on Syria. At what stage the decision was made, not merely to raid these lands, but to conquer them, is not clear.

Abū Bakr died on 22 Djumādā II, 13/23 August 634, and was buried beside Muḥammad. The great simplicity of his life, with its rejection of all wealth, pomp and pretension, became in later times a legend, though there is doubtless a kernel of truth. The assertion that he began the 'collection of the Ḳurʾān' is now usually held to be mistaken in view of the general ascription of this to ʿUmar.

ABŪ BAKRA (the man of the pulley), the usual designation of a Companion of the Prophet called Nufayʿ b. Masrūḥ, an Abyssinian, formerly slave of the Thaḳafites of al-Ṭāʾif. During the siege of that town by Muḥammad (8/630) he joined the Muslims by letting himself down by a pulley and was emancipated by the Prophet. He stayed afterwards in Yaman and participated in the foundation of Baṣra where he settled and died in 51 or 52/671-2. Having been whipped by ʿUmar because he had testified against al-Mughīra b. Shuʿba [*q.v.*] on a charge of adultery, Abū Bakra played no part in politics and held aloof (*iʿtazala*) during the Battle of the Camel. He confined himself to cultivating the estates given him by ʿUmar and transmitting *ḥadīth*, in which he is regarded as trustworthy by the authorities.

His biographers give him as his mother Sumayya, so that he is considered as the brother, on the mother's side, of Ziyād b. Abīhi, with whom, however, he quarreled when Ziyād joined the party of Muʿāwiya. Abū Bakra left numerous descendants, among them seven sons: ʿAbd Allāh, ʿUbayd Allāh, ʿAbd al-Raḥmān, ʿAbd al-ʿAzīz, Muslim, Rawwād, Yazīd and ʿUtba, who had a part in the transmission of *ḥadīth*. Enriched by the exploitation of the public baths and favoured by Ziyād, they gained a place among the bourgoisie, and even the aristocracy, of Baṣra, and forged themselves an Arab genealogy, claiming that Abū Bakra was the son of al-Ḥārith b. Kalada, the "physician of the Arabs". Al-Mahdī, on ascending the throne, did not recognize this genealogy and forced the descendants of Abū Bakra to return to the status of *mawālī* of the Prophet (Ibn al-Ṭiḳṭaḳa, *al-Fakhrī* (Derenbourg), 245; al-Maḳdisī, *al-Badʾ* (Huart), vi, 94-5; I. Goldziher, *Muh. Stud.*, i, 137 ff.). A descendant of the family was the ḳāḍī Abū Bakra Bakkār b. Ḳutayba (182-270/798-884; see Ibn Khallikān, no. 115).

(M. TH. HOUTSMA-[CH. PELLAT])

ABU 'L-BARAKĀT HIBAT ALLĀH B. MALKĀ AL-BAGHDĀDĪ AL-BALADĪ, philosopher and physician, called Awḥad al-Zamān, 'unique of his time', was born at Balad, near Moṣul, about 470/1077 at the latest. Jewish by birth, he had for his master Abu'l-Ḥasan Saʿīd b. Hibat Allāh, and became a famous physician, serving in this quality the caliphs of Baghdād—where he resided—and the Seldjuḳ sultans. The anecdotes related by the biographers reveal his often difficult relations with his various patrons and their courts. At an advanced age he was converted to Islam. This decision was taken by him, according to the different rumours reported by his biographers, out of wounded pride or out of fear (because of the death of the wife of sultan Maḥmūd who had been attended by him; or because, taken prisoner during a battle in which the army of the caliph al-Mustarshid was defeated by sultan Masʿūd, his life was threatened). Having become blind at the end of his life, he died in Baghdād, it seems after 560/1164-5. Rival of the Christian physician Ibn al-Tilmīdh, he had as his disciple and friend Isḥāḳ, the son of Abraham b. Ezra, who composed on him a panegyric in Hebrew.

The main work of Abu'l-Barakāt is the *Kitāb al-Muʿtabar*, dealing with logic, *naturalia* (including psychology) and metaphysics (published in three volumes by Şerefettin Yaltkaya, Hyderabad 1358/1939). A detailed commentary on Ecclesiastes, composed in Arabic, is of considerable philosophical interest; it is almost entirely unpublished. Among the smaller treatises ascribed to Abu'l-Barakāt is to be noted the *Risāla fī Sabab Ẓuhūr al-Kawākib Laylᵃⁿ wa-Khafāʾihā Nahārᵃⁿ* (cf. Ibn Abī Uṣaybiʿa, i, 280), transl. by E. Wiedemann (in *Eders Jahrbuch für Photographie*, 1909, 49-54). Under a slightly different title: *Ruʾya 'l-Kawākib bi'l-Layl lā bi'l-Nahār*, it passes for a work of Ibn Sīnā (cf. G. C. Anawati, *Essai de Bibliographie avicennienne*, no. 162).

In *al-Muʿtabar*, modelled in great part on the *Shifāʾ* of Ibn Sīnā, Abu'l-Barakāt sometimes takes over theses from that book, quoting them literally, but at the same time attacks others that are among the most essential. In his opposition to Ibn Sīnā he is often at one, in the field of physics, with the tradition that bore in Islamic lands the name of Platonic, and which was that followed by Abū Bakr al-Rāzī. His psychology is, in some respects, related more than that of the *Shifāʾ*, or more manifestly so to that of the Neoplatonists.

Abuʾl-Barakāt's method of philosophizing does not, however, lend itself easily to recourse to the authority of tradition. This is shown by the very title of the *Kitāb al-Muʿtabar*, which in the usage of Abu 'l-Barakāt means something like: "The book about what has been established by personal reflection". As a matter of fact, this method is distinguished in the first instance by the appeal to self-evident truths, the certainties *a priori*, which nullify the theses *a posteriori* of the ruling philosophy of the period. Abu 'l-Barakāt refuses to make a difference between the certainties of reason, admitted as valid by the Peripatetics, and those depending on the estimative faculty (*wahm*), dismissed by them.

It is mainly this method that leads Abu 'l-Barakāt to assert, against the partisans of the Aristotelian theory of space, the existence of a tridimensional space. With John Philoponus he refutes the proposition denying the possibility of movement in the void. Having demonstrated the fallacy of the peripatetic arguments to the contrary, he proves the infinity of space by the impossibility for man to conceive a limited space.

Similarly, it is the appeal to the *a priori* knowledge of the human mind that allows Abu 'l-Barakāt to clarify the problem of time—the true solution of which, according to him, depends upon metaphysics rather than upon physics. In effect, he shows that the apperception of time, of being, and of self, is anterior in the soul to any other apperception the soul might have, and that the nature of being and that of time are closely linked. According to his definition, time is the measure of being (not, as the peripatetics held, that of movement). He does not admit the diversity of the various levels of time, the gradations of *zamān, dahr, sarmad* assumed by Ibn Sīnā and other philosophers. In his opinion, time characterizes the being of the Creator as well as that of created things.

He identifies prime matter with the body considered merely from the point of view of corporality, apart from any other characteristic; corporality being an extension susceptible of being measured. Among the four elements, earth alone is, in his view, constituted of corpuscles, indivisible because of their solidity.

Dealing with the movement of projectiles, Abu 'l-Barakāt accepts, though with modifications, the theory of Ibn Sīnā—ultimately, as it seems, inspired by John Philoponus—according to which the cause of this movement is a 'violent inclination', that is to say a force (called later by certain Latin schoolmen *impetus*) imparted by the projecting body to the projectile. He explains the acceleration in the fall of heavy objects by the fact that the principle of natural inclination (*mayl ṭabīʿī*, a current philosophical term), contained in them, furnishes them with successive inclinations. The text of the *Muʿtabar* treating of this doctrine is the first one, as far as is known at present, where one finds implied this fundamental law of modern dynamics: a constant force gives rise to an accelerated movement.

It is especially the psychological doctrine of Abu 'l-Barakāt that shows in the most palpable way the role given in his philosophy to recourse to what is self-evident. As a matter of fact, this doctrine has as its starting point the consciousness that man has of himself, i.e. of his soul. This consciousness bears the stamp of certainty and is anterior to any other knowledge; it would be there even without the perception of the sensible things. Ibn Sīnā had already availed himself of this *a priori* datum, which he had great difficulty in integrating with his psychology—which bears the stamp of Peripaticism—while Abu 'l-Barakāt is led by it towards other psychological verities, equally guaranteed and authenticated by their self-evident character. For instance, the valid consciousness that man has of being one—the same when he sees and hears, thinks, remembers or desires, or accomplishes any other psychical act—is sufficient in the view of Abu 'l-Barakāt to refute the various theories postulating a multiplicity of the faculties of the soul. Another example: the certainty that one has of perceiving, in the act of seeing, the very object that one sees, and at the place where it really is—and not an image, that according to certain hypotheses is situated inside the brain—this certainty proves by itself the truth of the impressions that it guarantees. We have, then, a psychology that consists, partly, of a system of self-evident truths, and is dominated up to a certain point by the notion of consciousness or apperception (*shuʿūr*, a term used in a similar sense by Ibn Sīnā). It denies the distinction established by the Aristotelian doctrine between intellect and soul. In fact, according to Abu 'l-Barakāt, it is the soul that accomplishes the so-called acts of intellection—a concept which he criticises. Similarly, he denies the existence of the active intellect postulated by the peripatetics.

Platonic or Plotinian influences—which are, to be sure, in harmony with the personal intuitions of Abu 'l-Barakāt—appear perhaps in the definition of the soul as an incorporeal substance acting in and by the body. Immateriality is taken by Abu 'l-Barakāt in a very strict sense, which was not current at all; so for instance in the theory of memory. The human souls are caused, in the view of Abu 'l-Barakāt, by the stellar ones, and return, after death, to their causes.

The knowledge of God, cause of causes, comes at the end of the knowledge of existing things and that of being perceived by an *a priori* knowledge, which divides being into necessary and contingent. On the other hand, the wisdom manifested in the order of nature proves the existence of a Creator. Last not least there are ways of direct communication between God and men. Abu 'l-Barakāt, following in this point the Avicennian tradition, does not admit the proof for the existence of God based on movement.

He holds that the essential attributes of God, such as knowledge, power and wisdom, belong to His essence in the same way as having three angles equal to two right angles belongs to the essence of a triangle.

In his view God may have manifold knowledge, also about particulars. In order to refute arguments to the contrary, he refers to his psychological doctrine, where he proves that the forms of the things perceived, stored up in the human soul, are immaterial, like the entity that has perceived them.

In this way divine knowledge appears as being up to a point analogous to human knowledge.

Rejecting the theory of emanation held by the philosophers, Abu 'l-Barakāt thinks that things have been created by a succession of divine volitions, either pre-eternal or coming into being in time. The first of these volitions, an attribute of the divine essence, created the first thing in existence, viz. according to religious terminology, the highest of the angels.

The personalism of the conception of God in Abu 'l-Barakāt sometimes relates it to the doctrines of the *kalām*. Nevertheless, this does not necessarily justify the conclusion that the *kalām* has influenced his thought.

So far as the problem of the eternity of the world is concerned, Abu 'l-Barakāt, having confronted the theses of those who affirm it and those that deny it, does not explicitly state his own conclusions, but hints that one who has understood his exposé of the question will not fail to find the correct answer. It seems, in summing up the discussion, that the true solution is, in the view of Abu'l-Barakāt, that which asserts the eternity of the world.

Abu 'l-Barakāt whose authority was invoked by a Jewish scholar of ʿIrāḳ, Samuel b. ʿEli, in his polemic against Maimonides, had as his partisans amongst the Muslims ʿAlā' al-Dawla Farāmurz b. ʿAlī, prince of Yazd, who defended him and his doctrines in a work bearing the title *Muhdjat al-Tawḥīd* and in a dispute he had with ʿUmar al-Khayyām (see al-Bayhaḳī, *Tatimma*, 110-1). The influence of Abu 'l-Barakāt over a personage of the first order, Fakhr al-Dīn al-Rāzī, seems to have been decisive. It is manifest especially in *al-Mabāḥith al-Mashriḳiyya*, a capital work of Fakhr al-Dīn, and was of great historical importance. In fact, the observation of the Shīʿite Muḥ. b. Sulaymān al-Tanakabunī, a Persian author of the 19th cent., who says, in substance, that the tradition of Ibn Sīnā had almost succumbed under the attacks of Abu 'l-Barakāt and Fakhr al-Dīn, before being re-established by Naṣīr al-Dīn al-Ṭūsī (*Ḳiṣas al-ʿUlamā'*, lith. 1304, 278), refers to a crisis in Muslim philosophical speculation, a crisis originated by Abu 'l-Barakāt, the memory of which remained alive among the Iranian students of Ibn Sīnā.

ABŪ BAYHAS AL-HAYṢAM B. DJĀBIR, Khāridjite, of the Banū Saʿd b. Ḍubayʿa. In order to escape from the persecution of al-Ḥadjdjādj, he fled to Medina, but was arrested by the governor, ʿUthmān b. Ḥayyān, and cruelly executed (94/713). He gave his name to the Bayhasiyya, one of the Khāridjite sects, who occupied an intermediate position between the strict Azraḳīs and the milder Ṣufrīs and Ibāḍīs. The Bayhasīs, though admitting that Muslims of different opinion from their own were unbelievers, considered it permissible to live amongst them, to intermarry with them and to inherit from them. Their tenets again diverged, so that they branched off into various subdivisions.

ABŪ BILĀL [see MIRDĀS B. UDAYYA].

ABŪ BURDA [see AL-ASHʿARĪ].

ABŪ DAHBAL AL-**DJUMAḤĪ**, WAHB B. ZAMʿA, Ḳurayshite poet of Mecca, who started to compose poetry before 40/660 and died after 96/715. He is included among the erotic poets of the Ḥidjāz by his poems devoted to three women: ʿAmra, of a noble Meccan family, a Syrian woman who led him into a breach with his family, and especially ʿAtīka, daughter of Muʿāwiya, whom he first saw during a pilgrimage. His verses, soon becoming famous, attracted the attention of the princess, whom he followed to Damascus, but the caliph, though recognizing the chaste character of Abū Dahbal's relations with his daughter, took umbrage and sent the poet away.

Abū Dahbal is not, however, an exclusively erotic poet, as an important part of his work is devoted to panegyrics on Ibn al-Azraḳ, governor of al-Djanad in Yaman, appointed by ʿAbd Allāh b. al-Zubayr, and ʿUmāra b. ʿAmr, governor of Ḥaḍramawt. The incident with Muʿāwiya seems to have turned him away from the Umayyads and made him a partisan of the anti-caliph; the *Aghānī* even quotes some verses alluding to the murder of al-Ḥusayn b. ʿAlī.

Bibliography: Brockelmann, S I, 80 and the references given there; to the fundamental article in the *Aghānī*[1], vi, 154-70 should be added al-Marzubānī, *al-Muwashshaḥ*, 70, 189; idem, *Muʿdjam* 117, 342; Nallino, *Scritti*, vi, 55; O. Rescher, *Abriss*, i, 144-5; and especially the sources quoted by F. Krenkow, *JRAS*, 1910, 1017-75, who has collected the verses of the poet. (CH. PELLAT)

ABŪ ḌAMḌAM, the hero of a collection of anecdotes, cited already in the 10th century. All kinds of foolish remarks are attributed to him, and more particularly comical decisions on questions of law, similar to those later attributed to Ḳarāḳūsh. This Abū Ḍamḍam is probably identical with the devotee who, before or during the lifetime of Muḥammad, offered up his good name in place of the poortax to the servants of God; for this express sacrifice of the respect of his fellowmen may easily be interpreted as a permission or invitation to expose the devotee as the typical figure of foolishness. To one bearer of the same name there is ascribed an extraordinary knowledge of the ancient poetry, but there is no means of deciding whether this is the same personage.

Bibliography: Ibn Ḳutayba, *Adab al-Kātib* (Grünert), 3-4; idem, *Shiʿr*, 3 f.; *Fihrist*, 313; Ibn ʿAbd Rabbih, *ʿIḳd*. Cairo 1302, iii, 445; Ibn al-Athīr, *Usd*, v, 232; Ibn Ḥadjar, *Iṣāba*, iv, 204; M. Hartmann, in *Zeitschr. d. Vereins f. Volkskunde*, v; J. Horovitz, *Spuren griechischer Mimen*, 31, note. (J. HOROVITZ)

ABU 'L-DARDĀ' AL-ANṢĀRĪ AL-KHAZRADJĪ. His name and genealogy are given as ʿUwaymir b. Zayd b. Ḳays b. ʿĀ'isha b. Umayya b. Mālik b. ʿAdī b. Kaʿb b. al-Khazradj b. al-Ḥārith of the Balḥārith family of the Khazradj. Some sources give his name

as ʿĀmir instead of ʿUwaymir, and for his father's name instead of Zayd we find variously ʿĀmir, ʿAbd Allāh, Mālik or Thaʿlaba, while some give him the *nisba* al-Rahānī. He was a younger contemporary of Muḥammad who is generally listed among the Companions (*Ṣaḥāba*) though some sources raise doubts as to the legitimacy of this. He did not become a Muslim till after the battle of Badr and it is noted that he was the last of his family to become a convert to Islam. Some list him among those present at Uḥud. When Muḥammad established "brotherhoods" between the Emigrants and the people of Medina he was the "brother" chosen for Salmān al-Fārisī. A certain number of traditions are reported on his authority and are given in the *Dhakhā'ir al-Mawāriḥ*, iii, 158-62. The Ṣūfīs claimed him as one of the *ahl al-ṣuffa* [*q.v.*], quoting a number of sayings of an ascetic or pietistic character from him, which is probably the reason why in the biographical dictionnaries he is called a *zāhid* and one to whom *ʿilm* was given. These sources also say that he became known as the sage (*ḥakīm*) of the early Muslim community. He is reported as having said that before Islam he was a merchant, but after his conversion found that business life interfered with strict attention to cult duties (*ʿibāda*) so he gave up business. His great reputation, however, was as an authority on the Ḳur'ān. He is listed as one of the few who collected (*djamaʿa*) revelations during the Prophet's lifetime, and a small number of variant readings from him is recorded in the *ḳirā'āt* books. During his stay in Damascus, where he was sent to serve as a ḳāḍī, he made it a practice to gather to the mosque groups to whom he taught the Ḳur'ān, thus becoming the true father of the Damascus School later headed by Ibn ʿĀmir [*q.v.*]. He died at Damascus in 32/652, or thereabouts, his tomb and that of his wife Umm al-Dardā' being shown there near one of the gates.

(A. JEFFERY)

ABŪ DĀ'ŪD AL-SIDJISTĀNĪ, SULAYMĀN B. AL-ASHʿATH, a traditionist; born in 202/817. He travelled widely in pursuit of his studies and gained a high reputation for his knowledge and piety. Eventually he settled at Baṣra, which is no doubt why some wrongly held that the *nisba* Sidjistānī comes from a village near Baṣra called Sidjistān (or Sidjistāna), and not from the province of that name. He died in Shawwāl 275/Febr. 889.

Abū Dā'ūd's principal work is his *Kitāb al-Sunan*, which is one of the six canonical books of Tradition accepted by Sunnīs. He is said to have submitted it to Aḥmad b. Ḥanbal who gave it his approval. Ibn Dāsa says Abū Dā'ūd declared that he collected this work of 4800 traditions from a mass of 500,000, and that it contains sound traditions, those which seem to be so, and those which are nearly so. He also said, "I have made clear the traditions in this book of mine which contain great weakness, and those about which I have said nothing are good (*ṣāliḥ*), some being sounder than others". This refers to the notes which he often adds to his traditions to express his opinion on the value to be attributed to them. Muslim has an introduction to his *Ṣaḥīḥ* in which he discusses some general questions of criticism; but Abū Dā'ūd is the first to give such detailed notes, paving the way for the more systematic criticism of individual traditions given by his pupil al-Tirmidhī in his collection. Abū Dā'ūd quotes men not found in the two *Ṣaḥīḥs*, his principle being that transmitters are counted trustworthy provided there is no formal proof to discount them. His work which has the generic title of *Sunan*, dealing mainly with matters ordained, or allowed, or forbidden by law, received high praise. For example, Abū Saʿīd b. al-Aʿrābī said that anyone who knew nothing but the Ḳur'ān and this book would have sufficient knowledge; and Muḥammad b. Makhlad said that the traditionists accepted it without question just as they accepted the Ḳur'ān. But one is surprised to find that, although many men in the fourth century praised it highly, no mention of it is made in the *Fihrist*. Indeed, Abū Dā'ūd is merely mentioned there as the father of his son. People of later times have expressed some criticisms. Al-Mundhirī, for example, who produced a summary of it, called *al-Mudjtabā*, criticized some of the traditions not supplied with notes, and Ibn al-Djawziyya added further criticisms. But while faults have been found with the work, it still holds an honoured place. The *Sunan* was transmitted through several lines, some versions being said to contain material not found in others. Al-Lu'lu'ī's version is the one which has gained most favour. A number of editions of the *Sunan* have been printed in the East (see Brockelmann). A small collection of *mursal* traditions by Abū Dā'ūd, entitled *Kitāb al-Marāsīl*, was published in Cairo in 1310/1892.

Bibliography: Brockelmann, I, 168 f., S I, 266 f.; Ibn Khallikān, no. 271; Ibn al-Ṣalāḥ, *ʿUlūm al-Ḥadīth*, Aleppo, 1350/1931, 38-41; Ibn Ḥadjar, *Tahdhīb al-Tahdhīb*, iv, 169-73; Nawawī, *Tahdhīb al-Asmā'* (Wüstenfeld), 708-12; Ḥādjdjī Khalīfa, no. 7263; Goldziher, *Muh. Stud.*, ii, 250 f., 255 f.; W. Marçais, in *JA*, 1900, 330, 502 f.; J. Robson, in *MW*, 1951, 167 f.; idem, in *BSOS*, 1952, 579 ff. (J. ROBSON)

ABŪ DHARR AL-GHIFĀRĪ, a Companion of Muḥammad. His name is commonly given as Djundub b. Djunāda, but other names are also mentioned. He is said to have worshipped one God before his conversion. When news of Muḥammad reached him he sent his brother to Mecca to make enquiries, and being dissatisfied with his report, he went himself. One story says he met Muḥammad with Abū Bakr at the Kaʿba, another that ʿAlī took him secretly to Muḥammad. He immediately believed, and is surprisingly claimed to have been the fifth (even the fourth) believer. He was sent home, where he stayed till he went to Medina after the battle of the Ditch (5/627). Later he lived in Syria till he was recalled by ʿUthmān because of a complaint against him by Muʿāwiya. He retired, or was sent, to al-Rabadha, where he died in 32/652-3, or 31. He was noted for humility and asceticism, in which respect he is said to have resembled Jesus. He was very religious and eager for knowledge, and is said to have matched Ibn Masʿūd in religious learning. He is credited with 281 traditions, of which al-Bukhārī and Muslim rendered 31 between them.

Bibliography: Ibn Ḳutayba, *Maʿārif* (Wüstenfeld), 130; Yaʿḳūbī, ii, 138; al-Masʿūdī, *Murūdj*, iv, 268-74; Ibn ʿAbd al-Barr, *Istiʿāb*, Ḥaydarābād

Sprenger, *Das Leben und die Lehre des Mohammad*, i, 434 ff.

(J. Robson)

ABŪ DHU'AYB AL-HUDHALĪ, Khuwaylid b. Khālid, Arabian poet, a younger contemporary of the Prophet. The legend presents him journeying to visit Muḥammad but reaching Medina the very morning after his death. There is some justification for the assumption that Abū Dhu'ayb migrated to Egypt under 'Umar. From there he joined Ibn Abī Sarḥ's campaign into Ifrīḳiya (26/647). He died on his way to Medina where he accompanied 'Abd Allāh b. al-Zubayr who had been charged by Ibn Abī Sarḥ with informing the caliph 'Uthmān of the successes won by his armies (probably in 28/649). The only other known incident of his biography is contained in the report—probably factually correct but possibly spun out of the opening lines of Poem i—that in Egypt he lost within one year five sons to the plague.

Recognized by the Arab critics as the foremost poet of his tribe, a judgement to which the modern reader will readily subscribe, Abū Dhu'ayb excels the bards of the *djāhiliyya* by the stringent composition of his *ḳaṣīda*'s. In the care he devoted to the structure of his odes he continued a trend already traceable in the work of Sā'ida b. Dju'ayya, an older Hudhalī poet, whose *rāwī* Abū Dhu'ayb was. Both poets share the description of wild honey and its gatherer along with a certain delight in the intimate and accurate description of the bees as well as the procedure of the collector—a motif which is not really popular with other Hudhalī poets. A peculiar treatment of the massing of a cloud formation and the subsequent downpour is also characteristic of Sā'ida and his *rāwī*. In Abū Dhu'ayb's love poetry an adumbration of what came to develop into the style of the Medinese school is clearly noticeable. Another feature that seems to anticipate future developments is the manner in which Abū Dhu'ayb tends to elaborate the *nasīb* into a complete ode (cf. nos. II and XI, where the other themes are, as it were, enveloped by the *nasīb*). Like his master Sā'ida, Abū Dhu'ayb is fond of, and excels in descriptions of weapons and of hunting-scenes, but is weak in depicting horses (as already noted by al-Aṣma'ī). Almost half of his preserved verse belongs to elegies in which the gentle melancholy of his obsession with the instability of fate provides an appropriate emotional background. His masterpiece, the elegy on the death of his sons (poem I), shows a unity of mood and thought—the theme of the inevitability of doom is stated and connected with the occasion of the *marthiya*, then illustrated in three gripping scenes, to be concisely restated in the last line—which is unsurpassed in ancient poetry.

(G. E. von Grunebaum)

ABŪ DJAHL, properly Abu 'l-Ḥakam 'Amr b. Hishām b. al-Mughīra of the Banū Makhzūm of Ḳuraysh, also named Ibn al-Ḥanẓaliyya after his mother, Asmā' bint Mukharriba. He was born about 570 or a little after; he and Muḥammad were youths together at a feast in the house of 'Abd Allāh b. Djud'ān, while his mother became a Muslim and lived until after 13/635. A few years before the Hidjra Abū Djahl seems to have succeeded al-Walīd b. al-Mughīra as leader of Makhzūm and also of the group of clans associated with Makhzūm. He was less inclined to compromise with Muḥammad than was al-Walīd, as his position in Meccan affairs was more endangered by Muḥammad than that of the older man. He was perhaps largely responsible for the boycott of Hāshim and al-Muṭṭalib, and the ending of the boycott was a defeat for his policy. He won an important success, however, when he and 'Uḳba b. Abī Mu'ayṭ, soon after Abū Ṭālib died and was succeeded by Abū Lahab as chief of Hāshim, persuaded the latter to cease giving protection to Muḥammad. Just before the Hidjra he seems to have tried to have Muḥammad killed, and to make revenge impossible there was to be a man from each clan involved. Owing to his hostility to Muḥammad during the latter years of the Meccan period many acts of persecution of Muslims are attributed to him, though probably not all really happened (cf. Ḳ. xvii, 62, xliv, 43, xcvi, 6 and commentators). He and his brother al-Ḥārith b. Hishām persuaded their uterine brother 'Ayyāsh b. Abī Rabī'a to return from Medina and kept him (perhaps forcibly) in Mecca. Abū Djahl's influence was based on his commercial and financial strength. The expedition of Ḥamza to Sīf al-Baḥr in 1/623 came near a large caravan directed by Abū Djahl. In 2/624 when Mecca was informed that Abū Sufyān's caravan from Syria was threatened by the Muslims, Abū Djahl led the force of about 1000 men which went to save it, and perished in the battle of Badr [*q.v.*]. Abū Djahl sought battle with the Muslims even after the caravan was known to be safe, perhaps in the hope of gaining military glory, since Abū Sufyān, when available, had the privilege of commanding. After Abū Djahl's death the leading men in the group of clans associated with Makhzūm were Ṣafwān b. Umayya (Djumaḥ), Suhayl b. 'Amr ('Āmir) and eventually Abū Djahl's son 'Ikrima.

Bibliography: Ibn Hishām, Wāḳidī, Ṭabarī—see indexes; Ibn Sa'd, iii/1, 194, iii/2, 55, viii, 193, 220; Ya'ḳūbī, ii, 27; Caetani, *Annali*, i, 294-5, 309, 478, 491, etc.; Montgomery Watt, *Muhammad at Mecca*, by index; Azraḳī, Wüstenfeld, 455, 469. (W. Montgomery Watt)

ABŪ DU'ĀD AL-IYĀDĪ, Djuwayra, Djuwayriyya or Ḥāritha b. al-Ḥadjdjādj (or again Ḥanẓala b. al-Sharḳī, which was more probably, however, the name of Abu 'l-Ṭamaḥān al-Ḳayni, see *Shi'r*, 229), pre-Islamic poet of al-Ḥīra, contemporary of al-Mundhir b. Mā' al-Samā' (about 506-554 A.D.), who put him in the charge of his horses. The expression *djār^{un} ka-djār' Abī Du'ād*, which appears in a line of Ḳays b. Zuhayr and has become proverbial, gave rise to several traditions showing Abū Du'ād as the "protégé" of a noble and generous *djār*, who is either al-Mundhir, al-Ḥarith b. Ḥammām or Ka'b b. Māma.

As a poet, Abū Du'ād is famous for his description of horses, and in this genre some critics consider him superior to Ṭufayl al-Ghanawī and al-Nābigha al-Dja'dī. Nevertheless, the lexicographers have not collected his poems systematically, as the ydid not collect those of 'Adi b. Zayd, because his language was not "nadjdī" and he did not follow the poetical tradition. Moreover, al-Aṣma'ī accuses Khalaf al-

Aḥmar of having attributed to Abū Du'ād forty *ḳaṣīdas* composed by himself (al-Marzubānī, *Muwashshaḥ*, 252).

Bibliography: Brockelmann, S I, 58; Caussin de Perceval, *Essai sur l'Histoire des Arabes*, ii, 110-3, putting together the traditions; the fundamental article is that of the *Aghānī*[1], xv, 95-9; see also Ibn Ḳutayba, *Shi'r*, 120-3; Maydānī, *Amthāl*, Cairo 1352, i, 49, 170 (in reference to *djār ka-djār A.D.* and *anā al-nadhīr al-'uryān*); Marzubānī, *Muwashshaḥ*, 73-4, 88; idem, *Mu'djam*, 115; Ibn Durayd, *Ishtiḳāḳ*, 104; Ya'ḳūbī, i, 259-306; W. Ahlwardt, *Sammlungen*, i, 8-9; O. Rescher, *Abriss*, i, 80-1,; Nallino, *Scritti* vi, 36, who classes him among the Christian poets, although Cheikho, *Naṣrāniyya*, does not mention him. ABŪ DULAF, MIS'AR B. MUHALHIL AL-KHAZRADJĪ AL-YANBU'Ī, an Arab poet, traveller and mineralogist. The earliest date in his biography is his appearance in Bukhārā towards the end of the reign of Naṣr b. Aḥmad (d. in 331/943). His travels in Persia hint at the years 331-341/943-952. Abū Dja'far Muḥammad b. Aḥmad, whom Abū Dulaf mentions as his patron in Sīstān (read: *Aḥmad b. Muḥammad), ruled 331-52/942-63. The author of the *Fihrist* (completed in 377/987) refers to him as *djawwāla* "globe-trotter" and as his personal acquaintance. Al-Tha'ālibī in his *Yatīmat al-Dahr*, Damascus, iii, 176-94, associates him with the circle of al-Ṣāḥib Ismā'īl b. 'Abbād (326-85/938-95), probably during the later period of al-Ṣāḥib's life. As transmitters of the verses of Abū Dulaf, al-Tha'ālibī mentions chiefly the natives of Hamadhān, and among them Badī' al-Zamān (d. 398/1007). The long *ḳaṣīda* on the slang of the rogues (*Banū Sāsān*), which enchanted the Ṣāḥib, was written in imitation of the poem of 'Uḳayl al-'Ukbarī who belonged to the same literary circle of Rayy (*Yatīma*, ii, 285-8). Abū Dulaf himself supplied the commentary on the difficult expressions.

The two patrons, to whom Abū Dulaf dedicated his two geographical *risālas*, and who introduced into them their own remarks, are still unknown. The first *risāla* describes Abū Dulaf's journey in the company of the envoys of the Turkish king Ḳālīn b. Shakhīr, who were returning from Bukhārā to Sandābil. Marquart, *Streifzüge*, 88-90, identified Sandābil with Kan-čou, the capital of the Western Uyghur king. On the way there, Abū Dulaf quotes in utter disorder the names of the Turkish tribes which he pretends to have visited. From Sandābil he suddenly goes over to Kila (Kra in Malaya), and then, in a desultory way, refers to various places in India, to emerge finally in Sīstān. Grigoriev, Marquart and von Mžik recognized the spurious character of the journey (except for the direct road Bukhārā-Sandābil, and Sīstān). Later (1945) Marquart thought that the *genuine* Abū Dulaf might be discovered in the quotations found in *al-Fihrist*. The analysis of the Mashhad text shows that both the *risālas* are equally genuine, as far as the authorship goes, and therefore the fake must be attributed to Abū Dulaf himself. The quotations in *Fihrist*, though differing from the first *risāla*, have no better claim to veracity. On the contrary, the second *risāla*, describing Abū Dulaf's journey in more easily controllable regions (western and northern Persia, Armenia) gives a clear itinerary and contains a number of interesting details which can be verified.

Narod. prosv.*, 1872, 1-45; Marquart, *Streifzüge*, 1903, 74-95; id., *Das Reich Zabul*, in *Festschrift E. Sachau*, 1915, 271-2; A. von Rohr-Sauer, *Des Abu Dulaf Bericht über seine Reise nach Turkestan, China und Indien*, Bonn 1939, (translates the text of the Mashhad MS. discovered by A. Z. Validi-Togan; H. von Mžik, in his review of this work, *OLZ*, 1942, 240-2, has pointed out the leniency of Rohr-Sauer's conclusions); V. Minorsky, *La deuxième risala d'Abu Dulaf*, in *Oriens*, 1952, 23-7; id., *Abu Dulaf's travels in Iran* (being printed in Cairo, 1954)—gives the Mashhad text of the second *risāla* with a detailed commentary. (V. MINORSKY)

ABŪ DULĀMA ZAND B. AL-DJAWN, a black slave, client of the Banū Asad in Kūfa. He is already mentioned in the history of the last Umapyad caliph, but appears as a "poet" only under the 'Abbāsids and plays the part of a court jester in the palace of al-Saffāḥ and especially in those of al-Manṣūr and al-Mahdī. His poem on the death of Abū Muslim (137/754-5) is said to have been the first of his works to make him a name. Examples of his poetry show him to have been a clever, witty versificator, who readily seizes upon low expressions and displays all sorts of filth with cynical joy; but he does not despise the most insipidly fulsome praise when this form of mendicancy promises some reward. He laughs at the praise of the crowd and his spiteful tongue is feared by all. It is true he did not spare himself and still less his near relatives; he would even occasionally revenge himself for the coarse jokes which the magnates played on him when one of his patrons was pleased to ridicule another through him. He also enjoyed the jester's liberty of being above the Islamic laws and could make them the butt of his insolent mockery. He has given proverbial fame to his mule, which possessed all possible defects and to which he dedicated a witty *ḳaṣīda*.

Abū Dulāma embodied a popular type of crude and unrestrained comicality; hence the historicity of some of the anecdotes that are told both of him and of Abū Nuwās is somewhat doubtful.

Statements as to the date of his death vary: according to some he died in 160/776-7, according to others in 170/786-7; the first of these dates being the more likely.

(J. HOROVITZ)

ABU 'L-DUNYĀ ABU 'L-HASAN ʿALI B. ʿUTHMĀN B. AL-KHAṬṬĀB (or ʿUthmān b. al-Kh.), one of those to whom preternatural longevity has been ascribed (*muʿammarun, q.v.*); he is also called al-Muʿammar al-Maghribī or al-Ashadjdj al-Muʿammar. He is said to have been born about 600 A.D. and to have died in 316/928,327/938-9 or even 476/1083-4. Of the tribe of Hamdān, he drank in his youth from the source of life in the presence of al-Khaḍir [*q.v.*], then joined ʿAlī b. Abī Ṭālib, with whom he fought at Ṣiffīn and from whom he received the name of Abu 'l-Dunyā, after his horse had made a scar on his face (al-Ashadjdj = the scarred one). After the death of the caliph, he went to Tangier. He returned at the beginning of the 4th/10th century, to fulfil the pilgrimage and to relate traditions which he claimed to have heard from the mouth of ʿAlī. The information about him goes back to the 4th century (see Ibn Bābawayh, *Ikmāl*, 297-303, cf. I. Goldziher, *Abhandlungen*, ii, lxviii, n. 4; al-Dhahabī, *Mīzān al-Iʿtidāl*, ii, 647; Ibn Hadjar, *Lisān al-Mīzān*, iv, 134-40, 191-2) and one may think that this is no more than the tale of a vulgar impostor. Nevertheless al-Djāḥiẓ, *Tarbīʿ* (Pellat), para 146, mentions an Ashadjdj b. ʿAmr (read al-Muʿammar?) alongside al-Sufyānī [*q.v.*] and al-Aṣfar al-Kahtānī, and, according to the prophecies of Daniel "one with a scar", sometimes identified with ʿUmar b. ʿAbd al-ʿAzīz (Ibn Ḳutayba, *Maʿārif*, Cairo 1353, 158; G. van Vloten, *Recherches*, 55-6, 79 and references), will fill the world with justice. It is therefore possible that a group of Sunnīs put, as early as the 3rd century, their hope in an Ashadjdj, especially as the Shīʾite Ibn Bābawayh uses the word *mukhālifūnā*, "our adversaries", to describe those who deny the existence of the *ḳāʾim*, but believe in the longevity of Abu 'l-Dunya.

(CH. PELLAT)

ABU 'L-FAḌL [see IBN AL-ʿAMĪD].

ABU 'L-FAḌL (Faẓl) **ʿALLĀMĪ** (Shaykh), author, liberal thinker, and informal secretary of the emperor Akbar, was the younger brother of the poet Fayḍī [*q.v.*], and the second son of Shaykh Mubārak Nāgawrī (d. 1593), one of the most distinguished scholars of his age in India, and the author of a commentary on the Ḳurʾān, *Manbaʿ-i Nafāʾis al-ʿUyūn*. He was born on 6 Muḥarram 958/14 Jan. 1551 at Agra, where his father had settled, in 1543, as a teacher. Abu'l-Faḍl was a pupil of his father, and owed his profound scholarship and liberality of outlook largely to the training given him by the latter. By his fifteenth year he had studied religious sciences, Greek thought and mysticism; but formal education did not satisfy the yearnings of his soul, nor did the orthodox faith bring him spiritual solace. While teaching in his father's school, he spent his time in extensive reading, deep meditation and frequent discussions of religious questions.

Abu 'l-Faḍl was presented at the court by his brother, Fayḍī, in 1574. He soon gained high favour with Akbar by his scholarly criticism of the narrow-mindedness of the *ʿulamāʾ* in the religious discussions which were started in the *ʿIbādat Khāna* in 1575. He helped in freeing the Emperor from the domination of the *ʿulamāʾ*, and was instrumental in bringing about their ultimate political downfall by the promulgation, in 1579, of the decree (*maḥḍar*), drafted by him in collaboration with his father, which invested Akbar with the authority of deciding points of difference between the theologians.

A firm believer in God, whom he regarded as transcendental and the Creator, Abu 'l-Faḍl considered that there could be no relationship between man and God except that of servitude (*ʿabdullahī*) on the part of the former. Servitude required sincerity, suppression of the ego (*nafs*) and devotion to Him, resignation to His will, and faith in His Mercifulness. Though he regarded formal worship as mere hypocrisy, he believed that there were many ways of serving the Lord, but only divine blessing could reveal the Truth. "In the main", he wrote, "every sect may be placed in one of two categories—either, it is in possession of the Truth, in which case one should seek direction from it; or, it is in the wrong, in which it is an object of pity and deserving of sympathy, not of reproach" (*Akbar Nāma*, ii, 660). His faith in being at "peace with all" (*ṣulḥ-i-kull*) involved not only toleration of all religions but also love for all human beings.

In political affairs, Abu 'l-Faḍl sought to emphasise the divine character of Akbar's kingship. Royalty, he claimed, was light emanating from God (*farr-i-īzadī*), communicated to kings without the intermediate assistance of any one. Though the existence of kings was necessary at all times, it was only after many ages that there appeared, by divine blessing, a monarch who could not only rule effectively, but could also guide the world spiritually. Since Akbar could ensure the material as well as the spiritual well-being of his subjects, he could be truly regarded as the "Perfect Man" (*insān-i-kāmil*). It was the duty of all to give Akbar complete loyalty and to seek his spiritual guidance by becoming his disciples. The chosen among the disciples would be those who attained the "four degrees of devotion" (*chahār martaba-i-ikhlāṣ*), i.e. preparedness to place at Akbar's disposal their property, life, honour and faith.

Though Abu'l-Faḍl's religio-political views earned for him the enmity of the *ʿulamāʾ*, the policy of religious toleration which he helped Akbar in evolving, the non-denominational yet spiritual character of obedience to the Emperor which he advocated, his justification, on ethical grounds, of every imperial action, and his persistent efforts to inculcate, especially among the nobles, a sense of mystical loyalty to Akbar, contributed greatly to the political consolidation of the Mughal Empire.

In spite of Abu'l-Faḍl's immense influence over Akbar and the numerous duties which he performed at Court (especially in drafting letters to nobles and foreign potentates), his progress in the official hierarchy was slow. It was only in 1585 that he was promoted to the *manṣab* of 1000, which was doubled in 1592. Six years later it was raised to 2500. Except when he was associated, for a short time in 1586, with Shāh Ḳulī Khān Maḥram in the joint-government of Delhi, Abu'l-Faḍl never held any office until 1599, when he was posted to the Deccan, at the instance of hostile elements at the Court. He distinguished himself there as an able administrator and military commander. In recognition of his services, he was promoted, in 1600, to the rank of 4000, and two years later, to that of 5000. The same year he was hastily summoned to the Court when Akbar's son Salīm (afterwards the Emperor Djahāngīr) rebelled. On his way back, he was waylaid and assassinated by Rādja Bīr Singh Dēva, the disaffected Bundēla chieftain of Orchha, on 4 Rabīʿ I 1011/22 Aug. 1602. His head was severed and sent to Salīm, at whose instance the crime had been committed, while the body was buried at Antarī (near Gwalior). The news came as

a great shock to Akbar, who mourned the loss deeply and never forgave Salīm for instigating the murder. Abu'l-Faḍl was survived by his son, ʿAbd al-Raḥmān Afḍal Khān (d. 1613), who rose to be governor of Bihār.

Abu'l-Faḍl's principal title to fame as an author rests upon his monumental work, *Akbar Nāma*, a history of Akbar (down to the 46th regnal year) and of his ancestors, compiled in three daftars (first two daftars published in *Bibl. Ind.* 3 vols.). The third daftar, *Āʾīn-i-Akbarī* (*Bibl. Ind.*, 3 vols.), dealing with Imperial regulations and containing detailed information on Indian geography, administration and social and religious life, was the first work of its kind in India. Abu'l-Faḍl's compositions, characterised by an individual literary style, served as a model for many generations, though none was able to imitate him successfully. His numerous works include a Persian translation of the Bible; *ʿIyār-i-Dānish* (a recension of *Anwār-i-Suhaylī*); prefaces to *Tārīkh-i-Alfī* (unfortunately lost), to the Persian translation of *Mahābhārata*, and to many other works; and a *Munādjāt* (ed. by Rizvi, *Medieval India Quarterly*, Aligarh, I/iii). His letters, prefaces and other compositions were compiled by his nephew under the title *Inshā-i-Abu 'l-Faḍl* (3 vols.). Another collection of his private letters is entitled *Ruḳʿāt-i-Abu 'l-Faḍl*.

Bibliography: Autobiographical accounts: *Āʾīn-i-Akbarī*, iii (at end); *Inshā-i-Abu 'l-Faḍl*, iii. Biographies: *Maʾāthir al-Umarāʾ* (*Bibl. Ind.*), ii, 608-22; Elliot and Dowson, vi, 1 ff.; Blochman, Introduction to his translation of *Āʾīn-i-Akbarī*; Storey, ii/3, 541-51 (detailed references on 551).

(NURUL HASAN)

other singers, such as Maʿbad and Ibn Suraydj, and

ABU 'L-FAḌL ʿIYĀḌ [see ʿIYĀḌ].

ABU 'L-FARADJ [see BABBAGHĀʾ; IBN AL-DJAWZĪ; IBN AL-ʿIBRĪ; IBN AL-NADĪM].

ABU 'L-FARADJ AL-IṢBAHĀNĪ (or AL-IṢFAHĀNĪ), ʿALĪ B. AL-ḤUSAYN B. MUḤ. B. AḤMAD AL-ḲURASHĪ, Arab historian, litterateur and poet. He was born in 284/897 in Iṣfahān (whence his *nisba*) in Persia, but was of pure Arab race, a descendant of Ḳuraysh, or, to be more exact, of the Marwānid branch of the Umayyads. In spite of this, he was a Shīʿite. He studied in Baghdād, where he passed the greater part of his life, protected by the Būyids, especially by the vizier al-Muhallabī. He found also a warm welcome in Aleppo at the court of the Ḥamdānid prince Sayf al-Dawla. He died in Baghdād on 14 Dhu'l-Ḥidjdja 356/20 Nov. 967. His main book, on which he worked according to his own testimony for fifty years, is the *Kitāb al-Aghānī* ("Book of Songs"). In it the author collected the songs that had been chosen, by order of the caliph Hārūn al-Rashīd, by the famous musicians Ibrāhīm al-Mawṣilī, Ismāʿīl b. Djāmiʿ and Fulayḥ b. al-ʿAwrāʾ, and later revised by Isḥāḳ b. Ibrāhīm al-Mawṣilī; he added songs by other singers such as Maʿbad and Ibn Suraydj and by caliphs and their descendants; for each song he indicated its melody. This is, however, but the least part of his work, as Abu'l-Faradj added rich information about the poets who were the authors of the songs, giving an account of their life and quoting many of their verses, as well as about the composers of the melodies. Furthermore, he gives many details about the ancient Arab tribes, their *ayyām*, their social life, the court life of the Umayyads, society at the time of the ʿAbbasid caliphs, especially of Hārūn al-Rashīd, the milieu of musicians and singers. In one word, in the *Aghānī* we pass in review the whole of Arabic civilization from the *djāhiliyya* down to the end of the 3rd/9th century. The author even does us another service: following the method of the Arab writers, he quotes long passages from earlier writers, whose works have not come down to us. His book is thus a source also for the development of Arabic style.

The first edition of the *Aghānī* was published in Būlāḳ 1285/1868-9 in twenty volumes, to which should be added a twenty-first volume published by R. Brünnow (*The twenty-first volume of the Kitāb al-Aghānī*, Leiden 1888). For a lacuna see J. Wellhausen, *ZDMG*, 1896, 145-51. *Tables* by I. Guidi (Leiden 1895-1900). A second edition, being a reproduction of the Būlāḳ ed., together with the twenty-first volume and the *Tables* of Guidi, Cairo, 1323/1905-6. Cf. also Muḥ. Maḥmud al-Shinḳīṭī, *Taṣḥīḥ*, Cairo 1334/1916). A third and much superior edition was started in Cairo in 1927.

Another work of Abu'l-Faradj that has come down to us is *Maḳātil al-Ṭālibiyyīn wa-Akhbaruhum*, a historical work composed in 313/923. It contains biographies of the descendants of Abū Ṭālib (from Djaʿfar b. Abī Ṭālib to the seventy who died under the reign of al-Muḳtadir, 295-320/908-32) who in some way lost their lives for political reasons, including those who died in prison or in hiding. This book was published in lithography, Teheran 1307 and in print, Nadjaf 1353. The Bombay edition (1311) on the margin of Fakhr al-Dīn al-Nadjafī, *Muntakhab fi 'l-Marāthī wa 'l-Khuṭab*, contains the first half only.

Among those books that are lost should be mentioned books on genealogy and a *Kitāb Ayyām al-ʿArab*, where 1700 "days" were mentioned. Abu'l-Faradj also edited the *dīwāns* of Abu Tammām, al-Buḥturī and Abū Nuwās.

Bibliography: Ibn Khallikān, no. 351; Yāḳūt, *Irshād*, v, 149-68; al-Khaṭīb al-Baghdādī, *Taʾrīkh Baghdād*, xi, 398-400; Brockelmann, i, 146, S i, 225-6. A good biography, quoting his poetry and containing information about the *Aghānī*, in *Aghānī*³, preface, i, 15-37 (the information about the *Muhadhdhab* is to be corrected). For MSS of the *Aghānī* see H. Ritter, in *Oriens*, 1949, 276 ff.; for miniatures illustrating it, D. S. Rice, in *Burlington Magazine*, 1953, 128 ff.

(M. NALLINO)

ABU 'L-FATḤ [see IBN AL-ʿAMĪD; IBN AL-FURĀT; AL-MUẒAFFAR].

ABU 'L-FIDĀ, ISMĀʿĪL B. (AL-AFḌAL) ʿALĪ B. (AL-MUẒAFFAR) MAḤMŪD B. (AL-MANṢŪR) MUḤAMMAD B. TAḲĪ AL-DĪN ʿUMAR B. SHĀHANSHĀH B. AYYŪB, AL-MALIK AL-MUʾAYYAD ʿIMĀD AL-DĪN, Syrian prince, historian, and geographer, of the family of the Ayyūbids [*q.v.*], born in Damascus, Djum. i, 672/Nov. 1273. At the age of 12, in the company of his father and his cousin al-Muẓaffar Maḥmūd II, prince of Ḥamāh, he was present at the siege and capture of Marḳab (Margat) (684/1285). He took part also in the later campaigns against the Crusaders. On the suppression of the Ayyūbid principality of Hamāh in 698/1299, he remained in the service of its Mamlūk governors, at the same time ingratiating himself with the Mamlūk sultan al-Malik al-Nāṣir [*q.v.*] Muḥammad b. Ḳalāʾūn. After several vain attempts to obtain the government of Ḥamāh, he was finally appointed on 18 Djum. i, 710/14 Oct. 1310, at the instance of the "king of the Arabs", Muhannā, shaykh of Āl Faḍl. In 712/1312 his government was converted to a life principality, but two years later he, with the other governors,

was made directly subordinate to the governor of Damascus, Tankiz, with whom his relations were for a time strained. In the following years he strengthened his position by lavish patronage and generosity, especially on the occasion of his visits to Egypt. In 719/1319-20 he accompanied sultan Muḥammad on pilgrimage to Mecca, and on their return to Cairo he was publicly invested with the insignia of the sultanate and the title of al-Malik al-Muʾayyad (17 Muḥ. 720/28 Febr. 1320), and given precedence over all governors in Syria. He continued to enjoy the great reputation which he had acquired as patron and man of letters, as well as the friendship of the sultan, until his death at Ḥamāh on 23 Muḥ. 732/27 Oct. 1331. With the support of Tankiz, his son al-Afḍal Muḥammad was nominated as his successor, and was also granted the insignia of the sultanate. (For his grave, cf. *ZDMG*, lxii, 657-60; lxiii, 329-33, 853 ff.; *Bull. d'Etudes Orient.*, 1931, 149).

The Arabic biographical notices furnish several specimens of his poetical productions, which included a versification of the juristic work *al-Ḥāwī* of al-Māwardī [*q.v.*]. Of various other writings on religious and literary subjects almost all have perished. His reputation rests on two works, both largely compilations, but rearranged and supplemented by himself. The *Mukhtaṣar taʾrīkh al-bashar*, a universal history covering the pre-Islamic period and Islamic history down to 729/1329, is in its earlier part based mainly on Ibn al-Athīr. Its contemporary popularity is shown by the continuations to it written by Ibn al-Wardī [*q.v.*], Ibn Ḥabīb al-Dimashḳī, and Ibn al-Shiḥna al-Ḥalabī [*q.v.*]. It was a major source of eighteenth-century orientalism, through the editions of J. Gagnier, *De vita . . . Mohammedis* (Oxford 1723) and J. J. Reiske-J. G. Chr. Adler, *Annales Moslemici* (Leipzig 1754 and Copenhagen 1789-94). The complete text was first published in Istanbul (2 vols., 1286/1869-70).

The *Taḳwīm al-Buldān*, a descriptive geography supplemented by physical and mathematical data in tabular form (derived mainly from the Arabic translation of Ptolemy, the tenth-century *K. al-aṭwāl*, al-Bīrūnī and Ibn Saʿīd al-Maghribī [*qq.v.*], their divergences being noted) and completed in 721/1321, largely replaced all earlier geographical works. It is extensively quoted by al-Ḳalḳashandī [*q.v.*], and several later abridgements were made, including one in Turkish by Muḥ. b. ʿAlī Sipāhīzāde (d. 997/1589). Individual sections were edited and translated by European scholars from the seventeenth century (John Greaves, London 1650; J. B. Koehler, Leipzig 1766; etc.). The entire work was edited by J. T. Reinaud and MacGuckin de Slane (Paris 1840) and translated by Reinaud (Paris 1848) and Stanislas Guyard (Paris 1883), the first volume of the translation consisting of a classic survey entitled *Introduction générale à la géographie des Orientaux*. The judgments of scholars on Abu 'l-Fidā's geography have differed widely, from "a rather poor compilation of earlier sources" (J. H. Kramers, in *Legacy of Islam*, Oxford 1931, 91; cf. C. E. Dubler, *Abū Ḥāmid el Granadino*, Madrid 1953, 182) to G. Sarton (see *Bibl.*), for whom Abu'l-Fidā is "the greatest geographer of his age". See also the art. DJUGHRĀFIYA.

Bibliography: Autobiography (extracted from the History), trans. de Slane, in *Recueil des Historiens des Croisades, Orientaux* i, 166-186 (see also *Appendice* 744-51); Dhahabī, *Taʾrīkh al-Islām*, Suppl., Leiden MS. 765; Kutubī, *Fawāt* (Cairo 1951), i, 70; Ibn Ḥadjar, *al-Durar al-kāmina*, Hyderabad 1348, i, 371-3; Subkī, *Ṭabaḳāt al-Shāfiʿiyya*, vi, 84-5; Ibn Taghrībirdī, Cairo, ix, 16, 23, 24, 39, 58-62, 74, 93, 100, 292-4 (largely reproduced in Maḳrīzī, *Sulūk*, i, Cairo 1941, 87, 89, 90, 137, 142, 166, 196, 202, 238); idem, *Les Biographies du Manhal Ṣāfī* (G. (H. A. R. GIBB)

ABŪ FIRĀS AL-ḤAMDĀNĪ, poetic cognomen of AL-ḤĀRITH B. ABI 'L-ʿALĀʾ SAʿĪD B. ḤAMDĀN AL-TAGHLIBĪ, Arab poet, born in 320/932, probably in ʿIrāḳ. Saʿīd, himself a poet, was killed by his nephew Nāṣir al-Dawla Ḥasan on attempting to occupy Mawṣil in 323/935, The mother of Abū Firās, a Greek *umm walad*, moved with her son to Aleppo after its occupation by the poet's cousin Sayf al-Dawla in 333/944, and there he was trained under the eye of Sayf al-Dawla, who also married his sister. In 336/947-8 he was appointed to the governorship of Manbidj (and later also of Ḥarrān), where, in spite of his youth, he distinguished himself in the conflicts with the Nizārī tribes of Diyār Muḍar and the Syrian desert. He also frequently accompanied Sayf al-Dawla in his Byzantine expeditions, and was captured in 348/951 but succeeded in escaping from imprisonment at Kharshana by leaping on horseback into the Euphrates. In 351/962 he was again captured at Manbidj during the Greek operations preliminary to the siege of Aleppo, and taken to Constantinople where he remained, in spite of his entreaties to Sayf al-Dawla, until the general exchange of prisoners in 355/966. He was then appointed governor of Ḥimṣ and in the year after Sayf al-Dawla's death attempted to revolt against his son and successor (and his own nephew) Abu'l-Maʿālī, but was defeated, captured and killed by the latter's general Karghawayh, 2 Djumādā i, 357/4 April 968.

The reputation of Abū Firās owes much to his personal qualities. Handsome in person, of noble family, brave, generous, and extolled by his contemporaries as "excelling in every virtue" (though also egoistic and rashly ambitious), he lived up to the Arab ideal of chivalry which he expressed in his poetry. This is probably the thought which underlies the often-quoted phrase of Ibn ʿAbbād: "Poetry began with a king (sc. Imruʾ al-Ḳays) and ended with a king (sc. Abū Firās)". His earlier output is composed of *ḳaṣīdas* of the classical type, devoted to praise of his family's nobility and warlike deeds (notably a *rāʾiyya* of 225 lines recounting the history of the Ḥamdānid house) or to self-praise, and shorter lyrical pieces on amatory or friendship themes of the ʿIrāḳī type. The former are remarkable for their sincerity, directness, and natural vigour, in contrast to the metaphorical elaboration of his chief rival at the court of Sayf al-Dawla, al-Mutanabbī; the latter are elegant trifles, formal and unoriginal. Noteworthy also are his outspokenly Shīʿite odes, satirizing the ʿAbbāsids. But it is more especially on the poems of his captivity, the *Rūmiyyāt*, that his fame rests. In these he gives expression in affecting and eloquent terms to the captive's yearning for home and friends, mingled with not a little self-praise, reproach to Sayf al-Dawla for the delay in ransoming him, and bitter complaints at being neglected.

His *dīwān* was edited with a commentary (largely from the poet himself) shortly after his death by his tutor and friend, the grammarian Ibn Khālawayh (d. 370/980). The manuscripts present, however, so many variations in text and arrangement that other recensions must also have been circulated, including probably that of al-Babbaghā (d. 398/1008: see Tanūkhī, *Bibl.*). All the earlier defective editions (Bayrūt 1873, 1900, 1910) are superseded by the critical edition of S. Dahhān (3 vols., Bayrūt 1944), with full bibliography.

Bibliography: Tanūkhī, *Nishwār al-Muḥāḍara*, i, London 1921, 110-2; Tha'ālibī, *Yatīma*, i, 22-62 (Cairo i, 27-71); also ed. and translated with an introd. by R. Dvořak, *Abū Firās, ein arab. Dichter und Held*, Leiden 1895; Ibn Khallikān, no. 146; Brockelmann i, 88; S i, 142-4, M. Canard, *Sayf al-Daula* (recueil de textes), Alger-Paris 1934, index; idem, *Hist. de la Dynastie des Ḥamdānides*, i, Alger 1951, 379, 395 f., 596 ff., 669 f., 763, 772, 796, 810, 824; H. Ritter, in *Oriens* 1948, 377-85.

ABŪ FUDAYK 'Abd Allāh b. Thawr, a Khāridjite agitator, of the Banu Ḳays b. Tha'laba. Originally associated with Nāfi' b. al-Azraḳ [*q.v.*], he left him to join Nadjda b. 'Āmir [*q.v.*], whom he did not hesitate to murder, because of certain differences of opinion that arose between them. After this murder he gained control over Baḥrayn (72/691) and succeeded in withstanding the attack of an army from Baṣra sent against him by 'Abd al-Malik. Shortly afterwards (73/693) a second expedition, consisting of 10.000 men from Basra and commanded by 'Umar b. 'Ubayd Allāh b. Ma'mar succeeded in defeating and killing him.

Bibliography: 'Adjdādj, no. 11; Mubarrad, *Kāmil*, 662; Balādhuri, *Ansāb*, v, 346, xi (= *Anonyme arab. Chronik*, ed. Ahlwardt), 143 ff.; Ṭabarī, ii, 829, 852 ff.; Ash'arī, *Maḳālat*, 101; Shahrastānī, (on margin of Ibn Ḥazm, *Fiṣal*), i, 162-167; R. Brünnow, *Die Charidschiten*, 47 ff.; J. Wellhausen, *Die religiös-politischen Oppositionsparteien*, 32. See also khawāridj.

ABU FUṬRUS [see nahr abī fuṭrus].

ABU 'L-FUTŪḤ ḤASAN [see makka].

ABU 'L-FUTŪḤ al-RĀZĪ, Persian commentator of the Ḳur'ān. He lived between 480/1087 and 525/1131, fixed by conjecture. Among his disciples are the famous Shi'te theologians Ibn Shahrāsūb and Ibn Bābūya [*q.v.*], who describes him as a scholar, preacher, commentator of the Ḳur'ān and a pious man. According to al-Shushtarī (*Madjālis al-Mu'minīn*) he was a contemporary of al-Zamakhsharī, whom he quoted as his master—which would explain the Mu'tazilism of his commentary. Muḥ. Ḳazwīnī has proved that his commentary could not date from before 510/1116. He claimed that he was a descendant of the Companion Nāfi' b. Budayl. His *Rawḍ al-Djinān wa-Rawḥ al-Djanān* (Teheran 1905, in two volumes; 1937, in three volumes) is one of the earliest—if not the earliest—of the Shī'ite commantaries composed in Persian. In his introduction he declared that he gave preference to this language because those who knew Arabic were in the minority. The commentary, preceded by an introduction concerning the exegesis of the Ḳur'ān, deals with grammar, rhetoric, juridical and religious commands and the traditions about the origin of the verses. The influence of al-Ṭabarī's *Tafsīr* can be perceived; the Shī'ite tendency is less pronounced than in the later Persian commentaries.—In addition to the commentary he is said to be the author of a commentary on the *Shihāb al-Akhbār* of Muḥ. b. Salāma al-Ḳuḍā'ī (Brockelmann, i, 343).

Bibliography: Storey, section i, no. 6; H. Massé, in *Mélanges W. Marcais*, Paris 1950, 243 ff.

(H. Massé)

ABŪ GHĀNIM Bishr b. Ghānim al-**KHURĀSĀNĪ**, eminent Ibāḍī lawyer of the end of the 2nd/8th and the beginning of the 3rd/9th century, a native of Khurāsān. On his way to the Rustamid *imām* 'Abd al-Wahhāb (168-208/784-823) at Tāhart, to offer him his book *al-Mudawwana*, he stayed with the Ibāḍī *shaykh*, Abū Ḥafṣ 'Amrūs b. Fatḥ, of Djabal Nafūsa, who rendered a service to Ibāḍī literature by conserving in the Maghrib a copy of the work.

The *Mudawwana* of Abū Ghānim is the oldest Ibāḍī treatise on general jurisprudence, according to the teaching of Abū 'Ubayda Muslim al-Tamīmī (d. under al-Manṣūr, 136-58/754-75; cf. ibāḍiyya) as transmitted by his disciples. The manuscript of the *Mudawwana*, copied by 'Amrūs b. Fatḥ, was composed of twelve parts; the titles are given in the catalogue of Ibāḍī books compiled by Abu 'l-Ḳāsim al-Barrādī (8th/14th century). The book has become very rare; according to information received from S. Smogorzewski, a unique manuscript was in the possession of an Ibāḍī *shaykh* in Guerrara (Mzāb). Al-Barrādī's catalogue also quotes another law book by Abū Ghānim.

Bibliography: Shammākhī, *al-Siyar*, Cairo 1301, 228; Sālimī, *al-Lam'a*, in a collection of six Ibāḍī works published in Algiers 1326, 184, 197-8; A. de Motylinski, *in Bull. Corr. afr.*, 1885, 18, nos. 12 and 14.

(T. Lewicki)

ABU 'L-GHĀZĪ BAHĀDUR KHĀN, ruler of Khīwa and Čaghatāy historian, born probably on 16 Rabī' i, 1012/24 Aug., 1603, son of 'Arab Muḥammad Khān, of the Özbeg dynasty of the Shaybānids [*q.v.*], and of a princess of the same family. He spent his youth in Urganč (at that time largely depopulated owing to the change of course of the Oxus), at the court of his father, who was khān of this place.. In 1029/1619 he was appointed to be his father's lieutenant in Kāth, but when his father was killed soon afterwards in a rebellion of two of his other sons, had to take refuge at Samarḳand with Imām-ḳuli Khān. After long fighting he, together with his brother Isfandiyār, succeeded in ousting the rebellious brothers, with the aid of some Turkmen tribes. In 1033/1623 he became lieutenant of his brother in Urganč, but quarrelled with him, in connection with Turkmen tribal feuds, in 1036/1626 and had to flee to Tāshkent, where he lived for two years at the Kazakh court. After another attempt to seize the throne in Khīwa, he spent ten years (from 1039/1629) as an exile at the court of the Ṣafawids, mostly at Iṣfahān. Here he widened his knowledge of the past of his people, acquired at the Kazakh court, by the study of Persian sources. By the evidence of his translation, he knew Persian and Arabic well. After his flight from Persia he perfected his knowledge at the Kalmük court, by collecting Mongol traditions.

It was only after the death of Isfandiyār (1052/1642) that Abu 'l-Ghāzī became (in 1054/1644-5) khān of Khīwa. As khān, he maintained diplomatic relations with all his neighbours, including Russia, interrupted by repeated wars. Expeditions against the Turkmens in 1054/1644, 1056/1646, 1058/1648, 1062/1651 and 1064/1653, led finally to the submission of some of these tribes in Ḳara-Kum and

Manghishlaḳ. He was engaged also against the Kalmuks in 1059/1649, 1064/1653 and 1067/1656, and against Bukhārā in 1066/1655 and 1073/1662. Occasionally he allowed Russian caravans passing through his territory to be plundered, but had, in the interests of his own trade if for no other reasons, to pay compensation. For the rest, he endeavoured to further the welfare of his country and to promote scholarship. The military gifts which he ascribes to himself were, according to less partial sources, rather modest. He died in 1074/1663, shortly after he had abdicated in favour of his son.

Of his works we possess: 1) *Shedjere-i Terākime*, composed in 1070/1659, mainly derived from Rashīdal-Dīn and the Oghuznāma, but with additions of independent value. The Čaghatāy text was published in facsimile by the Türk Dil Kurumu, Ankara 1937; there is a Russian translation by A. Tumanski, ʿAshkābād 1892. 2) *Shadjarat al-Atrāk* (*Shedjere-i Türk*), which he left unfinished at his death; the part from 1054/1644 was finished by his son Abu 'l-Muẓaffar Anūsha Muḥammad Bahādur in 1076/1665. This work contains the history of the Shaybānids from the middle of the 15th century, and is the main source for the dynasty up to 1074/1663, though written mostly "from memory", without direct use of sources, and widely defective for the earlier periods as well as in its chronology. The introduction, containing traditions about Činghiz Khān and his immediate successors, is almost wholly legendary. Nevertheless, as the work became known in Europe at an early date, it remained for some time the main authority for the history of the Mongols. Two Swedes captured in the battle of Poltava (1709), Tabbert von Strahlenberg and Schenström, became acquainted with it in Siberia and, with the help of a Russian interpretation by an imām, prepared a German translation, on which is based the French edition of v. Bentinck, *Histoire généalogique des Tartars*, Leiden 1726. This was soon followed by a Russian and in 1780 by an English edition. The German original of 1716-7 was published by Messerschmid, Göttingen 1780, as *Geschlechtsbuch der mungalisch-mogulischen Chanen*. Finally Ch. M. v. Frähn published a Latin translation, Kazan 1825. A critical use of the text was only made possible by the publication of the Caghatāy text, with a French translation, by J. J. P. Baron Desmaisons, *Histoire des Mogols et des Tatars*, 1871-4, but this work in turn requires revision in the light of more recent studies.

Bibliography: Desmaisons, ii, 312 ff.; A. Strindberg, *Notice sur le MS. de la première traduction de la chronique d'Abulghasi-Behader*, Stockholm 1889; I. N. Berezin, *Biblioteka vostočnykh istorikov*, iii (the Russian trans. by G. Sablukov), 1852; Ahmed Zeki Velidi Togan, *IA*, iv, 79-83. (B. Spuler)

ABŪ ḤAFṢ ʿUMAR B. **DJAMĪʿ**, Ibāḍī scholar, probably a native of the Djabal Nafūsa, mentioned in al-Shammākhī's K. *al-Siyar* (Cairo 1301, 561-2), in a short note that gives no chronological information, but from which it may be deduced that he lived at the end of the 8th/14th or the beginning of the 9th/15th century.

He translated into Arabic the old *ʿAḳīda* of the Ibāḍīs of the Maghrib, originally composed in Berber. This translation was in use, at the time of al-Shammākhī (d. 928/1521-2), in the island of Djarba and in the other Ibāḍī communities of the Maghrib, excepting the Djabal Nafūsa. It is still the catechism of the Ibāḍīs of the Mzāb and of Djarba. The *ʿAḳīda* of Abū Ḥafṣ was the subject of numerous commentaries: by al-Shammākhī (circulating in MSS); by Abū Sulaymān Dāʾūd b. Ibrāhīm al-Thalātī of Djarba (d. 967/1559-60) (see Exiga dit Kayser, *Description et histoire de l'île de Djerba*, Tunis 1884, 9-10 text, 9-10 transl.); and finally those by ʿUmar b. Ramaḍān al-Thalātī (12th/18th century), autographed or printed after the *ʿAḳīda*, in the editions of Algeria (e.g. Constantine 1323) or Cairo.

The *ʿAḳīda* of Abū Ḥafs was published and translated, with notes taken from the Ibāḍī commentaries, by A. de Motylinski, *L' ʿAqida des Abadhites*, *Recueil Mém. et Textes XIVᵉ Congrès des Orientalistes*, Algiers 1905, 505-45.

(A. de Motylinski—T. Lewicki)

ABŪ ḤAFṢ ʿUMAR B. SHUʿAYB AL-**BALLŪṬĪ**, native of Pedroche (Bitrawdj) in the Faḥṣ al-Ballūt, a district to the north of Cordova, founder of a minor dynasty which ruled over the island of Crete (Iḳrītish [*q.v.*]) between 212/827 and 350/961, when his descendant ʿAbd al-ʿAzīz b. Shuʿayb was dethroned and the island recaptured by the general and future Byzantine emperor Nicephorus Phocas.

After the celebrated revolt of the Suburb which broke out in Cordova in 202/818 and was harshly suppressed by the amīr Ḥakam I (cf. UMAYYADS OF SPAIN), a group of Andalusians, several thousand in number, who had been expelled from the capital, decided to emigrate and try their luck in the Mediterranean. They succeeded in gaining a foothold in Egypt and occupied Alexandria for a few years. Besieged by the governor, ʿAbd Allāh b. Ṭāhir, they had to capitulate in 212/827 and then decided to attempt a landing in Crete. Under the leadership of their chief, Abū Ḥafṣ al-Ballūṭī, they captured the island, which thus passed under Muslim domination. There is little information about the chronology of the dynasty founded by al-Ballūṭī and the history of the island during that period. All that is known, thanks to Byzantine historians, who call Abū Ḥafṣ *Apocapso* or *Apochapsa*, is that all attempts by the Byzantines to recapture Crete were in vain. It was also in vain that in 225/840 the emperor Theophilus addressed himself to ʿAbd al-Raḥmān II [*q.v.*] to ask for the restitution of the island. During its Muslim occupation, Crete maintained economic and cultural relations with al-Andalus, and its capital, al-Khandaḳ (modern Candia), was quite a brilliant intellectual centre.

Bibliography: Ibn Khaldūn, *ʿIbar*, iv, 211; Kindī (*GMS* XIX), 158-184; M. Gaspar Remiro, *Cordobeses musulmanes en Alejandría y Creta*, *Homenaje Codera*, Saragosa 1904, 217-33; A. A. Vasiliev, *Byzance et les Arabes*, i (Fr. edition by Grégoire and Canard), Bruxelles 1935, 49 ff.; Zambaur, nos. 48, 70; A. Freixas, *España en los historiadores bizantinos*, *Cuadernos de Hist. de Esp.*, Buenos Aires, xi, 1949, 21-2; Lévi-Provençal, *Hist. Esp. Mus.*, i, 169-73, ii, 145-6. (E. Lévi-Provençal)

ABŪ ḤAFṢ ʿUMAR B. YAḤYĀ AL-**HINTĀTĪ** (an Arabic relative adjective formed from the name of a Berber tribe of the Anti-Atlas in Morocco, the Hintāta), or, according to the more current Berber form, Īntī, the chief companion of the Almohade Mahdī, Ibn Tūmart [*q.v.*], and the most active supporter of the dynasty of the Muʾminids (see ʿABD AL-MUʾMIN). It was his own grandson, the amīr Abū Zakarīyāʾ Yaḥyā b. ʿAbd al-Wāḥid who, in 634/1236-37, renounced his allegiance to the Muʾminids in Ifrīḳiya and founded, with himself and his descendants as rulers, the dynasty of the Ḥafṣids [*q.v.*], which was to be called after this their ancestor.

Abū Ḥafṣ Intī—on whom the "Memoirs" of al-Baydhaḳ [*q.v.*] are the most detailed source, whose information is most likely to be authentic—bore, in common with all his fellow-tribesmen before the activity of the Almohade Mahdī, a Berber name, which appears to have been Faskāt ū-Mzāl. Ibn Tūmart himself, after he had persuaded him to support his cause, gave him the name of Abū Ḥafṣ ʿUmar, in memory of the famous companion and lieutenant of the Prophet. Their first meeting, after the Mahdī's return to his native mountains, can be placed in the year 514/1120-21; Abū Ḥafṣ, at this time, was apparently about 30 years old. From that time on, he was to make a remarkable career for himself, showing an extremely developed political sense, a more and more marked ascendant over the first Almohade caliph, his own "creature", and enjoying the respect of all those who benefited under the new régime, from the highest to the lowest; in short, he was the "éminence grise" of the Almohade system which owed to him, more than any other the fact that it did not fall to pieces at the outset. Until his death at a ripe age, in 571/1175-76, this intrepid Berber, victorious general, valued counsellor and venerated *shaykh*, appeared continually in the forefront of the historical scene of the Maghrib, al-Andalus and Ifrīḳiya. For details of his long political and military activities, see the articles AL-MUWAḤḤIDŪN and MUʾMINIDS.

Bibliography: E. Lévi-Provençal, *Documents inédits d'histoire almohade*, Paris 1928, index; *Un recueil de lettres officielles almohades*, Paris 1942, index; Ibn al Kaṭṭān, in *Mélanges R. Basset*, Paris 1925, ii, 335-393, and an unpublished manuscript on the history of the Almohades (*Naẓm al djumān*); ʿAbd al-Wāḥid al-Marrākushī *al-Muʿdjib*, ed. Dozy and transl. Fagnan, index; the chronicles of the post-Almohade period (Occident: *al-Ḥulal al-mawshiyya*, Ibn ʿIdhārī's *Bayan*, Ibn Khaldūn's *ʿIbar*, *Rawḍ al-Ḳirṭās*, *Taʾrīkh al-dawlatayn*, etc.; Orient: Ibn al-Athīr, Nuwayrī), etc.—The best general account of Abū Ḥafṣ Intī, up to now, is that given by R. Brunschvig, *La Berbérie occidentale sous les Ḥafṣides*, I, Paris 1940, 13-16. His career will be treated in detail in a forthcoming work (in Spanish) by A. Huici Miranda on the Almohades and the dynasty of the Muʾminids in North Africa and in Spain.

(E. LÉVI-PROVENÇAL)

ABŪ ḤĀMID AL-GHARNĀṬĪ, MUḤAMMAD B. ʿABD AL-RAḤMĀN (variant AL-RAḤĪM) B. SULAYMĀN AL-MĀZINĪ AL-ḲAYSĪ, Andalusian traveller and collector of *ʿadjāʾib* [*q.v.*] at the beginning of the 6th/12th century, the perfect type of the Occidental *raḥḥāla*, drawn by the desire of *ṭalab al-ʿilm* and the spirit of adventure to the farthest limits of the lands of Islam. There is little biographical information about him and the main dates of his adventurous life are given by himself in his works. He was born in Granada in 473/1080, no doubt studied in his native city, and perhaps stayed some time in Uclés (Uḳlīsh); when he was about thirty years old he left his native country, never to return. First he spent some years in Ifrīḳiya, then embarked in 511/1117-8 for Alexandria, stayed first in that town and later in Cairo, until 515/1123. After a stop at Damascus, he went to Baghdād, where he spent four years. In 524/1130 he was in Abhar in Persia and subsequently near the mouth of the Volga. He went, much later, to Hungary, staying there for three years, until 548/1153. He then travelled through the lands of the Ṣaḳāliba (Eastern Europe), and reached Khwārizm; from there he went, via Bukhārā, Marw, Nīshāpūr, Rayy, Iṣfahān and al-Baṣra, to Arabia, to perform the pilgrimage. In 550/1155 he settled in Baghdād, but left six years later for Moṣul. He then went to Syria, and after staying in Aleppo, established himself at Damascus, where he died in 565/1169-70.

It was in Baghdād, and then in Mosul, that Abū Ḥāmid al-Gharnāṭī composed the two works that made him famous. In Baghdād he wrote for the well-known vizier Yaḥyā b. Hubayra his *al-Muʿrib an baʿḍ ʿAdjāʾib al-Maghrib*; in Moṣul, on the demand of his protector and Maecenas, Abū Ḥafṣ al-Ardabīlī (cf. Brockelmann, S i, 783-4), his *Tuḥfat al-Albāb* (or *al-Aḥbāb*) *wa-Nukhbat al-Aʿdjāb*, which was abundantly cited by Muslim authors in the West as well as in the East. These two books, which are extant in numerous MSS, are full, not only of interesting information and exact records, but also of legendary or marvellous accounts. They have formed the object of elaborate monographs, with edition of the text and annotated translation; the *Tuḥfa* was published by G. Ferrand in *JA*, 1925, 1-148, 195-303; the *Muʿrib* by C. E. Dubler, with a Spanish translation and a hypercritical study (*Abû Ḥāmid el Grenadino y su relación de viaje por tierras eurasiáticas*, Madrid 1953). A translation of the description of Rome contained in the *Tuḥfa* was published, from a Palermo MS, in the same city, by C. Crispo Moncada in 1900.

Bibliography: Maḳḳarī, *Analectes*, i, 617-8; Ḥadjdji Khalifa, ii, 222, iv, 189-90; Pons Boigues, *Ensayo bio-bibliográfico*, 229-31; Brockelmann, S I, 877-8. (E. LÉVI-PROVENÇAL)

ABŪ ḤAMMU I MUSA B. ABĪ SAʿĪD ʿUTHMĀN B. YAGHMURĀSAN, fourth king of the ʿAbd al-Wādid dynasty. Proclaimed on 21 Shawwāl 707/15 April 1308, he had first to repair the damage caused by the siege of Tlemcen by the Marīnids; he then prepared the defence of his capital against external attacks and fortified it in the expectation of a new siege. In the exterior, he restored his authority over the Banū Tūdjīn and the Maghrāwa and pushed as far as Bidjāya (Bougie) and Constantine, while in the west he hindered the Marīnids from advancing beyond Wadjda (Oujda). Preoccupied by the upkeep of a strong army, he could give little thought to the material and intellectual situation of his subjects. He showed extreme harshness even towards his son Abū Tāshufīn, who had him murdered on 22 Djumādā I 718/22 July 1318 and was proclaimed as his successor.

Bibliography: see ʿABD AL-WĀDIDS. (A. BEL)

ABŪ ḤAMMŪ II MŪSĀ B. ABĪ YAʿḲŪB YŪSUF B. ʿABD AL-RAḤMĀN B. YAḤYĀ B. YAGHMURĀSAN, king of the ʿAbd al-Wādīd dynasty. Born is Spain in 723/1323-4, he was brought up at the court of Tlemcen. After the victory of the Marinid army over his uncles Abū Saʿīd and Abū Thābit, in Djumādā I 753/June 1352, he had to take refuge with the Ḥafṣid court of Tūnis. When the relations between the Ḥafṣids and Marīnīds deteriorated, he was put at the head of an army and reconquered Tlemcen, where he was proclaimed as king on Rabīʿ I 760/9 February 1359. In 772/1370 the capital again fell under the rule of the Marīnids, who, however, evacuated it in 774/1372. Abū Ḥammū, returning to his dominions, had to face several revolts and especially the hostility of his son Abū Tāshufīn II [*q.v.*], who attacked Tlemcen at the head of a Marīnid army in 791; Abū Ḥammū was killed in the battle, on 1 Dhu'l-Ḥidjdja 791/21 Nov. 1389.

Abū Ḥāmmū had a highly cultivated mind and sought the society of scholars and poets; he himself composed a treatise on political ethics. His secretary, intimate friend and historian, was Yaḥyā b. Khaldūn, who was assassinated in Ramaḍān 780/Dec. 1379, at the instigation of Abū Tāshufīn.

Bibliography: see ʿABD AL-WĀDĪDS.

(A. BEL)

ABU ḤAMZA [see AL-MUKHTĀR B. ʿAWF].

ABŪ ḤANĪFA AL-NUʿMĀN B. THĀBIT, theologian and religious lawyer, the eponym of the school of the Ḥanafīs [*q.v.*]. He died in 150/767 at the age of 70, and was therefore born about the year 80/699. His grandfather Zūṭā is said to have been brought as a slave from Kābul to Kūfa, and set free by a member of the Arabian tribe of Taym-Allāh b. Thaʿlaba; he and his descendants became thus clients (*mawlā*) of this tribe, and Abū Ḥanīfa is occasionally called al-Taymī. Very little is known of his life, except that he lived in Kūfa as a manufacturer and merchant of a kind of silk material (*khazz*). It is certain that he attended the lecture meetings of Ḥammād b. Abī Sulaymān (d. 120) who taught religious law in Kūfa, and, perhaps on the occasion of a *ḥadjdj*, those of ʿAṭāʾ b. Abī Rabāḥ (d. 114 or 115) in Mecca. The long lists, given by his later biographers, of authorities from whom he is supposed to have „heard" traditions, are to be treated with caution. After the death of Ḥammād, Abū Ḥanīfa became the foremost authority on questions of religious law in Kūfa and the main representative of the Kūfian school of law. He collected a great number of private disciples to whom he taught his doctrine, but he was never a *ḳāḍī*. He died in prison in Baghdad, where he lies buried; a dome was built over his tomb in 459/1066. The quarter around the mausoleum is still called al-Aʿẓamiyya, al-Imām al-Aʿẓam being Abū Ḥanīfa's customary epithet.

The biographical legend will have it that the ʿAbbāsid caliph al-Manṣūr called him to the newly founded capital, wanted to appoint him as a *ḳāḍī* there, and imprisoned him because of his steady refusal. A variant makes already the Umayyad governor Yazīd b. ʿUmar b. Hubayra, under Marwān II, offer him the post of *ḳāḍī* in Kūfa and flog him in order to make him accept it, but again without success. These and similar stories are meant to explain the end of Abū Ḥanīfa in prison, and the fact, surprising to later generations, that the master should not have been a *ḳāḍī*. The truth is probably that he compromised himself by unguarded remarks at the time of the rising of the ʿAlids al-Nafs al-Zakiyya and his brother Ibrāhīm, in 145, was transported to Baghdād and imprisoned there (al-Khaṭīb al-Baghdādī, xiii, 329).

Abū Ḥanīfa did not himself compose any works on religious law, but discussed his opinions with and dictated them to his disciples. Some of the works of these last are therefore the main sources for Abū Ḥanīfa's doctrine, particularly the *Ikhtilāf Abī Ḥanīfa waʾbn Abī Laylā* and the *al-Radd ʿalā Siyar al-Awzāʿī* by Abū Yūsuf, and the *al-Ḥudjadj* and the version of Mālik's *Muwaṭṭaʾ* by al-Shaybānī. (The formal *isnād* al-Shaybānī—Abū Yūsuf—Abū Ḥanīfa, that occurs in many works of al-Shaybānī, designating as it does merely the general relationship of pupil and master, is of no value in this connection). For the doctrine that Abū Ḥanīfa himself had received from Ḥammād, the main sources are the *al-Āthār* of Abū Yūsuf and the *al-Āthār* of al-Shaybānī. The comparison of Abu Ḥanīfa's successors with his predecessors enables us to assess his achievement in developing Muhammadan legal thought and doctrine. Abū Ḥanīfa's legal thought is in general much superior to that of his contemporary Ibn Abī Laylā (d. 148), the *ḳāḍī* of Kūfa in his time. With respect to him and to contemporary legal reasoning in Kūfa in general, Abū Ḥanīfa seems to have played the role of a theoretical systematizer who achieved a considerable progress in technical legal thought. Not being a *ḳāḍī*, he was less restricted than Ibn Abī Laylā by considerations of practice; at the same time, he was less firmly guided by the administration of justice. Abū Ḥanīfa's doctrine is as a rule systematically consistent. There is so much new, explicit legal thought embodied in it, that an appreciable part of it was found defective and was rejected by his disciples. His legal thought is not only more broadly based and more thoroughly applied than that of his older contemporaries, but technically more highly developed, more circumspect, and more refined. A high degree of reasoning, often somewhat ruthless and unbalanced, with little regard for the practice, is typical of Abū Ḥanīfa's legal thought as a whole. Abū Ḥanīfa used his personal judgment (*raʾy*) and conclusions by analogy (*ḳiyās*) to the extent customary in the schools of religious law in his time; and as little as the representatives of the other schools, the Medinese for example, was he inclined to abandon the traditional doctrine for the sake of "isolated" traditions from the Prophet, traditions related by single individuals in any one generation, such as began to become current in Islamic religious science during the lifetime of Abū Ḥanīfa, in the first half of the second century A. H. When this last kind of tradition, two generations later, thanks mainly to the work of al-Shāfiʿī, had gained official recognition, Abū Ḥanīfa for adventitious reasons was made the scapegoat for the resistance to the "traditions of the Prophet" and, parallel to this, for the exercise of personal judgment in the ancient schools of law, and many sayings shocking to the later taste were attributed to him. Al-Khaṭīb al-Baghdādī (d. 463/1071) made himself the mouthpiece of this hostile tendency. The legal devices (*ḥiyal*) which Abū Ḥanīfa had developed in the normal course of his technical legal reasoning, were criticized too, but they became later one of his special titles to fame (cf. Schacht, in *Isl.*, 1926, 221 ff.).

As a theologian, too, Abū Ḥanīfa has exercised a considerable influence. He is the eponym of a popular tradition of dogmatic theology that lays particular stress on the ideas of the community of the Muslims, of its unifying principle, the *sunna*, of the majority of the faithful who follow the middle of the road and avoid extremes, and that relies on scriptural rather than on rational proofs. This tradition is represented by the *al-ʿĀlim waʾl-Mutaʿallim* (wrongly attributed to Abū Ḥanīfa) and by the *Fiḳh al-Absaṭ*, which both originated in the circle of Abū Ḥanīfa's disciples, and later by the works of Ḥanafī theologians, including the creed of al-Ṭaḥāwī (d. 321/933) and the catechism of Abu 'l-Layth al-Samarḳandī (d. 383/993) which has always been very popular in Malaya and Indonesia, in territory which in matters of religious law is solidly Shāfiʿī. This dogmatic tradition arose out of the popular background of the theological movement of the Murdjiʾa [*q.v.*], to which Abū Ḥanīfa himself belonged. The only authentic document by Abū Ḥanīfa which we possess is, in fact, his letter to ʿUthmān al-Battī, in which he defends his murdjiʾite

views in an urbane way. (It was printed, together with the *al-ʿĀlim wa'l-Mutaʿallim* and the *Fiḳh al-Absaṭ*, in Cairo 1368/1949). Another title that was ascribed to Abū Ḥanīfa is the *Fiḳh al-Akbar*. Wensinck has shown that the so-called *Fiḳh al-Akbar I* alone is relevant. This exists only embedded in a commentary wrongly attributed to al-Māturīdī (printed as no. 1 in *Madjmūʿat Shurūḥ al-Fiḳh al-Akbar*, Hyderabad 1321). The text itself consists of ten articles of faith outlining the orthodox position as opposed to the Khāridjīs, the Ḳadarīs, the Shīʿites, and the Djahmīs [see these articles]. Propositions directed against the Murdjiʾa as well as against the Muʿtazila [*q.v.*] are lacking. This means that the author was a Murdjiʾite who lived before the rise of the Muʿtazila. All but one of the theses of the *Fiḳh al-Akbar I* occur also in the *Fiḳh al-Absaṭ*, which consists of statements of Abū Ḥanīfa on questions of theology in answer to questions put to him by his disciple Abū Muṭīʿ al-Balkhī (d. 183/799). The contents of the *Fiḳh al-Akbar I* are therefore authentic opinions of Abū Ḥanīfa, though nothing goes to show that he actually composed the short text. But the so-called *Fiḳh al-Akbar II* and the *Waṣiyyat Abī Ḥanīfa* are not by Abū Ḥanīfa. The authenticity of a number of other short texts attributed to Abū Ḥanīfa has not yet been investigated and is at least doubtful; the *Waṣiyya* addressed to his disciple Yūsuf b. Khālid al-Sumtī al-Baṣrī represents Iranian courtiers' ethics and cannot be imagined as a work of a specialist in Islamic religious law.

The later enemies of Abū Ḥanīfa, in order to discredit him, taxed him not only with extravagant opinions derived from the principles of the Murdjiʾa, but with all kinds of heretical doctrines that he could not possibly have held. For example, they ascribed to him the doctrine that hell was not eternal—a doctrine of the Djahmīs, against whom Abū Ḥanīfa ranged himself explicitly in the *Fiḳh al-Akbar*, or the opinion that it was lawful to revolt against a government—a doctrine which goes straight against Abū Ḥanīfa's own tenets as expressed in the *al-ʿĀlim wa'l-Mutaʿallim*; he even was called a Murdjiʾite who believed in the sword, a *contradictio in adjecto*. (This is perhaps deduced from his attitude at the time of the revolt of al-Nafs al-Zakiyya).

Among his descendants, his son Ḥammād and his grandson Ismāʿīl, *ḳāḍī* in Baṣra and in Raḳḳa (d. 212/827), distinguished themselves in religious law. Among his more important pupils were: Zufar b. al-Hudhayl (d. 158/775); Dāwūd al-Ṭāʾī (d. 165/781-2); Abū Yūsuf [*q.v.*]; Abū Muṭīʿ al-Balkhī (see above); Al-Shaybānī [*q.v.*]; Asad b. ʿAmr (d. 190/806); Ḥasan b. Ziyād al-Luʾluʾī (d. 204/819-20). Among the traditionists, ʿAbd Allāh b. al- Mubārak (d. 181/797) esteemed him highly.

Under the growing pressure of traditions his followers, starting with Yūsuf, the son of Abū Yūsuf, collected the traditions from the Prophet that Abū Ḥanīfa had used in his legal reasoning. With the growth of spurious information, typical of a certain aspect of Muhammadan law, the number of these traditions grew, too, until Abu 'l-Muʾayyad Muḥammad b. Maḥmūd al-Khwārizmī (d. 655/1257) collected fifteen different versions into one work (*Djāmiʿ Masānīd Abī Ḥanīfa*, Hyderabad 1332). We are still able to distinguish and to compare the several versions, but none of them is an authentic work of Abū Ḥanīfa.

ABŪ ḤANĪFA AL-DĪNAWARĪ [see AL-DĪNAWARĪ].

ABU 'L-ḤASAN ʿALĪ, tenth ruler of the dynasty of the Marīnids of Fez, was 34 years old when, in 731/1331, he succeeded his father, Abū Saʿīd ʿUthmān. Of a strong constitution, he seems also to have possessed the energy and the wide outlook of a great prince. Numerous public buildings show his piety and his magnificence. His reign saw not only the zenith of the dynasty and its greatest territorial expansion, but also the beginning of its decline. In Spain, he took Gibraltar from the Christians (1333), but after a success at sea, he suffered a disastrous defeat at the Rio Salado, near Tarifa, which put an end to the holy war for the Marīnids (1340). In Barbary, the took up again the expansionist policy of the great Almohades; he besieged Tlemcen, rebuilt the town-camp of al-Manṣūra and, after three years, at last took the capital of the ʿAbd al-Wādids. In conquered Tlemcen, he received the congratulations of the Mamlūk sultan of Egypt and of the king of the Sudan. In support of his ally, the Ḥafṣid of Tunis, he marched on Ifrīḳiya; but, after a period of success, he was crushingly defeated near al-Ḳayrawān (Kairouan) by a coalition of the nomad Arabs (1348). He left Tunis by sea, his fleet sank; he managed to disembark at Algiers and tried to recover his kingdom, which his son Abū ʿInān had seized. He died in 752/1352. Abū ʿInān had him buried at Chella (Shālla [*q.v.*]).

(G. MARÇAIS)

ABŪ HĀSHIM ʿABD ALLĀH, Shīʿite leader, son of Muḥammad b. al-Ḥanafiyya, whom he succeeded as head of the smaller branch of the *shīʿa* [see KAYSĀNIYYA]. The only information we have about him concerns his death and his testament in favour of the ʿAbbāsids. Old historical and heresiographical sources relate that Abū Hāshim went, with a group of Shīʿites, to the court of Sulaymān b. ʿAbd al-Malik, who, afraid of his intelligence and authority, had him poisoned during his return journey. Feeling his approaching death, Abū Hāshim made a detour to Ḥumayma, not far from the residence of the ʿAbbāsids, where he died after bequeathing his rights to the Imamate to Muḥammad b. ʿAlī [*q.v.*]. This tradition has been generally taken as an invention of the philo-ʿAbbāsid party. Nevertheless, stripped of incongruences and superstructures, it may well contain a kernel of truth, especially as, in effect, immediately after the death of Abū

Hā**sh**im the ʿAbbāsids came out of the shadows and the ʿIrāḳī *shīʿa* went into action in obedience to their orders. [Cf. also ʿABBĀSIDS].

ABŪ HĀSHIM, sharīf of Mecca [see MAKKA].

ABŪ HĀSHIM, Muʿtazilī theologian [see AL-DJUBBĀʾĪ].

ABŪ ḤĀTIM YAʿḲŪB B. LABĪD (or LABĪB or ḤABĪB) AL-**MALZŪZĪ** AL-NADJīSĪ, Ibāḍī imām in the Maghrib. The orthodox Arab historians represent him as a mere leader of Berber rebels. His role, however, was more defined, as he was given by the Ibāḍīs of Tripolitania the title of *imām al-difāʿ* ("*imām* of defence"). According to the chronicle of Abū Zakariyyāʾ al-Wardjlānī, this revolt took place in Radjab 145/Sept.-Oct. 762, only one year after the death of Abu 'l-Khaṭṭāb. According to al-Shammākhī, *al-Siyar*, Cairo 1301, 134, Abū Ḥātim's government began in (1)54 A. H. It is, however, possible that this is a mistake for 145.

Little is known about the first years of Abū Ḥātim's imamate; he captured Tripoli, massacring many of his enemies, and made the city his capital. According to Abū Zakariyyāʾ he was in contact with the future founder of the imamate of Tāhart, ʿAbd al-Raḥmān b. Rustum, who was at this time entrenched in the mountain of Sūf Adjadj. In 154/771 Abū Ḥātim took part in a general rising of the Berbers against the ʿAbbāsid governor of Ifrīḳiya, ʿUmar b. Ḥafṣ, called Hazārmard. With his troops he took part in the siege of Ṭubna, in the Zāb. Another detachment of Abū Ḥātim's army had been for eight months investing al-Ḳayrawān, which was taken in the beginning of 155/771-2. Soon after the capture of al-Ḳayrawān, an ʿAbbāsid army from Egypt appeared on the eastern frontier of Tripolitania. Abū Ḥātim left Tripoli and defeated this army in a battle, which is said by the Ibāḍī chroniclers, probably erroneously, to have taken place near Maghmadās (Macomades Syrtis in antiquity, Marsā Zafran of the modern maps). Shortly after, however, another ʿAbbāsid army commanded by Yazīd b. Ḥātim al-Azdī advanced from Cairo towards Tripoli. Abū Ḥātim collected the Ibāḍi Berber tribes of Tripolitania: Nafūsa, Hawwāra, Ḍarīsa, etc. and went out to meet the enemy. The battle took place on 27 Rabīʿ I 155/7 March 772, to the west of a place called Djanbī (Abū Zakariyyāʾ) or Djandūba (al-Shammākhī), to the east of Djabal Nafūsa. The Ibāḍī army was cut to pieces, and Abū Ḥātim with 30,000 of his men are said to have been left on the battlefield.

(A. DE MOTYLINSKI—T. LEWICKI)

ABŪ ḤĀTIM AL-**RĀZĪ,** AḤMAD B. ḤAMDĀN, early Ismāʿīlī author and missionary (*dāʿī*) of Rayy. Born in the district of Bashāwūy near Rayy and well versed in Ḥadīth and Arabic poetry, he was chosen by Ghiyāth, *dāʿī* of Rayy, as his lieutenant, Ghiyāth was succeeded by Abū Djaʿfar, whom. however, Abū Ḥātim contrived to oust, thus becoming himself the leader of the *daʿwa* in Rayy. It is reported that he succeeded in converting Aḥmad b. ʿAlī, governor of Rayy (304-11/916-24). After the occupation of Rayy by the Sāmānid troops (311/923-4) Abū Ḥātim went to Daylam to make common cause with the ʿAlids there. His activities seem to have been at first supported by Mardāwidj [*q.v.*]. When Mardāwidj later turned against the Ismāʿīlīs, Abū Ḥātim fled to Mufliḥ (who became governor of Ādharbāydjān in 319/931). There he seems to have died, according to Ibn Ḥadjar, in 322/933-4, the date being, if not quite certain, approximately correct.

Of his works the most famous is the *al-Zīna*, a dictionary of theological terms, which is dominated by his philological interests, while Ismāʿīlī tenets are only discreetly alluded to. (For a short description of the book cf. A. H. al-Hamdani, *Actes XXIe Congrès des Orientalistes*, 291-4). In a lost book, *al-Iṣlāḥ*, he attacked the philosophical system of al-Nasafī [*q.v.*], as expounded in al-Nasafī's *al-Maḥṣūl*. When this controversy has been better explored and Abū Ḥātim's *Aʿlām al-Nubuwwa* fully published, it is hoped that more light will be shed on his own opinions. (P. Kraus has published an important section of *Aʿlām al-Nubuwwa*, recording the disputation between Abū Ḥātim and the philosopher Abū Bakr al-Rāzī).

Bibliography: Niẓām al-Mulk, *Siyāsat-Nāma*, Schefer, 186 (ed. Khalkhali, 157); Maḳrīzī, *Ittiʿāẓ* (Bunz), 130; *Fihrist*, 188, 189; Baghdādī, *al-Farḳ*, 267; Ibn Ḥadjar, *Lisān al-Mīzān*, i, 164; W. STERN)

ABŪ ḤĀTIM AL-**SIDJISTĀNĪ,** SAHL B. MUḤ. AL-DJUSHAMĪ, Arabic philologist of Baṣra, d. Radjab 255/869. His *nisba* is related to Sidjistān, a village in the district of Baṣra (Yāḳūt, iii, 44). He was a disciple of Abū Zayd al-Anṣārī, Abū ʿUbayda Maʿmar b. al-Muthannā, al-Aṣmaʿī, etc. Among his disciples are mentioned Ibn Durayd and al-Mubarrad. As a grammarian he was of no great reputation, his specific field being the works of the ancient poets, their vocabulary and prosody. Of his works the bibliographers mention thirty-seven titles (enumerated by A. Haffner, *Drei arabische Quellenwerke über die Aḍdād*, Beirut 1913, 160-2). The following works have come down to us: (1) *al-Aḍdād*, ed. by Haffner, *op. cit.* 163-209; (2) *al-Nakhl*, ed. by B. Lagumina in *Atti ... Lincei*, Scienze morali, Ser. 4, 8, 5-41; (3) *al-Tadhkīr wa l-Taʾnīth*, MS Taymūr, cf. *MMIA*, 1923, 340; (4) *al-Muʿammarūn*, ed. by I. Goldziher, *Abh. z. arab. Philologie*, ii, Leiden 1899.

Bibliography: *Fihrist*, 58-9; Azharī, *Tahdhīb al-Lugha*, ed. K. V. Zetterstéen in *MO*, 1920, 22; Zubaydī, *Ṭabaḳāt*, ed. F. Krenkow in *RSO*, 1919-20, 127, no. 35; Anbārī, *Nuzha*, 251-4; Yāḳūt, *al-Irshād*, iv, 258; Ibn Khallikān, no. 266; Yāfiʿī, *Mirʾāt al-Djanān*, Ḥaydarābād 1337-8, ii, 156; Ibn Ḥadjar, *Tahdhīb al-Tahdhīb*, Ḥaydarābād 1326, ii, 257; Suyūṭī, *Bughya*, 265; Brockelmann, I, 107, S I, 157. (B. LEWIN)

ABU 'L-HAWL (HŌL), "father of terror", the Arabic name for the sphinx of Djīza (Gizeh). Some authors simply call it *al-ṣanam*, "the idol", but the name Abu 'l-Hawl is already attested for the Fāṭimid

period. At that time the Coptic name *Belhīt* (*Belhīb*), or as al-Ḳuḍāʿī (quoted by al-Maḳrīzī) has it: *Belhūba* (*Belhawba*), was also still known. The Arabic Abu 'l-Hawl is most probably a popular etymology based on the Coptic designation; the initial *B* probably represents the Coptic article, which has been transformed in Arabic, as often happened, into Abū. In the old tradition the name Abu 'l-Hawl was applied only to the head of the lionbodied sphinx, as the body was covered by sand in the Middle Ages and was disengaged only in 1817. Modern Arabic authors use the word for "sphinx" in general, not only for the sphinx in the vicinity of the pyramids.

The Arabs, who had no knowledge of ancient Egyptian civilization, regarded with superstitious awe the head which reached high above the sand of the desert in majestic dimensions. It was considered to be a talisman preventing the encroachment of the sand on the valley of the Nile; the same magical effect was ascribed by others to the pyramids. Another, female, colossal statue—to judge by the descriptions probably a statue of Isis with the child Horus—which lay on the other shore of the Nile in Fusṭāṭ, was considered to be the beloved of Abu 'l-Hawl. She had her back to the river, as Abu 'l-Hawl had his to the desert, and was thought to be a talisman against the flooding of Fusṭāṭ by high water. This statue was destroyed in 711/1311 by treasure-hunters and its stones were used in the building of a mosque. According to another tradition Abu 'l-Hawl was the effigy of the legendary Us͟hmūm, to whom the Ṣābians used to sacrifice white cocks and incense.

The Arabic accounts have but little to contribute to the history of the monument. According to al-Maḳdisī the face was apparently no longer intact in 375/985, although later accounts praise its beauty and the harmony of its features, whose reddish colour is frequently mentioned. About 780/1378 a fanatical *s͟hayk͟h* caused further damage to the statue.

ABU 'L-HAYD͟JĀ AL-ḤAMDĀNĪ [see ḤAMDĀNIDS].

ABU ḤAYYĀN ATHĪR AL-DĪN MUḤAMMAD B. YŪSUF AL-**G͟HARNĀṬĪ**, the most distinguished Arab grammarian of the first half of the 14th century, was born in Granada, S͟hawwāl 654/Nov. 1256, and died in Cairo, Ṣafar 745/July 1344, where, after 10 years of productive study and travel throughout the entire Arab world, he had served as a professor of the Ḳurʾānic disciplines in the Ṭūlūnī mosque. This creative scholar is purported to have written 65 works, many of them multi-volumed, on Arabic and other languages (notably Turkish, Ethiopic, and Persian), Ḳurʾānic studies, traditions, jurisprudence, history, biography, and poetry.

Of the 15 extant works the most important are: *Manhad͟j al-Sālik*, a commentary of the *Alfiyya* of Ibn Mālik (ed. Sidney Glazer, New Haven 1947; includes, besides text, a complete bio-bibliography of Abū Ḥayyān and a historical sketch of native Arabic grammar); *al-Idrāk li-Lisān al-Atrāk*, the most ancient grammar of Turkish available (ed. A. Caferoglu, Istanbul 1931; cf. also *JA*, 1892, 326-35); *al-Baḥr al-Muḥīṭ*, an extensive commentary on the Ḳurʾān (cf. *Gesch. des Qor.*, iii, 243 and Brockelmann, S ii, 136).

Abū Ḥayyān's greatness as a grammarian was due not only to his mastery of the linguistic data and control of his predecessors' efforts (he knew Sībawayhi's *Kitāb* by heart, for he accorded it an authority in grammar equal to that of *ḥadīth* in religion), but to his remarkably modern approach to descriptive and comparative grammar (cf. S. Glazer, in *JAOS*, 1942), as shown both by his willingness to illuminate an Arabic grammatical concept through quotations from other languages and by following such operational principles as "One must base rules of Arabic on frequency of occurrence" and "Analogous formations that contradict genuine data found in good speech are not to be permitted". This unusual spirit of objectivity and respect for facts have made of the *Manhad͟j al-Sālik* a work of great distinction. Besides elucidating and correcting Ibn Mālik's brilliant if occasionally erroneous compression of the totality of Arabic grammar into 1000 verses of poetry, the *Manhad͟j* presents a miniature bibliography of grammatical science and a panorama of thought on some of its most difficult problems on which the opinions of hundreds of grammarians, Ḳurʾān readers, and lexicographers are cited. It was consigned to obscurity by the more elementary works on the same subject written by his pupils Ibn ʿAḳīl and Ibn His͟hām.

Bibliography: Maḳḳarī, *Analectes*, i, 823-62; Kutubī, *Fawāt*, ii, 282, 352-6; Ibn Ḥad͟jar al-ʿAsḳalānī, *al-Durar al-Kāmina*, Hyderabad 1350/1931, iv, 303-8; Suyūṭī, *Bug͟hyat al-Wuʿāt*, 121-2; Zarkas͟hī, *Taʾrīk͟h al-Dawlatayn*, Tunis 1289/1872, 63; Brockelmann, II, 109, S II, 136; I. Goldziher, *Die Ẓâhiriten*, Leipzig 1884, 188 ff.

(S. GLAZER)

ABŪ ḤAYYĀN AL-TAWḤĪDĪ, ʿALĪ B. MUḤ. B. AL-ʿABBĀS (probably called al-Tawḥīdī after the sort of dates called *tawḥīd*), man of letters and philosopher of the 4th/10th century. The place of his birth is given either as Nīs͟hāpūr, S͟hīrāz, Wāsiṭ or Bag͟hdād; its date must be placed between 310-20/922-32. He studied in Bag͟hdād, grammar under al-Sīrāfī and al-Rummānī, S͟hāfiʿite law under Abū Ḥāmid al-Marw al-Rūd͟hī and Abū Bakr al-S͟hās͟hī; and also frequented ṣūfī masters. He supported himself by acting as a professional scribe. It is said, in a somewhat doubtful passage (see al-Subkī, al-Ṣafadī, al-D͟hahabī, Ibn Ḥad͟jar) that he was, owing to heretical opinions, persecuted by the vizier al-Muhallabī (d. 352/963). He was in Mecca in 353/964 (*al-Imtāʿ*, ii, 79; *Baṣāʾir*, MS Cambridge, fol. 167v) and in Rayy in 358/971 (Yāḳūt, *Irs͟hād*, ii, 292; at the court of Abu 'l-Faḍl b. al-ʿAmīd?, d. 360/970). From his *al-Muḳābasāt*, 156, we know that in 361/971 he attended lectures of the philosopher Yaḥyā b. ʿAdī in Bag͟hdad. He tried his luck with the vizier Abu 'l-Fatḥ b. al-ʿAmīd in Rayy (d. 366/976), to whom he addressed an elaborate epistle; to judge from his hostile sentiments towards the vizier, he did not achieve much. From 367/977 he was employed by Ibn ʿAbbād as an amanuensis. In this case, too, he was anything but a success, owing, no doubt, mainly to his own difficult character and sense of superiority (he for example refused to "waste his time" in copying the bulky collection of his master's epistles), and was finally given his dismissal. He felt himself badly treated and avenged himself by a pamphlet containing brilliant caricatures of both Abu 'l-Fatḥ b. al-ʿAmīd and Ibn ʿAbbād (*D͟hamm*—or *Mat͟hālib* or *Ak͟hlāḳ—al-Wazīrayn*; considerable extracts in Yāḳūt, i, 281, ii, 44 ff., 282 ff., 317 ff.; v, 359 ff., 392 ff., 406 f.).

It was in the period between 350-65/961-75 that he composed his anthology of *adab*, entitled *Baṣāʾir al-Ḳudamāʾ*, also called *al-Baṣāʾir wa'l-Dhakhāʾir*, etc.) in ten volumes (vols. i-v in Fātiḥ (Istanbul), 3295-9; i-ii in Cambridge 134, in Djār Allāh (Istanbul) and in Manchester 767; unidentified volumes in the ʿUmūmiyya (Istanbul, Rāmpūr i, 330, Ambrosiana (?)). It was probably in Rayy that he addressed to Miskawayh the questions which the latter answered in his *al-Hawāmil wa'l-Shawāmil*. After his return to Baghdād, at the end of 370/980, he was recommended by Zayd b. Rifāʿa and Abu 'l-Wafāʾ al-Būzdjānī, the mathematician, to Ibn Saʿdān (also called, after his function as an inspector of the army, al-ʿĀriḍ—cf. al-Rūdhrawarī, *Dhayl Tadjārib al-Umam*, 9; hence the confusion in Ibn al-Ḳifṭī and in modern authors). For him he started his book on Friendship, which was finished, however, only thirty years later. He frequented regularly at this epoch (lectures attended in 371/981, *al-Muḳābasāt*, 246, 286) the man who exercised the greatest influence on him, namely Abū Sulaymān al-Manṭiḳī [*q.v.*], who was his main oracle, especially on philosophical matters, but also on every other conceivable subject. Ibn Saʿdān was appointed by Ṣamṣām al-Dawla as his vizier in 373/983. Abū Ḥayyān remained an assiduous courtier of the vizier, attending his evening receptions where he had to answer the vizier's questions on the most varied topics of philology, literature, philosophy, court- and literary gossip. (He very often reproduces the views of Abū Sulaymān—who lived in retirement and did not attend the court—on the matter in question). At the request of Abu 'l-Wafāʾ the mathematician, he compiled for his perusal a record of thirty-seven of these sessions, under the title of *al-Imtāʿ wa'l-Muʾānasa* (ed. A. Amīn and A. al-Zayn, Cairo 1939-44). In 375/985-6 Ibn Saʿdān fell and was executed, and Abū Ḥayyān apparently remained without a patron. (He wrote for Abu 'l-Ḳāsim al-Mudlidjī, vizier in Shīrāz for Ṣamṣām al-Dawla in 382-3/992-3, *al-Muḥaḍarāt wa'l-Munāẓarāt*; quotations in Yāḳūt, i, 15, iii, 87, v, 382, 405, vi, 466). Of the later period of his life we know very little; he evidently lived in poverty. It was in these later years that he compiled his *al-Muḳābasāt* (Bombay 1306, Cairo 1929—both very faulty editions), a collection of 106 conversations on various philosophical subjects. The chief speaker is again Abū Sulaymān, but there appear all the other members of the Baghdād philosophical circle. *Al-Muḳābasāt* and *al-Imtāʿ wa'l-Muʾānasa* are mines of information about contemporary intellectual life and they should prove invaluable for a reconstruction of the doctrines of the Baghdād philosophers.—Towards the end of his life Abū Ḥayyān burned his books, alleging as reason the neglect in which he had to live for twenty years. In the preface to his treatise on Friendship (*al-Ṣadāḳa wa 'l-Ṣadīḳ*, printed together with a short treatise on the use of science, Istanbul 1301), which he finished in 400/1009, he makes similar complaints. A guide book to the cemetery of Shīrāz (*Shadd al-Izār ʿan Ḥaṭṭ al-Awzār*, 17) claims that the tomb of Abū Ḥayyān al-Tawḥīdī (whom it calls, however, Aḥmad b. ʿAbbās) was to be seen in Shīrāz and gives as the date of his death 414/1023.

Abū Ḥayyān was a master of Arabic style. He was a great admirer of al-Djāḥiẓ, in whose praise he wrote a special treatise, *Taḳrīẓ al-Djāḥiẓ* (quoted by Yāḳūt, i, 124, iii, 86, vi, 58, 69; Ibn Abi 'l-Ḥadīd, *Sharḥ Nahdj al-Balāgha*, iii, 282 f.), and his wish to imitate the style of the great prose-writer is evident His talent is most apparent in the passages, frequent in his books, where he characterizes people. As for his beliefs, he does not seem to have had any original system. He was obviously impressed by Abū Sulaymān's Neo-platonic system, which the latter shared with most of the other contemporary Baghdād philosophers. Like the other members of the circle, Abū Ḥayyān also showed an interest in Ṣūfism, but not enough to make him a regular Ṣūfī. His *al-Ishārāt al-Ilāhiyya* (ed. ʿA. Badawī, Cairo 1951) "consists of prayers and homilies and only occasional references to Ṣūfī technicalities". "Abū Ḥayyān was coupled with Ibn al-Rāwandī and al-Maʿarrī as one of the *zindīḳs* of Islam (*JRAS*, 1905, 80) but his extant works scarcely justify this assertion" (D. S. Margoliouth, in *EI*[1], s.v.).

Bibliography: Yāḳūt, *Irshād*, v, 380 ff.; Ibn Khallikān, no. 707; Subkī, iv, 2; Ṣafadī, *Wāfī*, in *JRAS*, 1905, 80 ff.; Dhahabī, *Mīzān*, iii, 353; Ibn Ḥadjar, *Lisān*, iv, 369; Suyūṭī, *Bughya*, 348; Brockelmann, i, 283, S i, 435; Muḥammad b. ʿAbd al-Wahhāb Ḳazwīnī, *Sharḥ-i Ḥāl-i Abū Sulaymān Manṭiḳī Sidjistānī*, Chalon-sur-Saone, 1933, 32 ff. (also in *Bist Maḳāla*, Tehran 1935); ʿAbd al-Razzāḳ Muhyi 'l-Dīn, *Abū Ḥayyān al-Tawḥīdī* (in Arabic), Cairo 1949; I. Keilani, *Abū Ḥayyān al-Tawḥīdī* (in French), Beyrouth 1950.—Abū Ḥayyān's little treatise on writing, ed. F. Rosenthal, *Ars Islamica*, 1948, 1 ff.; three epistles (*Risālat al-Imāma*—quoted by Ibn al-ʿArabī, *Musāmarāt*, ii, 77, Ibn Abi 'l-Ḥadīd, *Sharḥ Nahdj al-Balāgha*, ii, 592 ff., etc., and containing a message purporting to be addressed by Abū Bakr to ʿAlī, but which, it has been suspected, was invented by Abū Ḥayyān himself; *R. al-Ḥayāt*, from a philosophical point of view; and the above mentioned treatise on writing) have been edited by I. Keilani, *Thalāth Rasāʾil*, Damascus 1952. An extract from *al-Zulfa*, al-Rūdhrawarī, 75. (S. M. Stern)

ABU 'L-HUDHAYL AL-ʿALLĀF, MUḤAMMAD B. AL-HUDHAYL B. ʿUBAYD ALLĀH B. MAKḤŪL, with the *nisba* of AL-ʿABDĪ (being a *mawlā* of ʿAbd al-Ḳays), the first speculative theologian of the Muʿtazila. He was born in Baṣra, where he lived in the quarter of the *ʿallāfūn*, or foragers (whence his surname); the date of his birth is uncertain: 135/752-3 or 134/751-2 or even 131/748-9. In 203/818-9 he settled in Baghdād and died, at a great age, in 226/840-1, or according to another tradition, in the reign of al-Wāthiḳ (227-32/842-7), or, on the authority of others, in 235/849-50, under al-Mutawakkil. He was indirectly a disciple of Wāṣil b. ʿAṭāʾ, through the intermediary of one of Wāṣil's companions, ʿUthmān al-Ṭawīl. Like Wāṣil, he was lettered; his profound knowledge of poetry was especially celebrated. Some *ḥadīths* also are quoted under his name.

The theology which he inherited from the school of Wāṣil was still rudimentary. Essentially polemical, it opposed—in a rather unsystematic fashion, it seems—the anthropomorphism of popular Islam and of the traditionists, the doctrine of determinism favoured for political reasons by the Umayyads, and the divinization of ʿAlī preached by the extreme Shīʿites. While continuing this polemic, Abu 'l-Hudhayl was the first to engage in the speculative struggles of the epoch, a task for which he was exceptionally well equipped by his philosophical mind, his sagacity and his eloquence. He became the apologist of Islam against other religions and against the great currents of thought of the preceding epoch:

the dualists, represented by the Zoroastrians, the Manichaeans and other Gnostics; the philosophers of Greek inspiration, the *dahriyya*, mainly represented by the champions of the natural sciences; finally against the increasingly numerous Muslims who were influenced by these foreign ideas: crypto-Manichaean poets like Ṣāliḥ b. ʿAbd al-Ḳuddūs, the theologians of the "modern" type who had adopted certain gnostic and philosophical doctrines, etc. It seems that it was only at a mature age that he made himself acquainted with philosophy. On the occasion of his pilgrimage (the date of which is unknown) he met in Mecca the S͟hīʿite theologian His͟hām b. al-Ḥakam and disputed with him concerning his anthropomorphist doctrines, which show a gnostic influence; and it was only then that he began to study the books of the *dahriyya*. Later historians observe certain similarities between his doctrine of the divine attributes and the philosophy of Pseudo-Empedocles, forged by the Neo-Platonists and natural scientists of late antiquity; in effect his philosophical sources must have been of such a kind, which are represented in general by medieval Aristotelianism. These philosophers attracted, as well as repelled, him; while combatting them, he adopted their methods and their manner of looking at problems. Naive as a thinker, and having no scholastic tradition, he approached speculative problems with a daring which did not even recoil from the absurd. Hence all the prematurity and the lack of balance which characterize his theology, but also the freshness of his attempts. He was the first to set many of the fundamental problems at which the whole of the later Muʿtazila was to labour.

The unity, the spirituality and the transcendence of God are carried in the theology of Abu 'l-Hud͟hayl to the highest degree of abstraction. God is one; he does not resemble his creatures in any respect; he is not a body (against His͟hām b. al-Ḥakam); has no figure (*hayʾa*), form (*ṣūra*) or limit. God is knowing with a knowledge, is powerful with a power, alive with a life, eternal with an eternality, seeing with a faculty of sight, etc. (against the S͟hīʿites who asserted that God *is* knowledge, etc.), but this knowledge, power, etc. are identical with himself (against popular theology which regarded the divine attributes as entities added to essence): provisional formulas of compromise which did not satisfy later generations. God is omnipresent in the sense that he directs everything and his direction is exercised in every place. God is invisible in the other world; the believers will see him with their hearts. The knowledge of God is unlimited, as to what concerns his knowledge of himself; as for his knowledge of the world, it is circumscribed by the limits of his creation, which forms a limited totality (if it were not limited, it would not be totality). The same applies to the divine power. Abu 'l-Hud͟hayl strove to reconcile the Ḳurʾānic doctrine of creation *ex nihilo* with the Aristotelian cosmology, according to which the world, set in motion by God, is eternal, movement being co-eternal with the prime mover himself. While accepting movement as the principle of the universal process, he declared it to be created in the Ḳurʾānic sense; in consequence, movement also will reach its end and will cease. This end is placed by him in the other world, after the last day: movement having ceased, paradise and hell will come to a standstill and their inhabitants will be fixed in a state of immobility, the blessed enjoying for eternity the highest pleasures and the damned enduring the most cruel torments. This bizarre doctrine, which, according to tradition, he himself revoked, is unanimously rejected by all the Muslim theologians, Muʿtazilites or not; nor have its grave consequences for the doctrine of God's omniscience and omnipotence escaped them. In regard to theodicy, Abu 'l-Hud͟hayl taught that God has the power to do evil and injustice, but he does not do it, because of his goodness and wisdom. God admits the evil actions of man, but he is not their author. Man has the power to commit them, he is responsible for them, and responsible even for the involuntary consequences resulting from his actions (theory of *tawallud*, first developed by Abu 'l-Hud͟hayl). The responsible being is man in his entirety, his *rūḥ* together with his visible body. It was Abu 'l-Hud͟hayl who introduced into Muʿtazilite speculation the concept of the accidents (*aʿrāḍ*) of bodies, and that of the atom, which he called *d͟jawhar*. These concepts, which originally had a purely physical relevance, were made by him to serve as the basis for theology proper, cosmology, anthropology and ethics. This is his most original innovation, as well as the most heavy with consequences; it was this which gave to Muʿtazili theology its mechanical character. Life, soul, spirit, the five senses, are accidents and therefore not enduring; even spirit (*rūḥ*) will not endure. Human actions can be divided into two phases, both of them movements: the first is the approach ("I shall do"), the second the accomplished action ("I have done"). Man having free will, the first movement can be suspended in the second phase, so that the action remains unaccomplished; it is only the accomplished action which counts. Divine activity is interpreted in the light of the doctrine of accidents: the whole process of the world consists in an incessant creation of accidents, which descend into the bodies. Some accidents, however, are not be found in a place or in a body; e.g. time and divine will (*irāda*). The latter is identical with the eternal creating word *kun*; it is distinct from its object (*al-murād*) and also from the divine order (*amr*), which man can either obey or disobey (while the effect of the creating word *kun* is absolute: *kun fa-yakūnu*, Ḳurʾān ii, 111, etc.). Those who are not acquainted with the Ḳurʾānic revelation, but have nevertheless accomplished laudable acts prescribed by the Ḳurʾān, have obeyed God without having the intention to do so (theory of *ṭāʿa la yurādu'llāhu bihā*, otherwise attributed to the K͟hārid͟jites). The Ḳurʾān is an accident created by God; being written, recited or committed to memory, it is at the same time in various places.—In the question of the *manzila bayn al-manzilatayn* Abu 'l-Hud͟hayl took up a position which was in conformity with the political situation of his time: he did not reject any of the combatants round ʿAlī, yet preferred ʿAlī to ʿUt͟hmān. He enjoyed the favour of al-Maʾmun, who often invited him to the court for theological disputes.—All the writings of Abu 'l-Hud͟hayl are lost.

During his long life, Abu 'l-Hud͟hayl had an enormous influence on the development of theology and he collected round him a large number of disciples of different generations. The best known amongst them is al-Naẓẓām, though he quarrelled with his master because of his destructive theories concerning the atom; Abu 'l-Hud͟hayl condemned him and composed several treatises against him. Among his disciples are named Yaḥyā b. Bis͟hr al-Arrad͟jānī, al-S͟haḥḥām, and others. His school continued to exist for a long time; even al-D͟jubbāʾī still avowed his indebtedness to Abu 'l-Hud͟hayl's

theology, in spite of the numerous points on which he differed from him.—Unfortunately, the theology of Abu 'l-Hudhayl was exposed to the malevolence of a renegade from Muʿtazilism, the famous Ibn al-Rāwandī, who, in his *Faḍīḥat al-Muʿtazila* grossly misrepresented it, by submitting it to an often too cheap criticism; this caricature has been faithfully reproduced by al-Baghdādī in his *Farḳ* and often recurs in the résumés of the Muʿtazila. It is only with the help of *al-Intiṣār*, by al-Khayyāṭ, the severe critic of Ibn al-Rāwandi, that we are able to unmask the latter's procedure and gain an exact idea of the true motives of Abu 'l-Hudhayl's speculation. Al-Ashʿarī, in his *Maḳālāt*, reproduced his theses with admirable impartiality, after the school tradition of the Muʿtazila. Al-Shahrastānī based his exposé on the later Muʿtazilite tradition, especially, it seems, on al-Kaʿbī.

Bibliography: al-Khaṭīb al-Baghdādī, *Ta'rīkh Baghdād*, iii, 366-70; Masʿūdī, *Murūdj*, index; Ibn Khallikān, no. 617; Ibn al-Murtaḍā (T. W. Arnold, *The Muʿtazila*), index; Ibn Ḳutayba, *Ta'wil Mukhtalaf al-Ḥadīth*, Cairo 1326, 53-5; Khayyāṭ, *Intiṣār* (Nyberg), index; Ashʿarī, *Maḳālāt* (Ritter), index; Baghdādī, *Farḳ*, index; Ibn Ḥazm, *Fiṣal*, ii, 193, 487, iv, 83 ff., 192 ff., etc.; Muṭahhar al-Maḳdisī, *al-Bad' wa 'l-Ta'rikh* (Huart), index of transl.; Shahrastānī, 34-7; Ṣāʿid al-Andalusī, *Ṭabaḳāt al-Umam* (Cheikho), 21 f.; Maḳrīzī, *Khiṭaṭ*, ii, 346; S. Nādir, *Falsafat al-Muʿtazila*, Alexandria 1950-1. (H. S. Nyberg)

ABŪ HURAYRA al-Dawsī al-Yamānī, Companion of Muḥammad. His name ʿAbd Shams was changed to ʿAbd Allāh or ʿAbd al-Raḥmān when he became a Muslim, but numerous other names have also been mentioned. He was called Abū Hurayra because, when he herded his people's goats, he kept a kitten to play with. When he came to Medina the Prophet was on the expedition to Khaybar (7/629). Accepting Islam, he associated closely with Muḥammad on whose charity he depended, and was one of the poor men called *ahl al-ṣuffa* [*q.v.*]. He was devoted to his mother whom he persuaded to become a Muslim. ʿUmar appointed him governor of Baḥrayn, but deposed him and confiscated a large sum of money in his possession. When ʿUmar later invited him to resume the post, he refused. Marwān is said to have appointed Abū Hurayra his deputy when he was absent from Medina, but another version says Muʿāwiya gave him this appointment. Abū Hurayra had a reputation both for his piety and his fondness for jesting. He is said to have died in 57, 58, or 59; but if it is true that he prayed at ʿĀ'isha's funeral in 58, the date must be 58/678, or 59. He was 78 years old.

Although he became a Muslim less than four years before Muḥammad's death, Abū Hurayra is noted as a prolific narrator of traditions from the Prophet, the number of which is estimated at 3500. Aḥmad b. Ḥanbal's *Musnad* contains 213 pages of his traditions (ii, 228-541). 800 or more men are credited with transmitting traditions from him. There is a story, given in slightly different forms, in which he explains why he transmitted more traditions than others. He says that while others were occupied with their business, he stayed with Muḥammad and so heard more than they. When he complained that he forgot what he heard, Muḥammad told him to spread out his cloak while he was speaking and draw it round himself when he had finished. Abū Hurayra did so, and thereafter forgot nothing he heard the Prophet say. He had to defend himself against suspicions regarding his traditions; but whether this is genuine, or has merely been invented for the purpose of overcoming the suspicions of people at a later period, it is impossible to prove. The traditions attributed to him contain much material which cannot be genuine; but Sprenger is scarcely justified in calling him a pious humbug of the first water, as the traditions traced to him are not necessarily his. He may be little more than a convenient authority to whom inventions of a later period have been attributed. Abū Hurayra presumably did tell many stories about Muḥammad, but the authentic ones may be only a small amount of the huge number of traditions traced to him. Many of his traditions appear in the *Ṣaḥīḥs* of al-Bukhārī and Muslim.

Bibliography: Ibn Ḳutayba, *Maʿārif*, 141 f.; *ʿUyūn*, i, 53; Dawlābī, *al-Kunā wa 'l-Asmā'*, Hydarabad 1322-3, i, 61; Ibn ʿAbd al-Barr, *Istīʿāb*, Hydarabad 1336, 697 f.; Ibn al-Athīr, *Usd*, v, 315-7; Nawawī, *Tahdhīb al-Asmā'*, ed. Wüstenfeld, 760 f.; Dhahabī, *Tadhkirat al-Ḥuffāẓ*, i, 31-5; Ibn Ḥadjar, *Iṣāba*, Cairo 1358/1939, iv, 200-8; *Tahdhīb al-Tahdhīb*, xii, 262-7; Wensinck, *Handbook*, 7 f.; A. Sprenger, *Das Leben und die Lehre des Muhammad*, iii, p. lxxxiii-lxxxxv; D. S. Margoliouth, *Mohammed*, 352 f.; *ZDMG*, 1895, 487 f. The *ṣaḥīfa* attributed to Hammām b. Munabbih, containing traditions from his teacher Abū Hurayra, was published by M. Ḥamīdullāh, *MMIA*, 1953, 96 ff. (J. Robson)

ABŪ ḤUSAYN (Banū Abī Ḥusayn) Sicilian dynasty [see kalbids].

ABŪ ʿINĀN FĀRIS, eleventh sovereign of the Marīnid [*q.v.*] dynasty of Fez, born in 729/1329, had himself proclaimed at Tlemcen in 749/1349, when his father, Abu 'l-Ḥasan ʿAlī, after being defeated at Ḳayrawān, was returning as a fugitive to Morocco. Ibn al-Aḥmar describes him as very tall, with a fair skin (his mother was a Christian slave), and says that he had a long beard. A fearless horseman, he was also widely versed in literature and the law. Like his father, he was a prince with a passion for building, and completed several of the foundations that his father had begun, in particular medersas at Fez, Meknes, and Algiers. The Bū ʿInāniyya at Fez is the most monumental of these Maghribī colleges.

Having gained the throne by usurpation, Abū ʿInān went on to assume the caliphian title *amīr al-mu'minīn*, which his father had not borne. He made it his aim to rebuild his father's empire in Barbary and fairly quickly succeeded in doing so, but only for a few years. He seized Tlemcen from the ʿAbd al-Wādids (1352); and, the same year, took possession of Bougie. In 757/1357 he occupied Constantine and had himself proclaimed at Tunis; but, abandoned by his Arab auxiliaries, the Dawāwīda of the Constantine region, he was compelled to return to Fez. Not long afterwards he fell ill (759/1358) and was strangled by his vizier al-Fūdūdī, who had the son of his victim proclaimed, and thus inaugurated the series of palace revolutions and the long decadence of the Marīnids.

ABŪ ʿĪSĀ AL-IṢFAHĀNĪ, Jewish pretender to the title of the Messiah under the Umayyad ʿAbd al-Malik b. Marwān, or according to others under Marwān II. The most noteworthy of his doctrines was his acknowledgment of the validity—for the non-Jews—of Islam and Christianity. He was killed in a battle against the Muslims; the sect, called ʿĪsawiyya, survived into the 10th century A. D.

Bibliography: Bīrūnī, *al-Āthār al-Bāḳiya*, 15; Ibn Ḥazm, *Fiṣal*, i, 114-5; Shahrastānī, 168; Maḳrīzī, *Khiṭaṭ*, ii, 478-9 (= S. de Sacy, *Chrest. arabe*², i, 116); H. Grätz, *Gesch. d. jüd. Volkes*⁴, v, 173 and note 17 (by A. Harkavy); *Encyclopaedia Judaica*, s.v. Abu Issa. (S. M. STERN)

ABŪ ʿĪSĀ MUḤAMMAD B. HĀRŪN **AL-WARRĀḲ,** a Muʿtazilite at first, became one of the arch-heretics in Islām; his friend and pupil, Ibn al-Rāwandī [*q.v.*], went through the same metamorphosis. The date of Abū ʿĪsā's death is given by al-Masʿūdī (vii, 236) as 247/861; if it is true, however, that Ibn al-Rāwandī died about the end of the 3rd/9th century (see Kraus, 379), this date would seem to be too early. The issue would be decided if one could be sure that the paragraph in al-Shahrastānī, 198, where the date 271 occurs, still continues the quotation from Abū ʿĪsā.

Abū ʿĪsā was accused of Manichean sympathies. Al-Murtaḍā's defence, *al-Shāfī*, 13, to the effect that his books *al-Mashriḳī* and *al-Nawḥ ʿalā al-Bahā'im* were spuriously attributed to him by the Manicheans, deserves, of course, no credit. On the other hand it is not very likely that he was a formal adherent of Manicheism; most probably he was an "independent thinker" (L. Massignon). Interesting quotations, showing his method in criticising current religious beliefs, and taken from his *al-Gharīb al-Mashriḳī*—such is the full title also in *Fihrist*, 177, and al-Ṭūsī, 99; a "stranger from the East" was evidently introduced as the exponent of heterodox views—are to be found in Abū Ḥayyān al-Tawḥīdī, *al-Imtāʿ wa 'l-Mu'ānasa*, iii, 192.

His main work was a book on religions and sects, *al-Maḳālāt*, which served as an important source for writers such as al-Ashʿarī (*Maḳālāt al-Islāmiyyīn*, 33, 34—Shīʿa; cf. also index, 37), al-Masʿūdī (*Murūdj*, v, 473 ff.—Zaydiyya), al-Baghdādī (*Farḳ*, 49, 51), al-Bīrūnī (*al-Āthār al-Bāḳiya*, 277, 284—Jewish sects, Samaritans), Abu 'l-Maʿālī (*Bayān al-Adyān* (Eghbal), 10—religion of the pagan Arabs; as the editor points out, 54 ff., similar passages are to be found in Ibn Abi 'l-Ḥadīd, *Sharḥ Nahdj al-Balāgha*, i, 39, iv, 437; Ibn Abi 'l-Ḥadīd quotes Abū ʿĪsā in other passages also), al-Shahrastānī, (141, 143—Shīʿa; 192—Mazdak; 188—Mānī). Abū ʿĪsā's Muʿtazilī adversaries insinuated that he was too eager to reproduce in his book the arguments of the Manicheans.

Abū ʿĪsā wrote books favourable to the Shīʿa (*al-Imāma*; *al-Saḳīfa*, quoted by al-Mufīd, cf. Eghbal, *Khāndān-i Nawbakhtī*, 86)—hence the partiality of Shīʿite authors for him.

His critical examination of the three branches of Christianity (Orthodox, Jacobite, Nestorian) survives in the refutation by Yaḥyā b. ʿAdī (cf. A. Perier, *Yahya ben ʿAdi*, 67, 150 ff.; L. Massignon, *Textes inédits concernant l'hist. de la mystique*, 182-5; A. Abel, *Abû ʿÎsâ al-Warrâq*, Brussel 1949).

ABŪ ISḤĀḲ AL-ILBĪRĪ, IBRĀHĪM B. MASʿŪD B. SAʿĪD AL-TUDJĪBĪ, Andalusian jurist and poet, native, as shown by his *nisba*, of Ilbīra (Elvira), which in the century of the *mulūk al-ṭawā'if* lost its position to the neighbouring Granada. Little is known of his life. Born in the last years of the 4th/10th century, he was, during the reign of the Zīrid king of Granada, Bādīs b. Ḥabūs, secretary of the *ḳāḍi* ʿAlī b. Muḥ. b. Tawba and at the same time was occupied in teaching. In his poems he protusted against the increasing influence of the Jews in the kingdom of Granada and especially against the functions, too important in his eyes, entrested to the famous vizier Samuel ha-Nagid Ibn Nagrēlla, and to his son Joseph, who succeeded him in this office in 448/1056-7. It was no doubt at the latter's instigation that Bādīs assigned to the *faḳih* a forced residence in the *rābiṭa* of al-ʿUḳāb, in the Sierra de Elvira. Abū Isḥāḳ, however, did not give way, and the celebrated political poem, to which he owes most of his reputation, was, if not the determining cause, at least one of the factors which brought about the well-known pogrom in Granada, on 9 Ṣafar 459/30 Dec. 1066, during which Joseph b. Nagrēlla and 3000 of his correligionists were murdered. Abū Isḥāḳ al-Ilbīrī died shortly afterwards, at the end of the same year of 459/1067.

In addition to his fulminating poem, to which attention was long ago drawn by Dozy, Abū Isḥāḳ left a collection of poems, which are in the majority of ascetic inspiration and which he apparently composed at an advanced age. This *dīwān*, of which a MS has been preserved in the Escorial (no. 404), has been published by the author of this article, with an introduction. It is very characteristic of the limited poetical faculties of an Andalusian *faḳīh* of medium culture, who rises to eloquence only when expressing his intolerant fanaticism.

Bibliography: Ḍabbī, no. 520; Ibn al-Abbār, *Takmila* (Algiers), no. 352; Ibn al-Khaṭīb, *Iḥāṭa*, article reproduced by R. Dozy, *Rech.*³, i, 282-94 and App. xxvi (*Poème d'Abou Ishak d'Elvira contre les Juifs de Grenade*); idem, *Hist. Mus. Esp.*², iii, 70-3; E. García Gómez, *Un alfaquí español: Abû Isḥâq de Elvira*, Madrid-Granada, 1944; Brockelmann, S I, 479-80. (E. GARCÍA GÓMEZ)

ABŪ ISḤĀḲ [see AL-ṢĀBIʾ and AL-SHĪRĀZĪ].

ABŪ KABĪR AL-HUDHALĪ, an early Arab poet, after Abū Dhu'ayb the second greatest poet of the tribe of Hudhayl. He belonged to the Banū Saʿd, or, according to some, to the Banu Djurayb. His real name was ʿĀmir (or ʿUwaymir) b. al-Ḥulays (also without the article), according to other statements, ʿĀmir b. Djamra, but he was always known by his *kunya*. According to some commentators (cf. e.g. al-Tibrīzī on the *Ḥamāsa*), Abū Kabīr married the mother of the famous Ta'abbaṭa Sharr^an and as the stepson was displeased at this union Abū Kabīr is said to have been advised by the mother of Ta'abbaṭa Sharr^an to kill him at the first opportunity, but failed on account of the latter's bravery. This

story can hardly be true but is rather an attempt to explain the well known lines of Abū Kabīr in the *Ḥamāsa* in which he describes a companion in arms, an ideal hero in terms of the Arab conception. Moreover, in some versions the roles are interchanged (cf. Ibn Ḳutayba, *al-Shiʿr*, 422): Taʾabbaṭa Sharran married Abū Kabīr's mother and so on. The story that represents Taʾabbaṭa Sharran as the constant companion of our poet deserves equally little credence because his tribe was continually at feud with the Fahmīs. He flourished in the second half of the 6th and the beginning of the 7th century, so that biographers like ʿIzz al-Dīn b. al-Athīr (*Usd al-Ghāba*, Cairo 1280, vi, 272) and Ibn Hadjar al-ʿAsḳalānī (*al-Iṣāba*, Cairo 1325, vii, 162) number him among the *ṣaḥāba*.

From the content of his poems he is, however, decidedly to be classed as a *djāhilī*. His *dīwān*, edited and translated for the first time by F. Bajraktarević, consists of only four long *ḳaṣīdas* and 19 short fragments mostly wrongly attributed to him, but is in many ways very interesting and valuable; all the *ḳaṣīdas* are composed in the same metre (*kāmil*) and begin in the same way, as was pointed out particularly by Ibn Ḳutayba (*al-Shiʿr*, 420). What is specially striking also in his poems is the complete absence of any description of the camel. Arab critics frequently rank Abū Kabīr very highly as a poet. Al-Maʿarrī, it is true, accuses him of narrowness of range but singles out some of his verses as particularly fine, while ʿAwf b. Muḥallim (in Yāḳūt, *Irshād*, vi, 97) goes so far as to call him the greatest poet of Hudhayl.

Bibliography: *Dīwān al-Hudhaliyyīn*, Cairo 1948, ii, 88-115; *Ḥamāsa* (Freytag), i, 36 ff.; Ibn Ḳutayba, *Shiʿr*, 420-5; Abu 'l-ʿAlāʾ al-Maʿarrī, *Risālat al-Ghufrān*, Cairo 1321, 100-1 (Engl. transl. by Nicholson, in *JRAS*, 1900, 708-9); Suyūṭī, *Sharḥ Shawāhid al-Mughnī*, Cairo 1322, 81-3; ʿAbd al-Ḳādīr al-Baghdādī, *Khizānat al-Adab*, Būlāḳ 1277, iii, 466-73, iv, 165-7, 420-1; ʿAynī, *al-Maḳasid al-Naḥwiyya* (on margin of *Khizānat al-Adab*), iii, 54-7, 361-4, 558-60; Iskandar Āghā Abkāriūs, *Rawḍat al-Adab fi Ṭabaḳāt Shuʿarāʾ al-ʿArab*, Beyruth 1858, 192-6; Muḥammad Bāḳir, *Djāmiʿ al-Shawāhid*, Ḳumm 1308, 67-8, 167, 278-9; Muḥammad ʿAbd al-Ḳādir al-Fāsī, *Takmīl al-Marām bi-Sharḥ Shawāhid Ibn Hishām*, Fez 1310, 18[8], 24[1-8]; F. (FEHIM BAJRAKTAREVIĆ)

ABŪ ḲALAMMAS [see ḲALAMMAS].

ABŪ ḲALAMŪN means originally a certain textile of a peculiar sheen, then a precious stone, a bird, and a mollusc. The origin of the word is not certain; the unanimous statement of the Arab philologists that Abū Ḳalamūn is a Byzantine product would indicate the derivation of the word from Greek. In the *K. al-Tabaṣṣur bi 'l-tidjāra* (*MMIA*, 1932, 337; *Arabica*, 1954, 158, 162), Abū Ḳalamūn is listed as a precious Byzantine textile. According to H. L. Fleischer (*De Glossis Habichtianis*, Leipzig 1836, 106), followed by Dozy (*Suppl.*, i, 6, 85), it is derived from ὑποκάλαμον, supposed to mean "striped cloth". S. de Sacy proposed to derive the word from χαμαιλέων, "chameleon", proverbial for its changing colours (*Chrest. arabe*, iii, trad. 268). But neither the dictionaries nor Djāḥiẓ nor Damīrī know of Abū Ḳalamūn as a name for the chameleon (though, according to the *Burhān-i ḳāṭiʿ*, the word has this meaning in Persian). The proverb: "more changeable than Abū Ḳalamūn", or: "than Abū Barāḳish" (e.g. Freytag, *Proverbia*, i, 409; Hamadhānī, *Maḳāmāt*, Beyrouth 1924, 86; Ibn Ḥazm, *Ṭawḳ*, 69, cf. *And.*, 1950, 353), could refer to the chameleon or to a bird of changing colours which is also called Abū Barāḳish (cf. Ḳazwīnī, ed. Wüstenfeld, I, 406). Further, according to Muḳaddasī, 240-1 (ed. and transl. Pellat, 53 and no. 143), Abū Ḳalamūn denotes a mollusc (pinna), the byssus or "beard" of which is used in the manufacture of a sheeny cloth, which is also known as *ṣūf al-baḥr* (cf. Dozy, *Suppl.*, s.v.). P. Kraus, *Jābir ibn Ḥayyān*, ii, 110) refers to the use of χαμαιλέων as a term for the philosophers' stone in ancient alchemy (cf. Lippmann, *Entstehung* ... *Alchemie*, i, 298). This usage explains why Djābir gave one of his books, in which he treats of the various colours of the seven metals (*adjsād*), the title *Kitāb Abī Ḳalamūn* (P. Kraus, *op. cit.*, i, 24; cf. Ruska, in *Isl.*, 1925, 102 n.).

ABŪ KALB [see SIKKA].

ABŪ KĀLĪDJĀR AL-MARZUBĀN B. SULṬĀN AL-DAWLA, a prince of the Buwayhid [*q.v.*] dynasty, born in al-Baṣra in Shawwāl 399/May-June 1009. When in 412/1021 Musharrif al-Dawla's Daylamite troops murdered his wazīr at al-Ahwāz and declared for his brother Sulṭān al-Dawla [*q.v.*], the latter, whom Musharrif had supplanted as ruler of al-ʿIrāḳ in the previous year, took heart and sent them his son Abū Kālīdjār, though then only a boy of twelve, to take over the city in his name. In the following year Musharrif and Sulṭān made peace, Musharrif retaining al-ʿIrāḳ and Sulṭān regaining Fārs and Khūzistān; but in Shawwāl 415/December 1023-January 1024 Sulṭān died, on which the control of those provinces was for the next two years disputed between Abū Kālīdjār (who was even then no more than sixteen) and another of his uncles Abu 'l-Fawāris, the ruler of Kirmān. Abū Kālīdjār emerged victorious from this struggle, but then failed in an attempt to dislodge Abu 'l-Fawāris also from Kirmān; so that when they made peace in 418/1027 he was obliged to pay Abu 'l-Fawāris a yearly tribute of 20,000 dīnārs.

Meanwhile these preoccupations had prevented Abū Kālīdjār from accepting the invitation of the Baghdād garrison to replace yet a third uncle, Djalāl al-Dawla [*q.v.*], as Amīr al-Umarāʾ, on the latter's failure to appear in the capital after the death, in Rabīʿ II 416/June 1025, of Musharrif al-Dawla. Abū Kālīdjār was nevertheless acknowledged in the *khuṭba* at Baghdād for some eighteen months (from Shawwāl 416/Dec. 1025 to Djumādā I 418/June-July 1027); in 417/1026 he was likewise acknowledged in the *khuṭba* at al-Kūfa; and in the following year he was able to send his wazīr, Ibn Bābshādh, to assert his authority over the Euphrates marshes, though the only result of this move was a rebellion of their inhabitants against the wazīr's extortions. In 419/1028 Abū Kālīdjār added both al-Baṣra and Kirmān to the area under his control, the former by a timely intervention in a conflict between the Daylamites and Turks of Djalāl's garrison, and the latter by the death of Abu

l-Fawāris. In 420/1027 however, on his seizing Wāsiṭ, Djalāl retaliated by sacking al-Ahwāz; and when in Rabīʿ I 421/April 1030 they met in a three-day battle, Abū Kālīdjār was severely defeated. Djalāl then retook Wāsiṭ and the marshes, and for a time his troops also reoccupied al-Baṣra; but this was soon recovered by those of Abū Kālīdjār; and in Shawwāl/October of the same year he in turn defeated Djalāl at al-Madhār.

During the next five years Djalāl was repeatedly forced to leave Baghdād owing to the insubordination of his Turkish mercenaries; and on two such occasions—in 423/1032 and 428/1037—his name was replaced in the *khuṭba* of the capital at their instance by that of Abū Kālīdjār. On the second of these occasions Abū Kālīdjār despatched a force to help the chief Turkish commander, which took and held Wāsiṭ for a few months. During most of 424/1033, on the other hand, al-Baṣra was occupied by Djalāl's forces and his name pronounced instead of Abū Kālīdjār's in the *khuṭba* there. But these mutual aggressions proving of no advantage to either, in 428/1037, after Djalāl's recovery of Wāsiṭ, uncle und nephew concluded a formal peace, swearing to molest each other no more.

In 431/1039 Abū Kālīdjār joined in suppressing his tributary governor of al-Baṣra with Ibn Mukram of ʿUmān, whom the governor had annoyed; and later in the same year and again in 433/1041-2 was obliged to send troops to ʿUmān itself to suppress disorders consequent on Ibn Mukram's death. In the latter year Abū Kālīdjār's intervention in a quarrel between the sons of the Kākawayhid (Kākōyid) ʿAlāʾ al-Dawla was fruitless; but in 434/1042-3 his forces repulsed the first Saldjūḳid attack on Kirmān. Then in Shaʿbān 435/March 1044 Djalāl died; and though the Baghdād garrison first offered its allegiance to his son al-Malik al-ʿAzīz [*q.v.*], Abū Kālīdjār prevailed on them with the offer of an ample accession gratuity to withdraw it in his favour. In Ṣafar 436/September 1044, accordingly, he was acknowledged in the *khuṭba* not only in Baghdād itself but also in the Ḥulwān district, the Euphrates territory and Diyār Bakr, and thus became sole Buwayhid sovereign, receiving from the caliph the *laḳab* Muḥyī al-Dīn.

During his ensuing four years' reign Abū Kālīdjār was chiefly concerned to preserve his power against Saldjūḳid encroachment. This had already caused him to begin walling his capital, Shīrāz, for the first time, and in 437/1045-6 only the outbreak of disease among his horses prevented him from challenging a Saldjūḳid advance into the south-western Djibāl. Two years later, however, he decided instead to ally himself with the Saldjūḳids; and, Ṭughrul [*q.v.*] proving amenable, an alliance was sealed by Ṭughrul's marriage with Abū Kālīdjār's daughter and the marriage of Abū Kālīdjār's second son to Ṭughrul's niece. This alliance preserved his dominions in the west from further Saldjūḳid attacks; but in 440/1048, a Saldjūḳid force again invaded Kirmān, where, instead of being opposed, it was joined by Abū Kālīdjār's governor. He therefore set out to vindicate his authority in person, but suddenly died before reaching his destination (Djumādā I 440/ Octobr 1048).

Abū Kālīdjār left at least nine sons, the eldest of whom, entitled al-Malik al-Raḥīm [*q.v.*], succeeded him as Amīr al-Umarāʾ, the last of the dynasty to rule in Baghdād and al-ʿIrāḳ, and the second of whom, Fūlād-Sutūn, succeeded him as ruler of Fārs until murdered by a rebel in 454/1062.

In 429, while in Shīrāz, Abū Kālīdjār, in common with many of his Daylamite troops, was converted to Ismāʿīlism by the Fāṭimid *dāʿī* al-Muʾayyad fi 'l-Dīn [*q.v.*]. Some four years later, in order to maintain good relations with the ʿAbbāsid al-Ḳāʾim he was obliged to banish the *dāʿī* from his dominions; but it would appear from the account of these events in the latter's *Sīra* (ed. Ḳāmil Ḥusayn, Cairo 1949, 77) that he remained personally devoted to the Fāṭimid cause. A reference to Abū Kālīdjār's dealings with al-Muʾayyad is made also by Ibn al-Balkhī in his *Fārs-nāma*.

(Harold Bowen)

ABŪ KĀMIL SHUDJĀʿ b. Aslam b. Muḥ. b. Shudjāʿ al-Ḥāsib al-Miṣrī, next to Muḥ. b. Mūsā al-Khʷārizmī [*q.v.*] the oldest Islamic algebraist of whose writings we still possess some remains; they entitle us to place him among the greatest mathematicians of the Islamic Middle Ages (for the development of Islamic algebra see al-djabr wa 'l-muḳābala). Through Leonard of Pisa and his followers he exercised considerable influence on the development of algebra in Europe and no less great was the impact of his geometrical writings (algebraic treatment of geometrical problems) on Western geometry. No details of his life are known; all we can say is that he lived after al-Khʷārizmī (d. about 850 A.D.) and before ʿAlī b. Aḥmad al-ʿImrānī (d. 344/955-6) who wrote a commentary on his Algebra.

The *Fihrist*, 281, lists a number of books on astrological and mathematical subjects as well as on other topics such as the flight of birds etc. Two of these titles: *Kitāb fi 'l-Djamʿ wa 'l-Tafrīḳ*, "On augmenting and diminishing" (the *Fihrist* attributes a work bearing the same title to al-Khʷārizmī) and *K. al-Khaṭaʾayn*, "On the two errors", have been the objects of elaborate discussions ever since F. Woepcke (*JA*, 1863, 514) tried to identify *al-Djamʿ wa 'l-Tafrīḳ* with the Latin *augmentum et diminutio* occurring in the *Liber augmenti et diminutionis*, ed. Libri, in *Histoire des sciences mathématiques en Italie*, Paris 1838, 253-97, 2nd ed., 1865, 304-69; cf. H. Suter, in *Bibl. Math.*, 1902, 350-4, and J. Ruska, *Zur ältesten arab. Algebra und Rechenkunst*, in *SBAK. Heid.*, 1917/2, 14-23.

None of the works mentioned in the *Fihrist* has survived in Arabic. A work preserved in Arabic is *al-Ṭarāʾif* (MS Leiden, 1001, fol. 50v-58v), transl. and commented by H. Suter, *Das Buch der Seltenheiten der Rechenkunst von Abū Kāmil al-Miṣrī*, *Bibl. Math.*, 1910-1, 100-20. It deals with the integral solutions of indeterminate equations ("Diophantine analysis" according to modern usage; it may be well to state that this term is historically incorrect: Diophantus, 3rd cent. A.D., whom we have to regard, at least as far as the Greek world is concerned, as the founder of indeterminate analysis, is interested only in rational, not exclusively integral, solutions of his problems). Of *al-Ṭarāʾif* there exists a Hebrew version (Munich 225, 4) by Mordekhai Finzi of Mantua

(c. 1460) who translated also Abū Kāmil's treatises on algebra (Munich 225, 3). As assumed by G. Sacerdote, *Il trattato del pentagono e del decagono di Abu Kâmil*, in *Festschrift Steinschneider*, Leipzig 1896, 169-94, and proved by Suter, *Die Abhandlung des Abū Kāmil Shoğāʿ b. Aslam "über das Fünfeck und Zehneck"*, *Bibl. Math.* 1909-10, 15-42, these translations were made not from Arabic or Latin, but from Spanish. According to Suter, it is probable that the Paris MS 7377 A, no. 6, is a Latin version of *al-Ṭarāʾif*. (The same MS contains Latin versions of Abū Kāmil's algebra and of his treatises on the pentagon and decagon).—Indeterminate equations with integral solutions appear in India fully developed about 1150 in Bhāskara's Vījaganita (cf. Colebrooke, *Algebra with arithmetic and mensuration*, London 1817, 233-5), but the problem is referred to already by Āryabhaṭa (b. 476), who even anticipates for its solution the method of continued fractions, to which Bhāskara applies the term *kuṭṭaka* "dispersion" (cf. M. Cantor, *Gesch. d. Math.*[3], i, 588 ff.) Abū Kāmil's procedure is less systematic and therefore inferior to the Indian. He finds his solutions mainly by way of trial, yet shows considerable skill in overcoming the difficulties involved. It is hard to decide whether or not he knew the *kuṭṭaka* method. However that may be, it is certain that the anonymous author of a commentary on *al-Ṭarāʾif*, of which the Leiden MS contains a fragment (fol. 101-2), was familiar with it, because he clearly refers to the proof of a method of finding integral solutions that can hardly have been different from the *kuṭṭaka* method.

The connection between Abū Kāmil and the Indians is shown by a curious detail: they resort to the same, or at least similar, varieties of birds as examples in their problems. In Europe, we meet with indeterminate equations in Leonard of Pisa's *Liber abaci* (1202; *Scritti*, ed. Boncompagni, Roma 1857-62, i)—again with reference to birds. The first appearance in Europe of this problem seems to be marked by a MS composed about 1000 A.D. in the monastery of Reichenau. Later European algebraists, in particular the German "Cossists" (Adam Riese, etc.) usually substitute men, women, or virgins for the birds, and therefore the term "regula virginum" (or "r. potatorum", "r. coeci" or "r. coeti") was adopted by them to denote this kind of problem (cf. *Bibl. Math.*, 1905, 112).

Abū Kāmil's "Algebra" is known only in Latin (MS Paris 7377 A, fol. 71v-93v) and Hebrew (Paris 1029, 7 and Munich 225, 5) translations. The two MSS of the Arabic original noted by Brockelmann have not yet been examined. It is above all upon this work that his fame rested. It was commented by al-Istakhrī and al-ʿImrānī, but both commentaries are lost. L. C. Karpinski's elaborate study: *The Algebra of Abu Kamil Shojaʿ ben Aslam*, *Bibl. Math.*, 1911-2, 40-55, is based on the Latin Paris MS. For the historical background of the work, see also O. Neugebauer, *Zur geometrischen Algebra*, *Quellen und Studien z. Gesch. d. Math.*, B (*Studien*), 1936, 245-59, and S. Gandz, *The Mishnat ha-Middot and the Geometry of Muh. b. Mūsā al-Khowārizmī*, ibid., A (*Quellen*), 1932, in particular 37, 68, 83. In the definition of *djazr* (*radix*, root), *māl* (*census*, capital) and *ʿadad mufrad* (*numerus*, absolute number) Abū Kāmil closely follows al-Khʷārizmi, but in many respects he goes far beyond his predecessor. Thus he effects the addition and subtraction of square roots involving irrationalities only, by means of the relations corresponding to our modern formula $\sqrt{a} + \sqrt{b} = \sqrt{a + b + \sqrt{2ab}}$. E.g., to subtract the square root of 8 from the sq.r. of 18, he gives the rule: "Subtract 24 from 26, and 2 remains. The root of this is the root of 8 subtracted from the root of 18". The same example is found in al-Karadjī's ([*q.v.*]; d.c. 1029) treatise on algebra *al-Fakhrī* (see F. Woepcke, *Extrait du Fakhri*, Paris 1853, 57-9), while Leonard of Pisa (*Scritti*, i, 363-5), in demonstrating the same method, uses the numbers 18 and 32. The analogous treatment of cube roots, as dealt with by al-Karadjī, is not yet found in Abū Kāmil.

The treatise "On the pentagon and decagon", Latin version, MS Paris A, German transl. by Suter, cf. above; Hebrew version, Munich 225, 3, Italian transl. by Sacerdote, cf. above. All problems occurring in this treatise are solved in a clear and simple mode by applying algebraic methods to geometry. Throughout his treatise, Abū Kāmil chooses special values—in most cases the value 10—for the given quantity, instead of denoting it by a letter or even equalling it to 1. In this respect, he has not freed himself from the method of al-Khʷārizmī; but in his way of handling the problem he is far superior to his predecessor, and his work definitely marks an important progress. Sacerdote has shown that Leonard of Pisa knew this treatise and made extensive use of it in his *Practica geometriae* (*Scritti*, ii).

Bibliography: Suter, 43; Brockelmann, S I, 390; M. Steinschneider, *Hebräische Übersetzungen*, 584-8. (W. Hartner)

ABU 'L-ḲĀSIM, the name of a canting parasite, whom Muḥammed b. Aḥmed Abu 'l-Muṭahhar al-Azdī depicts in his *Ḥikāyat Abi 'l-Ḳāsim al-Baghdādī* as a Baghdād type. The book was probably written in the first half of the fifth century and purports to relate faithfully a day in the life of its hero. Abu 'l-Ḳāsim by means of his pious eloquence gets a hearing in a society of people at a banquet, rails at the guests and the host and shows his linguistic skill in a detailed comparison of the advantages of Baghdād and Iṣfahān. As the numerous courses of the repast are served, they are accompanied by his glib remarks. When the wine goes to his head he becomes importunate and vulgar, till finally, being forced to drink still more deeply, he falls asleep; when the intoxication is over he again plays the devout believer. Into this framework the author, led on by his philological inclinations, has interwoven so much of his extensive knowledge of the *adab* literature and of the terminology of the different trades and also of pornographic poetry—he quotes many verses of Ibn al-Ḥadjdjādj—that the realism of the description as well as the unity of the tale suffer considerably.

Bibliography: Abu 'l-Muṭahhar al-Azdī, *Ḥikāyat Abi 'l-Ḳāsim*, ed. A. Mez, Heidelberg 1902; J. M. de Goeje, in *GGA*, 1902, 723 ff.; C. Brockelmann, in *Literarisches Centralblatt*, 1902, 1568 ff. (J. Horovitz)

ABU 'L-ḲĀSIM [see AL-ZAHRĀWĪ].

ABU 'L-ḲĀSIM BĀBUR [see TĪMŪRIDS].

ABU 'L-KHAṢĪB, a canal to the south of Baṣra (called after a client of the caliph al-Manṣūr), the most important among the canals that in the Middle Ages flowed from the west into the main channel of the Tigris, the Didjla al-ʿAwrāʾ of Arabic authors, i.e. the modern Shaṭṭ al-ʿArab. Its bed still exists. It was on its bank that the Zandj rebels built in the 3rd/9th century the great fortress of al-Mukhtāra.

Bibliography: Le Strange, 47 f.; M. Streck, *Babylonien nach den arab. Geogr.*, Leiden 1900, i, 42. (M. Streck)

ABU 'L-KHATTĀB MUḤAMMAD B. ABĪ ZAYNAB MIḲLAṢ AL-ADJDAʿ **AL-ASADĪ**, Muslim heresiarch. According to al-Kashshī, his father was Miḳlaṣ b. Abi 'l-Khaṭṭāb, and he himself used the *kunyas* Abū Ismāʿīl and Abu 'l-Ẓubyān. He was a Kūfan and a *mawlā* of the tribe of Asad. In the Nuṣayrī writings he is also called al-Kāhilī. He was one of the chief *dāʿīs* of the Imām Djaʿfar al-Ṣādiḳ, but fell into error and taught false doctrines, as a result of which he was repudiated and denounced by the Imām. Seventy of his followers, assembled in the mosque of Kūfa, were attacked by order of the governor ʿĪsā b. Mūsā, and after a bitter struggle, were killed. Abu 'l-Khaṭṭāb himself was arrested and brought before ʿĪsā b. Mūsā, who had him executed and crucified at Dār al-Rizḳ, on the Euphrates, together with a number of his followers. Their heads were sent to the Caliph al-Manṣūr and impaled by the gate of Baghdād for three days. The date of these events is not precisely known, but a conversation recorded by al-Kashshī as having taken place in 138/755 appears to refer to the recent extermination of Abu 'l-Khaṭṭāb and his followers (*fa'nḳaṭaʿat āthāruhum wa-faniyat ādjāluhum*: al-Kashshī 191; cf. Lewis, 33; Ivanow, however (p. 117) interprets this tradition as referring to the repudiation of Abu 'l-Khaṭṭāb by Djaʿfar, and places his death in about 145/762). According to the Nuṣayrīs, who still revere Abu 'l-Khaṭṭāb, 'he manifested the *daʿwa*' at Dār al-Riẓḳ on 10 or 11 Muḥarram, and both this and the day of his 'appointment' by Djaʿfar al-Ṣādiḳ (11 Dhu 'l-Ḥidjdja) are sacred anniversaries. He seems to have played a role of some importance in the early development of extremist Shīʿite doctrine, and is named by the Central Asian Ismāʿīlī book *Umm al-Kitāb* (*Isl.*, 1936, pts. 1 and 2; cf. W. Ivanow, *REI*, 1932, 428-9), as well as by a number of Sunnī and Ithnā-ʿasharī sources, as a founder of the Ismāʿīlī faith. He is however condemned in later Ismāʿīlī writings of the Fāṭimid period, in much the same terms as in the books of the Ithnā-ʿashariyya. For a discussion of his doctrines see KHAṬṬĀBIYYA.

Bibliography: The best accounts of the life and death of Abu'l-Khaṭṭāb are to be found in Ithnā-ʿasharī works, especially Kashshī, *Maʿrifat al-Ridjāl*, Bombay, 1317, 187 ff.; Nawbakhtī, *Firaḳ*, 37 and 58 ff. An Ismāʿīlī account will be found in the Ḳāḍī Nuʿmān's *Daʿāʾim al-Islām* (A. A. Fyzee) vol. i, Cairo, 1951, 62 ff. There are also some interesting references in the Nuṣayrī work *Madjmūʿ al-Aʿyād*, ed. R. Strothmann, in *Isl.*, 1946, 6, 8, 10, 148, 159, 202. For general discussions see Henry Corbin, *Étude préliminaire pour le 'Livre réunissant les deux sagesses' de Nâsir-e Khosraw*. Tehran 1953, 14 ff.; W. Ivanow, *The Alleged Founder of Ismailism*, Bombay 1946, 113 ff.; B. Lewis, *The Origins of Ismāʿīlism*, Cambridge 1940, 32 ff.; Muḥammad Ḳazwīnī, in Djuwaynī, iii, 344 ff. (B. LEWIS)

ABU 'L-KHAṬṬĀB AL-KALWADHĀNĪ [see AL-KALWADHĀNĪ].

ABU 'L-KHATTĀB ʿABD AL-AʿLĀ B. AL-SAMḤ **AL-MAʿĀFIRĪ** AL-ḤIMYARĪ AL-YAMANĪ, the first *imām* elected by the Ibāḍīs of the Maghrib. He was one of the five missionaries (*ḥamalat al-ʿilm*, "carriers of science") sent to the Maghrib by Abū ʿUbayda al-Tamīmī of Baṣra, the spiritual head of the sect, in order to preach there the Ibāḍī creed [cf. IBĀḌIYYA]. These missionaries received from Abū ʿUbayda the order to establish an imamate amongst the Ibāḍiyya of Tripolitania, with Abu 'l-Khaṭṭāb as *imām*. The activities of the *ḥamalat al-ʿilm* were crowned with success. In 140/757-8 the Ibāḍī notables of Tripolitania, in a council held in Ṣayyād, near Tripoli, elected Abu 'l-Khaṭṭāb as *imām*. The Ibāḍi Berber tribes, Hawwāra, Nafūsa etc., commanded by the new *imām*, conquered with the slogan *lā ḥukm illā li'llāh wa-lā ṭāʿa illā ṭāʿat Abi 'l-Khaṭṭāb*, the whole of Tripolitania, including Tripoli, which became the residence of their chief. In Ṣafar 141/Juni-July 758 the army of Abu 'l-Khaṭṭāb took al-Ḳayrawân, capital of Ifrīḳiya, at that time in the possession of the Ṣufrīs of the Berber tribe of Warfadjdjūma. ʿAbd al-Raḥmān b. Rustam, the future founder of the Ibāḍī imamate of Tāhart, was appointed governor of the town. The outcome of Abu 'l-Khaṭṭāb's conquests was the creation of an Ibāḍī state comprising the whole of Ifrīḳiya, viz. Tripolitania, Tunisia and the eastern part of Algeria. It even seems that Abu 'l-Khaṭṭāb had a certain influence over the Ṣufrīs of Sidjilmāssa.

In Dhu 'l-Ḥidjdja 141/April 759, Muḥammad b. al-Ashʿath al-Khuzāʿī, ʿAbbāsid governor of Egypt, sent to Ifrīḳiya an army commanded by al-ʿAwwām b. ʿAbd al-ʿAzīz al-Badjalī, to reconquer the province. The army was defeated by the Ibāḍīs in the region of Surt, near the eastern boundaries of Abu 'l-Khaṭṭāb's possessions. Another ʿAbbāsid army, led by Abu 'l-Aḥwaṣ ʿUmar b. al-Aḥwaṣ al-ʿIdjlī, was defeated at Maghmadāṣ (Macomades Syrtis, modern Marsa Zafran). In the meantime, Ibn al-Ashʿath received orders to march himself against the Berbers and to assume the government of Ifrīḳiya. On receiving this news, Abu 'l-Khaṭṭāb set out with a considerable army. Deceived, however, by a stratagem of Ibn al-Ashʿath, who pretended to return to the east, he allowed his troops to disband. When Ibn al-Ashʿath shortly afterwards reached the neighbourhood of Tripoli, the *imām* hastily assembled the nearest tribes to check his advance. The battle took place at Tāwurghā (on the coast, a few days' journey to the east of Tripoli) in Ṣafar 144/May-June 761. It was very bloody: Abu 'l-Khaṭṭāb with twelve or fourteen thousand of his followers were killed. In Djumādā I/August, Ibn al-Ashʿath reoccupied al-Ḳayrawān.

Bibliography: Abū Zakariyyāʾ, *al-Sīra wa-Akhbār al-Aʾimma* (MS coll. S. Smogorzewski), fol. 1ᵛ, 6ʳ-13ᵛ; E. Masqueray, *Chronique d'Abou Zakaria*, Algiers 1878, 18-38; Shammākhī, *Siyar*, Cairo 1301, 124-32; Bakrī (de Slane, *Descript. de l'Afr. sept.*[2]), 7, 28, 149, transl. de Slane, 22, 63, 285-6; Ibn Khaldūn, *Hist. des Berb.*, i, 220, 373-5; H. Fournel, *Les Berbers*, i, 351, 355-60.

(A. DE MOTYLINSKI-T. LEWICKI)

ABU 'L-KHAṬṬĀR AL-ḤUṢĀM B. ḌIRĀR AL-KALBĪ, governor of al-Andalus, who arrived in that country from Ifrīḳiya in 125/743, to replace the *wālī* Thaʿlaba b. Salāma al-ʿĀmilī. He carried out a liberal policy, and skilfully removed from Cordova the representatives of the Syrian *djunds*, who had come to Spain under the leadership of Baldj b. Bishr [*q.v.*]. On the advice of Count Ardabast (Arṭūbās), son of the Visigothic prince Witiza, he settled these *djundīs* on fiefs, requiring from them in return that they should respond to mobilization appeals that might be made to them. It was in this way that the Syrian system of the *djunds* came to be introduced into al-Andalus. The representatives of the *djund* of Damascus were installed in the Elvira district, those of the *djund* of the Jordan in the district of Rayyo (Archidona and Malaga), those of the *djund* of Palestine in the district of

Sidona, those of the *djund* of Ḥimṣ (Emesa) in the districts of Seville and Niebla, those of the *djund* of Ḳinnasrīn in the district of Jaén, and those of the *djund* of Egypt in the Algarve and in the region of Murcia (Tudmīr). A little later Abu 'l-Khaṭṭār entered into conflict with a powerful chief of the *djund* of Ḳinnasrīn, al-Ṣumayl [*q.v.*] b. Ḥātim al-Kilābī, who mustered troops and defeated the governor in Radjab 127/April 745 on the Guadalete. In vain did Abu 'l-Khaṭṭār afterwards attempt to regain his office; it was seized by the Djudhāmite chief Thawāba b. Salāma, who himself died the next year.

Bibliography: E. Lévi-Provençal, *Hist. Esp. mus.*, i, 48-50. (E. LÉVI-PROVENÇAL)

ABU 'L-KHAYR, ruler of the Özbegs [see UZBEKS] and founder of the power of this nation, descendant of Shaybān, Djuči's youngest son [see SHAYBĀNIDS], born in the year of the dragon (1412; as the year of the hidjra 816/1413-4 is erroneously given). At first he is said to have been in the service of another descendant of Shaybān, Djamaduḳ Khān. The latter met his death in a revolt; Abu 'l-Khayr was taken prisoner, but was released and shortly after proclaimed khān in the territory of Tura (Siberia) at the age of 17 (year of the ape-1428; as year of the hidjra 833/1429-30 is given). After a victory won over another khān of the family of Djuči the greater part of Ḳipčaḳ submitted to him. In 834/1430-1 he conquered Khwārizm with its capital Urgandj, which was plundered, but soon afterwards he gave it back. According to his biographers, Abu 'l-Khayr later vanquished two more princes, Maḥmūd Khān and Aḥmad Khān, conquered the city of Urdū-Bāzār, and seized (though for a short time only) the "throne of Ṣāyin Khān", i.e. that of Batu. Shortly before the death of Sultan Shāhrukh (850/1447) Abu 'l-Khayr established himself firmly through the subjugation of the fortresses of Sighnaḳ (at present the ruins of Sunaḳ-Ḳurghan), Arḳuḳ, Suzaḳ, Aḳ-Ḳurghan and Uzkand ou the Sir Daryā—the most significant event in his reign for the further history of the Özbegs. Sighnaḳ seems to have been his capital from that time. South of this region no durable conquests were made under Abu 'l-Khayr; even the neighbouring town of Yasī (now Turkistān) remained in the power of the Tīmūrids. Marauding expeditions were frequently undertaken, even as far afield as Bukhārā and Samarḳand. Abu 'l-Khayr appeared with greater forces in 855/1451-2 as an ally of the prince Abū Saʿīd against the then ruler of Samarḳand ʿAbd Allāh; with his aid ʿAbd Allāh was defeated and killed and Abū Saʿīd was installed as ruler in Samarḳand; Rābiʿa Sulṭān Bēgum, daughter of Ulugh Beg, was given in marriage to Abu 'l-Khayr. A second attempt to interfere in the disputes of the Tīmūrids fell out less happily; Muḥammad Djūḳī, favored by Abu 'l-Khayr against Abū Saʿīd, was forced in 865/1460-1 after some successes to raise the siege of Samarḳand at the approach of his enemy, to quit the country ravaged by Abu 'l-Khayr's auxiliary troops (under Burke Sulṭān) and in 868/1463—having, it seems, received no assistance from Abu 'l-Khayr—to surrender to his adversary. Shortly before, probably about 861/1456-7 (Abu 'l-Khayr 's grandson, Maḥmūd, born in 858/1454, is said to have been then three years old), Abu 'l-Khayr's power received a severe blow from the Ḳalmaḳ (Kalmucks); beaten in the open field, he had to flee to Sighnaḳ and let the enemy ravage the whole country up to the Sīr. About 870/1465-6 there appears to have taken place among the Özbegs that split, through which the proper inhabitants of the steppes, since called Ḳazaḳ, separated from the other portion of the nation. The year of the rat (1468; erroneously identified with 874/1469-70) is given as the year of Abu 'l-Khayr's death; the power founded by him was after a short interruption restored and extended by his grandson Muḥammad Shaybānī.

Bibliography: Abu 'l-Khayr's biography was written towards 950/1543-4 by Masʿūd b. ʿUthmān al-Kuhistānī (*Taʾrīkh-i Abu 'l-Khayr Khānī*; the statements in Howorth, *Hist. of the Mongols*, ii, 687, are correct only so far as concerns the MS. of the British Museum, but not the work itself; cf. Rieu, *Cat. of Pers. MSS.*, i, 102; the Leningrad MSS, including that of the University Library or. 852, used here, have also the beginning of the biography). Masʿūd was also able to utilize the oral narratives of Abu 'l-Khayr's son Süyünič Khān (d. 931/1525), who seems to have drawn his information from written sources, as for example the *Maṭlaʿ al-Saʿdayn* of ʿAbd al-Razzāḳ al-Samarḳandī. Information about Abu 'l-Khayr is also to be found in the historical works on his grandson Shaybānī and his successors, especially in the *Tawārīkh-i Nuṣrat Nāma* (cf. Rieu, *Cat. of Turkish MSS.*, 276 ff.) and the writings dependent on it. (W. BARTHOLD)

ABU 'L-KHAYR AL-ISHBĪLĪ, surnamed AL-SHADJDJĀR, "the arboriculturist", author of a book on agriculture, was a native of Seville (Ishbīliya). Neither the date of his birth or that of his death are known, and one can only say that as he is quoted by Ibn al-ʿAwwām [*q.v.*], who lived in the second half of the 6th/12th century, he must have belonged to an earlier period. He was probably the contemporary of the botanist-physicians and "gardeners" of the 5th/11th century, such as Ibn Wāfid al-Lakhmī, Ibn Baṣṣāl, Ibn Ḥadjdjādj al-Ishbīlī and al-Ṭighnarī. His *K. al-Filāḥa* is preserved in MSS in the Bibliothèque Nationale in Paris, in the Zaytūna mosque in Tūnis and some private libraries in North Africa.

The following are the main contents of Abu 'l-Khayr's book. (i) General considerations on planting (*gharāsa*): favourable months; influence of the moon; the time needed for plants to grow and to yield fruit; age of trees; damage (weather, animals, fire, water); special treatment of olive-trees, vines, fig-trees, palm-trees. (ii) Plantations proper: trees, bushes, grain, seeds; layering, pruning, grafting; fruit and vegetable conserves; growing of vegetables; aromatic plants, flowers; flax and cotton; banana and sugar-cane. (iii) Animals: of the back-yard, especially pigeons; bees and wild animals; harmful animals (reptiles, rodents and insects). (iv) Finally two pages on the *tadjārib al-ʿām*, i.e. meteorological or astrological prognostications.

Abu 'l-Khayr appeals to his personal experience and observations in the gardens, parks, fields, vineyards and forests of the Aljarafe (al-Sharaf, district of Seville). His literary documentation consists in quoting, no doubt at second hand, the *K. al-Nabāt* of Abū Ḥanīfa al-Dīnawarī (which had been expounded in 60 vols. by Ibn Ukht Ghanim—cf. Makkarī, *Analectes*, ii, 270), Aristotle, Anatolius, "Ḳasṭūs" (Cassianus Bassus Scholasticus), Philemo—through adaptations of the *Geoponica* and through the *al-Filāḥa al-Nabaṭiyya* of Ibn Waḥshiyya [*q.v.*]. [For this agronomical literature see FILĀḤA.] On the whole, the book is an empirical work of technical science, but, like the agronomical literature in general, is not without its popular and superstitious

side, and formulas for amulets and descriptions of talismans are given.

Bibliography: The *K. al-Filāḥa* published in Fez 1357-8 is falsely attributed to Abu 'l-Khayr. An edition with annotated French translation is in preparation by the author of this article. Some paragraphs were published by A. Cherbonneau and H. Pérès, *K. al-Filāḥa ou Livre de la Culture*, in *Bibl. Arabe-Française*, v, Algiers 1946. See also ʿA. Abu 'l-Naṣr, in *MMIA*, 1953, 557; J.-J. Clément-Mullet, intr. to *Livre de l'Agriculture d'Ibn al-Awam*, Paris 1864, i, 78; C. E. Dubler, in *And.*, 1941, 137; E. (H. Pérès)

ABŪ KHIRĀSH Khuwaylid b. Murra al-Hudhalī, *mukhaḍram* Arab poet, who was converted to Islam and died under the caliphate of ʿUmar, from the bite of a snake while he was drawing water for Yamanite pilgrims (who were then required by the caliph to pay his *diya*). Abu Khirāsh is counted among the pre-Islamic warriors who could run faster then horses, sharing this distinction with his nine brothers Abū Djundab, ʿUrwa, al-Abaḥḥ, al-Aswad, Abu 'l-Aswad, ʿAmr, Zuhayr, Djannād and Sufyān, who also were poets of rank.

Bibliography: The *dīwān* of Abū Khirāsh was published by J. Hell, *Neue Hudailiten-Diwane*, ii, Leipzig 1933. Biographical notes and verses in Djāḥiz, *Hayawān*[2], iv, 267, 351; Ibn Ḳutayba, *Shiʿr*, 417-8; Abū Tammām, *Ḥamāsa* (Freytag), 365, 370; *Aghānī*[1], xxi, 54-70; Ibn Ḥadjar, *Iṣāba*, no. 2345; Baghdādī, *Khizāna*, Cairo 1347, i, 400, ʿAskarī, *Dīwān al-Maʿānī*, i, 131, ii, 72; Nallino, *Scritti*, vi = *Letteratura*, 46 (French transl. 77).

(Ch. Pellat)

ABŪ ḲUBAYS, a sacred hill on the eastern edge of Mecca. Rising abruptly from the valley floor, it overlooks the Great Mosque a few hundred meters away. The Kaʿba corner containing the Black Stone points towards the hill, at the foot of which is al-Ṣafā, the southern end of al-Masʿā. Buildings now hem the hill in on nearly every side. Muslim tradition holds that this was the first mountain created by God. Adam and other ancients are sometimes said to be buried there. The hill's older name was al-Amīn, given because the Black Stone was kept safe there during Noah's Flood. Various stories explain the origin of the name Abū Ḳubays (Yāḳūt, s.v.); al-Azraḳī, 477-8, inclines towards the version identifying Abū Ḳubays as a man of Iyād, the first to build on the hill. Djabal Abū Ḳubays and al-Aḥmar on the western side of the valley were together called al-Akhshabān (the Two Rough Ones); a *ḥadīth* says that Mecca will last as long as these two. According to popular tradition, the Prophet was standing on Abū Ḳubays when the moon was rent in twain (Ḳur., liv, 1). The Kaʿba was destroyed in 64/683-4 by shots from a *mandjanīḳ* fixed on Abū Ḳubays, and in medieval times a castle crowned the hill; no fortifications now remain there. The first *zāwiya* of the Sanūsī order was built on Abū Ḳubays c. 1252-3/1837, and in Snouck Hurgronje's time a large Naḳshbandī establishment also stood on the slopes (*Mekka*, ii, 285).

For bibliography, see makka. (G. Rentz)

ABŪ ḲURRA Theodore, Melkite Bishop of Ḥarrān, said to be the first Christian writer of importance to produce works in the Arabic language. He was born at Edessa c. 740 and must have died c. 820. He refers to himself in his writings as a disciple of John of Damascus (d. 749), but though he studied as a youth in the monastery of St. Saba in Palestine, he can hardly have been a student under the Damascene. Like that of John, however, his name is associated with the early stages of Christian apologetics against Islam, and with that Christian learning which played so large a part in moulding the development of Islamic theology. He wrote in his native Syriac, in Greek and in Arabic. His writings are for the most part polemical in nature, which may be explained by the fact that in his days the city of Ḥarrān was a centre of vigorous intellectual life in which pagans and Manichees, Jews, Muslims and Christians of orthodox and of non-orthodox persuasion all shared. In his extant treatises he defends his orthodox faith against the teachings of all these opposing traditions. His Greek tractates have been edited in Migne, *Patr. Gr.*, xcvii, and the Arabic by Constantine Bacha, *Oeuvres arabes de Théodore Aboucara, évêque de Haran*, Beyrouth, n.d., though there is some doubt as to the authenticity of certain tractates included in each of these collections (see Peeters, in *Acta Bollandiana*, 1930, 94, and H. Beck, in *Orientalia christiana analecta*, 1937, 40-3).

Bibliography: Michael Syrus, *Chronique*, iii, 29-34; C. Bacha, in *Mach.*, 1903, 633-6; G. Graf, *Gesch. d. christl. arab. Lit.*, ii, 7-26; id., *Die arabischen Schriften des Theodor Abu Qurra*, Paderborn 1910. His part in the Muslim controversy is discussed in A. Palmieri, *Die Polemik des Islam*, 18 f.; G. Güterbock, *Der Islam im Licht der byzantinischen Polemik*, 1912, 15 ff.; I. Kratschkovsky, in *Khristianskij Vostok*, 1916, 301-9; A. Guillaume, in the Centenary Suppl. to *JRAS*, 1924, 233-44; C. H. Becker, *Islamstudien*, i, 434 ff.; W. Eichner, in *Isl.*, 1936, 136 ff. (A. Jeffery)

ABŪ LAHAB, son of ʿAbd al-Muṭṭalib and Lubnā bint Hādjir (of Khuzāʿa), and half-brother of Muḥammad's father. His name was ʿAbd al-ʿUzza and his *kunya* Abū ʿUtba; Abū Lahab (literally "father of the flame") was a nickname given by his father on account of his beauty. At one time, doubtless before Muḥammad's preaching had roused opposition, he was friendly with his nephew, for his sons ʿUtba and ʿUtayba were married (or perhaps only betrothed) to Muḥammad's daughters Ruḳayya and Umm Kulthūm respectively. During the boycott of Hāshim and al-Muṭṭalib by the other clans Abū Lahab dissociated himself from Hāshim, probably because through his wife, a daughter of Ḥarb b. Umayya, he was connected with ʿAbd Shams. On the death of Abū Ṭālib, shortly after the end of the boycott, Abū Lahab became head of the clan and at first promised to protect Muḥammad, presumably for the sake of the honour of the clan. He withdrew his protection, however, when Abū Djahl and ʿUḳba b. Abī Muʿayṭ managed to convince him that Muḥammad had spoken disrespectfully of deceased ancestors like ʿAbd al-Muṭṭalib and said they were destined for Hell. This loss of protection probably led to Muḥammad's attempt to settle in al-Ṭāʾif; when it proved vain, Muḥammad,

before entering Mecca again, had to obtain the *djiwār* of the head of another clan. This hostile conduct was doubtless the occasion of Sūra cxi which, with a play on the name, consigns Abū Lahab and his wife to the flames of Hell. He died shortly after the battle of Badr to which he is said to have sent in his place a man who owed him money. There is a long story about his reaction to the news of this defeat. His sons ʿUtba and Muʿattib became Muslims in 8/630, and ʿUtba's grandson, al-Faḍl b. al-ʿAbbās, was known as a poet (*Aghānī*, xv, 2-11).

(W. Montgomery Watt)

ABU 'L-LAYTH AL-SAMARḲANDĪ, Naṣr b. Muḥ. b. Aḥmad b. Ibrāhīm, known as *Imām al-Hudā*, a Ḥanafī theologian and jurisconsult of the 4th/10th century. The date of his death is variously given as between 373/983-4 and 393/1002-3. He must not be confused with his slightly older contemporary *al-Ḥāfiẓ* al-Samarḳandī, whose name was also Abu 'l-Layth Naṣr. The oldest known biographical source, ʿAbd al-Ḳādir (d. 775/1373), attributes to this latter person some of the main works that generally go under the name of the *Imām al-Hudā*, but this seems to be a mistake.

Abu 'l-Layth was a very successful author in several fields of the Islamic sciences, and his books have become popular from Morocco to Indonesia. His main works are: (1) a *Tafsīr*, printed Cairo 1310/1892-3; this was translated into old Ottoman Turkish by Ibn ʿArabshāh (d. 854/1450-1), and Ibn ʿArabshāh's work was expanded by Abu 'l-Faḍl Mūsā al-Iznīqī, a contemporary, under the title *Anfas al-Djawāhir*; manuscripts of these Turkish editions are among the oldest dated Ottoman Turkish manuscripts; (2) *Khizānat al-Fiḳh*, a handbook of Ḥanafī law; (3) *Mukhtalif al-Riwāya*, on the divergent doctrines of the ancient Ḥanafī authorities, in three editions; (4) *al-Muḳaddima fi 'l-Ṣalāt*, on the duty of ritual prayer, with many commentaries; (5) *Tanbīh al-Ghāfilīn* and (6) *Bustān al-ʿĀrifīn*, both on ethics and piety, often printed; (7) an *ʿAḳīda*, in the form of question and answer (ed. A. W. T. Juynboll, *BTLV* 1881, 215 ff., 267 ff.), with a commentary by Muḥammad b. ʿUmar al-Nawāwī (d. after 1305/1888), under the title *Ḳaṭr al-Ghayth* (Brockelmann, S II, 814; C. H. Becker, *Isl.* 1911, 23), often printed, also Malay and Javanese interlinear translations. This *ʿAḳīda* is authentic (against Juynboll, l. c., and F. Kern, *ZA* 1912, 170) and represents a popular, Ḥanafī current of theological thought (Schacht, in *Studia Islamica*, i).

Bibliography: ʿAbd al-Ḳādir al-Ḳurashī, *al-Djawāhir al-Muḍīʾa*, Hyderabad 1332, ii, 196, 264 f.; G. Flügel, *Die Krone der Lebensbeschreibungen*, Leipzig 1862, 58 f., 152 f.; Muḥammad ʿAbd al-Ḥayy al-Laknawī, *al-Fawāʾid al-Bahiyya*, Cairo 1324, 220; Brockelmann I, 210 f.; S I, 347 f. (nos. 6 and 7 refer to the same work).

(J. Schacht)

ABU 'L-MAʿĀLĪ Muḥammad b. ʿUbayd Allāh, Persian writer. His sixth ancestor was Ḥusayn al-Aṣghar, traditionist and son of the Imām Zayn al-ʿĀbidīn. His family lived for a long time in Balkh. He was a contemporary of Nāṣir-i Khusraw, whom he may have known and about whom he gives us the earliest information available. From two passages of his only work Ch. Schefer assumed that he was at the court of the Ghaznawid sultan Masʿūd III when he composed his *Bayān al-Adyān*, dated 485/1092, the earliest known work on religions in the Persian language. The first two chapters are devoted to religions before Islam and to some heresies; the third and fourth to the exposition of the Sunnite and Shīʿite doctrines and to the Islamic sects (especially Ismāʿilism); the fifth chapter, dealing with the extremists (which may, therefore, have been of importance) is lost. He mentions his main sources. His work has not the bulk of the *Tabṣirat al-ʿAwāmm* of Sharīf Murtaḍā (second half of 12th century), but it commends itself by its clear precision and by the sober vigour of its style. It is among the best of the rare prose works in Persian from the Ghaznawid period. Editions by Ch. Schefer (*Chrestomathie persane*, i, 131-71) and Abbas Iqbal, Teheran 1312/1934 (detailed genealogy of Abu 'l-Maʿālī in the introduction); transl. H. Massé, *RHR*, 1926, 17-75. (H. Massé)

ABU 'L-MAʿĀLĪ ʿABD AL-MALIK [see al-Djuwaynī].

ABŪ MADYAN, Shuʿayb b. al-Ḥusayn al-Andalusī, famous Andalusian mystic, born about 520/1126 at Cantillana, a little town about 20 miles NNE of Seville. Sprung from a very modest family, he learnt the trade of weaver, but, impelled by an irresistible taste for knowledge, he learnt the Ḳurʾān and, as soon as he was able, went to N. Africa to complete his education. At Fez he was the disciple of renowned masters, who owed, however, their fame less to their theological learning than to their piety and their ascetic lives—men such as Abū Yaʿazzā al-Hazmīrī, ʿAlī b. Ḥirzihim, and al-Daḳḳāḳ. This last invested him with the *khirḳa*, the robe which bore witness to his vocation of ṣūfī; but his real initiator into the theories of mysticism seems to have been Abū Yaʿazzā. With the permission of this master, he left for the Orient. There he succeeded in absorbing the tradition of al-Ghazālī and of the great mystics. At Mecca he may have encountered the famous ʿAbd al-Ḳādir al-Gīlānī (d. 561/1166). He returned to the Maghrib, and settled at Bidjāya (Bougie), where he became known for his teaching and his exemplary life. His fame reached the ears of the Muʾminid ruler Abū Yūsuf Yaʿḳūb al-Manṣūr, who summoned him to the court at Marrākush, no doubt apprehensive about such religious prestige outside the Almohad sect. When within sight of Tilimsān (Tlemcen) Abū Madyan was taken ill and died (594/1197). Following his expressed wish he was buried at al-ʿUbbād, a village on the outskirts of Tlemcen, which was apparently already frequented by ascetics, but which, as his burial-place, was to become especially venerable.

The place which he occupies amongst the most important figures in western Islam is not due, strictly speaking, to his writings; at least, his only surviving writings are "a few mystical poems, a *waṣiyya* (testament), and an *ʿaḳīda* (creed)" (A. Bel). It is because of the memory of him handed down by his disciples, and the maxims attributed to him, that he bas been considered worthy to be regarded as a *ḳuṭb* (pole), a *ghawth* (supreme succour), and a *walī* (friend of God). The maxims proclaim the excellence of the ascetic life, of renunciation of this world's goods, of humility, and of absolute confidence in God. He used to say: "Action accompanied by pride profits no man; idleness accompanied by humility harms no man. He who renounces

calculation and choice lives a better life". He often repeated this line: "Say: Allah! and abandon all that is material or has to do with the material, if thou desirest to attain the true goal". Actually there is nothing original in his conception of ṣūfism, but the success of his doctrine and its long-continued influence can be explained by its conciliation of various tendencies and by the type of society which received it. "His great merit and his great success lie in his having realised, in a way that his hearers could understand, a happy synthesis of the influences which he had undergone. With him the moderate ṣūfism that Ghazālī had already, a century earlier, incorporated in Muslim orthodoxy, principally for the use of a privileged élite, is now adapted to the mentality of the North African believer, whether man of the people or literate ... Abū Madyan ... gave once and for all the keynote for North African mysticism" (R. Brunschvig).

The books of hagiography attribute miracles to him, and Tlemcen, where he died, adopted him as patron. His tomb, which became the centre of a fine architectural complex (mosque of al-ʿUbbād 737/1339, *madrasa* 747/1347, little palace, *ḥammām*) mainly built by the Marīnid sultan of Fez Abu 'l-Ḥasan, ruler of Tlemcen, is still a place of pilgrimage for the country people of the province of Oran and eastern Morocco.

(G. Marçais)

ABU 'L-MAḤĀSIN Djamāl al-Dīn Yūsuf b. **TAGHRĪBIRDĪ**, Arabic historian, born at Cairo, probably in 812/1409-10 (exact date doubtful). His father was a mamlūk from Asia Minor (Rūm) bought and promoted by Sultan al-Ẓāhir Barḳūḳ; under Sultan al-Nāṣir Faradj he became commander in chief of the Egyptian armies (*amīr kabīr*, *atābak*) in 810/1407, and in 813 viceroy (*nā'ib al-salṭana*) of Damascus, where he died early in 815/1412. The boy Yūsuf was brought up by his sister, wife of the chief ḳāḍī Muḥammad b. al-ʿAdīm al-Ḥanafī and then of the chief ḳāḍī ʿAbd al-Raḥmān al-Bulḳīnī al-Shāfiʿī (d. 824). He studied under many noted scholars the usual learned disciplines, and also music, Turkish and Persian. At the same time he had entrance to the Mamlūk court, became proficient in military exercises, and was granted a fief (*iḳṭāʿ*). He made the pilgrimage to Mecca in 826/1423, in 849/1445 (as a *bāshā* in the *ḥadjdj* escort), and again in 863/1459. In 836/1432 he took an active part in the Syrian campaign of Sultan Barsbāy, with whom he was on intimate terms (as he was with later sultans), and turned to the writing of history after he had heard al-ʿAynī's works read to that sultan.

His first important work was *al-Manhal al-Ṣāfī wa 'l-Mustawfī baʿd al-Wāfī*, biographies of the sultans and important amīrs and scholars from 650/1248 to 855/1451, but with some additions as late as 862/1458; an annotated résumé was published by G. Wiet in *MIE*, 1932, 1-480.

Next came *al-Nudjūm al-Zāhira fī Mulūk Miṣr wa 'l-Ḳāhira*, a history of Egypt from 20/641 to his own times, and continuing also the biographical series of the *Manhal*. It was written, he says, for himself and his friends, especially Sultan Djaḳmaḳ's son Muḥammad, and at first went only to the end of Djaḳmaḳ's reign, Muḥarram 857/Jan. 1453. Later he continued it to 872/1467 (see below). Editions: *Abû 'l-Mahasin ibn Tagri Bardii Annales*, from 20/641 to 365/976, ed. Juynboll and Matthes, 2 vols., Leiden 1855-61; *Abu 'l-Maḥâsin ibn Taghrî Birdî's Annals*, from 366/977 to 566/1171 and from 746/1345 to 872/14 7, ed. W. Popper (*Univ. of California Publ. in Semitic Philology*, ii, iii part I, v, vi, xii) Berkeley 1909-29; *al-Nudjūm al-Zāhira*, from 20/641 to 799/1397, Cairo 1348/1929 ff. (Dār al-Kutub al-Miṣriyya, al-Ḳism al-Adabī).

The death of al-Maḳrīzī in 845 and of al-ʿAynī in 855 left Abu 'l-Maḥāsin as Egypt's principal historian, and he wrote *Ḥawādith al-Duhūr fī Maḍa 'l-Ayyām wa 'l-Shuhūr*, chronicles from 845/1441 to 12 Muḥarram 874/July 16, 1469, to continue al-Maḳrīzī's *al-Sulūk li-Maʿrifat Duwal al-Mulūk*. Simultaneously he continued his own *Nudjūm*, but omitted from it much of the *Ḥawādith*'s fuller material regarding persons and economic and political conditions. Edition: *Extracts from Abu 'l-Maḥāsin ibn Taghrī Birdī's Chronicle Ḥawādith al-Duhūr*, ed. Popper (*Univ. Cal. Pub. in Semitic Phil.*, viii), 1930-42 (contains all passages not represented in *Nudjūm*, vol. vii).

Two other extensive historical works, not mentioned by him or his biographers, are ascribed to him: *Nuzhat al-Ra'y* for 678-747/1279-1346, and *al-Baḥr al-Zākhir fī ʿIlm al-Awwal wa 'l-Ākhir*, for 32-71/652-90.

He wrote also several condensations or extracts from his main works: *al-Dalīl al-Shāfī ʿala 'l-Manhal al-Ṣāfī*; *Kitāb al-Wuzarā'*; *al-Bishāra fī Takmilat al-Ishāra* (supplement to al-Dhahabī's *Ishāra*); *al-Kawākib al-Bāhira*; *Mansha' al-Laṭāfa fī Dhikr man Waliya'l-Khilāfa*; and *Mawrid al-Laṭāfa fī man Waliya'l-Salṭana wa'l-Khilāfa*, ed. with Latin translation by J. E. Carlyle, Cambridge 1798.

His works other than on history were: *Taḥārīf Awlād al-ʿArab fi 'l-Asmā' al-Turkiyya*; *al-Amthāl al-Sā'ira*; *Ḥilyat al-Ṣifāt fi 'l-Asmā' wa'l-Ṣināʿāt* (anthology of poetry, history and literature); *al-Sukkar al-Ḳādiḥ wa'l-ʿIṭr al-Fā'iḥ* (a poem of mystic content); and a short treatise on vocal music.

He left the manuscripts of his works to the tomb-mosque which he had built for himself. He died on 5 Dhu'l-Ḥidjdja, 874/5 June 1470.

Bibliography: Aḥmad al-Mardjī (the author's pupil and copyist of the *Manhal*), in *Nudjūm*, Cairo, i, Introd., p. 9; Sakhāwī, *Ḍaw'*, x, 305-8; Ibn al-ʿImād, *Shadharāt*, ix, 317; Ibn Iyās, *Badā'iʿ* (Kahle and Mustafa), iii, (5c), 43; Weil, *Chalifen*, iv, pp. xvii-xxi; v, pp. vii-xiv; E. Amar, in *Mélanges H. Derenbourg*, 1909, 245-54; G. Wiet, in *BIE*, 1930, 89-105; Brockelmann, II, 41, S II, 39; F. Wüstenfeld, *Die Geschichtsschreiber der Araber*, no. 490; Ḥādjdjī Khalīfa (Flügel), index, no. 4301; Babinger, 61.

(W. Popper)

ABU 'L-MAḤĀSIN Yūsuf b. Muḥammad b. Yūsuf al-**FĀSĪ**, Moroccan scholar, and Ṣūfī *shaykh* of repute, born in 938/1530-31, the ancestor of the Fāsiyyūn (vernacular Fāsiyyīn) family, which, since the 16th century, has provided the town of Fās with a long succession of scholars and jurists.

Abū'l-Maḥāsin al-Fāsī himself belonged to the Fihrite branch of the Banu 'l-Djadd, which, about 880/1475, had emigrated from Malaga, in Spain, to Morocco. He was born at al-Ḳaṣr al-Kabīr (or, in the Spanish form, Alcázarquivir), where his grandfather Yūsuf had settled after a stay of seven years at Fās (this is how he came to acquire the appellative al-Fāsī, which remained that of all his descendants). But it was to the capital of North Morocco that Abu'l-Maḥāsin al-Fāsī went to study, and there he finally settled, from 988/1580 onwards. He soon acquired there an exceptional reputation for learning and piety, and founded a *zāwiya* which has been much frequented ever since. In 986/1578, he took part in the famous battle of Wādi' l-Makhāzin against the Portuguese (see SAʿDIDS). He died on 18 Rabīʿ I 1013/14 August 1604. Among his most famous descendants should be mentioned his son Muḥammad al-ʿArabī al-Fāsī, author of a monograph on Abu 'l-Maḥāsin, the *Mir'āt al-Maḥāsin* (lith. at Fez in 1324), his grandson ʿAbd al-Ḳādir b. Alī [*q.v.*], and the son of the latter, ʿAbd al-Raḥmān [*q.v.*]. A genealogical table of the Fāsiyyūn family will be found in *Hist. Chorfa*, 242.

Bibliography: E. Lévi-Provençal, *Hist. Chorfa*, 240-41, and the numerous references mentioned *ibid.*, 240, n. 4, among which may be cited here only Ifrānī, *Ṣafwat man Intashar*, Fez, n. d., 27; Ḳādirī, *Nashr al-Mathānī*, Fez 1310, i, 89; Muḥibbī, *Khulāṣat al-Athar*, Cairo 1284, iv, 507; Kattānī, *Salwat al-Anfās*, Fez 1316, ii, 306 ff.; M. (E. LÉVI-PROVENÇAL)

ABŪ MANṢŪR ILYĀS AL-**NAFŪSĪ**, governor of Djabal Nafūsa and Tripolitania, on behalf of the Rustamid *imām* of Tāhart, Abu'l-Yakẓān Muḥammad b. Aflaḥ (d. 281/894-5). He came from Tindemīra, a village in the Djabal Nafūsa, but the exact dates of his birth and death are unknown. His province comprised the whole of Tripolitania, excepting the town of Tripoli which belonged to the Aghlabids. He had immediately to engage in conflict with the Berber Ibāḍī tribe of Zawāgha, who occupied the coast between Tripoli and Djerba. The tribe, which sought to free itself from dependence on the Nafūsa and had adopted the dissident doctrines of Khalaf b. al-Samḥ, revolted against Abū Manṣūr under the leadership of the son of Khalaf, who had taken refuge with them. Abū Manṣūr, attacked by the Zawāgha, defeated them with severe losses; their leader fortified himself on the island of Djerba, but his followers were bribed and delivered him up to Abū Manṣūr.

According to Ibn al-Raḳīḳ, quoted by al-Shammākhī, when in 266/879-80 the invader Abu 'l-ʿAbbās Aḥmad b. Ṭūlūn defeated the Aghlabid governor of Tripoli, Muḥammad b. Ḳurhub, and besieged the city for forty three days, the inhabitants called Abū Manṣūr to their help. He arrived with twelve thousand men, attacked Ibn Ṭūlūn outside the city and routed him.

ABŪ MANṢŪR [see AL-THAʿĀLIBĪ].

ABŪ MAʿSHAR DJAʿFAR B. MUḤAMMAD B. ʿUMAR AL-**BALKHĪ**, astrologer, usually known in western Europe as Albumasar, was born at Balkh in eastern Khurāsān, studied at Baghdād, and was a contemporary of the famous philosopher al-Kindī (first half of 3rd/9th century); after studying the Islamic traditions, he devoted himself particularly to the study of astronomy and astrology, and it is to the latter that he owes his celebrity. He benefited fully from the very flourishing state of astronomical studies in Baghdād, but had a decided preference for astrology. In any case, in his various astrological works it is possible to pick out the astronomical principles and laws that he derived from contemporary scholars. He died at Wāsiṭ, almost a centenarian, in 272/886.

In the works of Abū Maʿshar can be observed the influences exerted at that time on Arab learning by cultural currents from Persia (in the Pahlawi tongue), and, more indirectly, from India. But Abū Maʿshar not only benefited from the learning of his contemporaries; even in his own time he was reputed to be a plagiarist. The author of the *Fihrist*, on the authority of Ibn al-Muktafī, tells us that Abū Maʿshar plagiarized various authors, particularly the works of Sind b. ʿAlī, and these accusations are corroborated by modern criticism.

Among his numerous works may be cited:

(1) a collection of astronomical tables (*zīdj*), unfortunately lost, in which the movements of the planets were calculated for the meridian of Gangdiz (or Gangdez in Pahlawi), and in agreement with the Indian theory of millenary cycles (*hazārāt*).

(2) *al-Madkhal al-Kabīr* (The great introduction to Astrology), a treatise divided into eight books and still unpublished in Arabic, twice translated into Latin, first in 1130 by Johannes Hispalensis, then, in 1150, by Hermannus Secundus or the German. This work was to have a great influence in Christian Europe; the Latin manuscripts of it are numerous, and Hermann's translation was printed at Augsburg quite early, in 1489, under the title *Introductorium in astronomiam Albumasaris Abalachii octo continens libros partiales*; it was also printed in Venice in 1495 and again in 1506. It is important to note that this corpus of astrology contains an exposition of the theory of tides, and it can be said that medieval Europe learned the laws of the ebb and flow of the sea from it. There are in this theory, side by side with true observations, some completely fantastic explanations. The moon is made to influence also the winds, rainfall, and the whole sublunary world.

(3) *Aḥkām Taḥāwīl Sinī al-Mawālid*, translated by Johannes Hispalensis under the title *De magnis coniunctionibus et annorum revolutionibus ac eorum profectionibus octo continens tractatus*, printed at Augsburg in 1489, and at Venice in 1515. The Arabic text is found in Escurial ms. 917 (Brockelmann, I, 221, is wrong in supposing that this is a ms. of the preceding work), and also in ms. 2588 of the Bibl. Nat. of Paris. Nallino believed that the translation of *De magnis coniunctionibus* ... was from an Arabic original, *Dalālāt al-Ashkhās al-ʿUlwiyya* ('Indicazioni date dalle persone superiori dagli astri'), and Suter denied any connection between the *De magnis coniunctionibus* and the *Kitāb al-Ḳirānāt* which is also attributed to Albumasar; but, as J. Vernet points out in a recent article, there is a large measure of correspondence between the two works.

(4) *al-Nukat*, a sort of summary of the previous treatise, translated by Johannes Hispalensis under the title *Flores astrologiae*: the Arabic text is in Escurial ms. 918, 1, and 938, 5, and also in folios 1-29 of ms. 2588 of the Bibl. Nat., Paris. The Latin

translation was printed at Augsburg in 1488, at Venice in 1488, 1485, and 1506.

(5) *al-Ulūf fī Buyūt al-ʿIbādāt* was, judging by the quotations from it in later authors, a study on the temples built in the world in each millenary.

(6) *Mawālid al-Ridjāl wa'l-Nisāʾ*, a treatise on the horoscopes of men and women, divided into twelve chapters, and preserved in ms. Berlin no. 5881.

Some other works are also attributed to Abū Maʿshar, but their authenticity cannot be proved; in any case, they do not involve a different view of the scientific character of our author, which is almost exclusively astrological.

Bibliography: Brockelmann, I, 221, S I, 394; H. Suter, *Die Mathematiker und Astronomen der Araber*, 28, Nachtr., 162; Ibn al-Ḳiftī, *Taʾrīkh al-Ḥukamāʾ* (Lippert), 152; J. Lippert, *Abū Maʿshars Kitāb al-ulūf*, *WZKM*, 1895, 351-8; M. Steinschneider, *Die europäischen Übersetzungen*, 35-8; P. Duhem, *Le système du monde*, ii, 369-860; C. Nallino, *Scritti*, iv, 331-2; G. Sarton, *Introd. to the Hist. of Science*, i, 568; J. Vernet, *Problemas bibliográficos en torno a Albumasar*, Barcelona 1952. (J. M. Millás)

ABŪ MAʿSHAR Nadjīḥ b. ʿAbd al-Raḥmān **al-Sindī** al-Madanī, a slave from the Yaman, possibly of Indian parentage, who purchased his freedom and lived in Medina. He was considered a rather "weak" *ḥadīth* scholar, but he is deservedly famous as the author of a Kitāb al-Maghāzī. Numerous fragments of it have been preserved by al-Wāḳidī and Ibn Saʿd. Among his authorities he mentions Nāfiʿ, the *mawlā* of Ibn ʿUmar, Muḥammad b. Kaʿb al-Ḳuraẓī, and other scholars of Medina. In the year 160/776-7, he left Medina and remained in Baghdād until his death in Ramaḍān (?) 170/787. There he enjoyed the favor of several members of the court of the ʿAbbāsid caliphs. Al-Ṭabarī has taken from him information on Biblical history and on Muḥammad's life and especially chronological statements, the latter going down to the very year of his death.

Bibliography: Brockelmann, S I, 207; Bukhārī, *Taʾrīkh*, Ḥaydarābād 1360, 114; Ibn Ḥibbān, *Madjrūḥīn* (ms. Āyā Ṣōfiya 496, fol. 234); Ibn ʿAdī, *Duʿafāʾ* ms. Topkapu Sarāy, Ahmet III, 2943, iii, fols. 183b-185a); al-Khaṭīb al-Baghdādī, *Taʾrīkh Baghdād*, xiii, Cairo 1349/1931, 457-62; Ibn Ḥadjar, *Tahdhīb*, x, Ḥaydarābād 1325-7, 419-22; Dhahabī, *Nubalāʾ* (ms. ABŪ MIDFAʿ [see sikka].

ABŪ MIḤDJAN ʿAbd Allāh (or Mālik or ʿAmr) b. Ḥabīb, Arab poet of the Thaḳīf tribe, counted as one of the *mukhaḍramūn*. After taking part in the defence of al-Ṭāʾif against Muḥammad, when he wounded with an arrow a son of Abū Bakr (in 8/630), he was converted in 9/631-2 and fought at al-Ḳādisiyya. The story goes that, in order to take part in this battle, he escaped first from his escort (for ʿUmar had banished him to Ḥaḍawḍa, see Goldziher, *Abhandl.*, i), then managed to obtain provisional liberty, thanks to the wife of Saʿd b. Abī Waḳḳāṣ; Saʿd had imprisoned him for drunkenness, but the poet's conduct in the battle—which has been somewhat embroidered by the historians—won for him the general's pardon. It is possible that Abū Miḥdjan also took part in the battle of Vologesias (Ullays). In 16/637 he was again exiled by ʿUmar to Nāsiʿ, and died shortly afterwards; it is said that his tomb was to be seen on the frontier of Ādharbāydjān or of Djurdjān.

The fragments of his poetry that have been preserved show no originality, but his reputation as a poet is upheld mainly by his bacchanalian songs (the famous line: 'When I die, bury me at the foot of a vine . . .' is attributed to him); and a group of poems in which he openly challenges the Ḳurʾān's prohibition of wine must be taken seriously. It was this attitude that led to his being banished several times by ʿUmar.

This poet should not be confused with his namesake Abū Miḥdjan Nuṣayb b. Rabāḥ, on whom see nuṣayb.

Bibliography: The *dīwān* of Abū Miḥdjan has been edited by C. Landberg, *Primeurs arabes*, i, Leiden 1886 (another ed., Cairo n. d., with a commentary by al-ʿAskarī), and by Abel, Leiden 1887 (with a biography and a Latin translation). Accounts of him are to be found in Djumaḥī, *Ṭabaḳāt* (Cairo), 105-6; Ibn Ḳutayba, *Shiʿr*, 251-3; Masʿūdī, *Murūdj*, iv, 213-19; *Aghānī*[1], xi, 137-43, xxi, 210-24; Ibn Ḥadjar, *Iṣāba*, iv, no. 1017; Baghdādī, *Khizāna* (Būlāḳ), iii, 550-6; Caetani, *Annali*, v, 224 sqq.; Brockelmann, I, 40, S I, 70; O. Rescher, *Abriss*, i, 105-7; Nallino, *Scritti*, vi, 46.

(N. Rhodokanakis-Ch. Pellat)

ABŪ MIKHNAF Lūṭ b. Yaḥyā b. Saʿīd b. Mikhnaf al-Azdī, one of the earliest Arabic traditionists and historians, d. 157/774. He is credited in the *Fihrist* with 32 monographs on diverse episodes of Arab history, relating mainly to ʿIrāḳ, much of the contents of which is preserved in the chronicles of al-Balādhurī and al-Ṭabarī. The separate works which have come down to us under his name are later pseudographs. His great-grandfather Mikhnaf was the leader of the 'Irāḳī Azd on the side of 'Alī (for him see Ibn Saʿd, vi, 22 and Naṣr b. Muzāḥim, *Waḳʿat Ṣiffīn* (Cairo 1365), index); on the whole, however, Abū Mikhnaf presents an ʿIrāḳī or Kūfan, rather than purely Shīʿite, point of view in his historical narratives. As a traditionist he is regarded as weak and unreliable.

Bibliography: *Fihrist* 93; Ṭūsī, *List*, no. 575; Kutubī, *Fawāt*, ii, 175 (ed. Cairo 1951, no. 360); Brockelmann, I, 65; S I, 101-2; Storey, ii, 229; J. Wellhausen, *Ar. Reich*, pref. III-V (brief characterization of his materials and method); F. Wüstenfeld, *Der Tod Husains und die Rache* (*AGGW*, 1883); Bartold in *Zapiski Vostoch. otd. imper. arkheol. obshch.*, xvii, 147 ff.; R. E. Brünnow, *Die Charidschiten*, Leiden 1884.

(H. A. R. Gibb)

ABŪ MUḤAMMAD ʿAbd Allāh b. Muḥammad b. **BARAKA** al-ʿUmānī, commonly called Ibn Baraka, Ibāḍite author from the township of Bahlā in ʿUmān. The precise dates of his life are not known, but an ʿUmānī Ibāḍite writer, Ibn Mudād, regards him as a disciple and partisan of the imām Saʿīd b. ʿAbd Allāh b. Maḥbūb, killed in 328/939-40. He himself played a considerable part in the political life of ʿUmān and composed several historical and juridical works, of which only the following are extant: 1. *al-Djāmiʿ*, on the principles of law; 2. *al-Muwāzana*, on the condition of ʿUmān at the time of the imām al-Ṣalt b. Mālik, and dealing also with certain points of principle and their juridical solutions; 3. *al-Sīra*, somewhat similar to the preceding work; 4. *Madḥ al-ʿIlm*, in praise of

knowledge and those who pursue it; 5. *al-Taḳyīd*; 6. *al-Ta^cāruf*; 7. *al-Sharḥ li-Djāmi^c Ibn Dja^cfar*, doubtless a commentary on *al-Djāmi^c*, a work by Abū Djābir Muḥammad b. Dja^cfar al-Azkawī of ^cUmān, dealing with the application of legal principles.

Bibliography: Sālimī, *Tuḥfat al-A^cyān fī Sīrat Ahl ^cUmān*, i, Cairo 1332, 153, 166, 167; idem, *al-Lam^ca* (in a collection of six Ibāḍī works published in Algeria, 1326), 210-1; *al-Siyar al-^cUmāniyya*, ms. Lwow, foll. 183v-198v and 271r; E. Masqueray, *Chronique d'Abou Zakaria*, Algiers 1878, 139, n.: A. de Motylinski, *Bibliographie du Mzab*, in *Bull. de Corr. Afr.*, Algiers 1885, 19, nos. 19 and 20. (T. Lewicki)

ABŪ MUḤAMMAD ṢĀLIḤ b. Yanṣāran b. Ghafiyyān al-Dukkālī al-Mādjirī, famous Moroccan saint of the 6th-7th century A. H., patron of the town of Āsfī [*q.v.*], the present-day Safi. Born about 550/1155, his principal master was the famous Abū Madyan [*q.v.*] al-Ghawth, patron of Tilimsān (Tlemcen). He went on pilgrimage to Mecca and is believed to have stayed in Alexandria twenty years to follow the teaching of the ṣūfī ^cAbd al-Razzāḳ al-Djazūlī, who was of Moroccan origin. After his return to Morocco he became the propagandist among his fellow-countrymen of the *ḥadjdj* and *ṭalab al-^cilm* in the East, and retired to the *ribāṭ* of Asfī, where he died on 25 Dhu 'l-Ḥidjdja 631/22 September 1234. A monograph on him, entitled *al-Minhādj al-Wāḍiḥ fī Taḥḳīḳ Karāmat Abī Muḥammad Ṣāliḥ*, was written by his great-grandson Aḥmad b. Ibrāhīm b. Aḥmad b. Abī Muḥ. Ṣāliḥ.

Bibliography: Ibn Farḥūn, *Dībādj*, Cairo 1329, 132; Bādisī, *Maḳṣad*, tr. G. S. Colin, in *AM*, 1926, 92, 195 (n. 295); Kattānī, *Salwat al-Anfās*, Fez 1316, ii, 43-44; Lévi-Provençal, *Fragments historiques sur les Berbères au Moyen Age*, Rabat 1934, 77-8; idem, *Hist. Chorfa*, 221 and n. 3. (E. Lévi-Provençal)

ABŪ MŪSĀ [see al-Ash^carī].

ABŪ MUSLIM, leader of the revolutionary ^cAbbāsid movement in Khurāsān. He was of obscure antecedents, probably a slave of Persian origin, in the service of the Banū ^cIdjl in Kūfa. Here he made contact with the *shī^ca* and in 119/737 he is found amongst the followers of the *ghālī* al-Mughīra b. Sa^cīd. In 124/741-2, the Khurāsānian *nuḳabā'* of the ^cAbbāsids, proceeding to Mecca, found him in prison. They liberated him and took him to the Imām Ibrāhīm b. Muḥammad. After instructing him, the Imām sent him in 128/745-6 to Khurāsān with the mission of directing the movement of insurrection in that province.

On arrival in Khurāsān and after overcoming the initial hostility of the local chiefs of the movement (especially Sulaymān b. Kathīr), Abū Muslim managed with dexterity and energy to reap the fruits of the long ^cAbbāsid propaganda. On 1 Shawwāl 129/15 June 747 the black banners of the insurgents were publicly raised. Profiting by the internal discords of the Umayyad army, Abū Muslim gained support among the Yamanites, and succeeded in taking Marw in Rabī^c II or Djumādā I 130/December 747 or January 748. From there his generals operated in all the surrounding regions; one of them, Ḳaḥṭaba b. Shabīb [*q.v.*], took up the pursuit of the Umayyad forces towards the west, which was to end in the fall of the dynasty.

After the proclamation of al-Saffāḥ as caliph, Abū Muslim remained as governor in Khurāsān, ensuring, on the one hand, internal security (suppression of the Shī^cite revolt in Bukhārā, 133/750-1), and extending, on the other hand, the Islamic conquest towards the east (expedition of Abū Dā'ūd, the same year). His relations, however, with the new dynasty, which in great part owed to him its success, became increasingly strained. It does not seem that there was, on his part, an actual design of revolt, nor do the assertions of some heresiographers, followed by modern scholars, that he was carrying on an extremist religious propaganda, seem to correspond to the truth. His great prestige and power, however, were enough in themselves to alarm the ^cAbbāsids. The accession of al-Manṣūr in 136/753-4 marks the beginning of the crisis. After making use of Abū Muslim against his uncle ^cAbd Allāh b. ^cAlī [*q.v.*], he invited him to present himself at court. Abū Muslim, after long hesitation, suspecting, but not fully crediting, what was waiting for him, decided to do as he was bid, and was treacherously killed. His memory remained alive in the Eastern provinces, and, starting with the movement of al-Muḳanna^c [*q.v.*], gave rise, during many years, to political and religious agitation.

Bibliography: Dīnawarī, *al-Akhbār al-Ṭiwāl* (Guirgass), Ya^cḳūbī, Ṭabarī, indexes; *Aghānī, Tables*; G. van Vloten, *De Opkomst der Abbasiden in Chorasan*, Leiden 1890, 70-131; J. Wellhausen, *Das arabische Reich und sein Sturz*, 323-52; R. N. Frye, *The Role of Abū Muslim in the ^cAbbāsid Revolt*, *MW*, 1947, 28-32; S. Moscati, *Studi su Abū Muslim, I-III*, *Rend. Linc.*, 1949, 323-35, 474-95; 1950, 89-105. (S. Moscati)

ABU 'l-MU'THIR al-Ṣalt b. Khamīs al-Bahlawī al-^cUmānī, Ibāḍī historian and lawyer, native of Bahlā' in ^cUmān. His exact dates are not known; but he is counted among the Ibāḍī scholars of the second half of the 3rd/9th century. He left valuable literary materials, especially in the field of history, and also took an active part in the political life of his time, being a zealous partisan of the *imām* al-Ṣalt b. Mālik, deposed in 273/886-7.

Among his works, the following are worthy of note: (1) *al-Aḥdāth wa 'l-Ṣifāt*, devoted to events in ^cUmān at the time of al-Ṣalt b. Mālik, and to the circumstances of his deposition; (2) *al-Bayān wa 'l-Burhān*, on the principle of the institution of the Imamate in connection with the affair of al-Ṣalt; (3) *al-Sīra*, containing information about the important figures of the earliest period of Ibāḍism. — MSS of these three books were in the possession of S. Smogorzewski. (4) *Tafsīr al-khams mi'at Āya*, commentary on five hundred verses dealing with forbidden and permitted things.

Bibliography: Sālimī, *Tuhfat al-A^cyān fī Sīrat Ahl ^cUmān*, 1332, i, 65-6, 153; idem, *al-Lam^ca* (in a collection of six Ibāḍī works, published in Algeria, 1326), 219; E. Masqueray, *Chronique d'Abou Zakaria*, Algiers 1878, 139, note; *al-Siyar al ^cUmāniyya*, MS Lwow University, fol. 3r-16v, 17r-25r, 37r-47v, 115v-120r, 268r, 270v; A. de Motylinski, *Bibliographie du Mzab*, *Bull. de Corr. Afr.*, 1885, 20, no. 27; S. Smogorzewski, *Matériaux pour servir à la bio-bibliographie ibāḍite* (unpublished). (T. Lewicki)

ABŪ NAḌḌĀRA, Ya^cḳūb b. Rafā'īl Ṣanū^c (also James Sanua), prolific Jewish Egyptian journalist and playwright (1839-1912). He indirectly influenced the ^cUrābī Revolt by teaching, lecturing, writing and performing short satirical plays and first starting the publication of *Abū Naḍḍāra Zarḳā'* ("the man with green spectacles"),

an anonymous lithographic sheet, enlivened by cartoons, in the Egyptian fallāḥīn dialect. Because he had criticized the Khedive and his counsellors, he had to leave Egypt in 1878; but he continued to publish his newspaper in Paris intermittently, in Arabic and French, and smuggled it into Egypt under various names. Copies also reached North Africa, Syria und India. Besides Abū Naḍḍāra himself, many characters drawn from Egyptian life appeared in his newspapers, notably the greedy *shaykh al-ḥāra* (the Khedive Ismāʿīl), officials, merchants, brokers, beggars, etc. They expressed their views in conversation form, letters, short plays, and minutes of meetings. He also contributed articles to various French newspapers. Besides his plays —of which he claims to have written over 30 (one preserved in Arabic)—he published a few stories and pamphlets, of little literary value. His political-journalistic activity in his exile had two phases. In the first, until 1882, he attacked the Khedives Ismāʿīl and Tawfīḳ, and encouraged the National Party and its supporters. In the second phase, after the failure of the ʿUrābī Revolt and the exile of its leaders, he inveighed against the British and their Egyptian supporters; called on France and Turkey to oust the British; proposed Prince Ḥalīm, son of Muḥammad ʿAlī, for the throne of Egypt; and campaigned, albeit perfunctorily, for the betterment of the lot of the fallāḥīn. All in all, he was the creator of the satirical newspaper and the modern satirical play in Arabic.

Bibliography: Brockelmann, S III, 265-6; Yūsuf Ilyān Sarkīs, *Muʿdjam al-Maṭbūʿāt al-ʿArabiyya*, 349-50; F. Ṭarrāzī, *Taʾrīkh al-Ṣiḥāfa al-ʿArabiyya*, ii, 238, 247, 283, 284, 354; iii, 8-9; id., *Arabic periodicals fascicle*, 1933, 162-3, 372-7, 398-9; Ibrāhīm ʿAbduh, *Taṭawwur al-Ṣiḥāfa al-Miṣriyya*, 1945, 107, 235, 236; J. Heyworth-Dunne, *Society and politics in modern Egyptian literature*, in *Middle East Journal*, July 1948, 309-10; I. Krachkovskij, in *Vostok*, 1924, 165-8; Aimé Vingtrinier, *Abou Naddara à Constantinople*, 1897; J. M. Landau, *Abū Naḍḍāra, an Egyptian Jewish Nationalist*, in *Journal of Jewish Studies*, 1952, 30-44. (J. M. Landau)

ABU 'L-NADJM al-Faḍl (al-Mufaḍḍal) b. Ḳudāma al-ʿIDJLĪ, Arab poet of the 1st/7-8th century (d. after 105/724). Although he composed several *ḳaṣīdas*, he owes his celebrity to his verses in *radjaz* in which he treats of beduin subjects (descriptions of camels, horses, ounces, etc.), and eulogizes the Umayyads ʿAbd al-Malik, Hishām, ʿAbd al-Malik b. Bishr, and the governor al-Ḥadjdjādj. The critics, who include him among the four best *rudjdjāz* (with his fellow-tribesman al-Aghlab and the two Tamīmites of al-Baṣra, al-ʿAdjdjādj and his son Ruʾba), rank him highest for description, and praise his facility for improvisation. His rivalry with al-ʿAdjdjādj (Muḍar against Rabīʿa) is famous, and the biographers describe a grotesque scene in which, at the *Mirbad*, Abu 'l-Nadjm mounted on a he-camel puts to flight his rival and his she-camel, and recites the well-known line: 'I and every poet of the human race [have demons to inspire us]: his is female and mine male'. Nevertheless it was Ruʾba who gave the name *Umm al-radjaz* to a long *ardjūza* which Abu 'l-Nadjm recited to Hishām, whose wrath was aroused by an ill-chosen word; he was soon received back into favour, however, and received from Hishām an endowment in the Sawād of al-Kūfa.

Bibliography: Brockelmann, S I, 90; Rescher, *Abriss*, i, 223; Nallino, *Scritti*, vi, 98. A biographical account and some verses are to be found in Ibn Sallām, *Ṭabaḳāt* (Hell), 148, 149-50; Ibn Ḳutayba, *Shiʿr*, 381-6; *Aghānī*[1], ix, 77-83; Baghdādī, *Khizāna*, i, 103, ii, 340-53; *MMIA*, 1928, collects together the biographical data (385-94), and publishes the *Umm al-radjaz* (472-9). A *lāmiyya* has been published by Maymanī, *al-Ṭaraʾif al-adabiyya*, Cairo 1937, 55-71, and there are scattered verses in a number of works, particularly al-Djāḥiẓ, *Bayān* and *Ḥayawān*[2], in the indexes; Aṣmaʿī, *Fuḥūla*, *ZDMG* 1911, 499, 503, 511, 515; Abū Tammām, *Ḥamāsa* (Freytag), 45, 144, 514, 755; Marzubānī, *Muʿdjam*, 310; ʿAskarī, *Dīwān al-Maʿānī*, i, 113, 279. (Ch. Pellat)

ABŪ NAṢR [see al-fārābī].

ABŪ NUʿAYM AL-IṢFAHĀNĪ, Aḥmad b. ʿAbd Allāh b. Isḥāḳ b. Mūsā b. Mihrān al-Shāfiʿī, born in Iṣfahān in Radjab 336/Jan.-Feb. 948 (Ibn Khallikān: or 334, Yāḳūt, *Buldān*, i, 298, 330), d. Monday 21 Muḥarram (Ibn Khallikān: or Ṣafar; Yāḳūt: Monday 20 Muḥarram; Dhahabī, Subkī: 20 Muḥarram) 430/23 Oct. 1038, an authority on *fiḳh* and *taṣawwuf*. His grandfather Muḥ. b. Yūsuf was a well known ascetic, the first of his kin to accept Islam (Ibn Khallikān). Abū Nuʿaym mentions him as his forerunner in *Ḥilyat al-Awliyāʾ* (i, 4). His father who also was a scholar (Yaḳūt, *Buldān*, iv, 344) had him taught by important teachers, such as Djaʿfar al-Khuldī and al-Aṣamm, from his sixth year. From 356/967 he travelled and studied in ʿIrāḳ, Ḥidjāz and Khurāsān, and for 14 years he was reckoned as one of the best *ḥadīth*-authorities. This is stated by his contemporary al-Khaṭīb al-Baghdādī who quotes him (*Taʾrīkh Baghdād*, xii, 407, 412) and by al-Dhahabī and al-Subkī, but neither al-Khaṭīb nor Yāḳūt include him in their biographies of learned men. The number of those who transmitted *ḥadīth* from him is said to be about eighty. Al-Sulamī, his older contemporary, quotes one *ḥadīth* on his authority with one intermediary (*Ṭabaḳāt al-Ṣūfiyyah* sub Abu 'l-ʿAbbās b. ʿAtāʾ). Al-Khaṭīb, according to al-Subkī one of his nearest pupils, criticises him for treating *idjāza*'s lightly, but is in this contradicted by al-Dhahabī, 278. The strife between Ḥanbalites and Shāfiʿites caused sharp criticism of him by his fellow townsman Abū ʿAbd Allāh b. Mandah (cf. Brockelmann, S i, 281) and led to bodily attacks on him. He was even expelled from the mosque of Iṣfahān, which saved his life as, according to tradition, Subuktigīn, when he conquered the town, massacred the people assembled in the mosque at the Friday-service; this is reckoned one of his *karāmāt*. Al-Nabhānī (cf. Brockelmann, S II, 763 f.) relates that the mosque fell down twice and crushed the crowd because A. N. had cursed it. Abū Nuʿaym's work *Ḥilyat al-Awliyāʾ wa-Ṭabaḳāt al-Aṣfiyāʾ* (Cairo 1351/1932-1357/1938) was finished in 422/1031 (see x, 408). It was written to strengthen what he regarded as the true ṣūfism (i, 4). After a general description of ṣūfism he mentions the different etymologies of the word, above all its derivations from *ṣūf*, on which he had written a book *Labs al-Ṣūf*, stressing its connotation of humility (i, 20, 23). The rest consists in accounts of and sayings by 649 pious people (*nussāk*) reckoned as ṣūfis, beginning with the four "righteous caliphs"—an evidence of the interpenetration of ṣūfism and orthodoxy. Every section begins with "the *shaykh* (Abū Nuʿaym) said". It differs from al-Sulamī's *Ṭabaḳāt*, which gives only sayings with few or no anecdotes. It is told that he brought the work personally to Nīsābūr

where he sold it for 400 dīnārs. Extracts from it are used in Ibn al-Djawzī, *Ṣafwat al-Ṣafwa*.

His second large work, *Dhikr Akhbār Iṣbahān* (ed. S. Dedering, Leiden 1931) contains biographies of people who had connexions with Iṣfahān, mainly scholars, after a short history and topography of the town. On this topic he had several forerunners (cf. Dedering ii, p. VIII-X). Besides these works he wrote several smaller books on the proofs of prophecy, the medicine of the prophet, the excellence of Muḥammad's first followers, with extracts from al-Bukhārī and Muslim etc. He died in Iṣfahān and his tomb is said by Yāḳūt (i, 298) to be in Murdbāb.

(J. PEDERSEN)

ABŪ NUʿAYM AL-FAḌL B. DUKAYN AL-**MULĀʾĪ**, *ḥadīth* scholar and historical informant (b. 130/748, d. 29 Shaʿbān 219/8 Sept. 834).

He was a client of the family of Muḥammad's Companion Ṭalḥa. He lived in al-Kūfa and made occasional visits to Baghdād, where he was once received by al-Maʾmūn. Dukayn's actual name is said to have been ʿAmr. A son of Abū Nuʿaym, ʿAbd al-Raḥmān (perhaps the author of the Ḳurʾān commentary, referred to in *Fihrist*, 34), and a grandson, Aḥmad b. Mītham, are mentioned.

Abū Nuʿaym is considered a very reliable transmitter of traditions. He is also highly praised for the courageous way in which he stood up for the uncreatedness of the Ḳurʾān against Muʿtazila inquisitors. On the other hand, he was suspected of being a Shīʿite. He admitted his secret veneration for ʿAlī, though he wanted it understood that he was moderate in his attitude. He moved in ʿAlid circles, and appears quite often as a transmitter of information about Ṭālibids and ʿAlids (cf., for instance, Ibn Saʿd, iii, 160; iv/1, 23 ff., 30; v, 66 ff., 236-8; Abu 'l-Faradj al-Iṣfahānī, *Maḳātil al-Ṭālibiyyīn*, Cairo 1368/1949, 46). He was acceptable to and respected by both Shīʿites and ʿAbbāsids. When he died, a descendant of Abū Ṭālib prayed for him first. Then, the ʿAbbāsid governor of al-Kūfa, a fifth cousin of the reigning caliph al-Muʿtaṣim, insisted upon repeating the ceremony.

Of Abū Nuʿaym's work nothing has come to light so far, except the frequent references of the historians to him. He appears as a transmitter mainly of biographical data but also of some general historical information. He himself probably never published any historical work. *Fihrist*, 227, credits him with two works concerned with ritualistic and legal problems, a *Kitāb al-Manāsik* and a *Kitāb al-Masāʾil fi 'l-Fiḳh*.

(FR. ROSENTHAL)

ABŪ NUMAYY I and **II**, sharīfs of Mecca [see MAKKA].

ABŪ NUWĀS AL-ḤASAN B. HĀNIʾ AL-ḤAKAMĪ, the most famous Arabic poet of the ʿAbbāsid period. He was born in al-Ahwāz between 130/747 and 145/762 and died in Baghdād between 198/813 and 200/815 (so also Ḥamza al-Iṣbahānī, MS Fātiḥ 3773, fol. 6r). As his *dīwān* contains a *marthiya* on al-Amīn (d. 198/873), earlier dates are improbable. His father belonged to the army of the last Umayyad, Marwān II, and was a *mawlā* of al-Djarrāḥ b. ʿAbd Allāh al-Ḥakamī, who came from the South Arabian tribe of Saʿd b. ʿAshīra; hence the *nisba* of Abū Nuwās and his dislike of the Northern Arabs. His mother Gullabān (= Gulbān) was Persian.

While still very young, Abū Nuwās came to Baṣra, and later to Kūfa. His first master was the poet Wāliba b. al-Ḥubāb, who is said to have been in erotic relationship with him. After Wāliba's death (cf. the *marthiya*, *Dīwān*, Cairo 1898, 132), he became the pupil of the poet and *rāwī* Khalaf al-Aḥmar. He acquired a knowledge of the Ḳurʾān and *ḥadīth* also, and studied under the grammarians Abū ʿUbayda, Abū Zayd, etc. He is also said to have spent, according to the old custom, some time among the beduins in order to improve his linguistic knowledge.

His education finished, Abū Nuwās came to Baghdād, to gain the favour of the caliph with panegyrics. He found, however, little favour at the court, but was better received by the Barmakids. After the fall of the Barmakids he had to flee to Egypt, where he composed panegyrics on the head of the *dīwān al-kharādj*, al-Khaṭīb b. ʿAbd al-Ḥamīd. Soon, however, he was able to return to his beloved Baghdād, where he now spent, as a boon companion of al-Amīn, the most brilliant years of his life. Nevertheless, even al-Amīn once prohibited him from wine drinking and even imprisoned him on that account.

There are different reports about his death. According to one tradition he died in prison, to which he had been sent on account of a blasphemous verse, according to another in the house of a woman tavern-keeper, according to a third in the house of the learned Shīʿite family of the Āl Nawbakht. He was linked to this family, especially to Ismāʿīl b. Abī Sahl al-Nawbakhtī, by close friendship, though this did not prevent him from composing some wounding lampoons on Ismāʿīl (*Dīwān*, 171 f.). The assertion, therefore, that he was murdered by the Nawbakhtīs is probably mere slander, especially as this family interested itself even later in the collection of Abū Nuwās' poems and Ḥamza al-Iṣbahānī made use of information derived from them (cf. MS Fātiḥ 3773, fol. 3v).

The Arab literary critics themselves regarded Abū Nuwās as the representative of the modern school of poets, the *muḥdathūn*. "What Imraʾ al-Ḳays was for the ancients, that is Abū Nuwās for the moderns" (Fātiḥ 3773, fol. 7r). At most, only Bashshār b. Burd could possibly compete with him. Although in his panegyrics Abū Nuwās still uses in general the classical form (cf. e.g. *Dīwān*, 77, the panegyric known as *manhūka*, addressed to al-Faḍl b. al-Rabīʿ, to which Ibn Djinnī devoted an extensive commentary), otherwise the old forms, especially that of the *nasīb*, serve as a butt for his ridicule. Once he begins abruptly: "I do not weep because the dwelling-place has become an inhospitable desert" (Fatih 3775, fol. 12r); instead of the

former dwelling-place of the beloved he weeps for the taverns that have disappeared and bewails the boon-companions dispersed far and wide (cf. also the poem translated by H. Ritter, *Orientalia* i, Istanbul 1932).

Abū Nuwās is at his best in his songs on wine and pederasty. He is not only able to sing in ever fresh accents the delights of both, but also depicts with humorous realism his adventures in this field. Nor does he avoid self-irony, as when he describes the thrashing which he received at the hands of youths whom he had made drunk in order to amuse himself with them (cf. e.g. Fātiḥ 3775, fol 21). Equally ironical are the dirges which he composed about his own body, wasted by illness (*Dīwān*, 131 f.). Abū Nuwās confesses his sins with remarkable frankness and often also invites his fellow-men to repent likewise. He calls upon those who reproach him to leave him alone as their blame only incites him all the more; nor does he intend to mend his ways until the grave. He boasts of having omitted nothing that displeases God, except polytheism (*Dīwān*, 281), and ridicules all the institutions of Islam. His verses against Islam do not spring however, from any intellectual principle, but from his love of pleasure, to which the commandments of Islam were a hindrance. Finally, he too sets his hopes in God's forgiveness and considers himself too unimportant for God to take notice of his deeds (Fātiḥ 3775, fol. 16). His ascetic poems do not serve to prove that he repented in old age; they could have been composed in transient moods or as occasional poems due to special impulses. Otherwise, too, there are frequent contradictions in the *dīwān*; they ought not to be taken as proofs of a change of mind or of dishonesty, as Abū Nuwās was more interested in the witty formulation of his ideas than in the content of the idea itself.

Poems about love of women are rare in comparison with those on love of boys. It is said that only once Abū Nuwās fell in love with a girl, a slave called D̲janān. It is true that Ḥamza al-Iṣbahānī denies this emphatically and enumerates a long list of women with whom Abū Nuwās was allegedly in love (Fātiḥ 3774, fol. 76 v); but these are only names taken from the poems and are perhaps even fictitious.

The *dīwān* of Abū Nuwās contains, for the first time in Arabic literature, a special chapter containing hunting-poems. They mostly describe hounds, falcons and horses, but also various kinds of game, and are remarkable for the richness of their vocabulary. Abū Nuwās had models for this genre in the descriptions of animals in the old beduin poetry, but he seems to have made it into an independent genre. Later on it was further developed by Ibn al-Muʿtazz.

The language of Abū Nuwās, though he uses some contemporary vernacular expressions, is on the whole correct. The mistakes which he makes were already usual among his predecessors (cf. J. Fück, *Arabiya*, 51 ff.). In certain groups of his poems Persian words occur very frequently (e.g. in *das̲h̲t-i biyābān*, Fātiḥ 3775, fol. 29, a whole *iḍāfat*-construction). Altogether, Persian civilization plays a considerable role in his poetry (cf. Gabrieli, *OM*, 1953, 283). We often find him referring to the heroes of Persian history, but as the old Arabs are also mentioned, this has certainly no special significance, and Abū Nuwās can hardly be called a poet of the *shuʿūbiyya*. His work only reflects the cultural background of the ʿAbbāsid epoch, in which the influence of the Iranian element gradually increased.

In the imagination of the Arabic world the figure of Abū Nuwās is intimately connected with that of Hārūn al-Ras̲h̲īd, who personifies in his turn the the glory of the caliphate. Thus he entered the *Arabian Nights* and still today he is a favourite figure of popular stories, where he most often plays the role of a court jester. (Cf. A. Schaade, *Zur Herkunft der Urform einiger Abū Nuwās Geschichten in 1001 Nacht*, *ZDMG*, 1934, 259 ff.; idem, *Weiteres zu Abū Nuwās in* 1001 *Nacht*, *ZDMG*, 1936, 602 ff.; W. H. Ingrams, *Abū Nuwās in Life and in Legend*, London 1933, cf. Schaade in *OLZ*, 1935, 525-7.)

Abū Nuwās did not himself make a collection of his poems. Thus, on the one hand much has been lost—more especially his poems written in Egypt remained unknown in ʿIrāk (cf. Fātiḥ 3773, fol. 4r); on the other hand, many poems, especially on wine and pederasty, were falsely attributed to him. His *dīwān* is extant in several recensions, of which the two most important are due to al-Ṣūlī and Ḥamza al-Iṣbahānī (for the latter, see E. Mittwoch, in *MSOS*, 1909, 156 ff.). While al-Ṣūlī aimed at excluding all spurious poems and arranged the poems, within the separate chapters, in strict alphabetical order, Ḥamza shows a less critical sense, as one could never know if a suspect poem as not after all genuine. Thus his collection is about three times as large as that of al-Ṣūlī, and contains about 1500 poems with 13,000 lines. Moreover, he adds to many verses *ak̲h̲bār*, which are missing in al-Ṣūlī, and to some chapters adds a commentary. He also incorporated in his collection the so called "*Risāla* of the Syrian on the *sariḳāt* of Abū Nuwās", addressed to him by Muhalhil b. Yamūt. Ahlwardt's edition of the wine-songs follows the recension of al-Ṣūlī, while the printed edition of Cairo 1898 is based on that of Ḥamza. Today we have for both recensions better MSS—especially in Istanbul—than those that were available at the time of these editions.

(EWALD WAGNER)

ABŪ RIG̲H̲ĀL, mythical person, about whom two entirely different traditions can easily be distinguished. According to the first, he was a T̲h̲aḳafite of Ṭāʾif who guided Abraha [*q.v.*] on his

way to Mecca. He died in al-Mughammas [*q.v.*] and was buried there. It was the custom to stone his tomb. (For a similar custom cf. AL-DJAMRA.) The story is sometimes told with the object of slandering the Thaḳafites. The earliest mention would be a verse of Ḥassān b. Thābit (ed. Hirschfeld, lxii, 1), if it is not an anti-Thaḳafite falsification. The early date of the custom of stoning Abū Righāl's tomb is proved by a vers of Djarīr: "If al-Farazdaḳ dies, stone him as you stone the tomb of Abū Righāl".

According to the second tradition, found in its simplest form in al-Ṭabarī and Aḥmad b. Ḥanbal, Abū Righāl was the only survivor of Thamūd [*q.v.*]. At the time of the disaster of Thamūd he was staying in Mecca and was saved by the sanctity of the place; he died, however, as soon as he left Mecca. His story was told by the Prophet as he was passing al-Ḥidjr with his army. In the earliest form, this version knows of no connection of Abū Righāl with Thaḳīf, but this feature was later introduced, possibly under the influence of the first story. In one of the stories in *al-Aghānī* he is even said to have been a king of Ṭā'if and ancestor of Thaḳīf. On the other hand, authors like al-Djāḥiẓ, Ibn Ḳutayba and al-Masʿūdī quote a version which is evidently meant as a defence of the Thaḳafites: it was they who killed Abū Righāl, a cruel and injust person.—Later authors still further confuse the two traditions. Al-Diyārbakrī gives as the name of Abū Righāl Zayd b. Mukhallif.

Bibliography: Djumaḥī, *Ṭabaḳāt*, 69; Ibn Hishām, i, 32; Ibn Ḳutayba, *Maʿārif*, 44; Djāḥiẓ, *Ḥayawān*, Cairo 1906, vi, 47; Ṭabarī, i, 250-1, 937; Masʿūdī, *Murūdj*, iii, 159-61, 261; Azraḳī (Wüstenfeld), 93, 362; *Aghānī*, xiv, 74-6, xv, 131; Thaʿlabī, *Ḳiṣaṣ*, Cairo 1347, 50, 308; Yāḳūt, ii, 793, iii, 816, iv, 583; Ibn al-Athīr, i, 66, 321; Diyārbakrī, *Khamīs*, Cairo 1283, 188; Ḳazwīnī (Wüstenfeld), ii, 73; *TA* and *LA*, s. v. *r-gh-l*.

(S. A. Bonebakker)

ABU 'L-SĀDJ Dīwdād (Dēwdādh) b. Dīwdast, founder of the Sādjid dynasty, descended from a noble Iranian family of Ushrūsana related to its ruler, the Afshīn [*q.v.*] Ḥaydar (Khaydhar) b. Kā'us, under whose command he served in the expedition against Bābak (221-2/836-7). In 224/839 he led an expedition against the Afshīn's rebellious deputy Mankadjūr in Ādharbaydjān. In 242/856 or 244/858 (see al-Ṭabarī, iii, 1436) he was appointed by the caliph al-Mutawakkil to the command of the Mecca Road, which he held until the outbreak of the conflict between al-Mustaʿīn and al-Muʿtazz in 251/865. He joined the former in Baghdād with his troop of 700 horsemen, and was sent to strengthen the defences of al-Madā'in and to engage Turkish raiding forces to the south-east. After the restoration of peace he was engaged first to collect the taxes in the Euphrates districts of the Sawād, and was later reappointed to the Mecca Road and the government of Kūfa, where his deputy succeeded by a ruse in seizing the ʿAlid Abū Aḥmad Muḥammad b. Djaʿfar, who had revolted there. He was subsequently (it is said) appointed to the Khurāsān Road, and in 254/868 was posted to Aleppo as the deputy of Ṣāliḥ b. Waṣīf in the government of northern Syria and the ʿAwāṣim, but was driven out one or two years later by Aḥmad b. ʿĪsā b. Shaykh. In 261/874-5 he was appointed to Ahwāz; shortly afterwards his troops were defeated by the Zindj [*q.v.*], and Ahwāz was sacked. In the following year, on the eve of the decisive conflict between al-Muwaffaḳ and Yaʿḳūb b. Layth al-Ṣaffār, he joined the latter and thus shared in his defeat and was deprived of his own estates. He died in 266/879-80 in Djundīsābūr, while returning from the Ṣaffārid camp to Baghdād.

Abu 'l-Sādj appears in history as the type of leader of a small band of irregular cavalry (*aṣḥāb Abi 'l-Sādj*), who stood in a rather loose relation with the central government at Sāmarrā, and was assigned to various tasks on the frontiers for which a mobile force was required. His son Muḥammad al-Afshīn, who had remained in the service of al-Muwaffaḳ, was posted to the Mecca Road in the year of his father's death and succeeded to the command of his troops. For the further history of the family see SĀDJIDS.

(H. A. R. Gibb)

ABŪ SAFYĀN was according to popular legend a pre-Islamic king of al-Bāra in Djabal al-Zāwiya, north of ancient Apamea and west of Maʿarrat al-Nuʿmān. The ruins of al-Bāra are the most considerable in the whole region. The period in which the city, called in Syriac Kafrā dhe-Bārtā, was at the hight of its prosperity was the 5th-7th century A. D. Under the rule of Islam it continued to prosper for a considerable time, and it included also a Jewish colony. During the Crusades it became a center of conflict. It was probably at that period that a Muslim fortress was built to the north of the town, today called Ḳalʿat Abū Safyān. (For al-Bāra see Ibn Khurradādhbih, 76; Yaʿḳūbī, 324; Yāḳūt, i, 465; Littmann (see *Bibl.*); M. van Berchem, *Voyage en Syrie*; i, 196-200; R. Dussand, *Topogr. hist. de la Syrie*, 181 and index.)—According to the legend the fortress was built in pre-Islamic times, and in it ruled a Jewish king, called Abū Safyān. ʿAbd al-Raḥmān, son of Abū Bakr, fell in love with Luhayfa, the daughter of Abū Safyān, and was staying in the castle when his father summoned him to embrace Islām. Both ʿAbd al-Raḥmān and Luhayfa were converted and fled. Abū Safyān pursued them and in the battle that followed there appeared the warriors of Islām, more particularly ʿUmar and Khālid b. al-Walīd, who had been summoned to give aid by the angel Gabriel. Abū Safyān was killed by ʿUmar and the whole country came under the dominion of the Muslims.

(E. Littmann)

ABŪ SAʿĪD, the Īlkhān [see ĪLKHĀNS].

ABŪ SAʿĪD al-Aflaḥ b. ʿAbd al-Wahhāb [see RUSTUMIDS].

ABŪ SAʿĪD Faḍl Allāh b. **ABI 'L-KHAYR,** Persian mystic, born 1 Muḥarram 357/7 December 967 in Mayhana (Mēhana, Mehna), the present-day Me'āna in Khurāsān, between Abīward and Sarakhs; died there 4 Shaʿbān 440/12 January 1049. His biography was written by his descendant Muḥ. b. Abī Rawḥ Luṭf Allāh b. Abī Saʿīd b. Abī Ṭāhir b. Abī Saʿīd b. Abi 'l-Khayr under the title *Ḥālāt u-Sukhunān-i Shaykh Abī Saʿīd b. Abi 'l-Khayr*, ed. V. Zhukowski, St. Petersburg 1899 (a manuscript, under the title *Čihil Maḳām*, Aya Sofya 4792, 29 and 4819, 4, Turkish translation Istanbul Univ. Libr., Yīldīz 958), and, much more fully, by the cousin of the foregoing, Muḥammad b. al-Munawwar b. Abī Saʿīd under the title *Asrār al-Tawḥīd fi Maḳāmāt al-Shaykh Abī Saʿīd*, ed. V. Zhukowski,

St. Petersburg 1899, after two defective manuscripts; reprint Teheran 1313 H. Sh., new ed., Teheran 1332 H. Sh. (quoted as AT). (Manuscripts also Skutari, Hudāʾī, Taṣ. 238; Istanbul, Shehīd ʿAlī Pasha 1416.) This work was the source used in the *Tadhkirat al-Awliyāʾ* of ʿAṭṭār and the *Nafaḥāt al-Uns* of Djāmī. The father of Abū Saʿīd was a druggist known as Babu Bu 'l-Khayr. He took the boy with him occasionally to the sacred performances of dances (*samāʿ*) which the ṣūfīs of the town gave by turns in their houses. Abū Saʿīd received his first instruction in mystical devotion from Abu 'l-Ḳāsim Bishr-i Yāsīn (d. 380/990), who had a poetic streak in him and is the author of the majority of the verses which Abū Saʿīd later quoted in his sermons. As a young man Abū Saʿīd studied Shāfiʿite law in Marw under Abū ʿAbd Allāh al-Ḥuṣrī and Abū Bakr al-Ḳaffāl (d. 417; al-Subkī, *Ṭabaḳāt*, iii, 198-200). Among his fellow-students was Abū Muḥammad al-Djuwaynī (d. 438; al-Subkī, iii, 208-19), the father of Imām al-Ḥaramayn. Then he studied exegesis of the Ḳurʾān, dogmatics and Ḥadīth in Sarakhs under Abū ʿAlī Zāhir (d. 389; al-Subkī, ii, 223), who succeeded in rooting out Muʿtazilism from Sarakhs.

In Sarakhs the crazy saint Luḳmān al-Sarakhsī introduced him to the ṣūfī Abu 'l-Faḍl Muḥ. b. Ḥasan al-Sarakhsī. It was he who induced Abū Saʿīd to abandon the study of learned subjects and to devote himself entirely to ṣūfism and became his *pīr* whom he consulted in all difficulties: moreover after Abu 'l-Ḥasan's death Abū Saʿīd was in the habit of visiting his grave in Sarakhs when dejection (*ḳabḍ*) overtook him. He had, at the injunction of Abu 'l-Faḍl, the *khirḳa* bestowed upon him by the celebrated ṣūfī al-Sulamī. After the death of Abu 'l-Faḍl he went through Nasā to Āmul and spent some time with Abu 'l-ʿAbbās al-Ḳaṣṣāb, who likewise bestowed the *khirḳa* upon him. Upon his return to Mayhana—the exact chronology of this period is by no means easy to establish—he gave himself up with extreme zeal to severe ascetic and mystic exercises. He spent his time partly in total seclusion in a room in his father's house, but also stayed in neighbouring monasteries, in particular the so-called *ribāṭ-i kuhan*. Here he was sometimes observed by his father in the midst of extraordinary practices of self-castigation. He went beyond the prescribed measures in his religious ablutions, washed the doors and walls of his cell, never reclined, ate nothing whatever during the day, at night only a morsel of bread, spoke to people only when it was unavoidable, and shut himself off during the performance of *dhikr* by padding his ears so as to be undisturbed. At times he could not bear so much as the sight of his fellow-men and would disappear for months in the mountains or the neighbouring desert.

This period of forming himself through asceticism with the object of subduing the sensual soul (*nafs*) and breaking asunder all bonds with the world, as well as of following up an ideal model of the Prophet in the minutest detail, is said to have lasted up to the fortieth year of his life. Already at this time the social motive of ṣūfism, the "service of the poor" (*khidmat-i darwīshān*) begins to assume importance for him. He begged for the poor, swept mosques, cleaned washing-places, and so on. This "service of the poor", conceived principally for self-abasement at first, came ever more to the fore in the course of his life. "The shortest way to God", he put it once, "lies in bestowing comfort upon the soul of a Muslim" (*rāḥatī bā dil-i musulmānī rasāndan*) (*AT*, 242). This mode of life is exhibited in its fully-developed form at the period of his one year's residence in the capital of Khurāsān, Nīshāpūr, where he stayed in the monastery of Abū ʿAlī Ṭarsūsī in the quarter of ʿAdanīkūbān. There young men flocked to him: he preached before large audiences and displayed himself as a kind of spiritual guide (*ṣidḳ maʿ al-Ḥaḳḳ, rifḳ maʿ al-khalḳ*). At this juncture the gift of thought-reading (*firāsat*), peculiar to him and esteemed a miracle (*karāmat*) by his followers, stood him in good stead: it revealed to him the most intimate impulses of the hearts even of his enemies, disarmed his adversaries and converted many of them into followers instead. He liked to arrange lavish, even extravagant entertainments for his followers, culminating in sacred dance music (*samāʿ*). During these, dancing and crying out (*naʿra zadan*) were, as was customary, the order of the day. In the throes of ecstasy gowns were thrown off, torn up, and distributed around. To finance these luxurious occasions, at which as much as a thousand *dīnārs* is supposed to have been spent in a day, and which moved ʿAwfī to remark that in later years Abū Saʿīd lived hardly as an ascetic but rather as a sultan (Barthold, *Turkestan*, 311), he did not hesitate to incur debts; these were the cause of frequent embarrassment to his household manager Ḥasan-i Muʾaddib. Some wealthy devotee, however, was always found, who, often at the last moment, provided the requisite money. Sometimes he sent Ḥasan to followers, even to opponents, with whom he stayed, in order to raise money in an almost barefaced manner. The money was immediately spent, as it was regarded as a principle to possess no assured property (*maʿlūm*) and to accumulate nothing. His way of living caused offence the Karrāmite Abū Bakr Muḥ. b. Isḥāḳ b. Miḥmashādh made common cause with the Ḥanafite ḳāḍī Ṣāʿid b. Muḥammad al-Ustuwāʾī (d. 432; on both see ʿUtbī-Manīnī, ii, 309 ff., Persian translation by Djurfādḳānī, Teheran 1272, 427 ff.; W. Barthold, *Turkestan*, 289-90, 311; on the latter Ibn Abi 'l-Wafāʾ, *al-Djawāhir al-Muḍīʾa*, no. 685, and al-Samʿānī, *Ansāb*, under al-Ustuwāʾī) and laid information about Abū Saʿīd before sultan Maḥmūd b. Subuktigīn, who ordered an enquiry, perhaps in conjunction with a universal heresy hunt carried out by the aforementioned Karrāmite governor Abū Bakr (Barthold, *Turkestan*, 290). However, Abū Saʿīd contrived to disarm both through his skill in thought-reading, with the result that they abandoned the prosecution. The indictments were, that the *shaykh* recited on the pulpit verses in place of the Ḳurʾān and Ḥadīth, that he gave too luxurious feasts and that he had made the young people dance. The great al-Ḳushayrī, who encountered Abū Saʿīd in Nīshāpūr, took exception to the excessively liberal way of life of the *shaykh* and to his dance music. The contrast between the characters of the two men is illustrated by an apt anecdote: al-Ḳushayrī had repudiated a derwish and banished him from the town. Abū Saʿīd showed him at a banquet how by very much gentler methods a derwish may be sent travelling (Nicholson, 35-6).

A strong kindliness of nature and an affection for his fellow-men were conspicuous characteristics of Abū Saʿīd. He was no preacher of repentance; seldom, if ever, did he refer in his sermons to the verses of the Ḳurʾān threatening the torments of Hell. Numerous stories were related of how by means of his *firāsa* he saw through the intimate thoughts of sinners and opponents and thoroughly

abashed them. The guiding motif of his life is said to have been the *ḥadīth*: *Ṣil man ḳaṭaʿak wa-aʿṭi man ḥaramak wa'ghfir man ẓalamak* (*AT*, 311). The celebrated ṣūfī Ibn Bākūya (d. 442/1050) reproached him for allowing young people to sit together with old and for treating them just as he did the old, for allowing them to dance and for giving back the cast-off *khirḳa* to its owner, whereas it should by being cast off have become common property. Abū Saʿīd contrived to give plausible reasons for these innovations (*AT*, 170-1). Ibn Ḥazm brands him as an unbeliever, since he wore now wool, now silk, sometimes prayed a thousand *rakʿas* a day, sometimes not at all (*Fiṣal*, iv, 188). At all events social work played a very much greater role in the second period of his life than individual mystic experience: and from this point of view he is comparable (in spite of substantial differences) with Abū Isḥāḳ al-Kāzarūnī [*q.v.*]. However he once gave tongue to a pronouncement similar to al-Ḥallādj's *Ana 'l-Ḥaḳḳ*. In the course of a sermon he was overcome by a state of inner excitement and called out *Laysa fi l-djubbati illā 'llāh*, "There is none other than God in this robe". So saying he ran his forefinger through the gown. It was divided and the portion with the hole made by his finger preserved.

In Nīshāpūr he also met the philosopher Ibn Sīnā and is supposed to have held lengthy conversations with him. A correspondence between the two is preserved. Abū Saʿīd asked the philosopher what was the way to God according to his experience, and received a reply (printed by H. Ethé, *SBBayr. Ak.*, 1878, 52 ff.; Ibn Sīnā, *al-Nadjāt*, Cairo 1331, 12-5; Ibn Abī ʿUṣaybiʿa, ii, 9-10; al-ʿĀmilī, *al-Kashkūl*, Cairo 1318, 264-5). At the end of his stay in Nīshāpūr he wished to accompany his son Abū Ṭāhir on the pilgrimage, but was restrained from this in Kharaḳān by the celebrated ṣūfī Abu 'l-Ḥasan Kharaḳānī. He then went to Bisṭām where he visited the grave of Abū Yazīd, and to Dāmghān, eventually reaching Rayy before returning with his son. He spent the rest of his life in his home town of Mayhana.

Abū Saʿīd is supposedly the author of a great number of quatrains. (On editions cf. Nicholson, 48, note; also editions Bombay 1294 and Lahore 1934.) However it has been expressly stated that he composed only one verse and one quatrain (Nicholson, 4). The quatrains may not then be attributable to him. One of them, with which he is supposed to have cured his Ḳur'ān-teacher Abū Sāliḥ of an illness (*AT*, 229) and which opens with the word *ḥawrā* was made the subject of a commentary by ʿAbd Allāh b. Maḥmūd al-Shāshī under the title *Risāla-yi Ḥawrā'iyya* (*AT*, 322-5).

Abū Saʿīd left a numerous family, who tended his grave for more than a hundred years and were held in great respect in Mayhana. His eldest son Abū Ṭāhir Saʿīd (d. 480) continued the "service of the poor" and thereby involved himself in debts which were paid by Niẓām al-Mulk. He was an uncultured individual, however, who left school before he was ten years old and knew by heart only the 48th sūra of the Ḳur'ān, and did not have the personality to found an order after his father's death (as did the son of Djamāl al-Dīn Rūmī, Sulṭān Walad), although Abū Saʿīd did leave behind a kind of statute for an order (Nicholson, 46). The tradition was however broken by political events. Abū Saʿīd lived to see the entry of the Saldjūḳs into Khurāsān. They occupied Mayhana, and Abū Saʿīd was on friendly relations with Tughrīl and Čaghrī Beg. Sultan Masʿūd laid siege to the town and captured it shortly before his decisive defeat at Dandānaḳān in the year 431/1040. During the devastation of Khurāsān by the Ghuzz in the year 548/1153 the place was absolutely laid waste, no fewer than 115 members of Abū Saʿīd's family being tortured and put to death. A follower of Abū Saʿīd, Dūst Bū Saʿd Dada, whom the *shaykh* had sent to Ghazna not long before his death to have the Sultan discharge his accumulated debts, found Abū Saʿīd dead, went to Baghdād on his return, and founded a daughter monastery there. At the time of Ibn al-Munawwar his family held the position of *shaykh al-shuyūkh* in Baghdād, but nothing is known of the subsequent destiny of this offshoot (*AT*, 294-300).

ABŪ SAʿĪD AL-DJANNĀBĪ [see AL-DJANNĀBĪ].

ABŪ SAʿĪD B. MUḤAMMAD B. MĪRĀNSHĀH B. **TĪMŪR**, Tīmūrid sultan. In 853/1449, at the age of twenty-five, Abū Saʿīd, taking advantage of the desperate situation of Ulugh Beg, at whose court he lived, tried his fortune in Transoxiana. A siege of Samarḳand (1449), then a rising at Būkhārā (May 1450) both ended in failure. Not long afterwards he seized Yasī (Turkistān), and held it against the troops of ʿAbd Allāh b. Ibrāhīm Sulṭān b. Shāhrūkh. In Djumādā I 855/June 1451 he drove the latter out of Samarḳand with the help of the Özbeg khān Abū 'l-Khayr. In spring 858/1454 Abū Saʿīd crossed the Oxus and took Balkh. Abu 'l-Ḳāsim Bābur, ruler of Khurāsān, invaded Transoxiana and laid siege to Samarḳand (Oct.-Nov.), where resistance was organized by the famous Naḳshbandī *shaykh* ʿUbayd Allāh Aḥrār, who is said to have restrained Abū Saʿīd from deserting his capital. Peace was made, Abū Saʿīd keeping the right bank of the Oxus. The relations of the two princes remained cordial until the death of Bābur (Rabīʿ II 861/March 1457).

Abū Saʿīd then tried to take Harāt, where Ibrāhīm b. ʿAlā' al-Dawla b. Baysunghur had succeeded in having himself proclaimed. The siege (July-August 1457), marked by the execution of Gawhar Shād, who was accused of intelligence with Ibrāhīm, was raised without result. Defeated by the Ḳara Ḳoyunlu Djahānshāh, Ibrāhīm sought an alliance with Abū Saʿīd (beginning of 862/winter 1457-8), and a defensive treaty was concluded. At the end of June 1458 Djahānshāh occupied Harāt. Abū Saʿīd, who had stationed his army on the Murghāb to watch the course of events, took advantage of Djahānshāh's difficulties to get possession of the town peacefully (Nov. 1458), and thus became master of Khurāsān, which he had always coveted. In Djumādā I 863/March 1459 the three Tīmūrid princes ʿAlā' al-Dawla, Ibrāhīm b. ʿAlā' al-Dawla, and Sulṭān Sandjar were defeated at Sarakhs.

The year 1459 was spent in mopping up Khurāsān. In 1460 Abū Saʿīd occupied Māzandarān; in his rear the amir Khalīl came from Sīstān and laid siege to Harāt (summer 1460); and when calm had been restored in Sīstān (autumn 1460), Abū Saʿīd had to deal with a revolt in Transoxiana (winter 1460). Sulṭān Ḥusayn took advantage of this to reoccupy Māzandarān and besiege Harāt (Sept. 1461), but Māzandarān was retaken by Abū Saʿīd in the same year.

Abū Saʿīd's power extended theoretically over Transoxiana, Turkistān (to the confines of Kāshghār and of the Dasht-i Ḳipčāḳ), Kābulistān and Zābu-

listān, Khurāsān and Māzandarān. In fact, he was powerless to prevent the Özbeg raids to the south of the Sīr Daryā. In 1454-5 the Tīmūrid Uways b. Muḥammad b. Baykarā had risen at Otrār with the support of Abu'l-Khayr Özbeg, and had inflicted a crushing defeat on Abū Saʿīd. In 865/1461 Muḥammad Djūkī b. ʿAbd al-Laṭīf b. Ulugh Beg, after devastating Transoxiana, took refuge at Shāhrukhiyya (Tāshkent). Abū Saʿīd besieged this stronghold for ten months (Nov. 1462-Sept. 1463). Each year the Özbegs made raids into Transoxiana. In 868/1464 Sulṭān Ḥusayn, who had sought refuge in Khwārizm, ravaged with impunity Khurāsān from Abīward and Mashhad as far as Tūn.

Abū Saʿīd was more fortunate in the north-east, and succeeded in averting the Mongol threat to his frontiers. During his reign in Samarḳand he had repulsed two attacks by the Mongol khān Esen Bugha. In 1456 he recognized Yūnus, the elder brother of Esen Bugha, and on several occasions gave him help in establishing himself in the western part of Moghūlistān. In 868/1464 Yūnus once again sought refuge with Abū Saʿīd, who lent him troops.

Real though the personal qualities of Abū Saʿīd were, they have been exaggerated, and his reign revealed no very impressive trends. Among the Turkish aristocracy of his entourage, pre-eminence passed to the Arghūn clan, which had supported Abū Saʿīd from the beginning, and whose chiefs received offices and favours. Like his predecessors, Abū Saʿīd frequently adopted the practice of settling fiefs (*soyūrghāl*) on his sons (Māzandarān on Sulṭān Maḥmūd, Farghāna on ʿUmar Shaykh, etc.), on local potentates (Sīstān), and on important dignitaries, whether they were Turks or Tādjīks, lay or religious. Barthold has brought out the important role played, under Abū Saʿīd, by Khwādja Aḥrār [*q.v.*], who held undisputed authority in Samarḳand, and was head of the clergy in Transoxiana. The great expedition to the west in 1468 was not decided on without the favourable advice of the shaykh, of whom Abū Saʿīd proclaimed himself a *murīd*.

Another characteristic trait of fifteenth-century Iran was his interest in agriculture. Abū Saʿīd seems to have taken a personal interest in it; and he instituted many measures to help the peasants. In 860/1465, at the request of Khwādja Aḥrār, he ordered that in no case should more than a third of the *kharādj* be levied before the harvest; the *kharādj* was normally to be paid in three instalments. At Samarḳand, Bukhārā, and Harāt the *tamghā* was abolished or reduced. In 870/1466, after a cold spring, Abū Saʿīd waived the tax on fruit trees. He had constructed the famous dam of Gulistān (near Mashhad) in order to irrigate *khāṣṣa* lands. Among the men of ability who held the office of vizier the most remarkable, Ḳuṭb al-Dīn Tāwūs Simnānī, was a specialist in agricultural matters; he had the Djūy-i Sulṭānī dug, north of Harāt.

Little is known of how the nomadic elements of the population fared. In 870/1465-6 Abū Saʿīd settled in Khurāsān 15,000 nomad families which had fled from the territories of the Ḳara Ḳoyunlu. On the whole the Tīmūrid empire remained poor in nomads by comparison with its neighbours in the west, which explains the inadequacy of its military enterprises.

The Campaign of 1468. Abū Saʿīd, hoping to regain from the Turkmens the territory lost after the death of Shāhrukh, went to the help of the Ḳara Ḳoyunlu Ḥasan ʿAlī b. Djahānshāh, against the Aḳ Ḳoyunlu, the traditional allies of the Tīmūrids. Governors were nominated for the principal towns to be conquered. But the empire of Abū Saʿīd was in a state of relative peace, and the expedition, hastily conceived, was ill prepared in the military sense. Abū Saʿīd set out with the cavalry without waiting for the thousands of carts requisitioned in Khurāsān and Māzandarān for the army's baggage. The Khurāsānian infantry, in the rearguard, was attacked by deserters. When the news of the death of Abū Saʿīd reached Harāt the troops raised in 'Hindūstān' (i.e. Afghānistān) were not yet organized. Notwithstanding this lack of preparation Abū Saʿīd made the mistake, when caught by the winter, of penetrating too deeply into Ādharbaydjān. He was cut off and captured near Mūghān by Uzun Ḥasan. A few days later the Tīmūrid Yādgār Muḥammad, a dependent of Uzun Ḥasan, had him executed (Feb. 1469) to avenge the death of his grandmother Gawhar Shād.

Bibliography: Sources. The *Maṭlaʿ al-Saʿdayn* of ʿAbd al-Razzāḳ Samarḳandī is the main source (ed. M. Shafīʿ, Lahore 1941-9). Supplement with: *Rawḍat al-Ṣafāʾ*; *Ḥabīb al-Siyar*; *Muʿizz al-Ansāb*; *Bābur-nāma*, ed. and transl. Beveridge; and Isfizārī, *Rawḍat al-Djannāt fī Taʾrīkh Harāt* (cf. Barbier de Meynard, *JA*, 1862/ii). 'Mongol' policy: *Tārīkh-i Rashīdī*, ed. Elias, transl. E. D. Ross. Biographies: Sayf al-Dīn Ḥādjī, *Āthār al-Wuzarāʾ* (ms.); Khwāndamīr, *Dastūr al-Wuzarāʾ*, ed. Teheran 1317; and the Naḳshbandī collections, Kāshifī, *Rashaḥāt ʿAyn al-Ḥayāt*, two ed., Tashkent and Lucknow; Abīwardī, *Rawḍat al-Sālikīn* (ms.), etc. Documents: see the collections of *inshāʾ* mss. (especially B. N. Paris, Suppl. Pers. 1815); A. N. Kurat, *Topkapı Sarayı Müzesi arşivindeki . . . yarlık ve bitikler*, Istanbul 1940 (one letter); cf. also Ferīdūn Bey, *Munshaʾāt*.

Studies. In the absence of monographs on the period, works dealing with questions or periods bordering on it must be used. See particularly V. V. Barthold, *Ulug Beg i iego vremja*, 1918 (Germ. transl. by Hinz, *Uluġ Beg und seine Zeit*, 1935), and *Mir Ali Shir i političeskaja zizn'* (transl. Hinz, *Herat unter Husain Baiqara*); the articles (by Yakubovskij, Molčanov, Belenitskij, etc.) in the two collections *Rodonačal'nik uzbekskoj literatury*, Tashkent 1940, and *Ali Shir Navoj Sbornik*, Tashkent 1946; Belenitskij, *K istorii feodal'nago zemlevladenija Srednej Azii pri Timuridakh*, in *Istorik-Marksist*, 1941/4; the works of I. P. Petrushevskij; W. Hinz, *Irans Aufstieg zum Nationalstaat*, 1936. On the Russian embassy to Harāt in 1464 cf. *ZVO*, i, 30 sqq. See also Browne, iii; Grousset, *Empire des Steppes*. Bouvat, *Essai sur la civilisation timouride*, *JA*, 1926, and *L'Empire mongol* (*2e phase*), Paris 1927, may be disregarded.

(J. Aubin)

ABŪ ṢAKHR al-HUDHALĪ, ʿAbd Allāh b. Salama, Arab poet of the second half of the 1st/7th century. He belonged to the tribe of Sahm, a branch of the Hudhayl of the Ḥidjāz, and embraced the Marwānid cause; imprisoned by the anti-caliph ʿAbd Allāh b. al-Zubayr, he regained his liberty when the latter died, and, according to his own account, took part in the capture of Mecca in 72/692. He celebrated in his verse the caliph ʿAbd al-Malik, as well as his brother, ʿAbd al-ʿAzīz; see *Aghānī*¹, xxi, 144. Above all he praised the amīr Abū Khālid ʿAbd al-ʿAzīz of the Asīd clan, whose brother, Umayya, had been governor of al-Baṣra from 71/690

until 73/end of 692; see al-Ṭabarī, index; on the favour in which this family was held by the Caliph, see Ibn ʿAbd Rabbih, *ʿIḳd*, Cairo 1359, viii, 55.

Some twenty poems and fragments by Abū Ṣakhr are known, which were included by al-Sukkarī in his *dīwān* of Hudhayl. A number are *ḳaṣīdas* of the classic type; others are erotic-elegiac compositions recalling those of ʿUmar b. Abī Rabīʿa.

Bibliography: *Aghānī*[1], xxi, 144-54; J. Wellhausen, *Letzter Teil der Lieder der Hudhailiten*, Berlin 1884, i, Arabic text, nos. 250-269; al-Buḥturī, *Ḥamāsa*, no. 1009; Ḳudāma b. Djaʿfar, *Naḳd al-Shiʿr*, 13, 44-5. (R. BLACHÈRE)

ABŪ SALAMA ḤAFṢ B. SULAYMĀN AL-**KHALLĀL**, vizier. A freed slave from Kūfa, he was sent in 127/744-5 to Khurāsān with ample powers, as one of the chief ʿAbbāsid emissaries. He took part in the armed insurrection which put an end to the Umayyad dynasty, and was appointed governor of Kūfa. At the culminating point of the revolution he inclined towards the ʿAlids and seems to have attempted to set up an ʿAlid caliphate. In this, one can perhaps see a consequence of the deliberate ambiguity about the rights of the "house of the Prophet", put into circulation by the revolutionary propaganda. Al-Saffāḥ, however, was chosen as caliph and Abū Salama gave him his allegiance (132/749). The caliph appointed Abū Salama vizier, without, however, losing his suspicions, and in the same year planned to remove him. Fearing that this might irritate Abū Muslim, the powerful governor of Khurāsān, who was Abū Salama's companion in the *daʿwa* and might have been acting in agreement with him, he sent his brother Abū Djaʿfar (al-Manṣūr) to consult Abū Muslim. Abū Muslim made no difficulties; on the contrary, he himself sent a hired assassin to kill Abū Salama. The crime was subsequently attributed to the Khāridjites. Abū Salama is described as an educated and capable man, and his services in the ʿAbbāsid cause are indisputable. Nevertheless, the fears of the caliph concerning him seem, by the common witness of the sources, to have been justified.

Bibliography: Dīnawarī, *al-Akhbār al-Ṭiwāl* (Guirgass), Yaʿḳūbī, Ṭabarī, Masʿūdī, *Murūdj*, indexes; Ibn Khallikān, no. 200; Ibn al-Ṭiḳṭaḳā, *Fakhri* (Dérenbourg), 205-10; S. Moscati, in *Rend. Linc.*, 1949, 324-31. (S. MOSCATI)

ABU 'L-ṢALT UMAYYA B. ʿABD AL-ʿAZĪZ B. ABI 'L-ṢALT AL-ANDALUSĪ was born in 460/1067 in Denia (Dāniya), in the Levante, and studied under the *ḳāḍī* al-Waḳḳashī from whom he inherited his encyclopaedic knowledge. About 489/1096 we find him in Alexandria and Cairo, where he continued to pursue his studies. In consequence of an unsuccessful attempt to refloat a sunken ship, he was imprisoned by the vizier al-Afḍal. Exiled from Egypt, he went (in 505/1111-2) to al-Mahdiyya, where he was well received by the Zīrid *amīrs* Yaḥyā b. Tamīm, and his son ʿAlī b. Yaḥyā, and he remained in al-Mahdiyya, an honoured and respected figure, until his death on 1 Muḥarram 529/1134 (other dates are also mentioned).

The following may be mentioned of his numerous works. (i) *Taḳwīm al-Dhihn*, a short treatise on Aristotelian logic, edited and translated into Spanish by A. González Palencia, Madrid 1915 (with biographical introduction). (ii) *Risāla fi 'l-ʿAmal bi 'l-Asṭurlāb*, on the use of the astrolabe; a short analysis with a list of the chapters, in Millás, *Assaig*. (iii) Answers to scientific questions (*masāʾil*) concerning different problems of physics, cosmography and mathematics; short summary ibidem. (iv) A summary of astronomy, composed for the Egyptian vizier al-Afḍal, which, according to the judgment of his contemporaries, was a manual without educational value and useless for teachers. (v) *Al-Adwiya al-Mufrada*, on simples, was translated into Latin by the famous physican Arnaldo de Vilanova and into Hebrew by Yehuda Natan. (vi) *Al-Rasāʾil al-Miṣriyya*, dedicated to Abu 'l-Ṭāhir Yaḥyā b. Tamīm, and giving vivid information about the affairs and the customs of Egypt; ed. by ʿAbd al-Salām Hārūn, *Nawādir al-Makhṭūṭāt*, Cairo, (vii) *Risāla fi 'l-Mūsīḳī*; the Arabic original is lost, but an anonymous Hebrew translation is preserved in Paris, Bibl. Nat., Hebrew MS no. 1036.

Abu'l-Ṣalt also wrote for al-Ḥasan, son of ʿAlī b. Yaḥyā, a historical work, viz. a continuation of the History of Ifrīḳiya by Ibn al-Raḳīḳ, bringing it down to 517/1123. Extracts are to be found in Ibn ʿIdhārī, *al-Bayān al-Mughrib*, i, 274 ff., 292 ff., al-Tidjānī, *Riḥla*, Tunis 1927, 51 ff. (= *JA*, 1852/ii, 131), 90 (= ibidem, 176), 237 (= *JA*, 1853, 375 ff.), and Ibn al-Khaṭīb (*Centenario di Michele Amari*, i, 455-9). (S. M. STERN)

ABU 'L-SARĀYĀ AL-ḤAMDĀNĪ [see ḤAMDĀNIDS].

ABU 'L-SARĀYĀ AL-SARĪ B. MANṢŪR AL-**SHAYBĀNĪ**, Shiʿite rebel. Said to have been a donkey-driver, and afterwards a bandit, he entered the service of Yazīd b. Mazyad al-Shaybānī in Armenia, and was engaged against the Khurramiyya [*q.v.*]. Later he commanded Yazīd's vanguard against Harthama in the civil war between al-Amīn and al-Maʾmūn, but subsequently changed sides and joined Harthama. Obtaining permission to go on pilgrimage to Mecca, he openly revolted, and after defeating the troops sent against him went to al-Raḳḳa. Here he met the ʿAlid Muḥammad b. Ibrāhīm b. Ṭabāṭabā [*q.v.*], whom he persuaded to go to Kūfa, and himself joined him there on 10 Djumādā II 199/26 Jan. 815. Three weeks later he defeated the army sent by al-Ḥasan b. Sahl to put down the revolt at Kūfa, and on the following day (1 Radjab/15 Feb.) Ibn Ṭabāṭabā died. The Sunnī sources accuse Abu 'l-Sarāyā of poisoning him, but the accusation is not borne out by the Shīʿī tradition. Another ʿAlid, Muḥammad b. Muḥ. b. Zayd, was chosen as Imām, but the effective power remained in the hands of Abu 'l-Sarāyā. He had dirhams coined in Kūfa (*ZDMG*, 1868, 707) and sent detachments to take Wāsiṭ, Baṣra, al-Ahwāz, Mecca, etc.

When he next marched on Baghdād, al-Ḥasan b. Sahl appealed to Harthama, then on his way back to Khurāsān. Harthama at once turned back, defeated Abu 'l-Sarāyā at Ḳaṣr Ibn Hubayra (Shawwāl/May-June), and besieged him in Kūfa. Since the Kufans refused to support him, Abu 'l-Sarāyā fled with 800 horsemen (16 Muḥarram 200/26 Aug. 815), made for Sūsa, but was there defeated and himself wounded by the forces of the governor of Khūzistān, al-Ḥasan b. ʿAlī al-Maʾmūnī, and his followers dispersed. He tried to reach his

home at Ra's al-'Ayn, but was overtaken at Djalūlā by Ḥammād al-Kundaghush, who captured him and handed him over to al-Ḥasan b. Sahl at Nahrawān. Al-Ḥasan had him beheaded (10 Rabī' I 200/18 Oct. 815) and his body was hung at the bridge of Baghdād.

Bibliography: Ṭabarī, iii, 976 ff.; Ibn al-Athīr, vi, 212 ff., 217 ff.; Abu 'l-Faradj, *Maḳātil al-Ṭālibiyyīn*, Teheran 1307, 178-93; F. Gabrieli, *al-Ma'mūn e gli 'Alidi*, Leipzig 1929, 10-23; for the activities of his representative in Baṣra cf. Ch. Pellat, *Milieu Basrien*, Paris 1953, 198-9.

(H. A. R. Gibb)

ABŪ SHĀMA Shihāb al-Dīn Abu 'l-Ḳāsim 'Abd al-Raḥmān b. Ismā'īl al-Maḳdisī, Arab historian, born in Damascus on 23 Rabī' II 599/10 Jan. 1203. All his life was spent in Damascus except when he stayed for one year in Egypt for the purpose of study, and visited Jerusalem for fourteen days, and al-Ḥidjāz, twice, on pilgrimage. He obtained a professorship in Damascus, in the madrasas al-Rukniyya and al-Ashrafiyya, only five years before his death on 19 Ramaḍān 665/13 June 1268. Like most scholars of his time he had a varied education, on a Sunnī basis, and his works, consequently, dealt with several subjects, but his reputation rests on his historical writings.

His main works are: 1) *K. al-Rawḍatayn fī Akhbār al-Dawlatayn*, a history of Nūr al-Dīn and Ṣalāḥ al-Dīn (printed in Cairo, 1288, 1292; extracts, with French translation by Barbier de Meynard, in *Recueil des historiens des croisades, Hist. Or.*, iv, v, Paris 1898, 1906; German translation—careless and incomplete—by E. P. Goergens, entitled *Buch der beiden Garten*, 1879). It derives from first-hand authorities and preserves, in parts, the important works *al-Barḳ al-Shāmī* by 'Imād al-Dīn al-Kātib, *Sīrat Ṣalāḥ al-Dīn* by Ibn Abī Ṭayy and a great number of *Rasā'il* by al-Ḳāḍī al-Fāḍil. The events are dealt with chronologically and the narratives are supported by documents mainly from al-Fāḍil and al-'Imād. In this book he names his sources when quoting, and keeps to their wording, except for al-'Imād. 2) *Al-Dhayl 'ala 'l-Rawḍatayn*, a continuation fo the preceding. In the first part of this book Abū Shāma draws mainly on the *Mir'āt al-Zamān* of Sibṭ Ibn al-Djawzī. In the later part he himself as an eyewitness is the main source. This book is more of a biographical than historical work, especially in the econd part, and is less important than *K. al-Rawḍatayn*. (Printed in Cairo, 1947, with the title: *Tarādjim Ridjāl al-Ḳarnayn al-Sādis wa 'l-Sābi'*; extracts with French translation in the *Recueil des historiens des croisades*.) 3) *Ta'rīkh Dimashḳ* (in two versions), a summary of the vast work of Ibn 'Asākir with the same title (Ahlwardt, *Verz. arab. Hs. Berlin*, no. 9782). 4) commentary on the *Ḳaṣīda al-Shāṭibiyya* (printed in Cairo). 5) A commentary on the seven poems of his teacher 'Alam al-Dīn al-Sakhāwī (d. 643/1245) in praise of the Prophet, is extant in manuscript (Paris, 3141, 1).

All of his other works, dealing with various subjects, are lost, and some biographers say that they were destroyed by fire along with his library.

Bibliography: Kutubī, *Fawāt*, i, 252; Suyūṭī, *Ṭabaḳāt al-Ḥuffāẓ*, xix, 10; Dhahabī, *Tadhkirat al-Ḥuffāẓ*, Ḥaydarābād, iv, 251; Maḳrīzī, *Khiṭaṭ*, i, 46; *Orientalia*, ed. Juynboll, ii, 253; Brockelmann, I, 386, S I, 550. (Hilmy Ahmad)

ABU 'L-SHAMAKMAK Abū Muḥammad Marwān b. Muḥ. Arabic poet of the early 'Abbāsid period, was born in Baṣra in the quarter of the Banū Sa'd as a *mawlā* of the Banū Umayya. No date is given for his birth. His *laḳab* would seem to allude to his big nose and big mouth. He must have migrated to Baghdād some considerable time before the accession of Hārūn al-Rashīd (170/786). Ibn al-Mu'tazz, *Ṭabaḳat al-Shu'arā al-Muḥdathīn* (A. Eghbal), 55, puts his death in or about 180/796. Like other poets of his time Abu 'l-Shamaḳmaḳ is credited with undertaking an occasional public duty. He appears to have served as transmitter of the *kharādj* of Madīnat Sābūr to the caliph. On the whole, however, he made his precarious living by means of eulogies and lampoons. A number of anecdotes illustrate his position on the margin of the contemporary world of letters. Ibn 'Abd Rabbih, *al-'Iḳd al-Farīd*, Cairo 1353/1935, iv, 255, lists Abu 'l-Shamaḳmaḳ among the "luckless wits." His originality, which was most effective in parody and to which the introduction to Arabic poetry of the talking cat that deserts its impoverished owner may be owed, went unrewarded and constant frustration induced frequent descents into unmitigated vulgarity.

Bibliography: A collection of his fragments with a critical introduction and a biography was published by G. E. von Grunebaum, *Orientalia*, 1953, 262-83. (G. E. von Grunebaum)

ABU 'L-SHAWḲ [see 'Annāzids].

ABU 'LSHĪṢ Muḥammad (b. 'Abd Allāh) b. Razīn al Khuzā'ī, Arab poet, died about 200/915. Like his relative Di'bil [*q.v.*], he lived at the court of Hārūn al-Rashīd for whom he wrote panegyrics, and afterwards dirges. He then went to al-Raḳḳa and obtained the favours of the *amīr* 'Uḳba b. al-Ash'ath, remaining his boon-companion and court poet until 196/811.—To judge by the rare fragments of his work that have been preserved, Abu 'l-Shīṣ does not appear as an orginal poet in his panegyrics, hunting poems and wine songs, though these poems were valued by his contemporaries, notably by Abū Nuwās, who did not hesitate to plagiarize him. The elegies on the infirmities of old age which he composed at the end of his life, when he became blind, are of greater value as they as they express real feeling. Similarly, when he makes fun of himself or mocks at the poets who imitate the poetry of the desert (e.g. Ibn Kutayba, *Shi'r*, 536, concerning the *ghurāb al-bayn*), he is not lacking in humour.

Bibliography: Fragments of Abu 'l-Shīṣ's poetry and isolated verses are to be found in a number of books: Ibn Ḳutayba, *Shi'r*, 535-9; *Aghānī*[1], v, 36, xv, 108-13; Djāḥiẓ, *Ḥayawān*[2], iii, 518, iv, 345, v, 184; Ps.-Djāḥiẓ, *Maḥāsin* (van Vloten), 68; Ibn al-Mu'tazz, *Ṭabaḳāt*, 26-33; Bayhaḳī, *Maḥāsin*, 358; Tabari, iii, 763; Ibn al-Athīr, vi, 135; Djahshiyārī, *Wuzarā'*, 96v; al-Khaṭīb, *Ta'rīkh Baghdād*, v, 401-2; Ṣafadī, *Nakt al-Himyān*, 257-8; Ibn Khallikān, iv, 232; Kutubi, *Fawāt*, ii, 281 ff.; 'Askarī, *Dīwān al-Ma'ānī*, Cairo 1352, i, 255, ii, 123, 198-9, 252; see also O. Rescher, *Abriss*, ii, 28-9; Brockelmann, I, 83, S I, 133. (A. Schaade-Ch. Pellat)

ABŪ SHUDJĀ' Aḥmad b. Ḥasan (or Ḥusayn) b. Aḥmad, a famous Shāfi'ī jurisconsult. His family came from Iṣfahān, his father was born in 'Abbādān. He himself was born in 434/1042-3 in Baṣra, and there taught Shāfi'ī law for more than 40 years; he was alive in 500/1106-7, but the date of his death is not known. At some time, he was a *ḳāḍī*. He is the author of a short compendium of Shāfi'ī law, called *al-Ghāya fi 'l-Ikhtiṣār*, or *al-Mukhtaṣar*, or *al-Taḳrīb*. This became the starting-point of one of the great literary traditions of the

Shāfiʿī school and acquired, from the 7th/13th to the 13th/19th century, a considerable number of commentaries and glosses, many of which have been printed. Editio princeps of the text, with (unreliable) translation, by S. Keyser, *Précis de jurisprudence musulmane*, Leiden 1859; translation of the text by G.-H. Bousquet, *Abrégé de la loi musulmane*, separately printed from the *Revue Algérienne* 1935; edition and (faulty) translation of the commentary of Ibn Ḳāsim al-Ghazzī (d. 918/1512), with the title *Fatḥ al-Ḳarīb*, by L. W. C. van den Berg, Leiden 1895 (some corrections to the translation in Bousquet, *Kitâb et-Tanbîh*, Bibliothèque de la Faculté de Droit de l'Université d'Alger, II, XI, XIII, XV, Algiers 1949-52); partial translation of the gloss of Ibrāhīm al-Bādjūrī (d. 1277/1861), with reprint of the corresponding chapters of the text, by E. Sachau, *Muhammedanisches Recht*, Berlin 1897.

Bibliography: Yāḳūt iii, 598 f.; Tādj al-Dīn al-Subkī, *Ṭabaḳāt al-Shāfiʿiyya*, Cairo 1324, iv, 38; Juynboll, *Handleiding*, 374 f.; Brockelmann I, 492 f.; S I, 676 f. (J. SCHACHT)

ABŪ SHUDJĀʿ MUḤAMMAD B. AL-**ḤUSAYN** [see AL-RŪDHRAWARĪ].

ABŪ SUFYĀN B. ḤARB B. UMAYYA, of the clan of ʿAbd Shams of Ḳuraysh, prominent Meccan merchant and financier (to be distinguished from Muḥammad's cousin, Abū Sufyān b. al-Ḥārith b. ʿAbd al-Muṭṭalib). His name was Ṣakhr, and his *kunya* is sometimes given as Abū Ḥanẓala. ʿAbd Shams had been at one time a member of the political group known as the Muṭayyabūn (which included the clan of Hāshim), but about Muḥammad's time had moved away from this group and in some matters cooperated with the rival group, Makhzūm, Djumaḥ, Sahm, etc. As head of ʿAbd Shams Abū Sufyān joined in opposing Muḥammad in the years before the hidjra, but his opposition was not so violent as that of Abū Djahl. On several occasions he led caravans in person, notably in 2/624 when a caravan of 1000 camels returning from Syria under his command was threatened by Muḥammad. In answer to his requests for help the Meccans sent out about 1000 men under Abū Djahl. By skilful and vigorous leadership Abū Sufyān eluded the Muslims; but Abū Djahl was eager to fight, and brought upon the Meccans the disaster of Badr. Of Abū Sufyān's sons Ḥanẓala was killed and ʿAmr taken prisoner but subsequently released, while his wife Hind lost her father ʿUtba. Abū Sufyān was apparently in charge of the preparations to avenge Badr, and commanded the large army sent to Medina in 3/625, probably as a hereditary privilege, the *ḳiyāda*. He realized that the result of the ensuing battle of Uḥud was not satisfactory for Ḳuraysh, but was prevented from attacking the main settlement of Medina by Ṣafwān b. Umayya (of Djumaḥ), possibly out of jealousy. Abū Sufyān also organized the great confederacy which besieged Medina in 5/627. When this proved a fiasco, he perhaps lost heart; at least resistance in Mecca to Muḥammad came to be directed by the leaders of the rival group, Ṣafwān b. Umayya, Suhayl b. ʿAmr and ʿIkrima b. Abī Djahl. Abū Sufyān is not mentioned in connection with the peace of al-Ḥudaybiya. When in 8/630 allies of Ḳuraysh openly broke the peace, Abū Sufyān went to Medina to negotiate. What happened is not clear, but he possibly came to some understanding with Muḥammad. Muḥammad's marriage to his daughter, Umm Ḥabība, may have softened his heart, even though she had been some fifteen years in Abyssinia as a Muslim. Certainly, when Muḥammad marched on Mecca soon after, Abū Sufyān, along with Ḥakīm b. Ḥizām, came out and submitted to him (apparently now becoming a Muslim), and those who took refuge with Abū Sufyān were guaranteed security. Thus he did much to bring about the surrender of Mecca peacefully. He took part in the battle of Ḥunayn and the siege of al-Ṭāʾif, where he is said to have lost an eye; like the other Meccans he would be well aware that Hawāzin and Thaḳīf were as hostile to Mecca as to Muḥammad. In the distribution of the spoils he and Ḥakīm seem to have received a specially large gift in recognition of their services. On the submission of al-Ṭāʾif, Abū Sufyān, who had business and family connections there, helped to destroy the idol of al-Lāt. He was appointed governor of Nadjrān and perhaps also of the Ḥidjāz, but whether by Muḥammad or Abū Bakr is disputed. If it is true that he was in Mecca at Muḥammad's death and spoke against Abū Bakr, he cannot have been governor of Nadjrān then; but the alleged speech, like many other statements about Abū Sufyān, may be anti-Umayyad propaganda. He was present at the battle of the Yarmūk, but may have done little more than exhort the younger men, as he was about 70. He is said to have died about 32/653 aged about 88. Of his sons, Yazīd died as a Muslim general in Palestine about 18/639, and Muʿāwiya was the first Umayyad caliph.

Bibliography: Ibn Hishām, Wāḳidī, Ibn Saʿd, Ṭabarī—see indexes; Ibn Ḥadjar, *Iṣāba*, ii, 477-80; Ibn al-Athīr, *Usd*, iii, 12-3, v, 316; Caetani, *Annali*, i, ii(l). (W. MONTGOMERY WATT)

ABŪ SULAYMĀN MUḤAMMAD B. ṬĀHIR B. BAHRĀM AL-SIDJISTĀNĪ AL-**MANṬIḲĪ**, philosopher, b. about 300/912, d. about 375/985. He was a pupil of Mattā b. Yūnus (d. 328/939) and Yaḥyā b. ʿAdī (d. 364/974), and lived in Baghdād (he was patronized by ʿAḍud al-Dawla, to whom he dedicated some of his treatises), occupying an eminent place among the philosophers of the capital. His system, like that of most of the other members of his environment, had a strong Neo-platonic colouring. For the content of his teaching we are mainly indebted to Abū Ḥayyān al-Tawḥīdī [*q.v.*], whose works, especially *al-Muḳābasāt* and *al-Imtāʿ wa 'l-Muʾānasa*, are filled with reports of Abū Sulaymān's utterances on philosophical as well as many other topics, usually expressed in a rather involved and obscure style. A few of Abū Sulaymān's shorter treatises have survived in MS. Of his history of Greek and Islamic philosophers, *Ṣiwān al-Ḥikma*, only an abbreviation is extant in several MSS (cf. M. Plessner, in *Islamica*, 1931, 534-8; add Brit. Mus. Or. 9033; cancel Bodl. Marsh 539; Leiden 133 contains an even shorter version by al-Ghaḍanfar al-Tibrīzī). The *Ṣiwān al-Ḥikma* was one of the sources of al-Shahrastānī, *al-Milal wa 'l-Niḥal*, for the description of the old Greek philosophers (cf. P. Kraus, in *BIE*, 1937, 207 = *IC*, 1938, 146). Various other authors also quote Abū Sulaymān for information concerning the history of philosophy: Ibn al-Nadīm (who was a disciple of his), *Fihrist*, 241, 243, 248; Ibn Maṭrān, see P. Kraus, *Jābir ibn Ḥayyān*, i, p. lxiii; Ibn Abī Uṣaybiʿa, i, 9, 15, 57, 104, 186-7.

Bibliography: *Fihrist*, 264, 316; Abū Shudjaʿ, *Dhayl Tadjārib al-Umam* (Amedroz-Margoliouth), 75-7; Bayhaḳī, *Tatimmat Ṣiwān al-Ḥikma* (M. Shafi), 74-5; Yāḳūt, *Irshād*, ii, 89, iii, 100, v, 360, 398 (after Abū Ḥayyān); Ṣāʿid al-Andalusī, 81; Ibn al-Ḳifṭī, 282-3; Ibn Abī Uṣaybiʿa, i,

321-2; Brockelmann, I, 236, S I, 377; Muḥammad b. ʿAbd al-Wahhāb Ḳazwīnī, *Sharḥ-i Ḥāl-i Abū Sulaymān Manṭiḳī Sidjistānī* (Publ. de la Société des Études Iraniennes, no. 5), Chalons-sur-Saone 1933 = *Bīst Maḳāla*, Teheran 1934, 94 ff.

(S. M. STERN)

ABU ʾL-SUʿŪD MUḤAMMAD B. MUḤYI ʾL-DĪN MUḤ. B. AL-ʿIMĀD MUṢṬAFĀ AL-ʿIMĀDĪ, known as Khodja Čelebi (Hoca Çelebi), famous commentator of the Ḳurʾān, Ḥanafī scholar and Shaykh al-Islām, born 17 Ṣafar 896/30 December 1490, died 5 Djumādā I 982/23 August 1574. His father, a native of Iskilīb (Iskilip, west of Amasia) had been a notable scholar and ṣūfī. Abu ʾl-Suʿūd began his career as a teacher, being eventually promoted to one of the "Eight Madrasas" of Sulṭān Muḥammad II. In 939/1533 he was appointed *ḳāḍī*, first in Brūsa (Bursa), then in Istanbul; in 944/1537 he became *ḳāḍī ʿasker* of Rumelia, and in 952/1545 Sulṭān Sulaymān I. made him Grand Muftī or Shaykh al-Islām. He kept this post for the rest of his life, under Sulaymān and his successor Salīm II. Abu ʾl-Suʿūd was bound to Sulaymān by real friendship, and though he could not quite maintain his exclusive influence under Salīm, this Sulṭān too held him in high esteem. The one reproach that is made against him is his scheming and his eagerness for the intimacy of the great. To Sulaymān, he justified the killing of Yazīdīs, and to Salīm, the attack on Cyprus, in breach of a treaty of peace with Venice. He was buried in the Abū Ayyūb quarter of Istanbul, where his tomb still exists. When the news of his death reached the Holy Cities, funeral prayers for an absent person were said for him. Several of his disciples held important positions under Salīm II, Murād III, and Muḥammad III.

As Shaykh al-Islām, Abu ʾl-Suʿūd succeeded in bringing the *ḳānūn*, the administrative law of the Ottoman Empire, into agreement with the *sharīʿa*, the sacred law of Islam. Supported by Sulaymān, he completed and consolidated a development which had already started under Muḥammad II. He formulated, consciously and in sweeping terms, the principle that the competence of the *ḳāḍīs* derives from their appointment by the Sultan, and that they are therefore bound to follow his directives in applying the *sharīʿa*. Already as *ḳāḍī ʿasker* he had begun, on the orders of the Sultan, to revise the land law of the European provinces and to apply to it the principles of the *sharīʿa*. (On the effects of this revision, see P. Lemerle and P. Wittek, in *Archives d'Histoire du droit oriental*, 1948, 466 ff.) His *fatwās*, of which a number still exist in the original, were brought together in several semi-official and private collections. In keeping with his general aim, Abu ʾl-Suʿūd took account of the practice in authorising the *waḳf* of movables and in particular of money, the giving and taking of remuneration for teaching and other religious duties, (on these two questions, he became involved in polemics), in allowing the Ḳaragöz play, and in refraining, in the end, from giving a *fatwā* against the use of coffee. Whilst he appreciated orthodox Ṣūfism, he did not hesitate to authorise the execution of extremist ṣūfīs.

In his spare time, Abu ʾl-Suʿūd composed a commentary on the Ḳurʾān, drawn mainly from al-Bayḍāwī and al-Zamakhsharī, with the title *Irshād al-ʿAḳl al-Salīm*; it became popular in the Ottoman Empire and beyond its frontiers, found several commentators and was printed a number of times. Among his other, smaller works, a book of prayers drawn from traditions and meant to be learned by heart (*Duʿā-nāma*, or *R. fi ʾl-Adʿiya al-Maʾthūra*), may be mentioned. He also wrote some poetry in Arabic, Persian and Turkish.

Bibliography: ʿAlī Efendi Manuḳ (d. 992/1584), *al-ʿIḳd al-Manẓūm*, Cairo 1310 (on the margin of Ibn Khallikān, *Wafayāt* ii), 282 ff.; ʿAṭāʾī, *Dhayl-i Shaḳāʾiḳ*, Istanbul 1268, 183 ff.; Pečewī, *Tārīkh*, i, Istanbul 1281, 52 ff.; Ibn al-ʿImād, *Shadharāt al-Dhahab*, viii, 398 ff.; Brockelmann, II, 579 f.; S II, 651; M. Hartmann, in *Isl.*, 1918, 313 ff. (on the publication of Sulaymān's *Ḳānūn-nāma-yi Djadīd*, containing *fatwās* of Abu ʾl-Suʿūd, and of Abu ʾl-Suʿūd's *Maʿrūḍāt*, another collection of his *fatwās*, in MTM, I 1-2); P. ABŪ ṬĀHIR SULAYMĀN AL **KARMAṬĪ** [see AL-DJANNĀBĪ].

ABŪ ṬĀHIR ṬARSŪSĪ (ṬARṬŪSĪ, ṬŪSĪ) MUḤAMMAD B. ḤASAN B. ʿALĪ B. MŪSĀ, a person otherwise unknown, said to be the author of several novels in prose, prolix in style and of great length, a confused mixture of Arab and Persian legendary traditions, written in Persian and afterwards translated into Turkish. These include *Ḳahramān-nāma* (about Ḳahramān, a hero from the epoch of Hūshang, semi-mythical king of Īrān), *Ḳirān-i Ḥabashī* (the story of a hero from the time of the Kayānid king Kay Ḳubād), *Dārāb-nāma* (history of Darius and Alexander).

Bibliography: Firdawsī, *Livre des rois*, ed. and transl. of J. Mohl, i, preface 74 ff.; H. Ethé, in *Grundr. d. iran. Philol.*, ii, 318; E. Blochet, *Cat. mss. persans Bibl. Nat. Paris*, nos. 1201-2; idem, *Cat. mss. turcs*, anc. fonds, nos. 335-7; Ch. Rieu, *Cat. Turkish MSS Brit. Mus.*, 219 ff.

(H. MASSÉ)

ABŪ ṬĀḲA [see SIKKA].

ABŪ ṬĀLIB, son of ʿAbd al-Muṭṭalib b. Hāshim and Fāṭima bint ʿAmr (of Makhzūm), and full brother of Muḥammad's father. His own name was ʿAbd Manāf. He is said to have inherited the offices of *siḳāya* and *rifāda* (providing water and food for pilgrims) from his father, but at the Ḥilf al-Fuḍūl and war of the Fidjār his brother al-Zubayr seems to have been the leading man of Hāshim. He fell into debt, and to meet this surrendered the *siḳāya* and *rifāda* to al-ʿAbbās. Nevertheless he seems to have remained chief of the clan of Hāshim, and their quarter of the town was called the *shiʿb* of Abū Ṭālib. When ʿAbd al-Muṭṭalib died, he looked after Muḥammad, and is said to have taken him on trading journeys to Syria. He continued to protect Muḥammad when he came forward as prophet, even when most of the other clans of Ḳuraysh boycotted Hāshim and al-Muṭṭalib; there were presumably also economic reasons for the boycott. He died shortly after the end of the boycott, about 619, and was probably succeeded as chief by his brother Abū Lahab. Of his sons by Fāṭima bint Asad b. Hāshim, ʿAlī (who is said to have been brought up by Muḥammad) and Djaʿfar became Muslims, while Ṭālib fought against Muḥam-

mad at Badr. He himself, though protecting Muḥammad, clearly did not become a Muslim; but the point was much discussed and varying traditions circulated, in connection with the theological question of the fate of those who lived before Muḥammad's mission.

Bibliography: Ibn Hishām, 114-7, 167-77; Ibn Saʿd, i/1, 75-9, 134-5, 139-41; Ṭabarī, i, 1123-6, 1173-85, 1198-9; Ibn Ḥadjar, *Iṣāba*, iv, 211-9; Th. Nöldeke, in *ZDMG*, 1898, 27-8; Goldziher, *Muh. Studien*, ii, 107; Caetani, *Annali*, i, 158, 298, 307, etc.; F. Buhl, *Das Leben Muhammads*, 115-8; Montgomery Watt, *Muhammad at Mecca*, index. (W. MONTGOMERY WATT)

ABŪ ṬĀLIB KALĪM [see KALĪM].

ABŪ ṬĀLIB MUḤAMMAD B. ʿALĪ AL-ḤĀRITHĪ AL-**MAKKĪ**, d. in Baghdād in 386/998, muḥaddith and mystic, head of the dogmatic *madhhab* of the Sālimiyya [*q.v.*] in Baṣra. His chief work is the *Ḳūt al-Ḳulūb*, Cairo 1310, whole pages of which were copied by al-Ghazālī in his *Iḥyāʾ ʿUlūm al-Dīn*.

Bibliography: Brockelmann, I, 200, S I, 359-66; Sayyid Murtaḍā, *Itḥāf*, Cairo, ii, 67, 69 and passim; Shaʿrawī, *Laṭāʾif*, Cairo, ii, 28; Ibn ʿAbbād al-Rundī, *al-Rasāʾil al-Kubrā*, lith. Fez 1320, 149, 200-1; L. Massignon, *Essai sur les origines du lexique technique de la mystique musulmane*, 2nd ed., index and reff. cited. (L. MASSIGNON)

ABŪ ṬĀLIB KHĀN (1752-1806), the son of Ḥādjdjī Muḥammad Beg, of Turkish descent, was born at Lucknow. His early years were spent in Murshidābād at the court of Muẓaffar Djang. With the accession of Āṣaf al-Dawla (1775) he returned to Oudh and was appointed *ʿamaldār* of Itāwah and other districts. He also served as a revenue official under Colonel Hannay who farmed the country of Sarwār. He was later employed by Nathaniel Middleton, the English Resident, and was connected with Richard Johnson in the management of the confiscated *djāgīrs* of the Begams of Oudh. He remained in Oudh until 1796. In February 1799 he sailed from Calcutta to Europe where he visited England, France, Turkey, and other countries, returning to India in August 1803. An account of his travels, the *Masīr-i Ṭālibī fī Bilād-i Ifrandjī* was published in 1812 and translated into English by C. Stewart (1814) and into French by Ch. Malo (1819). He also wrote the *Lubb al-Siyar wa-Djahān-numā* and the *Khulāṣat al-Afkār*. His *Tafzīh al-Ghāfilīn*, a history of Oudh under Āṣaf al-Dawla, is an important source for the careers of Ḥaydar Beg and the various English residents, and contains a spirited defence of Hannay's revenue administration (English trans. by W. Hoey, 1888). He published also the first edition of the *dīwān* of Ḥāfiẓ, Calcutta 1791.

Bibliography: Elliot and Dowson, *History of India*, viii, 298 ff.; Rieu, *Cat. of Persian Mss.*, i, 378 ff. (C. COLLIN DAVIES)

ABŪ TAMMĀM ḤABĪB B. AWS, Arabic poet and anthologist. According to his son Tammām he was born in the year 188/804; according to an account deriving from himself, in the year 190/806 (*Akhbār*, 272-3) and in the town of Djāsim between Damascus and Tiberias. He died according to his son in 231/845, according to others 2 Muḥarram 232/29 Aug. 846 (*ibid.*). His father was a Christian by name Thādhūs (Thaddeus, Theodosius?) who kept a wine-shop in Damascus. The son altered the name of his father to Aws (*Akhbār*, 246) and invented for himself a pedigree connecting him with the tribe of Ṭayyiʾ. He was mocked on the score of this false pedigree in satirical verses (*Akhbār*, 235-8); later, however, the pedigree appears to have found acceptance, and Abū Tammām is therefore frequently referred to as "the Ṭayyite" or "the great Ṭayyite". He spent his youth as a weaver's assistant in Damascus (Ibn ʿAsākir, iv, 19). Subsequently he went to Egypt where at first he earned his living by selling water in the Great Mosque, but he also found opportunity to study Arabic poetry and its rules. The exact chronology of his life is difficult to reconstruct, at all events until the happenings mentioned in his poetry and the biography of the men eulogised by him are accurately established. According to one tradition he composed his first panegyrics in Damascus for Muḥ. b. al-Djahm, brother of the poet ʿAlī b. al-Djahm (*al-Muwashshah*, 324). This, however, can hardly be correct, as this personage was only in 225 appointed governor of Damascus by al-Muʿtaṣim (Khalīl Mardam Bek, in the preface to the *Dīwān* of ʿAlī b. al-Djahm, 4). According to the poet's own account (*Akhbār*, 121), he composed his first poem in Egypt for the tax-collector ʿAyyāsh b. Lahīʿa (al-Badīʿī, 181). He was, however, disappointed by him and repaid him, as often in similar circumstances, with lampoons (cf. al-Badīʿī, 174 ff.). Al-Kindī (*Governors and Judges of Egypt*, ed. Guest, 181, 183, 186, 187) quotes some verses of Abū Tammām referring to events in Egypt in the years 211-4. From Egypt Abū Tammām returned to Syria. At this time are to be placed, apparently, the encomia and lampoons on Abu 'l-Mughīth Mūsā b. Ibrāhīm al-Rāfiḳī. When al-Maʾmūn returned from his campaign against the Byzantines (215-8), Abū Tammām, clad in the bedouin attire beloved by him all his life, offered him a *ḳaṣīda*, which however was not to the caliph's taste, since he took exception to the fact that a bedouin should compose urban poetry (Abū Hilāl al-ʿAskarī, *Dīwān al-Maʿānī*, ii, 120). At this time the young Buḥturī perhaps came into contact with him in Ḥimṣ (*Akhbār*, 66, cf. 105).

Abū Tammām first rose to fame and became generally known under al-Muʿtaṣim. On the destruction of Amorium in the year 223/838 (cf. ʿAMMŪRIYYA) the Muʿtazilite chief ḳāḍī Aḥmad b. Abī Duʾād [*q.v.*] sent him before the caliph in Sāmarrā. The caliph recalled the harsh voice of the poet, which he had heard in Maṣīṣa, and granted Abū Tammām an audience only after making sure that he had with him a *rāwī*, or reciter, with a pleasant voice (*Akhbār*, 143-4). Then began Abū Tammām's career as the most celebrated panegyrist of his time. In addition to the caliph he eulogised in his *ḳaṣīdas* the highest dignitaries of his epoch. One of these was Ibn Abī Duʾād, whom, however, he offended temporarily through a poem in which the South Arabs (to whom the tribe of Ṭayyiʾ belonged) were greatly extolled to the disadvantage of the North Arabs (from which the chief ḳāḍī claimed descent). An apologetic *ḳaṣīda* had to be addressed to the patron before his reinstatement was effected (*Akhbār*, 147 ff.). Other personalities eulogised by him were, for example, the general Abū Saʿīd Muḥ. b. Yūsuf al-Marwazī, who had distinguished himself in the war against Byzantium and in the operations against the Khurramite Bābak, and his son Yūsuf, killed by the Armenians in 237 while governor of Armenia; Abū Dulaf al-Ḳāsim al-ʿIdjlī, d. 225; Isḥāḳ b. Ibrāhīm al-Muṣʿabī, police chief (*ṣāḥib al-djisr*) of Baghdad from 207 to 235. Ḥasan b. Wahb, secretary to the wazīr Muḥ. b. ʿAbd al-Malik al-Zayyāt was a particular admirer of Abū Tammām. Abū Tammām also travelled several times to visit

provincial governors, for example the governor of Djabal, Muḥ. b. al-Haytham (*Akhbār*, 188 f.), Khālid b. Yazīd b. Mazyad al-Shaybānī, governor of Armenia under al-Wāthiḳ, d. 230 (*Akhbār*, 188 ff.) and others. His journey to ʿAbd Allāh b. Ṭāhir in Nīshāpūr is the most celebrated. ʿAbd Allāh did not come up to his expectations in rewarding him, and the cold climate did not suit the poet, so that he quickly retraced his steps. He was held up by snow in Hamadhān, and made good use of his time in compiling with the aid of the library of Abu 'l-Wafā b. Salama the most celebrated of his anthologies, the *Ḥamāsa*. Some two years before his death, Ḥasan b. Wahb found him the postmastership of Mosul. The philosopher al-Kindī is supposed to have predicted an early death for him as the result of over-exertion of his intellectual faculties, *shiddat al-fikr* (Ibn Khallikān, apparently after al-Ṣūlī, where, however, the appropriate passage is lacking, cf. *Akhbār*, 231-2). It was in Mosul that Abū Tammām died. Abū Nahshal b. Ḥumayd al-Ṭūsī, brother of the Muḥammad who fell in 214 in the campaign against Bābak, had erected over his grave a dome, visited by Ibn Khallikān. Abū Tammām was dark, tall, dressed in bedouin fashion, spoke extremely pure Arabic, having at the same time a most unattractive voice and suffering from a slight impediment of speech; he accordingly had his poetry recited by his *rāwī* Ṣāliḥ (*Akhbār*, 210).

Abū Tammām's *ḳaṣīdas* treat of important historical events, such as the conquest of Amorium, the campaign against Bābak and his execution (223/837-8), the execution of Afshīn (226/840), whom he himself had previously eulogised, and many others. In certain particulars the *ḳaṣīdas* supplement the historians (cf. *al-Ṭabarī's The reign of al-Muʿtaṣim*, transl. and annot. by E. Marin, New Haven 1951, index, and M. Canard, *Les allusions à la guerre byzantine chez les poètes Abū Tammām et Buḥturī*, in A. A. Vassiliev, *Byzance et les Arabes*, I, *La dynastie d'Amorium*, Bruxelles 1935, 397-403).

Even in Abū Tammām's lifetime opinions were divided upon the aesthetic merit of his poetry. The poet Diʿbil, held in awe by reason of his sharp tongue, asserted that one third of his poetry was plagiarized, one third bad, one third good (*Akhbār*, 244). His pupil al-Buḥturī, who held him in the greatest respect, thought Abū Tammām's best verse better than his own best, his bad verse worse than his own bad verse (*Akhbār*, 67). The poet ʿAlī b. al-Djahm (d. 249; *Akhbār*, 61-2) was a friend and admirer of Abū Tammām. From him originates the account of Abū Tammām's first entry into the poets' hall (*ḳubbat al-shuʿarāʾ*) in the mosque of Baghdād (*Taʾrīkh Baghdād*, viii, 249, after al-Muʿāfā b. Zakariyyāʾ; *Dīwān ʿAlī b. al-Djahm*, intr., 6-7). Long after the poet's death writings were penned both in praise of him and against him; in these works his literary "thefts" also were discussed. Abu l-ʿAbbās Aḥmad b. ʿUbayd Allāh al-Ḳutrabullī wrote against him (*al-Muwāzana*, 56), in his favour Abū Bakr Muḥammad al-Ṣūlī, whose *Akhbār Abī Tammām* is at once the oldest and the most circumstantial source for the life of the poet. To his defenders must be added in addition al-Marzūḳī (d. 421) who wrote a *Kitāb al-Intiṣār min Ẓalamat Abī Tammām* (cf. *Oriens*, 1949, 268). The ḳāḍī Abu 'l-Ḥasan ʿAlī al-Djurdjānī (d. 366/976-7) in his *Wasāṭa bayn al-Mutanabbī wa Khuṣūmih*, Ṣaydā 1331, 58 ff., and al-Āmidī (d. 381) in his *Muwāzana bayn al-Ṭāʾiyyayn Abī Tammām wa 'l-Buḥturī*, Istanbul 1287 (Turkish transl. by Mehmed Weled, Istanbul 1311) weigh up his merits and demerits. Al-Marzubānī (d. 384) in *al-Muwashshaḥ*, Cairo 1343, 303, 329, brings into prominence rather his weak points. Al-Sharīf al-Murtaḍā in his *al-Shihāb fi 'l-Shayb wa 'l-Shabāb*, Istanbul 1302, defends the poet against al-Āmidī's strictures. The modern reader will follow the judgement of the old critics. Abū Tammām's *ḳaṣīdas* contain, side by side with brilliant conceits which have established the poet's fame, much that is unpleasant. He has a penchant not only for queer words but also for artificial, frequently tortuous, sentence construction, the understanding of which much exercised the Arabic commentators. Unhappy personifications of abstract ideas, affected, far-fetched and unconvincing metaphors harass the reader often for many verses at a stretch till he stumbles on an excellent poetical figure. Added to this is an unfortunate tendency towards paronomasia and subtly-reasoned antithesis, to which he all too frequently sacrifices the clarity and attractiveness of the phrase (cf. ʿAbd al-Ḳāhir al-Djurdjānī, *Asrār al-Balāgha*, ed. Ritter, 15). The *Dīwān* was collected by al-Ṣūlī (alphabetically), by ʿAlī b. Ḥamza al-Iṣfahānī (under subjects), also handed on by al-Sukkarī (*Oriens*, 1949, 268) and others. Unsatisfactory editions Cairo 1299, Beyrut 1889, 1905, 1923, 1934. Index by Margoliouth in *JRAS*, 1905, 763-82. No edition exists as yet of the numerous comtaries, absolutely indispensable for the understanding of his poetry, by al-Ṣūlī, al-Marzūḳī, al-Tibrīzī, Ibn al-Mustawfī (*Akhbār*, intr. 8; H. Ritter, *Philologika*, xiii, in *Oriens*, 1949, 266-9; Ḥādjdjī Khalīfa, under *Dīwān Abī Tammām*, and Ismāʿīl Pasha, *Īḍāḥ al-Maknūn fi 'l-Dhayl ʿalā Kashf al-Ẓunūn*, i, Istanbul 1945, 422). [The commentary of al-Tibrīzī is in course of publication in Cairo; vol. i, 1952.]

Abū Tammām collected in addition several anthologies of poetry. The best known is a collection of fragments (*muḳaṭṭaʿāt*) by less known poets, which he made during his involuntary halt in Hamadhān, the *Ḥamāsa*. Edited with the commentary of al-Tibrīzī by G. Freytag, *Hamasae Carmina cum Tebrisii scholiis*, Bonn 1828, Latin transl. 1847-51, reprinted with all the errors Būlāḳ 1284, Cairo 1938. On the numerous commentaries see Brockelmann, i, 134 ff.; H. Ritter, *Philologika*, iii, in *Oriens*, 1949, 246-61; Ḥādjdjī Khalīfa, s.v. *Ḥamāsa*, and Ismāʿīl Pasha, *Īḍāḥ al-Maknūn*, i, 422. Of the other anthologies there are preserved in manuscript the *Ḥamāsa al-Ṣughrā* or *al-Waḥshiyyāt* (see *Oriens*, 1949, 261-2), not to be identified with any of the *Ikhtiyārāt* mentioned by al-Āmidī; and *Ikhtiyār al-Shuʿarāʾ al-Fuḥūl* in Mashhad (see *MMIA*, xxiv, 274). We know only the names of the remainder: *al-Ikhtiyārāt min Shiʿr al-Shuʿarāʾ wa Madḥ al-Khulafāʾ wa Akhdh Djawāʾizihim* (*Fihrist*, 165, *Maʿāhid al-Tanṣīṣ*, 18); *al-Ikhtiyārāt min Ashʿār al-Ḳabāʾil* (*Fihrist*) = *al-Ikhtiyār al-Ḳabāʾilī al-Akbar* and *al-Ikhtiyār al-Ḳabāʾilī* (*Muwāzana*, 23); *Ikhtiyār al-Muḳaṭṭaʿāt*, beginning with *ghazal* (ib.); *al-Ikhtiyār min Ashʿār al-Muḥdathīn* (ib.). Also the *Naḳāʾiḍ Djarīr wa 'l-Akhṭal*, ed. Salhani, Beyrout 1922, derives from him.

ABŪ TĀSHUFĪN I, ʿAbd al-Raḥman b. Abī Ḥammū, fifth sovereign of the ʿAbd al-Wādid dynasty. Proclaimed 23 Djumādā I 718/23 July 1318 after the murder of his father Abū Ḥammū I, he exiled to Spain all those of his relatives who could claim the throne and thus freed his hands to lay siege to Constantine and Bidjāya (Bougie) and to make an attempt at extending his kingdom towards the east. The Ḥafṣids, however, allied themselves with the Marīnids and the Marīnid sultan Abu 'l-Ḥasan seized Abu Tāshufīn's dominions and besieged Tlemcen in 735/1335. Two years later the capital was taken by assault and the king was killed in battle.

Bibliography: see ʿabd al-wādids.

(A. Bel*)

ABŪ TĀSHUFĪN II b. Abī Ḥammū Mūsā, sovereign of the ʿAbd al-Wādid dynasty. Born in Rabīʿ I 752/April-May 1351, he passed his youth in Nedroma. After the flight of Abū Ḥammū II to Tunis, the Marīnid sultan Abū ʿInān sent him to Fez; he returned to Tlemcen only in 760/1359. In spite of his father's concessions to him, his impatience to acceed to the throne drove him to attempts to get rid of Abū Ḥammū. But Abū Ḥammū, put into prison in Oran, escaped; and when sent on pilgrimage, returned triumphantly to Tlemcen. Finally Abū Tāshufīn took command of a Marīnid army which defeated Abū Ḥammū and enabled him to accede to the throne in Dhu 'l-Ḥidjdja 791/Nov. 1389. He remained faithful to his obligations as a vassal of the Marīnids and died on 17 Radjab 795/29 May 1393.

Bibliography: see ʿabd al-wādids.

(A. Bel*)

ABU 'L-ṬAYYIB [see al-mufaḍḍal].

ABŪ ṬAYYIB [see al-mutanabbī, al-ṭabarī].

ABŪ THAWR Ibrāhīm b. Khālid b. Abi 'l-Yamān al-Kalbī, prominent jurisconsult and founder of a school of religious law, died in Baghdād in Ṣafar 240/July 854. Living in ʿIrāḳ one generation after al-Shāfiʿī, Abū Thawr seems to have been influenced by al-Shāfiʿī's methodological insistence on the authority of the *ḥadīth* of the Prophet, without, however, renouncing the use of *raʾy* [*q.v.*], as had been customary in the ancient schools of law. The later biographers represented this as a conversion on the part of Abū Thawr from the *raʾy* of the ancient ʿIrāḳians to the school of al-Shāfiʿī, and he is, indeed, often counted among the adherents of the Shāfiʿite school. But his opinions, which often diverge from Shāfiʿite doctrine, are not regarded as variants (*wudjūh*) of the doctrine of the school, nor does he, indeed, enjoy a particularly high reputation as a traditionist. Some cautious praise of him as a jurisconsult is attributed to his older contemporary, Aḥmad b. Ḥanbal. A limited number of Abū Thawr's opinions on religious law are quoted in the works on *ikhtilāf* [*q.v.*], particularly in the two fragments of al-Ṭabarī's *Ikhtilāf al-Fuḳahāʾ* (ed. Kern, Cairo 1902, and Schacht, Leiden 1933). The school of Abū Thawr was still widely represented in the 4th/10th century, particularly in Armenia and Ādharbaydjān.

Bibliography: *Fihrist* i, 211; ii, 91; al-Khaṭīb al-Baghdādī, *Taʾrīkh Baghdād*, vi, 65 ff.; Subkī, *Ṭabaḳāt al-Shāfiʿiyya*, i, 227 ff.; Ibn Ḥadjar al-ʿAsḳalānī, *Tahdhīb al-Tahdhīb*, i, 118 f.; Ibn al-ʿImād, *Shadharāt*, ii, 93 f.; Juynboll, *Handleiding*, 369, 371. (J. Schacht)

ABŪ TURĀB, nickname of ʿAlī b. Abī Ṭālib [*q.v.*].

ABŪ ʿUBAYD AL-BAKRĪ, Abd Allāh b. ʿAbd al-ʿAzīz b. Muḥ. b. Ayyūb, was, with al-Sharīf al-Idrīsī [*q.v.*], the greatest geographer of the Muslim West, and one of the most characteristic representatives of Arab Andalusian erudition in the 5th/11th century.

Although little is known about the details of the life of Abū ʿUbayd al-Bakrī, it is possible to describe the various aspects of his scientific activity, all of which seems to have taken place in his own country; in fact, he appears never to have travelled in the East, or even North Africa, which he nevertheless described so minutely. According to the information which has come down to us, the principal facts of his biography amount to the following: his father, ʿIzz al-Dawla ʿAbd al-ʿAzīz al-Bakrī, was the only sovereign (or else the second, after his own father Abū Muṣʿab Muḥ. b. Ayyūb) of the diminutive principality of Huelva (Walba [*q.v.*]) and Saltes (Shalṭīsh [*q.v.*]), founded in 403/1012, at the time of the fall of the Marwānid caliphate of Cordova, on the Atlantic coast of the south of the Iberian peninsula, not far west of Niebla (Labla). In 443/1051, ʿIzz al-Dawla, under the political pressure exerted against him by al-Muʿtaḍid b. ʿAbbād [see ʿabbādids], was forced to give up his principality to the king of Seville, who annexed it to his possessions. Abū ʿUbayd, the exact date of whose birth is unknown, must at this time have been at least thirty. He accompanied his father to Cordova, which was chosen by him for his new place of residence, under the more or less effective protection of its ruler Abu 'l-Walīd Muḥ. b. Djahwar [cf. djahwarids]. These, anyway, are the particulars given by Ibn Ḥayyān (*al-Matīn*, in Ibn Bassām, *al-Dhakhīra*, ii, reprod. by Ibn ʿIdhārī, *al-Bayān*, iii, 240-2, and Dozy, *Abbad.*, i, 252-3), and which there is no reason to doubt, but another source (append. to *al-Bayān*, iii, 299) asserts that Abū ʿUbayd and his father, who died about 456/1064, withdrew to Seville itself, which is not improbable. However that may be, Abū ʿUbayd very quickly became known as a distinguished writer. He was the pupil of the chronicler Abū Marwān b. Ḥayyān and of other masters of repute, and moved in provincial court circles, especially that of the Banū Ṣumādiḥ of Almeria. When he later witnessed the military and political intervention of the Almoravids in Spain, and the successive depositions of the *mulūk al-ṭawāʾif*, he had already written most of the numerous works for the preparation of which he had collected innumerable notes. He settled at Cordova, which had been restored by the sultan Yūsuf b. Tāshufīn to the position of capital of al-Andalus: and there he died, full of years, in Shawwāl 487/Oct.-Nov. 1094 (496 according to al-Ḍabbī, who attributes to him the title of *dhu 'l-wizāratayn*).

Abū ʿUbayd al-Bakrī, to judge by the variety of his works, appears as a perfect type of *mushārik*, having acquired an extensive knowledge of widely different branches of learning. He was principally a geographer, but also at the same time a theologian,

philologist, and botanist. He even cultivated the art of poetry, since certain of his biographers have reproduced some of his bacchic verses, and he has been given the reputation of a confirmed drinker. He has also been depicted as a bibliophile, who preserved his valuable manuscripts in envelopes of fine fabric.

In the religious sphere, Ibn Bashkuwāl attributes to him, without giving the title, a work on the 'signs of the prophetic mission' of the Messenger of God (*fī aʿlām nubuwwat nabiyyinā*). As a philologist, Ibn Khayr (*Fahrasa*, *B A H*, ix-x, 325, 326, 343, 344), attributes to him four works: (1) a criticism of Abū ʿAlī al-Ḳālī [*q.v.*], *al-Tanbīh ʿalā Awhām Abī ʿAlī fī Kitāb al-Nawādir*, ed. A. Ṣalḥani, 4 vol., Cairo 1344/1926; cf. Brockelmann, S I, 202; (2) a commentary on the *Amālī* of the same, *Simṭ al-Laʾālī fī Sharḥ al-Amālī*, ed. ʿAbd al-ʿAzīz Maymanī, Cairo 1354/1936; cf. Brockelmann, *loc. cit.*; (3) a commentary on the verses quoted in *al-Gharīb al-Muṣannaf* of Abū ʿUbayd al-Ḳāsim b. Sallām, entitled *Ṣilat al-Mafṣūl*; (4) a commentary on the collection of proverbs by the same Abū ʿUbayd b. Sallām, entitled *Faṣl al-Maḳāl fī Sharḥ Kitāb al-Amthāl* (MSS at Istanbul; cf. *M O*, vii, 123; *Z D M G*, 1910; Brockelmann, S I, 166 f. n.). Lastly we may mention another work, semi-historical, semi-philological, which seems to be lost: *al-Muʾtalaf wa 'l-Mukhtalaf* on the names of the Arab tribes.

The botanical work of Abū ʿUbayd al-Bakrī, *Kitāb al-Nabāt*, also indicated by Ibn Khayr, *Fahrasa*, 377, seems not to have been found yet in MS. It has its place, in any case, in the series of Andalusian treatises on descriptive botany, made up of alphabetically-arranged items, and it served as a direct source for the *muḥtasib* and naturalist of the 6th/12th century Ibn ʿAbdūn [*q.v.*] al-Ishbīlī, for the composition of his *ʿUmdat al-Ṭabīb fī Sharḥ al-Aʿshāb* (cf. M. Asín Palacios, *Glosario de voces romances registradas por un botánico anónimo hispano-musulmán*, Madrid-Granada 1943, XXVII and n. 1). This botanical treatise, which Ibn Abī Uṣaybiʿa described in a few lines (cf. M. Meyerhof, *Esquisse d'histoire de la pharmacologie et botanique chez les Musulmans d'Espagne*, in *al-And.*, 1935, 14; the same, *Un glossaire de matière médicale de Maïmonide*, in *Mém. Inst. d'Égypte*, xli, 1940, XXVII), mainly concentrated, as did that of Ibn ʿAbdūn, on the peninsula of al-Andalus; it was made use of not only by the latter, but also by the naturalists al-Ghāfiḳī and Ibn al-Bayṭār.

Abū ʿUbayd al-Bakrī's geographical work, on which his renown in the Arab world was mainly based, consists of two books of unequal length and importance; *Muʿdjam mā istaʿdjam* and *al-Masālik wa 'l-Mamālik*. The *Muʿdjam*, which was published by F. Wüstenfeld in an autographed edition (*Das geographische Wörterbuch*, Göttingen, 1876-7; 4 vols, Cairo 1945-51), is a list of toponyms, mostly referring to the Djazīrat al-ʿArab, which occur in the poetry of the *djāhiliyya* and the literature of the *ḥadīth* and the spelling of which had given rise to discussions. This list is preceded by an interesting introduction on the geographical setting of ancient Arabia and the respective habitats of the most important tribes.

As for the *al-Masālik*, the main work of al-Bakrī, we have so far only part of it, in the form of extensive fragments, not all of which have yet been published. Of the introductory volume, which deals with general geography and the Muslim and non-Muslim peoples (MS at Paris, B. N., 5905), the greater part is still unpublished (fragment on the Russians and Slavs published at St. Petersburg in 1878 by A. Kunik and V. Rosen, *Izvestiya al-Bekri i drugikh avtorov o Rusi i Slavyanakh*, i; cf. also A. Seippel, *Rerum Normannicorum Fontes Arabici*, Oslo 1896-1928). But the portion which is undoubtedly the most important, that dealing with the Muslim West, has long been known, as far as Africa is concerned, through the edition and French translation (both today very outdated) of MacGuckin de Slane (*Description de l'Afrique septentrionale*, Arabic text, Algiers 1857; 2nd ed., Algiers 1910; Fr. tr., *JA*, 1857-8, 2nd ed., Algiers 1910). Before that, in 1831, an abridged translation had been published in Paris by Quatremère (*Not. et extraits*, xii). The author of this article has published some unpublished parts of *al-Masālik* relating to al-Andalus, and identified the quotations included in the historico-geographical compilation entitled *al-Rawḍ al-Miʿṭār* by Ibn ʿAbd al-Munʿim al-Ḥimyarī al-Sabtī (*La Péninsule ibérique au Moyen-Age*, Leyden 1938, 245-52; cf. also *La 'Description de l'Espagne'* of Aḥmad al-Rāzī, in *And.*, 1953, 100-4), using a MS in the library of the Djāmiʿ al-Ḳarawiyyīn at Fez, in which is to be found the most extensive fragment that we yet possess on the description of the Iberian Peninsula.

Following the usual practice of geographers of his own time and preceding centuries, Abū ʿUbayd al-Bakrī aimed first and foremost at giving his work, as its title, descriptions of 'itineraries and kingdoms', indicates, the form of a roadbook, including an estimate of distances between each town or staging-post. A dry list of names might have been the result, interesting enough, but only a bare outline, if the author had not set upon it his personal stamp and made a discriminating choice among the mass of particulars which he had contrived to collect. These particulars are not only geographical; they concern to a considerable extent political and social history and even ethnography, and this is what gives to the *Masālik* of al-Bakrī, at least as far as the West is concerned, their inestimable value. His was an inquiring and methodical mind, and he thus drew some historical sketches that have never since been equalled: his accounts of the Idrīsids or the Almoravids, for example, still constitute the most reliable basis of our documentation on the first of these dynasties and on the origins of the second. Most of his descriptions of towns are remarkably precise; his toponymic material for the Maghrib, Ifrīḳiya, and the *bilād al-Sūdān* is of a fulness no less worthy of interest.

It goes without saying that, when writing his valuable description of North Africa, Abū ʿUbayd had at his disposal, in his residence at Cordova or Seville, not only the verbal information afforded him by people coming from Ifrīḳiya or the Maghrib but also the work of other authors who had dealt with the same regions. The basic source, which he actually mentions several times in his work, was in fact *al-Masālik wa'l-Mamālik* by Muḥ. b. Yūsuf al-Warrāḳ, on the geography of Ifrīḳiya. This man (see AL-WARRĀḲ and R. Brunschvig in *Mélanges Gaudefroy-Demombynes*, Cairo 1935-45, 151-52), who lived for a long time in al-Ḳayrawān before going to settle at Cordova in the reign of the caliph al-Ḥakam II and at his invitation, thus enabled al-Bakrī, who used his work (which now appears to be lost) to furnish us with information that goes back to the 10th century, and on which the geographer could draw at will. Moreover, he doubtless had at his disposal documents of the Cordovan archives

(for example on the heretical sect of the Barghawāṭa [*q.v.*]). On the other hand, the fact that he makes no allusion to the intervention of the Almoravids in Spain confirms the indication that al-Bakri finished his *al-Masālik* in 460/1068, i.e. eighteen years before the battle of al-Zallāḳa.

Another source, not less important than al-Warrāḳ's book, was the geographical work of one of Abu ʿUbayd's own masters, Aḥmad b. ʿUmar al-ʿUdhrī, a native of Dalias (*Dalāya*, hence his *maʿrifa* Ibn al-Dalāʾī), who died at Almeria in 478/1085 (cf. *Pén. ibér.*, xxiv, n. 2.). This work, which was entitled *Niẓām al-Mardjān*, and was later to be used as a source by al-Ḳazwīnī also, gave much space to the *ʿadjāʾib* [*q.v.*], which were not omitted likewise by al-Bakrī himself. Finally, a further source should be mentioned, of uncertain provenience but which may conceivably be simply another of Abū ʿUbayd's own works: the *Madjmūʿ al-Muftaraḳ*, from which, in their turn, Ibn ʿIdhārī and al-Maḳḳarī were later to make borrowings.

For his documentation on Christian Spain and the rest of Europe, it may be noted finally that Abū ʿUbayd quotes — doubtless, however, through the intermediary of al-ʿUdhrī, since al-Ḳazwīnī also refers to him by the same indirect means — a Jew of Tortosa, Ibrāhīm b. Yaʿḳūb al Isrāʾīlī al-Ṭurṭūshī, who lived at the beginning of the 4th/10th century, but whose work (perhaps written in Hebrew, then translated into Arabic or Latin?) appears to be lost.

The parts of al-Bakrī's *Masālik* that have been preserved amply merit a complete critical edition and systematic study. A study of the author's language has also yet to be undertaken; al-Bakrī is, together with the authors of *ḥisba* treatises such as Ibn ʿAbdūn al-Ishbīlī, Ibn ʿAbd al-Raʾūf, and al-Saḳaṭī of Malaga, and authors of treatises on husbandry, the Andalusian writer whose vocabulary contains the greatest number of Hispanicisms. From the point of view of the economic position of the West in the 10th and 11th centuries (data on metrology, the cost of living, commercial relationships and trade in commodities and luxury articles), his work, even in its fragmentary form, provides a mass of information which would give scope for the drawing up of analytical lists and maps, as does the *Nuzhat al-Mushtāḳ* of al-Sharīf al-Idrīsī, that other masterpiece, of a somewhat later date, on the historical geography of the Islamic world in the middle ages.

Bibliography: Biographical accounts of al-Bakrī, all short and with little details: Ibu Bashkuwāl, *Ṣila*, n. 628; Ḍabbī, *Bughya*, n. 930; Ibn al-Abbār, *al-Ḥulla al-Siyarāʾ* (in Dozy, *Corrections* ..., Leyden 1883, 118-23); al-Fatḥ b. Khāḳān, *Ḳalāʾid al-ʿIḳyān*, 218; Ibn Saʿīd, *Mughrib*, i, Cairo 1953, 347-8; Ibn Bassām, *Dhakhira*, ii (account reproduced by the preceding); Suyūṭī, *Bughya*, 285; Ibn Abi Uṣaybiʿa, ii, 52; Maḳḳarī, *Nafḥ* (*Analectes*), ii, 125. See also Pons Boigues, *Ensayo*, n. 125; J. Alemany Bolufer, *La geografía de la Peninsula ibérica en los escritores árabes*, Granada 1921, 45-6; R. Blachère, *Extraits des principaux géographes arabes*, Paris 1932, 183, 255 (with a very dubious appreciation on the documentary value and style of al-Bakrī); Lévi-Provençal, *La péninsule ibérique au Moyen Age*, Leyden 1938, xxi-xxiv; Brockelmann, I, 476, S I, 875-6. The accounts by Reinaud, *Intr. à la Géogr. d'Aboulféda*, ciii, and by M. G. de Slane in the preface to his incomplete edition, are today very much out-of-date. Finally, for the materials relating to eastern Europe in the works of al-Bakrī, via his borrowings from Ibrāhīm al-Ṭurṭūshī, see C. E. Dubler, *Abū Ḥāmid al-Granadino y su relación de viaje por tierras eurasiáticas*, Madrid 1953, 161-2.

(E. Lévi-Provençal)

ABŪ ʿUBAYD AL-ḲĀSIM B. SALLĀM (the *nisba* varies between al-Baghdādī, al-Khurāsānī and al-Anṣārī), grammarian, Kurʾānic scholar and lawyer, was born at Harāt about 154/770, his father, of Byzantine descent, being a *mawlā* of the tribe of Azd. He studied first in his native town, and in his early twenties (about 179/795) went to Kūfa, Baṣra and Baghdād where he completed his studies in grammar, *ḳirāʾāt*, *ḥadīth* and *fiḳh*. In none of these fields did he adhere to one school or group, but chose a middle position in an eclectic way. Returning home he became tutor in two influential families in Khurāsān, and in the year 192/807 was appointed *ḳāḍī* of Ṭarsūs in Cilicia by its governor Thābit b. Naṣr b. Mālik. Abū ʿUbayd remained in office until 210/825 and after some travelling settled for the next ten years in Baghdād, where ʿAbd Allāh b. Ṭāhir became his generous patron. In the year 219/834 he performed the pilgrimage and afterwards stayed on at Mecca to die there in 224/838 and to be buried in the house of Djaʿfar b. Abī Ṭālib.

Twenty titles of Abū ʿUbayd's books are mentioned in the *Fihrist*, several of which have survived in MS. His three main works deal with the *gharīb*, the difficult linguistic passages, especially in the Ḳurʾān and the *ḥadīth*, and are entitled *Gharīb al-Muṣannaf*, *Gharīb al-Ḳurʾān* and *Gharīb al-Ḥadīth* respectively. *Gharīb al-Muṣannaf*, the first great dictionary of the Arabic language, is said to consist of 1000 chapters, 1200 *shawāhid* and 17,990 words; ʿAbd Allāh b. Ṭāhir granted the author a pension as a sign of recognition for it. This and all his other works are based on the previous research of other scholars, but Abū ʿUbayd in using them wrote the standard works on these subjects, which superseded his forerunners and were used and frequently quoted by all the later authors. — Only *al-Amwāl*, Cairo 1353, has been preserved of his works on *fiḳh*, and of his works on *adab* his *al Amthāl*.

Bibliography: *Fihrist*, 71-2; al-Khaṭīb, *Taʾrīkh Baghdād*, xii, 403-16; Anbārī, *Nuzha*, 188-98; Yāḳūt, *Irshād*, vi, 162-6; G. Flügel, *Die grammatischen Schulen der Araber*, 86; M. J. de Goeje, in *ZDMG*, 1864, 781-814; Brockelmann, I, 106, S I, 166; H. L. Gottschalk, in *Isl.*, 1936, 245-89; A. Spitaler, in *Documenta Islamica Inedita*, Berlin 1952, 1-24 (partial edition of *Faḍāʾil al-Ḳurʾān*).

(H. L. Gottschalk)

ABŪ ʿUBAYD ALLĀH Muʿāwiya b. ʿUbayd Allāh b. Yasār al-Ashʿarī, vizier. Appointed by the caliph al-Manṣūr to the retinue of his son al-Mahdī, he was made vizier on al-Mahdī's accession (158/775). He held the office probably up to 163/779-80, but already in 161/777-8 the accusation of heresy brought against his son Muḥammad, which led to the latter's execution, compromised his position. The enmity of the powerful chamberlain al-Rabīʿ b. Dāʾūd consummated his downfall. Removed from the vizierate and replaced by Yaʿḳūb b. Dāʾūd, he was nevertheless left in the charge of the *dīwān al-rasāʾil* until 167/783-4; he died in 170/786-7.

According to the unanimous witness of the sources, he was a man of the first rank, competent and honest. Ibn al-Ṭiḳṭaḳā gives an account of his organizing and administrative achievements, culminating in the reform of the *kharādj*, substituting

for land tax in the *Sawād* of al-ʿIrāḳ a proportional tax on the produce, payable in nature; he is also stated to be the author of a book on this subject.

Bibliography: Yaʿḳūbī, Ṭabarī, indexes; Djahshiyārī, *Wuzarāʾ* (Cairo 1938), 102-118; *Aghānī, Tables*; Ibn Khallikān, xi, 88; Ibn al-Ṭiḳṭaḳā, *Fakhrī* (Dérenbourg), 246-50; S. Moscati, in *Orientalia*, 1946, 162-4. (S. Moscati)

ABŪ ʿUBAYDA Maʿmar b. al-Muthannā, Arabic philologist, born 110/728 in Baṣra, d. 209/824-5 (other dates also in *Taʾrīkh Baghdād* and later works). He was born a *mawlā* of the Ḳurayshite clan of Taym, in the family of ʿUbayd Allāh Maʿmar (cf. Ibn Ḥazm, *Djamharat Ansāb al-ʿArab*, Cairo 1948, 130); his father or grandfather came originally from Bādjarwān (near al-Raḳḳa in Mesopotamia, less probably the village of the same name in Shirwān) and was said, on dubious authority, to have been Jewish. He studied under the leading philologists of the school of Baṣra, Abū ʿAmr b. al-ʿAlāʾ and Yūnus b. Ḥabīb, and composed a number of treatises on points of grammar and philology, none of which have been preserved. Breaking away, however, from the narrow philological interests of his teachers, Abū ʿUbayda took as his field of study everything that had been transmitted on the history and culture of the Arabs. Applying to these scattered oral materials the systematic methods employed in the philological schools, of collecting and grouping together items of the same or similar kinds, he composed some dozens of treatises on points of Arab and early Islamic history and tribal traditions, which served as the starting point and supplied most of the data for all future studies relating to pre-Islamic Arabia. His materials were arranged under general heads and these again by sub-categories, as, for example, in the *Kitāb al-Khayl*, on famous Arab horses, still preserved (ed. Hyderabad 1358). Similarly, materials relating to the tribes were most frequently arranged under the categories of "virtues" (*manāḳib*) and "vices" (*mathālib*); by the latter he gave much offence to the tribal pride of the Arabs, the more so because they provided ammunition for the anti-Arab polemics of the Persian *shuʿūbiyya* [*q.v.*]. Moreover, as a convinced Khāridjite (cf. with Ibn Khallikān, Djāḥiẓ, *Bayān*, Cairo 1932, i, 273-4; Ashʿarī, *Maḳālāt*, i, 120), he had no respect for the contemporary Arab sharīfs, especially the Muhallabids, and publicly exposed their pretensions. For both these reasons he was accused by the opponents of the *shuʿūbiyya* of being a bitter calumniator of the Arabs (*kāna aghra ʾl-nās bi-mashātim al-nās*: Ibn Ḳutayba, *Kitāb al-ʿArab*, in *Rasāʾil al-Bulaghāʾ* [3], Cairo 1946, 346), but there is little evidence to identify him, as Goldziher and Aḥmad Amīn have done, with the Persian *shuʿūbiyya* — rather, indeed, the contrary (cf. Masʿūdī, *Tanbīh*, 243). The accuracy of his scholarship was warmly defended in learned circles (cf. Djāḥiẓ, *loc. cit.* and *Taʾrīkh Baghdād*, xiii, 257), and even his critics were compelled to recognize the depth and many-sidedness of his learning and to utilize his works. Only on the more technical field of Arabic poetry was he held to be inferior to his rival al-Aṣmaʿī [*q.v.*], although it was currently said "The seekers of knowledge, when they attend the instruction of al-Aṣmaʿī buy dung in the market of pearls, but when they attend Abū ʿUbayda's they buy pearls in the dung-market", in allusion to the latter's unclean habits and poor delivery. His abilities as an editor and glossator of poetry have, however, left a monument in his compilation of the *naḳāʾiḍ* of Djarīr and al-Farazdaḳ, transmitted through Muḥ. b. Ḥabīb and al-Sukkarī (ed. A. A. Bevan, Leiden 1905-12). Almost the whole of his life was spent in Baṣra, except for one or two short visits to Baghdād. He was notoriously unwilling to allow the circulation of his books, and an amusing story is told of the stratagem of students in Baghdād to obtain copies of them (*Taʾrīkh Baghdād*, xii, 108). Among the more famous of his pupils were Abū ʿUbayd al-Ḳāsim b. Sallām, Abū Ḥātim (ibn) al-Sidjistānī, ʿUmar b. Shabba, and the poet Abū Nuwās.

In addition to his compilations of historical traditions and literary materials, Abū ʿUbayda composed several philological works on the Ḳurʾān and the Ḥadīth. His *Gharīb al-Ḥadīth* seems to have been the earliest work of its kind; it was a short book and contained no *isnāds* (Ibn Durustawayh in *Taʾrīkh Baghdād*, xii, 405). More important was *Madjāz al-Ḳurʾān*, the first known work on *tafsīr* (*madjāz* meaning in this case "interpretation" or "paraphrase"), consisting of brief notes on the meaning of selected words and phrases in the order of the sūras. This work, which was transmitted by his pupil ʿAlī b. al-Mughīra al-Athram, survives in two MSS (edition in preparation in Cairo). Abū ʿUbayda also contributed philological notes to Ibn Hishām for his redaction of the *Sīra* by Ibn Isḥāḳ.

Bibliography: *Fihrist*, 53-4; *Taʾrīkh Baghdād*, no. 7210 (xiii, 252-8); Ibn Khallikān, no. 702; Yāḳūt, *Irshād*, vii, 164-70; *Aghānī, Tables*; many other casual references in Arabic works; I. Goldziher, *Muh. Stud.* i, 194 sqq. (but see H. A.R. Gibb, in *Studia Orientalia Ioanni Pedersen dicata*, Copenhagen 1953, 105 ff.); Brockelmann, I, 103, S I, 162; F. Krenkow, in *Kitāb al-Khayl*, 174-9; E. Mittwoch, *Proelia Arabum paganorum*, Berlin 1899; A. Amīn, *Ḍuḥa ʾl-Islām*, ii, 304-5; Ṭāhā al-Ḥādjirī, *al-Riwāya wa ʾl-Naḳd ʿinda Abī ʿUbayda*, Alexandria 1951. (H. A. R. Gibb)

ABŪ ʿUBAYDA ʿĀmir b. ʿAbd Allah b. **al-DJARRĀḤ**, of the family of Balḥārith, of the Ḳurashite tribe of Fihr, one of the early Meccan converts to Islām, and one of the ten Believers to whom Paradise was promised (see al-ʿAshara al-Mubashshara). He took part in the emigration to Abyssinia, and is said to have been distinguished for courage and unselfishness and to have been given the title of *amīn* by Muḥammad for that reason. He was 41 years of age at the battle of Badr, and took part in the later campaigns, distinguishing himself at Uḥud, and as the commander of several expeditions. He was later sent to Nadjrān to instruct the Yamanite converts, but returned to Medina before the death of Muḥammad and together with ʿUmar b. al-Khaṭṭāb played a decisive part in the election of Abū Bakr as Muḥammad's *khalīfa*. After ʿUmar's accession to the Caliphate (13/634) Abū ʿUbayda was despatched to Syria to join the campaigns against the Byzantine forces, and some time later, probably in the year 15/636, was given the supreme command there. After the victory on the Yarmūk in that year, Abū ʿUbayda completed the conquest of northern Syria (Ḥimṣ, Aleppo, Antioch). In 17/638 the caliph himself visited the headquarters of the Syrian army at Djābiya, to regulate the administration of Syria and to give Abū ʿUbayda the support of his authority. Tradition asserts that ʿUmar intended to nominate Abū ʿUbayda as his eventual successor, and when a serious epidemic broke out in Syria in 18/639 he summoned Abū ʿUbayda to Medina. Abū ʿUbayda, however, refused

to leave Syria and himself fell a victim to the plague. He was 58 years of age, and left no descendants. He was clearly a man whose personality impressed his contemporaries, but he is presented by later tradition in a rather colourless fashion.

Bibliography: Ibn Saʿd, iii/1, 297-301; vii/2, 111-2; Ṭabarī, index; *Nasab*, 410, 445; Abū Nuʿaym, *Ḥilyat al-Awliyāʾ*, i, 100-2; Ibn al-Athīr, *Usd al-Ghāba*, iii, 84, v, 249; Caetani, *Annali*, i, ii, *passim*; idem, *Chronographia*, A. H. 18, para. 32; C. H. Becker, in *Camb. Med. Hist.*, ii, 1913, 341-6 (= *Islamstud.*, i, 81-7); H. Lammens, *Le "triumvirat" Aboû Bekr. ʿOmar et Aboû ʿObaida*, *MFOB*, 1910, 113 ff. (exaggerated, but contains many references to traditions in later sources).

(H. A. R. GIBB)

ABŪ ʿUBAYDA AL-TAMĪMĪ [see IBĀḌIYYA].

ABU 'L-WAFĀʾ AL-BŪZADJĀNĪ, MUḤAMMAD B. MUḤ. B. YAḤYĀ B. ISMĀʿĪL B. AL-ʿABBĀS, one of the greatest Arab mathematicians, very probably of Persian origin, born in Būzadjān in Ḳuhistān, 1 Ramaḍān 328/10 June 1940. His first teachers in mathematics were his uncles Abū ʿAmr al-Mughāzilī and Abū ʿAbd Allāh Muḥammad b. ʿAnbasa, the former having in his turn studied geometry under Abū Yaḥyā al-Marwazī (or al-Māwardī) and Abu 'l-ʿAlāʾ b. Karnīb. In the year 348/959 Abu 'l-Wafāʾ emigrated to ʿIrāḳ, and lived in Baghdād until his death, which took place there in Radjab 388/July 998; according to Ibn al-Athīr and Ibn Khallikān, who follows him, in 387/997. It was Abu 'l-Wafāʾ who introduced, in 370/980-1, Abū Ḥayyān al-Tawḥīdī to the vizier Ibn Saʿdān, and for whom Abū Ḥayyān wrote his *al-Imtāʿ wa'l-Muʾānasa*.

Of his mathematical and astrononomical works the following are extant: 1. An arithmetic book, entitled *Fīmā yaḥtādj ilayh al-Kuttāb wa'l-ʿUmmāl min ʿIlm al-Ḥisāb*, identical with the *al-Manāzil fi'l-Ḥisāb* mentioned by Ibn al-Ḳifṭī; Woepke published in *JA*, 1855, 246 ff. the titles of the "stations" and of the chapters of the book. — 2. *Al-Kāmil*, probably identical with the *Almadjist* mentioned by Ibn al-Ḳifṭī; certain parts of it have been translated by Carra de Vaux, *JA*, 1892, 408-71. — 3. *Al-Handasa* (in Arabic and Persian), probably the same as the Persian *Book of the geometrical constructions* of the Paris Library, reviewed by Woepke, *JA*, 1855, 218-56, 309-59; the latter is of the opinion that this book was not written by Abu 'l-Wafāʾ himself, but by one of his pupils summing up his lectures. (See also H. Suter, in *Abh. z. Gesch. der Naturwiss. u. d. Med.*, Erlangen 1922, 94 ff.) — Nothing unfortunately has remained of his commentaries to Euclid, Diophantus and al-Khʷārizmī, nor of his astronomical tables called *al-Wāḍiḥ*; but the tables called *al-Zīdj al-Shāmil*, in Florence, Paris and London, of an unknown author, are very likely an adaptation from Abu 'l-Wafāʾs tables.

The chief merit of Abu 'l-Wafāʾ consists in the further development of trigonometry; it is to him that we owe, in spherical trigonometry, for the right-angled triangle, the substitution, for the perfect quadrilateral with the proposition of Menelaus, of the so called "rule of the four magnitudes" (sine a : sine c = sine A : 1), and the tangent theorem (tan. a : tan. A = sine b : 1); from these formulae he further infers : cos. c = cos. a. cos. b. For the oblique-angled spherical triangle he probably first established the sine proposition (cf. Carra de Vaux, loc. cit., 408-40). We are also indebted to him for the method of calculation of the sine of 30′, the result of which agrees up to 8 decimals with its real value (Woepke, in *JA*, 1860, 296 ff.). His geometrical constructions, which are partly based on Indian models, are also of great interest (Woepke, *JA*, 1855, 218-56). On the other hand, the merit of introducing tangents, cotangents, secants and cosecants into trigonometry does not belong to him, as these functions were already known by Ḥabash al-Ḥāsib. Neither was he the discoverer of the variation of the moon, as asserted by L. A. Sedillot in 1836. (A passionate dispute followed between Sedillot and Chasles on the one side and Biot, Munk and Bertrand on the other, until Carra de Vaux, *JA*, 1892, 440-71, elucidated the truth of the matter.)

Bibliographie: *Fihrist*, 266, 283; Ibn al-Ḳifṭī, 287; Ibn al-Athīr, ix, 97; Ibn Khallikān, no. 681 (transl. de Slane, iii, 320); Abu 'l-Faradj (Ṣālḥānī), 315; Cantor, *Vorlesungen über Gesch. d. Mathematik*[2], i, 698 ff.; A. v. Braunmühl, *Vorlesungen über Gesch. d. Trigon.* Leipzig 1900, i, 54 ff.; Suter. 71, Nachtr. 166; idem, *Abh. zur Gesch. d. mathem. (H. SUTER*)

ABŪ YAʿAZZĀ (or YAʿZĀ) YALANNŪR B. MAYNŪN, sprung from a sub-Atlantic Berber tribe (Dukkāla, Hazmīra or Haskūra), famous Moroccan saint of the 6th/12th century. After living for a time at Fez, where his *zāwiya* in the al-Blīda quarter (a dialect form of *al-Bulayda*) is still frequented, he settled in a village of the Middle Atlas, half-way between Rabat and Ḳaṣabat Tādlā, Tāghyā, which is today a small administrative centre bearing the name of the saint, as pronounced now in that region: Mūlāy Būʿazzā. He is said to have been the disciple of the patron saint of Azammūr Abū Shuʿayb Ayyūb b. Saʿīd al-Ṣinhādjī (in the vernacular Mūlāy Būshʿīb), and himself to have had as pupil the famous Abū Madyan [*q.v.*] al-Ghawth. He died of plague on 1 Shawwāl 572/2 April 1177 in his hermitage at Tāghyā, where he led an ascetic life, among adepts of his ṣūfī doctrine. His funerary *zāwiya* is the object of an annual pilgrimage (*mawsim*): it was built and decorated at the end of the 17th century by the order of the ʿAlawī sultan of Morocco, Mawlāy Ismāʿīl.

Apart from a long notice on him by al-Tādilī in his *al-Tashawwuf ilā Ridjāl al-Taṣawwuf*, Abū Yaʿazzā was the subject of a monograph, entitled *al-Muʿzā fī Manāḳib Abī Yaʿzā*, by a Moroccan ṣūfī author, Aḥmad b. Abi 'l-Ḳāsim al-Ṣawmaʿī, who died in 1013/1604. See also E. Lévi-Provençal, *Fragments historiques sur les Berbères au Moyen Age*, Rabat 1934, 77.

(E. LÉVI-PROVENÇAL)

ABŪ YAʿḲŪB AL-KHURAYMĪ, ISḤĀḲ B. ḤASSĀN B. ḲŪHĪ, Arab poet, died probably under the caliphate of al-Maʾmūn, about 206/821. The scion of a noble family of Sogdiana, which he sometimes mentions with pride (Yāḳūt, v, 363), al-Khuraymī (the form al-Khuzaymī is erroneous) derived his *nisba* from his being a *mawlā*, not directly of Khuraym al-Nāʿim, as most of his biographers

have it, but of his descendants, viz. Khuraym b. ʿĀmir and his son ʿUthmān (see Ibn ʿAsākir, *Taʾrīkh*, ii, 434-7; v, 126-8). He seems to have lived in Mesopotamia, Syria, al-Baṣra, where he frequented dissolute poets such as Ḥammād ʿAdjrad, Muṭīʿ b. Iyās etc. (*Aghānī*[1], v, 170, xiii, 82), and finally in Baghdād. In Baghdād he was connected with the entourage of al-Rashīd (*Aghānī*[1], xii, 21-2) and especially with the Barmakids Yaḥyā (al-Khaṭīb, *Taʾrīkh Baghdād*, vi, 326), al-Faḍl (al-Djahshiyārī, *al-Wuzarāʾ*, 150r) and Djaʿfar (*Aghānī*[1], xii, 21-2), as well as with their secretaries al-Ḥasan b. Baḥbāḥ al-Balkhī and Muḥammad b. Manṣūr b. Ziyād (Ibn al-Djarrāḥ, 103; al-Djahshiyārī, 118r, 170r). During the conflict between al-Amīn and al-Maʾmūn, he took the part of the former (al-Masʿūdī, *Murūdj*, vi, 462-3) and composed during the siege of Baghdād a long *ḳaṣīda* (al-Ṭabarī, iii, 873-80) in which he described the destruction of the city and besought al-Maʾmūn to put an end to the fratricidal war.

The work of al-Khuraymī, known even in the Maghrib (cf. al-Ḥuṣrī, *Zahr* (Z. Mubārak), iv, 201; Ibn Sharaf, *Intiḳād* (Pellat), Algiers 1953, index) was no doubt more important than would appear from the *ḳasīda* quoted above and from verses scattered in books of history and *adab*. Though he composed some satires, some of which were sung by ʿAllawayh (Ibn al-Djarrāḥ, 105; *Aghānī*, x, 120-35), al-Khuraymī is in the foremost place an author of panegyrics (the choice of their object being dictated by self-interest) and of dirges on persons with whom he was connected, especially Muḥammad b. Manṣūr b. Ziyād and the members of Khuraym's family (Ibn ʿAsākir, loc. cit.). At the end of his life, the loss of his second eye (he had been one-eyed before and is sometimes called al-Aʿwar) inspired him to moving verses (al-Djāḥiẓ, *Hayawān*[2], iii, 113, vii, 131-2; *Aghānī*, xv, 109; al-Ṣafadī, *Nakt al-Himyān*, 71).

The critics admit al-Khuraymī's talent and state that his poetry was especially enjoyed by the secretaries of the bureaux—no doubt because of his non-Arab origin; though he does not seem to have played a role among the Shuʿūbīs.

Amīn, *Ḍuḥa ʾl-Islām*, i, 64-5; O. Rescher, *Abriss*, ii, 37-8; Brockelmann, I, 111-2. (CH. PELLAT)

ABŪ YAʿĶŪB ISḤĀḲ B. AḤMAD AL-**SIDJZĪ**, Ismāʿīlī dāʿī and one of the sect's most important authors. According to Rashīd al-Dīn (*Djāmiʿ al-Tawārīkh*, MS Brit. Mus., Add. 7628, fol. 277r), "after that time"—viz. the execution of al-Nasafī in Bukhārā, 331/942—"Isḥāḳ-i Sidjzī, nicknamed Khayshafūdj, fell into the hands of the *amīr* Khalaf b. Isḥāḳ (sic MS, read Aḥmad) Sidjzī". (Khalaf b. Aḥmad, of the "second" Ṣaffārid dynasty, ruled 349-99.) This probably implies that Abū Yaʿḳūb was killed by the *amīr* Khalaf. (According to W. Ivanow, *Studies in Early Persian Ismailism*, 119, note 1, his book *al-Iftikhār* must be dated, by internal evidence—not, however, specified—after 360/971.) At any rate, the usual statement that Yaʿḳūb was executed in 331 in Bukhārā together with al-Nasafī, turns out to be erroneous. (The nickname Khayshafūdj for Abū Yaʿḳūb—read conjecturally, as there are no points in the MSS; it is probably the word for 'cotton-seed', cf. Dozy, i, 417—occurs also in al-Bustī's refutation of Ismāʿīlism, MS Ambrosiana, coll. Griffini 41, to be analysed by the present writer.)

Of the many surviving books of Abū Yaʿḳūb, the principal one of which seems to be *al-Iftikhār*, only one, the *Kashf al-Maḥdjūb*, has been published (by H. Corbin, Teheran 1949), not in the Arabic original, which is lost, but according to a Persian version. A close study of Abū Yaʿḳūb's works is absolutely necessary, as he is our main authority for the doctrines of the philosophical wing of Ismāʿīlism in the 4th/10th century. It seems that the system expounded by Abū Yaʿḳūb was on the whole based on that of al-Nasafī [*q.v.*], who seems to have been the one who introduced Neoplatonic philosophy into Ismāʿīlism about 300 A.H. (Abū Yaʿḳūb composed a book, unfortunately lost, in defence of al-Nasafī's main work, *al-Maḥṣūl*, against the attacks of Abū Ḥātim al-Rāzī.) However, while the system of al-Nasafī can only be reconstructed, from sparse quotations, in its main lines, the preserved books of Abū Yaʿḳūb allow us to study the system, in the form exposed by him, in all desirable detail.

Bibliography: Baghdādī, *Farḳ*, 267; Bīrūnī, *Hind*, 32; W. Ivanow, *A Guide to Ismaili Literature*, 33-5; idem, *Studies in Early Persian Ismailism*, index.—It is doubtful if Abū Yaʿḳūb al-Sidjzī is the same person as Abū Yaʿḳūb, *dāʿī* of Rayy about the middle of the 4th/10th century, mentioned in *Fihrist*, 189, 190. (S. M. STERN)

ABŪ YAʿĶŪB YŪSUF B. ʿABD AL-MUʾMIN, second ruler of the Muʾminid [*q.v.*] (Almohad) dynasty, reigned 558-80/1163-84. He succeeded to the throne by a coup d'état, in spite of the official proclamation of his elder brother Muḥammad as crown-prince in 549/1154. It is true that Muḥammad ruled for about two months, a fact that has been passed over in silence by almost all the historians of the dynasty; but the powerful vizier ʿUmar b. ʿAbd al-Muʾmin, alleging that his father, four days before his death, had ordered the name of the heir-presumptive to be suppressed in the *khuṭba*, and that he had declared to himself (ʿUmar) on his death-bed that he wished Yūsuf to succeed him, summoned Yūsuf in all haste from Seville, where he had resided as governor for the last six years, and had him proclaimed by the *shaykhs* and the army, in Ribāṭ al-Fatḥ (Rabat), as the new caliph.

The accession of Yūsuf was by no means received with unanimous approval. His brother ʿAlī, governor of Fez, who went to bury his father in Tīnmallal, protested against this arbitrary nomination, but died mysteriously on his return from the Atlas. Two other brothers, ʿAbd Allāh, governor of Bidjāya, who died shortly afterwards by poison, and ʿUthmān, governor of Cordova, also refused to recognize him. Thus Yūsuf did not dare to take the caliphal title of *amīr al-muʾminīn*, but confined himself for five years to the title of *amīr al-muslimīn*.

Establishing himself in Marrākush, after dismissing the enormous army concentrated by his father in Rabat, Yūsuf had to suppress a revolt that broke out among the Ghumāra, between Ceuta and Alcázarquivir, while the *sayyids* ʿUmar and ʿUthmān were leading a vigorous campaign in al-Andalus against Ibn Mardanīsh [*q.v.*] and his Christian mercenaries. Invading his territory, they defeated his army in 560/1165, ten miles outside Murcia. The

city resisted, however, and preserved its independence for another five years.

When the hostile *sayyids* had submitted or had been eliminated, Ibn Mardanīs͟h had been defeated and the revolt of the G͟humāra had been suppressed, Yūsuf assumed in 563/1168 the caliphal title. Yet at the very moment that his proclamation was celebrated, the warlike little state of Portugal caused him grave concern. Giraldo sem Pavor, the famous captain of Afonso Henriques, captured the towns of Evora, Trujillo, Cáceres, Montanchez, Serpa and Juromenha, and laid siege, together with his king, to Badajoz, which could be saved only by the the intervention of Ferdinand II of Leon, the ally of the Almohads.

The problem of Ibn Mardanīs͟h in the Levante resolved itself almost spontaneously. Ibn Hamus͟hkū, lieutenant and father-in-law of Ibn Mardanīs͟h, quarrelled with him and submitted to the Almohads. Yūsuf then mobilized all his forces and crossed the Straits. Murcia was regularly besieged, Yūsuf conducting the operations from his headquarters in Cordova. The city could not be taken, but the troops of Ibn Mardanīs͟h deserted him one after the other and his cruelty lost him his last partisans. He died of chagrin, seeing the whole of his work undone (567/1172). His eldest son Hilāl and all his brothers soon joined the doctrine of the *tawḥīd* and submitted to Yusuf, who received them well and admitted them into his council.

When the latter came to Seville, they suggested to Yūsuf to lay siege to Huete (Wabd͟ha), which had been recently repopulated by Christians and had become a menace to Cuenca and the frontier of the Levante. Yūsuf left Seville, took Vilches and Alcaraz, and marching through the plain of Albacete, reached Huete in July. The siege at once revealed the caliph's lack of energy and the hesitant and unwarlike spirit of his troops, who failed completely. It seemed that the besieged, who withstood courageously the Almohad attacks, would have to surrender owing to lack of water, but violent summer storms filled their cisterns and threw the enemy's camp into disorder. Owing to lack of food and the approach of the Castilian army, the Almohads lifted the siege and returned, via Cuenca, Játiva, Elche and Orihuela, to Murcia; there the army was disbanded.

Yusuf rested in Seville during the winter of 568/1172-3. But the count Jimeno "the hunchback" (*al-aḥdab*), who, with the men of Avila, had caused severe damage in the valley of the Guadalquivir, penetrated, in S͟haʿbān 568/April 1173, into the region of Ecija and took enormous booty. The troops that had come back from Huete were collected again, and the indefatigable Abū Ḥafṣ ʿUmar Īntī [*q.v.*], together with the two brothers of the caliph, Yaḥyā and Ismāʿīl, overtook the count near Caracuel, defeated and killed him. Subsequently, Badajoz was furnished with supplies and the whole left bank of the Tagus ravaged, from Talavera to Toledo; in consequence, Afonso Henriques, on behalf of Portugal, and the count Nuño de Lara, on behalf of Castile, were compelled to ask for and to sign an armistice for five years. The winter of 569/1173-4 was spent in resettling and fortifying Beja, in the Algarve, which had been ruined and evacuated two years before.

Later, Yūsuf celebrated with splendour his marriage with a daughter of Ibn Mardanīs͟h, and during the whole year of 570/1175 did not leave Seville. This second stay of Yūsuf in al-Andalus had already lasted almost five years when he suddenly left for Marrākus͟h.

At this time a severe epidemic was raging over the whole empire. Yūsuf lost several of his brothers and he himself remained ill for a long time while Alfonso VIII was besieging Cuenca and, after nine months, in October 1177, forced this famous fortress to surrender. The garrisons of Cordova and Seville tried to relieve it by a diversionary move towards Talavera and Toleda, but with no practical results.

After the loss of Cuenca, Yūsuf, who had recovered his health, consulted with his brothers, the governors of Cordova and Seville, on ways and means to cut short the ever-increasing agressiveness of the Christians. The armistice with Portugal had expired and the crown-prince, Sancho, earned his spurs by invading the valley of the lower Guadalquivir, attacking Triana, then Niebla and the whole of the Algarve. Beja had again to be evacuated.

Yūsuf found no other way to withstand these attacks but to transport to Morocco and al-Andalus the Arabs of Ifrīḳiya, but seeing that they were becoming more and more turbulent, under the leadership of ʿAlī, a descendant of the Banu 'l-Rand, lords of Ḳafṣa [*q.v.*] (Gafsa), who had revolted there, he took the field to stifle that dangerous centre of dissidence and to force the Arabs to join the holy war in Spain. He left Marrākus͟h for Ifrīḳiya, and after a siege of three months took Ḳafṣa, in the winter of 576/1180-1. ʿAlī, surnamed al-Ṭawīl, capitulated and the Riyāḥ pretended to submit. Only a small section of them, however, followed Yūsuf; the greater part remained in Ifrīḳiya, ready to support any attempt at revolt against the Almohads, and to lend assistance to Karāḳūs͟h [*q.v.*] and the Banū G͟hāniya [*q.v.*].

In the meantime, in the Iberian peninsula, an advance of Alfonso VIII towards Ecija and the taking of Santafila, near Lora del Rio, coincided with a Portuguese invasion towards San Lucar la Mayor, Aznalfarche and Niebla, and with the revolt in the Anti-Atlas of the Banū Wāwazgīt, who occupied the silver mine of Zad͟jundar. The caliph had to go in person to subdue the rebels, while Ibn Wānūdīn led a razzia against Talavera. Finally Yūsuf, after undertaking the extension of Marrākus͟h to the southward and enlarging the walls during the summer of 579/1183—an enterprise continued later by his son, Yaʿḳūb, by the building of the imperial quarter of al-Ṣāliḥa—decided, in spite of the discouraging example of Huete, to engage all his forces in a campaign designed to put a brake to the audacity of the Portuguese.

The preparations for the expedition and the concentration of the troops were very ample, but also took a long time. In May, Castille and Leon had concluded the peace of Fresno-Lavandera and engaged themselves to fight together against the Muslims—Ferdinand on his part renouncing his old alliance with the Almohads. Three months later, Yūsuf started collecting his troops. On 16 Rabīʿ I 580/27 June 1184, he appeared before Santarem (S͟hantarīn). The Portuguese had had about ten months to prepare the defence of the fortress, almost impregnable without a long siege. It cost the Almohads much trouble to take the suburb near the river, and at the end of a week's useless efforts and tenacious resistance, the approach of Ferdinand II with his Leonese spread terror in the Almohad army which, in panic, re-crossed the river. The caliph was mortally wounded when raising camp and died near Evora, on the road to Seville, on 18 Rabīʿ II 580/29 July 1184.

Abū Yaʿḳūb Yūsuf was considered as the most

gifted of the Almohad caliphs. The son of a Maṣmūdī woman—the daughter of the *ḳāḍī* Ibn ʿImrān—and born in the heart of the Atlas, in Tīnmallal, he was instructed in Marrākush in the doctrine of the *tawḥīd*. Nevertheless, in spite of his Maghribi birth and education, his long stay in Seville, where he arrived at the age of seventeen years, made of him an Andalusian litterateur as refined as one of the *mulūk al-ṭawāʾif*. Surrounded by famous philosophers, physicians and poets, he perfected his literary knowledge and developed his artistic taste. Seduced by the charm of Seville, he gave it back the title of capital of al-Andalus, which had been taken away by his father at the end of his reign, and endowed it with numerous monuments and public works. He took pleasure in taking part in the scientific meetings adorned by men like Ibn Ṭufayl, Ibn Rushd and Ibn Zuhr, who, encouraged by him, produced their most celebrated works.

At the same time, thanks to the terror with which his father had imposed his authority, this friend of scholarship was able to enjoy an absolute power in the Maghrib. Ifrīḳiya was still under his control and the dangerous enclave of Ibn Mardanīsh in Murcia disappeared. Yet in spite of appearances, the ceaseless war against the Christians in al-Andalus made manifest his incapacity as a military leader, the low morale of his enormous armies and the inefficiency of his commissariat. The small Christian states of the Peninsula, though divided by internal quarrels, could, in spite of their lack of men and resources, inflict on him the severest reverses. His urgent desire to pursue the *djihād* did not suffice to check the Christians' drive, and led to his death before the Portuguese castle of Santarem.

ABU L-YAḲẒĀN MUḤAMMAD B. AL-**AFLAḤ** [see RUSTAMIDES].

ABŪ YAʿLĀ B. AL-**FARRĀʾ** [see IBN AL-FARRĀʾ].

ABŪ YAZĪD (BĀYAZĪD) ṬAYFŪR B. ʿĪSĀ B. SURŪSHĀN AL-**BISṬĀMĪ**, one of the most celebrated Islamic mystics. With the exception of short periods, during which he was obliged to live far from his home town owing to the hostility of orthodox theologians, he spent his life in Bisṭām in the province of Ḳūmis. There he died in 261/874 or 264/877-8. The Ilkhānid Uldjaytu Muḥammad Khudābanda is reputed to have had a dome erected over his grave in the year 713/1313. He wrote nothing, but some five hundred of his sayings have been handed down. In part they are extremely daring and imply a state of mind in which the mystic has an experience of himself as of one merged with the deity and turned into God (*ʿayn al-djamʿ*). They were collected and handed down by his circle and people who visited him, in the first place by his disciple and attendant Abū Mūsā (I) ʿĪsā b. Ādam, son of his elder brother Ādam. From him the celebrated ṣūfī of Baghdād, al-Djunayd, received sayings of this nature in Persian and translated them into Arabic (*Nūr*, 108, 109, 122). The chief traditionist from Abū Mūsā is his son Mūsā b. ʿĪsā, known as "ʿAmmī", from whom the tradition was handed down by "the lesser Ṭayfūr" b. ʿĪsā, whose place in the family genealogy is not quite clear, and by other traditionists. Among the visitors who recorded sayings of Abū Yazīd must be named in the first place Abū Mūsā (II) al-Dabīlī, of Dabīl in Armenia (*Nūr*, 55) and Abū Isḥāḳ Ibrāhīm al-Harawī, known as Istanba (Satanba), a pupil of Ibrāhīm b. Adham (*Ḥilya*, x, 43-4) and the celebrated Ṣūfī Aḥmad b. Khiḍrōya who visited him on the pilgrimage. Abū Yazīd was a friend of Dhu 'l-Nūn al-Miṣrī. Djunayd wrote a commentary on his utterances, portions of which are preserved in *al-Lumaʿ* of al-Sarrādj. The most circumstantial source on Abū Yazīd's life and sayings is the *Kitāb al-Nūr fī Kalimāt Abī Yazīd Ṭayfūr*, by Abu 'l-Faḍl Muḥ. b. ʿAlī b. Aḥmad b. al-Ḥusayn b. Sahl al-Sahlagī al-Bisṭāmī, born 389/998-9, died 476/984 (not quite satisfactory edition by ʿAbd al-Raḥmān Badawī, *Shaṭaḥāt al-Ṣūfiyya*, i, Cairo 1949). Amongst al-Sahlagī's authorities the most important are: Abū ʿAbd Allāh Muḥ. b. ʿAbd Allāh al-Shīrāzī Ibn Bābōya, the celebrated biographer of al-Ḥallādj, died 442/1050, whom al-Sahlagī met in the year 419 or 416 (*Nūr*, 138) and Shaykh al- Mashāʾikh Abū ʿAbd Allāh Muḥammad b. ʿAlī al-Dāstānī (Hudjwīrī, *Kashf al-Maḥdjūb*, ch. xii). The *al-Ḳaṣd ilā Allāh* of the pseudo-Djunayd contains a legendary embellishment of Abū Yazīd's "Journey to Heaven" (R. A. Nicholson, *An early Arabic version of the Miʿráj of Abú Yazíd al-Bisṭámí*, in *Islamica*, 1926, 402-15).

Abū Yazīd's teacher in ṣūfism was a mystic who was ignorant of Arabic, by name Abū ʿAlī al-Sindī, whom he had to teach the Ḳurʾān verses necessary for prayer, but who in return introduced him to the *the* Unio Mystica. It is not impossible that Indian influences may have affected Abū Yazīd through him. Abū Yazīd was, in contrast for instance with the later ṣūfīs Abū Isḥāḳ al-Kāzarūnī and Abū Saʿīd b. Abi 'l-Khayr, a wholly introvert ṣūfī. He did not exercise, as they did, a social activity (*khidmat al-fuḳarāʾ*), yet was ready to save humanity, by vicarious suffering, from hell. He even finds words to criticize the infernal punishment meted out to the damned, who are, after all, but a handful of dust. The "numinous" sense is extremely highly developed in him, together with a sense of horror and awe before the Deity, in whose presence he always felt himself an unbeliever, just about to lay aside the girdle of the magians (*zunnār*). His passionate aspiration is aimed at absolutely freeing himself through systematic work upon himself ("I was the smith of my own self": *ḥaddād nafsī*), of all obstacles separating him from God (*ḥudjub*), with the object of "attaining to Him". He describes this process in extremely interesting autobiographical sayings with partly grandiose images. The "world" (*dunyā*), "flight from the world" (*zuhd*), "worship of God" (*ʿibādāt*), miracles (*karāmāt*), *dhikr*, even the mystic stages (*maḳāmāt*) are for him no more than so many barriers holding him from God. When he has finally shed his "I" in *fanāʾ* "as snakes their skin" and reached the desired stage, his changed self-consciousness is expressed in those famous hybrid utterances (*shaṭaḥāt*) which so scandalized and shocked his contemporaries: "*Subḥānī! Mā aʿẓama shaʾnī*"—"Glory be to me! How great is My majesty!"; "Thy obedience to me is greater than my obedience to Thee"; "I am the throne and the footstool"; "I am the Well-preserved Tablet"; "I saw the Kaʿba walking round me"; and so on. In meditation he made flights into the supersensible

world; these earned him the censure that he claimed to have experienced a *miʿrādj* in the same way as the Prophet. He was in the course of them decorated by God with His Singleness (*waḥdāniyya*) and clothed with His "I-ness" (*ananiyya*), but shrank from showing himself in that state to men; or flew with the wings of everlastingness (*daymūmiyya*) through the air of "no-quality" (*lā-kayfiyya*) to the ground of eternity (*azaliyya*) and saw the tree of "one-ness" (*aḥadiyya*), to realise that "all that was illusion" or that it "was himself" who was all that, etc. In such utterances he appears to have reached the ultimate problem of all mysticism. A later legend makes him solve with ease conundrums put to him in a Christian monastery, thus effecting the wholesale conversion of the monastery to Islam.

(H. RITTER)

ABŪ YAZĪD MAKHLAD B. KAYDĀD AL-**NUKKĀRĪ**, Khāridjite leader (belonging to the Ibāḍī al-Nukkār [*q.v.*]), who by his revolt shook the Fāṭimid realm in North Africa to its foundations. His father, a Zanāta Berber merchant from Taḳyūs (or Tûzar) in the district of Ḳastīliya, bought in Tadmakat a slave girl called Sabīka, who bore him Abū Yazīd about 270/883 (apparently in the Sūdān). Abū Yazīd studied the Ibāḍī *madhhab* and became a schoolmaster in Tāhart. At the time of the victory of Abū ʿAbd Allāh al-Shīʿī he moved to Taḳyūs and started, in 316/928, his anti-government propaganda. After a first arrest, when he was, however, immediately released, he went to the Awrās mountain among the Hawwāra clan of the Banū Kamlān, among whom he gained a large following (they remained to the end his staunchest supporters); the Nukkārī *imām* Abū ʿAmmār al-Aʿmā ceded to him the leadership. Abū Yazīd was arrested in Tūzar, but Abū ʿAmmār broke into the prison and liberated him. He spent a year in the district of Sumāṭa, after which he returned to the Awrās.

In 332/943 he started his revolt. He took Tabissa and Marmādjanna (where he received as a present his favourite riding donkey, whence his surname *ṣāḥib al-ḥimār*), al-Urbus (Laribus; 15 Dhu 'l-Ḥidjdja 332), Bādja (13 Muḥarram 333), and entered al-Ḳayrawān on 23 Ṣafar, executing the Fāṭimid commander Khalīl b. Isḥāḳ and the *ḳāḍī* of the city. The Sunnīs of al-Ḳayrawān were at first not unsympathetic to one who, though a heretic himself, liberated them from Fāṭimid rule (for the attitude of the Mālikī *fuḳahā'* cf. Abū Bakr al-Mālikī, *Riyāḍ al-Nufūs*, analyzed by H. R. Idris, in *REI*, 1936, 80-7; Abu 'l-ʿArab, ed. Ben Cheneb (*Classes des Savants de l'Ifrīqiya*), introd., viii f., xvi); but the exactions of the Berbers alienated them more and more. On the other hand the stricter sectarians became not a little dissatisfied when they saw their leader abandon his former simple habits, wear silken garments and mount a thoroughbred horse.

Leaving his son Faḍl and Abū ʿAmmār in al Kayrawān, Abū Yazīd engaged and defeated, on 12 Rabīʿ I, the Fāṭimid general Maysūr (whom he killed) and approached al-Mahdiyya. After an attempt to take the city by storm (3 Djumādā II), during which he reached the *muṣallā* (according to a celebrated Fāṭimid legend, it had been foretold by al-Mahdī that a future, very dangerous, rebel would reach that *muṣallā*, but would not get farther), he laid siege to it. After repeated attempts throughout Djumādā II, Radjab and Shawwāl to storm the city, and after counterattacks by the besieged in Dhu 'l-Kaʿda 333 and Ṣafar 334, Abū Yazīd withdrew to al-Ḳayrawān. He made repentance for his luxury and returned to his former simple life; and so the Berbers again flocked to his standard. Heavy fighting went on round Tūnis (which changed hands several times) and Bādja; in Rabīʿ II Ayyūb, a son of Abū Yazīd, was seriously defeated by the Fāṭimid general al-Ḥasan b. ʿAlī but soon took his revenge. Al-Ḥasan retired to the Kutāma country, and established himself firmly (taking Tīdjis and Bāghāya) in the rear of Abū Yazīd. On 6 Djumādā II Abū Yazīd laid siege to Sūsa. Al-Ḳā'im died on 13 Shawwāl, and a small cavalry detachment sent out from al-Mahdiyya by his successor, al-Manṣūr, succeeded in routing Abū Yazīd before Sūsa (21 Shawwāl), so that he hastily returned to al-Ḳayrawān. In the meantime, the populace of al-Ḳayrawān had risen against Abū ʿAmmār and now excluded Abū Yazīd from the city. Al-Manṣūr entered al-Ḳayrawān on 23 Shawwāl; after several futile attacks on the Fatimid army entrenched in the city (Dhu 'l-Ḳaʿda 334, Muḥarram 335) and after a heavy battle on 13 Muḥarram, Abū Yazīd withdrew towards the west. Al-Ḥasan b. ʿAlī moved against some of the remaining garrisons of Abū Yazīd (such as that in Bādja) and joined the army of al-Manṣūr. The fleet of the Umayyad admiral Ibn Rumāḥis, which was on its way to Ifrīḳiya, turned back on the news of Abū Yazīd's rout. (For the embassies of Abū Yazīd to ʿAbd al-Raḥmān III, cf. also Ibn ʿIdhārī, ii, 228 ff.; E. Lévi-Provençal, *Hist. Esp. mus.*, ii, 103-4.)

Abū Yazīd fled westwards, al-Manṣūr close on his heels. Al-Manṣūr left al-Ḳayrawān on 26 Rabīʿ I, reached (via Sabība and Marmādjanna) Bāghāya, and from there pursued Abū Yazīd to Billizma, Ṭubna and Biskra (which he reached on 5 Djumādā I). From there he returned to Ṭubna, defeated Abū Yazīd near Maḳḳara (12 Djumādā I) and entered al-Masīla. Abū Yazīd fled to Djabal Sālāt; when al-Manṣūr searching for him in vain in that wild country, went westwards to the Ṣinhādja country, Abū Yazīd, in the rear of al-Manṣūr, besieged al-Masīla. Al-Manṣūr returned and entered al-Masīla on 5 Radjab, on which Abū Yazīd took refuge in the mountains of ʿAḳār and Kiyāna. Leaving al-

Masīla on 10 Shaʿbān, al-Manṣūr defeated Abū Yazīd in a heavy battle; in Ramaḍān, he again defeated Abū Yazīd, who retired to the fortress of Kiyāna (overlooking what was later to be Ḳalʿat Banī Ḥammād). On 2 Shawwāl al-Manṣūr besieged the fortress, which was entered on 22 Muḥarram 336; at night, the last remaining warriors carried Abū Yazīd and Abū ʿAmmār from the citadel. Abū ʿAmmār was killed, while Abū Yazīd had a fall and was captured. The curious conversation that passed between al-Manṣūr and his captive has been recorded. Abū Yazīd died of his wounds in 27 Muḥarram/ 19 August 947. His body, stuffed with straw, was exposed to the insults of the mob in al-Mahdiyya. Faḍl, the son of Abū Yazīd, gave some further trouble in the Awrās and the district of Ḳafṣa, till he was defeated and killed in Dhu 'l-Ḳaʿda 336. Other sons of Abū Yazīd found a shelter at the court of the Umayyads in Cordova.

Bibliography: The main source is a contemporary Fāṭimid chronicle of which the substance has been preserved in Idrīs ʿImād al-Dīn, *ʿUyūn al-Akhbār*, second half of vol. v. The same chronicle was used by Ibn al-Raḳīḳ in his lost history of Ifrīḳiya. The whole account of Ibn Ḥammādū (Vanderheyden), 18 ff., is no doubt taken from Ibn al-Raḳīḳ. Ibn Shaddād, in his lost history of al-Ḳayrawān, also no doubt copied Ibn al-Raḳīk, while Ibn al-Athīr's account, viii, 315 ff., still easily recognizable as an abstract of the Fāṭimid chronicle, evidently goes back to Ibn Shaddād. The passages in Tidjānī, *Riḥla*, Tunis 1927, 17, 18-9, 20-1, 233-5 (transl. in *JA*, 1852, 96 ff., 101 ff., 106 ff., 1953, 363 ff.) are taken from Ibn al-Raḳīḳ.—Further references: Abū Zakariyyāʾ (*Chronique d'Abou Zakaria*, transl. Masqueray), Algiers 1879, 226 ff.; Ibn ʿIdhārī, *al-Bayān al-Mughrib* (Colin and Lévi-Provençal), i, 316 (quotes Ibn Hammādū—6th/12th century, not identical with the Ibn Ḥammādū quoted above—Ibn Saʿdūn and Ibn al-Raḳīḳ); Maḳrīzī, *Ittiʿāẓ* (Bunz), while mainly deriving from Ibn al-Athīr, has some additional notes (55, 56-7).—Cf. also G. Marçais, *La Berberie et l'Orient*, 147-53; R. Le Tourneau, *La révolte d'Abû-Yazîd, Cahiers de Tunisie*, 1953, 103-125. (S. M. STERN)

ABŪ YŪSUF YAʿḲŪB B. IBRĀHĪM AL-ANṢĀRĪ AL-KŪFĪ, a prominent religious lawyer, one of the founders of the Ḥanafī [*q.v.*] school of law. Abū Yūsuf was of pure Arab extraction; his ancestor, Saʿd b. Ḥabta, was a youth in Medina in the time of the Prophet. (For details of his genealogy, see al-Khaṭīb al-Baghdādī, xiv, 243.) His date of birth, reckoned backwards from the date of his death, is rather arbitrarily given as 113. According to an anecdote, the several versions of which are mutually contradictory, he was a poor boy, was helped by his teacher Abū Ḥanīfa [*q.v.*] who recognized his worth, and achieved success beyond every expectation. All we know is that he studied religious law and traditions in Kūfa and in Medina, under Abū Ḥanīfa, Mālik b. Anas, al-Layth b. Saʿd and others (a reasonably complete and authentic list of his teachers is given by al-Khaṭīb al-Baghdādī, xiv, 242), and lived in Kūfa until he was appointed *ḳāḍī* in Baghdād; he held this office until his death in 182/798. He is reported to have visited Baṣra in 176 and in 180. It is not certain whether he was appointed by al-Mahdī, al-Hādī, or Hārūn al-Rashīd. According to a story which al-Tanūkhī (d. 384) heard from his father (*Nishwār al-Muḥāḍara*, 123 ff.), Abū Yūsuf was able to assure on a point of religious law an officer who rewarded him generously and later had occasion to recommend him to the caliph Hārūn. As he succeeded in giving a satisfactory opinion to the caliph too, the caliph drew him near to his person and finally appointed him *ḳāḍī*. This version has a certain inner probability, but cannot for that reason alone be regarded as authentic. It is certain, however, that by his practical sense he soon became friendly with, and even made himself indispensable to, Hārūn al-Rashīd. By exaggerating this achievement, both his friends and his detractors made him into the prototype of the unprincipled lawyer who would find an easy way out of any legal difficulty for his clients and for himself. The existence of his *Kitāb al-Ḥiyal* and the misunderstandings of the serious legal purpose underlying it, could not fail to reinforce that misconception. (Cf. Schacht, in *Isl.*, 1926, 217.) Al-Rashīd conferred upon him the title of Grand Cadi or *ḳāḍī 'l-ḳuḍāt* for the first time in Islam. This was then merely an honorific title given to the *ḳāḍī* of the capital, but the caliph not only consulted Abū Yūsuf on the administration of Muhammadan justice, on financial policy, and on similar questions, but on the appointment of other *ḳāḍīs* in the empire.

His son Yūsuf became a *ḳāḍī* during the lifetime of his father, as his substitute for the western side of Baghdad; he died in 192. His most prominent disciple was al-Shaybānī [*q.v.*].

The literary output of Abū Yūsuf must have been considerable. The *Fihrist* mentions a list of titles of works which, with one exception, have not survived. The exception is the *Kitāb al-Kharādj*, a treatise on public finance, taxation, criminal justice, and kindred subjects, which Abū Yūsuf wrote at the request of Hārūn al-Rashīd (editio princeps of the Arabic text, Būlāḳ 1302; French transl. by E. Fagnan, Paris 1921). Three further works which are undoubtedly genuine, though they do not appear in the ancient bibliography of Abū Yūsuf, have been preserved: the *Kitāb al-Āthār*, a collection of the Kūfian traditions that Abū Yūsuf transmitted (Cairo 1355), the *Kitāb Ikhtilāf Abī Ḥanīfa wa-Ibn Abī Laylā*, a comparison of the opinions of the two authorities of Kūfa mentioned in the title (Cairo 1357; also in al-Shāfiʿī, *Kitāb al-Umm*, vii, 87-150), and the *Kitāb al-Radd ʿalā Siyar al-Awzāʿī*, a reasoned refutation, with broad systematic developments, of the opinions of the Syrian scholar al-Awzāʿī on the law of war (Cairo, n.d.; also in al-Shāfiʿī, *ibid.*, 303-36). The *Fihrist* mentions at least two titles of the same comparative and polemical kind: the *Kitāb Ikhtilāf al-Amṣār* and the *Kitāb al-Radd ʿalā Mālik b. Anas*. Finally, extracts from Abū Yūsuf's *Kitāb al-Ḥiyal* (Book of legal devices) were incorporated by his disciple al-Shaybānī in his *Kitāb al-Makhāridj fi 'l-Ḥiyal* (ed. Schacht, Leipzig 1930). Several statements on principles and methods in his polemical treatises (e.g. *Kitāb al-Radd ʿalā Siyar al-Awzāʿī*, par. 5) show Abū Yūsuf's interest in legal theory (cf. *Fihrist*, 203_{17}), but, contrary to what is sometimes affirmed, he did not write special works on the subject.

The doctrine of Abū Yūsuf, on the whole, presupposes the doctrine of Abū Ḥanīfa, whom he regarded as his master. The points on which Abū Yūsuf diverged from him are therefore more relevant for appreciating Abū Yūsuf's own legal thought than those on which both are in agreement. The most prominent peculiarity of Abū Yūsuf's doctrine is that he is more dependent on traditions than his master, because there were more authoritative

traditions from the Prophet in existence in his time. Secondly, the doctrine of Abū Yūsuf often represents a reaction against Abū Ḥanīfa's somewhat unrestrained reasoning; but Abū Yūsuf was by no means consistent, and in a certain number of cases he abandoned, by diverging from Abū Ḥanīfa, the sounder or more highly developed doctrine. Thirdly, we can discern in Abū Yūsuf's legal thought certain favourite processes of reasoning, such as the *reductio ad absurdum*, and a habit of rather acrimonious polemics. Finally, a remarkable feature of Abū Yūsuf's doctrine is the frequency with which he changed his opinions, not always for the better. Sometimes the contemporary sources state directly, and in other cases it is probable, that Abū Yūsuf's experience as a judge caused him to change his opinion. Abū Yūsuf represents the beginning of the process by which the ancient school of the ʿIrāḳians of Kūfa was replaced by that of the followers of Abū Ḥanīfa.

ABŪ YŪSUF YAʿḲŪB B. YŪSUF B. ʿABD AL-MUʾMIN AL-**MANṢŪR**, third ruler of the Muʾminid [*q.v.*] (Almohad) dynasty reigned 580-95/1184-99. On the death of Abū Yaʿḳūb Yūsuf before Santarem on 18 Rabīʿ II 580/29 July 1184, Abū Yūsuf Yaʿḳūb, bringing back the body of his father, reached Seville, where he was proclaimed on 1 Djumādā I/10 August. He hastened to Marrākush, took the title of *amīr al-muʾminīn*, issued several severe financial edicts and demanded from his subjects the strictest orthodoxy. He attempted for some time to administer justice himself at public audiences and satisfied his passion for construction by endowing his empire with important buildings. Finding the Almoravid Dār al-Ḥadjar, where his father and grandfather had lived, too cramped, he built the suburb of al-Ṣāliḥa, in order to take up his own residence there. But scarcely had he begun this enterprise when he received news of the landing of the Almoravid Banū Ghāniya [*q.v.*] in Bidjāya (Bougie).

As soon as the news of the disaster of Santarem reached Majorca, the Banū Ghāniya, rejecting the Almohad offers for submission and encouraged by the partisans of the Ḥammādids in Bidjāya, fitted out a squadron which took Bidjāya on 19 Ṣafar 581/22 May 1185. ʿAlī b. Ghāniya, profiting from the disorganization caused by the capture of Bidjāya, also took Algiers, Miliana, Ashīr and Ḳalʿat Banī Ḥammād. The reaction of Abū Yūsuf Yaʿkūb was instantaneous. An army, assisted by the naval squadron of Ceuta, recaptured in the spring of 582/1186 Algiers, Bidjāya and the other places that had passed into the possession of the Almoravids, and marched against ʿAlī b. Ghāniya, then besieging Constantine. The Almoravid leader, abandoning the siege, retired hastily towards the Djarīd. There he took Tūzar and Ḳafṣa (Gafsa) and made an alliance with Ḳarāḳūsh [*q.v.*] in Tripoli. Thus only Tūnis and al-Mahdiyya remained in the hands of the Almohads in Ifrīḳiya. Abū Yūsuf Yaʿḳūb, in these circumstances, decided to lead a great expedition to the east. He marched to Tūnis and from there sent against the rebels and their allies a strong force, which was, however, defeated on 15 Rabīʿ II 583/24 June 1187 in the plain of ʿUmra, near Ḳafṣa. The Almohad caliph took his revenge for this reverse three months later, at al-Ḥamma (9 Shaʿbān/14 Oct.). The whole south of Ifrīḳiya was again subjected to Almohad domination and the sovereign returned to the west, reaching Tlemcen. Soon, however, the troubles broke out again in Ifrīḳiya, in spite of the death of of Alī b. Ghāniya, which occured shortly afterwards. Yaḥyā b. Ghāniya, brother of ʿAli, was able to sustain, with uncommon energy and ability, the struggle against the Almohad empire for almost another half-century, causing it grave anxieties.

On the other hand, it was time for Abū Yūsuf to turn his attention to the Iberian Peninsula, which he had left five years before, and to check the attacks of the Portuguese and the Castilians. While the Muʾminid ruler was making his preparations, Sancho I, with the help of strong Crusader contingents on their way to Palestine, laid siege to Silves (Shilb), on the south coast. After a siege of three months, the place was taken on 20 Radjab 585/3 Sept. 1189. At the same time, the king of Castille had taken the field against the Almohad possessions and attacked Magacela, Reina, Alcala de Guadaira and Calasparra. In 586/1190 Abū Yūsuf Yaʿḳūb took the counter-offensive. He imposed an armistice on the Castillians and Leonese, and then attacked the Portuguese fortresses of Torres Novas and Tomar, to the north of Santarem, while another army besieged Silves. Torres Novas, unable to resist, had to capitulate, but Tomar, defended by the Templars, resisted and the garrison made vigorous sallies. Lack of food and an epidemic that broke out in the Almohad camp forced the caliph to raise the siege of both Tomar and Silves.

Next year, the caliph again led an expedition in the same direction. After storming several fortresses to the south of the Tagus, such as Alcacer do Sol, Palmella and Almada, he captured Silves by surprise on 25 Djumādā II 587/10 July 1191.

In 589/1193, Abū Yūsuf Yaʿḳūb, who had supervised personally the works undertaken in Rabat, ordered the construction of the fortress of Ḥiṣn al-Faradj (Aznalfarache) near Seville, on the highest and narrowest part of the Ajarafe (al-Sharaf); it was thereafter celebrated by the poets in a great quantity of verses. Shortly afterwards, however, he had to organize a new expedition against Christian Spain, as the armistice signed in 1190 had expired and Alfonso VIII boldly attacked the region of Seville. Abū Yūsuf had again to cross the Straits and make for Seville, whence he departed, without loss of time, via Cordova, for the col of Muradal, to meet the army of Alfonso VIII. On 8 Shaʿbān 591/18 July 1195, took place the famous battle of Alarcos (al-Arak [*q.v.*]), where the Castilians were severely defeated. The Almohads captured five strongholds situated in the region of the Campo de Calatrava. On his return to Seville, the sovereign took, to mark his victory, the honorific title of al-Manṣūr bi'llāh.

Next spring, Yaʿḳūb al-Manṣūr, eager to exploit his victory, took Montanchez, Trujillo and Santa Cruz and devastated, in the valley of the Tagus, the region of Talavera. He pushed even as far as the *vega* of Toledo and laid waste its vineyards and orchards. Another expedition next year led him without success as far as Madrid, (which was defended by Diego Lopez de Haro), Alcalá de Henares and Guadalajara.

On his return to Marrākus̲h̲, worn out by illness, he appointed his son Muḥammad as his heir and retired from public life, to spend his time in devotional exercises and pious works, such as the foundation of a magnificent hospital and distributions of alms. He obliged the Jews to wear a special sign to distinguish them from the Muslims. During the last days of his life he was assailed by remorse for having ordered the execution of some of his nearest relations. He assembled in his palace in al-Ṣāliḥa the Almohad *s̲h̲ayk̲h̲s* and the members of his family and informed them of his last wishes. It seems that the date of his death can be fixed with certainty on 22 Rabīʿ I 595/23 Jan. 1199.

The reign of Yaʿḳūb al-Manṣūr marks the apogee of the Almohad empire. His energetic character, the care and rigorousness with which he supervised the administration of his dominions and his personal courage made it possible for him to defeat all his enemies, in Ifrīḳiya as well as in Spain, to raise the moral of his armies and to pass into the memory of posterity surrounded by an aureole of legend. His magnificent constructions in the imperial suburb of al-Ṣāliḥa and the mosque of the Booksellers (*d̲j̲āmiʿ al-Kutubiyyīn*) in Marrākus̲h̲ with its splendid minaret, the Giralda of Seville and the ensemble of the mosque of Ḥassān in Rabat show that he was the glorious continuator of the monumental work undertaken by his father and grandfather. His riches, the splendour of his court, his desire to be surrounded by scholars, his success in the holy war, have blinded his admirers and prevented them from observing the germs of decomposition hidden behind such a brilliant façade. In al-Andalus, in spite of his success in Portugal and Castille, he could hardly contain the Christian drive, while in Ifrīḳiya the Arabo-Majorcan revolt, stifled but always reviving, opened in the flank of the empire the deep wound which soon drained it of all force and energy. When the vigour and the skill of Yaʿḳūb al-Manṣūr were no longer at the helm of the Almohad ship of state, it was inevitable that it should run upon the rocks and sink, during the reign of his successors, children or youths, who were, for most of the time, to show a total lack of ability.

(A. Huici Miranda)

ABŪ ẒABĪ (commonly written Abū D̲h̲abī), a town (54° 22' E. long., 24° 29' N. lat.) and s̲h̲ayk̲h̲dom on the Trucial Coast of Arabia. The population of the town, the only settlement of any size in the s̲h̲ayk̲h̲dom, is several thousand. The most prominent structure is the ruler's fortresslike palace.

The town is said to have been founded about 1174-5/1761 by Banī Yās [*q.v.*], a tribe then ranging in the interior of al-Ẓafra [*q.v.*]. No evidence points to any earlier settlement on the site, which lies on the seaward side of a triangular island separated from the mainland by a narrow ford (al-Maḳtaʿ). The island is relatively secure from attacks by land and has a partially protected harbour for small craft, but the supply of drinking water is poor.

The chiefs of Banī Yās continued to reside in the interior until the accession of S̲h̲ak̲h̲būṭ b. D̲h̲iyāb of Āl Bū Falāḥ, the ruling clan, about 1209-10/1795. About 1214-5/1800 the Wahhābīs of Nad̲j̲d first appeared along the coast, but they developed close ties with the Ḳawāsim and the people of al-Buraymī rather than with Abū Ẓabī. Banī Yās do not appear to have come under Wahhābī influence until the accession of K̲h̲alīfa b. S̲h̲ak̲h̲būṭ in 1248/1833.

S̲h̲ak̲h̲būṭ signed the General Treaty of Peace sponsored by the British in 1235/1820 following the British expedition against Raʾs al-K̲h̲ayma [*q.v.*]. In 1251/1835 Abū Ẓabī adhered to the first Maritime Truce, from which the Trucial Coast takes its name [cf. baḥr fāris]. An Exclusive Agreement in 1309/1892 gave Great Britain special rights in Abū Ẓabī, which like the other Trucial States is considered to be independent while under British protection. In 1357/1939 the S̲h̲ayk̲h̲ of Abū Ẓabī granted an oil concession for 75 years which is operated by Petroleum Development (Trucial Coast) Ltd., an Iraq Petroleum Company associate; in 1372/1952 oil had not yet been found. Offshore drilling rights are held by other interests.

Zāyid b. K̲h̲alīfa (d. 1326/1908) during his reign of 53 years made Abū Ẓabī the leading power on the Trucial Coast, but during the successive reigns of his four sons Abū Ẓabī was surpassed in importance by al-S̲h̲āriḳa [*q.v.*] and Dubayy [*q.v.*], which developed more rapidly their relations with the modern world. The present ruler (1952) of Abū Ẓabī is S̲h̲ak̲h̲būṭ b. Sulṭān (acc. 1346-7/1928), a grandson of Zāyid.

Abū Ẓabī is by far the largest of the Trucial States, though most of its boundaries in the interior remain undefined. It claims a common land boundary with Ḳaṭar in the vicinity of al-ʿUdayd [*q.v.*] and extensive territory in al-Ẓafra, where members of Banī Yās still reside in some of the tiny villages of al-D̲j̲iwāʾ. Several villages of al-Buraymī belong to Āl Bū Falāḥ. Banī Yās are settled on some of the islands in the Gulf between the Trucial Coast and Ḳaṭar, and they visit others while engaged in pearling, fishing, and gathering firewood. Āl Bū Falāḥ are on friendly terms with many of the beduins of the hinterland, though in recent years the once firm connections with the Manāṣīr [*q.v.*] have grown weaker. (G. Rentz)

ABŪ ZAKARIYYĀʾ AL-D̲J̲ANĀWUNĪ, Yaḥyā b. al-K̲h̲ayr, Ibāḍī scholar from the D̲j̲abal Nafūsa. He was a native of Id̲j̲nāwun (modern Djennaouen, near Djado, in the eastern part of the D̲j̲abal Nafūsa; cf. J. Despois, *Le Djebel Nefousa*, Paris 1935, 213 and passim). Al-S̲h̲ammāk̲h̲ī mentions him amongst the personages of the 6th/12th century. He was the grandson of another Ibāḍī scholar from the D̲j̲abal Nafūsa, Abu 'l-K̲h̲ayr Tūzīn al-D̲j̲anāwunī, contemporary of the *s̲h̲ayk̲h̲* Abu 'l-K̲h̲ayr Tūzīn al-Zawāg̲h̲ī. As the latter lived under the reign of the Zīrid al-Muʿizz b. Bādīs (406-54/1016-62; see al-S̲h̲ammāk̲h̲ī, *al-Siyar*, 335-9), Abū Zakariyyāʾ can probably be assigned to the first half of the 6th/12th century. He studied under the *s̲h̲ayk̲h̲* Abu 'l-Rabīʿ Sulaymān b. Abī Hārūn in the mosque of Ibnāyn (D̲j̲abal Nafūsa) and became

famous in Ibāḍī literature by the breadth of his learning and by his works, mainly on jurisprudence. Al-Barrādī quotes in his catalogue of Ibāḍī books, written shortly after 775/1373-4, a work by Abū Zakariyyāʾ, without giving its title. According to him the work contained seven parts, on fasting, marriage and divorce, testaments, salaries, judgments, preemption and security. The *K. al-Ṣawm*, on fasting, has been autographed in Cairo, 1310, and the *K. al-Nikāḥ*, about marriage and divorce, has been published in Egypt, with a marginal gloss by Muḥammad Abū Sitta al-Ḳaṣbī; the other parts are unpublished. Abū Zakariyyāʾ write also *al-Lamʿ* (or *al-Waḍʿ*), printed in Cairo (with a marginal gloss by Muḥammad Abū Sitta al-Ḳaṣbī) in 1305. It deals with dogmatics (1-116) and ritual law: ablutions, purification, prayer, alms, pilgrimage, etc. (117-692).

(A. DE MOTYLINSKI-T. LEWICKI)

ABŪ ZAKARIYYĀʾ AL-WARDJLĀNĪ, YAḤYĀ B. ABĪ BAKR, historian of the Ibāḍīs of the Maghrib. The Ibāḍi chroniclers al-Dardjīnī (7th/13th century) and al-Shammākhī (d. 928/1522) who took the chronicle of Abū Zakariyyāʾ as the basis for their own works, give but scanty details about him and do not indicate the date either of his birth or of his death. From al-Dardjīnī it is known at least that he was a native of Wardjlān (Ouargla) and that he studied in the Wādī Rīgh (Oued Righ) under the Ibāḍī *shaykh* Abu 'l-Rabīʿ Sulaymān b. Ikhlaf al-Mazātī (d. 471/1078-9). Thus the chronicle of Abū Zakariyyāʾ must have been written at the end of the 5th/11th or the beginning of the 6th/12th century. According to an Ibāḍī tradition of Wardjlān, Abū Zakariyyāʾ died and was buried in that place, or perhaps in the neighbouring oasis of Sadrāta.

The chronicle of Abū Zakariyyāʾ, *al-Sīra wa-Akhbār al-Aʾimma*, is the oldest document concerning the history of the Ibāḍīs in the Maghrib written by a member of the sect. It contains important information on the introduction and the development of the Ibāḍī doctrine in the Maghrib, the history of the Rustamids, their fall, the struggle of the Ibāḍīs against the Fāṭimids, as well as on the lives of the famous *shaykhs* of the community up to the time of the author. The work, not yet published, consists of two parts; the not very numerous manuscripts are generally modern; those especially of the second part are rare and very faulty. The most important part has been translated by E. Masqueray (*Chronique d'Abou Zakaria*, Algiers 1878) in a rather mediocre way, after a very bad manuscript. A table of contents has been given by A. de Motylinski.

According to al-Barrādī's catalogue of Ibāḍī works (8th/14th century) Abū Zakariyyāʾ was also the author of letters and decisions on dogmatic theology.

Bibliography: Shammākhī, *Siyar*, Cairo 1301, 427-8 and passim; Dardjīnī, *Ṭabaḳāt al-Mashaʾikh* (in MS); Kutubī, *Fawāt*, Cairo 1283, ii, 400 ff.; A. de Motylinski, *Bibliographie du Mzab*, *Bull. de Coor. Afr.*, 1885, 27, 36-8, 39, 42; R. Basset, *Les sanctuaires du Djebel Nefousa*, *JA*, 1899/i, 424-5. An edition and new translation of the chronicle of A. Z. by Dalet and R. Le Tourneau is in preparation. (A. DE MOTYLINSKI-T. LEWICKI)

ABŪ ZAKARIYYĀʾ B. KHALDŪN [see IBN KHALDŪN].

ABŪ ZAYD, legendary hero of the Banū Hilāl. In the cycle of romances relating to the Banū Hilāl he is represented as the son of Rizḳ, ruler of the Bilād al-Sarw, and Khadrāʾ, daughter of the *sharīf* of Mecca. He was black-skinned and his original name was Barakāt. After various adventures in Arabia Abū Zayd goes with his people to the Maghrib; there he is treacherously murdered by the other chief figure in the romances, Diyāb (or Dhiʾāb), but is avenged in turn by the killing of Diyāb. No documentary evidence has yet been found to determine whether Abū Zayd was a historical personage.—For details and bibliography, see HILĀL.

ABŪ ZAYD AL-ANṢĀRĪ, SAʿĪD B. AWS, Arab grammarian and lexicographer of the school of Baṣra. He belonged to the Medina tribe of Khazradj. A pupil of Abū ʿAmr b. al-ʿAlāʾ [*q.v.*], he was one of the few Baṣrians who went to Kūfa, where he collected, from al-Mufaḍḍal al-Ḍabbī [*q.v.*] the greater part of the poetic material which he used in his *K. al-Nawādir*. He was invited by al-Mahdī to come to Baghdād and died in 214 or 215/830-1. A contemporary of Abū ʿUbayda and al-Aṣmaʿī, he was considered superior to them in grammar, but of his numerous treatises only two have survived: *K. al-Maṭar*, a collection of Arabic expressions concerning rain (ed. R. Gottheil, *JAOS*, xvi, 282-312; ed. L. Cheikho, *Mash.*, 1905) and *al-Nawādir fi'l-Lugha*, a collection of rare poems and phrases. This work was handed down by his pupils Abū Ḥātim al-Sidjistānī and Abu 'l-Ḥasan al-Akhfash; it has been published by S. Shartūnī, Beirut 1894. ʿAlī b. Ḥamza al-Baṣrī wrote *al-Tanbīh ʿalā Aghlāṭ Abī Zayd fī Nawādirih* (cf. al-Baghdādī, *Khizāna*, iv, 39; Th. Nöldeke, in *ZDMG*, 1895, 318 ff.; H. L. Fleischer, *Kleinere Schriften*, iii, 471 ff.).

Bibliography: Ibn Ḳutayba, *Maʿārif*, 270; Anbārī, *Nuzha*, 173-9; Zubaydī, *Ṭabaḳāt* (Krenkow), in *RSO*, 1919, 141; Sīrāfī, *Akhbār al-Naḥwiyyīn* (Krenkow), 52-7; Ibn Khallikān, no. 262; G. Flügel, *Die gram. Schulen*, 70 ff.; Brockelmann, S I, 162. (C. BROCKELMANN *)

ABŪ ZAYD [see AL-BALKHĪ].

ABŪ ZAYD [see AL-ḤARĪRĪ].

ABŪ ZAYYĀN I MUḤAMMAD B. ABĪ SAʿĪD ʿUTHMĀN B. YAGHMURĀSAN, third sovereign of the ʿAbd al-Wādid dynasty. Proclaimed in Tlemcen on 2 Dhu 'l-Ḳaʿda 703/6 June 1304, he succeeded in having the siege of his capital by the Marīnid troops raised. He then chastised the tribes in the eastern part of his kingdom who had supported the enemy; the Tūdjīn Berbers were forced to submit and pay tribute, the Arab tribes were severely treated and driven back into the desert. On his return to Tlemcen, he devoted himself to repairing the damage caused by the siege, but died shortly afterwards, on 21 Shawwāl 707/14 April 1308.

Bibliography: see ʿABD AL-WĀDIDS.

(A. COUR *)

ABŪ ZAYYĀN II MUḤAMMAD B. ABĪ ḤAMMŪ II, sovereign of the ʿAbd al-Wādid dynasty. During the lifetime of his father he was governor of Algiers and tried in vain, on his father's death, to seize power. He took refuge with the Marīnid sultan Abu 'l-ʿAbbās Aḥmad, who led an expedition against Tlemcen and made it possible for Abū Zayyān to be proclaimed in Muḥarram 796/Nov.-Dec. 1393. He remained a faithful vassal of the Marīnids. A patron of men of letters and poets, he was assas-

sinated in 801/1398 after being driven from the throne by his brother Abū Muḥammad ʿAbd Allāh.

Bibliography: see ʿABD AL-WĀDIDS..

(A. COUR *)

ABŪ ZAYYĀN III AḤMAD B. ABĪ MUḤAMMAD ʿABD ALLĀH, second last ʿAbd al-Wādid ruler of Tlemcen. Thanks to the support of the Turks of Algiers he seized the power and was proclaimed in 947/1540. The Spaniards of Oran who supported his brother Abū ʿAbd Allāh Muḥammad undertook an expedition against Tlemcen, which failed (949/1543). After a second, victorious expedition, the Spaniards made it possible for Abū ʿAbd Allāh Muḥammad to seize the power (30 Dhu 'l-Ḳaʾda 949/7 March 1543), but he was soon driven out by his own subjects, who restored Abū Zayyān to the throne. He declared himself a vassal of the Turks and reigned until his death in 957/1550.

ABUBACER [see IBN ṬUFAYL].

ABŪḲĪR, or BŪḲĪR, small town on the Mediterranean coast, 15 m. east of Alexandria, on the railway which links this town with Rosetta (Rashīd). The earliest Arab geographer to describe the position of Abūḳīr was al-Idrīsī. But before him Arab texts on Ancient Egypt refer to the building of a lighthouse: and European travellers certainly mention, on this route, towers intended to serve as landmarks. Eutychius tells of the passage to Abūḳīr of the relieving fleet which had been summoned from Ṭarsūs to protect Egypt against the Fāṭimids. Alī Pasha Mubārak, according to a source that has not been traced, relates that European pirates raided Abūḳīr on 27 Shaʿbān 764/11 June 1363, and carried off about sixty inhabitants, who were put up for sale at Sidon. It was the period of Bonaparte's expedition that made Abūḳīr famous, by Nelson's naval victory on 1 August 1798 and the extermination of the Turkish army on 25 July 1799. At Abūḳīr, on 8 March 1801, disembarked the English army which was to end the French occupation; and, finally, Abūḳīr was again an English operational base in March 1807. There was an excellent anchorage and good shelter at Abūḳīr at that time, but the village itself was miserable.

Amélineau erroneously believed that he had found the name Abūḳīr in the *Jacobite Synaxary*; the reference there is to a church in Old Cairo, dedicated to Apa Kyros.

Étienne Combe has studied at length the problem of the Alexandria-Rosetta route, as well as of the lakes along the coast, and has provided a rich bibliography of Arab writers and European travellers. In this work will be found the various transcriptions of the name of the locality, and the monotonous description of a somewhat difficult journey: a sandy region had to be crossed, uncultivated and uninhabited, with only a few palm-trees here and there to enliven the prospect. The three lakes, from west to east, bore the names Maryūṭ, Abūḳīr and Atkū. The only account of the lake of Abūḳīr which is at all detailed in the *Ṣubḥ* of al-Ḳalḳashandī, but he refers to the prosperity of the region as a thing of the past. Some few birds lived on the shores of the lake, whose waters teemed with fish. The mullet (*būrī*) which was caught there formed part of the food supply of Alexandria. On the banks were some large salinas, whose product was exported to Europe.

A strong causeway, often reinforced, separated the lake of Abūḳīr from Lake Maryūṭ; the Maḥmūdiyya canal and the railway from Cairo to Alexandria were built along this. Since 1887 the lake of Abūḳīr has been drained and the land cultivated.

Monneret de Villard, in *Bulletin de la société de géographie d'Égypte*, xiii, 74, 76; E. Combe, *Alexandrie musulmane*, *Bulletin de la société de géographie d'Égypte*, xv, 201, 238; xvi, 111-71, 269-92; Dehérain, *L'Égypte turque*, *Hist. de la nation égyptienne*, v, 275, 277, 281-285, 433, 440, 445, 518-519, pl. xi; Durand-Viel, *Les campagnes navales de Mohammed Aly*, i, 49, 63, 65, pl. x, xi, xiii, xix.

Other places of no importance in Egypt have the same name.

Worthy of mention, however, is the gorge of the Būḳīr (Būḳīrān—Būḳīrāt), in the Djabal al-Ṭayr (Mountains of the Birds), in Middle Egypt, north of Minya. The Arab authors associate a curious legend with this locality. The mountain was, on a given day each year, the meetingplace of the birds called *būḳīr*. They put their heads into a cleft in the mountain, which closed on one of them: that bird remained suspended and died there.

(G. WIET)

ABUKLEA, misspelling for Abu Ṭulayḥ, so called after the *ṭalḥ* tree (*Acacia seyal*), the name of a well-centre on the road through the Bayūḍa desert which, avoiding the Nile bend of Abū Ḥamad, leads from Korti (Ḳurtī) south of Dongola to al-Metamma, a distance of 192 miles. The place is famous as the scene of a battle fought on 17 Jan. 1885 between the *darwīsh* forces of Muḥammad Aḥmad [*q.v.*] and a "desert column" of some 1800 British troops who were advancing from Korti to the relief of Khartūm where the Egyptian garrison and General Charles Gordon were besieged by the Mahdists. The British under Sir Herbert Stewart found a large body of the Mahdi's best troops (some 3000 Baḳḳāra and 5000 Djaʿliyyīn) in possession of the wells. Advancing in square formation they were fiercely attacked, and after desperate hand-to-hand fighting the Mahdists withdrew leaving about 1000 dead behind. The British casualties were 74 dead and 94 wounded. The way was now open to al-Metamma where the British forces were joined by four river steamers which Gordon had despatched from Khartūm. A fatal delay of a few days enabled the Mahdists to take Khartūm by storm (26 Jan.), and the relieving force was obliged to retrace its steps without achieving its object.

AL-**ABWĀʾ**, a place on the road from Mecca to Medina, 23 miles from al-Djuḥfa in the territory of Banū Ḍamra of Kināna. According to some authorities the name really belonged to a mountain situated there. Muḥammad's mother, Āmina, is commonly said to have died there while returning from Medina to Mecca, and to be buried there; but she is sometimes said to be buried in Mecca (Ṭabarī, i, 980). The first expedition from Medina in which Muḥammad himself took part was to al-Abwāʾ and Waddān nearby. It is said that at al-Abwāʾ, as the Meccans marched against Medina in 3/625, some proposed to dig up Āmina's body, but the majority opposed this.

ʿĀD, an ancient tribe, frequently mentioned in the Ḳurʾān. Its history is related only in sporadic allusions. It was a mighty nation that lived immediately after the time of Noah, and became haughty on account of its great prosperity (vii, 69; xli, 15). The edifices of the ʿĀdites are spoken of in xxvi, 128 f.; cf. in lxxxix, 6-7 the expression: "ʿĀd, Iram of the pillars" [see IRAM DHĀT AL-ʿIMĀD]. According to xlvi, 21, the ʿĀdites inhabited al-Aḥḳāf [*q.v.*], the sand dunes. The prophet sent to them, their "brother" Hūd [*q.v.*], was treated by them just as Muḥammad was later treated by the Meccans, and on account of that they were, with the exception of Hūd and a few pious men, swept away by a violent storm (vii, 65 ff.; xl, 58; xli, 16; liv, 19; lxix, 6). Finally, in xi, 52, there is mention of a drought from which they suffered. From these indications the later legends of the *ḳiṣaṣ al-anbiyāʾ* wove their coherent narratives. [For these, cf. also HŪD, IRAM DHĀT AL-ʿIMĀD, LUḲMĀN, SHADDĀD B. ʿĀD.]

It cannot be shown with certainty what more ancient traditions are at the base of the Ḳurʾānic story. The old poets knew ʿĀd as an ancient nation that had perished (e.g. Ṭarafa, i, 8; *al-Mufaḍḍaliyyāt*, viii, 40; Ibn Hishām, i, 468; cf. Zuhayr, xx, 12 and LUḲMĀN); hence the expression: "since the time of ʿĀd", *Ḥamāsa* (Freytag), 195, 341. Their kings are mentioned in the *Dīwān* of the Hudhaylites, lxxx, 6, and their prudence in that of Nābigha, xxv, 4. The mention of the ʿAdite Aḥmar by Zuhayr, *Muʿallaḳa*, verse 32, and in the *Dīwān* of the Hudhaylites, p. 31, merits consideration, as the Muslim legend connects (Ḳudār) al-Aḥmar with Thamūd [*q.v.*].

Whether there really existed, and where, a nation called ʿĀd, is still an unanswered question. The genealogies of the Arabs relating to the ʿĀdites are naturally valueless, just as is their locating of that people in the large and uninhabitable sandy desert between ʿUmān and Ḥaḍramawt. The identification of Iram with Aram, adopted by the Arabs and several modern scholars, is not at all likely. Of the latter, Loth has identified ʿĀd with the wellknown tribe of Iyād; on the other hand Sprenger sought for ʿĀd in the Oadites, who according to Ptolemy lived in N.-W. Arabia; this recalls the well of Iram in Ḥisma (al-Hamdānī, *Ṣifa*, 126; A. Sprenger, *Die alte Geogr. Arabiens*, § 207; A. Musil, *Arabia Petraea*, ii/2, 128). The excavation of the second-century Nabataean temple at Djabal Ramm, about twenty-five miles due east of ʿAḳaba, brought to light Nabataean inscriptions giving the name of the place as *ʾrm*; Savignac, very plausibly, connected this with Iram. Cf. H. W. Glidden, in *BASOR*, no. 73, 1939, 13 ff.; Ramm would also be identical with al-Hamdānī's Iram and Ptolemy's Aramaua. But Wellhausen pointed out that instead of the expression "since the time of ʿĀd" the expression *min al-ʿād* also occurs; therefore he supposed that originally ʿĀd was a common noun ("the ancient time"; adj. *ʿādī*, "very ancient") and that the mythical nation arose from a misinterpretation of that expression.

ADĀʾ (A.), lit. «payment», «accomplishment», a technical term used in the *fiḳh* to designate the accomplishment of a religious duty in the time prescribed by the law, in opposition to *ḳaḍāʾ*, which designates the belated accomplishment of a religious duty (of course when the delay is permitted). A distinction is also drawn between a perfect and an imperfect accomplishment (*al-adāʾ al-kāmil* and *al-adāʾ al-nāḳiṣ*).—In the reading of the Ḳorʾān *adāʾ* means the traditional pronunciation of the letters, synonymous with *ḳirāʾa* [*q.v.*].

ʿĀDA (A.) custom, customary law.

(i) General, (ii) North Africa, (iii) India, (iv) Indonesia.

i. — General. The realities of social life have never exactly reflected the *sharīʿa* [*q.v.*], or *sharʿ*, the ideal Muslim Law corresponding to God's will. This is true not only in regard to the ritual provisions of this Law, but also and even more so in regard to its juridical aspects. It is not, of course, the modern reforms of Muslim law in various countries that are envisaged here, but the survival of pre-Islamic custom (*ʿāda* or *ʿurf* [*q.v.*]). The words *ʿāda* and *ʿurf* have the same meaning, but the usage varies from region to region (e.g. the first is used in Indonesia, the second in North Africa, and in East Africa one says *dastūr*). In addition, the Muslim rulers have often issued administrative regulations on matters of law, called, e.g. in Persia *ʿurf*, in Turkey *ḳānūn* [*q.v.*] (for the meaning of this word in North Africa, see below ii), sometimes also *siyāsa* [*q.v.*]. Also the innumerable regulations made by rulers, establishing various taxes contrary to the Law (*maks* [*q.v.*]), must be recalled here.

What is, then, the exact role of custom in Muslim countries?

a) There is first of all the case where the *fiḳh* itself expressly refers to customary usage, e.g. to determine what is to be understood by equivalent dowry, or by ordinary standards of nourishment (e.g. for the *zakāt al-fiṭr*), etc. Some lawyers even felt justified in advancing the view, following the principle according to which everything that is not forbidden is permissible, that the Muslim Law could admit customary law in every case in which the *ʿurf* was not contrary to the *sharʿ*; in fact, however, custom has not been admitted as one of the sources (*uṣūl*) of the law [cf. UṢŪL].

b) A juridico-sociological analysis of social reality allows us to make the following distinctions.

1) In the most classically Muslim countries it can be observed that alongside the religious jurisdiction there exists an administrative ("political" = *siyāsa*) jurisdiction, varying in forms and names, which need not be treated here, e.g. in matters concerning penal law, obligations and contracts; in it customary law or the regulations (*ḳānūn*) of the princes are applied to a greater or lesser extent. So for example in Turkey marriage, from the 17th century onwards, had to be concluded obligatorily, from the penal point of view, before the authorities.

2) Sometimes even the religious courts are compelled to sanction local usage, either because, thanks to a juridical artifice (*ḥīla* [*q.v.*]) the act, though contrary to the spirit of the Law, has been put into a legally unchallengable form (e.g. in the matter of usury, or the conditional repudiation in favour of the wife in Java, and especially the use of the *waḳf*, in North Africa and elsewhere, to disinherit women); or even without that expedient —which is even more characteristic; thus in Java the pre-Islamic marriage arrangement is considered as a *sarikat* (i.e. *shirka*), a contract of commercial partnership between the husband and wife. On the island of Great Comore, there exists a kind of *waḳf*, the *magnahuli*, in favour of women only, the validity of which is well recognized. (For the *ʿamal* in North Africa, see below, ii.)

3) There exist religious courts administering the Law, but, except in case of litigation, the population ignores them and follows local custom. This is the case, among others, in the Awrās (cf. below, ii), to a large extent; in the same way, the religious courts were competent in matters of succession in Java up to 1938, but the population did not follow the Ḳurʾān in this field; also the persistence of the *Lek Dukagini* among the Muslims of North Albania can be quoted in this connection.

4) The clearest case of the persistence of a customary law is that where there is no religious jurisdiction at all, but only that of the customary courts, and these apply customary law. It is, however, essential to realize that this custom can be more or less islamized (see below, ii, concerning the Berbers). One point, especially, can be taken more or less for granted: viz. that there is no Muslim country where the marriage formalities, which are, to be sure, very simple, are not performed according to Muslim law.

It can be said that in general it is among populations which are still imperfectly islamized (in the objective meaning of the word, as those in question may have a very fervent faith) that the predominance of customary law and the absence of religious courts can be observed. There is, however, at least one very remarkable exception: until recent times, the region of Menangkabau (Central Sumatra) was strongly attached to its matriarchal customs, which were quite contrary to Islam, and yet Islamic learning was very widely spread in that region. The same matriarchate can be observed also e.g. among the Tuaregs of the Hoggar, who are, it is true, rather lukewarm Muslims. In the Laccadive islands, inheritance follows the female line. Thus the effective manifestations of the survival of custom among the Muslim community are innumerable.

As regards the future, something on the following lines may be said. If, on the one hand, the control of Muslim Law over practice is on the decline—total abolition in Turkey and in the countries under Soviet rule, reforms in Egypt, India etc.—on the other hand the Law is almost everywhere gaining ground at the expense of custom. Custom is thus on the way of slow disappearance, partly due to the influence of European colonization and European civilization. Custom is being Islamized, because the means of communication are improving and religious courts are installed in place of the old customary jurisdictions. As a matter of fact, almost everywhere the European colonizers believed that the law of the local Muslims was essentially the theoretical religious law.

In the following sections more detailed descriptions are given of the role of customary law in three representative areas of the Islamic world.

ii. — North Africa. This region, where Berber dialects were spoken before the coming of the Arabs, has since been profoundly Arabicized and Islamized.

a) As regards the Arabic-speaking regions, no study has yet been made, with a few exceptions, of what elements among the customs of the population go back to the pre-Islamic period and are Berber survivals. On the other hand, it can be observed that, especially in Morocco, the *ḳāḍīs* sometimes apply solutions which are contrary to the prevailing Mālikī view and which may possibly—though this has scarcely yet been envisaged as an object of study from this point of view—represent Berber survivals; this is the *ʿamal* (especially *ʿamal Fāsī* [*q.v.*]).

b) As regards the Berber-speaking regions:

1) From a purely theoretical point of view, there are districts where, officially, the Berber customs have remained legally applicable, namely Greater Kabylia in Algeria and the very important zones of Berber customary law in Morocco, where the situation existing before the French conquest was made permanent by the *dahir* (*ẓahīr*) of 16 May 1930. This measure roused at the time violent polemics; these are, however, completely forgotten today, since, by the *dahir* of 8 April 1934, penal justice is no longer governed by customary law, but is unified througout the whole of Morocco; the civil courts of customary law have been reorganized, with two courts of appeal. In Kabylia, it is the *juge de paix* who administers the customary law with right of appeal to the court of the *arrondissement*. In all these cases, the matters involved are those of personal status and the law of succession.

2) The social reality is, however, much more complex. (a) In Tunisia, in the few remaining isolated Berber-speaking communities, there are scarcely more than memories of the ancient customary law. (b) In Algeria, more than a quarter of the population speaks Berber. In Greater Kabylia, where the social organization of each village has remained very strong, the *djamāʿa* continues illegally to settle many conflicts; it applies the local *ḳānūns*, i.e. rates of fines, some of which, renewed, are nowadays compiled in French (no longer in Arabic). In Berber-speaking Lesser Kabylia and in the Awrās (where the French have installed *ḳāḍīs*), the quasi-official Berber justice continues to operate on a fairly large scale. (c) It is in Morocco (where more than 40% of the population is Berber-speaking) that Berber law is most extensively applied, and there the real customary sphere tends much more to encroach upon the official sphere.

One cannot make a simple contrast between customary law and Muslim law, because the former has been influenced, to a greater or lesser degree, by the latter. In Morocco, for instance, customary law has remained purest in the central regions; it is less pure in the Northern Middle-Atlas; it is strongly Islamized in the south. In Greater Kabylia, it has been influenced by the official French reforms. The inhabitants of the Mzāb, on the other hand, have a legal system that has been very greatly influenced by the heretical Ibāḍī religious law. It would be wholly premature to assert that there once existed a common stock of Berber legal institutions. My impression is that this was not the case (just as the Berber-speaking populations do not belong to one and the same race). To be sure, some characteristic institutions recur in the whole of North Africa (collective storehouses from Tunisia to Morocco, but not in Kabylia; inferior marriage, *mashrūṭ*, in the region of Guraya in Algeria; *amazzal* among the Zemmur in Morocco), but they are not found everywhere among the Berber-speaking population. On the other hand, the condition of women is essentially variable among the Berbers; it is very low, for example, among the Kabyles, very high indeed among the Tuareg, with all the intermediate stages between these two extremes. It is true that the collective oath as a method of proof is very widely spread and, from the point of view of succession, women are in general disinherited. It seems therefore preferable to suspend judgement about the existence of a primitive Berber custom.

Everything relating to Berber public law, which was in force in Morocco until the French conquest, is but a memory. In penal law, the custom of the *diya*, i.e. blood-money (in its Berber form and not according to the rules of the *fiḳh*) survives quasi-officially in several Berber-speaking regions (as well as among the Arabic-speaking population of North-Africa). The Berber civil institutions that survive in Algeria and in Morocco are being increasingly influenced by factors foreign to customary law (such as Islam or modern civilization).

iii. — India. With the establishment of British rule in India, procedural and, to a large extent, substantive Muslim law gave place to the English legal system, and, on the grounds of equity, justice and good conscience, customs were invested with legal validity. Thus encouraged, many customary practices came to light. Most of these customs—inconsistent and sometimes directly contrary to the *s͟harīʿa*—have from time to time been deprived of their legal value by fresh legislation. The most far reaching of such legislation was the Shariat Act of 1937. Nevertheless, in spite of this law, custom still prevails among people, who respect its traditional force and who, moreover, would not think of bringing matters involving such questions before a court of law. Even to-day, therefore, we find custom playing a prominent part in the social life of some of the communities.

Before the Shariat Act of 1937, however, amongst those indigenous Muslim communities which were converts from Hinduism, Hindu law found a partial survival in customs and usages. These communities are the K͟hod̲j̲as [*q.v.*] the Memons [*q.v.*] of Kačč̣h, the Halai Memons of Porebunder, the Molesalam Grasias of Broach in Western India, the Moplas [cf. Māpilla] in Madras, and certain Muslim elements in Kas͟hmīr, the Pand̲j̲āb and Sind.

The Khod̲j̲as, Memons and Sunnī Bohras had retained the Hindu law of agnatic intestate succession, excluding the female from inheritance. It does not seem however that any of these communities had ever wholly adopted the Hindu law of joint family.

In Southern India, Moplas, who are the remnants of a matriarchal form of society, were governed by the *marumakkatyam* law (inheritance by the children of the sister). So a Muslim, who by custom was folowing this law, could make a valid gift of property to the Tawzihi, which is a corporate unit consisting of the mother and all her children and descendents in the female line (Chakkra Kannan vs. Kunhi Poker, (1916) 39 Madras 317).

In the Pand̲j̲āb and U.P. some of the Muslim communities excluded the female from inheritance. In Karamat Ali vs. Sadat Ali (1933) Lucknow 228, it was held that the Islamic law of inheritance was modified by the custom of the place of its application. In the same case the court enforced the custom of *stribant*, according to which the sons of each wife were regarded as one group and each group was awarded an equal share in the inheritance. A custom, similar in effect, called *chundawand* entitles the group to its allotted portion until the extinction of its last member (D. F. Mulla, *Principles of Mahomedan law*, 4).

In testamentary succession, Muslim law restricts the power of the testator to one third and excludes any heir from benefitting under the will unless with the consent of the other heirs. The K͟hod̲j̲as and Memons, however, could under the customary practices leave their whole property to whomsoever they wished. After the Cutchi Memon Act of 1938, the Memons were bound by the Muslim law in respect of testate succession. Testamentary customs at variance with the Muslim law have also been noticed in some parts of the Pand̲j̲āb (Rahim Baksh vs. Umar Din, (1915) P.R. 9). The retention of the Hindu law of inheritance by some of the communities prevents the making of gifts to non-agnates.

Adoption is not recognised by Islamic law, but in some parts of the Pand̲j̲āb and Sind where it is supported by custom it has prevailed over this prohibition. In U.P., also, the custom of adoption has been upheld and the Oudh Estates Act of 1869 permitted a Muslim *taluḳdār* to adopt a son. In other provinces, where some of the communities have retained the Hindu law of inheritance and succession, the courts have refused to accept the plea that the retention of Hindu law of inheritance implies, at the same time, the retention of the Hindu law of adoption. So when, in provinces where the custom has no legal force, a child is adopted—the practice being for wealthy families to adopt children from poor families—he cannot expect to receive an inheritance from the adopting parents under Islamic law, and gifts of property are made to him during their lifetime. The K͟hod̲j̲as, of course, need not resort to this expedient but do so by will.

The Muslim law of pre-emption (*s͟hufʿa*) is more or less applied in the light of customary practices. The Madras courts refused to apply it on the grounds of it being opposed to justice, equity and good conscience. In U.P., Bihār, Assam and Gud̲j̲arāt it was recognised by the courts that the right to pre-emption exists not only between Muslims, but also between a Muslim and a Hindu, and between Hindus if the custom so warrants.

In the law of marriage, custom usually tends to make divorce and polygamy difficult. In some marriage contracts the husband delegates to the wife the right to divorce (*ṭalāḳ al-tafwīḍ*) which she can use if any of the conditions mentioned in the marriage contract is broken; the marriage contract generally includes the right of the wife to use her powers of divorce if the husband should remarry. Another common device is to name an enormous dower sum (*mahr*), of which only a token amount (*muʿad̲j̲d̲j̲al* = prompt dower) is paid at the time of marriage, the remainder—the deferred dower (*muʾad̲j̲d̲j̲al*)—becoming payable when the wife is divorced or widowed. When both these conditions are combined within a marriage contract, they serve as a potent weapon in the hands of the wife.

In contrast to this in some parts of Southern India a large sum of money must be paid to the bridegroom by the bride's people, and in this the influence of Hindu custom is to be seen. It has often brought financial ruin to the family or compelled its daughters to remain unmarried.

The *ʿidda*, the waiting period of a divorced or widowed woman laid down by the Islamic law, was in one of the cases in the Pand̲j̲āb held to be outside the requirements of the customary law of certain Muslim communities (Bhagwat Singh vs. Santi 50. I.C. 654).

Though taking of interest is prohibited by Islamic law, it is a practice of long standing among most Indian Muslims, and in particular among the trading communities, and would seem to have gained legality.

Most of such customs which were contrary to Muslim law have been deprived of their legal validity by the Shariat Act of 1937. The force of the custom is almost wholly excluded from most matters of Muslim family law. But the Act excepted from its scope the devolution of agricultural lands which, it would appear, still devolve according to custom.

The Act does not summarily abolish customs pertaining to adoption, wills and legacies. But it lays down that if a Muslim who has reached majority makes a declaration to the effect that he and his descendents wish to be governed by Muslim law in the

matters stated above, Muslim law would be applicable to them.

In addition, there exist in India communities which are neither completely Muslim nor Hindu, retaining some elements of both religions. Such is the sect of Satpanthis and Pīrpanthis [*qq.v.*] (the "followers of truth" and the "followers of Pīr") in Gudjarāt, Kaččh and Khāndesh. They claim to belong to the Hindu caste of Mathia Kunbis and follow the Atherva-veda; yet they observe the fast of Ramaḍān and other Muslim practices and bury their dead with both Muslim and other ceremonies. Other such communities are the Nyitas in Mālwā, the Kanchandas in Sind, the Ḥusaynī Brahmans in U.P. the Bhagwanis or Satyadharmas in Bengal and the Chauhars in the Pandjāb. (See *Census of India*, 1931, i, 380 ff.).

With the partition of India, it may be assumed that henceforth customs will cease to have any legal sanction in Pakistan, though the same may not be said with certainty about India. However, whether or not custom is granted any legal sanction, it would not be possible to eradicate its deep rooted influences for generations to come.

(Shamoon T. Lokhandwalla)

iv. — Indonesia. 1. The word, in the form *adat*, has been adopted, not only in Malay but also in many other languages of the Indian archipelago. It comprises all things Indonesian that are custom, usage, practice.

1. *Adat* thus includes also the juridical customs of a country or region. The scholars who studied the juridical parts of the general *adat* in Indonesia used the now well known word "*adat* law" (Adatrecht), and not the wider term "customary law", because at least among the Muslim population of Indonesia, not all the juridical customs in force were "customary" by origin.

Some rules concerning marriage and divorce and law of inheritance are due to the impact of the *sharīʿa* on the Muslim Indonesian world. From the *sharīʿa* the Indonesians also took the institution of "pious foundations" (*waḳf*). In some regions the influence of the *sharīʿa* on general rules of the law of relationship is visible. But otherwise some regional rule or institution was originally not unwritten law but due to a princely edict or order (viz. the older *pesuara* of the Balinese princes). Moreover in some regions one may find that parts of the law in the closed legal communities (*desa, subak*) are formulated in written local regulations (*awig-awig desa* in Bali). The famous *taʿliḳ-ṭalāḳ*-institution of Java—see § 4—is still often called by Javanese the *djandji dalem*, that is "the royal promise", because according to their tradition it was a seventeenth century king (*susuhunan*) of Mataram, who gave this order to his subjects in that way.

So far the situation in Muslim Indonesia is *mutatis mutandis* the same as in the older and central countries of Islam. For, notwithstanding the totalitarian pretention of the *sharīʿa* to be the formulation of God's eternal will, which is followed by every Muslim in any country, time or circumstances, only some chapters of the *fiḳh* system were actually enforced.

2. The particular situation in Muslim Indonesia, however, is that an incessant discussion is going on about the worth of *adat* law and about the relation of *adat* law and the *sharīʿa*.

Moreover those departments of juridical life which have been entirely Islamized in other countries: viz. law of matrimony, law of relationship, law of inheritance—are not the unchallenged domain of *sharīʿa* in Muslim Indonesia, as will be shown below. Before the second world war the more radical adherents of the nationalist parties argued that the pluriform *adat* law in the 18 juridical regions of the East Indies was an obstacle to the unification and modernization of the country. Their ideal became: one pan-Indonesian state, one (official) language and one law. They rejected the *sharīʿa* as well as *adat* law. Notwithstanding their anti-western attitude they believed—and partly still do—that western law should be introduced entirely. The former Dutch government often had (for its Indonesian subjects) considered the possibilities of westernization of private law but projects of codes were never carried out. Even unification of the *adat* law in force proved to be a troublesome experiment. Notwithstanding that, elements of western law began, rather long ago, to penetrate into Indonesian life as a consequence of modern enterprise, modern traffic and commerce. For several separate objects statute laws were made in order to meet modern needs, and this process is still going on. But this is adaptation of new rules where they are wanted. The main point is that *adat* law is still in force in all sections of Indonesian juridical life. Even now only the European group and the Chinese are subjected to western private law (Dutch codification).

3. Apart from the arguments of radical adherents to western law, there is a dispute about the mutual relations between *adat* law and *sharīʿa*. In the remarkable country of Minangkabau (Western Sumatra, so-called Padang Highlands) this discussion has been going on for at least 150 years. The rather highly civilized and thoroughly Muslim people of Minangkabau still preserve, in defiance of the *sharīʿa*, their matrilineal system of relationship. This means that husband and wife do not form one family but belong to separate clans or sub-clans. The heirs to the man's estate are not his children but his sisters'children. His wife's brother or her maternal uncle has the highest authority over her children and not their father. The matrimonial bond is very loose. Even the *walī*-ship is only a formality—real authority belongs only to the matrilineal family-chiefs.

For several generations two parties have existed in Minangkabau: the *sharīʿa* party and the *adat* party. Both groups have modernized their organization and activities. In 1952 a large congress was held where all notable persons of the upland districts of Minangkabau, both *ʿulamāʾ* and non-religious

persons, *adat*-functionaries and politicians tried to find a way out, that is to say a conciliation between both juridical complexes (on this occasion in the section of the law of inheritance) but without success. The view-point of the above-mentioned Minangkabau *ʿulamāʾ*, notwithstanding their concessions to *adat* law, was thoroughly traditional (orthodox).

4. There is however one outstanding problem that was already before the war—to quote a Javanese politician—"an inexhaustible source of disputes". This is the position of the woman, especially in Javanese life. From a social point of view the position of the Javanese woman is fairly high. But her position as a wife is extremely unsafe. The peculiar situation as far as this point is concerned is that in Java (and in Minangkabau) more than 50% of all marriages are dissolved by the husband's act of repudiation. Of course the *sharīʿa* gives the husband that right everywhere. It is remarkable however that in the Muslim regions where a patrilineal system of relationship is in force the matrimonial bond is strong, because the husband has to pay a considerable bride-price. In Java the so-called "*tuku*" (remnant of a bride-price) is only a combination of cheap presents, and even the *mahr* of the *sharīʿa* often remains unpaid. The socio-familial system in Java is bilateral.

Since a score of years a strong current has set in against polygyny. Not in the first place against simultaneous polygyny (which is not so frequent: ± 2%) but mainly against "successive" polygyny: the habit of the man (who can marry quite "cheaply") to exchange his wife for a younger one. The *taʿlīḳ-ṭalāḳ*-institution is not effective against this most serious social evil. This *taʿlīḳ*-regulation is as follows: Immediately after contracting his marriage the husband has to declare to his wife's *walī* and the witnesses that, if he leaves his wife for a certain time without providing for her and without sending her tidings, if he severely illtreats her or commits another unseemly act—then his wife is free, if she likes to do so, to complain before the Muslim authority concerned. If there is evidence of her husband's failing in these respects the authority states one *ṭalāḳ* to have taken place.

The republic has improved the (officially edited) forms for the *taʿlīḳ*-statements and given them by means of *iwadl*-paying the character of an eventual *khulʿ*. And a bill is being prepared which is an interesting combination of elements of western law, Muslim religious law and *adat* law, although the prospects of its enactment are doubtful.

This bill has the following salient points: (a) child-marriages (not frequent in Indonesia) are forbidden; (b) each marriage is to be registered in a registrar's office in accordance with the European continental system; (c) the future married couple have to give each other certificates as to their health (influence of "eugenics"?); (d) the mutual rights and duties of husband and wife are circumscribed partly (*mutatis mutandis*) in the words of the Dutch code, partly in the terminology of the *sharīʿa*, especially the duties of the "polygamous" husband; (e) As to polygyny in general: 1. polygyny is to be allowed only in the interest of society; 2. no man can take a second or third wife (etc.) without the consent of the wife (wives) he already has; 3. he requires a medical certificate stating that his health allows "polygamy"; 4. he must prove himself to possess the financial means to entertain more than one household; 5. the polygamist *in spe* must promise to be "righteous" in his conduct. Otherwise the judge is given a considerable power to dissolve marriages in well-defined cases, again partly derived from articles of the Dutch code, partly from regional rules of *adat* law and the usual *taʿlīḳ*-formulas. Whether, however, in the intention of the bill, a Muslim husband can still repudiate his wife depends on the ultimate legislative elaboration of the bill.

5. There are of course other points in the incessant disputes. As was already mentioned in § 3 above, there is the question of succession-law. Notwithstanding the fact that in Java Muslim courts exist (since centuries) which deal with all suits concerning Indonesian Muslim estates, it is well-known that in reality the Javanese, as well as the Sundanese and Madurese—outside the court—followed in case of partition of estates the lines of *adat* law. For this reason suits of this kind belong since 1937 to the competence of the common "secular" judge. There is still Muslim propaganda against this "colonial" measure.

ADA ĶALʿE, island in the Danube in Rumania, inhabited by Turks, 4 kms above the Iron Gates and ½ km below Orsova; 800 by 200 m. In the 15th century the Ottoman Turks occupied the strategic points of the river in this region, but the island is mentioned for the first time only in 1691, when the vizier Dursun Meḥmed Pasha conquered the "little island in the straits of Irshowa (Orsova)" which was then occupied by 400 soldiers and called *Shans adāsi*, i.e. "entrenchment island", from German *Schanz* (Silihdār Fïndïklïlï Meḥmed Agha, *Taʾrīkh*, Istanbul 1928, ii, 540). In 1716 the first durable fortifications were built by the *muḥāfiẓ* of the Iron Gates, Čerkes Meḥmed Pasha (Meḥmed Rashīd, *Taʾrīkh*, Istanbul 1153, ii, 153). After occupation by the Austrians, it was retaken by ʿAlī Pasha, called *serdār-i ekrem*, in 1738; it is on this occasion that the name Ada Ķalʿesi appears for the first time (cf. Meḥmed Ṣubḥī, *Taʾrīkh-i Weḳāʾiʿ*, Istanbul 1198, 131, 134). It depended from the *wāli* of Vidin. The last struggles round Ada Ķalʿe took place in 1788, when during the expedition of the *ṣadr aʿẓam* Ķodja Yūsuf Pasha against the army of Laudon, the last time when Ottoman troops appeared in the Banat, the island played the role of a river base. Yūsuf Pasha built a large bridge between Orsova and Tekye (Tekija) and reinforced the "fortress of the Great Island (Ada-i Kebīr Ķalʿesi)". (The expedition is described in detail by an anonymous writer in *Sefer-nāme-yi Serdār-i Ekrem Yūsuf Pasha*, MS Istanbul, Univ. Kitapsarayï, T.Y. 3254; another

MS in the possession of the writer). During the revolt of the Serbians, the island became an important stronghold of the Empire. The *Dayī*, who surrendered in Belgrade, were executed in Ada Ḳalʿe by the *muḥāfiẓ* Redjeb Agha in 1809 (Aḥmed Djewdet, *Taʾrīkh*, Istanbul 1309, ix, 126, 128). Somewhat later Redjeb Agha himself, following the example of the *aʿyān* in the Balkans, rebelled, but was executed. His brothers, Ādem, Bekir and Ṣāliḥ, who occupied the fortress of Fetḥ Islām (Kladovo), had to retire to the island. Welī Pasha, son of ʿAlī Tepedelenli, who had been charged with the pacification of Serbia, granted them pardon, on which they surrendered the island. After 1867, when the Turkish garrisons evacuated Serbia, Ada Ḳalʿe remained without direct communication with the capital. At the Congress of Berlin (1878) the island was forgotten, and so remained an isolated possession of the Ottoman Empire, administered by a *nāḥiye müdürü*. Its inhabitants elected deputies to the Turkish parliament. By the treaty of Trianon (1920), it was incorporated, with the Banat, into Rumania; but this was recognized by Turkey only by the treaty of Lausanne (1923).

At the present day, the island has 640 Turkish inhabitants. There are schools for the Muslim population. The fortifications, in red brick and stones, with their basements and cisterns, are noteworthy, as well as the mosque built by Selīm III, with a *ziyāret-gāh* of Miskīn Bābā, a derwīsh who came in the 18th century from Turkestan and died on the island.

(AUREL DECEI)

ADA PĀZĀRĪ, flourishing town in the province of Kodja-eli, Turkey, situated at 40° 47' N., 30° 23' E., in the fertile plain known as Aḳowa on the lower course of the Saḳarya river. Originally it lay between two arms of this river (hence the earlier name *Ada*, "Island"), but now lies between the Saḳarya and the Čarkh ṣūyu. It was occupied by the Turks under Orkhān and is mentioned for the first time in a *waḳf*-foundation which goes back to him (T. Gökbilgin, *XV. ve XVI. asırlarda Edirne ve Paşa livası*, Istanbul 1952, 161). In 1795 it appears, with the modern name of Adāpāzārl, as the seat of a *nāʾib*. In 1852-3 it was raised to the rank of a town, and about 1890 had 24,500 inhabitants, according to V. Cuinet, *La Turquie d'Asie*, iv, Paris 1899, 372 ff. By the census of 1950 the population had risen to 36,210. It is a trading centre for local produce, especially tobacco, vegetables and fruit. There are no Islamic monuments of importance.

ADAB (A.). The history of this word reflects, parallel to and even better than the history of the words *ʿilm* and *dīn*, the evolution of Arab culture from its pre-Islamic origins to our own day. In its oldest sense, it may be regarded as synonym of *sunna*, with the sense of "habit, hereditary norm of conduct, custom" derived from ancestors and other persons who are looked up to as models (as, in the religious sense, was the *sunna* of the Prophet for his community). The etymology of the word put forward by Vollers and Nallino agrees with this earliest meaning: both considered that the plural *ādāb* was formed from *daʾb* ("custom, habit"), and that the singular *adab* was subsequently derived from this plural. (Indigenous lexicographers connect it with the root *ʾdb*, meaning "marvellous thing", or "preparation, feast"). In any case, the oldest meaning of the word is that already given: it implies a habit, a practical norm of conduct, with the double connotation of being praiseworthy and being inherited from one's ancestors.

The evolution of this primitive sense accentuated, on the one hand, its ethical and practical content: *adab* came to mean "high quality of soul, good upbringing, urbanity and courtesy", in this acceptation corresponding to the refining of bedouin ethics and customs as a result of Islam (cf. Wensinck, *Handbook*, s. v. *adab*) and contact with foreign cultures during the first two centuries A.H. Thus, at the beginning of the ʿAbbāsid epoch, *adab* in this sense was the equivalent of the Latin *urbanitas*, the civility, courtesy, refinement of the cities in contrast to beduin uncouthness. (In this sense, the lexicons use the word *ẓarf*, courtesy and elegance, to explain *adab*.) The word kept this ethical and social meaning during the whole period of medieval Muslim civilization. So, for example, *adab*, etiquette, of eating, drinking, dressing [cf. ṬAʿĀM, SHARĀB, LIBĀS]; *adab*, etiquette, of the boon companion (cf. the treatise *Adab al-Nadīm* by Kushādjim and NADĪM); from another sphere: *adab*, etiquette, of disputation: cf. several treatises entitled *Ādāb al-Baḥth* and BAḤTH; etiquette of study (cf. books on *Adab al-Dars*, *Adab al-ʿĀlim waʾl-Mutaʿallim*, and TADRĪS).

However, from the first century of the *hidjra*, *adab*, in addition to this ethical and social meaning, acquired an intellectual meaning, which was at first connected with the first meaning, but then became increasingly differentiated from it. *Adab* came to imply the sum of knowledge which makes a man courteous and "urbane", profane culture (as distinct from *ʿilm*, learning, or rather, religious learning, Ḳuʾrān, *ḥadīth* and *fiḳh*) based in the first place on poetry, the art of oratory, the historical and tribal traditions of the ancient Arabs, and also on the corresponding sciences: rhetoric, grammar, lexicography, metrics. Consequently this humanistic concept of *adab* was at first strictly national: the perfect *adīb*, in the Umayyad period, was the man who excelled in knowledge of the ancient poets, in the *ayyām al-ʿArab*, in the poetical, historical and antiquarian sphere of Arab culture. But contact with foreign cultures widened the content of *adab*, or Arab *humanitas*, into *humanitas* without qualification; it now included a knowledge of those sections of non-Arab (Indian, Iranian, Hellenistic) literature (i.e. gnomic and technical literature) with

which Arab Muslim civilization became familiar from the early Abbasid period onwards. The *adīb* of the 3rd/9th century, of which al-Djāḥiẓ was the most perfect example, was therefore not only cultivated in Arabic poetry and prose, in maxims and proverbs, in the genealogy and tradition of the *djāhiliyya* and of the Arabs at a time when they were hardly yet Islamized, but broadened out his range of interest to include the Iranian world with all its epic, gnomic, and narrative tradition, the Indian world with its fables, and the Greek world with its practical philosophy, and especially its ethics and economics. It was thus that in the 3rd/9th century there came into being the great literature of *adab*, with its varied and pleasing erudition, which is not pure scholarship although it often also touches on, and handles scientific subjects, but which is centred above all on man, his qualities and his passions, the environment in which he lives, and the material and spiritual culture created by him. Within this domain al-Djāḥiẓ and his followers (Abū Ḥayyān al-Tawḥīdī, al-Tanūkhī, etc.) turned to account and extended the heritage bequeathed to Muslim society in the previous century by the Iranian genius Ibn al-Muḳaffaʿ, who can be described as the true creator of this enlarged conception of *adab*, with his versions of foreign historical and literary works (*Khudāy-nāmak* and *Kalīla wa-Dimna*) and his original ethical and didactic tracts (*al-Adab al-Kabīr* and *al-Ṣaghīr* (though the authenticity of the latter is very questionable). The literature of *adab* is the very backbone of high ʿAbbāsid culture.

The richness and complexity of this concept of *adab*, as humanity or culture, was on the other hand reduced, already in the ʿAbbāsid epoch, to a narrower acceptation. From its meaning of the "necessary general culture" expected of any man of superior education, it took on the specific meaning of "the knowledge necessary for given offices and social functions". Thus one could speak of an *adab al-kātib* or culture specially required for holding the office of secretary (such is the title of a treatise by Ibn Ḳutayba [cf. also KĀTIB]); or of the *adab* or *ādāb* of viziers, in the sense of the sum of special knowledge and experience proper to this office. [For the *adab* of the *ḳāḍī*, cf. also KĀḌĪ]. On the other hand, the concept *adab* ended by losing the wide humanistic acceptation that it had had during the golden age of the caliphate and became restricted to a narrower, and more rhetorical sphere of "belles-lettres": poetry, artistic prose, paremiography, and anecdotal writing. This was the kind of *adab* at which al-Ḥarīrī was an adept, with his verbal virtuosity and his entirely formal and purist interests. From *humanitas*, *adab* had become merely the literature of the academy, and remained so throughout the long decadence of Arabic letters and spirit right up to the time of the modern renaissance.

In the modern age *adab*, and even more so its plural *ādāb*, are synonyms of literature in the most specific sense of the word. *Taʾrīkh al-Ādāb al-ʿArabiyya* is the history of Arabic literature; *kulliyyat al-ādāb* is the faculty of arts of letters in the universities organized in the European manner. But beyond the limits of technical nomenclature, the conscious usage of certain writers (e.g. Ṭāhā Ḥusayn) tends to give back to the word something of its former elasticity and amplitude.

ʿADAD [see ḤISĀB].

ADAL, one of the Muslim states in East Africa that played an important part in the wars between Islam and Abyssinian Christendom. Al-Maḳrīzī (*al-Ilmām bi-Akhbār man bi-Arḍ al-Ḥabasha min Mulūk al-Islām*, Cairo 1895, 5) enumerates the following seven Islamic states in Southern and Eastern Abyssinia, which he designates as *mamālik bilād Zaylaʿ*: Awfāt (the common form is Īfāt), Dawārō, Arayabnī (Arabaynī, Arababnī), Hadyā, Sharkhā, Bālī, Dāra. From Abyssinian chronicles, other states are known which stood on the same footing as the above, one of them being Adal.—Adal (ʿAdal) is the farthest east of those states, and is approximately identical with the present "Côte française des Somalis". The inhabitants are partly Somali, partly ʿAfar (Danākil [see DANKALĪ]). It is mentioned for the first time in the wars between the Abyssinian king ʿAmda Ṣeyōn (1314-44) and the Muslims. In the march of ʿAmda Ṣeyōn upon Zaylaʿ (1332), the king of Adal, who attempted to bar his passage, was vanquished and killed. The rulers of Adal have the title of *amīr*, later on also the title of *imām*, in the Arabic texts, but of *negūs*, "king", in the Ethiopic chronicles. In the 15th century Adal was part of Īfāt (Awfāt [*q.v.*]); in the 15th century the *amīr* of Adal ruled over Īfāt and had his capital at Dakar to the east of Harar. Under the kings Zarʾa Yāʿḳōb (1434-68) and Baʾeda Māryām (1468-78) negotiations took place between the Abyssinians and Adal; afterwards there was fighting between them with changing fortune. Adal frequently served also for the Muslims from districts further to the west as a refuge from the Abyssinians, who, however, often followed them thither. The Muslim writers (al-Maḳrīzī and ʿArabfaḳīh, *Futūḥ al-Ḥabasha*) do not mention Adal—unless it is meant by ʿAdal al-Umarāʾ (al-Maḳrīzī, loc. cit., 2)—but refer only to the sultanate of Zaylaʿ in that region. Further, the king of Adal, Meḥmad son of Arwē Badlāy (Perruchon, *Chroniques de Zarʾa Yâʿeqôb et de Baʾeda Mâryâm*, 131), belonged to the family of the sultans of Zaylaʿ; he was a grandson of the celebrated Saʿd al-Dīn, after whom the dynasty and the land were called (Barr Saʿd al-Dīn). The latter reigned 1386-1415; he fell in 1415 in the battle with King Yesḥāḳ of Abyssinia (1414-29). "Adal" and "empire of Zaylaʿ" are often synonymous, and their histories are closely connected with each other [cf. ZAYLAʿ]. With regard to the 16th century see also AḤMAD GRAÑ. In the later history of those countries, the wars with the Muslim Somali and ʿAfar are thrust into the background by those with the Galla, who since 1540 warred with the Christians and Muslims of Abyssinia. Adal is still mentioned a few times in the chronicles. Even in the 19th century, before England, France and Italy took possession of the Abyssinian littorals, King Sāhla-Sellāsē of Shoa called himself also "King of Adal".

(E. LITTMANN*)

ʿADĀLA [see ʿADL].

ADALYA [see ANTALYA].

ĀDAM, the father of mankind (Abu'l-Bashar). In the Ḳurʾān it is related that when God had

created what is on the earth and in the heavens he said to the angels: "I am about to place a substitute (*khalīfa*) on earth", and they said: "Wilt thou place thereon one who will do evil therein and shed blood, whereas we celebrate thy praise and sanctify thee?" Then God taught Adam the names of all things, and as the angels did not know the names Adam taught them these (ii, 28-32 Fl.). Thereafter God ordered the angels to prostrate themselves before Adam, and this they did with the exception of Iblīs who in his haughtiness said that he was of higher rank, since he was created of fire, whereas Adam was created of clay (ii, 33; vii, 12 f.; xv, 26-36; xvii, 64; xviii, 49; xx, 116), cf. xv, 27 "we created man of dried clay, of black shaped mud". Iblīs was expelled from the garden (vii, 12; xvii, 66), in which Adam and his wife were placed to live pleasantly there, but with the order not to come near to "this tree" (ii, 35; vii, 19, cf. xx, 116 f.). Next follows the fall of man. "And Satan (*al-shayṭān*) caused them to slip from it (the garden) and had them removed from the state wherein they were" (ii, 36). He whispered to them in order to reveal to them their nakedness, and said that the tree was forbidden to them lest they should become angels and live eternally. So they ate of the tree and saw their nakedness and they sewed the leaves of the garden to cover them (vii, 20; xx, 120 f.). Then God sent them down on earth to live there as enemies, but when Adam asked for forgiveness, God promised him guidance (ii, 36-37; vii, 24-26; xx, 122-123). It is said that God had a covenant with Adam at first, but Adam forgot it (xx, 115), and God said "Have I not had a covenant with you, sons of Adam, that you will not serve Satan" (xxxvi, 60, cf. v, 172). Adam was chosen by God, as later Nūḥ and the families of Ibrāhīm and ʿImrān (iii, 23). Like Adam only ʿĪsā was created in a special way (iii, 59).

The non-Biblical elements in this account are to be found in Jewish, in some cases in Christian tradition. God's conversation with the angels before Adam's creation and Adam's superiority because of his knowledge about the names is known from *Bereshit Rabba*, xvii, 4; *Bemidbar Rabba*, xix, 3; *Pesikta*, ed. S. Buber, 34a; *Vita Adami* (Kautzsch, *Pseudepigraphen*, 513). The προσκύνησις of the angels before Adam is not commanded by God in Jewish writings. The angels wanted to honour him as God, but were prevented from doing so as God made Adam sleep (*Bereshit Rabba* 8, 10; *Pirke R. Eliezer*, 19). On the other hand Athanasius (*Quaestio X ad Antiochum*) refers to the idea (which he rejects) that Satan fell because he refused to προσκυνῆσαι before Adam. In *Vita Adami*, l.c., whose origin is incertain, the angel Michael prostrated himself to Adam and called upon the other angels to do so, and it is understood, but not said, that God approved of it. In the Christian Syriac *Cave of Treasures* (ed. Bezold, 14 f.) God gave Adam power over all beings, and the angels worshipped him except the jealous devil who then was turned out from the heavens. God's covenant with Adam is mentioned *Sanhedrin*, 38b; Augustin, *De civitate dei*, xvi, 27, and Adam's remorse *ʿErubin*, 18b; *ʿAboda Zara*, 8a; *Vita Adami*, 512.

In post-Ḳurʾānic tradition the *ḳiṣaṣ* about Adam were growing, and these also reflect to a great extent Jewish and Christian influence. They are mainly found in *ḥadīth*-collections, in *ḳiṣaṣ*-collections, in the works of general history, and in the commentaries to the Ḳurʾān.

As a preparation for the creation of Adam it is related that God sent Gabriel and after him Michael to the earth to take a handful of clay (*ṭīn*), but the earth refused to give it for that purpose, then the angel of death was sent and took by force red, white and black clay; this is why men have different colours. Adam got his name because he was taken from the surface, *adīm*, of the earth. The clay was kneaded and worked on until it became sticky, then slimy, stinking and at last a body of dry clay (*ṣalṣāl*). Some authors tell that Iblīs went into his mouth and emerged from his anus and vice versa; then the spirit was blown into him by God and went into his brain, from where it went into his eyes, his nose and further through the whole body, whereafter the body became flesh, blood, bone, veins and sinews. According to a tradition ascribed to the prophet the dust for the head was taken from the Kaʿba, for breast and back from Jerusalem, thighs from Yaman etc. (al-Ṭabarī, i, 87 ff.; idem, *Tafsīr*, i, 159; al-Masʿūdī, *Murūdj*, i, 51-3; al-Kisāʾī, 23-7; al-Thaʿlabī, 17). In Jewish tradition the clay for Adam's body was taken from the place of the temple or from the whole world, in different colours, and Adam was first shaped as a lifeless body (*golem*) (*Targum Yerushalmi*, to Gen. ii, 7; *Sanhedrin*, 38a; *Pirke R. Eliezer*, c. 11); a similar Christian tradition is found with Cyprian and Augustine. The beauty and the length of the body of Adam are mentioned in Muslim tradition (al-Thaʿlabī, 22, cf. Ḳurʾān, xcv, 4) as well as in Jewish (*Bereshit Rabba*, viii, 1; xii, 6; Sanhedrin, 38b) and Christian (*Cave of Treasures*, ed. Bezold, p. 12) literature.

The Jewish literature follows the tale of the Bible, in which the serpent seduces man. In *Vita Adami* (Kautzsch) 521, Satan speaks through the mouth of the serpent, and this is Christian tradition (*Cave of Tr.*, 22, Augustine, *De civitate Dei*, xiv, 11, Bar Hebraeus, *Taʾrikh Mukhtaṣar al-Duwal*, 7). Whereas the Ḳurʾān speaks only of Satan as the seducer, the Muslim tradition also introduces the serpent. The serpent speaks by order of Iblīs (al-Ṭabarī, *Tafsīr*, viii, 107), or Iblīs is carried into the garden by the serpent in its mouth or its belly (al-Ṭabarī, 104-6). In the *Ḳiṣaṣ* of al-Kisāʾī, (36-9) and al-Thaʿlabī, (20) the peacock (*ṭāʾūs*) appears. Iblīs tries to enter the garden in order to seduce Adam, but God prevents him. Then he meets the peacock, the chief of the animals in the garden, whom he tells that all creatures shall die, but that he can show where the tree of eternity is. The peacock tells this to the serpent, the serpent goes to Iblīs, who rushes into its mouth and thus comes into the garden and speaks through the serpent to Adam and Eve, and Eve eats of the tree. The forbidden fruit is in Jewish tradition mainly mentioned as grape or fig or wheat (*Berakot*, 40a, *Bereshit Rabba*, xv, 7), the same and other opinions are found in Christian and Muslim tradition (al-Ṭabarī, *Tafsīr*, i, 183 ff. and other commentaries to Ḳurʾān, ii, 35; al-Thaʿlabī, 19). [For Eve see ḤAWWĀ.]

As Adam was ordered to "go down" (*habaṭa*) to the earth paradise was thought to be in heaven. Al-Ṭabarī says (i, 121) that the tradition that Adam was placed in India (*al-Hind*) has been refuted neither by Muslim, Christian nor Jewish scholars. The most common tradition is that he alighted in Ceylon (*Sarandīb*), Eve in Djidda, Iblīs in Baysān (or Maysān or Ubulla), the serpent in Iṣfahān (or the desert). Later Adam and Eve met in Muzdalifa and ʿArafa (al-Ṭabarī, i, 121; al-Masʿūdī, i, 60; al-Yaʿḳūbī, i, 3; al-Thaʿlabī, 21 f.). This is to be understood in connexion with the idea that Adam,

who according to a tradition founded the Jewish festivals (*ʿAboda Zara*, 8a), accomplished the *ḥadjdj* ceremonies, the black stone being sent to him from heaven, whereafter he built the Kaʿba (al-Ṭabarī, i, 122; al-Yaʿkūbī, i, 3; al-Thaʿlabī, 23). He also learned, with Eve, the use of fire, agriculture and handicraft, according to a tradition of Jewish origin (Ḥamza al-Iṣfahānī (Gottwald), 84, Berlin 1340, 57; al-Ṭabarī, i, 123, 126 ff.; al-Thaʿlabī, 23-5). According to al-Thaʿlabī he even coined *dirhams* and *dīnārs*, as they are necessary for normal life. In continuation of the namegiving it is said that Adam learned all nouns and greetings and religious formulas (al-Ṭabarī, i, 93 ff.; al-Yaʿkūbī, 3). The presupposition is that Adam spoke Aramaic (*Sanhedrin*, 38b; Barhebraeus, *Chron. Syr.*, 5). Al-Ḥalabī (*al-Sīra al-Ḥalabiyya*, Cairo 1329, i, 20) says that Adam spoke Arabic in Paradise, but on the earth he spoke *suryāniyya*, and he wrote the 12 known kinds of writing, al-Kisāʾī (28) that he spoke 700 languages, of which the best was Arabic. He also wrote books (al-Dīnawarī, 8).

When Adam and Eve were united they begot children, first Ḳābīl and Hābīl [*q.v.*], each with a twin-sister. Adam married them each to the brother's twin-sister, therefore Ḳābīl was jealous and killed Hābīl. Shīth [*q.v.*], who was born without a sister, was the favourite of Adam and his spiritual heir (*waṣī*). Adam begot many other children, one of whom was named ʿAbd al-Ḥārith; al-Thaʿlabī says that Eve bore a boy and a girl twenty times and that the number of Adam's offspring was 40,000 before he died. Al-Ḥalabī mentions five gods of the Arabs who were sons of Adam; Iblīs made images of them and these were worshipped by later generations (al-Ṭabarī, i, 149 ff., 160 ff.; al-Masʿūdī, i, 62 f.; al-Yaʿkūbī, 4 f.; al-Thaʿlabī, 27; al-Ḥalabī, *Sīra*, i, 12).

God rubbed the back of Adam, and all his offspring appeared to him, amongst them David. When Adam heard that David should live only a short time he gave him 40 (50 or 70) years of his own life-time, so that he did not reach the 1,000 years that were destined for him (al-Ṭabarī, i, 156 f.; Ibn Saʿd, i/1, 7 f.; al-Thaʿlabī, 26). The same occurs in Jewish tradition (*Bemidbar Rabba*, xvi, 12; *Yalḳuṭ Shimʿoni*, § 41; *Pirḳe R. Eliezer*, c. 19), and a related idea is the Christian tradition that everything was created at the same moment (Barhebraeus, *Taʾrīkh Mukhtaṣar al-Duwal*, 7).

Adam was created on Friday, the 6th of Nīsān, year 1. On the same day he was expelled, and he died on a Friday at the same date of the month (al-Ṭabarī, i, 155 ff.; al-Masʿūdī, i, 60, 69; al-Yaʿkūbī, i, 4). He was buried, with Eve, in a cave, *maghārat al-kunūz*; at the foot of Abū Ḳubays near Mecca (al-Ṭabarī, i, 163; al-Yaʿkūbī, 4). Al-Thaʿlabī, 30, relates that after the flood he was brought to Jerusalem, following a Christian tradition that he was taken from the ark to Golgotha, the centre of the earth (*Cave of Treasures*, 38-42, 84, 112, 148), where the "chapel of Adam" is situated in the church of the holy sepulchre (see W. H. Roscher, *Der Omphalosgedanke*, Leipzig 1918; E. Wifstrand, *Konstantin's Kirche am heiligen Grabe*, Göteborg 1952, 30 ff.).

Adam was not only the first of men, but also the first of prophets, and so his position became influenced by the Muslim way of thinking. Just as Jesus was the second Adam in Christianity, a connexion was established in Islam between Adam and Muḥammad, with Adam as the first, Muḥammad as the last apostle (*rasūl*). In the Sabʿiyya system Adam is the first of the 7 *nāṭiḳ*'s, and some say there were men and *nāṭiḳ*'s existing before him. Seth was his *waṣī*. They distinguish between *Ādam al-kullī*, "all-Adam", identical with the intelligence (*ʿaḳl*), from whom the emanation began, and *Ādam al-djuzʾī*, the first one in the period of veiling. It is this ideal Adam before whom the angels prostrated themselves because he was godly, God's spirit being in him. This is sometimes designated as an incarnation (*ḥulūl*), which was continued by transmigration (*tanāsukh*). This deified ideal man was identified with "the perfect man" of Hellenism, and the same was by al-Ḥallādj named *nāsūt*. As Muḥammad became the centre of mankind, an idea especially emphasized in ṣufism, it became his essence (*ḥaḳīḳa*) or his "light" (*nūr*) that manifested itself in Adam. All creatures were created for the sake of Muḥammad, and Adam and his offspring were created of his light (al-Masʿūdī, i, 56; *al-Sīra al-Ḥalabiyya*, 23; al-Thaʿlabī, 16).

(J. PEDERSEN)

ʿADAM (A.) is a translation of the Aristotelian term στέρησις (*privatio*) and means the absence of existence or being. A definition of the word is found in Aristotle, *Metaphysics*, v, 22 and is taken over by the Arabic Aristotelians. On the whole in Aristotelian philosophy two meanings of the word must be distinguished: (1) absolute non-existence, that is absolute nothingness, (2) relative non-existence, namely (a) the absence of a quality in matter, (b) the pure potentiality of matter. Since the absence of a quality contains, according to Aristotle, potentially its opposite, it has as potentiality a certain positive character. The Aristotelian theory of becoming is based entirely on this concept of privation. There is no absolute becoming, all becoming is the actualization of a relative non-existent or potential.

However, for Aristotle, even pure nothingness seems to have a certain being, for, according to him, by being something it is. But it is the Stoics who have discussed most acutely the problem of the existence of the non-existent and it is the repercussion of their discussions and their terminology which is found in Islam among the theologians. In particular the Muʿtazilites held that the non-existent is a thing (*shayʾ*), an entity (*dhāt*) and something positive (*thābit*). According to them, before the existence of the world God knew the entities which He was going to create and what He knew had, since He knew it, a certain reality. Creating the world He gave those entities the accident of existence.

Among the philosophers al-Fārābī and Ibn Sīnā regard, like the Muʿtazilites, existence as an accident, whereas for Ibn Rus͟hd, as for the As͟hʿarites, existence is an essence.

Bibliography: The theory of *ʿadam* as professed by the Muʿtazilites is found in the works dealing with that sect (e.g. Ibn Ḥazm, *Fiṣal*, v, 45); a good discussion is found in S͟hahrastānī, *Nihāyat al-Iḳdām* (Guillaume), 150 ff. For a general discussion of the problem I refer to S. van den Bergh, transl. of Ibn Rus͟hd's *Tahāfut al-Tahāfut*, ch. i and ii; see also S. Pines, *Beiträge zur islamischen Atomenlehre*, 116 f.

(S. VAN DEN BERGH)

ADAMAWA, the name—deriving from the local leader of the Fulani *d̲j̲ihād* in 1809 (see para. 5 below)—given to a region in the hinterland of West Africa, and used:

(a) of an area never precisely defined in geographical terms but including the conquests of this *d̲j̲ihād* and the resulting sphere of Fulani influence in the region, extending from Marua in the north to well beyond Ngaundere in the south and from Rei Buba in the east to west of Yola,—approximately from 11° to 6° N. and 12° to 14° E. With the European occupation of this part of Africa early in the present century, the smaller and more closely populated western part came under the British administration of Nigeria,—the eastern section became part of the German Kameruns, which, after the German defeat in the 1914-18 war, were mandated to Great Britain and France by the League of Nations;

(b) of a Province, area according to 1931 census 281, 778 sq. miles—known until 1927 as the Yola Province—in Northern Nigeria, containing that part of (a) west of the original Anglo-German international boundary, plus those areas of the former German Kameruns mandated to Great Britain. These consist of a small area north of the river Benue, and a larger area to the south of it. The Adamawa Province also includes the Amirate of Muri in its south west corner and some tribal areas, not covered by the old name Adamawa. It lies south of the Bornu Province and east of the Bauchi Province of Nigeria.

2. Geography. The main features of Adamawa are the river Benue—the principal tributary of the river Niger and an international water-way which is navigable by steamers at the height of the wet season (August to October), and by large canoes and barges at all times,—running across its centre from east to west; the Mandara Mountains, over 3,000 feet, running north and south, north of the river Benue; and an extensive crescent-shaped massif,—over 5,000 feet at its higher western end,—curving from east to west, south of the river Benue.

3. Transport and Trade. The river Benue is itself extensively used for transport; the main caravan routes and modern motor roads run from south to north through the region. In earlier days, slaves and some ivory were the main exports; nowadays ground nuts and hides have replaced these, though there are numerous other items, including cotton, gum, sesame, etc. Imports consist of manufactured articles, especially cotton goods.

4. Economy. The region is not industrialised, and contains no large towns. It is self-contained so far as the necessities of life are concerned. Its population is mainly agricultural and pastoral. Its capital wealth consists in the numerous herds of cattle, sheep and goats.

5. Ethnography. (a) The population of the region comprises the Fulani (see article FULBE), both nomad and settled, and numerous pagan tribes. It is not possible to give figures with any accuracy for the indefinite region described in para. 1 (a) above. At the census of 1931, the salient figures for the Adamawa Province of Nigeria (para. 1 (b) above) were as follows: Fulani 150,936; Hausa [*q.v.*] 21,560; Kanuri [*q.v.*] 10,495; other tribes 467,138; these plus some minor groups gave a total population of 1,024,755.

The figures for the main pagan tribes were then: Bachama 19,703; Chamba 51,224*; Hona 6,604; Bata 23,003; Hiji 6,284; Kilba 22,799; Lala 9,733; Longuda 11,809; Mambilla 19,348; Mumuye 79,272; Vere 10,866; Wurkun 23,472; Marghi 151,223*. [Starred figures include members of the tribe outside the Provincial boundary, but inside the old "Adamawa".]

(b) Languages. Fulani (Fuffulde, see under FULBE) is the major language of the region, and the nearest approach to a lingua franca in it. Many of the pagan tribes now use it as such, though they have their own tongues, some of which are interconnected in varying degrees (e.g. Bura and Marghi with Kilba more remotely akin). Hausa is not much spoken outside the towns, and in them mostly by the trading elements. English and French are spoken only by those educated in the more advanced schools in the west and east of the region respectively.

6. History. Prior to the Fulani *d̲j̲ihād*, we have only orally transmitted tribal traditions. Most of the major tribes north of the river Benue do not claim to be indigenous and have traditions of immigration from the north and/or east. It seems clear that this was formerly the general direction of tribal movement, owing to the increasing desiccation of the Saharan areas further north, and a consequent thrust of those tribes least able to survive southwards to the tsetse ridden coast. The Fulani must have entered Adamawa centuries before the *d̲j̲ihād*. Local pagan tradition speaks (i) of an offshoot from the main Fulani trek (round the north and west African coasts, subsequently entering the West African hinterland from the direction of Senegambia), which entered Bornu and thence Adamawa from the north, having crossed the central Sahara by the westerly caravan route via Murzuḳ and Bilma), and (ii) of these Fulani arriving cattleless, having lost their herds en route, and then of their obtaining cattle from the local pagans. With the *d̲j̲ihād* we come to firm historical ground. When Usmanu bi Foduye [see ʿUT̲H̲MĀN B. FŪDĪ] started a *d̲j̲ihād* in the Sokoto area in circa 1804, his reputation spread, and he was joined by a certain Modibbo (Fulani for *muʿallim*) Adama. This Modibbo Adama was born near Gurin, east of the Vere hills on the west bank of the Faro tributary and just south of the river Benue, had studied in Bornu as a youth under a certain Modibbo Kiari thereafter returning to a village called Weltunde in the Benue region. In 1806, Usmanu gave M. Adama a flag and a few warriors with instructions to return to his own country and to start the *d̲j̲ihād* there. In 1809 Modibbo. Adama began a *d̲j̲ihād* from Gurin, thus embarking on a career of conquest and slave raiding amongst the local pagan tribes. Speaking generally, the Fulani horsemen achieved success except where the pagans could avail themselves of mountainous features unsuitable for mounted men. In such areas, many pagan tribes, such as the Hiji, Marghi and Kilba north of the Benue and the Mambilla, Chamba and others south of it, maintained actual or virtual independence until the European occupation.

In 1838, Modibbo Adama transferred his headquarters from Gurin (now only a tiny village, but still hallowed for its associations), to the nearby Ribadu, in 1839 to Joboliwo a little to the west, and, finally, in 1841, he founded Yola still more to the west (in Fulani the name means a raised area in a marsh), where he died in 1848. All these places are just south of the Benue river, and it is obvious that the intention was to control the river crossings. Details of the dynasty founded by Modibbo Adama are given below. The Fulani conquests, often amounting to little more than raids, were never closely organised except near to the capital. The administrative system was one of fiefs, feudal in character, the lesser chiefs owing allegiance to the *lamido* (Fulani = *amir*, plur: *lamibe*), and rendering tribute. But the tendency was centrifugal, and these fief holders (Fulani = *lamdo* plur: *lambe*) often achieved virtual though not nominal independence, in proportion to the distance of their fief from the capital. Good examples of this tendency were found in Madagali and Rei Buba in the north and east of the region respectively. Adamawa as a name for the region seems to have become current in the Modibbo's lifetime, for it was in use in Bornu when Clapperton was there in 1823-4.

7. Religion. Islam is the religion of the Fulani and many pagans have been converted and are in process of conversion to it, though adherents of the animistic cults are still numerous. Christian missions now operate in the region. Of these the most important numerically are the Church of the Brethren (American) in the Bura-Marghi tribal areas north of the river Benue, and the Sudan United (Danish) amongst the riverain Bachama tribe, west of Yola. In the 1931 census, of the total population of 1,024,755 for Adamawa Province, 674,516 were recorded as Muslim, 348,791 as animist, 1,425 as Protestant. It is certain that the next census will show considerable decrease of animists, a large increase of Muslims and some increase of Christians.

8. Miscellaneous. The first recorded European explorer was Dr. Barth in 1851. The French Lieut. Mizon visited the region in 1891-3. The Niger Company traded from hulks in the river Benue for several years before the actual military occupation of Yola by British forces on 2nd September 1901, when Yola Town was spiritedly defended with the help of deserters from Rabeh's forces (see under Bornu) armed with modern rifles, and two cannon presented to the then Lamido by Lieut. Mizon, contrary to agreements negotiated by him. The German forces occupied Garua in March 1902, and the Anglo-German international boundary was delimited by a commission in April 1903. During the world war of 1914-8 the region was the scene of military operations on a considerable scale, involving transport difficulties of magnitude. After an initial period of raid and counter raid, the German Kameruns were taken by an Anglo-French expeditionary force, which captured Garua on 10.6.15, and Ngaundere 28.6.15. The German mountain fortress of Mora surrendered 18.2.16.

The Amīrs of Yola

ʿADAN (Aden) (i) town, (ii) British crown colony, (iii) British protectorate in S.W. Arabia.

(1) Town and seaport on the South coast of Arabia, in British possession since 1839, with a mixed population of ca 35,000. ʿAdan (cf. akkad. *edinu* "steppe"), more precisely ʿAdan Abyan (by way of distinction from ʿAdan Lāʿa, and al-ʿAdan in a verse of Ufnūn al-Taghlibī; cf. Yāḳūt, iii, 622 f., Kay, 232, *AM*, ii, 17, 284), or *thaghr* ʿAdan from its being strongly fortified, is the *Athene* of Pliny, Ἀθήνη of Philostorgius, Εὐδαίμων Ἀραβία of the Periplus, Ἀραβία ἐμπόριον of Ptolemy (cf. Pauly-Wissowa, Suppl., iii, 6), and most probably the *ʿeden* of Ez., xxvii, 23 (see recently v. Wissmann-Höfner, *Beiträge* 306 (88), where also the triple 𐩲𐩵𐩬 of CIH 550, which may, however, be a fake, is quoted). For other names of the place see al-Maḳdisī, 30, IM, 110 (= Löfgren, *Arab. Texte*, i, 29).

The peninsula of ʿAdan is an extinct volcano, nowadays called Shamshān (vulg. Shamsham), in earlier time al-ʿUrr "the mountain" (ʿUrr ʿAdan); it is 1775 feet (ca. 550 m.) high. On the east side is a gap in the range opposite to the island of Ṣīra: here is the main part of the town, and the habitations reach the sea. ʿAdan was once an island: the low and narrow isthmus is still nearly covered at high spring tide. This disadvantage was removed by means of a bridge, al-Maksir, built by the Persians (cf. "Khor Maksar" west of the isthmus). Beside the main volcano there are several minor heights, e.g. Djabal Ṣīra, Ḥuḳḳāt, Marshaḳ (with a large light-house) and Dj. Ḥadīd (west of the isthmus). The old harbour was on the east side, in connexion with the town; a mole (*shaṣna*) was constructed to protect it against the SE wind (*azyab*). The excellent harbour to which ʿAdan now owes its importance is the large and well protected bay between the peninsula of ʿAdan and that of "Little Aden", with the mountains Muzalḳam "Sugarloaf Peak" and Iḥsān "Ass's Ears". Bandar Tawayih (Tawwāhī),

as the modern port is called, extends along the NW shore (for details see *Red Sea and Aden pilot* 135). The habit of constructing dams and cisterns, typical of old Sabean culture, has left traces in the ʿAdan territory. There are remnants of some fifty reservoirs scattered over the peninsula. According to IM they were built by Persians from Sīrāf. They are attested by Salt in 1809 and by Haines, the future conqueror of ʿAden, in 1835, to be in a tolerable state; but from 1839 on they were neglected, and much of their stonework was carried away until 1856, when the restoration of those inside the crater was begun. There are thirteen tanks holding nearly two millions litres of water, but the scanty and irregular rainfalls seldom fill them completely. There are numerous wells within the crater and in the west part of the peninsula (cf. IM, 131 ff.), but they cannot supply the need of drinking water, being for the most part brackish. In the Middle Ages al-Ḥayḳ (= al-Ḥiswa of to-day?) was "the watering-place (*manhal*) of ʿAdan" (al-Hamdānī, 53). In 1867 the British government got the permission of the sultan of Laḥdj [*q.v.*] to build an aqueduct from the village of Shaykh ʿUthmān. Later on condensers were installed.

Legend usually ascribes the foundation of ʿAdan to Shaddād b. ʿĀd [*q.v.*], who is said to have caused the famous tunnel to be cut through the mountain range and to have used the place as a prison. We are told the same of the *Tubbaʿs* and the Pharaohs of Egypt, whence the name al-Ḥabs or Habs Firʿawn. According to old tradition (e.g. al-Ṭabarī, i, 144) Ḳābīl, having killed his brother Hābīl [*q.v.*], fled with his sister from India to ʿAdan, where he was visited by Iblīs on Dj. Ṣīra and taught the use of musical instruments. His grave is shown to-day above the Main Pass gate. The "abandoned well" (*biʾr muʿaṭṭala*, Ḳur., xxii, 44) and *Iram Dhāt al-ʿImād* [*q.v.*] (Ḳur., lxxxix, 6) are located in or near ʿAdan. The tradition of a fire coming from Yaman or ʿAdan (Ṣīra) and portending the day of judgement, ascribed in *Ḥadīth* to Muḥammad, may be some sort of reminiscence of volcanic activity. IM makes Hanuman, the Indian ape-god who has a temple in ʿAdan, fetch the wife of Rāmacandra along a subway back to Udjdjayni from Ṣīra, where she had been brought by a demon (Rāvaṇa).

Population. According to al-Hamdānī (53, 124) the Arabs of ʿAdan were divided into three factions: Marab, Ḥumāḥim (var. Djamādjim, IM) and Mallāḥ (cf. Yāḳūt, iii, 622; BGA, iii, 102, iv, 206). The great number of Hindus and Somalis indicates a constant immigration by sea., IM 117 ff., has details on early migrations from Madagascar (Ḳumr) via Mogadishо and Kilwa, and of Persians from Sīrāf and Ḳays (Kīsh). Cf. Ferrand, *Le K'ouen-Louen* etc. (*JA*, 1919); Goitein, in *BSOAS*, 1954, 247 ff.; idem, in *Speculum*, 1954, 181 ff. A considerable number of the Jews of ʿAdan (abont whom see *Encyclopaedia Judaica*, s.v. Aden) were in recent years evacuated into Israel.

The early history of ʿAdan is very imperfectly known. From the *Periplus* (ca 50 A.D.) we learn that the place had been destroyed recently by ΚΑΙCΑΡ (probably an error for ΙΛΙCΑΡ = Ilisharaḥ Yaḥḍib, cf. v. Wissmann-Höfner, *Beiträge* 88), but in the time of Constantine the "Emporium Romanum" had recovered its old splendour; a church was built by the bishop Theophilus ca. 342. Later on ʿAdan lost its importance in favour of the Red Sea ports of Ahwāb and Ghulāfiḳa. The Persians (from 575 on) favoured culture in Yaman, building cisterns and bathhouses, and installing tanneries. After Bādhān, the last Sāsānid governor, had submitted to Muḥammad ʿAdan was visited in 10/631 by ʿAlī, who preached from its *minbar*. A mosque built by ʿUmar b. ʿAbd al-ʿAzīz was restored by Ḥusayn b. Salāma, the vizier of Banū Ziyād (204-429/819-1037). In 454/1062 ʿAlī b. Muḥammad al-Ṣulayḥī, *dāʿī* of the Fāṭimids of Egypt, conquered ʿAdan and presented it to Ḥurra Sayyida at her marriage with his son al-Mukarram in 461/1069. Banū Maʿn, since 410/1019 in possession of ʿAdan after the Ziyādids, were left in charge of the place until 476/1083, when they rebelled and were replaced by two brothers of the Hamdānid family of al-Karam (Mukarram) b. Yām, the founders of the Zurayʿid [*q.v.*] dynasty. ʿAbbās took up his residence in the fort of Taʿkar, controlling the isthmus gate, while Masʿūd held the castle of Khaḍrāʾ and superintended the sea trade. Later on the town was united in the hands of Muḥ. b. Sabaʾ (534-48/1139-53) and his son ʿImrān (-560/1165). The *kharādj* of ʿAdan by this time is given as 100,000 dīnārs a year. In 569/1173 Tūrān Shāh, the brother of Saladin, conquered Yaman by means of Turkish mercenaries (Ghuzz). The periods of Ayyūbid (-625/1228), Rasūlid (-858/1454) and Ṭāhirid (-923/1517) dominion were a golden time for the trade of ʿAdan. A new tax, collected by galleys (*shawānī*), was introduced by the Ayyūbids.

The discovery of the sea-route to India and the rise of the Ottoman power mark the beginning of decline in the trade of ʿAdan. The Portuguese admiral Albuquerque attacked the town on Easter Eve 1513 with twenty ships, but did not succeed in taking it. In 1538 a Turkish armada on its way to India outwitted the defenders, and the Turks dominated Yaman for nearly hundred years. ʿAdan was lost to the Zaydī imāms of Ṣanʿāʾ in 1568 and in 1630 the Turks left it finally. In 1735 ʿAdan passed into the hands of the ʿAbdalī sulṭān of Laḥdj, whose descendant Muḥsin was forced to cede it to the English expedition under Captain Haines, which had been sent to get an indemnity for the plundering of a British ship. In view of the sultan's treacherous attitude the place was taken by storm on the 20th January 1839. Of the prosperous town visited by Marco Polo in 1276, with 80,000 inhabitants and 360 (!) mosques, there was now left a miserable village of 600 persons living in huts. Since then the development of ʿAdan has progressed rapidly, especially after the opening of the Suez canal in 1869, and this "Arabian Gibraltar" is now a mercantile centre of great and increasing importance.

Buildings. A wall was built by the Zurayʿids for the protection of trade, and houses of stone increased in number. After the depart of Tūrān Shāh his viceroy in ʿAdan ʿUthmān al-Zandjīlī (Zandjabīlī) built a larger wall, with six gates, and a custom-house. Other secular buildings of Ṭughtekīn b. Ayyūb, his son Ismāʿīl, the Rasūlid ʿAlī al-Mudjāhid, and the Ṭāhirid ʿAbd al-Wahhāb are recorded, AM, 10 ff. Of the "handsome baths, lined with marble and jasper, and covered with a dome", which were seen in 1708 by de Merveille (Playfair, from La Roque), nothing is left. Among the mosques of ʿAdan the most celebrated is that of Abū Bakr al-ʿAydarūs [*q.v.*], the patron of the town, whose *ziyāra* is held on 15 Rabīʿ II. Other *masdjids* are mentioned by Hunter (175 f.) and in AM.

Höfner, *Beiträge zur histor. Geographie des vorislam. Südarabien*, Wiesbaden 1953. Map: Aden Protectorate 1930 (Geogr. Section, Gen. Staff, no. 3892; scale: 1 : 253.440).

(ii) British territory (since 1937 crown colony) in SW Arabia, including ʿAdan town, peninsula and isthmus, Shaykh ʿUthmān town with surrounding district, "Little Aden" peninsula, and Perim island. Area: ca. 80 square miles. Population: ca. 45,000.

(iii) British protectorate, divided into a Western and an Eastern half, with ʿAdan and Mukallā as centres. (a) The W. Aden Protectorate (ca. 40,000 sq. miles) comprises the "Nine Cantons", viz. (from W to E) Ṣubayḥī, ʿĀmirī (capital: Ḍāliʿ), ʿAlawī, Ḥawshabī (cap. Musaymir), ʿAbdalī (cap. Laḥdj), ʿAḳrabī, Upper and Lower Yāfiʿī, Faḍlī (cap. Shuḳra), Upper and Lower ʿAwlaḳī (cap. Aḥwar), in addition to the ʿAwdhalī and Bayḥānī districts [see articles on each of them]. (b) The E. Aden Protectorate (70-80,000 sq. miles) comprises the Ḥaḍramawt states (Ḳuʿayṭi and Kathīri) [see ḤAḌRAMAWT], the Wāḥidī [*q.v.*] sultanates of Balḥāf and Bir ʿAlī, the shaykhdoms of ʿIrḳa [*q.v.*] and Ḥawra [*q.v.*], and the Mahrī sultanate of Ḳishn [*q.v.*] and Suḳuṭra [*q.v.*]. Population: ca. 600,000.

(O. Löfgren)

ADANA (in Arabic script Adhana, Adana, Adāna, in later times Āṭana), (i) city in southern Anatolia, (ii) Ottoman *wilāyet*.

(i) Adana, situated at 37° N, 35°18 E, in the northern part of the plain of Cilicia (Čukurowa), on the right (western) bank of the Seyḥān river (the ancient Sarus), in Ottoman times the capital of the *wilāyet* of Adana, since 1935 of the *wilāyet* of Seyhan (see (ii) below); flourishing trading centre; population (1950) : 117,799.

History. The changing fortunes of the city have been largely dominated by its geographical situation at the foot of the Taurus passes. Lying at the intersection of the opposing spheres of interest of the Anatolian empires pushing southwards over the Taurus and the Syrian empires expanding towards the north, whose balance of forces or common weakness allowed the establishment of minor dynasties from time to time (Rubenids, Ramaḍānids), it found security only in an empire which embraced both Anatolia and Syria, as before the Arab conquest, and later under the Ottomans. Adana is an ancient settlement, which seems to have flourished at the time of the Lydian kings, was resettled by Pompey after its destruction by war, and under the East Roman empire was an important commercial centre which competed with Tarsus (cf. Pauly-Wissowa, i, 844).

Adana was occupied by the Arabs in the middle of the 7th century, but frequently changed masters in their struggle with the Byzantines. Depopulated by the constant frontier wars, it was rebuilt by Hārūn al-Rashīd and his successors and became a bastion in the chain of fortresses of the "Syrian marches" (*thughūr al-Shām*). In 875 it was temporarily taken by Basil I, and again in Byzantine possession in 944-6, but recaptured by the Arabs after a siege in 964. In 1025 Cilicia was again occupied by the Byzantines, who could not however hold it permanently; nor apparently were the victorious Seldjūḳs (1071) able at first to establish themselves in the province (cf. J. Laurent, *Byzance et les Turcs ... jusqu'en* 1081, Paris 1913, 11). At any rate, in 1082 Adana again belonged to the Byzantines, but was taken by Sulaymān b. Ḳutlumīsh in 1083 (J. B. Chabot, *Chronique de Michel le Syrien*, Paris 1905, 179). After its occupation by the Crusaders in 1097, it belonged at first to the principality of Antioch, but in 1104 was detached by Alexis I and came under Byzantine administration. In 1132 it belonged to Leon of Little Armenia, in 1137 became Byzantine, in 1138 was occupied by the Rūm Seldjūḳ Masʿūd, in 1151 (at the latest) again Armenian, 1158 Byzantine, finally in 1172-3 incorporated by the Rubenid Mlech in his Armenian state, in which it remained for a long time, although exposed to repeated Muslim attacks. Baybars, after his victory at Antioch in 1266 appeared before Adana; the Mamlūks also sacked the town in 1275 and 1304, and attacked it in 1355. It remained, however, in Armenian hands (except for 1341-4, when it fell by ihneritance to Guy de Lusignan). In 1359 it was occupied by the Mamlūks, and became the capital of a *niyāba*. In 1378 the governor was the Turkmen Yüregir-oghlu Ramaḍān, who, acknowledging the suzerainty of the Mamlūks, extended his dominions and founded the buffer-state of the Ramaḍān-oghlu [*q.v.*]. He and his successors followed sometimes a pro-, sometimes an anti-Mamlūk policy, securing for Adana a relatively quiet time. The inner conflicts and the invasion of the Dhu 'l-Ḳādirid Shahsuwār in 1467 do not seem to have disturbed the city. In 1485-9 the Ottomans endeavoured unsuccessfully to detach Adana from the Mamlūks. In 1516, Selīm I, during his Egyptian expedition, occupied it, but left the Ramaḍān-oghlu in possession, now as Ottoman vassals. In 1606 it came temporarily under the rule of the insurgent Djanbulāṭ-oghlu and in 1608 it was constituted a regular province (*eyālet*) under a governor (*wālī*) appointed by the Sulṭān. In the Turco-Egyptian war of 1832, Adana became the headquarters of the Egyptian army under Ibrāhīm Pasha, was ceded to Muḥammad ʿAlī Pasha by the treaty of Kütahya (6 April 1833), but restored to the Porte by the London Convention (6 July 1840). It was then made part of the province of Ḥalab, but in 1867 became again the capital of the new *wilāyet* of Adana. In Dec. 1918 it was occupied by French troops, but was returned to Turkey in 1922 under the terms of the Turco-French treaty of Ankara (20 Oct. 1921).

Commerce. Its favourable situation, as a bridgehead on the great Anatolian-Arabian road (cf. Fr. Taeschner, *Anat. Wegenetz*, Leipzig 1934, index), and the fertility of its surroundings, always enabled Adana to recover, in spite of its changing political fortunes. Nevertheless until the period of the Ramaḍān-oghlu it seems to have been less important than Ṭarsūs. In the 10th century, according to al-Iṣṭakhrī and Ibn Ḥawḳal, Adana was defended by

a wall with eight gates and a fortress on the opposite bank (the last remnants of which were demolished in 1836); according to al-Idrīsī (1150) it had a flourishing trade; W. von Ollenburg (1211) says that it was well populated but not rich. In the town, already famous for its cotton, the Venetians had privileges (Heyd, *Hist. du Commerce*, index, cf. Laurent, 11). Abu 'l-Fidā' described it as flourishing, B. de la Brouquière (1437) as a busy emporium. Its progress in the period of the Ramaḍān-oghlu, under Ottoman suzerainty, is reflected in the accounts of travellers (cf. e.g. Badr al-Dīn al-Ghazzī (1530), MS Köprülü 1390; Ḳuṭb al-Dīn al-Makkī (1557), *Tarih Semineri dergisi*, i/2, 4 ff.; P. Belon, *Les observations, etc.*, Antwerp 1533). Meḥmed ʿĀshiḳ, *Menāẓir al-ʿAwālim* (MS Nuru ʿOthmāniyye 3032, 215) and Ḥādjdjī Khalīfa, *Djihān-nümā* (Istanbul 1145, 601), depend on the Arabic geographers and do not add anything new. The anonymous *al-Menāzil wa 'l-Ṭarīḳ ilā Bayt Allāh* (MS Inkilap Kitabhanesi, M.C., K boy, 113, fol. 8v) mentions the excellence of its markets and of its products, likewise Ewliyā Čelebi, *Seyāḥat-nāme* (Istanbul 1935, iii, 37, ix, 333 ff.), according to whom Adana had 8700 houses built of clay (this might be slightly exaggerated in his usual manner). With the general retrogression of the Ottoman empire, however, a decline set in which lasted till the middle of the 19th century; one of the main causes was the insecurity which began immediately outside its gates. Nevertheless, the cotton trade continued, and in the 18th century there seem to have existed extensive commercial relations with merchants from Kayserī (cf. P. Lucas (1766); C. Niebuhr (travelled 1766), *Reisebeschreibung*, Hamburg 1837, and others quoted by Ritter).

At the beginning of the 19th century, Adana had still a larger population than Ṭarsūs (according to J. M. Kinneir, *Voyage dans l'Asie Mineure*, Paris 1818), while two decades later, in 1836, it is described as smaller than Ṭarsūs (J. Rusegger, *Reise in Griechenland ... und südöstl. Kleinasien*, Stuttgart 1841, 524 ff.). There was now but little trade, as is remarked in a report of the British consul Neale (cited Ritter, see Bibl.). On the attempt made during the Egyptian occupation more especially to revive cotton production, but without much success, see W. F. Ainsworth, *A Personal Narrative*, i, London 1880. An account of the corporation of the oil factories is given by V. Langlois, *Voyage dans la Cilicie*, Paris 1861. The city began to prosper again in the second half of the 19th century, due to the growing European demand for cotton and the efforts for improvement (e.g. road to Mersin) especially of the *wālī* Khalīl Pasha. According to J. Davies, *Life in Turkey* (London 1879, 48 ff.), as a result of these efforts, the land was well cultivated, the town relatively clean and active, and the number of inhabitants varying between twenty to thirty-five thousand (the difference being due to the migration of part of the population to the mountains during the hot summer and to the great number of migrating labourers). V. Quinet, ii, 35 ff., gives: 30,000 permanent inhabitants (13,000 Muslims, 12,575 Armenians) and 12,000-15,000 migrating labourers. In 1870 a municipal administration was established, with a mayor. Its communications were improved by the opening of the railway to Mersin in 1886, and the piercing of the Taurus tunnels during the first world war. The occupation and the subsequent exodus of the Armenians and Greeks, who had gained importance by their position in trade during the 19th century, brought about a crisis. Under the Turkish Republic there set in a period of rapid progress (72,577 inhabitants in 1927, 117,799 in 1950). Since 1935 Adana has been the capital of the province of Seyhan.

Population. Christianity was established in Adana from an early date, and it was an episcopal see. Since the government of the Armenian Rubenids the Armenians had greatly outnumbered the Greeks and the Armenian church acquired a preponderant position. Its Christian population, already affected by the constant Muslim attacks, steadily decreased after the Mamlūk conquest and under the Ottomans (see the reports of travellers, and data in Ritter and Alishan). During the 19th century the Christian population increased, but the victory of the Turks in 1922 brought about their total expulsion. Little is known of the Jews of Adana (cf. A. Galante, *Histoire des Juifs d'Anatolie*, Istanbul 1939, ii, 304). Arab elements penetrated into Cilicia with the armies from the 8th century, but could scarcely maintain themselves in Adana itself when Turkish nomads had already gained a firm foothold in the neighbourhood. Adana is described by P. Belon (1548) as lying on the linguistic frontier between Arabic and Turkish. Thereafter the Arab elements in the population were almost wholly displaced, and this situation could not be changed by the brief Egyptian occupation in the 19th century.

Culture. Adana has not played in the past, nor does it play at present, an important cultural role. It has an interesting museum, founded in 1924 in the *madrasa* of Djaʿfar Pasha. The main monuments are due to the Ramaḍān-oghlu: Eski or Yagh Djamiʿi, with a monumental gateway (inscription from 1553) and *madrasa* in the E. and S. sides of the court, domed *iwān* with finely sculptured ornament; the mosque itself is of uncertain date (before 1500). Ulu Djāmiʿ, built by Ramaḍān-oghlu Khalīl, 1507-41, and enlarged by his grandson Muṣṭafā, 948/1541 (for a legend relating to its construction, cf. Baki T. Arik, *Adana Fethinin destani*, Istanbul 1943, 47 ff.), mosque, *madrasa*, *türbe* and *ders-khāne*, enclosed by high wall; emphasis on eastern facade with main entrance. The groundplan, various details, coloured ornamentation and minaret indicate the influence of Syrian models; Seldjūḳ tradition is particularly apparent in the dragons at the base of the dome; richly elaborated *miḥrāb*; Ottoman tiles of the finest quality; these various stylistic elements are united into a convincing whole. *Türbe* with graves decorated with tiles of the Ramaḍān-oghlus Khalīl, Pīrī and Muṣṭafā. Of the many foundations of the dynasty the following are wholly or partly preserved: the so-called Waḳīf Serāyī, residence of the dynasty since 1495; Selāmīk Dayresī, today Tuz-khanī. Also noteworthy are the Čarshi Ḥammāmī, the *bedestān* (frequently mentioned by travellers, but rebuilt in the middle of the 19th century, and Aghdja Mesdjid, of 1409-10, the oldest mosque in the town, with carved door.

(R. Anhegger)

(ii) The older name of the *wilāyet* embracing in general the Cilician plain (Čukurowa)—now called Seyhan—with the capital of the same name. The old Ottoman *eyālet* of Adana (see Ḥādjdjī Khalīfa, *Djihān-nümā*, 601) comprised in addition to Adana only the two *sandjaḳs* of Sīs and Ṭarsūs; the later *wilāyet* of Adana (since 1867) the *sandjaḳs* of Adana, Ičel (Silifke), Khozan (Sīs), Djebel-i Bereket (Yarput); the present *wilāyet* of Seyhan (17,256 km², 509,600 inhabitants, 1950 *Genel nüfus sayımı*, Ankara 1950), which more or less corresponds to the earlier *sandjaḳ* of Adana, has the following *ḳaḍās*: Adana, Bagče, Ceyhan, Dörtyol, Feke, Kadirli, Karaisalı, Kozan, Osmaniye, Saimbeyli. The most important activity in the Čukurowa is cotton-cultivation, which today gives the impression of a monoculture.

(Fr. Taeschner)

ADĀT [see naḥw].

ʿĀDAT, ADAT LAW [see ʿāda].

al-**ʿAḌAYM** (ʿAḍēm), an eastern tributary of the Tigris (Didjla, [*q.v.*]). It is formed of the junction of several rivers which have their sources in the range east of and parallel to the Djabal Ḥamrīn and which in their course from N.E. to S.W. break through deeply cut ravines. The most important of these rivers are: the river of Kirkūk, viz. the Khāṣa (Kaza, Kissa) -čay (on some maps it figures also under the name of Ḳara-ṣū), which rises from several sources north of Kirkūk; further the river of Tāʾūk (Daḳūkā [*q.v.*]), viz. the Tāʾūk-ṣū (or -čay), the most important of all, which joins the Khāṣa-čay southwest of Tāʾūk; and the Aḳ-ṣū, also called the river of Tūz-Khurmatli. The latter comes from the Sedjirme-dagh and falls below the place Tūz-Khurmatli into the river of Tāʾūk. From this junction onwards the river is called al-ʿAḍaym, or Shaṭṭ al-ʿAdaym; it forces its way through the Djabal Ḥamrīn, flows in a southerly direction across the Babylonian plain and falls below 34° N 44°20' E into the Tigris. On their courses south of Tâza Khurmatli (below Kirkūk) down to the junction with the Aḳ-ṣū, the northern, and then the united northern and middle source rivers, meander through extensive swamps. When the snow melts, the ʿAḍaym is connected through a dried up river-bed north-east of the Djabal Ḥamrīn with the Narin-čay (on some maps also Narit-ṣū), a tributary of the Diyālā. The inhabitants are able to establish such a communication, when necessary, also south-west of the Djabal Ḥamrīn, by utilizing the generally dried-up Nahr Rādhān, which is connected with a tributary of the Diyālā (at present it is said to be used for irrigation and does not reach the Diyālā). (The ruins of the dam were first described by J. Ross, *Journ. Roy. Geogr. Soc.*, 1840, 121 ff.; then by J. F. Jones, *Bombay Records*, Memoir xliii, 1857, 123; see also E. Herzfeld, *Geschichte der Stadt Samarra*, Hamburg 1948, 76 ff.) When the channel of the Nahr Rādhān is opened, the water flows into the Diyālā and the lower ʿAḍaym is almost entirely dried up. Towards its estuary the ʿAḍaym is very scantily supplied with water in the hot season; according to travellers' statements, it is often for some month entirely dried up in its lower course.

The name ʿAḍaym occurs for the first time in the *Marāṣid al-Iṭṭilāʿ* (8th/14th century), 379, as al-ʿAẓīm or al-ʿUẓayyim; cf. Nahr al-Aʿẓam in Mustawfī (ca. 1340). For the identification of the ʿAḍaym with the Turnat of the cuneiform inscriptions and the Tornadotus (Tornas) of the classical writers, see F. Hommel, *Grundriss der Geogr. und Gesch. des alten Orients*², Munich 1904, 5, 293 ff.; Pauly-Wissowa, s.v. Tornadotus; for Radānu (= Nahr Rādhān) in the cuneiform inscriptions, which may have at one time denoted also the lower ʿAḍaym, see Streck, in *ZA*, 1900, 275 and Hommel, 293 ff. It is questionable wheter we may also identify the Gyndes of Herodotus with the ʿAḍaym; cf. Billerbeck, 72 ff.; Pauly-Wissowa, s.v. Gyndes.

Bibliography: Ritter, *Erdkunde*, ix, 522 ff., 537 ff.; A. Billerbeck, *Mitteilungen d. Vorderas. Ges.*, 1898, 65 ff., 83; G. Hoffmann, *Auszüge aus syr. Akten persischen Martyrer*, 1880, 253, 275.

(M. Streck *)

AḌDĀD (a.) (plur. of *ḍidd* = "a word that has two contrary meanings"), words which, according to the definition of Arab philologists, have two meanings that are opposite to each other, e.g. the verb *bāʿa* which may mean "to sell" and also "to buy" (= *ishtarā*); even the word *ḍidd* itself belongs to the same category of words, for in such an expression as *lā ḍiddᵃ lahū* it has not the meaning of "opposite", but that of "equal". The *aḍdād*, from their point of view, belong as a particular class to the homonyms (*al-mushtarik* [*q.v.*]), except that the latter class comprises two words that have the same sound but two different meanings (*maʿnayān mukhtalifān*), while in the *aḍdād* the two meanings are directly opposite to each other. The Arabs treated of this lexical question with the passion and accuracy which they applied to all the other domains of their language, and they devoted to it either special chapters of general works (e.g. al-Suyūṭī, *al-Muzhir*, Būlāḳ, i, 186-93; Ibn Sīda, *al-Mukhaṣṣaṣ*, xiii, 258-66), or separate monographs. The latter were enumerated for the first time by M. Th. Redslob, *Die arabischen Wörter mit entgegengesetzter Bedeutung*, Göttingen 1873, 7-9 (the name of al-Djāḥiẓ, however, is to be cancelled). While some of these works are known from citations, books called *Kitāb al-Aḍdād* by the following authors are preserved, and in part published: 1) Ḳuṭrub (d. 206/821), ed. H. Kofler, *Islamica*, 1932; 2) al-Aṣmaʿī (d. 216/831), ed. A. Haffner, *Drei arabische Quellenwerke über die Aḍdād*, Beirut 1913, 45-61; 3) Abū ʿUbayd (d. 223/837), see Brockelmann, S I, 167; 4) Abū Ḥātim al-Sidjistānī (d. ca. 250/864), ed. Haffner, ibid., 71-157; 5) Ibn al-Sikkīt (d. 243/857), ed. Haffner, ibid., 163-209; 6) Abū Bakr b. al-Anbārī (d. 327/939), ed. M. Th. Houtsma, Leiden 1881; also Cairo 1325; 7) Abu 'l-Ṭayyib al-Ḥalabī (d. 381/991), see Brockelmann, S I, 190; 8) al-Saghānī (d. 650/1252), ed. Haffner, ibid. 221-48.

The opinion which has long been maintained that Arabic, contrary to all the other Semitic languages, contains a very large number of such *aḍdād* is no

longer tenable. If all that is false and all that does not belong here are cut out of the list, there remains also in Arabic only a small residue. Hence al-Mubarrad (MS Leiden 437, p. 180) and Ibn Durustawayh (quoted by al-Suyūṭī, *al-Muzhir*, i, 191) went so far as to deny entirely the existence of the *aḍdād* in Arabic. Ibn al-Anbārī enumerates in his book more than 400 such *aḍdād*; but in spite of the fullness of the work such words as *ankara*, *walā*, etc. are missing. Redslob has already pointed out that a considerable part of this must be eliminated, as the authors either extend too far the concept of the *aḍdād*, or artificially accumulate as much matter as possible: 1. First of all it must be noted that most of the words quoted were known to or currently used by the Arabs only in one meaning, and the contrary meaning can be evidenced only by scanty and sometimes even contested citations. If it were not so, many misunderstandings would arise in everyday life, while Ibn al-Anbārī in his introduction (p. 1) denies any ambiguity. 2. It is absolutely false to consider the words not only in themselves, but also in their syntactical construction in the sentence, and to establish a *ḍidd* when, through various constructions or interpretations of the sentence, two contrary meanings are possible (Ibn al-Anbārī, loc. cit., 167-8). 3. Particles like *in*, *min*, *an*, *aw*, *mā*, *hal*, must be struck out from the list of *aḍdād*. Such arguments as that *in* means "if" and "not", that is to say, can both indicate the possibility of a thing and negate it, are feeble. Equally trivial are the considerations that verbal forms (*kāna* or *yakūnu*) indicate different tenses, or that proper names (*Isḥāḳ*, *Ayyūb*, *Yaʿḳūb*) may also have secondary meanings. 4. Forms which only in certain circumstances may have a meaning contrary to their usual one could be enumerated in large numbers. Here belong words such as *kaʾs*, goblet, and also its contents, *naḥnu*, we, I; further all the *fāʿil* forms which are also passive (e.g. *wāmiḳ*, *k͟hāʾif*) and the *faʿīl* forms that are also active (e.g. *amīn*); the elatives which may be formed from participles of the first and augmented roots; the verbs that sometimes also in the first form have a causative meaning (e.g. *zāla*) etc.; but none of these cases represent any real *aḍdād*. 5. Equally to be excluded are words which in certain cases are used ironically (*ihtizāʾan* ot *tahakkuman*) e.g. *yā ʿāḳil* ("intelligent one!") for a fool, or euphemistically (*tafāʾul*), as *yā sālim* ("healthy one!") for a sick person. The use of both tropes is at the will of the speaker. 6. The highest degree of arbitrariness and artifice was finally attained by the grammarians who count among the *aḍdād* words like *talʿa* (in the meaning of "waterpipe" and "hill"), on the grounds that water flows downwards and the hill rises upwards.—Most of the examples given by Ibn al-Anbārī fall under one or other of the points just quoted and therefore ought not to be considered as *aḍdād*; only a small residue remains.

The Arabs themselves already sought for explanations for these phenomena, but only one deserves consideration in so far at least as in the interpretation it leads back to the root, whence both meanings have branched out (Ibn al-Anbārī, loc. cit., 5; *al-Muzhir*, i, 193 ff.). The other explanations account only for the actually occurring meanings, and either regard all the *aḍdād* as meanings borrowed by the roots from one another (Ibn al-Anbārī, loc. cit., 7; *al-Muzhir*, i, 194), or attempt, often clumsily, to harmonize the meanings; for instance, the Arabs explain *baʿḍ* in its meaning "whole" by arguing that the whole thing is only a part of something else (Ibn al-Anbārī, 6).

C. Abel, *Uber den Gegensinn der Urworte*, Leipzig 1884 (reprinted in his *Sprachwissenschaftlichen Abhandlungen*, Leipzig 1885) made an attempt to find a general explanation, starting from a single point of view, for the linguistic phenomenon of the "enantiosemia" as a whole. According to him the words used by primitive men were not expressions for certain unambiguous concepts, but described rather the mutual relation between two opposites; e.g. the concept of "strong" could only be understood by a comparison with "weak", and the two sides of the opposition was only gradually distinguished by phonetic changes. The theory of Abel was not accepted by linguists, but found recognition among the psychoanalysts.

R. Gordis, *Words of mutually opposed meaning*, *Am. J. Semit. Lang.*, 1938, 270-80, also endeavours to find an explanation that should be valid for all *aḍdād*. Starting from modern anthropological theories, he connects the *aḍdād* with taboo and mana and concludes that "by and large, words of contradictory meaning endure in the speech of mankind only as survivals from primitive ways of thought .

Against such theories, the prevailing opinion in general linguistics is that the enantiosemia cannot be explained from a unique principle. Words have from their origin a fixed meaning; in the case of each *ḍidd*, therefore, one of the meanings must be considered as original, the other as secondary. The task of linguistics is to trace out in each case the gradual change of meaning, although it is immediately evident that the facts cannot be established for each *ḍidd*. As a matter of fact, the Arab philologists already admitted in principle this doctrine: *al-aṣl li-maʿnan wāḥidin*. That their works, in spite of the richness of their materials, make so slight a contribution to the solution of the problem is due, among other reasons, to the fact that for them the explanation of the *aḍdād* was not so much a scientific task as a purely practical one. To the Arabs it was of prime importance to give as complete an index as possible of all the words destined for daily and literary use, which have contrary meanings; they are therefore often guided simply by exterior consonance; thus for instance they put among the *aḍdād* the word *mūdī*, 1. "perishing" root *wdy*, 2. "vigorous", "strong", root *ʾdy*.

F. Giese, in *Untersuchungen über die Aḍdād auf Grund von Stellen aus altarabischen Dichtern*, Berlin 1894, explained, for most of the *aḍdād* which he found in old poetry, how they passed to the opposite meaning, by arranging them under various semasiological categories: 1. Metonymy, when one meaning of the word is to be explained as being a causal or temporal consequence of another meaning: e.g. *naʿa*, to lift a burden with difficulty, to carry it away; *nāhil*, he who goes to the water, the thirsty one; he who returns from the water, having his thirst quenched. 2. Concatenation of concepts of various kinds; for instance *bayn*, separation and union (according to whether one is separated alone from a group or in union with another), or *d͟jalal* "to be rolled", hence "heavy , but also "to be rolled and whirled up", hence "insignificant", "light". 3. Contraction of concept, either by refining or coarsening it, as for instance *ramma* "to be marrow-like, strong", and "to be marrowless, feeble". 4. For the words of emotion and odour the neutral original meaning "to be excited" is to

be supposed, no matter whether it is applied in a good or bad sense; thus for instance *rāʿa* "to be afraid" and "to be pleased"; *ṭariba* "to be sad" and "to be joyful"; *radjā*, *khāfa*, "to hope" and "to fear"; *dhafar*, *banna*, a "good smell" and a "bad smell". To this class belong also the verbs of conjecture in their double meaning of "to know" and "not to know", e.g. *ẓanna*, *ḥasiba*, *khāla*. 5. Cultural influence has often caused the later differentiation of words originally meaning the same thing in *bāʿa*, *sharā*, "to sell" and "to buy", originally "to exchange". 6. Denominatives, especially in the 2nd and 4th forms, originally meant: "to undertake an action with the object in question", and therefore may be applied both positively and negatively; e.g. *farraʿa*, "to rise", "to sink" (cf. Hebrew *shērēsh*, *siḳḳēl*. — Besides this the lack of compound-forming prepositions in Arabic makes much ambiguity possible (cf. al-Suyuti, 189: *walā* = *aḳbala*, "to turn oneself to" and = *adbara*, "to turn oneself from"; *samiʿa*, "to hear", and "to give ear" in the sense of "to answer"), and there are many *voces ambiguae* or *communis generis* which admit a double interpretation, e.g. *amam*, properly "aim" = a thing of little or of great importance; *maʾtam*, "a gathering place of women", either on sad or on joyous occasions; *zawdj*, "husband", "wife". Finally the many dialectical *aḍdād* are of importance. Arab philologists already quoted such examples; *sudfa* "darkness" in the dialect of the Tamīmites, "light" in that of the Ḳaysites; *wathaba*, "to sit" (= Hebrew *yāshabh*) in the Ḥimyarite dialect, "to spring up" generally in Arabic; further *samīd*, *ḳarʿ*, etc. (cf. C. Landberg, *La langue arabe et ses dialectes*, Leiden 1905, 64 ff.).

The phenomenon of the enantiosema can be observed in all Semitic languages. Hence the monograph of E. Landau, *Die gegensinnigen Wörter im Alt- und Neuhebräischen*, Berlin 1896, was of interest also for the understanding of the Arabic *aḍdād*. The most comprehensive and most critical examination of the subject is by Th. Nöldeke, *Wörter mit Gegensinn* (*Aḍdād*), *Neue Beiträge zur semitischen Sprachwissenschaft*, Strassburg 1910, 67-108. 177 *aḍdād* of literary Arabic are examined and explained either etymologically or semasiologically (by pointing out similar changes of meaning), taking into consideration the corresponding roots in the Arabic dialects, in Hebrew and Aramaic, and in the languages of Abyssinia. Though Nöldeke classifies a large number of the changes into certain semasiological categories, he deliberately abstains from seeking a fixed principle or order and states explicitly that "in semasiology fixed and general laws are even less manifest than in phonetics" and that "the variegated reality of human speech resists all attempts to force it into formulas".

As is implied in the preceding argument, enantiosema are to be found in all languages. Jacob Grimm, *Kleinere Aufsätze*, vii, 367, had already drawn attention to this; interesting examples are to be found in K. Nyrop, *Das Leben der Wörter* (transl. R. Vogt). Special attention is drawn to the observations of J. Wackernagel (which might otherwise be overlooked) in a passage of his *Vorlesungen über Syntax*[2], Basel 1928, ii, 235. (G. WEIL)

ADEN [see ʿADAN].

ADFŪ (EDFU), provincial capital in Upper Egypt, on the west bank of the Nile, the ancient Apollinopolis Magna of Greek times, the Arabic name of which is a transcription of the Coptic name, Atbō.

At the beginning of the Muslim administration the town was incorporated in the *kūra* of Aswān. It was on the caravan route from Cairo to the south, but Ibn Baṭṭūṭa is the only medieval traveller who refers to it, as being a day and a night's journey south of Armant. The temple of Adfū is merely mentioned by al-Dimashḳī, but without any description, for it must have been buried in sand. Indeed, Granger's reference to it, in 1730, is the first allusion to it by a European: he saw there 'the remains of a temple which one could not enter, and it was full of earth and rubbish'. We must wait for Vivant Denon to obtain a less rudimentary account; on him the temple made a tremendous impression. In the year 700/1300 some brickworkers brought to light the statue of a woman seated on a throne, on which were hieroglyphic inscriptions.

The district of Adfū seems to have been very fertile, and particularly rich in palm-trees. Its dates were made into cakes, after first being pounded. In the Mamlūk period its annual revenue was 17,000 dīnārs from an area of 24,762 *faddāns*. Al-Adfūwī is full of praise for the good qualities of the people of Adfū, whom he describes as generous, discreet, sincere, welcoming to strangers, and charitable.

No events memorable in history seem to have taken place in the town.

AḌḤĀʾ [see ʿĪD AL-AḌḤĀʾ].

ʿADHĀB (A.), "torment, suffering, affliction", inflicted by God or a human ruler, and in so far as it expresses not only absolute power but also love of justice, also "punishment, chastisement (*ʿuḳūba*)". The divine judgments, which are often mentioned in the Ḳurʾān, strike the individual as well as whole nations in the life of this world as well as in the life to come. It is mainly unbelief, doubt of the divine mission of the prophets and apostles, rebellion against God, that are punished in this manner [see ʿĀD, FIRʿAWN, LŪṬ, NŪḤ, THAMŪD, and others]. With regard to the punishments in the life to come, which begin already in the grave, see ʿADHĀB AL-ḲABR, DJAHANNAM.

For legal punishments, see ʿUḲŪBĀT.

(TH. W. JUYNBOLL)

ʿADHĀB AL-ḲABR, the punishment in the tomb, also called punishment in *barzakh* [*q.v.*]. The idea is based on the conception that the dead had a continued and conscious existence of a kind in their grave. So arose the doctrine of the two judgements, one which involves punishment or bliss in the grave and a subsequent judgement on the Day of Resurrection [for which see AL-ḲIYĀMA]. There are various ideas of what happens between death and resurrection.

1. The grave is a garden of paradise or a pit of hell; angels of mercy come for the souls of believers and angels of punishment for the infidels. The souls of believers are birds in the trees of paradise and will be united with their bodies at the resurrection; martyrs are already in paradise.

2. The dead are tortured by the weeping of the mourners, especially the wicked, hearing the steps of the mourners as they leave; the believer finds his grave spacious, 70 cubits by 70, while the unbeliever is crushed by his grave till his ribs inter

lock. The grave asks the dead man about his religion and the believer's good works answer for him. A sinner may be tormented by a snake of fire which bites him till the day of judgement.

3. Two angels, Munkar and Nakīr, black with blue eyes, make the dead man sit up and ask him about his religion. The believer answers with the "steadfast word" (Ḳur'ān, xiv, 26) and is shown the place in hell from which he is delivered and the place reserved for him in paradise; there upon he is left alone till the Day of Resurrection. The unbeliever cannot answer, so the angels beat him with iron whips which cause flames, and the blows are heard by all creation except men and *djinn*. It is a less reliable doctrine that punishment is of the spirit only. There are elaborate arguments to prove that those whose bodies are left impaled and those who were eaten by wild beasts suffer from it. The punishment lasts as long as it will please Allāh, according to some authorities till the Day of Resurrection, except on Fridays. It may be eased as long as a branch planted on the grave is green. The angels draw the souls out of the bodies; those of believers come out easily while those of unbelievers have to be dragged out causing severe pain. Variations in detail are many. The questioning of believers lasts seven days, that of unbelievers forty; or unbelievers are not questioned and the angels proceed at once to punishment: martyrs, infants and those who have performed certain acts of supererogation are not questioned.

In some sources a distinction is made between the punishment and the pressure (*daghṭa*) in the tomb, the righteous faithful being exempt from the former, not from the latter, whereas the infidels and the sinners suffer punishment as well as pressure. The prophet's daughter, Fāṭima, and some others escape being crushed.

The punishment in the tomb is not plainly mentioned in the Ḳur'ān. Allusions to the idea may be found in several passages, e.g. Ḳur'ān, xlvii, 26: "But how when the angels, causing them to die, shall smite them on their faces and backs"; vi, 92: "But couldst thou see, when the ungodly are in the floods of death, and angels reach forth their hands, saying, Yield up your souls: this day shall ye be recompensed with a humiliating punishment"; viii, 49: "And if thou wert to see when the angels take the life of the unbelievers; they smite their faces and their backs, and taste ye the torture of burning" (cf. further ix, 100; xxiii, 20; lii, 46).

The punishment of the tomb is very frequently mentioned in Tradition (see *Bibliography*), often, however, without the mention of angels. In the latter group of traditions it is simply said that the dead are punished in their tombs, or why, e.g. on account of special sins they have committed.

The names of Munkar and Nakīr do not appear in the Ḳur'ān, and once only in canonical Tradition (al-Tirmidhī, *Djanā'iz*, *bāb* 70). Apparently these names do not belong to the old stock of traditions. Moreover, in some traditions one anonymous angel only is mentioned as the angel who interrogates and punishes the dead (Muslim, *Īmān*, trad. 163; Abū Dā'ūd, *Sunna*, *bāb* 39b; Aḥmad b. Ḥanbal, iii, 233, 346; iv, 150; al-Ṭayālisī, no. 753). So there seem to be four stages in the traditions regarding this subject: the first without any angel being mentioned, the second mentioning "the" angel, the third two angels, the fourth being acquainted with the names Munkar and Nakīr.

This state of things is reflected in the development of the creed. The *Fiḳh Akbar* I, which may date from the middle of the 2nd/8th century, gives only a short reference to the punishment of the tomb (art. 10). The *Waṣiyyat Abī Ḥanīfa*, which may represent the orthodox views of the middle of the 3rd/9th century, mentions both the punishment and the interrogation by Munkar and Nakīr. The *Fiḳh Akbar II*, which may represent the new orthodoxy of the middle of the 4th/10th century A.D., is still more elaborate (art. 23): "The interrogation of the dead in the tomb by Munkar and Nakīr is a reality, and the reunion of the body with the spirit in the tomb is a reality. The pressure and the punishment in the tomb are a reality that will take place in the case of all the infidels, and a reality that may take place in the case of some sinners belonging to the faithful". In the later creeds and works on dogmatics the punishment and the interrogation in the tomb by Munkar and Nakīr are treated in a similar way.

The Khawāridj, some Muʿtazilīs and some of the extreme Shīʿa do not believe in punishment in the grave. Some Muʿtazilīs explained Munkar as the muttering of the unbeliever as he stumbles in his reply and Nakīr as the violence done to him. Others said that Munkar and Nakīr were not individuals but two classes of angels because men were dying every minute in all parts of the world and two individuals could not be everywhere at once. Another rationalisation was that the two were personifications of a man's good and evil deeds, promising him bliss or misery.

The Karrāmiyya [*q.v.*] taught the identity of Munkar and Nakīr with the two guardian angels who accompany man (ʿAbd al-Ḳāhir al-Baghdādī, *Uṣūl al-Dīn*, Istanbul 1928, p. 246). Al-Ghazzālī holds that all eschatological ideas are a reality that takes place in the *malakūt*.

The origin of the names Munkar and Nakīr is uncertain; the meaning "disliked" seems doubtful. The idea of the examination and the punishment of the dead in their tombs is found among other peoples also. The details to be found in Jewish sources (*ḥibbūṭ haḳ-ḳeber*) are strikingly parallel to the Muslim ones; the idea is, however, rather late among the Jews and apparently belongs to the post-Islamic period. (See J. C. G. Bodenschatz, *Kirchliche Verfassung der heutigen Juden*, Erlangen 1748, ii, 95 f.; *Jewish Enc.*, s.v. *Ḥibbuṭ ha-Ḳeber*.)

(A. J. Wensinck-A. S. Tritton)

ADHĀN, "announcement", a technical term for the call to the divine service of Friday and the five daily *ṣalāts* [see ṢALĀT].

According to Muslim tradition, the Prophet, soon after his arrival at Madīna (1 or 2 years after the

Hidjra), deliberated with his companions on the best manner of announcing to the faithful the hour of prayer. Some proposed that every time a fire should be kindled, a horn should be blown or *nāḳūs* (i.e. a long piece of wood clapped with another piece of wood; with such a *nāḳūs* the Christians in the East used at that time to announce the hour of prayer) should be used. But one Muslim, ʿAbd Allāh b. Zayd, related that he saw in a dream somebody who from the roof of the mosque called the Muslims to prayer. ʿUmar recommended that manner of announcing the *ṣalāt*, and as all agreed to it, this *adhān* was introduced by order of the Prophet. From that time the believers were convoked by Bilāl, and up to our days the *adhān* is called out at the time of the *ṣalāt*.

Becker (*Isl.*, 1912, 386 ff.) finds the historical model of the *adhān* in Christian Worship, Mittwoch (*Abh. Pr. Ak.W.*, 1913, Phil.-hist. Classe, No. 2, 22 ff.), perhaps less convincingly, in Jewish liturgy.

The *adhān* of the orthodox Muslim consists of seven formulas, of which the sixth is a repetition of the first:

1. *Allāhᵘ akbar*: "Allāh is most great".
2. *Ashhadu an lā ilāhᵃ illa 'llāh*: "I testify that there is no god besides Allāh".
3. *Ashhadu anna Muḥammadᵃⁿ rasūl Allāh*: "I testify that Muḥammed is the apostle of Allāh".
4. *Ḥayya ʿala 'l-ṣalāt*: "Come to prayer"!
5. *Ḥayya ʿala 'l-falāḥ*: "Come to salvation"!
6. *Allāhᵘ akbar*: "Allāh is most great".
7. *Lā ilāhᵃ illa 'llāh*: "The is no god besides Allāh".

The first formula is repeated four (by the Mālikites two) times one after the other, the other formulas are repeated twice each, except the last words: *lā ilāhᵃ illa 'llāh*, which are pronounced only once. The 2nd and 3rd formulas after being pronounced twice are repeated a third time in a louder voice. This repetition (*tardjīʿ*) is generally considered as recommended by the law, only the Ḥanafites forbid it. At the morning prayer (*ṣalāt al-ṣubḥ*) the words *al-ṣalāt khayr min al-nawm* ("prayer is better than sleep") are added in the *adhān*. This formula, also pronounced two times and called *tathwīb* (repetition), is inserted between the 5th and 6th formulas, but the Ḥanafites pronounce it at the end.

The *adhān* of the Shīʿites differs from that of the Sunnites in that the former has an eighth formula (inserted between the fifth and the sixth): *Ḥayya ʿalā khayr al-ʿamal*, "Come to the best work"! These words have at all times been the shibboleth of the Shīʿites; when called from the minarets in an orthodox country, the inhabitants knew that the government had become Shīʿite (cf. Snouck Hurgronje, *Mekka*, i, 63; S. de Sacy, *Chrestomathie arabe* i, text, p. 60; transl., p. 169). The Shīʿites pronounce also the final formula two times.

The Muslims who hear the *adhān* must repeat its formulas, but instead of the fourth and fifth, they recite: *lā ḥawlᵃ wa-lā ḳuwwatᵃ illā bi-'llāh*, "there is no strength nor power but in Allāh", and instead of the *tathwīb* formula in the morning *adhān*, they say: *ṣadaḳta wa-bararta*, "thou hast spoken truthfully and rightly".

The *adhān* is followed by formulas of glorification which are recommended and precisely determined by the law. They are omitted only after the call to the *maghrib ṣalāt*, because the space of time,i n which this prayer must be said, is very short.

There is no fixed melody for the *adhān*. Every *adhān* may be modulated at will with any known tune, provided that the right pronunciation of the words is not impaired by it. Cf. Snouck Hurgronje, *Mekka*, ii, 87: "In Mecca one hears different airs at the same time. Like the recitation of the Ḳur'ān, the singing of the *adhān* is in Mekka a highly developed art". Only among the Ḥanbalites there are doctors who do not allow any melody for the *adhān*, and the Wahhābīs follow this doctrine. The Ibāḍīs, too, do not sing the *adhān*. [For the melody of the *adhān* see also GHINĀ.]

Every Muslim who, alone or with others, recites the above-mentioned *ṣalāts* at home or in the field should pronounce the *adhān* in a loud voice as is recommended by the law (cf. Snouck Hurgrunje, *Mekkanische Sprichwörter und Redensarten*, 87 = *Verspr. Geschr.* v, 83). At mosques, a *mu'adhdhin* [*q.v.*] is often appointed to perform the *adhān*.

The call to the other public *ṣalāts*, e.g. those of the two feasts, those at sun and moon eclipses, etc., has only one formula: *al-ṣalāt djāmiʿatᵃⁿ*, "come to the public prayer"! This formula is said to have been current already in the time of the Prophet. Cf. I. Goldziher, in *ZDMG*, 1895, 315.

Important information on the modifications of the *adhān* formulas introduced at various times and in various places from the beginning of Islām is to be found in Maḳrīzī, *Khiṭaṭ*, ii, 269 f.

Owing to the profession of faith frequently occurring in the *adhān*, the Muslims pronounce it in the right ear of a child shortly after its birth (cf. Lane, *Arab. Society in the Middle Ages*, 186; Snouck Hurgronje, *Mekka*, ii, 138) as well as in the ear of people supposed to be possessed of *djinn* (evil spirits).

The *ṣalāt* in the mosque is immediately preceded by a second call, the *iḳāma* [*q.v.*], which contains the same formulas as the *adhān*.

ĀDHĀR [see TA'RĪKH].

ĀDHARBAYDJĀN (AZARBĀYDJĀN) (i) province of Persia; (ii) Soviet Socialist Republic.

(i) The great province of Persia, called in Middle Persian Āturpātākān, older new-Persian Ādharbādhagān, Ādharbāyagān, at present Āzarbāydjān, Greek Ἀτροπατήνη, Byzantine Greek Ἀδραβιγάνων, Armenian Atrapatakan, Syriac Adhorbāyghān. The province was called after the general Atropates ("protected by fire"), who at the time of Alexander's invasion proclaimed his independence (328 B.C.) and thus preserved his kingdom (Media Minor, Strabo, xi, 13, 1) in the north-western corner of later Persia (cf. Ibn al-Muḳaffaʿ, in Yāḳūt, i, 172, and al-Maḳdisī, 375: Ādharbādh b. Bīwarasf). The dynasty of Atropates flourished under the Arshakids and married into the royal house. The last scion of the house, Gaius Julius Artawazd, died in Rome in A.D. 38, when the kingdom was already incorporated by the Arshakids. (For the ancient history cf. Pauly-Wissowa, s.v. Atropatene.) Under the Sāsānians Ādharbaydjān was ruled by a *marzubān* and towards the end of the period belonged to the family of Farrukh-Hormizd, (see Marquart, *Eranšahr*, 108-14). The capital of Ādharbaydjān was at Shīz (or Ganzak), which corresponds to the ruins

ĀDHARBAYDJĀN

of Laylān (south-east of Lake Urmiya). It possessed a famous firetemple which the Sāsānian kings visited on their accession. Later the fire was removed to the less accessible Arshakid castle of Βιθαρμαΐς, Θηβαρμαΐς (now Takht-i Sulaymān).

The Arab conquest of Ādharbaydjān is variously recorded under the years 18-22/639-43. In the days of ʿUmar, Ḥudhayfa b. al-Yamān is said to have conquered Ādharbaydjān coming from Nihāwand; other expeditions came from Shahrazūr. Ḥudhayfa made a treaty with the *marzubān* whose capital was in Ardabīl. He agreed to pay 800,000 dirhams and the Arabs promised not to enslave anyone, to respect the fire-temples and the ceremonies held in them, and to protect the population against the Kurds (nomads) of Balāsagān, Sabalān and Shātrūdhān.

The population of Ādharbaydjān (of Iranian origin) spoke a multitude of dialects (al-Maḳdisī, 375: 70 languages near Ardabīl). Arab chieftains settled in various districts: Rawwād al-Azdī in the region of Tabrīz; Baʿīth al-Rabīʿa in Marand; Murr b. ʿAli al-Rudaynī south of Lake Urmiya, etc. They were gradually absorbed by the native population and towards the middle of the 4th/10th century the Rawwādids were considered as Kurds. (See in detail Sayyid A. Kasrawī, *Pādshāhān-i gum-nām*, i-iii, Teheran 1928-9.)

After the revolt of Bābak [*q.v.*], the grip of the caliphate on Ādharbaydjān weakened. The last energetic governors of the province (276-317/889-929) were the Sādjids [*q.v.*] who themselves ended in revolt. After their fall native dynasties sprang up in Ādharbaydjān. After the Khāridjite Daysam (half Arab and half Kurd), Ādharbaydjān was occupied by the Daylamite Marzubān b. Muḥammad, of the *bāṭinī* creed (see MUSĀFIRIDS). The Daylamites were succeeded by the Kurdish Rawwādids [*q.v.*] (373-463/983-1070).

In the beginning of the 5th/11th century the Ghuzz hordes, first in smaller parties, and then in considerable numbers, under the Seldjūḳids occupied Ādharbaydjān. In consequence, the Iranian population of Ādharbaydjān and the adjacent parts of Transcaucasia became Turkophone. In 531/1136 Ādharbaydjān fell to the lot of the *atābek* Ildigiz [*q.v.*] (better *Eldigüz) whose descendants ruled, in competition with the Aḥmadīlīs [*q.v.*], till the short-lived invasion of the Khwārizm-shāh Djalāl al-Dīn (622-8/1225-31) at whose heels came the Mongols. With the arrival of the Il-khān Hūlāgū (654/1256) Ādharbaydjān became the centre of a great empire extending from the Oxus to Syria. The residence of the Mongols was first in Marāgha [*q.v.*] and then in Tabrīz [*q.v.*] which became a great centre of trade and cultural life. After the Mongols and their successors the Djalāʾirs [*q.v.*], Ādharbaydjān was occupied by the Turkmens returning from the west (the Ḳara Ḳoyunlu [*q.v.*] and Aḳ Ḳoyunlu [*q.v.*]) whose capital was in Tabrīz (780-908/1378-1502).

After 907/1502 Ādharbaydjān became the chief bulwark and rallying ground of the Ṣafawids, themselves natives of Ardabīl and originally speaking the local Iranian dialect. In the meantime, between 1514 and 1603, the Ottomans frequently occupied Tabrīz and other parts of the province. The Persian control was restored by Shāh ʿAbbās but during the Afghān invasion (1135-42/1722-8) the Ottomans recaptured Ādharbaydjān and other western provinces of Persia, until Nādir Shāh expelled them.

In the beginning of the reign of Karīm Khān Zand the Afghān Āzād Khān revolted in Ādharbaydjān and later the Dumbuli Kurds of Khoy and other tribal chiefs lorded it over various parts of Ādharbaydjān.

With the advent of the Ḳādjārs Ādharbaydjān became the traditional residence of the heirs-apparent. In the north the final frontier with Russia (along the Araxes) was established in 1828 (treaty of Turkmančay). The western frontier with Turkey was delimitated only in 1914, and under Riḍā Shāh Persia ceded to Turkey a small area north of the Ararat.

After 1905 the representatives of Ādharbaydjān took a lively part in the Persian revolution. On 3 April 1908 Russian troops arrived in Ādharbaydjān, by agreement with Great Britain, to protect the foreign colonies in Tabrīz, but then prolonged their stay under various pretexts, and in 1914-7 warred with the Turks with varying fortune. They evacuated Ādharbaydjān after the Russian revolution (1917), and on 8 June the Turks arrived and installed in Tabrīz a Turcophile government. About this time there appeared the first traces of Ādharbaydjānī self-consciousness. The Persian control was restored by the future Riḍā Shāh on 5 September 1921. After the events of 1941 (see ĪRĀN) the Soviet forces occupied the northern provinces, including Ādharbaydjān. Under cover of the occupation, there developed a movement for the autonomy of Ādharbaydjān within the limits of the Persian state. The Russians evacuated Ādharbaydjān by the beginning of May 1946 (instead of March 1946, as first agreed) and this delay led to a great discussion in the United Nations and to the first official split among the Allies. After the evacuation, the Premier Ḳawām recognised the provincial autonomy of Ādharbaydjān in an agreement signed on 13 June 1946, by which the rights of local self-government with the use of the local Turkish dialect were guaranteed. However, on 4 November, Persian troops moved into Ādharbaydjān and the *status quo ante* was restored.

Geography. The list of towns and districts of Ādharbaydjān in Ibn Khurradādhbih, 119, is important for the composition of the province (*kūra*) soon after the conquest, and possibly even under the Sāsānians: 1. Marāgha; 2. Miyānadj; 3. Ardabīl; 4. Sīsar (= Senna); 5. Barza (= Saḳḳiz?); 6. Sābur-khāst; 7. Tabrīz; 8. Marand; 9. Khoy; 10. Kūlsara; 11. Mūḳān; 12. Barzand; 13. Djanza (Ganzak); 14. Djābarwān; 15. Nirīz; 16. Urmiya; 17. Salmās; 18. Shīz; 19. Rustāḳ al-Salaḳ; 20. Rustāk Sind-bāya (*Sind-pāye); 21. al-Badhdh; 22. Urm; 23. Balwān-Karadj (= Ḳaradja-dagh?); 24. Rustāḳ Sarāh (Sarāb); 25. Daskiyāwar (?); 26. Rustāḳ Māy-pahradj. Of these nos. 4, 5, 6, 13, 14, 15, 18, 19 and 26 lie to the south of Lake Urmiya (in the direction of Daynawar); nos. 7, 8, 9, 16 and 17 in the north-western corner; nos. 1, 2, 3, 10, 11, 12, 21, 22, 23 and 24 east of the meridian of Tabrīz. Nos. 20 and 25 cannot be located. The frontier in the south was no. 26: "the watch of Media" (possibly the present day Sunḳur [*q.v.*]; in the east, it passed between Miyāna and Zandjān [*q.v.*]; in the N.E. Ibn Khurradādhbih, 121, names Warthān (now Altan on the south bank of the Araxes) as "the end of the *ʿamal* of Ādharbaydjān". Thus the territory of the province closely corresponded to its present extent, but as Ādharbaydjān was usually governed jointly with the neighbouring Armenia and Arrān (see al-Maḳdisī, 374: *iḳlīm al-riḥāb* comprising the three provinces), administrative frontiers were subject to temporary changes, especially in later times. In al-Maḳdisī, 374, Khoy,

Urmiya and even Dā<u>kh</u>arraķān (south of Tabrīz) are reckoned to Armenia. According to Yāķūt (13th century) Ā<u>dh</u>arbay<u>dj</u>ān extended down to Bar<u>dh</u>aʿa (Parthav). In *Nuzhat al-Ķulūb* (730/1340), 89, Na<u>kh</u>ičewan and Ordūbād, on the left bank of the Araxes, are mentioned under Ā<u>dh</u>arbay<u>dj</u>ān.

Very characteristic for Ā<u>dh</u>arbay<u>dj</u>ān are the high peaks rising in various parts of the territory, with ranges of mountains connecting them: Mt. Sawalān west of Ardabīl (15,792 feet), Mt. Sahand, south of Tabrīz (12,000 feet), the Lesser Ararat (12,840 feet) south of which runs the long range which forms the frontier with Turkey and ʿIrāķ, and which in its southern part is studded with high peaks. The central parts of Ā<u>dh</u>arbay<u>dj</u>ān consist both of considerable plains (Tabrīz, Marand, <u>Kh</u>oy, Salmās) and of high plateaux burrowed by deep gorges.

The territory of Ā<u>dh</u>arbay<u>dj</u>ān belongs to the basins of the Caspian, of Lake Urmiya and of the Tigris. Towards the Caspian flow: (i) the tributaries of the Safīd Rūd having their sources on the south-eastern face of Mt. Sahand, and (ii) the southern tributaries of the Araxes (the river of Ardabīl, Ķara-su; the rivers of Ķara<u>dj</u>a-da<u>gh</u>; the river of <u>Kh</u>oy and the river of Mākū, Zangi-čay). The internal Lake Urmiya [*q.v.*] drains an area of 52,500 sq. km (the rivers of Marā<u>gh</u>a, Sufi-čay etc.; the river of Tabrīz, A<u>dj</u>ī-čay; the numerous rivers of Salmās and Urmiya; the important rivers of the Kurdish districts, <u>Dj</u>a<u>gh</u>atū, Tatawū, Gādir). The Lesser Zāb rises on the Persian side of the frontier range and, through the gap of Alān, emerges into the plains of Northern ʿIrāķ to join the Tigris.

The population of Ā<u>dh</u>arbaya<u>dj</u>ān lives chiefly in villages. The largest towns are Tabrīz (280,000 inhabitants), Ardabīl (63,000), Urmiya, <u>Kh</u>oy (49,000), Marā<u>gh</u>a (35,000). The semi-nomads are found on the Mū<u>gh</u>ān steppe (the Turkish <u>Sh</u>āh-sewan [*q.v.*]) and in the Kurdish districts along the Turkish frontier and south of Lake Urmiya. The population in its great majority speaks the local dialect of "Ā<u>dh</u>arbay<u>dj</u>ān Turkish" (see Ā<u>DH</u>ARĪ). The characteristic features of the latter are Persian intonations and disregard of the vocalic harmony, reflecting the non-Turkish origin of the Turkicised population. The remains of the old Iranian (*ā<u>dh</u>arī*) dialects are found in small groups in Ķara<u>dj</u>a-da<u>gh</u>, near Sahand, near <u>Dj</u>ulfa, etc. Persian is the official language learnt at school. Armenians and Assyrians ("Aysor") are found in the districts to the west of Lake Urmiya. Kurdish is spoken along the western frontier and in the southern districts, to the west of the Tatawū river.

(ii) Azerbay<u>dj</u>ān, Soviet Socialist Republic (Az. SSR) in the eastern part of Transcaucasia, between the south-eastern branches of the Caucasus, the Caspian coast and the Araxes (which separates it from the Persian province of the same name). In the north-east it borders on the Dā<u>gh</u>estān Autonomous republic (part of the Russian Socialist Federal Soviet Republic, RSFSR). In the north-west it borders on the Georgian S.S. Republic (along the Alazan) and in the west on the Armenian S.S. Republic (along the line running east of Lake Sewan = Gökče). In the south-west the autonomous republic (ASSR) of Na<u>kh</u>čewan, locked within the Armenian territories, is part of the Azerbai<u>dj</u>an republic, whereas the highlands of Ķara-ba<u>kh</u> (with a considerable Armenian population) form an autonomous territory (*oblast*) within Azerbay<u>dj</u>ān.

Historically the territory of the republic corresponds to the Albania of the classical authors (Strabo, xi, 4; Ptolemy, v, 11), or in Armenian Alvan-kʿ, and in Arabic Arrān [*q.v.*]. The part of the republic lying north of the Kur (Kura) formed the kingdom of <u>Sh</u>arwān (later <u>Sh</u>irwān [*q.v.*]).

After the collapse of the Imperial Russian army Bākū was protectively occupied by the Allies (General Dunsterville, 17 August-14 Sept. 1918) on behalf of Russia. The Turkish troops under Nūrī Pa<u>sh</u>a occupied Bākū on 15 Sept. 1918 and reorganized the former province under the name of Azarbay<u>dj</u>ān—as it was explained, in view of the similarity of its Turkish-speaking population with the Turkish-speaking population of the Persian province of Ā<u>dh</u>arbay<u>dj</u>ān. When after the Mudros armistice the Allies reoccupied Bākū (17 Oct. 1918), General Thomson (28 Dec. 1918) recognized the existing Azarbay<u>dj</u>ān government of the *Musāwāt* party as the only local authority. After the evacuation of the Allies, the Soviet regime was proclaimed in Bākū on 28 April 1920, without armed opposition, and Azerbay<u>dj</u>ān became one of the three republics of the federated Transcaucasia. In 1936 the federation came to an end and on the 5 Dec. 1936 Azerbay<u>dj</u>ān was admitted into the U.S.S.R. as one of the sixteen constituent republics of the Union.

The present-day republic possesses an area of 87,700 sq. km. and a population of 3.2 million, of which 28% live in towns. Local Turks are in a majority of 3/5, whereas the Armeninas form 12% of the population, and Russians 10%. The capital of the republic, Bākū [*q.v.*], counts 809,000 inhabitants, Gan<u>dj</u>a [*q.v.*] (formerly Elizavetpol and Kirovābād) 99,000. Other large towns are <u>Sh</u>amā<u>kh</u>ī, Ķuba, Sāliyān, Nu<u>kh</u>ī, Mingečawr, etc.

Bibliography: *Bolshaye Sovietskaye Entsik.*, 1951; *Chambers's Encyc.*, 1950; L. C. Dunsterville, *The Adventures of Dunsterforce*, London 1920.

(V. MINORSKY)

A<u>DH</u>ARGŪN (P., "flame-coloured"; Arabic A<u>DH</u>ARYŪN), a plant about 2-3 feet high with finger-long elongated leaves, of a red-yellow colour, and malodorous blossoms with a black kernel. The identification of this plant is not yet well established: in Greek χερὰ ἀζάριον occurs synonymously with *senecio vulgaris*, the common groundsel (B. Langkavel, *Botanik der spätern Griechen*, 1866, 74; I. Löw, *Aramäische Pflanzennamen*, 1879, 47). The descriptions of the Arabian authors leave a choice between the dark yellow *buphthalmos*, for which Clément-Mullet decided, and the *calendula officinalis*, marigold, which indeed unites the characteristic features of shape, hue and smell and which formerly was officinal. In Arab medicine *adharyūn* passed for a

cordial, an antidote, etc. The plant played in popular belief a greater part than in medicine: it was believed that its odour alone was sufficient to cause or to facilitate delivery as well as to drive away flies, rats and lizards.

Leclerc, in *Notices et extraits des manuscrits*, xxiii, 38; Meyerhof and Sobhy, *The abridged version of "the Book of Simple Drugs" etc.*, i, 146 ff. (J. HELL)

ĀDHARĪ (AZERĪ), a Turkish dialect.

(i) Language, (ii) literature.

(i) LANGUAGE

The word Ādharī, which means "pertaining to Ādharbaydjān", has been used to denote various ethnic groups from the 10th century onward. It was applied to the Ādharbaydjān Republic founded in the Caucasus in 1918, and is extended in the present day to cover not only the Soviet Republic of Ādharbaydjān and Persian Ādharbaydjān but also the Turkish populations of Khurāsān, Astarābād, Hamadān and other parts of Persia, Dāghestān and Georgia.

Ādharī Turkish has long maintained its identity as a literary language. According to the latest morphological classification of the Turkish dialects (Radloff, Samoilovich), it forms the "Southern Turkish" group, along with the Turkish of Anatolia, Turkmenistān, the Balkan peninsula and the Crimean littoral. Although the last word on the subject has not yet been said, the dialects of spoken Ādharī seem to fall into the following main groups: (i) Bākū-Shirwān; (ii) Gandja-Karabāgh; (iii) Tabrīz; (iv) Urmiya.

The chief phonetic and morphological characteristics of Ādharī are summarized below (the forms in brackets are those of the Turkish of Turkey).

a. *Vowels*:

There are two *e*-sounds an open [ɛ] and a closed [e] (here shown as *ẹ*). The former represents the sound of *fatḥa* in Arabic and Persian borrowings: *feget* (*fakat*), *veten* (*vatan*). So too in conjunction with *ʿayn* (which medially is heard as a pause): *etir* (*ıtır*), *eli* (*Ali*), *me'den* (*maden*), *ye'ni* (*yani*), *me'şuχ* (*māşuk*).

Closed *ẹ* occurs in initial syllables where other dialects of the group have *i*: *ẹniş* (*iniş*), *ẹndir-* (*indir-*), *ẹkiz* (*ikiz*), *ẹlm* (*ilim*), *ẹtibar* (*itibar*). It is also heard in the diphthong in *ẹyn* (*ayn*), *ẹyni* (*ayni*).

Initial *ı* has become *i* in modern Ādharī: *iraχ* (*ırak*), *illχ* (*ılık*), *ilan* (*yılan*).

av, *ev* of other dialects and Arabic *au*, appear as *oy*, *öy*, *ou*, *ō* or *ö*: *pilō* (*pilav*), *douşan*, *dōşan* (*tavşan*), *ōdan* (*avdan*), *söymek* (*sevmek*), *öy* (*ev*) *döylet* (*devlet*), *döşürmek* (*devşirmek*), *tōχ* (*tavuk*), *cōher* (*cevher*).

b. *Consonants*:

The sound of *ḳ* is rare in Ādhharī. Initially it is replaced by *g*, medially and finally by *χ*, except in foreign borrowings, where medial *ḳ* becomes *g* or *γ*. When doubled, it is pronounced *ḳg*: *gaya* (*kaya*), *gardaş* (*kardeş*), *baχmaχ* (*bakmak*), *hegiget* (*hakikat*), *egide* (*akide*), *aγll* (*akıl*), *teγvim* (*takvim*), *baḳgal* (*bakkal*), *saḳga* (*sakka*).

Palatal *k* replaces palatal *g* at the beginnings of words: *köç-* (*göç-*), *kölge* (*gölge*). In the Ādharī of Gandja and Persia, medial and final *k* is pronounced like the *ch* of German *ich*: *böyüḥ* (*büyük*), *çeḥmeḥ* (*çekmek*).

Initial *y* disappears: *il* (*yıl*), *üz* (*yüz*).

Initial *t* and *d* interchange, with no apparent rule: *tut* (*dut*), *tüşmek* (*düşmek*), *dartmaχ* (*tartmak*). In foreign words, final *t* is lost after *χ* or *s*, but is preserved when followed by a vowel: *vaχ* (*vakit*), *evdes* (*abdest*), *dos* (*dost*), but *vaχtim*, *evdeste*, *dosta*.

Initial *b* is almost always changed to *m* under the influence of a following *n*: *men* (*ben*), *minmek* (*binmek*), *muncuχ* (*boncuk*). Exceptions: *buynuz* (*boynuz*), *bende*.

ñ survives in some dialects: *doñuz* (*domuz*), *maña* (*bana*). In others it is dropped, nasalizing the preceding vowel: *mãa* (*bana*), *kõul* (*gönül*), *gözũa* (*gözüne*). In the dialects of Bākū and Persia it becomes *w*, particularly in the genitive, dative and accusative cases of the possessive forms of nouns: *ẹvüwüñ* (*evinin*), *ẹvüwe*, *ẹvüwi*.

r disappears from some words in the various dialects, with no definite rule, and in the Ādharī of Persia is regularly dropped from the 2nd person singular and plural and the 3rd person plural of verbal forms: see under *Verbs*, below. *dir*/*dır* loses its *r*, becoming *di*/*dı*.

l is commonly dropped from *değil*: *döyü*, *dẹy*, *dẹyi*. In some words it replaces *r*: *ḥançal*/*ḥençel* (*hançar*), *incil* (*incir*), *zerel* (*zarar*).

c. *Vowel Harmony* is generally observed in Ādharī, except in the dialects of Bākū, Nukha and Persia, where we find velar suffixes added to palatal stems—*ölmaχ*, *yiyacaχ*, *gẹdaχ*, *bildıγı*—and rounded vowels in suffixes: *aton*, *babon*, *alduχ*, *gelduχ*.

d. *Morphology*:

The chief morphological peculiarities are these: (1) The accusative suffix of all vowel-stems except *su* is *-ni*/*nı*: *arabanı*, *dereni*. Consonant-stems are treated as in the Turkish of Turkey: *aγacı*, *demiri*. (2) The suffix which denotes a regular occupation or forms a noun of agent is *-çi*/*-çı*: *demirçi*, *arabaçı*, *alvẹrçi*, *yazıçı*. (3) *kimi* or *kimin* is always used in place of *gibi*, and *ten* or *cen*/*can* in place of *kadar* or *dek*: *indiyeten*, *indiyecen*, *aχşamacan*, *dünenecen*. (4) The interrogative *mi* generally comes after the verbal suffixes: *öydedimi* (*evde midir*), *geleremmi* (*gelir miyim*), *yorgunsanmı* (*yorgun musun*), *gelmişemi* (*gelmiş miyim*). (5) In the conjugation of the verb, *k* and *χ* are used instead of *z* in the 1st person plural: *gelmirik* (*gelmiyoruz*); *almarıχ*, (*almayız*), *varajıχ* or *varacıχ* (*varacağız*), *sata bilmerik* (*satamayız*). (6) With personal names, instead of the plural suffix, *gil* is used, which means "house" in Čuwash: *Ahmetgil* (*Ahmet'ler*), *Memmetgil* (*Mehmet'ler*), *Hesengil* (*Hasan'lar*).

Verbs:

Ādharī has no necessitative mood; instead, it uses *gerek* with the optative: *gerek alam*, *gerek satam*, *gerek isdiyesen* (*istemelisin*).

The suffix of the 2nd person of the imperative is an invariable *ginen*, found only in Ādharī: *gelginen*, *atginen*.

The suffix of the present I tense is *-ir*[4]: *gelirem*, *gelirsen*/*gelisen*, *gelir*, *gelirik*/*gelürüχ*/*gelüruχ*, *gelirsiz*/*gelisüz*, *geliller*/*gellile*. The negative suffix is *-mir*/*-mır*: *gelmirem*, *gelmirsen*/*gelmisen*, *gelmir* . . . *gelmiller*/*gelmille*. The impotential form is: *gelemmirem*, *gelemmirsen*/*gelemmisen*, *gelemmir* . . . *gelemmiller*/*gelemmille*.

The present II or aorist tense is formed with *-er*/*-ar*: *gelerem*/*gellem*, *gelerse*. The negative: *gelmerem*/*gelmenem*, *gelmezsen*/*gelmesen*, *gelmez*, *gelmerik*/*gelmeruχ*, *gelmezsiñiz*/*gelmesüz*, *gelmezler*/*gelmezle*. The impotential: *gelemmerem*, *gelemmezsen*/*gelemesen* etc. The idea of inability is also expressed by the use of

the auxiliary verb *bilmemek*: *gele bilmirem, gele bilmirsen* etc.

The optative: *olam/olum, olasan, ola, alaχ, olasîñîz/olasîz, olalar/olala.* Negative: *almîyam/almiyem, almîyasan/almiyesen, almîya/almiye, almîyah/almîyaχ, almîyasîñîz/almiyesiñiz/almiyesiz, almîyalar almiyeler.*

The dubitative: *almîşam, almîşsan/almîsan, alîp/alîf/alîtdî, almîşîχ/almîşuχ, almîşsîñîz/almîsîz/almîsuz, alîpla/alîflar/alîtdîlar.*

Participle and gerundives: The participle in widest use is in *-en/-an*: *gelen, satan.* Ādharī is badly off for gerundives. In place of *-ken* and *-rek* it makes use of *-ende/-anda*: *gelende* (*gelirken*). The participle in *-diχ* is not used in the absolute form but only with case-endings.

(ii) LITERATURE.

If we set aside the *Kitāb-ī Dede Korkud* [*q.v.*], whose composition is ascribed to the 11th century, although the text was probably not fixed before the 14th, the first great name in Ādharī Turkish literature is that of Shaykh ʿIzz al-Dīn Asfarāyinī, a renowned 13th-century poet who wrote under the *makhlaṣ* of Ḥasan-oghlu or Pūr Ḥasan.

Two poets of the 14th century who played an important part in the development of Ādharī literature were Ḳāḍī Burhān al-Dīn [*q.v.*] and Nesīmī. Nesīmī [*q.v.*], who sometimes used the *makhlaṣ* of Ḥüseynī, was a contemporary of Tīmūr. A master of Arabic and Persian, as well as of Ādharī, he used his poetic gift to propagate the Ḥurūfī doctrine. His simple and attractive diction made him the most popular poet of his time. The mediaeval period of Ādharī literature is regarded as closing with him, but the themes and lyricism of his poetry had their influence on the development of the new period.

The simple Turkish style introduced by Nesīmī was raised to its greatest heights by Ḥabībī, Shāh Ismāʿīl the Ṣafawī and Fuḍūlī. Ḥabībī, poet, lyricist and scholar, who for a while enjoyed the patronage of Shah Ismāʿīl Ṣafawī, constitutes a stage between Nesīmī, Shāh Ismāʿīl and Fuḍūlī. The language of his matchless ṣūfī love-poems differs but little from that of his predecessors, whereas his contemporary Shāh Ismāʿīl [*q.v.*] ("Khaṭāʾī", 1485-1524) made a literary vehicle of the real Ādharī Turkish of the people. This departure from the classical literary language has been explained as due simply to Shāh Ismāʿīl's desire to find a large audience for his political and religious views. At all events he opened a new period in Ādharī literature, both by his endeavour to escape from the Perso-Arabic vocabulary used by Fuḍūlī [*q.v.*], and by his own remarkable creative powers. The course taken by writers after him was towards the language and literature of the people.

In this new development, which continued through the 17th and 18th centuries, an important part was played by the political, social and cultural movements then afoot in Ādharbaydjān. Classical literature began to develop side by side with the literature of the people, in the semi-independent khānates then coming into existence. Among the products of this folk-literature were romantic poems such as *Kör-oghlu, ʿĀshîk Gharib, Shāh Ismāʿīl* and *Aṣlî we-Kerem*. This genre, known as *ʿāshikh* (*ʿāshik*) literature, made great advances in Ādharbaydjān and formed a bridge between the classical literary language and the local dialects.

The progress made by folk-literature had its effect on the development of the classical literature, as is particularly evident in the language of the 17th- and 18th-century poets Mesīḥī, Ṣāʾib Tabrīzī [*q.v.*], Ḳawsī, Agha Mesīḥ Shirwānī, Nishāṭ, Widādī and Wāḳīf. Of these, Ḳawsī and Mesīḥī are especially noteworthy for their poetic power. Above all, the creative writers Widādī and Wāḳīf (18th century), who were steeped in the *ʿāshikh* literature, secured a large public for their poems among the broad mass of the people. Widādī, a prolific lyric poet, greatly enriched Ādharī literature. His contemporary, Molla Panāh Wāḳīf (1717-97) is considered the founder of the modern school. He chose his themes from life and appears in his poems as an historian and a realist. The simplicity, sincerity and melodiousness of his sweet songs in praise of his beloved and other beauties, replete with the lyricism of the people, have won him a great and abiding fame among the Ādharīs. In the same category is Dhākir (1774-1857), the greatest master of 19th-century comic poetry in Ādharī. The foremost stylist of Ādharī literature, he exposed in biting lampoons the injustices and shortcomings of the age.

After Wāḳīf a new stage begins. Ādharī literature underwent a virtual revolution, acquiring a number of new genres, thanks to the mature genius of Akhund-zāde [*q.v.*]. For the first time we find historical works, drama and prose-writings. ʿAbbās-Ḳulī Agha Ḳudsī (Bakikhānlî: 1794-1847), poet, scholar and lover of learning, is noted for his lyrical and satirical works. The literary coteries founded by Mirzā Shefīʿ "Wazeh", Nebātī and Natawan Khanîm (1837-97) on the one hand, and in Karabagh and Shamakhî on the other, and continued by such poets as Sayyid ʿAẓīm, ʿĀṣī, Newres, Ḳudsī, Ṣafā and Sālik, contributed by their rivalries to the enrichment of Ādharī literature. Seyyid ʿAẓīm (1835-88), who was recognized as a master of the *ghazal* and the *ḳaṣīda*, joined *Ekindji*, the progressive newspaper founded in 1875 by Ḥasan Bek Zerdābī (1841-1907) and devoted his poetic powers to castigating the fanaticism of the people.

The end of the 19th century may be described as

the period of the development of the Ādharī press. The appearance of *Ekindji*, the first Ādharī newspaper, was followed by that of several others: *Ḍiyā* and *Ḍiyā-i Ḳafḳas*, at Tiflīs (1879-1884); *Keshkül* (1883-91), *Sharḳ-ī Rūs* (1903-05), all of which served as rallying-points for progressive men of letters. The tempo of this development quickened remarkably after the Russian revolution of 1905, conditions becoming then more favourable, and new topics, ideas and figures began to appear. A stream of new periodicals arose: *Ḥayāt*, *Irshād*, *Teraḳḳī*, *Kaspiy*, *Ačïḳ Söz*. Their publishers were Aḥmed Agha-oghlu, ʿAlī Bey Ḥüseyn-zāde, ʿAlī Merdān Topčī-bashī and Meḥmed Emīn Resūl-zāde, nationalists and modernists with a knowledge of Ottoman, Russian and Persian literary and political life. Thanks to their labours and those of men like them, the common people became accustomed to the new cultural movement. The protagonist in the struggle was Alekper Ṣābir (d. 1911), the unequalled master of Ādharī satire, who used all the powerful resources of his pen to flay reaction, fanaticism and ignorance. Support came to him from the famous poet Djelīl Mamet Ḳulī-zāde, editor of the progressive and democratic revue *Molla Naṣr al-Dīn*, and from ʿAbbās Ṣīḥḥat (1874-1918).

Meḥmed Hādī and Ḥüseyn Djāwid were influenced by the literature of Turkey, imitating Nāmïḳ Kemāl, Fikret and Ḥāmid, and the poet Aḥmed Djewād also showed the influence of the Turkish national literary movement. Nedjef Bey Wezīrli and ʿAbd ül-Raḥīm Bey Ḥaḳwerdi maintained a constant flow of dramatic works, while Magoma and members of the Ḥadjībeyli family composed operettas and operas for the Ādharī theatre, laying the foundations of a national music.

The chief figures of the latest period, from the fall of the independent Republic of Ādharbaydjān to the present day, are Djelīl Mamet Ḳulī-zāde, Aḳwerdi, ʿAbd Allāh Shāʾiḳ, Djaʿfar Djabbarlī, and, of the younger generation, the poets Süleymān Rüstem, Ṣamed Wurgun, Rafīʿbeyli Nigār, Mīrwarī Dilbāzī.

Bibliography: The most important studies of Ādharī literary history are listed in *IA*, s.v. *Âzerî* (M. F. Köprülü). Other notable works are: B. Çobanzade, *Azerî edebiyatının yeni devri*, Baku 1930; M. Ali Nazim, *Azerbaydjanskaya khudojestvennaya literatura, Trudi Azerbaydjanskovo filial'a*, xxx, Baku, 1936); *Muhtasar Azerbaycan edebiyatı tarihi*, Baku 1943; *Antologiya azerbaydjanskoy poezii*, Moscow 1939; B. Nikitin, *La littérature des Musulmans en U.R.S.S.*, *REI*, 1934, cahier iii; M. E. Resulzade, *Çağdaş Azerbaycan edebiyatı*, Ankara 1950; A. Vahap Yurtsever, *Sâbir'in Azerbaycan edebiyatındaki yeri*, Ankara 1951. (A. Caferoğlu)

ʿADHRĀʾ [see nudjūm].

ADHRIʿĀT, the Edrei of the Bible, to-day Derʿa, chief town of Ḥawrān, 106 km. south of Damascus. Situated on the borderline between a basaltic region and the desert, the town, formerly renowned for its wine and oil, was always a great market for cereals and an important centre of trade routes. Before the Assyrian conquest (732 B.C.) the kingdoms of Damascus and Israel contended for it; some scholars have identified it with the Aduri of the Amarna tablets. The capital of Batanea, Adraa was taken by Antiochus III in 218 B.C.; then occupied by the Nabateans; next it came under Roman domination, and from 106 onwards was incorporated in Provincia Arabia. In the Christian era, Adraa became the seat of a bishopric of Arabia. In 613 or 614 the Persians, in the course of their victorious campaign against the Byzantines, sacked the town and destroyed the olive-groves of the region (al-Ṭabarī, i, 1005, 1007). On the eve of the hidjra, Adhriʿāt was the centre of an important Jewish colony; the tribe of Naḍīr, driven out of Medina by Muḥammad, took refuge there with their co-religionists. During the caliphate of Abū Bakr the inhabitants submitted to the Muslims, and acclaimed ʿUmar when he passed through the region. It is stated that Muʿāwiya II b. Yazīd was born there. At the time of the Ḳarmaṭian rebellion, 293/906, the population was massacred.

We find the place, called 'City of Bernard d'Étampes', in the works of the chroniclers of the Crusades, in 1119 and 1147 in particular. During the Mamlūk and Ottoman epoch Adhriʿāt, capital of Bathaniyya, formed part of the province of Damascus and was one of the stages of the Pilgrimage. The building of the railway linking Damascus, ʿAmmān, and Medina made it an important station, a junction for Buṣrā and Ḥayfā; it was occupied by the British on 28 September 1918.

At the present day Derʿa is an important railway centre, the southern road from Damascus to Baghdād passes through it, and it is a Syrian frontier post on the Jordan border.

Adraa; Schumacher, *Across the Jordan*, 121 f.; R. Dussaud, *Topographie hist. de la Syrie*, 325 ff.; H. Lammens, *Le siècle des Omeyyades*, 169; R. Grousset, *Hist. des Croisades*, i, 547, ii, 215; J. Cantineau, *Les Parlers du Ḥōrān*. For the inscriptions cf. *Syria, Princ. Exp.*, i, 10; ii/A, 307; iii/A, 281 ff.; iv/D, 64 ff. (F. Buhl-N. Elisséeff)

ADHRUḤ (cf. Ἄδροα), more rarely Udhruḥ, a place between Maʿān and Petra, a magnificent Roman camp (the surviving monuments are described by Brünnow and Domaszewski), supplied by a gushing spring. This place, situated in pre-Islamic times in the Djudhām country, was visited by the Ḳurayshite caravans. It submitted to Muḥammad on payment of tribute during the expedition to Tabūk (9/631); the treaty of capitulation handed down by our authorities is probably authentic. Muʿāwiya is said to have received there the homage of al-Ḥasan, the son of ʿAlī. According to some Arab geographers Adhruḥ was the chief town of the district of al-Sharāt, in the province of al-Balḳāʾ. It is not mentioned since the time of the crusaders, who nevertheless possessed in that region Ahmant, Vaux Moyse (= Wādī Mūsā), etc.

Adhruḥ became famous in Islamic history on account of the conference which took place there after the battle of Ṣiffīn, in order to reach a decision in the conflict between ʿAlī and Muʿāwiya (see ʿalī and muʿāwiya).

Bibliography: Iṣṭakhrī, 58; Maḳdisī, 54, 155; Yaʿḳūbī, *Buldān*, 326; Hamdānī, 129; Bakrī (Wüstenfeld), 83; Yāḳūt, i, 184 f.; Brünnow and Domaszewski, *Die Provincia Arabia*, i, 443 ff.; Le Strange, *Palestine under the Moslems*, 35, 39, 384.—The statement in *Ḥudūd al-ʿÂlam*, 150, that the place was inhabited by Khāridjites, is due to a confusion between al-Sharāt and *al-shurāt* (= Khāridjites).

(H. Lammens-L. Veccia Vaglieri)

AL-ADHWĀʾ, broken plural of *dhū*, denoting the kings and lords of Yaman whose names are

formed with Dhū. The most famous are the Mathāmina, the eight princes (*ḳayl* [*q.v.*]) of Ḥimyar [*q.v.*] who had the right of investiture at the election of the king. Their names are: Dhū Djadan, Dhū Ḥazfar, Dhū Khalīl, Dhū Muḳār (Maḳār), Dhū Saḥar, Dhū Ṣirwāḥ, Dhū Thuʿlubān (Thaʿlabān), Dhū ʿUthkulān. Al-Hamdānī, *Iklīl*, viii (ed. N.A. Faris), 159 includes Dhū Murāthid, who is included also in the verses cited by Nashwān, i, 263, where Dhū Saḥar is omitted.

Bibliography: Lane, 985a; Hamdānī, *Südarab. Muštabih*, ed. Löfgren, 48-54 (where also the derivation *adhwāʾiyya* "title or dignity of *al-Adhwāʾ*", cf. O. Löfgren, *Ein Hamdānī-Fund*, Uppsala 1935, 31); Nashwān, *Shams al-ʿUlūm*, ed. Zetterstéen, i, 263, ed. ʿAẓīmuddīn Aḥmad, GMS xxiv, 16, 39, 48; M. Hartmann, *Die arabische Frage*, 319 ff. (O. Löfgren)

ʿADĪ B. ḤĀTIM B. ʿABD ALLĀH B. SAʿD AL-ṬĀʾĪ, ABŪ ṬARĪF, Companion of the Prophet, and subsequently a follower of ʿAlī. Son of the celebrated poet Ḥātim al-Ṭāʾī [*q.v.*], and, like him, a Christian, he had inherited the command of his tribe from his father, but when threatened with the loss of it he became converted to Islam, in 9 or 10/630-1, and collected the taxes of Ṭayyiʾ and Asad. After the death of the Prophet he remained faithful to Islam, and prevented his tribe from apostatizing during the *ridda*. Later on he took part in the conquest of ʿIrāḳ, and received from ʿUthmān a grant of land, al-Rawḥāʾ, on the Nahr ʿĪsā (cf. Le Strange, *Lands*, index) not far from the future Baghdād. However, he kept aloof from ʿUthmān, and it can be inferred from al-Ṭabarī (i, 3164) that he had some connection with his assassins. He fought under ʿAlī in the Battle of the Camel (36/656), where he lost an eye. During the negotiations which preceded Ṣiffīn he was one of the delegates sent by ʿAlī to Muʿāwiya; then, as standard-bearer, he took part in the battle, in which his three sons were killed. Afterwards he lived at Kūfa, where he did not renounce his ʿAlid sentiments, and offered effective protection to members of his tribe who were persecuted by the powerful governor of ʿIrāḳ, Ziyād b. Abī Sufyān. He died in 68/687-88.

Djūsiya; Wüstenfeld, *Gen. Tabellen*, index. (A. Schaade *)

ʿADĪ B. MUSĀFIR AL-HAKKĀRĪ, SHAYKH ʿADĪ, Ṣūfī leader. He was an Arab of Ḳuraysh, an Umayyad, born at Bayt Fār near Baalbek; he met ʿAḳīl al-Manbidjī, Ḥammād al-Dabbās, ʿAbd al-Ḳāhir al-Suhrawardī, ʿAbd al-Ḳādir al-Djīlī, Abu ʾl-Wafā al-Ḥulwānī and Abū Muḥammad al-Shanbakī. He travelled far, spending much time in the wilderness till he settled in Laylash (Lalēsh) near Mosul apparently before 505/1111, made for himself a convent there and started an order called the ʿAdawiyya. His rule was so severe that many ṣūfī leaders were unable to follow it; it is said that he was the first to train novices. His *ʿaḳīda* is quite orthodox and contains nothing unusual; he was opposed to the Muʿtazila and to all innovations; as a ṣūfī he was like al-Ghazzālī. Ibn Taymiyya calls him a pious follower of the *sunna*, equates him with al-Shāfiʿī as a true believer and with ʿAbd al-Ḳādir al-Djīlī as a ṣūfī; he adds that he experienced ecstasies and that there was some extravagance in him which increased under his successors. He died in 557/1162 or two years earlier or a year later. The sayings and poems ascribed to him might have been uttered by any ṣūfī. The poem quoted by Layard can hardly be genuine.

According to a Christian legend, told by a monk Rāmīshoʿ, he was a Kurd; his father tended the flocks of a monastery and he himself became its business manager. Taking advantage of the absence of the abbot and some of the monks, he massacred those who remained and seized the building. Three years later he was summoned to Marāgha and put to death there in 619/1221; but in 682/1283 the building was restored to his descendants.

As Shaykh ʿAdī had no children, the headship of the order passed to the offspring of his brother Ṣakhr. Another version is that ʿAdī adopted the son of a servant, Ḥasan al-Bawwāb, and his descendants provided the heads who were treated with unusual respect, parents being proud to lend their daughters to them. The order was confined mainly to the Kurds though it had a convent in the Ḳarāfa at Cairo. The members looked towards ʿAdī (i.e. towards his grave) when they prayed and made him their treasure on which they relied in the hereafter; such devotion was not known in any other order. It is said that the extravagant views did not develop at once; only later did the sect give up the Muslim prayers and believe that ʿAdī was eating bread and onions with God and was the provider for his people. One chief of the order, Ḥasan b. ʿAdī, wept while listening to a sermon whereupon the Kurds nearly killed the too eloquent preacher. The order was strong enough to attract the attention of authority; this Ḥasan was put to death in 644/1246 by Badr al-Dīn Luʾluʾ of Mosul though the Kurds believe that he is not dead. Six years later Luʾluʾ dug up the bones of Shaykh ʿAdī and burnt them. In 655/1257 Sharaf al-Dīn Muḥammad b. ʿAdī was called to the help of ʿIzz al-Dīn Kay Khusraw of Malaṭya along with another Kurd, Aḥmad b. Bilās. Another descendant fled to Egypt with his Mongol wife in 675/1276 and yet another fled to Syria where he was killed in 680/1281. Early in the 8th/14th century one of the family kept almost royal state in Bayt Fār; another, Amīrān, served the government in Syria, then retired to Mizza and was venerated by the Kurds who made offerings to him. As they planned rebellion, Amīrān was put in gaol (at his own wish, *al-Durar al-Kāmina*, i, 414) and all was quiet, though the Kurds bowed down in front of the tower in which he was confined.

A lawyer stirred up the orthodox in 817/1414, so they destroyed the tomb and burnt the bones of the Shaykh in the presence of the remnant of his followers who are here called Ṣuḥbatiyya. Later the tomb was rebuilt.

For the relation between the historical Shaykh ʿAdī and his rôle in the religion of the Yazīdīs, cf. YAZĪDĪ.

ʿADĪ B. AL-**RIḲĀʿ**, ABŪ DUʾĀD ʿADĪ B. ZAYD B. MĀLIK B. ʿADĪ B. AL-RIḲĀʿ AL-ʿĀMILĪ, Arab poet of Syria, who was, in Damascus, the panegyrist of the Umayyads, especially of al-Walīd b. ʿAbd al-Malik (86-96/705-15), in the presence of whom he fought a poetical contest with Djarīr; he was also the butt of attacks by al-Rāʿī. ʿAdī was celebrated for the grace of his *nasīb* (see especially al-Mubarrad, *al-Kāmil*, 85, concerning Umm al-Ḳāsim) and for the care with which he composed his poems. His poems were known in Spain at an early date (*BAH*, ix, 397). He lived at least into the caliphate of Sulaymān b. ʿAbd al-Malik (96-9/115-7).

Bibliography: Djumaḥī, *Ṭabaḳāt* (Hell), 144-5; Djāḥiẓ, *Ḥayawān*², iii, 64, iv, 336, v, 441; Ibn Ḳutayba, *Shiʿr*, 391-4; *Aghānī*¹, viii, 179-83; Ibn Durayd, *Ishtiḳāḳ*, 225; Marzubānī, *Muʿdjam*, 253; Maymanī, *al-Ṭarāʾif al-adabiyya*, 81-97 (three poems); Āmidī, *Muʾtalif*, 116; Nuwayrī, *Nihāya*, iv, 246-50; Brockelmann, S I, 96; Nallino, *Scritti*, vi, 161-2 (Fr. transl., 248).

(CH. PELLAT)

ʿADĪ B. **ZAYD**, Arab Christian poet of al-Ḥīra, of the second half of the 6th century. His life was spent partly at the Sāsānid court at Ctesiphon (al-Madāʾin), where he was secretary for Arab affairs to Chosroes Parwīz, and partly at the Lakhmid court at al-Ḥīra, where he was a courtier and councillor of al-Nuʿmān III, whom he had helped to the throne. This last, however, as a result of the intrigues of his enemies, later had him incarcerated, and finally put to death in prison (about 600 A.D.). ʿAdī is one of the most curious figures in pre-Islamic Arab history and poetry. With Nābigha al-Dhubyānī and al-Aʿshā he represents the type of courtly and urbane poet familiar with a higher level of culture and civilization than those of the desert. Arab historico-literary tradition accordingly regards him as being on the fringe of the main stream of the poetry of the *djāhiliyya*, because of his "un-Nadjdī" language, although the subjects with which he dealt and the form which he gave them had a long and profound influence on the development of Arab poetry in the Muslim epoch.

As ʿAdī's *dīwān* has been lost, only fragments of his work are known to us (collected in an incomplete fashion and without any critical sense by L. Cheikho, *Shuʿarāʾ al-Naṣrāniyya*, 439-74, to which should be added fragments in al-Djāḥiẓ, *al-Ḥayawān*, iv, 65-6, al-Maḳdisī, *al-Badʾ wa 'l-Taʾrīkh*, i, 151, Ibn Ḳutayba, *al-Shiʿr*, 112-3, and various quotations in the *Ḥamāsa* of al-Buḥturī). Among these verses, those describing Biblical episodes (the creation and man's first sin) are of interest for the history of religion and culture: they, together with other evidence, confirm that the poet was a Christian (*ʿibādī*). But the main themes of his poetry seem to have been, on the one hand, praise of wine, and, on the other, meditation on the decay of human passions and effort, rendered vain by the inexorable passage of time. Of the former category a few sparse but significant examples have been preserved; we know that they were appreciated and imitated by Walīd b. Yazīd and, later, by Abū Nuwās. On the second theme, which was probably inspired by the poet's own misfortunes, we possess numerous fragments which are interesting not only for their pious and ascetic *Stimmung* (a curious contrast with the hedonism of the bacchic poetry), but for the reflections on and evocation of Oriental (Arabo-Iranian) history which are to be found there, exemplifying the vanity and feebleness of man. Instances of this are the famous fragment on al-Nuʿmān I and the castle of Khawarnaḳ (*Aghānī*³, ii, 138-9 and elsewhere), another on Hatra (al-Buḥturī, *al-Ḥamāsa* (Cheikho), 198), and one in Ibn Ḳutayba, 112-3, on Djadhīma al-Abrash and al-Zabbāʾ, which almost looks like a ballad. From all these relics, amounting to rather less than 400 lines, we receive the impression of a brilliant artistic personality, who contrived to give Arabic poetic form to the old themes of Semitic pessimism, and, at the same time, in contrast to the Biblical author of Ecclesiastes, to accompany them with a positive appreciation of some of the good things of life.

Bibliography: Ibn Ḳutayba, *Shiʿr*, 111-7; *Aghānī*³, ii, 97-154; J. Horovitz, *Adi ibn Zaid, the Poet of al-Hira, IC*, 1930, 31-69; F. Gabrieli, *Adi ibn Zaid, il poeta di al-Ḥira, Rend. (F. GABRIELI)

AL-ʿ**ĀḌID** LI-**DĪN ALLĀH**, the eleventh and last Fāṭimid caliph of Egypt. His name was ABŪ MUHAMMAD ʿABD ALLĀH B. YŪSUF, and was the grandson of the caliph al-Ḥāfiẓ; his father had been killed by the vizier ʿAbbās b. Abi 'l-Futūḥ on the very day of the enthronement of the caliph al-Fāʾiz. Al-ʿĀḍid succeeded this latter, his cousin, a sickly child who died at the age of eleven and a half. He himself came to the throne on 17 Radjab 555/23 July 1160, and was chosen by the all-powerful minister al-Ṣāliḥ Ṭalāʾiʿ [*q.v.*], who had been governing Egypt for more than six years, because of his tender age. Al-ʿĀḍid was, in fact, born on 20 Muḥarram 546/9 May 1151.

The history of this child-caliph's reign is thus in no way one of personal action on his part. The Arab writers seem uncertain, and intermittently attribute to him stray impulses of revolt, which had little success. We shall cite them, although admitting that in general the caliph looked on helplessly at a shattering series of tragic incidents of which he himself was finally to be the victim.

Clearly an important factor eludes us, as we have little information about the role of the secret camarilla of the Palace, whose intermittent influence is hinted at. We cannot but observe the personal ambition of the protagonists, who lived dangerously and were preoccupied with increasing their personal prestige, if only with a view to saving their skins. The death-throes of the Fāṭimid régime are a sorry spectacle.

The better to ensure the docility of the young caliph, Ṭalāʾiʿ made him his son-in-law, which however did not save Ṭalāʾiʿ from being assassinated, the end that he had always feared, on 19 Ramaḍān 556/11 September 1161. To be sure, the caliph was not liberated by this murder, to which he was possibly privy, for he found himself compelled to

confer the vizierate on Ruzzīk [*q.v.*], the son of the dead man. Ruzzīk had no intention of giving up any of his prerogatives, and the caliph established relations with a prefect of Upper Egypt, S̲h̲āwar [*q.v.*], in order to invite him to rid him of Ruzzīk. S̲h̲āwar recruited troops and took the offensive; he succeeded in taking Cairo and assuming power in Rabīʿ I 558/February 1163. The caliph quickly perceived that he had made a blunder, as the new minister continued, like his predecessors, to seclude his master. S̲h̲āwar was soon betrayed by one of his own officers, Ḍirg̲h̲ām [*q.v.*], who took his place in Ramaḍān 558/August 1163. There were indeed grounds for the sad reflection of a contemporary writer, ʿUmāra, who observed that in those times "any man who had received the confidence of his brother betrayed him". Then followed the crucial event which was to bring about the fall of the dynasty. S̲h̲āwar had succeeded in making his escape; he took refuge at the court of the Zangid prince of Aleppo, Nūr al-Dīn, and asked his help to regain power. The prince of Aleppo did not hesitate, being fired with the idea of re-establishing Sunnism in Egypt and reconstituting Islamic unity. The expeditionary force was commanded by S̲h̲īrkūh [*q.v.*], "a man full of audacity to whom fear was unknown", who took with him Ṣalāḥ al-Dīn, the future founder of the Ayyūbid dynasty. Ḍirg̲h̲ām was beaten in the open country and killed, and S̲h̲āwar became vizier again in Ramaḍān 559/August 1164.

Difficulties arose in connection with S̲h̲īrkūh, but it does indeed seem that he was not to blame for them. S̲h̲āwar had demanded help from Sunnīs against the S̲h̲īʿites whose chief minister he was; the next time his treachery was much more serious, for he asked for the intervention of Amalric I to drive the forces of S̲h̲īrkūh out of Egypt. The temporary results of this are well known: S̲h̲īrkūh capitulated at Bilbays and went back to Syria, the Franks occupied Cairo for a short time, and S̲h̲āwar had Fusṭāṭ set on fire, being unable to defend it. For the vizier had become alarmed and was trying to negotiate the withdrawal of the Frankish troops. The caliph, who still had absolutely no authority, had now for his part decided to appeal to Nūr al-Dīn, thus signing the warrant for his imminent fall.

This was the third invasion by S̲h̲īrkūh. It was decisive; he had S̲h̲āwar assassinated on 17 Rabīʿ I 564/18 January 1169, and seized the viziership, which he held for only two months, for he died on 22 D̲j̲umādā II/23 March. His nephew, Ṣalāḥ al-Dīn, succeeded yet him.

Ṣalāḥ al-Dīn energetically repressed the internal disorders, and did not hesitate to accept the challenge of street fighting in the capital itself, in the course of which the remnants of the Fāṭimid army, the Sudanese and Armenian forces, were exterminated. Then, one fine day, the name of the ʿAbbāsid caliph of Bag̲h̲dād was proclaimed in Cairo, in an atmosphere of complete indifference. A theologian of Persian origin, al-K̲h̲abūs̲h̲ānī, carried this out, and three years later Ṣalāḥ al-Dīn rewarded him by opening a college for him. The dedicatory inscription has been preserved; it celebrates the importance of S̲h̲āfiʿism, "characterized by a solid doctrinal foundation, unified by the method of al-As̲h̲ʿarī, against vain reasoners and other innovators". Perhaps the caliph ʿĀḍid never knew of his misfortune; he died a few days after the ʿAbbāsid proclamation, on 10 Muḥarram 567/13 September 1171. He was not yet twenty-one.

Thus ʿĀḍid was far from being a caliph on the scale of some of his predecessors. Nonetheless, we posses some interesting information about his personal appearance, for he received a Frankish embassy led by S̲h̲āwar. The Franks were taken, in the royal palace, to a vast hall divided into two by a great curtain of silk and gold, "with a pattern of beasts, birds, and persons". S̲h̲āwar prostrated himself three times before this hanging, the third time in an attitude of most humble adoration. Suddenly the great tapestry was raised and the caliph appeared, seated on a throne of gold, encrusted with precious stones. His face was veiled, and the removal of the glove of his right hand was an elaborate performance. The ambassadors were told that "the caliph was a youth whose beard was just beginning to appear, and that he was dark-skinned and very plump".

ADIG̲H̲E [see ČERKES].

AL-ʿ**ĀDIL**, title of two Ayyūbid princes:

1. AL-MALIK AL-ʿĀDIL ABŪ BAKR MUḤAMMAD B. AYYŪB, with the honorific title of SAYF AL-DĪN ("Sword of the Faith", called by the Crusaders *Saphadin*), the brother, assistant, and spiritual heir of Saladin (Ṣalāḥ al-Dīn, [*q.v.*]). He was born in Muḥarram 540/June-July 1145, or according to other accounts in 538/1143-4, in Damascus or in Baalbek, thus being six or eight years younger than his celebrated brother.

Al-ʿĀdil accompanied Saladin to Egypt in the third and final expedition of S̲h̲īrkūh (564/1169). His first important appointment was to the government of Egypt during Saladin's frequent absences in Syria after the death of Nūr al-Dīn in 569/1174. In this position he proved himself an able and loyal administrator, and apart from sending reinforcements and supplies, when called upon, for Saladin's army, he enjoyed full and independent powers in both external and internal affairs, being "the real Sultan of Egypt" (ʿImād al-Dīn, in *al-Barḳ al-S̲h̲āmī*, v, fol. 117r). After the capture of Aleppo in 579/1183, Saladin at first gave it to his son al-Ẓāhir G̲h̲āzī, but a few months later, on al-ʿĀdil's own request, transferred it to him with full powers of government (diploma in ʿImād al-Dīn, ibid., 124-6, dated S̲h̲aʿbān 579), and appointed his nephew Taḳī al-Dīn ʿUmar to Egypt, as regent for al-Afḍal [*q.v.*]. Although al-Ẓāhir loyally submitted to his father's decision, his disappointment on this occasion probably contributed to his later strained relations with al-ʿĀdil. Three years later, however, in 582/1186, again on al-ʿĀdil's suggestion, al-Ẓāhir was reinstated in Aleppo, and al-ʿĀdil himself reappointed to Egypt, this time as regent for Saladin's son al-ʿAzīz ʿUt̲h̲mān. He remained in this post through the campaigns of 583-4/1187-8 and the ensuing Crusade, himself taking part in the conquest of southern Palestine and Karak, and sending ships, men, and supplies in support of Saladin's attempt to raise the siege of ʿAkkā (585-7/1189-91). During the subsequent operations in Palestine he played a particularly important part in the negotiations with Richard Coeur-de-Lion, with whom he formed such friendly relations that it was even proposed that he should marry Richard's

sister Joan, and that they should rule jointly over Palestine. In the following year (588/1192), in consequence of the disorders resulting from Taḳī al-Dīn's unauthorized campaigns in the Djazīra and Diyār Bakr, al-ʿĀdil was transferred to the government of these provinces (at the same time retaining Karak and Balḳāʾ). Behind these frequent changes there may perhaps be discerned a consistent policy applied by Saladin. Of all his brothers, the one in whom he had the most complete confidence, and on whose advice he relied in all contingencies, was al-ʿĀdil. It was therefore natural that al-ʿĀdil should be placed in command of that province which, in the changing conjunctions of events, was for the time being the most vital for maintaining the unity and strength of Saladin's possessions.

On Saladin's death in 589/1193, al-ʿĀdil's first task was, in fact, to defeat an attempt by ʿIzz al-Dīn, atābeg of Moṣul, to reoccupy the Djazīra. Having secured his own province, he next intervened as mediator in the rivalries between Saladin's sons al-ʿAzīz of Egypt and al-Afḍal of Damascus. Though at first he supported al-Afḍal, the latter's incapacity became so manifest that he finally joined al-ʿAzīz to drive out al-Afḍal and himself took over the government of Damascus as the viceroy of al-ʿAzīz (592/1196). He was thus on the spot and ready to deal energetically with the Crusaders of 1197. On the death of al-ʿAzīz (595/1198) the Egyptian troops split into two factions, one supporting al-Afḍal, the other al-ʿĀdil. Al-ʿĀdil was besieged in Damascus until relieved by his Mesopotamian troops under his son al-Kāmil, when he pursued al-Afḍal into Egypt, defeated him, and was proclaimed Sultan of Egypt and Syria (596/1200). His claim was challenged by al-Ẓāhir, who again besieged Damascus, but al-ʿĀdil succeeded in forcing his withdrawal and pursued him to Aleppo, where al-Ẓāhir was finally compelled to recognize his suzerainty (598/1202). In 604/1207 his Sultanate was formally confirmed by the Caliph, and thereafter he distributed his own provinces between his sons: al-Kāmil in Egypt, al-Muʿaẓẓam in Damascus, al-Awḥad and al-Ashraf in the Djazīra and Diyār Bakr, himself moving from place to place as circumstances required.

So far as can be judged, the cornerstones of al-ʿĀdil's policy were to hold Saladin's empire together, in face of the ever-present possibility of fresh Crusades from overseas, and at the same time to serve the interests of the Ayyūbid house. Although the major governments were placed in the hands of his sons, it cannot be denied that they were the most capable to administer them, but he maintained at Aleppo the only one of Saladin's sons who showed any capacity and even guaranteed the succession of his infant son (who was also his own nephew), besides maintaining the governments of the collateral branches at Ḥimṣ and Ḥamāh. His personal prestige was unrivalled, and he employed it to strengthen the moral and material welfare of his subjects, by patronizing religion and learning, fostering agriculture and commerce, and maintaining peace. He followed Saladin's policy of negotiating commercial treaties with the Italian states, with the double object of increasing his own military resources and discouraging them from supporting fresh Crusades. With the local Crusader states he ensured peace by a series of truces which covered almost the entire period of his reign, at the same time strengthening his defences against the danger which materialized with the arrival of the Fifth Crusade in 614/1217. Leaving the bulk of his forces on guard in Egypt, he moved into Syria ro assist al-Muʿaẓẓam to screen the approaches to Jerusalem and Damascus, and while organizing reinforcements for the defence of Damietta fell ill and died at ʿĀliḳīn, outside Damascus, on 7 Djumādā I, 615-31 August 1218.

2. AL-MALIK AL-ʿĀDIL II ABŪ BAKR SAYF AL-DĪN, son of al-Malik al-Kāmil [*q.v.*] and grandson of the preceding, b. 617/1221. He succeeded al-Kāmil in the government of Egypt (635/1238) but was dethroned by his elder brother al-Ṣāliḥ Ayyūb [*q.v.*] in 637/1240 and died in prison at Cairo on 12 Shawwāl 645/9 Feb., 1248. See AYYŪBIDS.

(H. A. R. GIBB)

AL-ʿĀDIL B. AL-SALĀR, ABU 'L-ḤASAN ʿALĪ, Fāṭimid vizier. He was the son of an Artuḳid officer, who entered the service of the Fāṭimids after the taking of Jerusalem by the Egyptians, in 491/1098. He married the widow of a Zīrid prince who had died in exile at Alexandria.

He first appears in history as governor of Alexandria, at the beginning of the reign of the Fāṭimid caliph al-Ẓāfir. We learn that he assembled troops, marched on Cairo, and, on 7 Shaʿbān 544/10 December 1149, installed himself in the vizier's house, which had been abandoned by his predecessor, Ibn Maṣāl, an old man, who was killed in Upper Egypt on 19 Shawwāl/19 February 1150. In spite of his repugnance, the caliph al-Ẓāfir was forced to accept him as vizier, with the title of al-Malik al-ʿĀdil. He tried, however, to foment a plot against his minister, but the latter got wind of it and took his revenge in a bloodthirsty way by wiping out the corps of pages. Before long he himself was to fall victim to a stepson, ʿAbbās b. Abi 'l-Futūḥ [*q.v.*], who assigned to his own son, Naṣr, the task of assassinating Ibn al-Salār, on 6 Muḥarram 548/3 April 1153. Naṣr carried out the crime with his own hand, and by carrier pigeon informed his father ʿAbbās, who had just taken command of the garrison of Ascalon. ʿAbbās hastened back to Cairo to assume the office of vizier.

An important point about the political career of Ibn al-Salār is that he was the first to consider the possibility of an entente with the prince of Aleppo, Nūr al-Dīn, for making common cause against the Franks. It was doubtless premature; Nūr al-Dīn had his own personal designs on Damascus, which the Crusaders had besieged some years previously. As proof of his good will, Ibn Salār had, in 546/1151, sent the Egyptian fleets against the ports of Jaffa, Sidon, Beirut, and Tripoli, where great damage was caused. The expedition was also a reprisal against the Franks, who had sacked Faramā the previous year.

ʿĀDILA KHĀTŪN, daughter of Aḥmad Pas̲h̲ā, wife of Sulaymān Pas̲h̲a Mizrāḳlī ("Abū Laylā"), Ottoman governor of Bag̲h̲dād. During the lifetime of her husband she took part in the government of the province, holding audiences where the petitions were presented to her through the intermediary of an eunuch. She had also a mosque and a caravanseray built, bearing her name. When on the death of Sulaymān (1175/1761) power was about to slip from her hands, she stirred up against his successor, ʿAlī Pas̲h̲a, first the Janissaries, then five of the principal Mamlūks, and succeeded in having ʿUmar Pas̲h̲a, her brother in law, appointed as governor in the place of ʿAlī (1764). It is not known when and where she died.

(CL. HUART*)

ʿĀDIL-S̲H̲ĀHS, designation of the Muslim dynasty which ruled over Bīd̲j̲āpūr, one of the succession kingdoms to the Bahmanī kingdom of the Dekkan. The independent history of Bīd̲j̲āpūr extends from 895/1489 to 1097/1686 when the kingdom was conquered and absorbed by the Mug̲h̲al empire. The founder of the dynasty, Yūsuf ʿĀdil K̲h̲ān, was a slave in the service of Maḥmūd Gawān, the famous Bahmanī minister. After rising to the position of master of the horse at the Bahmanī court, Yūsuf was appointed to the provincial governorship of Dawlatābād. He took an active part in the intrigues and civil strife which marked the declining years of the Bahmanī kingdom and, according to the historian Firis̲h̲ta, caused the *k̲h̲uṭba* to be read in his own name in 895/1489. The Muslim historians of the dynasty claim a royal lineage for Yūsuf ʿĀdil K̲h̲ān, asserting that he was a son of the Ottoman Turkish sultan Murād II and was saved by his mother from death at the hands of the succeeding Ottoman sultan, his elder brother Muḥammad II, by being entrusted to a merchant of Sāwa, Khʷād̲j̲a ʿImād al-Dīn, who educated him. Eventually he found his way to India to take service under Maḥmūd Gawān. There is no independent evidence corroborating the testimony of historians partial to the ʿĀdil-S̲h̲āh dynasty. That his background was Persian is generally accepted however. Yūsuf ʿĀdil-S̲h̲āh introduced S̲h̲īʿa doctrines, being the first Muslim ruler in India to do so. During his reign, 895/1489-916/1510, spent in almost continual warfare against rival Muslim Dekkan princes and the Hindu rulers of Vījāyanagar, the Portuguese made their appearance off the shores of India, taking possession of the port of Goa. The successors of Yūsuf ʿĀdil-S̲h̲āh reigned as follows:

Ismāʿīl b. Yūsuf	916/1510-941/1534
Mallū b. Ismāʿīl	941/1534-941/1535
Ibrāhīm I b. Ismāʿīl	941/1535-965/1557
ʿAlī I b. Ibrāhīm	965/1557-987/1579
Ibrāhīm II b. Ṭahmāsp b. Ibrāhīm	987/1579-1035/1626
Muḥammad b. Ibrāhīm	1035/1626-1066/1656
ʿAlī II b. Muḥammad	1066/1656-1083/1672
Sikandar b. ʿAlī	1083/1672-1097/1686

Until the beginning of the 11th/17th century and the advent of the Mug̲h̲al threat from the north, the political history of Bīd̲j̲āpūr is filled by continuous warfare with the neighbouring Muslim states of the Dekkan, Bīdar, Aḥmadnagar, Golkonda and the Hindu empire of Vijāyanagar. However, in 972/1564 the four Muslim principalities combined against Vījāyanagar and at Talikot decisively defeated its forces and sacked the capital. The power and prosperity of Bīd̲j̲āpūr reached its zenith under Ibrāhīm II though it was never free from turbulence among the nobles.

Bīd̲j̲āpūr escaped the direct attentions of the Mug̲h̲als until the reign of S̲h̲āh D̲j̲ahān, attempting indeed to acquire territory from Aḥmadnagar which was disintegrating under the onslaught of the Mug̲h̲als. Bīd̲j̲āpūr and the latter clashed and in 1046/1636 the Mug̲h̲als invaded Bīd̲j̲āpūr and forced a peace at which Bīd̲j̲āpūr acknowledged Mug̲h̲al suzerainty. For the next twenty years the kingdom enjoyed peace. In 1068/1656 when Muḥammad ʿĀdil-S̲h̲āh died, S̲h̲āh D̲j̲ahān objected to the succession of ʿAlī ʿĀdil-S̲h̲āh II, invoking his claims as suzerain, and ordered Awrangzīb to invade the kingdom. Operations were stopped, however, at the news of S̲h̲āh D̲j̲ahān's illness and Bīd̲j̲āpūr survived only to face further danger from the Mahratta chief Sīwād̲j̲ī who in 1069-70/1659 destroyed a Bīd̲j̲āpūr army and its leader Afḍal K̲h̲ān in an ambush. Thenceforth Bīd̲j̲āpūr was rarely free from Mahratta depredations. With the accession of a minor, Sikandar ʿĀdil-S̲h̲āh, the kingdom was progressively bereft by Mug̲h̲al and Mahratta of its provinces until in 1097/1686, after a siege of more than a year, the capital itself was taken by Awrangzīb and the remnants of the kingdom absorbed into the Mug̲h̲al empire. Sikandar died in captivity in 1111/1700.

The ʿĀdil-S̲h̲āhs were great builders and made their capital at Bīd̲j̲āpūr [*q.v.*] one of the most magnificent monuments to the architectural genius of Islam in India. They were also great patrons of literature and the important historian Firis̲h̲ta wrote under the patronage of Ibrāhīm ʿĀdil-S̲h̲āh II.

(P. HARDY)

ADIYAMAN, formerly called ḤIṢN MANṢŪR, or Ḥiṣn-i Manṣūr (modern spelling Hüsnümansur), according to Cuinet also called Körkün, a small town in S.E. Anatolia, capital of the *ḳaḍā* of the same name in the *sand̲j̲ak*, now *wilāyet*, of Malaṭiya (formerly it belonged to the *wilāyet* of Maʿmūrat ül-ʿAzīz), 37° 45' N, 38° 15' E. The numbers of the inhabitants given in the past vary: according to EI[1], 10,000, mainly Armenians; according to Sāmī, 25,000, of which only 1255 Christians; according to ʿAli D̲j̲ewād in one passage 1150, in another more than 25,000 of which more than a half were Kurds; according to Cuinet 2,000 (in the whole *ḳaḍā* of Ḥiṣn-i Manṣūr: 42,134). The number in 1945 was 10,192.

The name Ḥiṣn Manṣūr derives from the Umayyad *amīr* Manṣūr b. D̲j̲aʿwana, who was killed in 141/758 on the orders of the ʿAbbāsid al-Manṣūr. Later, Hārūn al-Ras̲h̲īd had the place fortified and gave it a garrison. Thus Ḥiṣn Manṣūr, or Adiyaman,

became the heir of the ancient town of the neighbourhood, Perre, whose site is still marked by aqueducts and rock graves. Subsequently, Ḥiṣn Manṣūr is rarely mentioned; in the 6th/12th century it belonged to the Artuḳids.

(F. Taeschner)

ʿĀDJ, ivory.

1. From early times there was a demand for ivory in the civilizations of the Near East. The Assyrians excelled in the carving of ivory and excavations at Nimrūd and elsewhere have revealed masterpieces seldom surpassed. In the eastern Mediterranean area a tradition of ivory carving persisted and surviving examples have been attributed to the great centres of Antioch and Alexandria during the later centuries of Roman rule. There is no evidence that the workshops of Syria were producing ivories in the century before Islam; but in Egypt the tradition persisted into the Islamic period.

Probably the main source of ivory in the Islamic period was East Africa, the greatest ivory producing area during the Middle Ages. It is unlikely that India exported ivory in any quantity to the Near East or Europe as it scarcely produced enough for its own needs (W. Heyd, *Histoire du commerce du Levant au Moyen-Age*, Leipzig 1886, ii, 629-30). Surviving Islamic ivories seem to be of elephant tusk. Walrus ivory was used for the handles of daggers (see R. Ettinghausen, *The Unicorn*, Washington 1950, 120 ff.) and there are examples of bone carvings from Egypt.

The size and shape of the elephant tusk limits its use to relatively small objects or to elements in large scale decoration. In the Islamic period objects made entirely of ivory include caskets of both rectangular and cylindrical form, combs, oliphants or hunting horns and chess pieces. Techniques of decoration were carving in relief or painting on the surface with coloured stains including gilding; intarsia in which shaped ivory plaques either carved or painted were countersunk in a wooden surface; incrustation in which sheets of ivory were cut to the required shape and stuck to the wooden surface; and incised decoration usually consisting of dots and concentric circles sometimes filled with coloured pigments. Finally, ivories sculpted in the round are extremely rare.

2. It would be strange if ivory had not been in use in the early Islamic period. But so far excavations at sites of the Umayyad and ʿAbbāsid period have revealed no objects of ivory. There are very few ivories attributable to the Sāsānid period in Persia and perhaps the lack of a tradition accounts for this absence of ivory carvings in Mesopotamia and Persia. The cylindrical box with conical cover in the treasury of St. Gereon, Cologne, was made, according to the inscription, in Aden for a governor of Yaman probably about 136/753; but its technique and style belong rather to Egypt (*RCEA*, no. 41, ill. in Cott, pl. 79a). In Egypt Coptic craftsmen kept alive an earlier tradition. Large rectangular panels with both intarsia and incrusted decoration have been variously described as panels of a *tābūt* (coffin) and as book covers; the former is more probable. Pieces have been found in Egypt, and from their style were made by Coptic craftsmen in the 9th and 10th centuries. (For examples in the Arab Museum, Cairo, see Zakī Muḥammad Ḥasan, *Islamic Art in Egypt* (in Arabic), i, Cairo 1935, pl. 35; in the Kaiser Friedrich Museum, Berlin, ibid. pl. 34 and F. Sarre, *Islamic Bookbinding*, London 1923, pl. i and fig. 1 where it is described as a Ḳurʾān cover; and in the Metropolitan Museum of Art, New York, M.S. Dimand, *A Handbook of Muhammadan art*², New York 1947, fig. 69.)

Bone and ivory carved panels have been found in the ruined mounds of Fusṭāṭ and are associated stylistically with the wood carvings of the Fāṭimid period. These are cut in low relief and depict scenes of the chase, isolated animals and human figures set against a background of scrollwork. They were probably either panels of caskets or insets to larger wooden panels and can be dated to the 11th-12th century. (Examples in the Arab Museum, in Zakī Muḥammad Ḥasan, *Kunūz al-Fāṭimiyyīn*, Cairo 1937, pl. 56; in the Victoria and Albert Museum, in M. Longhurst, *Catalogue of carvings in ivory*, i, London 1927, pl. xxviii; in the Metr. Mus., in Dimand, op. cit., fig. 70. For examples of carved woodwork, see E. Pauty, *Les bois sculptés jusqu'à l'époque ayyoubite* (*Cat. gén. du Musée arabe du Caire*), Cairo 1931.) Caskets of ivory both rectangular and round are mentioned by al-Maḳrīzī, *Khiṭaṭ*, i, 414, in an eye-witness account of the treasures of the caliph al-Mustanṣir.

Apart from these, it is impossible at present to attribute others with any certainty to Fāṭimid Egypt. A group which has the strongest claim is represented by the beautiful panels carved in ajouré in the Bargello Museum, Florence, which are perhaps related in style and subject matter to the famous carved wood panels from the *māristān* of Ḳalāʾūn now in the Arab Museum. In composition and workmanship they far surpass the Fusṭāṭ fragments. (Well illustrated in *Meisterwerke Muhammadanischer Kunst*, Berlin 1910, iii, pl. 253. There is another example in the Louvre, see G. Migeon, *Manuel d'Art Musulman*², Paris 1927, fig. 148. For the *māristān* panels, see Pauty, op. cit., pls. xlvi-lviii.) Another group which has been ascribed to the Fāṭimid period comprises ivory oliphants or hunting horns and caskets. Their style is distinct and characterized by relief cutting in two planes; the decoration consists of interlaced circles each containing an animal or bird and, in the caskets, human figures too. Similar treatment of the decoration occurs in the repertoire of Fāṭimid ornament as well as in that of Muslim Spain. An attribution to Sicily or South Italy whose Norman rulers are known to have employed Muslim craftsmen should also be considered, for there are a number of oliphants of apparent western manufacture which reproduce in a general way the decoration of the oriental ones. If the latter were in fact made in Egypt it is at least possible that they were made for export to the West. (See O. von Falke, *Elfenbeinhörner*, 511-7, who attributes six horns and a fragmentary piece in the Metropolitan Museum to this group; also four caskets, seven plaques (in the V. and A. Museum) and an ivory box (in the Metr. Museum).)

As has already been mentioned the technique of incrustation was practised in Egypt. A casket of wood with ivory incrustations in the Cappella Palatina, Palermo, has been attributed to Egypt since it is connected in style and technique with a

fragmentary wood panel incrusted with ivory found at Edfū and now in the Arab Museum. Its date would appear to be the end of the 12th and beginning of the 13th century. (See Monneret de Villard, *La Casetta*, pls. i-v; for the Edfū panel, pl. xxvi.)

While the technique of incrustation was being adopted by the Muslim craftsmen, the Copts maintained the more ancient tradition of intarsia decoration. Both techniques were used in the doors of the Church of the Virgin in the Dayr al-Suryānī (in Wādī al-Naṭrūn), which were made in the first half of the 10th century (see Monneret de Villard, pls. xxi-xxv). But incrustation was rarely used in later times and was confined to small objects. Intarsia, on the other hand, was frequently used in the Ayyūbid and Mamlūk period for the decoration of large surfaces. The famous *minbar* made in Aleppo by order of Nūr al-Dīn in 1168-9 A.D. and sent to the Masdjid al-Aḳṣā in Jerusalem, is the first of a series of works in which panels of ivory or bone, either plain or carved, were inserted into a wooden ground so as to form geometric patterns, stars or polygons. Intarsia decoration is found in *kursīs*, *minbars* and *dikkas* of the Mamlūk period. The contrast between wood and ivory serves to emphasise the abstract pattern and the effect is heightened when the ivory panels are carved with arabesque or inscriptions. After the fall of the Mamlūks the technique was adopted in Turkey where there are fine examples of mosque furniture with intarsia decoration dating from the 17th century. (The *minbar* in al-Aḳṣā is illustrated in M. van Berchem, *CIA*, *Syrie du Nord*, *Jerusalem*, iii, no. 277 (p. 393 ff., pls. 29-30). Mamlūk examples in L. Hautcoeur and G. Wiet, *Les Mosquées du Caire*, Paris 1932, ii, pls. 172-3, and Turkish examples in E. Kühnel, *Meisterwerke der Archäologischen Museen in Istanbul*, iii, Berlin-Leipzig 1938, pl. 19.)

3. A group of ivories which has given rise to much discussion consists of caskets, combs and crosiers with painted and gilded decoration. Many of these found their way to the treasuries of European churches in the Middle Ages where the caskets were used as reliquaries or pyxes and the combs for liturgical purposes. P. B. Cott's *Siculo-Arabic Ivories*, which can claim to be almost complete, illustrates some ninety pieces in which the painted decoration is still visible. All have certain common stylistic and technical features. In many pieces all trace of the original colour has disappeared and the well preserved state of the famous casket of Würzburg is exceptional. Generally patterns are outlined in black and filled in with a palette which includes red, blue and green, and gold applied in both liquid and leaf form. Many pieces are inscribed around the rim of the cover in Arabic, either Kūfic or Naskh script. Most of these inscriptions contain benedictory phrases addressed to the owner and, more rarely, verses from a love poem which suggests that these were intended as bridal caskets to contain jewels and trinkets. There are examples, too, of Arabic letters used merely for decorative effect and without meaning. Unfortunately no surviving inscription contains a date, or the name of either maker or owner. If it is generally agreed that the painted ivories can be assigned to the 12th and 13th centuries, opinions differ regarding the place of origin and unless a piece comes to light with a revealing inscription or a reference in some contemporary source is discovered there can be no final answer to this question. In the circumstances style and iconography are the only evidence.

On stylistic grounds they have been variously attributed to Persia, Mesopotamia, Syria, Egypt, Spain and Sicily. It is true that the decoration of the so-called *minā'ī* ware of Persia dating from the second half of the 12th to the 13th century has a superficial resemblance to that of the painted ivories, in the rather sparse arrangement of the decoration and in the figural representations, especially the horsed rider. Attenuated versions of the motives found in the decorative arts of Syria occur on the ivories. The decoration of one distinctive group of painted ivories contains star interlacings and geometric ornaments so similar to those found in the art of Granada during the Naṣrid period that their attribution to a Granada workshop during the 14th and 15th centuries seems certain. (Ferrandis, nos. 89-103. Ferrandis accepts the Sicilian origin for the remainder but suggests that three of these were "imitations" made in Spain, viz. nos. 9 and 65 in Cott and a casket in the parish church of Fitero, Navarre, not mentioned by Cott: Ferrandis, no. 21.) Apart, however, from this small and somewhat isolated group, the closest parallels are to be found in the art of Fāṭimid Egypt: in the fragments of pottery from Fusṭāṭ, wood carvings, notably the *māristān* panels, and the greatest surviving monument of Fāṭimid painting, the ceiling of the Cappella Palatina in Palermo. Kühnel (cf. Bibliography), however, argues for their Sicilian (and, in some pieces, Spanish) origin. In this connection, a casket found at Carrión de los Condes in Palencia and now in the Museo Arqueológico, Madrid (Ferrandis, no. 9) is important. This is a rectangular box, the flat cover of which is inscribed on intarsia with a dedication to al-Muʿizz, the last Fāṭimid to rule from Ifrīḳiya, and the interesting information that it was made in al-Manṣūriyya, the Fāṭimid capital near al-Ḳayrawān. The maker's name is unfortunately almost entirely obliterated except for the *nisba* al-Khurāsānī. The casket can therefore be dated between 341/952 and 365/972. The sides are decorated with a border of scroll-work painted in green and red. Although the drawing is cursory and the style dissimilar to that of the group under discussion, it suggests that the technique of painting on ivory was already known and practised in the Maghrib in the third quarter of the 10th century and was presumably introduced from Egypt.

But the fact remains that these painted ivories give the impression of a style not entirely in accord with the canons of Islamic art. The sparse treatment of the decoration and the frequent carelessness of the drawing are in marked contrast with the careful presentation of decoration and precise drawing to which we are accustomed in Islamic art. Indeed, were it not for the Arabic inscriptions, there might well be doubt in assigning them to the Islamic world at all. For this reason it seems likely that they originated in an area on the fringe of the Islamic world which was open both to oriental and occidental influences. The fact that certain caskets contain Christian figures, that there are two crosiers with painted decoration identical to that of the caskets, and that painted ivories are found exclusively in the countries of Europe suggests that they were, at least, made for the Western market. (Christian figures occur on nos. 38, 39, 42, 44, 80 in Cott; for crosiers see Cott, nos. 148, 149. The Arabic inscription on the "Granadan" casket in the Instituto de Valencia de Don Juan states that it was made to contain the consecrated Host (Cott, no. 138). It is usually agreed that the combs were for liturgical

use.) Probably there was more than one centre where painted ivories were produced, and the poorer examples were copies of finer prototypes. But until we possess a documented piece, there can be no certain solution of the problem.

4. By far the most remarkable of the mediaeval Islamic ivories are the carved ivories made in Muslim Spain and among them are masterpieces which rival the Byzantine and Western ivories. Fortunately there are enough documented pieces to make it possible to trace their history over a period of little less than a century. Unlike most of the ivories which have been discussed so far, they were produced under royal patronage and include some made for presentation to royal personages. During the first half of the period, the centre of production was in Cordova and then moved to Madīnat al-Zahrāʾ; thus they belong to the declining years of the Caliphate of Cordova. The earliest of the Hispano-Arabic ivories were probably made in Cordova and are characterized by the exclusive use of plant ornament (see Ferrandis, nos. 1-3). In the earliest surviving products of the new workshop at Madīnat al-Zahrāʾ the decoration of one consists of paired birds and animals amid flowering plant scrolls and that of another includes paired dancers (see Ferrandis, nos. 4-6). The artists of both these groups were evidently familiar with the carved marble panels in the Great Mosque of Cordova and the marble revetments found at Madīnat al-Zahrāʾ. Another group consists of pieces made in the Madīnat al-Zahrāʾ workshop by an artist who signs himself Khalaf (Ferrandis, nos. 7-10). His masterpiece is the circular box belonging to the Hispanic Society in New York. His style is quite distinctive; birds, animals and figures are conspicuously absent and the flowers and leaves which are deeply cut are rendered with exuberance and a close attention to detail.

But undoubtedly the greatest achievement is the series of ivories with scenes with figures and animals which, indeed, must be numbered among the most precious examples of Hispano-Arabic art; for not only are they of first-rate artistic quality but as social documents the scenes of court life and of chase which they depict give us a rare picture of the refinements of Andalusian civilisation. The three finest examples (Ferrandis, nos. 13-4, 19) are the two cylindrical boxes in the Louvre and the Victoria and Albert Museum, the first dedicated to al-Mughīra, brother of al-Ḥakam II and dated 357/968, and the second dedicated to Ziyād b. Aflaḥ and dated 359/970, and the casket in the Cathedral of Pamplona, dedicated to a son of al-Manṣūr and dated 399/1008. The last is the latest dated surviving piece from the Cordovan workshop. With these are associated some five other pieces (Ferrandis, nos. 15-6, 20-2). Scenes are enclosed in lobed circles, polygons or arcades. The plant decoration is subordinated to the animals and human figures which are proportionally large; the symmetrical arrangement of these does not preclude naturalistic effect. Scenes include the prince with attendant servants and musicians, huntsmen with falcons or at grips with their quarry and men performing rustic tasks such as gathering the date harvest, animals struggling with their prey; and in one case an elephant is depicted. None of these pieces is signed except the Pamplona casket which bears the name of more than one artist.

After the fall of the Caliphate of Cordova, the workers founded a new establishment in Cuenca where they were given an asylum by the Dhu ʾl-Nūnids, rulers of Toledo. The earliest surviving product (Ferrandis, no. 25) is dated 417/1026 and signed with the maker's name Muḥammad b. Zayyān. From this it is clear that the workshop was already established before Ismāʿīl al-Ẓāfir won the kingdom of Toledo in 427/1036. The last documented piece (no. 26) bears a dedicatory inscription to Ḥusām al-Dawla son of Yaḥyā al-Maʾmūn and governor of Cuenca and is dated 441/1049. It is also signed with the maker's name ʿAbd al-Raḥmān b. Zayyān and shows that the workshop was in the hand of a single family. The Cuenca ivories lack the vitality and invention of the Cordovan ivories. Cordovan motives recur but their presentation is monotonous. Animals and scenes are not enclosed by the lobed circles and polygons but are arranged in horizontal or vertical registers in which they are often repeated in identical form.

After the middle of the 11th century it seems that the Christian kingdoms of the North took the lead in ivory carving, although their products show the influence of Andalusian techniques. Yet the tradition of ivory carving was not entirely lost in Muslim Spain, for among the surviving examples of the decorative arts of the Naṣrid kingdom of Granada are sword and dagger handles which incorporate carved ivory with floral and geometric designs and inscriptions resembling those of the Alhambra stucco revetments. (The most important pieces are illustrated in L. Torres Balbás, *Arte Almohade — Arte Nazari — Arte Mudejar* (*Ars Hispaniae* iv), figs. 256B and C, and 257; also a bow with ivory incrustations, fig. 255, and the staff of Cardinal Cisneros, said to be the sceptre of the Naṣrid kings, fig. 246. For two other sword handles see Migeon, op cit., fig. 161. Also attributed to Granada are the "eared" daggers with carved ivory plaques in the handles and "ears" of the pommel (see Torres Balbás, op. cit., figs. 256D and B).)

5. Besides ivory carving, Cordova had acquired a preeminence in ivory incrustation which was to survive the fall of the Umayyads. Muslim historians and travellers describe and praise the *minbar* made by order of al-Ḥakam II for the Great Mosque. But neither this nor the *minbar* made some years later for the mosque at Fez by order of Hishām II have survived though from the descriptions both were evidently formed of wooden panels with ivory incrustations. One of the earliest surviving Maghribī *minbars* with this kind of decoration is the magnificent example in the Kutubiyya of Marrākush. According to the inscription (see J. Sauvaget, in *Hesp.*, 1949, 313 ff.) this was made in Cordova and dates from the time of the Almoravids. Technically derived from mosaics, the decoration consists of interlaced bands incrusted with contrasting wood and ivory cubes enclosing polygons of carved arabesques, larger flowing floral or geometric patterns and a frieze with inscription in which the letters are formed of ivory sheets. The ivory is either natural colour or stained. (For detailed study and illustration see H. Basset and H. Terrasse, in *Hesp.*, 1926, 168-204; also Ferrandis, no. 159.) Other *minbars*, if technically less perfect, reveal a rich inventiveness. (The earliest is the *minbar* in the Mosque of al-Karawiyyīn, Fez, made at the close of the Almoravid period in 1145. Others are the *minbar* in the mosque of the Ḳaṣaba, Marrākush, for which see Basset and Terrasse, 244-70, and Ferrandis, no. 160, and the *minbars* in the mosque of Tāzā (1292-3) and in the Madrasa Bū ʿInāniyya, Fez

(1350-5). There is a copy of the Ḳaṣaba *minbar* in the mosque of al-Mawwāsīn, Marrākush, dating from the 16th century.) In Spain, few large-scale works of incrustation have survived; but there is a particularly fine pair of doors from a cupboard in the Museum of the Alhambra (Torres Balbás, fig. 244-5; Ferrandis, no. 167; other examples, Torres Balbás, fig. 243, Ferrandis, nos. 172, 174). Equally remarkable are caskets with ivory incrustations, decorated either with figural representations or geometrical designs (Ferrandis, nos. 161-3, 168-71). All these caskets have been found in Spain and because of the similarity of their decoration to certain Toledan stucco work have been attributed to Andalusia and the 12th to 13th century. Finally the handle of the so-called rapier of Boabdil in the Museo Historico Militar, Madrid, has delicate ivory incrustations of arabesques and is an eloquent witness of the skill of the Granadan craftsmen. (See Torres Balbás, fig. 240, and E. Kühnel, *Maurische Kunst*, Berlin 1924, pl. 124. The staff of Cardinal Cisneros has also ivory incrustations, see above.)

6. In this account of ivory products in the Islamic world, Persia figures scarcely at all. No piece has yet appeared that can be attributed to pre-Mongol Persia. It would be rash to assume for this reason that the art of working in ivory was unknown for there are references in contemperary literature which suggest the opposite. (Monneret de Villard, *op. cit.*, 15, quotes al-Ḳazwīnī (Wüstenfeld), ii, 273, who remarks that the inhabitants of Tarḳ, in the district of Iṣfahān, are skilled in making objects of ebony and ivory. M. de V. suggests that this implies a local industry of incrustation.) We can only blame the accidents and ravages of time for this absence. That incrustation was practised in later times is proved by the pair of wooden doors inlaid with ivory from the Gūr-i Mīr, Samarḳand, now in the Hermitage Museum, Leningrad (*Survey of Persian Art*, vi, pl. 1470). Made about 808/1405, their decoration is typically Tīmūrid. A pen-box (S. Lane-Poole, *The Art of the Saracens of Egypt*, London 1886, fig. 72) and dagger handles dating from the 18th century or later (P. Holstein, *Contribution à l'étude des armes orientales*, Paris 1931, ii, pl. lxi) imply the existence of a native school of ivory carving.

ADJAʾ and **SALMĀ**, the two main ranges of the central Arabian mountain group of Djabalā Ṭayyiʾ, modern al-Djabal. An old tale of the type of "metamorphosis as punishment for sin" is attached to them; the tale is connected with reality insofar as Adjaʾ and Salmā occur in Old Arabic and in early North Arabic dialects as personal names.—According to Ibn al-Kalbī's "Book of Idols", and one of the two versions in the *Djamhara* by the same author, the God Fals/Fils/Fulus was worshipped in the guise of one of the cliffs of Adjaʾ. This cult is probably of great antiquity, as the cult of a certain cliff (Raʿn) in the valley of al-ʿŌlā/Dēdān, in the 2nd century B.C., and later between 50 and 150 A.D., is attested by the evidence of some proper names.

ʿADJĀʾIB, "marvels", are in the first instance the marvels of antiquity. In addition, the term and its derivatives comprise, already in the Ḳurʾān, the marvels of God's creation. *ʿAdjāʾib* are thus any kind of casual data about extraordinary monuments, the three realms of nature and meteorological phenomena, and the two aspects under which they are viewed come from the Greek spirit on the one hand and the eastern biblical ideas on the other.

Islam, the continuator of the classical tradition as it was formulated in the East, was interested in exceptional monuments ,but in a spirit different from that of the Greek. Among the surprising buildings described as marvellous by the Arab authors, the Pharos of Alexandria acquired great notoriety. The monument, described by them in greater detail than by the Greek and Latin authors, existed until the 8th/14th century and was erroneously attributed to Alexander the Great. In general the Macedonian king represented a universal symbol, a mixture of Greek conqueror and of the spirituality of the ancient Orient, and many famous monuments were attributed to him.

As to the marvels of God's creation, these are no wanton inventions of fancy, but are often based on a minute and exact observation of nature. Thus in the *al-Ḥayawān* of Djāḥiẓ, there are rudiments of "Darwinism", and Abū Ḥāmid describes beavers' dams, which he considers to be miraculous; Ibn al-Faḳīh gives an account of the magnetic and electrical phenomena to be observed on a mountain near Āmid.

It was, however, inevitable that these two conceptions of the the *ʿadjāʾib*, so different from the ideological point of view, should fuse together to give rise, especially in the Arabic geographical texts, to a peculiar literary genre. The *ʿAdjāʾib al-Hind* by the captain Buzurg b. Shahriyār [*q.v.*] deserves to be mentioned in the first place by its early date and by its incontestable documentary value for its period. It starts with the statement: "God has divided the marvels of creation into ten parts, of which nine belong to the East, one to the other points of the compass. Of the nine parts belonging to the East, eight belong to India and China and one only to the other regions of the East . . .". The book consists of stories by the navigators of East Africa, India, and the islands of S.-E. Asia; some of them show an admixture of real observation while others can be explained only by study of the folklore of the people in question. While the marvels of far-away countries found their literary form already in the 4th/10th century, the curiosities of the various Islamic countries were only described in excursus in the geographical treatises (e.g. in al-Maḳdisī). It was only in the 6th/12th century that these isolated zoological, ethnological, archaeological etc. accounts acquired a particular literary form, especially through Abū Ḥāmid al-Gharnāṭī [*q.v.*] who collected them in his *Tuḥfat al-Albāb*. The Arabic literature of the 4th/10th and 5th/11th centuries, called "classical", is characterized by an equilibrium between erudition and aesthetic creation. When this equilibrium was disturbed by the decadence of Arabic literature, the writers increasingly disregarded science; the *ʿadjāʾib* thus came into greater favour and reached their full development in the cosmographies of the 8th/14th century. The greatest

author of this period was al-Ḳazwīnī [*q.v.*] whose work is divided into two parts: *ʿAdjāʾib al-Makhlūḳāt*, "The Marvels of Creation", and *Āthār al-Buldān*, "The Monuments"; thus the best representative of the genre bears witness, centuries later, to the two forms of *ʿadjāʾib* mentioned above. At this epoch the cosmographical works increasingly neglect geography; what remains are collections of entertaining stories. It was also in this period that the Sindbād cycle, which is but a literary adaptation of the accounts of Buzurg b. Shahriyār, was introduced into it.

In the first centuries of the *hidjra* the *ʿadjāʾib* were correctly situated in geographical space by those who observed them or by the authors who copied the former; this is also the case with the earlier Arab geographers and with Abū Ḥāmid. As the scientific interest decreased, however, and the popular interest in amusing literature grew, the data lost their precision and their exact geographical localization. The items of real knowledge acquired in Islam and unknown in antiquity recur in general in the descriptions of the *ʿadjāʾib*; yet these *ʿadjāʾib* acquire a particular role in the history of thought in that they transport us from tangible reality to the realm of fancy constituted by the oriental tales. Abū Ḥāmid, the precursor of the popular cosmographers, is one of the authors who had most influence on the Arabic and Persian writers in the age of decadence of Islamic literature in the late Middle Ages; it is not for nothing that his books were among the main sources of al-Ḳazwīnī. On the other hand it is through the popular cosmographies that the *ʿadjāʾib* stories brought an essential contribution of the Muslim genius to world literature in the form of the tales of the *Arabian Nights*.

(C. E. DUBLER)

ADJAL, the appointed term of a man's life or the date of his death; a topic regularly discussed in the earlier *kalām* along with that of *rizḳ* or sustenance. The idea that the date of a man's death is fixed presumably belongs to pre-Islamic thought. The word *adjal* is used in the Ḳurʾān in a variety of ways, e.g. for the date when the embryo emerges from the womb (xxii, 5), for the period Moses had to serve for his wife (xxviii, 28 f.), for the date when a debt is due (ii, 282), etc. In creating the heavens and earth, the sun and moon, God fixed an *adjal* for them (xlvi, 3; xxxix, 5 etc.); with this is connected the coming of the Last Day. More especially it is used for the term of existence decreed by God for communities (xxiii, 43, etc.) and for individuals (lxiii, 10 f.; vi, 2). This term is neither to be anticipated nor deferred; its fixity explains why the wicked are not punished at once. "No one has his life prolonged or no one has his life cut short except (as it is written) in a book (of God's decrees)" (xxxv, 12). The *adjal* is not shortened even through sinning (xxxv, 44, xlii, 13), while on the other hand it may be concluded that Muhammad presupposed the shortening of the *adjal* as a punishment, but it might be restored to the original length through repentance (xi, 3, xiv, 11). The Ḳurʾān very often emphasizes the expression of *adjal* as the irrevocable period of life assigned by God with the epithet *musammā* (xxxix, 43; xl, 69, and elsewhere), "enunciated" (without ambiguity) "through a word which had proceeded from God" (xlii, 13); the same epithet is applied to the course of the unchangeably operating phenomena of nature (xxxi, 28, xxxv, 14, xxxix, 7). The decreed duration of the world is also often designated by the same formal expression (vi, 2, 61, xxxv, 44). One may notice in the commentaries to the Ḳurʾān the tendency to refer the *adjal musammā*, where it is possible, to the period of the end of the world.

According to tradition (al-Bukhārī, *Ḳadar*, 1; Muslim, *Ḳadar*, 3; etc.) *adjal* and *rizḳ* are two of the four things determined for a man while he is in the womb. Some of the early Muʿtazila apparently suggested that a man who met a violent death had not reached the term decreed for him by God. Perhaps they said this because they hesitated to ascribe the evil of killing to God, just as they did not assert that sustenance consisting of stolen goods came from God. In a passage like Ḳurʾān xl, 67, *adjal* is capable of being interpreted as natural term or, as they put it, "the time at which God knew the man would have died had he not been killed" (cf. *Ibāna*). This view, however, offended the deep-rooted feeling that the date of death was fixed. Even Abu 'l-Hudhayl said that, if the man had not been killed then, he would have died in some other way. Al-Nadjdjār insisted that, whatever the mode of death, a man died at his term; and he was followed by the opponents of the doctrine of *ḳadar*, including al-Ashʿarī. Al-Kaʿbī tried to avoid ascribing evil to God by distinguishing between the death and the killing. No fresh points were raised after this, but the old points were frequently repeated by theologians. — The dogmatists discussed in connection with *adjal* also the question, in how far God lengthens or shortens the *adjal* as a reward for obedience or as a punishment of disobedience respectively, a question to which the answer results in the harmonizing interpretation of the Kurʾanic verses quoted above and puts the problem of *adjal* in the domain of the debates on *badāʾ* [*q.v.*]. An aspect of the problem of *adjal* concerns the death of great masses by elementary catastrophes, war, persecution, etc.

Jewish religious philosophy treats the problem from the same point of view.

(I. GOLDZIHER-W. MONTGOMERY WATT)

ʿADJALA, Arabic word borrowed from the North-Western Semitic languages (Hebrew *ʿagālāh*, Phoenician *ʿglt*, Jewish-Aramaic *ʿagaltā*, Syriac *ʿāgaltā*, Old Egyptian loan-word of the New Empire *ʿgrt* = **ʿagalta*, whence Coptic *ačolte*; see references in L. Koehler, *Lexicon in Veteris Testamenti libros*, Leiden 1953, 679), derived from a root denoting rotundity or swiftness. In Arabic, as in these languages, it designs wheeled vehicles (chariots, carts, wagons) drawn by animals; but in Arabic it is a generic term. It is for this reason that the use of these vehicles in the Islamic Orient will be treated here, if only in a fragmentary way.

Before Islam, the use of various kinds of cars (among them those termed *ʿagālāh*, etc., in the Semitic countries of the west and in Egypt) is well attested in the whole of the Near East (cf. e.g. V. Gordon Childe, *Wheeled Vehicles*, in *A History of Technology*, i, Oxford 1954; A. G. Barrois, *Manuel d'archéologie biblique*, ii, Paris 1953, 98-100, 233; A. Salonen, *Die Landfahrzeuge des Alten Mesopotamien*, Helsinki 1951; Erman and Ranke, *Ägypten*[2], Tübingen 1923, 584; P. Montet, *La vie quotidienne en Égypte*, Paris 1946, 169). In spite of the decline of the chariot of war as early as the Persian period (Salonen, 21), carriages are frequently mentioned in the same region during the Hellenistic and Roman periods (cf., e.g., for Egypt, C. Préaux, *L'économie royale des Lagides*, Brussels 1939, 214; W. E. Crum, *A Coptic Dictionary*, Oxford 1939, 26; Jewish texts in S. Kraus, *Talmudische Archäologie*, Leipzig 1910-2, ii, 336-8 and G. Dalman, *Arbeit und Sitte in Palästina*, ii, 111-5, iii, 58 f., 88-90, vi, 193 etc.). The same applies for pre-Islamic North Africa (R. Capot-Rey, *Géographie de la Circulation*, Paris 1946, 87).

In Islamic times, the texts concerning wheeled traffic seem much less frequent. The word *ʿadjala* occurs but rarely in the Middle Ages. None of the passages allows the technology of these vehicles to be determined; at the most they mention the animals which draw them. The lexicographers do not seem to deal with the subject. The reference in *Kalīla wa-Dimna* (Cheikho), 54, to a vehicle drawn by two oxen is derived from the Sanskrit original. In historical and geographical texts one comes across references, e.g. for Egypt, to such vehicles used for heavy loads (Umayyad period: Yāḳūt, i, 260; al-Masʿūdī (*Murūdj*, iii, 28 f.) in the 4th/10th century mentions large wagons drawn by buffaloes in the Syrian *thaghr;* 7th/13th century: Ibn Saʿīd, in al-Maḳḳarī, *Analectes*, i, 691; for Morocco in the 8th/14th century: al-Djaznāʾī, *Zahrat al-Ās* (Bel), 27, transl. 69 f.).

Most of the references, however, concern vehicles used in exceptional circumstances, and which appeared to cause considerable astonishment. E.g. in 242/856, a pilgrimage from Baṣra to the holy cities on an *ʿadjala* drawn by camels (Ibn Taghrībirdī, Cairo, ii, 307); a few years later, an *ʿadjala* drawn by men, which carried the sick Aḥmad b. Ṭūlūn from Antioch to Egypt (Ibn Abī Uṣaybiʿa, ii, 84); in 307/919 the large vehicles prepared in Baghdād for the public humiliation of the rebel Yūsuf b. Abi 'l-Sādj (*K. al-ʿUyūn*, in Ibn Miskawayh, ed. Amedroz, i, 49, n.). The Christians during their feasts used state carriages, e.g. in Edessa on the eve of the feast of the cross (Ḥusayn b. Yaʿḳūb, in al-ʿUmarī, *Masālik*, i, Cairo 1924, 265). The animals mentioned as drawing these vehicles, which were perhaps of very different shapes, are varied: horses of several breeds, camels, oxen, mules, donkeys, buffaloes, perhaps also elephants; as noted above, human traction also was used on occasion.

The word often serves to designate foreign vehicles: Byzantine racing chariots (Ibn Rusta, 120, Ibn Khurradādhbih, 112), wagons of the Christians of the Iberian peninsula (Ibn ʿIdhārī, iii, 86; *Akhbār al-ʿAṣr*, ed. M. J. Müller, *Die letzten Zeiten von Granada*, Munich 1863, 44, transl. 147-8), later Turkish *arabas*.

In Muslim Iran, literary references to carriages (*gardūn*) seem to be equally rare (B. Spuler, *Iran in frühislamischer Zeit*, Wiesbaden 1952, 428-9, notes no examples). Firdawsī, however, transposes into the world of myth wagons drawn by buffaloes or oxen (reff. in F. Wolff, *Glossar zu Firdosis Schahname*, Berlin 1935, s.v.). A wooden chariot used by Isfandiyār (*Shāh-nāmah* (Mohl), iv, 500-2, 510) is often shown in miniatures (e.g. *Survey of Persian Art*, v, 832 D; *La guirlande de l'Iran*, Paris 1948, 30), generally as a cart with two spoked wheels drawn by a horse tied between two shafts. Persian miniatures occasionally show other illustrations of wagons: a four-wheeled wagon drawn by a horse (MS from Tabrīz, end of 7th/13th century, in E. Blochet, *Musulman Painting*, London 1929, pl. xli); a cart with two spoked wheels drawn by a horse tied between two shafts on which are carried materials for building a mosque (miniature of Bihzād, A.D. 1467, in E. Kühnel, *Miniaturmalerei im islamischen Orient*, Berlin 1922, pl. 51); a kind of yurt probably mounted on wheels, drawn by horses, and used to carry to Tabrīz the corpse of Ghāzān Khān in 703/1304 (MS of 9th/15th century, reproduced in E. Blochet, *Les peintures des manuscrits de la Bibl. Nat.*, Paris 1914-20, pl. xix, cf. p. 272).

On the other hand, carts (*ḳangli*, later also *araba*, *arba*) were very frequently used by the Turco-Mongols of Central Asia until the 14th century, after which the economic decline of the nomad world led to a lessening of their use. Ibn Baṭṭūṭa, ii, 361, mentions them in Southern Russia. This vehicle, the name of which was arabicised as *ʿaraba* and even *ʿarabiyya* ("Arabian"), was introduced in particular into Mamlūk Egypt (see ʿARABA). Its name supplanted in popular use the word *ʿadjala* as a generic term for carriage; so that *ʿadjala* could be used anew in modern Egypt as a name for bicycle. In turkicised Anatolia the byzantine wagon (*kaghnī*) remained in use.

The medieval situation survived in the countryside up to modern times. In Syria, Volney states in the 18th century: "It is noteworthy that in the the whole of Syria no wagon or cart is seen; this is probably due to the fear lest they should be seized by the government's men and a heavy loss should be suffered in a moment" (*Voyage en Egypte et en Syrie*, Paris 1825, ii, 254). In Palestine, before the first world war, only Circassians and foreigners had peasant vehicles (Dalman, *Arbeit und Sitte*, ii, 98 and fig. 40-2; A. Ruppin, *Syrien als Wirtschaftsgebied*[2], Berlin-Vienna 1920, 424-5). On the whole, the situation was the same all over the Near East, except in Anatolia. For Morocco at the beginning of the 20th century, see Ch. René-Leclerc, *Le Maroc septentrional*, Algiers 1905, 87, 251-2; idem, in *Renseignements coloniaux*, 1905, 248; R. Le Tourneau, *Fès avant le Protectorat*, Casablanca 1949, 415. Various explanations have been offered, the most common being the bad state and insecurity of the roads (R. Brunschvig, *La Berbérie orientale sous le Ḥafṣides*, ii, 236; J. Weulersse, *Paysans de Syrie et du Proche-Orient*, Paris 1946, 133-6; cf. Mez, *Renaissance*, 461, Lévi-Provençal, *Hist. Esp. mus.*, iii, 98). Yet the comparison with the condition of the same countries

in antiquity and with the Turkish countries makes this an unsatisfactory explanation. The increasing scarcity of wood, due to the loss of forests, should perhaps be taken into consideration, and one could perhaps establish a parallel with the degeneration of the plough (cf. A. G. Haudricourt, *L'homme et la charrue*, in the press, and MIḤRĀTH). Also the improvement of transport due to the increasing use of the camel and the pack-saddle must be taken into account.

Nevertheless, sooner or later in the various countries, European vehicles were introduced, together with their usually Romance names (in Persia with a Russian name, *kāleske*), but were often adapted to local techniques and customs. Restricted to urban, official and military use, to public transport (for Persia, numerous descriptions and illustrations in C. Anet, *La Perse en automobile*, Paris 1906, 122, 189, pll. 19, 25, 26, etc.), they rarely penetrated into the country-side. As early as the 17th century, the Murādid *bāy* of Tunis travelled in a *karrūṣa* (Italian *carrozza*) (Ibn Abī Dīnār, *Muʾnis*, Tunis 1286, 224); this word is now in common use in North Africa and is found even in Berber dialects (L. Brunot, *Textes arabes de Rabat*, ii, Paris 1952, 712). Similarly *ḳarrīṭa* (Italian *carretta*) is used in Algeria for carts and wagons (Beaussier, *Dict. pratique arabe-français*[2], Algiers 1931, 793); the word was already used, in the plural form *karārīṭ*, to designate Portuguese wagons in the 16th century, *Chronique anonyme de la dynastie saʿdienne* (Colin), 59. In Egypt, the *ʿarabiyyat ḥanṭūr*, "cab", (from Hungarian *hintó* through Turkish *hinto*, cf. F. Miklosich, *SBAk. Wien*, 1885, 5, 1889, 8) and the *ʿarabiyyat kārrō* (Italian *carro*) are used (Nallino, *L'Arabo parlato in Egitto*[2], Milan 1913, 241; cf. Aḥmad Amīn, *Ḳāmūs al-ʿĀdāt waʾl-Taḳālīd*, Cairo 1953, 333 and pl. xvi).

(M. RODINSON)

ʿADJAM, the etymology and semantic evolution of this collective term in Arabic are exactly parallel to those of the Greek word βάρβαροι. In conformity with the basic meaning of the root from which it is derived, *ʿadjam* means people qualified by *ʿudjma*, a confused and obscure way of speaking, as regards pronunciation and language. *ʿUdjma* is therefore also the contrary of the Arabic *faṣāḥa*, and the *ʿadjam* are the non-Arabs, the βάρβαροι, so called after the most characteristic sign of barbarousness: an incomprehensible and obscure way of speaking. As to the Greeks, so also to the Arabs, the barbarians were primarily their neighbours the Persians, and pre-Islamic poetry already contrasted *al-ʿArab* with *al-ʿAdjam*, although for the latter the form *Aʿādjim*, the plural of *aʿdjam*, was preferred. The affective value attributed to the word depended on the point of view of the user; although it preserved for the most part the original contemptuous force inspired by the haughty presumption of Arab superiority, it sometimes, and even at an early date, implied the desirability and allurement of the exotic, and the acknowledgment of a more civilized and refined culture. In any case, during the whole Umayyad period the superiority of the Arabs, who held the hegemony in Islam and by whom it was spread, over the conquered *ʿadjam* was uncontested, and only isolated voices were raised (e.g. by the poet Ismāʿīl b. Yasār in *Aghānī*[2], iv, 411-2) in support of the race and culture of non-Arabs, i.e. of the Iranians. With the coming to power of the ʿAbbāsids, the victory of the *ʿadjam* over the Arabs, a victory which Naṣr ibn Sayyār had already deprecated in famous verses (al-Dīnawarī, 360), reversed the situation; the Iranians, having obtained political and social supremacy, soon laid claim to the supremacy of their cultural and spiritual values. This was the *shuʿūbiyya* movement [*q.v.*] which, in its essential nucleus, reaffirmed the superiority of the *ʿadjam* over the Arabs, even although its campaign was carried on in Arabic. When the heat of the controversy had died down, the two words remained in current usage merely to indicate ethnical difference, *ʿadjam* becoming synonymous with *Furs* (Persians). *ʿIrāḳ ʿAdjamī* indicated, from the late medieval period onwards, Iranian Media (which the ancient geographers had called *al-Djibāl*), to distinguish it from *ʿIrāḳ ʿArabī*, which is ʿIrāḳ proper. *Lāmiyyat al-ʿadjam* was given as the title, in contrast to the celebrated *ḳaṣīda* of Shanfara, to a similar poem in *lām* rhyme by the Iranian al-Ṭughrāʾī (d. 1121). For *ʿadjamī* = aljamiado see ALJAMIADO.

(F. GABRIELI)

ʿADJAMĪ OGHLĀN (*acemî oğlan*), a term, meaning "foreign boy", applied to Christian youths enrolled for service as Ottoman *ḳapî ḳulus* [*q.v.*], originally, according to the *Penčik ḳānūn* of 1362, by the reservation of one in every five of those taken prisoner of war, and later by *dewshirme* [*q.v.*] conscription. They were first placed for from five to seven years at the disposal of feudal *sipāhīs* and others in Anatolia, and later also in Rumelia, in order to learn Turkish and accustom themselves to Muslim usages, and then posted to the *ʿadjamī odjaḳ* of Gallipoli and, after the conquest, to that of Istanbul, being simultaneously selected for subsequent service, according to their abilities, in the sultan's palace or in one or other of the *odjaḳs* of the standing army, infantry and cavalry, or of the *bostāndjîs* [*q.v.*] of Edirne and Istanbul. Their actual appointment—known as *ḳapîya čîḳma*—to the palace service or these various corps was by seniority on the occurrence of vacancies.

After preliminary training at Ghalaṭa Sarāyî or Ibrāhīm Pasha Sarāyî in Istanbul or at Edirne, *ʿadjamī oghlāns* appointed to the sultan's household (and hence thereafter called *ič oghlāns* or *ič aghas*) might gradually rise from its lowest *ḳoghush* or dormitory to the *khāṣṣ oda* [*q.v.*], from the chief posts in which those who attained them might be appointed *beylerbeyis* and *wezīrs*. The two most important standing cavalry regiments (*sipāhs* and *silāḥdārs*) were likewise recruited from among the *ič aghas*, the other four (*ʿölūfedjis* and *ghurabā*) being recruited from among those *ʿadjamī oghlāns* who, though selected for the palace service, were not in the event appointed to it.

Most of the *ʿadjamī oghlāns* not chosen for the palace were destined for service as Janissaries (see YENI ČERI), whether after preliminary service in the *odjaḳ* of the *bostāndjîs* or by immediate admission into one of the thirty-four *ortas* [*q.v.*], under the command of the *Istanbul aghasî*, which were reckoned as forming part of the Janissary *odjaḳ*.

The gradual abandonment during the 17th

century of the *dewshirme* naturally resulted in the disappearance of *ʿadjamī oghlāns* proper, though their organization was maintained, like that of the whole Janissary *odjaḳ*, till its abolition in 1826.

ʿADJAMIYYA, a term used of the writing of non-Arabic languages in Arabic characters, [see ALJAMIADO, HAUSA].

ʿADJĀRIDA, Khāridjite sect which spread especially in Khurāsān. The name is derived from that of its founder, ʿAbd al-Karīm b. ʿAdjarrad, who seceded from the ʿAṭawiyya, one of the subdivisions of the Nadjadāt [*q.v.*]. ʿAbd al-Karīm was a native of Balkh and was imprisoned by the governor of ʿIrāḳ, Khālid al-Ḳasrī (105-20/724-38).

The main religious tenets attributed to the ʿAdjārida were: the exclusion from Islām (*barāʾa*) of children (even of one's own, according to Ibn Ḥazm) until they grow up and become believers; the duty to invite them to embrace the true faith when they reach puberty; the assertion that *hidjra* is a meritorious act, not a duty; the profession of friendship (*wilāya*) towards the quietists (*al-ḳaʿada*); the affirmation that *sūra* xii (*sūrat Yūsuf*), which by its frivolity could not be the word of God, did not belong to the Ḳurʾān.

Al-Ashʿarī names as branches of the ʿAdjārida the Maymūniyya, Khalafiyya, Ḥamziyya, Shuʿaybiyya, Ṣaltiyya, Khāzimiyya (with two subdivisions) and Thaʿāliba (with five subdivisions). Al-Shahrastānī adds the Aṭrāfiyya. Most of these schools held a less rigid opinion concerning children, viz. that they are in a neutral status until they accept or renounce faith at the time of puberty. The Ḥamziyya played an important political role in the ʿAbbāsid period. The grave Khāridjite revolt which broke out in 179/795 in southern Khurāsān and which lasted till 195/810 was, in fact, led by their chief Ḥamza b. Adrak.

(R. Rubinacci)

AL-**ADJDĀBĪ**, Abū Isḥāḳ Ibrāhīm b. Ismāʿīl b. Aḥmad al-Luwātī, author of various works on philology (especially the *Kifāyat al-Mutaḥaffiẓ*, a lexicographical work). Al-Tidjānī possessed several of them in autograph copies (al-Adjdābī was famous for his calligraphy). Al-Adjdābī lived in the second half of the 5th/11th century in Tripoli where he also died; his tomb is still venerated there.

(H. H. Abdul-Wahab)

ADJDĀBIYA, town of Cyrenaica, on the old main road which followed the coast from Alexandria to Tripoli, halfway between Barḳa and Surt. Adjdābiya now belongs to the district of Benghāzī. It was conquered by ʿAmr b. al-ʿĀṣ in 22/643, was subjected to poll-tax (*djizya*), and became during the following three centuries a military station and a great centre of commercial traffic. Built at the gate of the desert on stony ground—whence probably the Arabic name Adjdābiya, "the sterile"—it had in the 5th/11th century a citadel and a substantial mosque, built about 300/912-3 by the Fāṭimid prince Abu 'l-Ḳāsim, son of ʿUbayd Allāh al-Mahdī, with a very fine octagonal minaret. Wells, cut in the rock, provided water of good quality; there was also a fountain of sweet water. The town was surrounded by orchards (figs, apricots, etc.) and a small number of palms. The houses were built mainly in the form of brick vaults (*damūs*), as in the Sahara *ḳṣūrs*. It was well supplied with meat, fruits, honey, wool, etc. from the hinterland, especially the Djabal Akhḍar, and prices were low. On the gulf of the Great Syrtis, later called Djawn al-Kibrīt ("gulf of sulphur") there was a small harbour six miles from the town, called al-Maḥūr (?), which served as port for ships destined for Adjdābiya. According to the early geographers, the inhabitants of the town and the district were mainly Luwāta Berbers (subdivisions of Zanāna, Wāhīla, Masūsa, Sīwa, Tahlala, etc.), but a number of Arab elements, such as Azd, Lakhm, Ṣadīf, etc., settled there after the conquest.

The prosperity of the town seems to have been lost following the great Hilālī and Sulamī invasion in the 5th/11th century. The travellers (al-ʿAbdarī, al-ʿAyyāshī, al-Warthilānī) who passed Adjdābiya on their way from the Maghrib to the East, describe it as a town long since ruined, without any vegetation in the vicinity, with only a few visible, but abandoned, vestiges of habitation. During the Turkish, and especially the Italian, occupation, Adjdābiya became a small village, serving as a stage between Benghāzī and Misrāta.

Bibliography: Yaʿḳūbī, Baghdad 1918, 102, transl. G. Wiet, 203; Ibn Rusta, 344; Ibn Ḥawḳal, 67; Bakrī, 5 (transl. 16); Yāḳūt, Cairo, i, 121; ʿAbdarī, *Riḥla* (MS), vol. i; Warthilānī, Algiers 1908, 219 ff.

(H. H. Abdul-Wahab)

AL-ʿ**ADJDJĀDJ**, Abu 'l-Shaʿthāʾ ʿAbd Allāh b. Ruʾba, Arab poet of the Tamīm tribe, who resided mainly in al-Baṣra; it is probable that he was born during the caliphate of ʿUthmān (23-35/644-56), and he died in 97/115. Little is known about his life, except that he had to joust with his Kūfan rival Abu 'l-Nadjm al-ʿIdjlī [*q.v.*]. The main characteristic of al-ʿAdjdjādj's poetry—like that of his son Ruʾba [*q.v.*]—is the constant and exclusive use of the *radjaz* metre in poetical compositions marked by a very rich vocabulary and a laborious construction made more difficult by the poet's respect for the rules of prosody and the unusual number of lines (229 in one *urdjūza*). His *arādjīz* on the model of the pre-Islamic *ḳaṣīda* generally comprise a traditional *nasīb* (replaced in one case by religious subject-matter), then descriptions of the desert and the animals found there (camels, horses, onagers, wild bulls), and end with the panegyric of a man, of the poet himself, or his tribe. Al-ʿAdjdjādj never cultivated either the satire or the elegy. His praises are addressed to eminent personnages such as Yazīd b. Muʿāwiya, ʿAbd al-ʿAzīz b. Marwān, Bishr b. Marwān, Sulaymān b. ʿAbd al-Malik, al-Ḥadjdjādj b. Yūsuf, ʿUmar b. ʿUbayd Allāh b. Maʿmar, Muṣʿab b. al-Zubayr. The Arabic critics unanimously praise the verbal richness of al-ʿAdjdjādj, whose verses are frequently cited by the lexicographers; but he was guilty of an exaggerated use of alliteration, and an excessive addiction to rare words.

Bibliography: The poems of al-ʿAdjdjādj have been collected by W. Ahlwardt, *Sammlungen alter arabischer Dichter*, ii: *Die Diwane der Regezdichter Elʿaǧǧāǧ und Ezzafajān*, Berlin 1903; R. Geyer, *Beiträge zur Kenntnis altarabischer Dichter*, 3: *al-ʿAjjâj und al-Zafayân*, in *WZKM*, 1909, 74-101; *Arādjīz al-ʿArab*, Cairo 1313, passim; R. Geyer, *Altarabische Diiamben*, nos. 1-2. Biographical accounts and verses are to be found in Djumaḥī, *Ṭabaḳāt*, Cairo, 218; Djāḥiẓ, *Ḥayawān*², index; Ibn Ḳutayba, *Shiʿr*, 374-6; Ibn Ḥadjar, *Iṣāba*, no. 6316; *Mash.*, xxiii, 439-48; O. Rescher, *Abriss*, i, 219; Brockelmann, S I, 90; Nallino, *Scritti*, vi, index (Fr. transl. 153-5, 160-2).

(CH. PELLAT)

ʿADJLŪN, district of Transjordania, bounded on the north by the Yarmūḳ, to the east by the Ḥamād, to the south by the Wādī al-Zarḳāʾ and to the west by the Ghawr, partly corresponding to the old territory of Gilead, and occupied in Roman times by the towns of the Decapolis. The name seems to be of Aramaic origin. A mountanous and wooded district, it was first called Djabal Djarash, later Djabal ʿAwf from the name of the turbulent tribe which occupied it in the Fāṭimid period. It was pacified by the *amīr* ʿIzz al-Dīn Usāma, who, having been granted it in fief by al-Malik al-ʿĀdil b. Ayyūb, built there (it is said on the site of an ancient monastery) a fortress which was since then called Ḳalʿat ʿAdjlūn. Changing hands among various *amīrs* and princes, it played a part in the struggle against the Franks. Stripped of its walls by the Mongols, it was rebuilt in the Mamlūk period, when ʿAdjlūn constituted one of the districts of Damascus. At present ʿAdjlūn is the name of a *ḳaḍāʾ* (the chief place being Irbid [*q.v.*]), and a small township near the old fortress.

(D. SOURDEL)

ADJMĒR (AJMĒR, AJMĪR), capital of a small semi-autonomous state of the name in the heart of Rādjasthān, pop. (1951): 196,633 (of whom 23% Muslims). The place is renowned for its architectural monuments, and especially for the tomb of Khʷādja Muʿīn al-Dīn Ḥasan Sidjzī [*q.v.*] (d. 1236), which is one of the most important centres of pilgrimage in the country. The tomb was built by the Sultans of Mālwa shortly after 1455, while the adjoining buildings were constructed later, the two adjacent mosques having been erected by Akbar and Shāh Djahān. Archeologically the most important building is the Arhāʾī-din-kā-Djhonprā ("two-and-a-half days shed"), a Hindu college converted into a mosque. It consists of a quadrangle surrounded on all sides by cloisters of Hindu pillars, with four star-shaped towers at each corner. The *līwān* is a pillared hall, 248' x 40', divided into nine octagonal compartments, covered by a flat recessed roof, containing five rows of Hindu columns. A lofty screen wall (56 ft. high) of seven pointed arches gives the *līwān* a façade of remarkable beauty. The central arch, which stands higher than the others, is surmounted by two small minarets for the *muʾadhdhin* similar in style, like the rest of the mosque, to the Ḳuṭb Minār and mosque at Delhi. Constructed by Sultan Īltutmish (probably in place, or as an extension, of an earlier mosque started in 1200), it represents one of the finest examples of early Indo-Muslim architecture. Other monuments include a fortified palace built by Akbar, a garden laid by Djahāngīr, and marble pavilions erected by Shāh Djahān on the embankment of Anāsāgar.

History. Founded by the Rādjpūt Rādja Adjaya Cawhān around 1100, Adjmēr was conquered by Muʿizz al-Dīn Muḥammad Ghūrī in 1192, and annexed to the Sultanate by Ḳuṭb al-Dīn Aybak in 1195. Shortly after 1398, the Rādjpūts of Mēwāṛ captured it, but in 1455 the Sultans of Mālwa ousted them and held the place till 1531, when Rādja Māldēva of Mārwār occupied it. Adjmēr was annexed by Akbar early in his reign and attached to a *ṣūba* of that name. Surrounded as it was by Rādjpūt principalities, and lying on the route to Mālwa and Gudjrāt, the town soon became a strategic and trading centre; while Akbar's frequent visits to the shrine of Khʷādja Muʿīn al-Dīn made Adjmēr one of the most important places of pilgrimage. After 1721, it was occupied first by the Rādjpūts and then by the Mahrattas, who ceded it to the British in 1818.

(NURUL HASAN)

ADJNĀDAYN, the traditional name for the site of a battle fought in Djumādā I or II, 13/July-August 634, between the Muslim Arab invaders and the Greek defenders of Palestine. Although located by the literary sources between Ramla and Bayt Djibrīn, no place of this name is attested by the geographers. On topographical grounds, the site of the battle was located by Miednikoff on the Wādī al-Ṣamt in the vicinity of the two villages of al-Djannāba (Gharbiyya and Sharḳiyya), 34° 57' E., 31° 41' N., from the dual form of which (al-Djannābatayn) the traditional name seems to have arisen by conflation with the Ar. plural *adjnād* ("armies"). The Greek forces were commanded by Theodorus, brother of the Emperor Heraclius; some early Arabic sources mention also a certain Arṭabūn (? Araṭyūn = Aretion). The Arab forces were composed of the three separate contingents which had been operating in Palestine and Transjordan (see ABŪ BAKR), temporarily united under the command (most probably) of Khālid b. al-Walīd [*q.v.*], who had reached Syria from the Euphrates three months before. (A less probable version represents ʿAmr b. al-ʿĀṣ as the commander of the joint forces.) The numbers of the combatants, especially on the Greek side, are highly exaggerated in the Arabic sources; and it is probable that in reality the forces on either side scarcely reached 10,000 men. The Greek army was severely defeated and withdrew to Damascus, leaving the whole of Palestine open to the invaders, who again broke up into separate columns, until a further attempt by the Greek command to establish a defensive position at Fiḥl [*q.v.*] led to the renewed junction of their forces six months later.

ADJR (A.), reward, wages, rent. The word is of Akkadian origin and was received into Arabic, through the intermediary of Aramaic, at an early date. It is used in a religious and in a legal sense, which both occur from the Ḳurʾān onwards.

1. In a great number of ḳurʾānic passages, *adjr* denotes the reward, in the world to come, for pious deeds. This concept seems to derive from Christian rather than from Jewish sources, and it has become one of the fundamental ideas of practical ethics in Islam. According to Ḳurʾān, vi, 160, ten good deeds are credited for each one accomplished, though the term *adjr* does not occur here. It is often stated in traditions that the well-intentioned, though imperfect, fulfilment of religious obligations gives right to one reward, whereas their successful accomplishment is rewarded twice or several times. The fulfilment of the religious duty of the *idjtihād* [*q.v.*], and of the parallel duty of giving judgment according to religious law, in particular, gives right to one reward, even though the decision arrived at is faulty; if it is right, two (or even ten) rewards are promised. The earliest tradition to this effect seems to have originated towards the middle of the second century of Islam.

2. As a legal term, *adjr* seems to have denoted in Mecca, in the time of the Prophet, any payment for services rendered, and it is used in the Ḳurʾān not only of wages, but of the *mahr* [*q.v.*] which is due to wives, whether free women or slaves, under the contract of marriage, including a *mutʿa* marriage [*q.v.*] (iv, 23 f.; v, 5; xxxiii, 50; lx, 10), and of the maintenance due to divorced wives who feed their children (lxv, 5). In the doctrine of religious law, the term was restricted to wages or rent payable under a contract of *idjāra* [*q.v.*]. For rent in particular, the special term *udjra* is often used.

ĀDJURRŪMIYYA [see IBN ĀDJURRŪM].

ʿADJŪZ [see AYYĀM AL-ʿADJŪZ].

ADJWAF [see TAṢRĪF].

ʿADL (1) Etymologically, the term is found both as substantive and as adjective, but with meanings that do not exactly correspond. *ʿAdl*, the substantive, means justice; as an adjective, it means rectilinear, just, well balanced; it thus applies both to beings and to things. In its two forms, the word is current in the vocabulary of religion, theology, philosophy, and law. In the Muʿtazilite doctrine, *ʿadl*, the justice of God constitutes one of the five fundamental dogmas (*uṣūl*) of the system [see MUʿTAZILA]. The Ḳāḍī must give judgment with *ʿadl* (or *ḳisṭ*; cf. Ḳurʾān, iv, 58; v, 42); but the idea of material justice plays hardly any part in the theory of religious law [cf. UṢŪL], although it is insisted upon in the "Investigation of Complaints" [see MAẒĀLIM]. The adjective which corresponds exactly to this substantive *ʿadl* is *ʿādil*.

As an adjective, the word *ʿadl* expresses more particularly a juridical conception, and has numerous applications. However, agreement has never been reached on a definition of the term, as the Mālikite jurist Ibn Rushd observes. Furthermore, the various definitions that have been formulated are too comprehensive and imprecise. In al-Māwardī's definition, *ʿadāla*, the quality of *ʿadl*, is described as a state of moral and religious perfection. For Ibn Rushd it consists in not committing major sins, and also avoiding minor ones. But another author observes that such a state can be found only very exceptionally, in the saints; that *ʿadāla* simply describes the state of a person who in general obeys the moral and religious law. This last conception is the one that came to be finally accepted. In the latest stage of Muslim law, as it appears in the codification undertaken in the Ottoman empire about the middle of the 19th century, the following definition is given: "The *ʿadl* person is one in whom good impulses prevail over bad" (*Madjalla* art. 1705). In short, one can translate *ʿadl* by "person of good morals", with the essentially religious sense that this has in Islam. Whether this quality must be a natural inclination, innate or acquired, or whether it is sufficient for it to be achieved by an effort of will, is however a theoretically disputed point.—The antonym of *ʿadl* is *fāsiḳ*.

The adjective is also employed substantively; it then means a person of good morals (pl. *ʿudūl*).

ʿAdāla enters into various juridical categories. In the theory of public law, *ʿadāla* is one of the principal conditions for carrying out public functions recognized by the doctrine of the School. But it is in private law, in the theory of evidence, that the idea has been most fully developed and involves a most detailed system of regulations. The witness must be *ʿadl*; it suffices, however, that his *ʿadāla* should be substantiated at the time when his evidence is given and not at the time of his observation of the fact in question. It is a disputed point, nevertheless, whether the witness is presumed to have *ʿadāla* so long as it is not contested by the adversary, or whether, even if it is not called in question, it should be the subject of verification. The latter course has prevailed in practice and in doctrine. Consequently a procedure has been evolved for substantiation of the *ʿadāla* of witnesses; it is known as *tazkiya* or *taʿdīl*. In the latest stage of the law, this procedure involves two phases. In the first, the judge proceeds to a secret investigation, by sending a question in a sealed envelope to qualified persons; this is *al-tazkiya al-sirriyya*. It is afterwards necessary, in certain cases, for these persons to appear at the public hearing to confirm their former attestation; this is *al-tazkiya al-ʿalāniyya*. The attestation of the *ʿadāla* of a witness is called *taʿdīl*; contestation of this *ʿadāla* is called *djarḥ*.

However, the *tazkiya* procedure is not used exclusively as an accessory or as incidental to a law-suit. It functions also independently and as an end in itself, for recognizing in a positive and final manner the quality of *ʿadāla* in given persons. Because of the small reliance placed on writing, as such, once its use became widespread, recourse was had, in order to give it once and for all conclusive force, to the procedure of testimonial proof. However, this method was not altogether reliable, for the witnesses of the instrument could always themselves be challenged on the ground of lack of *ʿadāla*. This difficulty was overcome by the use of a preliminary *tazkiya*; the judge recognizes once and for all the *ʿadāla* of a certain number of persons, who thus become in principle irreproachable witnesses, and

to whom appeal can be made to establish the preconstituted proof of written documents. From among such people the scriveners or notaries are recruited who bear the name of *ʿudūl* in a technical sense. But the *ʿudūl* are employed also for many other services: as assistants to magistrates for the certifying of instruments of procedure and of judgments, for the carrying out of various acts of judiciary administration, for answering *tazkiya* inquiries, for nominating people to functions for which *ʿadāla* is a requisite, etc. (cf. SHĀHID).

(E. TYAN)

(2) In numismatics *ʿadl* means "of full weight", and therefore this word (often abridged to ع) is stamped on coins to show that they have the just weight and are current (*ʿadlī*).

ʿADLĪ, pen-name of Muḥammad II and Maḥmūd II, further of Bāyazīd II. Gibb, *History of the Ottoman Poetry*, ii, 32 ff., believes that the pen name of this last was ʿAdnī, but the Upsala MS bears ʿAdlī. (Gibb, ii, 25 f. attributes the *dīwān* of *ʿAdnī*, Istanbul 1308, to Maḥmūd Pasha.)

ADMINISTRATION [see DĪWĀN].

ʿADN [see DJANNA].

ʿADNĀN, ancestor of the Northern Arabs according to the genealogical system which received its final form in the work of Ibn al-Kalbī, about 800 A.D. The name occurs twice in Nabatean inscriptions from N.W. Arabia (ʿAbd ʿAdnōn, ʿAdnon; Jaussen et Savignac, *Mission Archéologique en Arabie*, Paris 1909-14, nos. 38, 328) also in Thamudic (Lankester Harding/Littmann, *Some Thamudic Inscriptions*, Leiden 1952) and was taken to South Arabia along the incense-route (*Corpus Inscriptionum Semit.*, iv, no. 808). As already noted by al-Djumaḥī, *Ṭabaḳāt* (Hell), 5 (cf. also Ibn ʿAbd al-Barr, *al-Inbāh ʿalā Ḳabāʾil al-Ruwāh*, Cairo 1350, 48), it does not occur in pre-Islamic poetry at all (Labīd, xli, 7 is spurious), and only very rarely in early Islamic literature. This means that the name does not owe its place in the system to the conflict of parties in the Umayyad period, like Nizār and Rabīʿa, but is of pre-Islamic origin, although it does not spring from bedouin tradition. It may come, like other rudimentary elements of the system, from the Meccan tradition.—It is noteworthy that, owing to the revival of national feeling, the name ʿAdnān again became current in Turkey by the last quarter of the 19th century. This is explained by the fact that the Young Turkish movement represented in its earliest stage an Ottoman nationalism which included also the Arabic traditions.

ADRAMIT [see EDREMID].

ADRAR, Berber geographical term meaning "mountains" and applied to a number of mountainous regions of the Sahara.

1. ADRAR, 650 km. to the south-east of Colomb-Béchar, capital of the Tawāt (Touat) and main *ḳsar* (*ḳaṣr*) of the tribe of Timmi.

The centre of Adrar, on its present site, dates from the French conquest (30 July 1900). Since that time, the town developped as an administrative and commercial centre. In 1951, Adrar had 1,795 inhabitants.

Agriculture plays but a small part in the life of the *ḳsar*. Craftsmanship (fabrication of woollen and cotton wall covers called *dokkali*) is in decadence. The main role was always played by commerce, but the caravan traffic to the Sūdān (dates, tobacco) and to the oases of Algeria (skins, butter, live sheep) has greatly diminished owing to the competition of motor transport.

Bibliography: Cne. Flye Sainte Marie, *Le commerce et l'agriculture au Tuat*, *Bul. Soc. Gég. Arch. Oran*, 1904; Watin, *Origine des populations du Touat*, *Bul. Soc. Géog. Alger*, 1905; A. G. P. Martin, *Les oasis sahariennes* (*Gourara, Touat, Tidikelt*), Paris 1908; P. Devots, *Le Touat, étude géographique et médicale*, *Archives Inst. Pasteur Algérie*, 1947.

2. ADRAR OF THE IFOGHAS, an ancient massif in the southern Sahara (Sūdān), between 21° and 18° N, 30′ and 3° E. Like the Ahaggar range of which it is an extension, it is made up of crystalline rocks of the pre-Cambrian age, but there is no trace of recent volcanic action.

The monsoon rains from the Gulf of Guinea come annually to the Adrar of the Ifoghas (Kidal: 123 mm.) and the vegetation already approximates to that of the coastal region, at least in the valleys; but the water points are rare because of the impermeability of the soil.

The massif is inhabited by Tuareg tribes, among which the noble tribe of Kidal, that of the Ifoghas, supplies the *amenokal* [*q.v.*]; by extension, the name Ifoghas is applied to all the tribes who inhabit the Adrar and its confines. In 1949 the subdivision of Kidal had 14,574 inhabitants, all nomads, breeding camels, oxen, and sheep. They nomadize close to the massif, but go to Tidikelt and Tuwāt (Touat), crossing the Tanezruft, to sell their sheep. The principal administrative centre is Kidal (683 inhabitants); not far from there the ruins of the ancient Songhai town of al-Sūḳ (Es Souq, Tadmekket) can still be seen.

3. ADRAR OF MAURETANIA (also called Adrar Tmar to distinguish it from the Adrar of the Ifogha). A group of plateaus in the southern Sahara between 19° and 23° N, 10° and 13° 30′ W, having a surface of 150,000 sq. km. These plateaus are formed by sedimentary layers, gravel, schist and limestone

and are limited by graded slopes which overlook schistous depressions followed by wadis or traced by *sebkhas*; the main slope, the Ḍhar, reaches the height of 830 m.

By the scanty rainfall (81 mm. in Atar, 52 in Chinguiti), the absence of permanent drainage, the steppe vegetation consisting of thorny shrubs, the Adrar forms part of the desert. Nevertheless, the climate, the hydrography and the vegetation have features which are different form those of the Sahara. In the summer the humid air of the Gulf of Guinea invades the Adrar and tornadoes occur in July and August; the wadis flow and fill the closed depressions called *graʾir*.

The first inhabitants of the Adrar were the Bafur about whom one knows scarcely more than that the Adrar was called by the Portuguese, as late as the 16th century, "Mountains of the Bafur". From the 10th century, the Lamtuna [*q.v.*] penetrated into the Adrar and their chief Abū Bakr b. ʿUmar made himself master of Shinḳīṭ ([*q.v.*]; modern Chinguiti) and finally of G͟hāna, though this conquest did not last. Three centuries later the Maʿḳil [q.v.], driven by the first Marīnids, retraced the steps of Abū Bakr and subjugated the Berber tribes. The marabutic movement of the 15th century also contributed to the arabization of the western Sahara. At this period arose the hierarchical organization characteristic of the society of Mauretania; at the summit of the scale the warriors (Hasan), descendants of the Arab conquerors, followed by the Marabuts (Zwāyā) and the Tributaries (Zenaga), both Berbers; finally the Ḥarātīn, the slaves and smiths, Bafur, negroes or of mixed-race. This organization survived up to the French penetration. In 1909 the Adrar was occupied by the column of Gouraud. In 1932 the *amīr* of the Adrar rebelled and the region was only pacified two years later.

Animal breeding is the main source of livelyhood. Warriors, Marabuts and Tributaries possess numerous herds of camels and sheep, which disperse during the cool season in the *ergs*, while in the summer they are assembled near the wells or graze in the coastal zone. Agriculture assumes two forms: raising of sorghum and water-melon in the *graras*, after the floods; raising of millet, corn and barley under the palm-trees in irrigated gardens; the dates, harvested in July (*gatna*), are the object of a lively trade. There are a number of small oases, Azougui, Ksar Torchane, Toungad, Oujeft. Chunguiti, which used to be a religious and intellectual centre, the radiation of which was felt as far as Senegal, is today a miserable little township. All the life is concentrated at Atar, capital of the district, which lies on the motor-road connecting Saint Louis with Agadir. [Cf. also MAURITANIA.]

ADRIANOPLE [see EDIRNE].

ʿAḌUD AL-DAWLA, ABŪ S͟HUD͟JĀʿ FANNĀ K͟HUSRAW, son of Rukn al-Dawla, Buwayhid [*q.v.*] *amīr al-umarāʾ*, born at Iṣfahān on 5 D͟hu 'l-Ḳaʿda 324/24 Sept. 936. On the death in 338/944 of his uncle ʿImād al-Dawla, according to the latter's wish, since he left no son of his own, Fannā K͟husraw, though then aged only thirteen, succeeded him as ruler of Fārs; in 351/962 he received the *laḳab* ʿAḍud al-Dawla from the caliph al-Muṭīʿ; on the death of his other uncle Muʿizz al-Dawla in 356/967 he obtained possession of ʿUmān; and in the following year he conquered Kirmān, in the government of which he was confirmed by the caliph, and was acknowledged as overlord by the ruler of Sīstān. In 361/971-2, after foiling an attempt by a brother of its former ruler to recover Kirmān, he extended his authority south-eastwards over Makrān, temporarily subduing the Balūč and other predatory tribes of that province.

Having thus obtained control of all southern Persia, ʿAḍud al-Dawla next sought to displace his cousin Bak͟htiyār as lord of al-ʿIrāḳ. Bak͟htiyār's folly had involved him in a rebellion of his Turkish troops; and in 363/973-4 ʿAḍud al-Dawla persuaded his father, now senior member of the Buwayhid clan, to authorize his leading an expedition to Bak͟htiyār's aid in conjunction with a small force of Rukn al-Dawla's own troops from Rayy. He delayed moving, however, until Bak͟htiyār was on the point of defeat. Then, himself routing the revolted Turks, he entered Bag͟hdād in D͟jumādā I 364/January 975 and two months later frightened Bak͟htiyār into abdicating. For the moment his ambition of acquiring al-ʿIrāḳ for himself was nevertheless disappointed, his father's indignation at his treatment of Bak͟htiyār being so violent as to bring on the illness from which in the next year he died. In the interval, however, by obediently restoring Bak͟htiyār and returning to S͟hīrāz, ʿAḍud al-Dawla succeeded in obtaining confirmation as his father's heir; and since his much younger brothers Fak͟hr al-Dawla and Muʾayyid al-Dawla swore allegiance to him, on Rukn al-Dawla's death ʿAḍud al-Dawla was able to invade al-ʿIrāḳ a second time without fear of opposition from them in Persia. Bak͟htiyār was prepared for this attack, which he decided to meet at al-Ahwāz, only to be completely defeated (D͟hu 'l-Ḳaʿda 366/July 977). It was not until three months later, however, that he acknowledged ʿAḍud al-Dawla as his overlord. Moreover, on his way to Syria, to which he proposed migrating, he was induced by the Ḥamdānid Abū Tag͟hlib to defy ʿAḍud al-Dawla yet again, with the result that on 12 S͟hawwāl 367/24 May 978 ʿAḍud al-Dawla routed their combined forces at Sāmarrā (Ḳaṣr al-D͟juṣṣ). Bak͟htiyār was caught and killed on the field; and Abū Tag͟hlib in the course of the next twelve months was pursued, deprived of all his hereditary lands, and eventually forced to seek refuge with the Fāṭimids in Syria. The outcome of these operations was that by D͟hu 'l-Ḳa'da 368/June 979, when ʿAḍud al-Dawla returned to Bag͟hdād, he was master, not only of al-ʿIrāḳ, but also of Diyār Rabīʿa, Diyār Bakr, and most of the D͟jazīra.

In expectation of ʿAḍud al-Dawla's second onslaught Bak͟htiyār had sought help not only from Abū Tag͟hlib, but also from ʿImrān b. S͟hāhīn, the ruler of the marshes (al-Baṭīḥa), from the Kurdish chieftain Ḥasanwayh al-Barzikānī, from ʿAḍud al-Dawla's brother Fak͟hr al-Dawla, and from the Ziyārid Ḳābūs b. Wus͟hmgīr. In 369/979, accordingly,

having overcome Abū Taghlib, ʿAḍud al-Dawla determined on ensuring the subservience of all these, sending two expeditions against ʿImrān's son and successor al-Ḥasan, which resulted in the following year in his agreeing to pay tribute, and another against the sons of Ḥasanwayh, who had also died in the interval. On his addressing a letter of admonishment to Fakhr al-Dawla, moreover, the latter replied with such truculence as to prompt ʿAḍud al-Dawla to lead a force in person into the Djibāl against him; on which so many of Fakhr al-Dawla's supportes deserted him that he fled to Ḳazwīn, whence he entered into a compact with Ḳābūs to oppose ʿAḍud al-Dawla with Sāmānid help, and moved to Nishāpūr to obtain it. Whilst on this expedition ʿAḍud al-Dawla fell gravely ill with epilepsy, and though he was able to reduce all the local Ḥasanwayhid fortresses, he was then obliged to return to Baghdād. Finding, however, that, in contrast to Fakhr al-Dawla, his other brother, Muʾayyid al-Dawla, was ready to acknowledge his suzerainty, he first conferred on him the government of Hamadhān and Nihāwand, and in 371/981, after receiving a defiant reply to his approaches from Ḳābūs, secured from the caliph a commission for Muʾayyid al-Dawla to replace Ḳābūs as governor of Ṭabaristān and Djurdjān. Muʾayyid al-Dawla in due course drove Ḳābūs from both these provinces; and though Ḳābūs and Fakhr al-Dawla obtained Sāmānid assistance, they failed to dislodge him as long as ʿAḍud al-Dawla and he remained alive.

In the last years of his reign ʿAḍud al-Dawla was involved in negotiations with both the Byzantines and the Fāṭimids. In 369/980 the rebel commander Bardas Sclerus sought refuge in Diyār Bakr and solicited ʿAḍud al-Dawla's support; but on the arrival in Baghdād of an embassy from Constantinople, to which a favourable reply was sent by the hand of the *ḳāḍī* Abū Bakr al-Bāḳillānī, ʿAḍud al-Dawla not only refused it but held the rebel and some of his relatives captive for the rest of his reign. In the same year there likewise arrived in the capital an envoy from the Fāṭimid al-ʿAzīz, who had been perturbed at rumours that ʿAḍud al-Dawla intended invading Egypt—a project that he in fact abandoned only because of his preoccupation with the defiance of Fakhr al-Dawla and Ḳābūs, but which, despite ʿAḍud al-Dawla's eventual assurances of his good will, continued up to his death to occasion alarm in Cairo.

ʿAḍud al-Dawla's death occurred in his forty-eighth year on 8 Shawwāl 372/26 March 983 at Baghdād, by which date he had not only united all the territory ever held by princes of his family in a single dominion, but had greatly enlarged it by the various conquests referred to above. He is generally regarded, with justice, as the greatest *amīr* of the Buwayhid dynasty, whose power reached its zenith after his acquisition of al-ʿIrāḳ. He then exacted from the caliph al-Ṭāʾiʿ, who married his daughter, various privileges not enjoyed by his predecessors in the amirate, namely designation by a second *laḳab*, Tādj al-Milla; the introduction of his name after that of the caliph into the *khuṭba* at the capital; and the beating of drums before the entrance to his palace at the hours of prayer. These distinctions were well deserved. ʿAḍud al-Dawla had been early instructed in the duties of monarchy by his father's *wazīr* Abu 'l-Faḍl b. al-ʿAmīd; and first in Fārs, and later in the other provinces which he acquired, he not only introduced such security and administrative order as had long been unknown in them, but exerted himself in the construction of public works, of which the most notable were the Band-i Amīr, a barrage across the river Kūr in Fārs, and the hospitals, called ʿAḍudī after him, in Shīrāz and Baghdād. To Baghdād indeed he restored much of its lost prosperity and magnificence. He also built a new mausoleum over the supposed grave of ʿAlī b. Abī Ṭālib at Nadjaf, where he himself was buried. For various references to other buildings etc. of his, see in particular the indices to the *Fārs-nāma* of "Ibn al-Balkhī" and al-Maḳdisī and for references to his library at Shīrāz see both al-Maḳdisī, 499 and Yāḳūt, *Irshād*, v, 446. ʿAḍud al-Dawla was a liberal, though exacting, patron of the learned and of poets, including al-Mutanabbī, and himself wrote verse, some of which is quoted by al-Thaʿālibī in the *Yatīmat al-Dahr*. A convincing account of his character, daily life, and methods of government, is supplied by al-Rūdhrāwarī, iii, 39 f.

Hilāl al-Ṣābiʾ); the *Fārs-nāma*, index; Ibn al-Athīr, index; Ibn al-Ḳalānisī, *Dhayl Taʾrīkh Dimashḳ* (Amedroz), index; Ibn Khallikān, no. 543 (transl. de Slane, ii, 481 f.); Yāḳūt, *Irshād*, i, ii, iv, indices; cf. also BUWAYHIDS. (H. BOWEN)

ʿAḌUD AL-DĪN, ABU'L-FARADJ MUḤAMMAD B. ʿABD ALLĀH, of the family of Ibn Muslima [*q.v.*], held the office of *ustād dār* under al-Mustandjid until he had the latter assassinated in the bath and homage paid to al-Mustaḍīʾ (566/1170). He was appointed vizier by the latter, but one year later he was dismissed and shortly afterwards re-established in his office. When ʿAḍud al-Dīn prepared himself for the pilgrimage to Mecca in 573/1178 he was killed by the Ismāʿīlīs. — Ibn al-Taʿāwīdhī [*q.v.*] was one of the poets who glorified him.

Bibliography: Ibn al-Athīr, xi, 219 ff.; *Fakhrī* (Ahlwardt), 367 ff.

ʿAḌUD AL-DĪN [see AL-ĪDJĪ].

ADULTERY [see ZINĀʾ].

ADWIYA, pl. of *dawāʾ*, every substance which may affect the constitution of the human body, every drug used as a remedy or a poison. In accordance with Greek ideas, Muslim pharmacologists distinguished between simple drugs, *adwiya mufrada* (φάρμακα ἁπλᾶ) and compound drugs, *adwiya murakkaba* (φ. σύνθετα), [for the latter see AḲRĀBĀDHĪN]. According to their origin, the *adwiya* were divided into vegetable (*nabātiyya*), animal (*ḥayawāniyya*) and mineral (*maʿdiniyya*).

Like medicine in general, Muslim pharmacology depends on Greek learning. An element of Persian tradition is also revealed in the pharmacological nomenclature. In many cases these Persian names of plants and drugs, some of them still in use (see e.g. Ahmed Issa Bey, *Dictionnaire des noms des plantes*, Cairo 1930) may date from the time of the celebrated medical school of Djundīsābūr, where Greek science flourished on Persian soil. This learning began to exercise an effective influence on the Muslims in the year 148/765, when the caliph al-Manṣūr summoned to attend him the chief physician of the hospital of Djundīsābūr, Djurdjīs of the family of Bukhtyashūʿ. Greek pharmacological learning was transmitted through Syriac translations of the fundamental works of Dioscorides, Galen, Oribasius and Paul of Aegina.

For the history of the Arabic translation of the *Materia Medica* of Dioscorides, see Diyusḳuridīs. The Dioscoridean idea, clearly expressed by the great Iranian scientist al-Bīrūnī in his pharmacological work cited below, that, theoretically, every plant had some medicinal virtue, whether actually known or not, caused pharmacological writers to include in their works plant descriptions which had a purely botanical interest, derived especially from Abū Ḥanīfa al-Dīnawarī. There is thus in Muslim tradition no clear difference between *materia medica*, or works on *al-Adwiya al-Mufrada* etc., and botany, *Nabāt* [*q.v.*].

According to the autobibliographical *risāla* of Ḥunayn b. Isḥāḳ (*Uber die syrischen und arabischen Galen-Übersetzungen*, (Bergsträsser), no. 53), the first five *maḳālāt* of the *Book of Simple Drugs* of Galen were translated into Syriac, rather unsatisfactorily, by Yūsuf al-Khūrī, later on by Ayyūb (Job of Edessa, about A.D. 765-835), and, finally, in an abridged form (?) by Ḥunayn himself, who also made an Arabic translation of the text; of the second part a Syriac translation made by Sergius (Sargīs of Rishʿaynā, d. 536; a MS of the text in Brit. Mus., 1004) was corrected by Ḥunayn and turned into Arabic by his nephew Ḥubaysh. (The *Book of Compound Drugs* also was translated into Syriac by Sergius and Ḥunayn, then into Arabic by Ḥubaysh; Ḥunayn, *op. cit.*, no. 79.)

The *Synopsis* and the *Ad Eunapium* of Oribasius were translated (into Arabic?) by Ḥunayn, who translated also, together with ʿĪsā b. Yaḥyā, into Syriac the first tract of the *Collectiones* (= *al-Kunnāsh al-Kabīr* mentioned by Ibn Abī Uṣaybiʿa, i, 10?). These translations are lost but frequently quoted by later authors.

The *Pragmatia* of Paul of Aegina was highly appreciated by Muslim physicians, who used an (abridged?) translation of its seven books by Ḥunayn (*al-Kunnāsh fi'l-Ṭibb*, *Fihrist*, 293; *Kunnāsh al-Thurayyā*, Ibn Abī Uṣaybiʿa, i, 103). Apart from small fragments no manuscript survives in Arabic, but there are frequent quotations in the works of later authors.

According to Bar Hebraeus (*The Chronography*, transl. by E. A. W. Budge, Oxford 1932,57), Ahron the priest wrote his medical pandect in Greek, and his work was translated into Syriac. An Arabic translation was made by Māsardjis (Māsardjawayh). The *Kunnāsh* of Ahrun *al-ḳass* is often quoted by pharmacological writers, and its author had a great reputation as a scholar (Djāḥiẓ, *al-Ḥayawān*, Cairo 1356, i, 250). Māsardjis/Māsardjawayh (see Steinschneider, in *ZDMG*, 1899, 428-34), the first translator of medical works into Arabic, was also the author of two books, one on food and the other on simples (*al-ʿAḳāḳīr*), perhaps identical with the two *maḳālāt* added to his translation of Ahron (cf. Ibn al-Ḳifṭī, 80).

After the time of Ḥunayn, pharmacology rapidly developed in the Eastern countries of the Muslim world. About a hundred Arabic authors on *materia medica* are mentioned in the bibliographical works of Ibn al-Nadīm, Ibn Abī Uṣaybiʿa and Ibn al-Ḳifṭī. Some thirty are represented by manuscripts in Eastern and Western libraries. Only a few of these works have been studied by Western scholars. For the history of the Greek text of Galen etc. these Arabic texts will certainly prove to be of importance.

In the course of time, many hundreds of names of simple drugs, not known to the Greeks, were incorporated in the body of learning transmitted by the Greeks to their Arab and Persian disciples. (For a preliminary list of such drugs see L. Leclerc, *Histoire de la médecine arabe*, Paris 1876, ii, 232-3.) Serious confusion in terminology inevitably followed from the great influx of names of Arabic, Iranian, Greek and Indian names of plants and drugs which were current in theory and practice. In the course of time many works were written with the purpose of determining their true significance and of putting together synonyms. For practical purposes the translation of Dioscorides made in Baghdād was of little use to readers, as long as the Greek names were for the most part only transliterated in Arabic characters. Arabic equivalents were introduced into the text by Spanish scholars in the middle of the 10th century. About the same time the Arab translator of the Syriac *Kunnāshā* of Yuḥannā b. Sarābiyūn (Serapion, Ibn Abī Uṣaybiʿa, i, 109) gave Arabic equivalents to the great number of Greek and Syriac names of simples contained in that work (MS Aya Sofiya 3716; P. Guigues, *Les noms arabes dans Sérapion*, *JA*, 1905-6). One of the oldest prose works written in Persian is the *al-Abniya ʿan Ḥaḳāʾiḳ al-Adwiya* of Abū Manṣūr Muwaffaḳ b. ʿAlī al-Harawī explaining, in alphabetical order, the Arabic, Persian, Syriac and Greek names of 584 different simples (ed. F. R. Seligmann, Vienna 1859; German transl. by A. C. Achundow, Dorpat 1893).

The most interesting work on pharmacological synonyms written in the East is certainly that of al-Bīrūnī (361-440/972-1048), *al-Ṣaydana fi'l-Ṭibb* (M. Meyerhof, *Das Vorwort zur Drogenkunde des Beruni*, *Quellen und Studien zur Gesch. der Naturwiss. und der Med.*, iii, Berlin 1933; idem, *BIE*, 1940, 133 ff., 157 ff.). Apart from two MSS of a Persian translation, this work has come down to us in a single, mutilated MS in Brusa, representing the author's rough draft of the work, probably written in his old age and never completed by him. In its unfinished condition it contains 720 articles, in the common order of the Arabic alphabet, dealing with vegetable, animal and mineral simples with numerous remarks on their names in Greek, Syrian, Indian, Persian and other Iranian languages, philological notes on the meaning of plant names and their synonyms used in Arabic poetry, and copious quotations from medical and botanical works (many of them quite unknown to us) on the quality and origin of the drug, its substitutes (*abdāl*) etc. This work certainly deserves further study.

Among the numerous works on medicine written in the East and containing also chapters on pharmacology only the most important can be mentioned here. The *Firdaws al-Ḥikma* of ʿAlī b. Rabban al-Ṭabarī, written in 235/850 (ed. M.Z. Siddiqi, Berlin 1928), quotes the translations of Ḥunayn and his disciples and is of special interest as aiming to introduce also Indian medicine (cf. A. Siggel, in *Abh. der Akad. der Wiss. und Lit.*, Berlin 1950). The large medical encyclopaedia (*al-Ḥāwī*) of Abū Bakr al-Rāzī (250-313/864-925) abounds with names of drugs. The corresponding chapter in the immense *al-Ḳānūn fi'l-Ṭibb* of Ibn Sīnā (Būlāḳ 1294) treats of eight hundred remedies. The 10th book of the *Dhakhīra-yi Khʷārizmshāhī* (not yet printed), a medical encyclopaedia written by Zayn al-Dīn Ismāʿīl al-Djurdjānī in the 6th/12th century, contains a special treatise on the names of drugs and their operation.

In very many cases the descriptions of Dioscorides, Abū Ḥanīfa al-Dīnawarī, etc., were certainly inadequate for the recognition of the plant. Thus, in the

absence of technical terminology — a want shared by Muslim as well as ancient science — it was a most valuable device to depict the plants in figures. In ancient time this method was introduced by the "rhizotomist" Crateuas (1st century B.C.), and a part of the synonyms and figures of his herbal passed into the recension of Dioscorides represented by the Juliana Anicia codex of A.D. 512 (in which later hands introduced also Arabic synonyms). It was the gift of an illustrated Dioscorides by the Byzantine Emperor to ʿAbd al-Raḥmān III in Cordova in the year 948 that inspired a new and most fruitful study of the text in Spain. (For illustrated MSS of Dioscorides see DIYUSḲURIDĪS.) By Ibn Abī Uṣaybiʿa (ii, 216-9) we are told that his teacher Rashīd al-Dīn al-Manṣur b. al-Ṣūrī (d. 639/1241) prepared a herbal illustrated with figures depicted from living plants. For the botanical chapter of Ibn Faḍl Allāh, see B. Farès, *Un Herbier arabe illustré du* XIV *siècle, Archeologica Orientalia in Memoriam E. Herzfeld*, 1952, 84 ff.

The Muslim inhabitants of the Iberian Peninsula were the inheritors of a country famous in antiquity for its wealth of minerals and plants useful for preparing remedies. At first, pharmacological knowledge in Spain was, however, an import from the Orient, and Western students went to Baghdād for medical studies. A strong impulse to pharmacological studies in Spain was given by the revised text of Dioscorides, and from the end of the 10th century on there was no lack of contributions to the knowledge of simples. (See M. Meyerhof, *Esquisse d'histoire de la pharmacologie et botanique chez les Musulmans d'Espagne, And.*, 1935, 1-41.) The first to write books on simples in Spain were ʿAbd al-Raḥmān b. Isḥāḳ b. Haytham and Sulaymān b. Ḥassān, known as Ibn Djuldjul, both of whom joined the monk Nicolas and the other physicians and botanists who worked on the text of Dioscorides. Ibn Djuldjul wrote a work on those simples which are not mentioned by Dioscorides (MS Oxford, Hyde 34, fol. 197-201). The great medical encyclopaedia *al-Taṣrīf* by Abu'l-Ḳāsim al-Zahrāwī (d. about 400/1009) contains in its 27th book a treatise on the simples, their synonyms and substitutes. About the life of Abū Bakr Ḥāmid b. Samadjūn very little is known except that he was a prominent physician in the days of the *ḥādjib* al-Manṣūr (d. 392/1002). His famous *Book of Sayings of Ancient and Modern Physicians and Philosophers about the Simple Drugs* has recently come to light (cf. P. Kahle, *Ibn Samağūn und sein Drogenbuch, Documenta islamica inedita*, Berlin 1952, 25 ff.).

The most comprehensive textbook on simples (and botany) produced in Spain was written by al-Ghāfiḳī, probably in the first half of the 6th/12th century. The first vol. exists in two illustrated MSS (see M. Meyerhof, in *BIE*, 1941, 13 ff; the whole work was discovered in Tripolitania). An abridged version was made by the Christian Abu'l-Faradj b. al-ʿIbrī, commonly called Barhebraeus (ed. M. Meyerhof and G. P. Sobhy, Cairo 1932-8, not completed). The method and arrangement of materials followed by Ibn Samadjūn and al-Ghāfiḳī was the model also of al-Idrīsī (d. 560/1166). In his *Book of Simple Drugs* (the first half of the work in MS Fātiḥ 3610, Istanbul) he contributes a vast material of synonyms in many languages (see M. Meyerhof in *Archiv für Gesch. der Math., der Naturwiss. und der Technik*, 1930, 45 ff., 225 ff.; idem, in *BIE*, 1941, 89 ff.). For Ibn Rushd's pharmacological chapter see the photographic reproduction of Book iv of *al-Kulliyyāt* by A. al-Bustānī, Tangier 1939.

In a vast encyclopaedia, *al-Djāmiʿ li-Mufradāt al-Adwiya wa'l-Aghdhiya* (bad edition of the Arabic text, Būlāḳ 1291); French transl. by L. Leclerc, *Notices et Extraits de la Bibliothèque Nationale*, xxiii, xxv, xxvi, xxx, 1877-93), Ibn al-Bayṭār (d. 646/1248) put together all information available to him, quoting about 150 previous authors from Dioscorides to his own teacher, Abu'l-ʿAbbās al-Nabātī, whose *Riḥla*, or "Botanical Journey", he often quotes. Most of these works Ibn al-Bayṭār certainly knew from secondary sources, al-Ghafiḳī above all. In 2324 articles the *Djāmiʿ* treats of about 1400 different drugs and plants, 400 of which were not known to the Greeks.

To these works, written in the West, containing descriptions of the drugs and directions for their use, may be added also a number of others, containing lists of synonyms written in order to explain the meaning of the different names given to simples and drugs. Such are e.g. the *Sharḥ Asmāʾ al-ʿUḳḳār* of the famous Jewish theologian, philosopher and physician Mūsā b. Maymūn (Maimonides, A.D. 1135-1204), ed. M. Meyerhof, Cairo 1940, and the anonymous *Tuḥfat al-Aḥbāb*, ed. H. P. J. Renaud and G. S. Colin, Rabat 1934, treating especially of the names current in Morocco and written probably in the 18th century.

Bibliography: M. Meyerhof, in the introduction to Maimonides, *Sharḥ Asmāʾ al-ʿUḳḳār*; for a list of drugs, M. Steinschneider, *Heilmittelnamen der Araber, WZKM*, xi (2043 items). (B. LEWIN)

AFʿĀ means not only the viper, as it is commonly assumed, but also other similar kinds of snakes (Nöldeke, in Wiedemann, 271). The descriptions, however, which are given in Arabic zoological works (spotted or speckled, broad head, slender neck, short tail, sometimes furnished with two horns, etc.) fit well with specific kinds of vipers (*echis carinatus, echis coloratus, aspis cerastes cerastes*). Most sources state that *afʿā* denotes the female, whereas the male is called *ufʿuwān*. The first term, however, is always employed in a generic sense. Corresponding forms in Hebrew and Ethiopian suggest that the word belongs to the oldest stock of the Semitic languages.

The *afʿā* is often mentioned in Arabic literature, from ancient poetry, proverbs and *ḥadīth* down to those later works in which zoology and zoological items are treated systematically. In ancient poetry it is represented as the emblem of the mortal enemy, of one who seeks revenge for murder. Its noxiousness is illustrated by the proverb: "He who has been stung by an *afʿā* is afraid to take hold of a rope". Rich information is offered by al-Djāḥiẓ. The *afʿā* had a market value since theriac was prepared from it. Certain people made a living from this trade importing the *afʿā* chiefly from Sidjistān. In al-Djāḥiẓ's time thirty *afʿā* sold for two *dīnārs*. With certain Bedouins the *afʿā* served as food, and this habit was satirically alluded to by some poets.

A good deal of the information on the *afʿā* is fabulous: e.g., that it lives to an age of a thousand years, that it becomes blind and recovers its sight by rubbing its eyes on the fennel-plant (*rāziyānadj*). Among the correct accounts is the statement that the *afʿā* is viviparous, in contrast, i.e., to most other species of its genus.

AFĀMIYA, or FĀMIYA, the Seleucid city of Apamea on the right bank of the Orontes (ʿĀṣī), at its northward bend 25 m. N.W. of Ḥamāt. During the Syrian campaign of the Sāsānid Khusraw I (540) it was captured and laid waste. After the Arab conquest of Syria it was colonized by tribesmen of ʿUdhra and Bahrāʾ. It regained importance as a fortified outpost of Aleppo only in the Ḥamdānid period and during the early Crusades. After the disintegration of the Saldjūḳ power in Syria, Afāmiya was occupied by the Arab Khalaf b. Mulāʿib in the Fāṭimid interest in 489/1096. On his murder by Assassins, it was captured by Tancred in 500/1106, and became the seat of a Latin archbishopric. It was recaptured by Nūr al-Dīn Maḥmūd on 18 Rabīʿ i, 544/26 July, 1149, after his victory at Inab, but its fortifications were destroyed in the great earthquake of 552/1157. The ruins of the old city still exist, flanked on the west by the later citadel, now named *Ḳalʿat al-Muḍīḳ* (for *al-Maḍīḳ*, i.e. the shallows or ford).

ʿAFĀR [see DANḲALĪ].

AL-**AFḌAL** B. ṢALĀḤ AL-DĪN, in full AL-MALIK AL-AFḌAL ABU 'L-ḤASAN ʿALĪ NŪR AL-DĪN, the eldest son of Saladin (Ṣalāḥ al-Dīn, [*q.v.*]), b. 565/1169-70, d. at Sumaysāṭ 622/1225. On Saladin's death he was recognized as ruler of Damascus and head of the Ayyūbid family, but owing to his incapacity and self-indulgence he lost successively Damascus, Egypt, and all his Syrian fiefs, and ended as a dependent of the Saldjūḳ sultan of Rūm. See AYYŪBIDS.

Bibliography: Ibn Khallikān, no. 459; Abū Shāma, *Dhayl al-Rawḍatayn*, 145; Ibn Taghrībirdī, *Nudjūm*, vi, index; Maḳrīzī, *Sulūk*, i, index. (H. A. R. GIBB)

AL-**AFḌAL**, Rasūlid ruler [see RASŪLIDS].

AL-**AFḌAL** B. **BADR** AL-**DJAMĀLĪ**, ABU 'L-ḲĀSIM SHĀHANSHĀH, Fāṭimid vizier, commonly known in history by his vizierial title. His birth is placed about 458/1066, and it is known from an inscription of 482/1089 that he was associated with his father in the vizierate. On the death of Badr, the aged caliph al-Mustanṣir was forced by the army to accept al-Afḍal as his chief minister, and himself died a few months later.

The accession of the caliph al-Mustaʿlī assumed a capital importance by its indirect repercussions. While al-Mustanṣir was still alive, but of great age, the problem of his successor had been debated, and an Ismaʿīlī missionary from Persia, Ḥasan b. al-Ṣabbāḥ, had concluded in favour of Nizār, one of the caliph's sons. Al-Afḍal, being the vizier in office, raised to the throne a younger son of al-Mustanṣir, Aḥmad, who was given the title of al-Mustaʿlī. The dispossessed heir, Nizār, who had fled to Alexandria to raise an army, was seized and immured in a dungeon. Some persons, however, believed that he succeeded in escaping, and he was recognized as Imām by Ḥasan b. al-Ṣabbāḥ, who founded the formidable sect of the Assassins. The coinage of the latter bore for some time the name of Nizār, and their partisans in Egypt were called Nizārīs. Al-Afḍal had not foreseen these consequences, and his attitude had been dictated by considerations of personal ambition, which induced him to place on the throne a young man who would be submissive to his will.

Badr al-Djamālī, who had saved Egypt from disaster, had set up a dictatorial regime, and al-Afḍal now followed in his footsteps, confining the caliph al-Mustaʿlī, who was about twenty years of age on his accession, to his palace. Al-Mustaʿlī reigned for less than eight years (487/1094-495/1101), and some historians have suggested that he may have been poisoned by Nizārīs. Al-Afḍal then placed on the throne a son of al-Mustaʿlī, a child five years old, who was given the title of al-Āmir bi-Aḥkām Allāh, and the all-powerful minister went on to govern without interference. But as the caliph grew up he became restive under his vizier's tutelage, and succeeded in hiring the services of assassins who rid him of al-Afḍal in 515/1121. The latter had held the office of chief minister for twenty-seven years, marked by an internal tranquillity which is the more impressive by contrast with the unprecedented disorders of the following years.

Al-Afḍal's dictatorial power justifies the laying at his door of the responsibility for the Egyptian negligence in face of the invasion of Palestine by the Crusaders. The Fāṭimid government may be partially exonerated if its unpopularity outside the borders of Egypt is taken into account. It has certain actions to its credit: some fortresses were restored (we have epigraphic evidence at least for the port of Sidon in 491/1098); in the previous year the Fāṭimid army had regained Tyre from a disloyal governor; finally, Jerusalem was forcibly captured in 491/1098 from the Artuḳid officers who had established themselves in it. The Egyptians were not unaware that Jerusalem was the essential aim of the Crusaders, and it cannot be believed that they captured it in order to hand it over to the Franks. Ambassadors from Egypt had in fact appeared in 490/1097 in the Crusaders' camp before Antioch, and the latter in turn sent envoys to Cairo, possibly to negotiate an agreement. As a matter of fact, northern Syria was occupied by princes of Sunnī obedience; the Fāṭimids had no desire to interfere with them, and the Saldjūḳids would have viewed their intervention with bad grace. In the absence of precise documents we are reduced to putting forward these hypotheses.

Nevertheless, the inaction, or at least the lack of vigour, of the Egyptian troops cannot be ignored. They did not move to the defence of Jerusalem. Its fall was deeply felt, and al-Afḍal led an army corps to a position north of Ascalon; there, however, he

held them immobile, while he waited for reinforcements which were expected to arrive by sea and for the concentration of his bedoiun contingents from Palestine. The Franks took the offensive and massacred the Egyptian army; al-Afḍal fled to the protection of Ascalon and hastily returned to Cairo. The year 494/1101 witnessed the Frankish occupation of Palestine, whose population sought refuge in Egypt. The vizier continued, in the following and later years, to show a certain activity against the Crusaders, but in fact the expeditions scarcely went beyond the outskirts of Ascalon and never gained more than booty and prisoners. The main ports of Syria were at the time in the hands of overlords, who sported Sunnī or Shīʿī colours according to the interest of the moment. One of the more important raids, led by a son of al-Afḍal, succeeded in taking Ramla. In 497/1103 ʿAkkā (Acre) fell, surrendered by its Fāṭimid commandant because of lack of support. The stubborn resistance of the autonomous prince of Tripoli induced al-Afḍal to send a naval squadron, which arrived too late. In 512/1118 the Frankish threat redoubled when the town of Faramā was burnt down—an episode which became famous because of the accidental death of Baldwin I, king of Jerusalem, who led the expedition. During this lamentable period the Muslim princes were full of mutual suspicion, but al-Afḍal had solicited, and obtained, the cooperation of the Būrids of Damascus.

Clearly, a very bad impression is made by the luxury which surrounded the caliph al-Āmir and his vizier; ceremonies and feasts seemed to multiply in direct ratio with the number of cities that fell into the hands of the Franks. Whatever responsibility rests on the government of Egypt for this indifference cannot be placed on the caliph, still a mere child, but on his all-powerful minister, who was given over to frivolous heedlessness. There is in particular a striking contrast between the kind of edifices built by Badr—of which only the wall and the monumental gates of Cairo need be mentioned here — and those erected by his son al-Afḍal. The latter was concerned with his own wellbeing, and multiplied pleasure-pavilions in Fusṭāṭ and Cairo. On his death, the caliph al-Āmir appropriated the minister's property; it required no less than two months to transfer the precious objects, jewels and silks. On the credit side, however, the historians record al-Afḍal's financial readjustments, which notably increased the revenues of the State.

For al-Afḍal's son, surnamed Kutayfāt, see the following article.

(G. WIET)

AL-AFḌAL, ABŪ ʿALĪ AḤMAD, surnamed **KUTAYFĀT**, son of the preceding. After the death of the caliph al-Āmir (12 Dhu'l-Ḳaʿda 524/17 Oct. 1130), the power was assumed by two favourites of the late caliph, Hazārmard and Barghash, who put forward al-Āmir's cousin ʿAbd al-Madjīd as temporary regent. Four days later the army raised Kutayfāt (who assumed the title of al-Afḍal) to the vizierate. Shortly afterwards the vizier declared the Fāṭimid dynasty deposed, and the empire was placed under the sovereignty of the Expected Imām of the Twelver-Shīʿa; ʿAbd al-Madjīd was removed from the regency and placed in custody, and Kutayfāt ruled as a dictator. We have coins of 525 bearing the name of "The Imām Muḥammad Abu'l-Ḳāsim al-Muntaẓir li-Amr Allāh"; others of 526, with the inscription *al-Imām al-Mahdī al-ḳāʾim bi-amr Allāh ḥudjdjat Allāh ʿala 'l-ālamīn*, give greater prominence to the vizier: "al-Afḍal Abū ʿAlī Aḥmad, his representative (*nāʾib*) and lieutenant (*khalīfa*)". Although this implied the abolition of Ismāʿīlism as the state religion of Egypt, Kutayfāt did not propose to outlaw it, and even showed it a certain consideration; in the college of *ḳāḍīs* appointed by him there sat an Ismāʿīlī in addition to a Ḥanafī, a Shāfiʿī and an Imāmī. The Ismāʿīlī elements evidently did not relish the idea of being relegated to the status of a disestablished religious sect. Kutayfāt was killed while riding outside the city, and ʿAbd al-Madjīd was brought out of his prison (16 Muḥarram 526/ 8 Dec. 1131). The event was commemorated annually, right to the end of the Fāṭimid dynasty (Maḳrīzī, *Khiṭaṭ*, i, 357, 490). ʿAbd al-Madjīd first ruled as regent, but after a brief interval was proclaimed caliph under the title of al-Ḥāfiẓ li-Dīn Allāh.

AL-AFGHĀNĪ [see DJAMĀL AL-DĪN AL-AFGHĀNĪ].

AFGHĀN.

(i) The people; (ii) The Pashto language; (iii) Pashto literature.

(i) THE PEOPLE.

Racially, there is a considerable difference between the various Afghān tribes. According to B. S. Guha, *Census of India*, 1931, i, iii A, p. xi, the Paṭhāns of Bādjawṛ are closely related to the Kalashes of Čitrāl, probably because they are to a large extent afghānized Dards. On the other hand the broad-headed Paṭhāns of Balūčistān resemble their Balūč neighbours. In the plains of Peshāwar and the Dēradjāts there is some admixture of Indian blood, and among some tribes we find traces of Turko-Mongolian influence. But in general it may be said that the Afghāns belong to the Irano-Afghān branch of the dolichocephalic Mediterranean race. According to Coon, *Races of Europe*, 419, the skull index is 72-75, and the average height 170 cm. (Frontier Paṭhāns), and 163 cm. (Afghāns of Afghānistān). The nose is prominent, frequently convex, of the so-called "Semitic" type. Similar noses are found also among Balūčes, Kashmīris, etc. "The Afghāns are usually brunets, but at the same time show a persistent minority of blondism, which in this case reflects Nordic admixture. They are heavy-bearded" (Coon, 420).

A distinction is sometimes made between Afghān and Paṭhān, the former name being applied to the Durrānī and allied tribes. But the difference is probably only one of nomenclature, the Persian designation Afghān (of unknown etymology) being naturally applied chiefly to the western tribes,

while Paṭhān, the indianized form of the native name is used about the eastern ones.

The native name, employed by all tribes, is Pas̲h̲tūn, or Pəs̲h̲tūn (north-eastern dialect Pak̲h̲tūn), pl. Pa/əs̲h̲tānə. Lassen and others after him, compared Pas̲h̲tūn to the Πάκτυες of Herodotus, and the name of the Afrīdīs has been identified with that of the 'Απαρύται. This latter identification is possible, if by no means certain. The first one, however, must be rejected, for phonetic and other reasons. (The ending *-ūn* goes back to *-āna*, and the ancient sound-group which has resulted in Pashto *s̲h̲t* (*k̲h̲t* is a later dialect form), could scarcely have been rendered by Greek κτ.) More probable is the connection first suggested by Marquart, with Ptolemy's Παρσυῆται, a tribe inhabiting the Paropamisus. Psht. *s̲h̲t* can go back to ancient *rs* (see Morgenstierne, "*Pashto*", "*Pathan*", *etc.*, *AO*, 1940, 138 ff.), and the probable ancient form was **Parsw-āna*, derived from **Parsu*, cf. Assyrian-Babylonian *Parsu(a)* Persian. This does not imply any specially close relationship between the two Iranian tribes in question. (Cf. also Pus̲h̲t, Puk̲h̲t, the name of the supposed seat of the Afg̲h̲ān tribes in the Wazīrī country.)—*Pas̲h̲to* (*Pak̲h̲to*) the native name of the Afg̲h̲ān language, probably goes back to a fem. adjective **Parsawā* (sc. language).

The Afg̲h̲āns are called *Kās̲h̲* by the Ōrmuṛs of Logar, and the Wazīrīs *Kəsī* (pl.) by the Ōrmuṛs of Kānigurām. The origin of this word is unknown, but it is connected with Kāsī, the name of an Afg̲h̲ān tribe near Quetta (Masson, *Travels*, i, 330) and with the Pas̲h̲to name of the Sulaymān Mountains: (da) Kase G̲h̲ar.

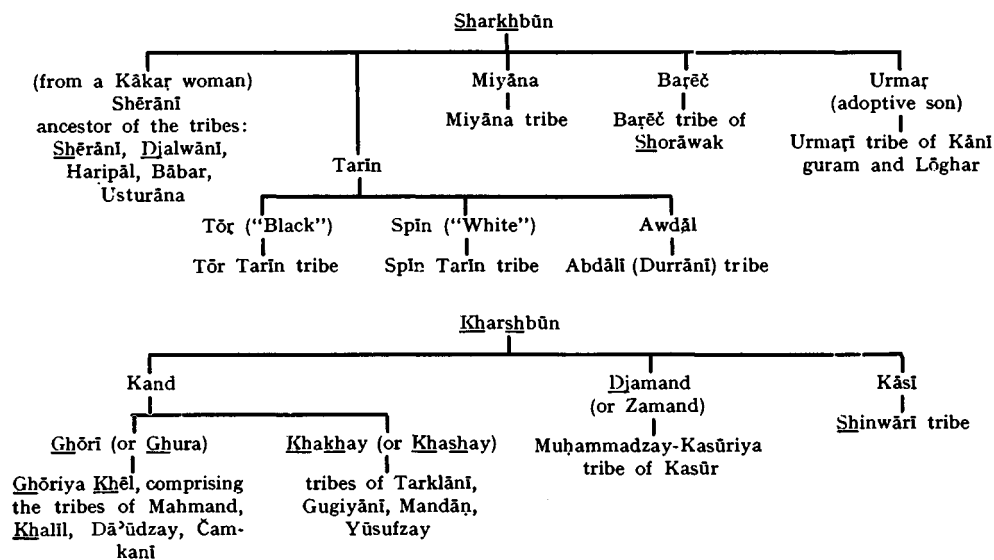
The word *Pas̲h̲to* is used also as a synonym of *Pas̲h̲tūnwalī*, etc., the special social code of the Afg̲h̲āns, the main pillars of which are: *nanawātai*, right of asylum, *badal*, revenge by retaliation, vendetta, *mēlmastyā*, hospitality. The causes of feuds leading to *badal* are said to be "women, gold and land" (*zan*, *zar*, *zamīn*). Among most tribes the organization is democratic, the hereditary *k̲h̲ān* having restricted power. More important matters are settled in consultation with the chiefs of the sub-tribes and clans, and the tribal or village council (*d̲j̲irga*) plays an important rôle. But the semi-independence of many tribes has become constantly more curtailed as well in Afg̲h̲ānistān as in India (Pakistan). Afg̲h̲ān or non-Afg̲h̲ān clients (*hamsāyas*) are attached to, and living under the protection of most tribes.—The ancient custom of periodical redistribution of land (*wēs̲h̲*) is now dying out in most places.—Even while politically disunited, and fighting amongst themselves, the Afg̲h̲ān tribes had a feeling of some kind of unity, based upon their sharing language, customs and traditions. On the other hand, each tribe is split up into sub-tribes, septs and clans. The names of such sections are often formed with the word *k̲h̲ēl*, or with the suffix *-zay*, but in some cases *-zay* denotes a whole tribe.

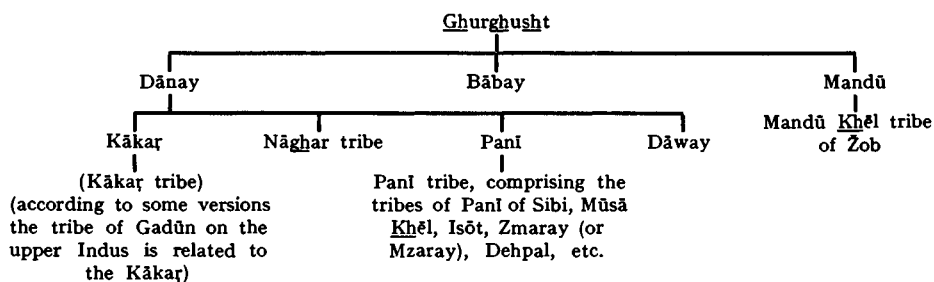
The Afg̲h̲āns are first referred to (in the form Avagāṇa) by the Indian astronomer Varāha Mihira (early 6th cent.) in his *Bṛhat-saṃhitā*. A little later is the probable reference to them in the Life of Hiuen-Tsang, which mentions a tribe A-p'o-kien (*Avagan?) located in the northern part of the Sulaymān Mountains (see A. Foucher, *La vieille route de l'Inde de Bactres à Taxila*, ii, Paris 1947, 235, 252 note 17). The earliest Muslim work mentioning them is the *Ḥudūd al-ʿĀlam* (372/982), followed by al-ʿUtbī's *Taʾrīk̲h̲-i Yamīnī*, and al-Bīrūnī. The name Paṭhān does not occur till the 16th century, but the change of *s̲h̲t* to *ṭh* shows that it must have been borrowed into Indo-Aryan at a considerably earlier date.—According to al-ʿUtbī, Cairo 1286, ii, 84, Maḥmūd of G̲h̲aznī attacked Ṭuk̲h̲āristān with an army consisting of Indians, K̲h̲alad̲j̲, Afg̲h̲āns and G̲h̲aznawīs, but on another occasion he attacked and punished the Afg̲h̲āns, and this is corroborated by Bayhaḳī who wrote shortly afterwards. Al-Bīrūnī mentions the various tribes of Afg̲h̲āns as living in the western frontier-mountains of India (*India*, transl. Sachau, i, 1, 208, cf. 199). This points to the Sulaymān Mountains as the earliest known home of the Afg̲h̲āns. It is uncertain how far they extended towards the West, but no Afg̲h̲ān settlement west of G̲h̲aznī is mentioned by early authors. There is no evidence for assuming that the inhabitants of G̲h̲ūr were originally Pas̲h̲to-speaking (cf. Dames, in EI[1]). If we are to believe the *Pəṭa K̲h̲azāna* (see below, iii), the legendary Amīr Karōṛ, grandson of S̲h̲anasb, (8th century) was a Pas̲h̲to poet, but this for various reasons is very improbable. The origin and early history of the westernmost Afg̲h̲ān tribe, the Durrānīs (Abdālis) [*q.v.*], is quite obscure.—Regarding the G̲h̲alzays [*q.v.*] it seems possible that their name is based upon a popular etymology ("Thief's Son") of the Turkish tribal name K̲h̲ald̲j̲ī, K̲h̲alad̲j̲, located by al-Iṣṭak̲h̲rī on the middle course of the Hilmand and by the *Ḥudūd* in the region of G̲h̲aznī [see KHALADJ]. But the G̲h̲alzays themselves may have been partly, perhaps predominantly, of Afg̲h̲ān origin. At any rate the Afg̲h̲āns do not appear to have acquired any political significance during the G̲h̲aznawī period. Some early references which follow were noted by M. Longworth Dames (*EI*[1]) and have been supplemented by P. Hardy. In 431/1039-40 Masʿūd sent his son Īzadyār into the hill country near G̲h̲azna to subdue the rebel Afg̲h̲āns (Gardīzī, ed. M. Nazim, 109). In 512/1118-9 an army composed of Arabs, *ʿad̲j̲am*, Afg̲h̲āns and K̲h̲alad̲j̲ was assembled by Arslān S̲h̲āh. In 547/1152-3, Alfī says, Bahrām S̲h̲āh assembled an army of Afg̲h̲āns and K̲h̲alad̲j̲. With the rise of G̲h̲ūrī power, the same state of things continues. In 588/1192 according to Firis̲h̲ta, Bombay 1831, 100 f., the army assembled by Muʿizz al-Dīn Muḥammad b. Sām consisted of Turks, Tād̲j̲īks and Afg̲h̲āns, and his Indian opponent Pithoray (Prithwī Rād̲j̲) assembled a force of Rād̲j̲pūt and Afg̲h̲ān horsemen. Thus in this great war between Muslims and Hindus Afg̲h̲āns are represented as fighting on both sides, which probably indicates that they were not yet completely converted to Islam, although the manufactured legends represent them as having been converted from the days of K̲h̲ālid. It is not clear whence Firis̲h̲ta obtained his statement. It does not appear in the account of this war given by Minhād̲j̲-i Sirād̲j̲ in the *Ṭabaḳāt-i Nāṣirī*. This author does not mention the Afg̲h̲āns throughout his account of the G̲h̲aznawī and G̲h̲ūrī kings. His first and only mention of them is in his own time in the year 658/1260 in the reign of Nāṣir al-Dīn Maḥmūd of Dihlī. He there says (transl. Raverty, 852) that Ulug̲h̲ K̲h̲ān employed 3000 brave Afg̲h̲āns in subduing the hill-tribes of Mēwāt in Rād̲j̲pūtāna. According to D̲j̲uwaynī, i, 142, K̲h̲alad̲j̲, G̲h̲aznawīs and Afg̲h̲āns formed part of the Mongol army which sacked Marw in 619. During the next two centuries we find occasional mention of Afg̲h̲āns in Indian history. For instance Baranī says in the *Taʾrīk̲h̲-i Fīrūzs̲h̲āhī*, 57, that Balban in 664/1265 established small forts in the neighbourhood of Gopālpur and entrusted

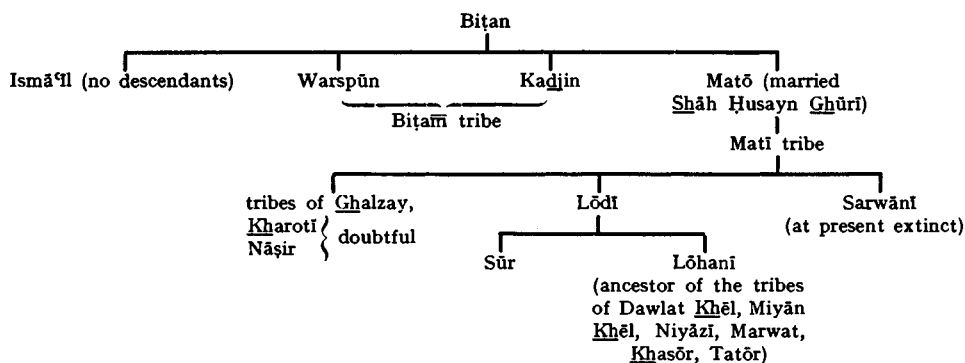
them to Afghāns; three other towns, particularly afflicted by robbers, were also given the protection of forts entrusted to Afghāns. According to the same author (p. 482) in the reign of Muḥammad b. Tughlaḳ there was a rebellion at Multān of a body of Afghāns headed by Multān Mall (this name means in the Multānī dialect "the champion of Multān" and is probably not the proper name of an Afghān). Sirhindī, *Taʾrīkh-i Mubārakshāhī*, Calcutta 1931, 106, says that this revolt was in 744/1343. Again Makh Afghān was one of the foreign *amīrs* who rebelled at Dēogīr. In 778/1376-7 the fief of Bihār was given to Malik Bīr Afghān (*Taʾrīkh-i Mubārakshāhī*, 133). Tīmūr found them still hill robbers and in the *Malfūẓāt-i Tīmūrī*, the *Ẓafar-nāma* and the *Maṭlaʿ al-Saʿdayn* it is related that he ravaged the country of the Awghānī (or Aghānī) who inhabited the Sulaymān Mountains. Thus except as occasional soldiers of fortune they remained a fierce race of mountain robbers until the rise to power in India of one of these adventurers made them famous. This leader was Dawlat Khān Lōdī of the Lōdī clan of Ghalzays; he rose to be one of the most important persons in the empire. Bahlūl Lōdī occupied the throne of Delhi in 855/1450 [see LŌDĪ]. The dynasty was overthrown by Bābur in 932/1525, but for a short time (944-63/1537-55) Shīr Shāh Sūr reinstalled the Afghāns in power [see SŪR] and a large number of Ghalzays and other Paṭhāns settled in India. At a later date Awrangzīb made grants of land to Paṭhāns of various tribes in Rohilkhand [*q.v.*; see also RĀMPUR] (Bareilly division, etc.), so called from Pashto *rohēla* (Rohilla), "hill-man", "Paṭhān". At the court of the Nawāb of Rāmpur some Paṭhān traditions were still alive at the time of Darmesteter's visit in 1886. But gradually the Afghān settlers in India were assimilated, except in the extreme North-West.

The immigration into India was part of the great expansion of Afghān tribes during the late Middle Ages. This expansion was on such a scale that it is difficult to believe with Dames (*EI*[1]) that the Afghāns were still at a period as late as that of the Ghūrid dynasty only an unimportant hill-tribe inhabiting a restricted area.—The Lohānīs were expelled from the Ghaznī mountains by the Sulaymān Khēl Ghalzays, who also pressed the Biṭanīs eastward through the Gōmal Pass in the 15th cent. A century or two earlier the Khaṭaks [*q.v.*] and Bangashes had started their movement towards their present homes in Kohāṭ, and Yūsufzays and allied tribes had, according to tradition, left the Tarnak and Arghasān for Kābul in the 12th cent. Later on they were expelled from Kābul and reached the Peshāwar plain during the 14th cent., pushing back the Dilāzāks, who perhaps represented an earlier wave of Afghāns, and penetrating into the mountain valleys to the North of Peshāwar [cf. YŪSUFZAY]. The Ghōriya Khēls (Mahmands, etc.), followed in their wake early in the 15th century. Some tribes crossed the Indus into the Pandjāb.

A first attempt to rally the Paṭhān tribes on the Frontier to a common fight for independence from the Mughals was made by the warrior-poet Khushḥāl Khān Khaṭak in the latter part of the 17th century. But a national Afghān state first came into being under the leadership of the Ghalzay chief Mīr Ways, and, more permanently, under Aḥmad Shāh Durrānī in the 18th century [see AFGHĀNISTĀN, History].

The main outlines of the tribal traditions of the Afghāns are mentioned by Abu 'l-Faḍl, *Akbar-nāma*; slightly different versions are given in Sulaymān Mākū's *Tadhkirat al-Awliyāʾ* (allegedly of the 13th century) and in the *Pəṭa Khazāna* (cf. about these below, iii). Our main source for the tribal traditions is Niʿmat Allāh's *Makhzan-i Afghānī* (completed A.D. 1613). The genealogies given there and copied in later works such as the *Ḥayāt-i Afghānī*, cannot be relied upon as historical sources, but are valuable as a testimony to the traditions current among the Afghāns in the 17th century. According to this tradition the common ancestor of the majority of the Afghān tribes was Ḳays ʿAbd al-Rashīd who was converted to Islam by Khālid and descended from Afghāna, a grandson of King Ṭālūt or Sārūl (Saul). Ḳays had three sons: Sarban, Baṭan (Biṭan) and Ghurghusht. Sarban had two sons: Sharkhbūn and Kharshbūn. The further ramifications may be tabulated as follows:






Most of the remaining tribes are said to be descended from Karṛān (or Kaṛlān), of doubtful ancestry.
According to some traditions also the Bangash (Bangakh) and Wazīrīs are descended from Kakhay; according to other, the Wazīrī and the Dawr tribes are not attached to any of these genealogies.

Certain clans claim to be *sayyids* by descent; such are to be found among the Sherāni, Kākaṛ, Karṛānī, Dāway, Tarīn, Miyāna and Biṭanī. The same descent is claimed by the tribes of Gandāpur and Ustarāna; these were originally subdivisions of the Shērānī. The Bangash claim to be of Ḳurayshite descent.

In the ***Makhzan-i Afghānī*** all these tribes are expressly acknowledged as Afghāns, with the exception of the Bangash, Wazīrī and those Karṛānī which belong to the Kakhay division (Afrīdī, etc.). The last seem to have remained unknown to him.

It is of interest to note that all the Pashto dialects which change the long vowels (*ā* > *ō*, etc., see below ii) belong to the Karṛānī group or to the Wazīrīs.—The extreme complexity of the tribal system may be exemplified by the ramifications of the Yūsufzays. One of their five sub-tribes, the Akōzays, are divided into Rānīzays and other sections. One of the five Rānīzay clans is in its turn divided into Ghaybī Khēl and three other clans. And one of the two Ghaybī clans are the Nūr Muḥammad Khēls, divided into Gharīb Kh. and Dwar Kh.—It may also be noted that the name Tōrmān, one of the ancestors of the Khaṭaks, is probably identical with that of Toramāṇa, a Hūṇa king of India, and also a member of the Shāhī dynasty. This does not imply any historical connection between the legendary Afghān and these princes, but only a survival of the name in local traditions.

Geographical distribution of the Afghān tribes. Durrānīs [*q.v.*] in the lower river valleys from Sabzawār and Zamīn-dāwar to south-cast of Ḳandahār and Čaman. Among the sections are the Pōpalzays (including the royal clan, the Sadōzays) and the Bārakzays.—Next to the Durrānīs, the Ghalzays [*q.v.*] are the most powerful tribe, and were for a long time their rivals. They occupy the country between Kalāt-i Ghilzay and Djalālābād. The Hōtaks were formerly the leading clan. The most important section is now the Sulaymān Khēl from whom are recruited the Pōwindas, nomads moving in autumn down through the Gōmal and Tōčī passes to the banks of the Indus, and returning in spring to Afghānistān. The Kharōtīs are related to the Ghalzays.—Kākaṛs and Tarīns inhabit the Pishin and Žōb districts in Balūčistān. The Panīs of Sibi are their neighbours.—North-west of Žōb, around the Takht-i Sulaymān, we find the Shērānīs.—The Wazīrs [*q.v.*] (divided into Darwēsh Khēl and Maḥsūd) live in the mountains between the Gōmal and the Kurram on both sides of the frontier. In the foothills to the East we find the Biṭanīs and Lōhānīs, and in the plains south of the lower Kurram the Marwats. The Tōčī valley is inhabited by the Dawrīs and Banūčīs.—The Khaṭaks occupy the plains of Kōhāṭ and extend right up to Attock. In the upper Kurram valley live the Bangash, the Shī'a Tūrīs and other tribes, and on the Afghān side of the frontier the Djādjīs, with their neighbours the Mangals and Khostwāls.—North of the Bangash are the Ōrakzay (with some Shī'a clans), and in Tirāh, the Khaybar and Kōhāṭ passes the Afrīdīs [*q.v.*], with Shinwārīs to the north of them, on both sides of the frontier.—The Mahmand [*q.v.*] occupy a large tract of land north of the Kābul river in

Afghānistān and in the Peshāwar district. Related to them are the Khalīls in Peshāwar.—East of the Mahmands are the Yūsufzays [*q.v.*] and allied tribes (Mandāṇ), etc., in Peshāwar and in the mountains to the North (Bunēr, Swāt, Dīr, etc.), where they are pushing back and assimilating the Dardic population.—The so-called Swātīs are a mixed lot, driven by the Yūsufzays across the Indus into the Hazārā district.—In the Kunaṛ valley and in other places in N.E. Afghānistān we find the Sāfīs.—In recent times many Pashto speaking Afghāns have settled, or have been settled, in various places north of the Hindū-kush and in the Harāt region.

Bibliography: see the works of Muḥammad Ḥayāt, Bellew, Raverty, quoted in the Bibliography to AFGHĀNISTĀN, section ii; the work of Elphinstone, quoted in that to AFGHĀNISTĀN, section i; H. A. Rose, *A Glossary of Tribes and Casts of the Punjab and the N.-W. Frontier Province*, Lahore 1911-9, especially s.v. Pathán; H. C. Willy, *From the Black Mountain to Waziristan*, London 1912 (on the Paṭhān frontier tribes).

(ii) THE PASHTO LANGUAGE.

Pashto is spoken in south-eastern Afghanistān from north of Djalālābād to Ḳandahār, and from there westwards to Sabzawār. (The Kābul area is mainly Persian-speaking, and so is Ghaznī.) Pashto is also spoken by settlers in northern and western Afghānistān. In Pakistan Pashto is used by the majority of the inhabitants of the N.W. Frontier Province from Dīr and Swāt southwards, in some localities in the Pandjāb, and in Balūčistān as far south as Quetta, probably in all by over 4 million people.

Pashto is in its origin and structure an Iranian language, although it has borrowed freely from Indo-Aryan. It shares all the common Iranian sound-changes. It sides with the other Eastern Ir. languages e.g. in having fricatives corresponding to W.Ir. initial *b*-, *d*-, *g*-., and in the sonorization of intervocalic -*sh*-. In its origin it is probably a "Saka" dialect, introduced from the North, but it is not possible to define its relationship more closely. Note ***dr***- < ****thr***, as in Khotanese, and *l*- < *dh*- as in Mundjī (but also in other E.Ir. languages). Various sound-changes, especially assimilations and reductions of consonant groups, have radically altered the form of most words of Iranian origin, as will appear from the comparison between some Pashto words and their Persian etymological equivalents: ***drē*** 3 : ***sih***; ***tsal(w)ōr*** 4 : ***čahār***; ***shpaǧ*** 6 : ***shash***; ***ōwə*** 7 : ***haft***; ***atə*** 8 : ***hasht***; ***las*** 10 : ***dah***; ***(w)shəl*** 20 : ***bīst***; ***mōr*** mother : ***mādar***; ***lūr*** daughter : ***dukhtar***; ***ghwaǧ*** ear : ***gōsh***; ***zṛə*** heart : ***dil***; ***sōṛ*** cold : ***sard***; ***ūx̌*** camel : ***ushtur***; ***yəǧ*** bear : ***khirs***; ***ǧdən*** millet : ***arzan***; ***pəx̌t-əm*** I ask : ***purs-am***.—Stress has been retained as a relevant factor, and metre is based on it, not on quantity.

Sound-changes and borrowings have given Pashto a phonemic system which includes a number of phonemes foreign to Persian, viz. the neutral vowel *ə*, the dental affricates *ts*, *dz*, the "back" sibilants here written *x̌*, *ǧ* (v. below), and the "cerebrals", *ṭ*, *ḍ*, *ṛ*, *ṇ*. In Pashto literature these sounds are usually expressed by the following special letters: ځ *ts* and *dz*; ښ *x̌*; ږ *ǧ*; ټ *ṭ* ډ *ḍ*; ړ *ṛ*; ڼ *ṇ*.

Bāyazīd Anṣārī and some of his successors employed a somewhat different set of letters, and in Afghānistān ځ *dz* is now being differentiated from څ *ts*. Here also *madjhūl ē* is distinguished from *ī* by putting two dots in vertical position below the *yā*-sign (ې), and devices have also been invented to express final -*əi*. More sporadically, and chiefly in dictionaries, attempts have been made to mark other vocalic distinctions and stress.

The most striking isoglott is that which separates the south-western group (the so-called "soft" dialects) from the north-eastern ("hard") group (Bangash, Ōrakzay, Afrīdī, Yūsufzay, Mahmand, etc.). The soft „dialects" preserve *x̌*, *ǧ* with the original quality of back *sh*, *ž*, while the „hard" ones they merge with respectively *kh* and *g*. Thus: *Pax̌to* = *Pashto* and *Pakhto*, *ǧira* beard *žira* or *gira* (in the other sections of this article *x̌* has been rendered by *sh* in tribal names and in the word Pashto, etc.). Some Ghalzay dialects occupy an intermediate position. The exact date of the change is uncertain, but it is probably later than the great northward migration of tribes.—Dialects also vary a good deal in their treatment of *sh*, *ž*, *ts*, *dz* (partly owing to the influence of an Indian sub- or adstratum), and palatalization, assimilation, dissimilation and metathesis act differently according to dialect (e.g. *nwar*, *lmar*, *nmar*, *mar*, etc. sun, *wužənz*, *ǧmandz*, *mangaz* comb, *px̌a*, *x̌pa* foot).—Cutting across the line dividing "soft" from "hard" Pashto runs an isoglott encircling a number of dialects (from Afrīdī to Wazīrī) changing *ā* > *ō*; *ō* > *ȫ* and in some dialects further to *ē* and *ū* > *ī* (e.g. Wazīrī ***mēr*** mother, ***plōr*** father; ***līr*** daughter).—The Waṇetsī dialect of north-eastern Balūčistān (Harnai-Shāhrīg region) occupies a rather independent position and must have split off from the bulk of Pashto earlier than any other dialect. It has retained *r* before *ž*, e.g. in *yirž* bear, and it shows a different development of -*t*- (*piyār* father, etc.).

Important morphological features of Pashto are e.g.: 1. Distinction between two genders, masc. and fem. 2. A great variety of declensions and traces of case-inflection. 3. No distinction between 3rd sing. and plur. 4. So-called passive construction of the preterite of transitive verbs (*zə tā wahəm* I strike you, but *zə tā wahələm* you struck me).

(iii) PASHTO LITERATURE.

Until recently no Pashto literary work older than the 17th century had been published. But in the *Almanach de Kābul*, 1940-1 (*Da Kābul Sālnāma*) ʿAbd al-Ḥayy Ḥabībī published fragments of the *Tadhkirat-i Awliyā*ʾ by Sulaymān Mākū, containing poems said to go back to the 11th century. In 1944 he published in Kābul the *Pəṭa Khazāna* by Muḥammad Hōtak, which professed to be written in Ḳandahār (finished 1729), and to be an anthology of Pashto poets from the 8th century down to the time of the compiler. But these works raise a number of grave linguistic and historical problems, and the question of their authenticity cannot be finally settled until the manuscripts are made available for philological investigation. Even if the authenticity of the *Khazāna* is admitted, however, Muḥammad Hōtak's dating of the oldest poems may be doubted. According to Raverty, Shaykh Malī in 1417 wrote a history of the Yūsufzays, but nothing more is known about this work [cf. YŪSUFZAY]. A manuscript exists, and has been examined, containing the ***Khayr al-Bayān*** of the arch-heretic Bāyazīd Anṣārī (d. 1585). From the early 17th century we possess the theological and historical works—rich in invectives—of his orthodox opponent Akhūn(d) Darwēza [see RAWSHANIYYA] (***Makhzan-i Afghānī*** and ***Makhzan-i Islām***). The 17th and 18th centuries are rich in poets,

but most of them are imitators of Persian models. The most remarkable according to European standards, and also the national poet of modern Afghānistān, is Khushḥāl Khān ([*q.v.*]; 1022-1106/1613-94), chief of the Khaṭaks, patriot, warrior and prolific writer on a multitude of subjects. His spontaneousness, force of expression and independence of mind lend a special charm to his best poems. Several of his descendants were also poets, and his grandson Afḍal Khān wrote the *Ta'rīkh-i Muraṣṣaʿ*, a history of the Afghāns. The oldest mystical poet was Mīrzā who belonged to the family of Bāyazīd Anṣārī, but the most popular were ʿAbd al-Raḥmān and ʿAbd al-Ḥamīd (both about A.D. 1700). Also Aḥmad Shāh, the founder of the Durrānī dynasty, was a poet. There are also numerous translations from the Persian and versified versions of Persian and Afghān legends, e.g. Ādam Khān and Durkhānaī. Of considerable interest are the folk-songs, ballads, etc., collected and published by Darmesteter. Recently the Afghān Academy (*Paxto Ṭōləna*) in Kābul has published a volume of folk-songs, chiefly so-called *landais* or *miṣrāʿs*, lyrical distichs in a peculiar metre, and some of them of great beauty. There is a considerable output of modern poetry in Afghānistān, and the Pashto Academy publishes also other literary works.

AL-AFGHĀNĪ [see DJAMĀL AL-DĪN AL-AFGHĀNĪ].

AFGHĀNISTĀN.

(i) Geography; (ii) Ethnography; (iii) Languages; (iv) Religion; (v) History.

(i) GEOGRAPHY.

The country now known as Afghānistān has borne that name only since the middle of the 18th century, when the supremacy of the Afghān race became assured: previously various districts bore distinct appellations, but the country was not a definite political unit, and its component parts were not bound together by any identity of race or language. The earlier meaning of the word was simply "the land of the Afghāns", a limited territory which did not include many parts of the present state but did comprise large districts now either independent or within the boundary of Pakistan. As at present constituted, under the rule of the Bārakzay kings (formerly *amīrs*), Afghānistān consists of a territory of irregular shape lying between 29° 30′ and 38° 30′ N. and between 61° and 75° (or, if the long strip of Wakhān is omitted, 71° 30′) E.

Geological formation. This country forms the north-eastern portion of the great Iranian plateau (cf. IRĀN), which is bounded to the north by the Central Asian depression, and to the east by the plains of Sind and the North-West Frontier Province of Pakistan, while to the south and west it slopes away into the depressed tract which occupies the central portion of the plateau, and on the south-east is connected with the mountain system of Balūčistān. The northern barrier of the highlands is the mountain range extending westwards from the Pāmir, with its outlying ridge, the Band-i Turkistān, beyond which the plain of sand and loess extends to the Oxus. On the east there is a sudden drop into the Indus valley. It will be seen therefore that, with the exception of the loess plain of Turkistān, the whole country belongs to the plateau, which is itself a late geological formation of the tertiary period, mainly sandstones and limestones. The north-eastern part of the plateau previously formed part of a great ocean connecting the Caspian depression with the plains of Pakistan. The process of upheaval which has raised it still continues, and Holdich considers that the extraordinarily deep river gorges are due to the fact that the erosive action of the rivers is too slow to keep pace with the upward movement.

Orography. The most prominent feature of the mountain system is the northern range running east and west above alluded to as forming the northern boundary of the plateau. It divides the Turkistān districts on the north (the ancient Bactria) from the provinces of Kābul, Harāt and Ḳandahār (the ancient Ariana and Arachosia) on the south. This main range is known by various names such as Hindū-kush [*q.v.*] on the E. where it branches from the Pāmir, Kūh-i Bābā further west, and Kūh-i Safīd and Siyāh Bubuk near Harāt; the latter is generally known as Paropamisus, although the true Paropamisus (or Paropanisus of Ptolemy) included the Hindū-kush. The greater part of the country south of this range is occupied by a number of subsidiary chains or long spurs which run from east to west or more generally from north-east to south-west. These ranges and the intervening valleys form the greater part of the Harāt and Ḳandahār provinces, while the tangled mass of mountains lying to the south of the eastern Hindū-kush comprises the valleys of the Kābul and Kuṛam rivers and forms the provinces of Kābul and Nūristān. The highest elevation in the northern range is the Shāh Fulādī peak (16,870 ft./5158 metres) in the Kūh-i Bābā, and the long spur running to the south-west contains several peaks of about 11,000 ft./3353 m. The ridges dividing the Hilmand, Tarnak, Arghandāb and Arghasān are outliers of this system, and it may be traced further south-east into Balūčistān. The Sulaymān [*q.v.*] range (highest peak the Takht-i Sulaymān, 11,200 ft./3145 m.), which drops finally into the Indus valley and is the eastern edge of the plateau, is beyond the political limits of Afghānistān. The mountains further

north on this eastern flank of the plateau between the Kuṛam and Gumal rivers are a more irregular mass with peaks over 11,000 ft./3353 m., while further north still between the valleys of the Kābul and the Kuṛam is the Safīd Kūh, the highest range in Afghānistān after the Hindū-kush and Kūh-i Bābā (highest peak Sikārām, 15,600 ft./4543 m.).

River system. Northward from the Hindū-kush the level of the country falls rapidly towards the Oxus valley, while southward the valleys fall more gradually towards the Sīstān depression containing the Hilmand Hāmūn (H. Lake) and its extension the Gūd-i Zirah, into which flow, with the exception of those belonging to the Indus system, all the rivers south of the Hindū-kūsh. Thus the rivers fall naturally into three groups, which may be called the Indus group, the Hilmand group and the Oxus group.

The Indus group comprises the Kābul [*q.v.*] river and its affluents, of which the most important are the Tagao and Kunar flowing from the Hindū-kush on the north and the Lūghar flowing from the Gul Kūh on the south. South of this the Kuṛam rising in the Paywar, and its tributary the Toči, called in its lower course the Gambīla, which joins it in Pakistan territory below the mountains. Still further south separating the Wazīristān mountains from the Takht-i Sulaymān is the Gumal formed by the junction of the Kundar and Žōb. These rivers though of small volume drain extensive tracts and mark important military and trade routes through the mountains between India and the plateau. Other small streams such as the Wahuā, Lūnī, Kahā and Nārī further south serve a similar purpose. It may be noted that many of these streams flow not along the natural valleys formed by the mountain range but transversely across the sandstone and limestone ridges of the Sulaymān Mountains, through which they cut deep precipitous gorges.

The second or Hilmand group consists of the Hilmand and its tributaries, and of the other rivers running towards the south-west into the Sīstān depression. The Hilmand [*q.v.*] or Hirmand (the Haētumant of the Avesta, the Etymandrus of classical writers) is the principal of these. It rises near Kābul and flows through narrow mountain valleys into the more open country of Zamīn-dāwar, where it is joined on the left bank by the Arghandāb (Harahwaiti, Arachotis). The latter in its turn is formed by the junction of the Upper Arghandāb, the Tarnak, and the Arghasān (or Arghastān), which drain a series of nearly parallel north-easterly and south-westerly valleys. Another member of the same system is the stream flowing southward from Ghazna which never joins the Hilmand system but is absorbed by the Ābistāda Salt Lake. Other rivers west of the Hilmand with the same general south-westerly flow, which also discharge into the Hāmūn, are the Khash Rūd, the Farāh Rūd, and the Harūt Rūd.

The Hāmūn [*q.v.*], a basin sometimes of small extent, expands enormously to the south in seasons of high flood, when the hill fort of Kūh-i Khʷādja becomes an island. It then discharges itself through a channel called the Shīlagh into a still lower depression known as the Gūd-i Zirah. Part of the Hāmūn is in Afghān territory and part in Persian according to modern demarcations which have divided Sīstān. The Hāmūn is only 1580 ft. above sea-level, and the Gūd-i Zirah is still lower. The Hāmūn on the average overflows once in ten years into the Gūd-i Zirah. Its water is only slightly brackish, and can be drunk, a circumstance due no doubt to its occasional overflow. The level of Sīstān does not appear to have risen since ancient times in spite of the enormous volumes of silt discharged by the rivers which have no other outlet. The cause for this is probably the prevalence of violent north-west winds through a great part of the year, which remove the light surface soil.

The third or Oxus group of rivers comprises the Oxus [see AMŪ DARYĀ] and it southern tributaries, as well as the Murghāb [*q.v.*] and Harī Rūd which also flow northward into the plain but never reach the Oxus. All of these rise on the northern flank of the great mountain barrier, with the exception of the Harī Rūd [*q.v.*], which rises on the south of the Kūh-i Bābā and flows westwards through a narrow valley between the Kūh-i Safīd and Kūh-i Siyāh into the Harāt plain where it turns to the north and after passing through a depression in the mountains loses itself in the plains of Russian Turkistān beyond Dhu'l-Fiḳār.

General formation. The mountain ranges generally become less lofty towards the south and west and the difficulties of communication that exist further north disappear. Hence the easy route for trade or military expeditions from Harāt to Ḳandahār has in all ages been circuitous via Sabzawār, Farāh and Girishk, while from Ḳandahār to Kābul and Ghazna the direct line of the Tarnak valley is followed. From Harāt where the Paropamisus drops to an insignificant elevation the Turkistān province is easily accessible, and the same country can also be reached from Kābul directly by difficult passes, the Khawāk, Bāmiyān and others, through the Hindū-kush.

Thus the three towns Harāt, Ḳandahār and Kābul are marked out by natural position as the most important points in the country. Each of them lies in a fertile valley and is self-supporting, and each of them commands important routes to the others as well as to India, Persia and Central Asia. If therefore Afghānistān is to be an independent whole the possession of these three points is essential to its rulers. There can be no stability if they are in separate hands. In this political sense Ghazna and Djalālābād must be classed with Kābul, the old capitals Bust and Girishk with Ḳandahār, and Sabzawār with Harāt. Sīstān lying on the easy route from Harāt to Ḳandahār has always been a debatable land.

Kābul is in every way the strongest position, and has generally in consequence been more independent than other districts. Harāt on the contrary is much exposed to attack from the west and north, and when Harāt has been conquered by a foreign invader Ḳandahār is immediately threatened. As long as Harāt is held Ḳandahār is safe from an attack on the western side and it has also a strong position towards the Indian side, though not so strong as that of Kābul.

The district of Sīstān adjoining the Hāmūn is fertile and suited for irrigation. Occupying a commanding position on the route leading eastward to Ḳandahār and westward to Harāt, it is of great importance to the rulers of Afghānistān, and its present division between that country and Persia is unfortunate.

Climate. The whole country is liable to great extremes of temperature ranging from the intense summer heat of Sīstān, the Garmsīr district and the Oxus valley to the great winter cold of the high exposed regions, where violent snowstorms are

not uncommon. Instances of armies suffering from such cold are well known in history. The march of the emperor Bābur from the neighbourhood of Harāt through the Hazāra mountains to Kābul is a case in point, and the Hindū-kush (lit. Hindu-slayer) is popularly supposed to derive its name from the death of the Indian troops of the emperor Shāh Djahān. More recent instances are the sufferings of ʿAbd al-Raḥmān's army in 1868 and of the British Boundary Commission in Bādghīs in 1885. The daily range of temperature is everywhere very great, the difference between maximum and minimum varying from 17 to 30 degrees of Fahrenheit. In the spring and autumn the upland valleys have a temperate and pleasant climate, which is very favourable to the growth of fruit, especially grapes, melons, peaches, plums, apricots, walnuts and pistachio-nuts. Modern travellers have found the neighbourhood of Kābul to be not unworthy of the praises lavished on it by the emperor Bābur.

In the more lofty part of the Hindū-kush inhabited by the Kāfir tribes a truly Alpine climate is found resembling that of parts of the Himalayas.

The vegetation generally speaking is that of the Persian plateau, and is quite distinct from that of the Indian plains. In the plains few trees are found except those cultivated in gardens, fruit trees, planes and poplars, while on the higher mountains many varieties of pines and evergreen oaks are found with wild vines, ivy and roses. On the lower and dryer ranges the wild pistachio (*Pistacia khinjuk*), wild olive (*Olea europea*), juniper (*J. excelsa*) and the reodan (*Tecoma undulata*) are the most characteristic trees. The *angūza* or *hing* (*Ferula assafoetida*) is very abundant in many parts. Wild flowers also abound in the spring, especially the iris, tulip and poppy.

Political divisions. The divisions of the country follow its physical formation.

Kābul. The province of Kābul contains the fertile high-lying valleys round the upper waters of the Kābul, Lūghar and Tagao rivers and Ghazna, also the lower part of the Kābul valley near Djalālābād [*q.v.*]. Ghazna [*q.v.*] was the most important town in this tract formerly, but Kābul [*q.v.*] has taken its place during the past four hundred years. Kābul was recognized as the centre of government under Mughal emperors, and was adopted by the Durrānī kings as their capital taking the place of Ḳandahār. Its old rival Peshāwar [*q.v.*] is the natural centre of the tribes in the lowlands near the Indus, but has been cut off from Afghānistān since it was taken by the Sikhs in 1834, and from 1848 to 1947 formed part of British India.

Ḳandahār. Ḳandahār includes the old province of Zamīn-dāwar, and comprises the lower valleys of the Hilmand, Tarnak, Arghandāb and Arghasān, the principal home of the Durrānīs. The modern town of Ḳandahār [*q.v.*] on the Arghandāb has been the capital of the province since the 14th century, and has taken the place of older towns such as Girishk [*q.v.*] and Bust [*q.v.*].

Sīstān. Sīstān [see SIDJISTĀN] is the hot and fertile irrigated district lying around the Hāmūn. A large part of it, however, belongs to Persia. It contains no large town.

Harāt. The Harāt province includes the fertile valley of the Harī Rūd and the open country lying between the Hazāra Mountains and the Persian border; also a considerable part of these mountains which are inhabited by the Hazāra [*q.v.*] and Čahār Aymāḳ [*q.v.*] tribes. The town of Harāt [*q.v.*], one of the most famous in eastern history, is its capital; although fallen from its ancient glory it is still and must remain a place of importance and will no doubt develop greatly with peace and improved communications. Sabzawār [*q.v.*] is also a thriving town in the south of the province.

Hazāristān [*q.v.*]. The country of the Ḥazāra and Čahār Aymāḳ tribes in the mountainous mass bounded to the north by the Kūh-i Bābā, to the west by the open country of Harāt, to the east and the south by the Hilmand valley. It is the country anciently known as Ghūr [*q.v.*], and the ruins of the town of Ghūr probably mark the site of the old capital of Fīrūz Kūh, where the Ghūrī kings reigned in the 12th century. It now contains no town of importance.

Turkistān. The country north of the Kūh-i Bābā as far as the Oxus is known as Turkistān. Its old capital Balkh [*q.v.*] has lost its former importance and the present centres of administration are Mazār-i Sharīf [*q.v.*], Tāshkurgān and Maymana [*q.v.*].

Badakhshān. The region lying north of the Hindū-kush and east of Turkistān along the left bank of the Oxus is known as Badakhshān [*q.v.*]. It is watered by the Ḳunduz river and its affluents.

Wakhān. Still further to the east and extending as far as the Pāmir is the long mountain valley called Wakhān [*q.v.*].

Nūristān. A mountainous tract of the Hindū-kush lying north of the Kābul valley and west of the Kunar is inhabited by the Kāfirs. It was known as Kāfiristān [*q.v.*], but after its conquest by ʿAbd al-Raḥmān Khān in 1897 its name was changed to Nūristān.

(M. LONGWORTH DAMES *)

(ii) ETHNOGRAPHY.

The population of Afghānistān is divided into the following main groups: (1) Afghāns; (2) Tādjīks and other Iranians; (3) Turko-Mongolians; (4) Hindū-kush Indo-Aryans (including Kāfirs). According to an estimate made in 1947 the population amounts to twelve millions, of which 53% are said to be Afghāns, 36% Tādjīks, 6% Uzbeks, 3% Hazāras and 2% others. But the figures are by no means certain. No "pure races" are to be found, each linguistic community being composed of several anthropological types, and intermixture and secondary adoption of Persian and Pashto having to a great extent blurred whatever clear distinctions may have existed at some earlier date. Apart from the theoretical difficulties in defining race, the meagreness of anthropological data, dealing with clearly defined local groups, warns us to be cautious in our statements.

1) For the Afghāns, see the separate article AFGHĀN.

2) Tādjīk is the general name [cf. TĀDJĪK] of the Persian-speaking population of Afghānistān, often also called Pārsiwāns, or, in the East and South, Dihgāns and Dihwārs. They are villagers, and also the inhabitants of most towns speak Persian. The Tādjīks have no tribal organization, except in some remote regions. In the villages they are peaceful tenants. In Harāt and Sīstān they are a direct continuation of the Persians of Persia, while in Northern Afghānistān (from Maymana to Badakhshān) they are in contact with the Tādjīks of the Soviet Union. In South-eastern Afghānistān they occupy some of the most fertile agricultural districts around Ghazna and in the Kābul region (Kūh-i Dāman, Pandjshīr, etc.). Anthropologically they are very mixed, but the hill-Tādjīks of Badakhshān, and of Northern Afghānistān in general, are of the Alpine type. South of the Hindū-kūsh many Tādjīks probably belong to the Irano-Afghān race. Some of the hill-Tādjīks of Badakhshān still retain their ancient Iranian languages. The same is the case with the Parāčīs north of Kābul and the Ormuṛs in the Lōgar valley.—The Ḳizilbash are descended from Persian Turks settled in Kābul and Harāt by Nādir Shāh.

3) Turkish and Mongolian tribes. In the plains of Northern Afghānistān Turkish tribes form an important, or even dominant part of the population. The majority are Uzbeks [*q.v.*], settled in villages and towns, and estimated by Jarring at about 500,000. West of them, between Andkhūy and Bālā Murghāb we find Turkmen [*q.v.*] nomads, chiefly Ersarīs (estimated at up to 200,000). In Afghān Pāmir there are about 30,000 Ḳirghiz [*q.v.*] nomads. Also some other Turkish tribes are represented in Afghānistān.—The Turks settled in the Kūhistān and Kūh-i Dāman north of Kābul have now all probably given up their national language.

The central *massif*, from Ghazna to Harāt, and from north of Bāmiyān to the middle Hilmand, is occupied by tribes of Mongol or mixed Turko-Mongol origin and type, extending also into Persia. The eastern part of this territory is the home of the Hazāras [*q.v.*] (or Barbarīs). They are divided into a number of tribes, Day-Kundī, Day-Zengī, Djāghurī, etc. The Hazāras are settled in villages, their formerly very powerful chiefs living in baronial castles. They are Shīʿites, and up to the time of the Amīr ʿAbd al-Raḥman they retained semi-independence. Their orthodox neighbours accused them of practising the infamous "lamp-extinguishing" ceremonies, and of laxity in sexual behaviour in general. When finally subdued by the Afghān Amīr, many of them sought refuge in Quetta and other places outside Afghānistān. A large number of Hazāras work as labourers in Kābul and other cities. They have decidedly mongoloid features, but are usually distinguishable from the more flat-faced Uzbeks. Further west, on both sides of the Harī Rūd, we find the half-nomadic Sunnī Čahār Aymāḳ [*q.v.*] ("Four Tribes"), a term apparently used somewhat loosely, but usually including Taymanīs (south of the Harī Rūd), Fīrūzkūhīs (north of this river), Djamshīdīs (Kushk), Taymūrīs (west of Harāt, in Persia) and Hazārīs (Ḳalʿa-i Naw), probably not to be confounded with the eastern Hazāras.—The Hazāras are often assumed to be descended from Čingiz Khān's soldiers, but more probably Mongol and to some extent also Turkish elements have gradually occupied the territories laid waste by him and his successors (see Bacon, op. cit.).

4) Indo-Aryans and Kāfirs. Among the Indo-Aryan "Dardic" tribes of Afghānistān the most important are the Pashaīs (locally also called Dihgāns) in the Kūhistān of Kābul, Laghmān and the lower Kunaṛ Valley. They are the remnants of the ancient Hindu and Buddhist population of Kāpisha and Nagarahāra. There are also some smaller communities of Indo-Aryan origin in the Kunaṛ region.—Nūristān (formerly Kāfiristān) is inhabited by a number of tribes, linguistically distinguished from the true Indo-Aryans [cf. KĀFIRISTĀN]. They were finally conquered by ʿAbd al-Raḥmān in 1896, and converted to Islām. Some of the Dardic tribes also remained pagans till comparatively recent times. The Kāfirs are now called Nūristānīs or Djadīdīs, i.e. "Recruits (of Islām)". Their ancient religion was a polytheism of an Indian type, with pantheons varying from tribe to tribe. They had also preserved many ancient social customs. There is no evidence of their being of Greek origin as sometimes asserted. Their neighbours divided them into Siyāh-pūsh "black-clad" (Katīs and Kāms) and Safīd-pūsh" white-clad" (Wāygalīs, Ashkuns and Prasūns or Parūnīs). Anthropologically the Kāfirs contain Oriental, Dinaric and Nordic elements, beside a short, dolichocephalic type with connections in the West Himalayas. Among some of the tribes the ratio of blondism is rather high.

There are some Djaṭ [*q.v.*] "gipsies" in Afghānistān, and a few Gūdjars [*q.v.*] in the Kunaṛ valley. Hindus are settled as traders and money-lenders in Kābul and other towns, and as horticulturists in the Kūh-i Dāman north of Kābul.

(iii) LANGUAGES,

Bābur mentions eleven languages spoken in the Kābul region, and the actual number for the whole of the country is considerably higher. The majority of the inhabitants speak either Pashto or Persian, both of them Iranian.

For Pashto see AFGHĀN.

Other Iranian Languages. Most of the Persian dialects [cf. also ĪRĀN, section on language] spoken in Afghānistān are of the eastern type, retaining the distinction between *madjhūl ē, ō* and *maʿrūf ī, ū*. In the Harāt region they merge into the western type, and the dialect of the Hazāras presents traits of its own. Balūčī just crosses the frontier into the southern deserts. In the Lōgar Valley, south of Kābul, Ōrmuṛī is dying out, but it is still spoken in Kāṇigurām in Wazīristān. Another ancient local Iranian language is Parāčī, which is found in a few villages north of Kābul. North of the Hindū-kūsh, in the mountains of Badakhshān, the so-called Pāmir or Ghalča [*q.v.*] languages have survived, but are probably receding and being gradually replaced by Tādjīkī Persian. They include: Mundjī spoken in Mundjān (with an offshoot called Yidgha in Čitrāl), the very archaic Wakhī in Wakhān (overflowing into Gilgit and Čitrāl), Sanglēčī, Zēbākī and Ishkāshmī at the bend of the Oxus and in the upper Wardōdj valley; Shughnī and Rōshānī in the Oxus Valley, north of Ishkāshm.

Indo-Aryan and Kāfirī. Apart from Lahndā spoken by Hindūs, we find a number of Indo-Aryan languages and dialects on the fringes of Nūristān in North-Eastern Afghānistān. They belong to the so-called Dardic branch of Indo-Aryan. The most important is Pashaī which has several widely diverging dialects, and is rich in popular poetry. In the Kunaṛ Valley, close to the frontier of Čitrāl, Gāwar-Bātī is spoken.—The Kāfir languages (Katī, Wāigalī, Ashkun and Prasūn) occupy a somewhat separate position and must have split off from Indo-Aryan in pre-Vedic times. But they have now been heavily overlaid with purely Indo-Aryan elements.

Non-Indo-Iranian Languages. Turkish dialects are spoken by Uzbeks, Turkmens and Ḳirghiz in Northern Afghānistān. Most Hazāras have now given up their ancient language, and the same is probably the case with the Čahār Aymāḳs. But (acc. to a private communication) F. Mackenzie was still able in 1951 to collect lists of words, containing many of Mongolian origin, among the Hazāras of Bīhsūd and the "Moghols" north of Maymana.—Some nomads west of Mazār-i Sharīf are said to be still speaking Arabic, as is also the case with some Arabs in Tādjīkistān [see ʿARAB].

(iv) RELIGION.

Since the conversion of the Kāfirs practically the entire population of Afghānistān are Muslims, and the great majority are Sunnīs. Shīʿite are the Hazāras, Ḳizilbash, the Kayānīs of Sīstān and Harāt, a few Paṭhān frontier tribes (Tūrīs, and some sections of Ōrakzays and Bangash, beside the Sayyīds of Tīrāh), and some Kūhistānīs and Badakhshīs (especially the Ghalčas). Of these the inhabitants of Badakhshān (with Shughnān, Wakhān, etc.) and many Pashaīs of Laghmān and adjacent valleys are Ismāʿīlīs, the Badakhshīs calling themselves Mullāʾīs and the Pashaīs being known under the name of ʿAlī-Ilāhīs (cf. Ivanow, *Guide to Ism. Lit.*, p. 9). Among the Shīʿī Paṭhāns there may still be secret adherents of the great heretic Bāyazīd Anṣārī [cf. RAWSHANIYYA].

Orthodox Islām is now very firmly established in Afghānistān, and the Islamic law (*sharīʿa*) is recognized. Hindus and Shīʿīs are tolerated, but Aḥmadīs are not allowed to enter the country, and Christian missions are prohibited. Local saints and their tombs are worshipped. Among the Paṭhān tribes of the Frontier the *mullās* have often played an important role in local politics and in preaching the *djihād* (holy war). (G. MORGENSTIERNE)

(v) HISTORY. (1) PRE-ISLAMIC.

The territories now known as Afghānistān were occupied by Iranian tribes during the Aryan migrations in the second and first millenia B.C., incorporated in the Achaemenid empire by Cyrus, and after the conquests of Alexander (cf. e.g. W. W. Tarn, *Alexander the Great*, Cambridge 1948) disputed between the Greco-Bactrians and the Parthians (cf. W. W. Tarn, *The Greeks in Bactria and India*, Cambridge 1952). In the first century B.C. there was a fresh influx of Iranian tribesmen under the leadership of the Kushan tribe of the Yueh-Chi. The Kushan empire, which attained its height under Kujula Kadphises in the 1st century A.D. and Kanishka in the 2nd (cf. *Cambridge History of India*, i, 1935; R. Ghirshman, *Bēgram. Recherches archéologiques et historiques sur les Kouchans*, Cairo 1946), eventually fell to the Sāsānids under Shāpūr II, probably before the middle of the 4th century. Shortly after 350 the Yueh-Chi tribes which had remained in Kāshgaria, pressed from the East by Turco-Mongol elements, appeared in Bactria, supported by a confederation of tribes of allied origin known as Chionites (see R. Ghirshman, *Les Chionites-Hephtalites*, Cairo 1948, 69 ff.). Shāpūr, though at

war with Rome, marched against the invaders, but was obliged to come to terms with them and to establish them in Bactria and its peripheral regions, in return for their aid against the Romans.

Kidara, the king of the Yueh-Chi or "Lesser Kushans", soon extended his conquests to the south of the Hindū-kush and annexed the Paropamisad and Gandhara. It is in the period of this expansion that the establishment of a tribe of Chionites, the Zabuls, in the region of Ghazni is to be placed. When, later on, Kidara's efforts to assert his independence led to a fresh conflict with Shāpūr, the Chionites sided with the latter. Kidara lost his kingdom, and probably his life; and Bactria passed into the hands of the Chionites known as Hephthalites from the name of their ruling dynasty. About 400 the lands both to the north and to the south of the Hindū-kush were held by the Chionites-Hephthalites, divided into two branches by the mountain-chain, but whose southern branch, the Zabuls, recognized the supremacy of the northern branch—both, however, remaining vassals of the Sāsānids. This vassal status was preserved so long as the Persian dynasty remained strong, but already by the beginning of the 5th century the Hephthalites, exploiting the difficulties experienced by Persia in the struggle against Rome and in defending the passes of the Caucasus against the barbarians, attempted to throw it off, only to be resubjected by Bahrām Gōr, just as their pressure towards India was halted by the Gupta kings.

The middle of the 5th century was a turning-point in the relations between Persia and the Hephthalites. During the reign of Pērōz, the Hephthalites won, in 484, a victory which transformed them almost from the vassals into the masters of Iran, to whom the Sāsānids paid tribute for more than half a century. It was only c. 560, when a new people, the Western Turks, had appeared on the chessboard of Central Asia, that a coalition between them and Khusraw I put an end to the central power of the Hephthalites. (For the relations with the Sāsānids, cf. A. Christensen, *L'Iran sous les Sassanides*[2], 1944.)

The kingdom of Zābul, or of the southern Chionites, followed its own course. At the end of the 5th century a new dynasty reigned to the south of the Hindū-kush. Its two kings, Toramana and Mihiracula (c. 515-544), made extensive conquests in India; the latter, devoted to a religion with a solar divinity, Mihira, left a memory of cruel persecutions which were pursued until he was crushed by an Indian national coalition. The disappearance of the kingdom of the southern Chionites preceded by a few years the destruction of Hephthalite supremacy in the northern lands.

After the destruction of these two kingdoms, their territories remained in the hands of a number of minor princes, some of whom became vassals of the Sāsānids, others of the Turks. The political condition of Eastern Afghānistān about the middle of the 7th century is portrayed in the account of the travels of the Chinese pilgrim Hiuen-Tsang, where the Afghān people are mentioned for the first time in an historical source under the form of the country of A-p'o-kien, located in the northern part of the Sulaymān mountains (see A. Foucher, *La vieille route de l'Inde de Bactres à Taxila*, ii, Paris 1947, 235, 252 n. 17).

Shortly after the passage of Hiuen-Tsang, the Chinese T'ang dynasty crushed the Western Turks and extended its suzerainty to the west of the Pāmir. For a whole century (659-751) sixteen kingdoms north and south of the Hindū-kush recognized the authority, more nominal than real, of the Chinese emperor. The Arab invaders, who so rapidly overran Iran, were checked in this part of Afghānistān by the tenacious resistance of the last kinglets, seconded by the civil wars and dissensions between the conquering tribes, and it was only at the end of the 9th century that Islam finally triumphed south of the Hindū-kush. Nevertheless, the Hephthalite element did not disappear without leaving its traces in the ethnic composition of modern Afghānistān, and there still exists in Badakhshān an important group bearing the name of Hayṭal. See, for a fuller account of the Chionites-Hephthalites the articles HAYṬAL, ZĀBULISTĀN, ZŪN. For the background of the early history, cf. also W. M. McGovern, *The Early Empires of Central Asia*, 1939.

(R. GHIRSHMAN)

(2) ISLAMIC—TO THE RISE OF THE AFGHĀN NATIONAL STATE.

To the Mongol period. The territories that form modern Afghānistān belonged in the first thousand years of Islamic history to different provinces, and although these neighbouring provinces, often shared common vicissitudes, they did not at any time form a separate entity. Nor did the Afghāns form a state of their own until the days of Mīr Ways, and more especially Aḥmad Shāh Durrānī. The little that is known of the earlier history of the Afghāns has been summarized in the article AFGHĀN; here a short sketch will be given of the history of the country. (For further details see the articles on the various provinces, e.g. KHURĀSĀN, SIDJISTĀN, ZĀBULISTĀN, ZAMĪN-DĀWAR,, ṬUKHĀRISTĀN, KĀBULISTĀN, and on the various dynasties that ruled these lands, as well as the articles on the most important towns, e.g. BALKH, GHAZNA, HARĀT, KĀBUL, etc.)

At the time of the Islamic conquest the provinces belonging to the Sāsānid empire were quickly overrun. One wave of the invasion passed through Sidjistān, but the attempts made during the first three centuries to conquer Kābul from this base produced no lasting results until the rise of the Ṣaffārid [*q.v.*] dynasty. The province of Kābul resisted Islamization much longer than the other eastern Islamic provinces, and it was only under the Ghaznawids that this was fully achieved. In the middle of the 4th/10th century Alp-takīn [*q.v.*] seized Ghazna from its former ruler Lawīk, conquered Zabulistān and built up an independent principality, which was inherited by his son Isḥāḳ, then by a slave of his, Balkā-takīn, then by another slave, Subuk-takīn, the founder of the Ghaznawid [*q.v.*] dynasty. The dynasty had its seat in Ghazna, and it was from that town that the greatest Ghaznawid ruler, Maḥmūd [*q.v.*], set out on his expeditions to Persia in the west and India in the east. Yet, while it is about this time that the name Afghān first appears in the historians, the Ghaznawid dynasty was in no sense a national Afghān one. The armies were probably composed mainly of Turks. When Maḥmūd marched to Balkh against the Ḳarakhānid ruler, his army comprised, according to al-ʿUtbī, Indians, Khaladj [*q.v.*], Afghāns and "Ghaznawīs", the last term no doubt meaning Iranians ("Tādjīk" [*q.v.*]) of the province of Ghazna. In 414/1023 Maḥmūd attacked the Afghāns of Sulaymān Kūh and sacked their country.

By the end of his life Maḥmūd ruled over an extensive territory comprising in the west Khurāsān, part of Djibāl and Ṭabaristān and in the east the whole of the Pandjāb; to the north his influence

extended beyond the Oxus while the core was formed by the whole of what is now Afghānistān. The personality of the great conqueror made a deep impression, and he became in a way a national hero in the land which formed the centre of his empire. For the further history of the dynasty, see GHAZNAWIDS. Bahrām Shāh (511-52/1118-57) had to acknowledge the suzerainty of the Saldjūḳs; thereafter, the chieftains of Ghūr became increasingly stronger, and after long struggles drove out the Ghaznawids. The Ghūrid [*q.v.*] dynasty was probably of "Tādjīk" origin. The fortunes of this dynasty were checked by invasions of Afghānistān by the Ghuzz and the Khwārizm-shāhs, so that the Ghūrids lost their power in their native land, but succeeded in building up an empire in India, which was inherited by their Turkish slaves. Djalāl al-Din Mankubirni, the last scion of the house of the Khwārizm-shāhs, after strong resistance, had to vacate Afghānistān before the Mongols of Čingiz Khān.

Mongols, Karts. Harāt and Sīstān were conquered by Čingiz Khān's son Tulūy, Ghazna by Uguday. Uguday also entered the Ghūr country and, making it the centre of his operations, conquered the mountains of Fīrūz Kūh and Ghardjistān as well as the plains of Garm-sīr and Sīstān. The last Ghūrid kings were swept away and Fīrūz Kūh completely destroyed. Tulak and other mountain fortresses offered resistance but to no effect. A leader of the resistance in Ghūr was the *amīr* Muḥammad of Ghardjistān, descendant in the maternal line of the Ghūrid kings. He was killed in 620/1223 in the fortress of Ashyar. The founders of the Kart dynasty were his descendants. The greater part of Afghānistān was incorporated into the Mongol empire. In the east, however, a Turkish chieftain, Sayf al-Dīn Ḥasan Karlugh, who had perhaps been allied to Djalāl al-Dīn Mankubirni, managed for some time to get possession of Bāmiyān, Ghazna and Ghūr. He must have exercised his rule in 622/1225, in which year he issued coins in the name of the caliph al-Ẓāhir. In 636/1238 he submitted to Uguday, and was placed under the control of a Mongol *shiḥna* (intendant). Nevertheless, he was expelled through the Kuṛam valley to India. In Sind he and his son Nāṣir al-Dīn reigned for a further twenty years. Ghazna and the Kuṛam served as a base for the further incursions of the Mongols into India. We do not hear of Afghāns in these movements; perhaps they had not yet reached as far north as the Kuṛam valley. After Uguday's death the Mongol empire was divided and Afghānistān fell to the lot of the Ilkhāns of Persia. Under their sovereignty a Tādjīk dynasty, named Karts [*q.v.*] came into power and ruled for nearly two hundred years over the greater part of the country. It was Tīmūr who put an end to the dynasty of the Karts, who represented the last effort of the Tādjīk element in Ghūr and Harāt to establish in their country an independent state. From this time until the rise of the Afghāns in the 18th century no native dynasty held rule in Afghānistān.

Tīmūr, Tīmūrids. In the course of Tīmūr's invasion Sīstān suffered terrible destruction; Kābul and Kandahār (which now began to be of importance) were quickly subdued and the whole country became part of Tīmūr's empire. In 800/1397 Tīmūr turned to the east and left his grandson Pīr Muḥammad as governor of Kābul, Ghazna and Kandahār, while his son Shāhrukh received in fief the kingdom of Khurāsān, with Harāt as its capital. Pīr Muḥammad attacked the Afghāns of Sulaymān Kūh and then advanced into India. On the news that he was resisted in Multān, Tīmūr himself advanced from Andarāb over the Hindū-kush, turned aside from Laghmān to attack the Siyāh-pūsh and the Kator-Kāfirs. After this expedition, he attacked the rebellious Afghāns and then passed over the Indus. Both on his outward march and on his return he passed Bānū; he therefore probably followed the road of Toči, which leads through the country of the Ghalzāy and the Wazīrī. We do not hear of Afghāns serving in his army, though it comprised Tādjīks.

When Tīmūr died (807/1405), Pīr Muḥammad reigned in Kābul; it was, however, Khalīl who took possession of the throne of the empire. (For fuller details concerning the history of the descendants of Tīmūr cf. TĪMŪRIDS.) The war that ensued ended with the murder of Pīr Muḥammad. Shortly afterwards, Khalīl was deprived of the throne and Shāhrukh became the supreme ruler. His reign, which lasted for about forty years, was a period of peace and the country was able to recover from the devastations of the last years. He was followed by Ulugh Beg, ʿAbd al-Laṭīf, ʿAbd Allāh, Bābur Mīrzā, all of whom reigned for a short time only. In 861/1456 Abū Saʿīd ascended the throne, but the possession of Khurāsān and Afghānistān was contested by Ḥusayn Bayḳara. The latter was defeated in 870/1465, but Abū Saʿīd died two years later, and his successor, Sulṭān Aḥmad, did not possess Khurāsān at all. Ḥusayn Bayḳara ruled uncontested, from his captal Harāt, over Khurāsān, Sīstān, Ghūr and Zamīn-dāwar. Under the long reigns of Shāhrukh and Ḥusayn Bayḳara, Harāt reached the zenith of its fame as a centre of poetry, learning and art. During the latter years of Ḥusayn Bayḳara, his rule was menaced from the north by the growing might of Shaybānī and his Uzbeks, while other parts of Afghānistān showed a tendency to dissolve into separate principalities, though not under indigenous rulers. Bābur [*q.v.*] established himself in Kābul and assumed the title of *pādshāh*. Until then Kābul had been governed by more or less independent menbers of the Tīmūrid house; Muḳīm, the son of Arghūn, had just taken possession of it when Bābur appeared before the city and occupied it (910/1505). Kābul remained under Bābur and his successors, the emperors of India [see MUGHAL] for more than two hundred years, until the invasion of Nādir Shāh.

Bābur, Arghūn, Uzbeks, Shāh Ismāʿīl. More dangerous for the kingdom of Khurāsān was the rise of the dynasty of Arghūn [*q.v.*]. Its founder, Dhu 'l-Nūn Beg Arghūn, a descendant of the Ilkhāns, governor of Ghūr and Sīstān, received also, after defeating the tribes of Hazāra and Nīkūdārī, the regions of Zābulistān and Garm-sīr. Taking Kandahār as his capital, he made himself independent, and with the help of his son, Shāh Beg, extended his rule southward to the Bolān pass and Siwastān. In 904/1498-9 he even invaded Harāt, recruiting his army from the population of Ghūr, Zamīn-dāwar and Kandahār—probably Tādjīks and Afghāns. His son Muḳīm, as mentioned above, occupied Kābul, though only for a short time. Shaybānī's invasion, however, proved the undoing of Dhu 'l-Nūn Beg; in the first battle against the Uzbeks he was killed and in 913/1507 Shaybānī took Harāt.

Dhu 'l-Nūn's sons Shāh Beg and Muḳīm were now between Bābur and Shaybānī. Bābur with some right claimed to be heir to Tīmūr's empire and advanced against Kandahār, while the Arghūn princes allied themselves with his old enemy Shaybānī. Bābur defeated them and took Kandahār.

He left there as governor his son Nāṣir Mīrzā, who was inmediately attacked by Shaybānī. Bābur himself had been on his way to Harāt to concert measures of defence against the Uzbeks with Sulṭān Ḥusayn when he heard of the latter's death. He joined the Sulṭān's sons in their campaign on the Murghāb, and then after visiting Harāt returned in winter by the mountain road to Kābul, a journey during which he and his troops underwent great hardships. He returned to Kābul in 912/beginning of 1507 just in time to suppress a dangerous plot amongst his own relations. Then followed his expedition to Ḳandahār in the summer, and he was back in Kābul by Djumādā I 913/Sept. 1507, arranging an Indian expedition, and had already started when he was recalled by the news that Ḳandahār had fallen and that the Arghūns had been restored by Shaybānī. When the news reached him he was actually engaged in war with the Afghān tribes of Djagdalak and Nangrahār, tribes recently established in the Kābul valley. He had great difficulty in holding even Kābul, where his authority was threatened by rebellion and mutiny. Shaybānī was now possessor of Khurāsān and overlord of Ḳandahār, but his power began to decline. His armies suffered severely during an expedition into the mountains of Ghūr, and another warrior king, Shāh Ismāʿīl, founder of the Ṣafawī kingdom of Persia, threatened him from the west. In 916/1510 Ismāʿīl invaded Khurāsān and Shaybānī was defeated and slain near Marw. Harāt passed into Ismāʿīl's possession and the Shīʿite doctrines were enforced there by a severe persecution. Bābur now allied himself with Ismāʿīl and recovered for a time possession of his hereditary dominions in Central Asia, leaving the kingdom of Kābul to his brother Nāṣir Mīrzā. The alliance with the Ṣafawī king was unpopular, however, and the Uzbeks rallied. In the end Bābūr, after a severe defeat at Ghaždawān near Bukhārā (918/1512) from which he barely escaped with his life, had to fall back upon Kābul, which he found in great disorder, and he had to suppress outbreaks among his own Mughal troops and among the Afghān tribes. The Yūsufzays had moved down from the mountains into the Peshāwar valley, and expelled their predecessors the Dilāzāks from the mountains of Bādjawr and Swāt. Bābur put them down severely and took Bādjawr with great slaughter. He also had to put down risings among the Hazāras. He then turned his attention to Kandahār where Shāh Beg Arghūn was still established. He had tried in vain to make terms with Shāh Ismāʿīl, had been imprisoned at Harāt, but escaped, and had since been endeavouring to establish a kingdom for himself in Sind, which he invaded with the assistance of some Balūč tribes in 917/1511. Bābur made two attempts to take Ḳandahār before he finally succeeded in 928/1522. Shāh Beg then removed his headquarters to Shāl (Quetta) in summer and Sībī in winter, and pursued his schemes in Sind, while the whole Ḳandahār province remained in Bābur's possession. Bābur now felt himself strong enough to embark on the series of enterprises which ended in the overthrow of the kingdom of the Lōdī Afghāns in India. He always preferred Kābul to the plains of India, and was buried at Ghazna where his tomb is marked by a column.

Between the Mughal and Ṣafawī empires. Afghānistān entered upon a more settled period under the influence of the two great empires of India and Persia between which it was divided. Harāt and Sīstān remained with Persia though still for a time troubled by Uzbek raids. Kābul remained part of the Mughal empire while Ḳandahār belonged sometimes to one and sometimes to the other. The power of the Mughal emperors was gradually restricted to the south of the Hindū-kūsh. North of it Sulaymān Mīrzā, established by Bābur as governor of Badakhshān, founded something like an independent dynasty, and the rest of the country remained under the Shaybānids. Ismāʿīl died in 930/1524, and Bābur in 937/1530. Bābur's son Humāyūn succeeded him and his brothers Kāmrān, Hindāl and ʿAskarī held various governments. Kābul and Ḳandahār were united with the Pandjāb under Kāmrān. On the Persian side Ṭahmāsp the successor of Ismāʿīl had made his brother Sām Mīrzā governor of Harāt. The Ṣafawīs regarded Ḳandahār as an appanage of the kingdom of Khurāsān now in their possession, and considered its occupation by the Mughal emperors to be a usurpation. In 941/1535 Sām Mīrzā made a sudden attack on it, but it resisted him successfully, and after eight months Kāmrān arrived and raised the siege. During Sām's absence the Uzbeks under ʿUbayd Allāh invaded Khurāsān, and the unfortunate town of Harāt was again taken and sacked. Ṭahmāsp recovered it, deposed Sām and himself attacked Ḳandahār which he took; but it was recovered by Kāmrān. Meanwhile Humāyūn lost his throne in India through the rising of the Sūr Afghāns under Shīr Shāh, and in 950/1543 he made his way from Sind through the desert south of Ḳandahār to Sīstān and Persia, where he was treated hospitably by Shāh Ṭahmāsp. In 952/1545 with the assistance of a Persian army he laid siege to Ḳandahār which was held against him by his brother ʿAskarī on behalf of Kāmrān, and took it after a prolonged resistance. In accordance with his engagement with Ṭahmāsp he made the town over to the Persians, but this excited great discontent among his own followers, and Humāyūn at last retook Ḳandahār from the Persians, and treated the province as part of his own dominions, greatly to the anger of Ṭahmāsp. Shortly afterwards Humāyūn took Kābul and with it obtained possession of his young son Akbar now three years old. During the next few years the war between the brothers went on with varying fortunes. Kāmrān twice regained possession of Kābul but could not hold it long; on one occasion he is said to have exposed the young prince Akbar on the battlements. He then spent some time among the Mahmand and Khalīl tribes of Afghāns, whom he incited to plunder the Kābul valley. At last in 961/1553, he surrendered to Humāyūn and was deprived of his sight. Humāyūn now held the kingdom of Kābul and Ḳandahār and found himself strong enough to attempt the reconquest of India. This resulted in his victory over the Sūr kings, but soon afterwards, in 963/1556, he died from the effect of an accident. While the young king Akbar was occupied in completing the reconquest of India Ṭahmāsp took the opportunity (965/1558) of seizing Ḳandahār, and it remained under Persian rule until the prince Muẓaffar Ḥusayn surrendered it to Akbar thirty-eight years later in 1003/1621. Shāh ʿAbbās recovered it, but it was lost again by his successor Shāh Ṣafī I, in whose time the governor ʿAli Mardān Khān surrendered it to Shāh Djahān (1047/1637); Girishk was also taken after a siege, and Zamīndāwar occupied. In 1058/1648 the young Persian king ʿAbbās II, then only sixteen years of age, led an army to Ḳandahār and took it, and it never again formed part of the dominions of the Mughal

empire. Shāh Djahān's armies in vain attempted the reconquest. The rival princes Awrangzīb and Dārā-shikūh both conducted expeditions against it, but were equally unsuccessful, and after the failure of the last (1062/1652) no further attempts were made.

With the exception of the vicissitudes of Ḳandahār, there is little to record in the history of Afghānistān during the time it was divided between the Mughal and Ṣafawī empires. The Afghān tribes were steadily increasing in numbers and influence, and it was probably in this period that the Abdālīs and Ghalzays spread from their mountains over the more fertile lands of Ḳandahār and Zamīn-dāwar and the Tarnak and Arghandāb valleys. The decline in the position and influence of the Tādjīk races which had borne the brunt of the Mongolian invasions, and the occupation of their mountain fortresses of Ghūr by a semi-Mongolian population [cf. HAZĀRA], gave the Afghān race the opportunity of rising into prominence. In their eastern mountains they had been but little affected by invaders, eager chiefly to press on through the passes to the plunder of India, and the same need of an outlet for their increasing population which led them to spread into the plains of India on the east also led the pastoral tribes to spread westwards. The mountain tribes continued to maintain practical independence of all rule. The Mughal government of Kābul ruled nominally, but its actual power was confined to the open valleys. In 994/1586 for instance Akbar's army met with a disastrous defeat at the hands of the Yūsufzays of Swāt and Bādjawr, and the general Rādjā Bīrbal was slain. Rādjā Mān Singh afterwards defeated the mountaineers but they were never really conquered; they often raided the plains and sometimes took sides in dynastic quarrels, as when the Yūsufzays took up the cause of the pretended prince Shudjāʿ against Awrangzīb. When Shāh ʿĀlam I before his accession was governor of Kābul under Awrangzīb in 1114/1702 one of his commanders Purdil Khān himself an Afghān, was killed with all his troops when trying to pass from Khōst to Kābul, and he had to bribe the tribes to keep open the road between Kābul and Peshāwar.

Abdālīs, Ghalzays, Nādir Shāh. In the Ḳandahār province the frequent changes of government between India and Persia fomented dissensions and intrigue, and enabled the powerful tribes to play off one against the other. The Abdālīs [*q.v.*] near Ḳandahār succeeded in this manner in obtaining concessions from Shāh ʿAbbās the Great. Sadō was recognized as chief, and his descendants the Sadōzays became the ruling family. Nevertheless their misconduct led to part of the tribe being removed to the Harāt province. This removal led to the extension of the influence of the Ghalzay [*q.v.*] tribe near Ḳandahār, and their power continued to increase until the accession of the emperor Shāh ʿĀlam I, when the Ghalzays of the Ḳandahār province began to intrigue with him against the Persian government. The plot was discovered and Gurgīn Khān, a Georgian chief, was sent to Ḳandahār at the head of an army, and arrested Mīr Ways the Ghalzay chief. During his imprisonment, however, Mīr Ways succeeded in gaining the confidence of Shāh Ḥusayn the Persian king, and was allowed to return to his tribe. Shortly afterwards he treacherously murdered Gurgīn Khan whom he had invited to a banquet, seized upon Ḳandahār and defeated all attempts to subdue him. He died soon after, and his brother ʿAbd al-ʿAzīz, who showed an inclination to submit to Persia, was murdered by Maḥmūd, son of Mīr Ways, who established himself as ruler. (For further details of their conquest of Persia see GHALZAY.)

At the same period the section of the Abdālī tribe in the Harāt province became practically masters of that province, defeated a strong army sent against them under Ṣafī Ḳuli Khān, and held their own till the time of Nādir Shāh, even taking Farāh from the Ghalzays after the latter had conquered Persia. While the Ghalzay Maḥmūd fought in Persia, the Abdālīs spread over Khurāsān and laid siege to Mashhad. The Ghalzay dynasty was in no way fitted to reign over a country like Persia, and had not sufficient force behind them to oppose any truly national movement. Even the support of the Ḳandahār province was lost when Ashraf succeeded his cousin Maḥmūd, whose brother was able to retain Ḳandahār. The Abdālīs too remained independent in Harāt. Thus when Nādir [*q.v.*] put himself at the head of a national movement Ashraf's government collapsed rapidly, and few of the Ghalzays survived to reach their native country. Ashraf was killed while wandering in Balūčistān in 1142/1729. Nādir now turned his arms against the Abdālīs under Malik Maḥmūd Khān who held Mashhad (1142/1728). He thoroughly defeated them and took many prisoners. Nevertheless he perceived their value as fighting men and secured their support by restoring them to their old home near Ḳandahār, from which he removed the Ghalzays when he had the opportunity. He banished them to the Harāt province, but very few, if any, seem to have really settled there, and there are none there at the present day. When Nādir Shāh had made himself king of Persia he laid siege to Ḳandahār which resisted him for a year, but at last fell (1150/1738). The Ghalzay power was thoroughly broken, but towards the Afghān tribes in general and especially the Abdālīs he pursued a policy of conciliation, and enlisted large numbers in his army. Many Ghalzays took refuge in the Kābul province of the Indian empire, and Nādir Shāh, asserting that his remonstrances had received no reply, advanced on Kābul which fell at once (1151/1738). Thus it was finally severed from the Mughal empire. The last known date of any coin of the emperor Muḥammad Shāh struck there is 1138/1725. Nādir Shāh apparently did not use the Kābul mint, but struck coins at Ḳandahār in 1150/1737, the year of his conquest, and others struck at Nādirābād (which he built during the siege outside Ḳandahār) no doubt refer to the period of the siege. The whole of Afghānistān was now in his hands and afforded him the necessary base for his invasion of India in 1152/1739. As a result of his victory over Muḥammad Shāh the whole Mughal territory west of the Indus including Peshāwar and the Dēradjāt with the suzerainty over the Kalhōrā or ʿAbbāsī rulers of Sind was ceded to him as well as the province of Kābul. On his return from Dihlī (1152/1740) he first crossed the Indus at Attock and attacked the Yūsufzays who had been giving trouble, and then went to Kābul. Thence he descended via the Kuṛam valley and the Bangash country, and went through the Dēradjāt to Sind, returning by the Bolān to Ḳandahār and thence to Harāt. During the remainder of his life he relied to a great extent on his Afghān troops and but little on the Persians, from whom he was alienated by his Sunnī creed. The Abdālīs were especially favoured and their young chief Aḥmad Khān rose to a high position in his army. Tradition says that Nādir himself prophesied that Aḥmad would be king after him. When Nādir Shāh was assassinated by Persians

and Ḳizil Bash, Aḥmad Shāh who was near by with a strong body of Abdālīs seized on a treasure convoy and made his way to Ḳandahār, where he made himself king. (M. LONGWORTH DAMES*)

(3) THE AFGHĀN NATIONAL STATE. (A) THE SADŌZAY DYNASTY.

Aḥmad Shāh made himself king in Ḳandahār and obtained possession of all the eastern portion of Nādir's empire up to the Indus. Harāt soon followed, and in the general break up of the Persian monarchy Aḥmad Shāh acted as the protector of Shāhrukh, grandson of Nādir Shāh, who was blinded by his enemies, and maintained a principality for him in Khurāsān. This province in reality formed part of the dominions of Aḥmad Shāh and his son Tīmūr Shāh, both of whom occasionally struck coins at Mashhad, but Shāhrukh continued to rule in name until he was seized and killed by Āghā Muḥammad Kādjār after Tīmūr Shāh's death. Harāt was however treated as an integral part of the Durrānī monarchy, and the ancient kingdom of Khurāsān has remained divided between Persia and Afghānistān.

Aḥmad Shāh made Ḳandahār his capital and gave it the name of Aḥmadshāhī which appears on his coins and those of his successors. He took the title of Durr-i Durrān, and his tribe, the Abdālīs, have since been known as Durrānī [*q.v.*]. His family had long been looked up to, and this fact, combined with his tact and energy, enabled him to hold his own. The tribes were treated mildly, and he relied upon foreign war rather than taxation to provide him with a revenue. The Durrānīs were proud of him and followed him willingly, but they were not an easy race to govern, and his son Tīmūr Shāh on this account moved his capital to Kābul where the population is mainly Tādjīk. In his Indian conquests Aḥmad Shāh not only rivalled but excelled Nādir Shāh, and extended his dominions far beyond the Indus. He added the provinces of Kashmīr, of Lahore and Multān, that is the greater part of Pandjāb and the suzerainty over the Dā'ūdpotras of Bahāwalpur to his dominions.

He invaded India several times, and occupied Dihlī more than once. His defeat of the Mahrattas at Pānipāt in 1174/1761 was a turning point in Indian history, but he did not add any provinces beyond the Pandjāb to his own dominions. His wars with the Sikhs were perpetual and led to the eventual loss of the province. The *khān* of Ḳalāt too, the Brahū'ī Nāṣir Khān who had become feudatory to Nādir Shāh declared his independence in 1172/1758. Aḥmad Shāh besieged Kalāt without success, and on being called away to India accepted a purely nominal submission. Nāṣir Khān, however, supported Aḥmad Shāh in his wars in Khurāsān, and contributed greatly to his victory over Karīm Khān Zand in 1182/1768. On this occasion the blind Afshārī prince took the side of Karīm Khān and sheltered him in Mashhad which Ahmad Shāh reduced by blockade.

For further details about Aḥmad Shāh see AḤMAD SHĀH DURRĀNĪ; he died at Murghāb in the hills near Ḳandahār in 1187/1773, leaving his successor a very extensive but insecure empire.

Tīmūr Shāh had held important posts under his father, such as the Niẓāmship of Lahore and Multān, which is marked by a distinct series of coins. At the time of Aḥmad Shāh's death he was at Harāt, and only obtained possession of Ḳandahār after seizing and executing his brother Sulaymān, who had been set up as his rival. He soon moved his capital to Kābul, and reigned uneventfully for twenty years, during which the monarchy declined steadily in strength and stability, although externally it remained unimpaired. The authority of the central government over the outer provinces was precarious. The Sikhs grew in power and took Multān in 1196/1781, but Tīmūr Shāh retook it the same year. In Sind the feudatory Kalhōrās were overthrown and replaced by Balūč *amīrs* of the Tālbur tribe (commonly called Tālpurs), who waged successful war against Tīmūr Shāh's generals from 1197/1782 to 1201/1786, and remained independent, although they accepted a nominal suzerainty. The Mangit *amīr* of Bukhārā Maʿṣūm, who had been encroaching on the Turkistān province, especially Marw, also made a nominal submission when attacked by Tīmūr Shāh, but retained all his conquests. In Kashmīr also there was a revolt which was suppressed. Internally the power of the Bārakzay clan of the Durrānīs became gradually greater. Tīmūr Shāh died in 1207/1793 and was succeeded by his son Zamān Shāh, who reigned till he was dethroned by his brother Maḥmūd Shāh in 1215/1800. Short as his reign was he was able to concentrate in it crimes and follies enough to wreck the Durrānī monarchy. Although weakened at home by the rivalry of his brothers Maḥmūd and Shudjāʿ al-Mulk, threatened in Khurāsān by the Ḳādjārs and in the north by Shāh Murād Mangit, and in the south defied by the *khān* of Kalāt and the *amīrs* of Sind, yet he could not refrain from wasting his strength in foolish attempts to rival Aḥmad Shāh's conquests in India, and to pose as the champion of Islam against Sikhs and Mahrattas. This brought him into collision with the English now rapidly becoming the ruling power in North India. His first invasion (1209/1795) was cut short at Ḥasan Abdāl by the news that Āghā Muḥammad Ḳādjār had captured Mashhad and murdered the blind old Shāhrukh. Having been appeased by an embassy from the Persian king he began a second invasion of India, which was interrupted by the rebellion of Maḥmūd at Harāt. After defeating this rising he invaded the Pandjāb, and this time reached Lahore and received the nominal submission of the Sikhs, now headed by Randjit Singh, but the Ḳādjār encroachments in Khurāsān again called him back. Maḥmūd meanwhile led a wandering life intriguing with discontented persons in Harāt and Ḳandahār. Among these was the powerful leader of the Bārakzay clan, Payinda Khān, known by the title of Sarfarāz Khān, who was jealous of the authority wielded by the vizier Wafā'dār Khān. The conspiracy was detected and Payinda Khān was executed. His son Fatḥ Khān fled to Maḥmūd in Khurāsān and induced him to throw himself on the sympathy of the Durrānī tribe with whom Zamān Shāh was unpopular (Zamān Shāh's mother was a Yūsufzay while Maḥmūd's was a Popalzay Durrānī). This advice was justified by the result. Maḥmūd obtained possession of Ḳandahār while the infatuated Zamān Shāh was preparing for another invasion of India. Maḥmūd advanced on Kābul and Zamān Shāh fled, but was soon captured and blinded (1215/1800). Simultaneously with Maḥmūd's accession at Kābul Shudjāʿ al-Mulk proclaimed himself king at Peshāwar. He was assisted by a Ghalzay rising against Maḥmūd and in 1218/1803 he took Kābul, imprisoned Maḥmūd and released the blind Zamān Shāh, his own whole brother. For a time Ḳandahār was held by Maḥmūd's son Kāmrān supported by Fatḥ Khān, but the latter made terms for himself and submitted, but discontented with his position almost immediately set up a rival king Ḳayṣar Shāh son of Zamān Shāh.

The next few years were occupied by constant intrigues. Fatḥ Khān changed rapidly from one pretender to another, sometimes supporting Maḥmūd and Kāmrān, sometimes Ḳayṣar, while Shudjāʿ al-Mulk dissipated his strength in expeditions to Sind and Kashmīr. Finally Fatḥ Khān, who was now supporting Maḥmūd, defeated Shudjāʿ al-Mulk at Nimla (1224/1809). He fled into India and Maḥmūd's second reign began. He was however absolutely dependent on Fatḥ Khān, whose power became very great. His brother Dūst Muḥammad held high office, another brother Muḥammad Aʿẓam became governor of Kashmīr, and another Kūhandil governor of Ḳandahār. Harāt which had become independent under another prince was reconquered by Fatḥ Khān and Dūst Muḥammad in 1232/1816. Soon afterwards Dūst Muḥammad incurred the enmity of Kāmrān, who had become governor, by entering his harem and insulting his sister. He fled to Kashmīr and Kāmrān took his vengeance on Fatḥ Khān, whom he blinded and afterwards killed with the consent of Maḥmūd. Although perfidious and unscrupulous Fatḥ Khān was greatly admired by the Afghāns, and his brother Dūst Muḥammad had no difficulty in raising a large force and defeating Maḥmūd in 1235/1818 near Kābul. Maḥmūd lost Kābul which he never recovered. He held Harāt till his death in 1245/1829 and Kāmrān continued to rule there till he was murdered in 1258/1842.

(M. Longworth Dames *)

(B) THE BĀRAKZAY (OR MUḤAMMADZAY) DYNASTY.

The Muḥammadzay, a small subdivision of the Durrānī Bārakzay of Ḳandahār, derive their name from Muḥammad, a contemporary of Malik Sadō, chief of the Abdālī clans, with whom he lived amongst his small tribe at Arghasān, SE of Ḳandahār, about 1000/1591. His descendants held the title of chief among the Bārakzay tribes of Ḳandahār, and came into prominence with Ḥādjdjī Djamāl Khān b. Ḥādjdjī Yūsuf b. Yāro b. Muḥammad, who served under Aḥmad Shāh and died in 1184/1770-1. His son Pāyinda Khān rendered important services to Tīmūr Shāh in the suppression of rebellions, but in consequence of his intrigues with Maḥmūd against Shāh Zamān was executed in Ḳandahār in 1214/1800. He left a number of sons, the eldest of whom, Fatḥ Khān, was installed as vizier, with the title of Shāh Dūst, on Maḥmūd's occupation of Kābul (1215/1800). With the increasing power of the Muḥammadzay their ambitions clashed with the ruling Sadōzay family and plunged Afghānistān into strife and bloodshed until finally, after the execution of Fatḥ Khān in 1234/1818-9, his brother Dūst Muḥammad drove Maḥmūd out of Kābul.

The Bārakzay chiefs, who by now held most of the country, ruled at first in the name of various puppet kings of the Sadōzay family, such as Ayyūb and Sulṭān ʿAlī (who took the name of Sulṭān Maḥmūd on his coins). It was not until 1254/1838 that Dūst Muḥammad formally assumed the style of *amīr* of Kābul; but neither he nor any of his successors before Ḥabīb Allāh took the title of shāh or king. During the early years of his rule the outer provinces of the empire were rapidly lost. The Sikhs took Multān in 1233/1818, Kashmīr in 1235/1819, Dēra Ghāzī Khān in the same year, and Dēra Ismāʿīl Khān in 1236/1821. Peshāwar long resisted them under Dūst Muḥammad's brother, Sardār Sulṭān Muḥammad, but it too fell in 1250/1834. The *amīrs* of Sind threw off the last sign of Afghān rule by taking Shikārpūr, and to the north of the Hindū-kush Balkh was lost also. Dūst Muḥammad therefore became the ruler of a compact Afghān kingdom; the loss of the outlying provinces, which had always been a source of weakness to the Sadōzay kings, tended to consolidate his power. Although without scruples of any sort in attaining his ends, yet he had the reputation of a just man and was popular among the Afghāns. But his progress was checked by the inevitable rivalries of his brothers. While he made Kābul his capital, Kūhandil Khān held Ḳandahār and defeated an attempt by Shudjāʿ al-Mulk Sadōzay to recover it in 1250/1834. Harāt was taken by the Persians after the murder of Kāmrān by his vizier Yār Muḥammad Khān (1258/1842), and was only recovered by Dūst Muḥammad in 1280/1863, just before his death.

Shudjāʿ al-Mulk, after his failure at Ḳandahār, endeavoured to obtain British assistance, and political events led to his ultimately obtaining it. Attempts by Alexander Burnes to negotiate a treaty with Dūst Muḥammad had broken down, and the growth of Russian influence led the Indian government to favour Shudjāʿ al-Mulk's claims. The Persians had at this time (1253/1837) laid siege to Harāt. It was believed that their operations were directed by Russians and an English officer conducted the defence. This brought matters to a climax. An Anglo-Indian army advanced through Sind and the Bolān Pass on Ḳandahār (end of 1254/Feb. 1839) and after taking the city marched on Kābul. Dūst Muḥammad fled to Bukhārā and Shudjāʿ al-Mulk was placed on the throne of Kābul (1 Djumādā II 1255/17 Aug. 1839). Dūst Muḥammad, after some unsuccessful operations in the north, surrendered to the British in the following year and was sent to Calcutta.

Shudjāʿ al-Mulk's reign was a troubled one. Kābul was abandoned by the British-Indian army in 1841, and on its retreat the army was almost annihilated at the Khurd Kābul pass. These operations were conducted by Muḥammad Akbar Khān, son of Dūst Muḥammad. The British continued to hold Djalālābad and Ḳandahār, and reoccupied Kābul in the autumn of 1258/1842. Shortly before this, Shudjāʿ al-Mulk had been murdered, and his son Fatḥ Djang was recognized as king by the Popalzays but opposed by the Bārakzays. The British soon afterwards left Afghānistān, and Fath Djang, knowing that he could not hold his own, went with them, accompanied by the blind old Zamān Shāh, who was still living. Dūst Muḥammad was sent back to Afghānistān, as he was the only man who could establish a firm government. His sons and brothers were reestablished in their governments, but rifts continued from time to time to breach the solidarity of the clan, and even Akbar Khān, now vizier, was on bad terms with his father till he died in 1266/1849-50. Dūst Muḥammad maintained friendly relations with Britain except at the time of the Sikh war of 1849, when the Afghān contingent covered itself with ridicule by its rapid flight after the battle of Gudjrāt. During the mutiny of the Indian army in 1857, Dūst Muḥammad gave them no support. He occupied himself in strengthening his own country, and from 1267 to 1272/1850-55 he reconquered Balkh, Khulm, Kunduz and Badakhshān. In 1280/1863 he succeeded in driving the Persians from Harāt, and he died there immediately after its recovery, having been a good ruler on the whole in spite of obvious faults. [See also DŪST MUḤAMMAD KHĀN.]

Shīr ʿAlī, his fifth son, who had been nominated by him as his successor, bacame almost at once

involved in civil war with his own elder brothers Muḥammad Aʿẓam and Muḥammad Afḍal, and with ʿAbd al-Raḥmān, the able and determined son of the latter. (For an account of these wars see ʿABD AL-RAḤMĀN KHĀN). Shīr ʿAlī was defeated in 1283/1866 and lost first Kābul and then Ḳandahār. Afḍal and Aʿẓam reigned in succession until 1285/1868, but never held possession of Harāt, whence Muḥammad Yaʿḳūb, Shīr ʿAlī's son, advanced in the latter year and recovered Ḳandahār and Kābul for his father. Shīr ʿAlī now held the whole of Afghānistān, and was recognized by the Indian government, and met the viceroy Lord Mayo at Ambāla in 1286/1869. He was not, however, satisfied with his treatment, as he could obtain no definite promise of support against other powers. At this period he imprisoned his enterprising son Muḥammad Yaʿḳūb and resented the viceroy's attempt to intercede for him. He agreed to an arbitration by British officers as to the Sīstān border, regarding which there was a dispute with Persia. According to this arbitration (1290/1873) a considerable part of the most fertile lands was awarded to Persia, and this was another cause of resentment. Finally he began to negotiate with Russia and refused to receive a British embassy. These causes led to the war of 1878-80. The British army took Kābul, and Shīr ʿAlī fled to Mazār-i Sharīf, where he died in 1296/1879). [See also SHĪR ʿALĪ]. His army, organized on the European model, was defeated by Lord Roberts at the Paywār pass.

Muḥammad Yaʿḳūb, released from prison and proclaimed *amīr* on his father's flight (Rabīʿ I 1296/Feb.-March 1879), met the advancing British forces at Gandamak, and there concluded a treaty (4 Djumādā II/26 May) by which he ceded to British India certain territories near the Bolān pass and the Kuṛam valley, and agreed to receive a mission at Kābul. A few months later a rising in Kābul resulted in the massacre of the members of the mission headed by Sir Louis Cavagnari. This led to a fresh outbreak of war. Roberts took Kābul a second time, but was besieged there by a tribal army headed by Muḥammad Djān and the *mulla* Mushk-i ʿĀlam. After its defeat Yaʿḳūb Khān was deposed and removed to India, and the government was offered to ʿAbd al-Raḥmān, a separate state being constituted at Ḳandahār. Part of the army at Ḳandahār under Stewart marched to Kābul, as a preliminary to evacuating the country, and in passing through the Ghalzay country was attacked at Aḥmad Khayl by a large force of men of that tribe, who were only defeated after a most desperate conflict. Scarcely had ʿAbd al-Raḥmān been proclaimed when Ayyūb, a son of Shīr ʿAlī, who had been collecting an army at Harāt, marched on Ḳandahār, defeated a small Anglo-Indian force at Maywand, and laid siege to Ḳandahār. Roberts marched rapidly from Kābul and defeated Ayyūb. After this the British army withdrew and the whole country including Ḳandahār was made over to ʿAbd al-Raḥmān (1297/1880). In spite of internal difficulties and external problems [see ʿABD AL-RAḤMĀN KHĀN], he preserved the independence and integrity of the country, and on his death (15 Djumādā II 1319/1 Oct. 1901) transmitted an undisputed authority to his son Ḥabīb Allāh. Shortly after the latter's accession the conclusion of a Russo-British agreement removed the fears of further annexation or intervention by either Power, and in 1323/1905 the *amīr* confirmed the treaty made by his father with the government of British India, securing to the latter control of the foreign relations of Afghānistān in return for an annual subsidy of eighteen *lakhs* of rupees (£160,000). Internally, peace was almost wholly unbroken and some advance was made in education. During the First World War Afghānistān maintained a policy of neutrality. On 18 Djumādā I 1337/20 Feb. 1919 Ḥabīb Allāh Khān was shot in his camp at Ḳalaʿ-i Gūsh in Laghmān. His brother Naṣr Allāh proclaimed himself his successor, but was captured by the late *amīr*'s third son, Amān Allāh, who had the support of the army, and imprisoned.

Amān Allāh Khān almost at once opened hostilities against British India but only a month later sued for an armistice, and by the Treaty of Rāwalpindi (11 Dhu 'l-Ḳaʿda 1337/8 Aug. 1919) the independence of Afghānistān was formally recognized. New treaties were concluded with the USSR and Great Britain in 1921, but tension continued on the northern frontier until 1922 and on the SE frontiers until 1924. In 1922 a constitution was promulgated at a Loe Djirga, followed in 1923 by an administrative code and in 1924 by measures to provide for the higher education of women. After the outbreak of a rebellion in Khost, led by the *mulla* ʿAbd al-Karīm, the latter were cancelled and the conscription laws modified at a second Loe Djirga (July 1924), and the rebellion was eventually suppressed. Nevertheless, King Amān Allāh (he had assumed the royal title in 1926), on returning from a tour through India, Europe, the USSR and Turkey (Dec. 1927 to July 1928), summoned a third Loe Djirga to promulgate a new constitution, and to announce a programme of social and educational reforms. A series of tribal risings followed, during which a Tādjīk brigand, Bačča-i Saḳaw, later entitled Ḥabīb Allāh Khān, advanced from Kūh-i Dāman and seized Kābul (Jan. 1929). Amān Allāh fled to Ḳandahār, and his attempts to regain Kābul were defeated by the Ghalzay supporters of Ḥabīb Allāh (April-May 1929); meanwhile, Harāt was occupied by another Tādjīk, ʿAbd al-Raḥīm.

The cause of the Muḥammadzays was now taken up by a collateral line descended from Pāyinda Khān, under the leadership of a former army commander who had been living in exile, Nādir Khān (b. Muḥammad Yūsuf Khān b. Yaḥyā Khān b. Sulṭān Muḥammad Khān, brother of Dūst Muḥammad). After several unsuccessful attempts, he secretly recruited a force of Wazīrs and Mahsūds, which, under the command of his brother Shāh Walī Khān, occupied Kābul, where Nādir Khān was proclaimed king, with the title of Nādir Shāh, on 12 Djumādā I 1348/16 Oct. 1929. Ḥabīb Allāh surrendered, and was executed. The pacification of the country required a further two years, and discontent continued to smoulder among the former supporters of Amān Allāh, of whom the most active were the Čarkhī family of Logar. The hasty execution of its leading member provoked a blood-feud, in the course of which king Nādir Shāh was assassinated (20 Radjab 1352/8 Nov. 1933) in the palace of Dilkushā. His son Muḥammad Ẓāhir, then aged 19, was at once proclaimed as successor by the brothers of Nādir Shāh, the eldest of whom, Sardār Muḥammad Hāshim Khān, exercised a virtual regency until 1946. Several tribal risings in the following years were sternly suppressed, and an active programme of military, educational and economic development was pursued. In 1934 Afghānistān entered the League of Nations, and in 1937 signed with Turkey, ʿIrāk and Iran the pact of Saʿdābād; a trade agreement was negotiated with the USSR in 1936. During the second World

War it again maintained a strict neutrality. The remaining frontier disputes were settled in 1947—that in the north by agreement with the USSR, and that with Iran over the Hilmand river by American arbitration. Since the constitution of Pakistan in the same year, however, the problem of the unsubdued tribes of the former "North-West Frontier" (see the articles AFRĪDĪ and MAHMAND), which for a century bedevilled relations between Afghānistān and British India, continues equally to disturb those between the two Muslim States.

(M. LONGWORTH DAMES—H.A.R. GIBB)

ʿAFĪF AL-DĪN AL-TILIMSĀNĪ (see AL-TILIMSĀNĪ).

AL-**AFLĀDJ** (AFLĀDJ AL-DAWĀSIR), a district in southern Nadjd athwart the great cuesta of Ṭuwayḳ, roughly bounded by Wādī Birk (N), the plain of al-Bayāḍ (E), Wādī al-Maḳran (S), and the sands of al-Daḥy (W). The most populous oasis and present capital is Laylā (46° 44′ 35″ E, 22° 16′ 45″ N).

The district contains a remarkable group of spring-fed pools called ʿUyūn al-Sayḥ and the extensive remains of a system of channels which once irrigated a more prosperous land. The pools, the largest of which is nearly a kilometre long, are the most noteworthy features of this kind in the Arabian Peninsula. The district, in older times also known as al-Faladj, takes its name from *faladj* (pl. *aflādj*), the term still used in ʿUmān for an underground aqueduct with surface apertures to facilitate cleaning of the channel, though strangely enough this type of aqueduct, which may be of Persian origin, is now called *sāḳī* (pron. *sādji*, pl. *sawādji*) in al-Aflādj. The poorly kept aqueducts of Samḥān, Barābir, al-Wadjdjādj, and three smaller ones, all of which water the oasis of al-Sayḥ, are still flowing.

The northernmost village of al-Aflādj is Usaylila. Laylā comprises the settlements of Ghaṣība, the present seat of the *amīr*, al-Mubarraz, the former seat, and al-Djufaydiriyya. Farther south are the oases of al-ʿAmār (not to be confused with Āl ʿAmmār, a section of the Dawāsir), al-Sayḥ, which is the most extensively cultivated of all, al-Kharfa, and al-Rawḍa. The pools lie south-west of al-Sayḥ. South of the pools are the tiny oases of Suwaydān, al-Ruḳayḳiyya, al-Ghawṭa, and Marwān. The southernmost oases are al-Badīʿ in Wādī Ḥashradj, which descends from al-Haddār, and al-Shuṭba in the upper reaches of al-Maḳran. In the highlands of Ṭuwayḳ are al-Sitāra (al-Ṣidāra in al-Hamdānī), Ḥurāḍa, and al-Ghayl, all ancient places. Along the western escarpment of Ṭuwayḳ are al-Ḥamar (al-Aḥmar) (N) and al-Haddār (S).

At the dawn of Islam the dominant tribe in al-Aflādj was Djaʿda [*q.v.*], whose ancestor was a brother of Ḳushayr and al-Ḥashīr, sons of Kaʿb, a descendant of ʿĀmir b. Ṣaʿṣaʿa of the Northern Arabs. In 9/630-1 Djaʿda embraced Islam and sent an envoy to Medina, where the Prophet confirmed the tribe's position in the district (Caetani, *Annali*, ii, 1, 297).

In 126/743-4 Djaʿda and their allies of Banū ʿĀmir on the First Day of al-Faladj killed a governor of Banū Ḥanīfa who had been set over them. Banū Ḥanīfa, after defeating Banū ʿĀmir on the Second Day of al-Faladj, had their power broken on the Day of al-Nishāsh in 126 (Caetani, *Chronographia*, v, 1601).

Three centuries after the Prophet, Djaʿda remained the foremost tribe of al-Aflādj, followed in importance by Ḳushayr and al-Ḥashīr (al-Hamdānī, i, 159). Djaʿda's chief centre was Sūḳ al-Faladj, a city with iron gates and walls 30 cubits thick enclosing an area said to contain 260 wells of sweet water. Also within the territory of Djaʿda was al-Ḳaṣr al-ʿAdī, reputed to date back to the time of Ṭasm and Djadīs—perhaps the same as the ruins now known as Ḳuṣayrāt ʿĀd just south of al-Sayḥ. Ḳushayr occupied the city of al-Hayṣamiyya with walls broad enough for four horses to run abreast along the summit. Among the towns belonging to al-Ḥashīr was al-Haddār, but many members of this tribe had already moved to the Yemen.

In 443/1051 Nāṣir-i Khusraw found al-Aflādj in a state of virtual ruin as the result of internal dissensions so severe that men wore their shields and swords even while praying. During this medieval age the tribe of Djumayla, said to be a branch of ʿAnaza, became the leading power. Āl Ṣabāḥ and Āl Khalīfa, the present ruling houses of al-Kuwayt and al-Baḥrayn, who trace their lineage back to Djumayla, emigrated from al-Haddār well over two centuries ago under pressure from the Dawāsir [*q.v.*] of the south, who eventually supplanted Djumayla in control of the whole district.

In 1199/1785 the people of al-Aflādj, following the lead of their kinsmen in Wādī al-Dawāsir, adhered to the Wahhābī cause and have since remained staunch in its support, though the district has played only a minor role in modern history. In 1328/1910 ʿAbd al-ʿAzīz Āl Saʿūd cornered the rebellious leaders of the Hazāzina of al-Faraʿ at Laylā and executed them. The district is now under an *amīr* responsible to the central government of Saudi Arabia in al-Riyāḍ.

In addition to the Dawāsir, small numbers of Subayʿ, the Suhūl, and the Fuḍūl live in al-Aflādj. Remnants of Djumayla are found at al-Haddār. *Ashrāf* form an important part of the population of al-Sayḥ. Negro blood is often seen in the towns, and there are many folk of Banū Khaḍīr [*q.v.*], mainly tillers of the soil (*kaddād*, pl. *kawādīd*).

The dates of al-Aflādj are famous. Both al-Hamdānī and Philby mention the *ṣufrī* variety (called by al-Hamdānī *sayyid al-tumūr*, though the present inhabitants regard the *sirī* as the *sayyid*),

and Nāṣir reckoned the dates of al-Aflādj better than those of al-Baṣra.

AFLĀṬŪN Arabic for Plato, the Greek philosopher, who became, together with Aristotle, the standard philosopher in late Greek philosophy.

(i) Works and doctrine; (ii) Lives; (iii) Sayings.

(i) Plato is known to Arab authors according to the different ways in which his genuine works or those erroneously attributed to him were read and studied in the Greek sections of the Roman Empire during the centuries preceding the Arab conquest of Hellenized lands in the Eastern Mediterranean. Most Arab thinkers did not consider Plato the main representative of Greek thought as St. Augustine e.g. had done (*Civ. Dei*, viii, 4, 12) but subordinated him to Aristotle; they were however like e.g. Porphyry, Ammonius and Simplicius aware of an identity of purpose and a basic agreement between the two great philosophers.

Just as commentaries on Aristotle written outside the Neoplatonic schools survived in Arabic translations and, partly, in Arabic translations only (as in the case of certain writings of Alexander of Aphrodisias and Themistius, etc.), interpretations of Plato, untinged by Neoplatonism, found their way to the Arabic philosophers and were studied by them. Part of Galen's (Djālīnūs [*q.v.*]) Πλατωνικῶν διαλόγων σύνοψις in eight books, lost in the Greek original but still partly accessible to Ḥunayn b. Isḥāḳ (*Mā Turdjima min Kutub Djālīnūs* (Bergsträsser), no. 124) and his school, has been traced and recently published, viz. the summary of the whole of the *Timaeus*, with many verbal quotations, a fragment of his paraphrase of the *Republic*, a fragment of his summary of the *Laws* and a reference to his summary of the *Parmenides* (P. Kraus and R. Walzer, *Plato Arabus*, i, 1951). Fragments of his medical commentary on the *Timaeus* (Ḥunayn, no. 122) have been recovered from Arabic medical writers (H. O. Schröder and P. Kahle, *Corpus Medicorum Graecorum, Supplementum*, i, 1934). Many quotations from Plato and references to him reached the Islamic world through translations of other works by Galen. As had happened in the case of Aristotle, late Greek philosophers tried to arrange Plato's dialogues in systematic order. An otherwise unknown work of this type, completely free from Neoplatonic influence and still fully aware of the political aspects of Plato's thought, was used and partly reproduced by al-Fārābī (F. Rosenthal and R. Walzer, *Plato Arabus*, ii, 1943). The author of the Greek treatise, who had even regarded this systematic ordering of the dialogues as a chronological arrangement by date of composition, is unknown. A commentary on the *Republic* of similar provenience was widely used by al-Fārābī; it constitutes the main part of Ibn Rushd's commentary which is available in a Hebrew translation and a 16th century Latin one (edition in preparation by E. J. Rosenthal). A summary of Plato's *Laws*, of a similar type, was used by al-Fārābī in his compendium of the work (F. Gabrieli, *Plato Arabus*, iii, 1952). Al-Rāzī commented on Plutarch's commentary on the *Timaeus* (S. Pines, *Atomenlehre*, 90) and Yaḥyā b. ʿAdī copied Plutarch's book (*Fihrist*, 246).

But, in general, Arabic philosophers look at Plato through the eyes of his Neoplatonic interpreters, Plotinus [cf. al-shaykh al-yūnānī], Porphyry (Furfūriyūs [*q.v.*]), Proclus (Buruḳlus [*q.v.*]) and others. In the preface to his translation of a fragment of Proclus' commentary on the *Timaeus* (89E-90C: E. Pfaff, *Corpus Medicorum Graecorum, Supplementum*, iii, p. xlii, 1941) Ḥunayn b. Isḥāḳ (cf. also *Mā Turdjima*, no. 45) says: "Galen is the standard interpreter of Hippocrates, and the man who is best entitled to explain the meaning of Plato's words is Proclus the most famous of scholars". An instructive example of this Proclean interpretation of Plato is to be found in Miskawayh's *al-Fawz al-Aṣghar*, in the section on the immortality of the soul (F. Rosenthal, 399 ff.), based probably on Proclus' work *On the immortality of the soul according to Plato*, in three books, which was known to the Arabs (*Fihrist*, 252). A tradition of this kind is followed by al-Kindī, in whom the Platonic element is strong (cf. *Rasāʾil* (Abū Rīda), nos. 10-13) not only in psychology but also in his extremely orthodox neoplatonic metaphysics of the One and in his ethics. The Plato to whom al-Fārābī (with the exception of his theory of the ideal state), Ibn Sīnā, Ibn Bādjdja and Ibn Rushd refer is, whether explicitly or implicitly, always the Plato of Plotinus and his followers. Yaḥyā b. ʿAdī had Olympiodorus' (6th century A.D.) commentary on the *Sophist* (lost in the Greek original) in his library (*Fihrist*, 256) in the translation of Isḥāḳ b. Ḥunayn. We find an interesting account of Plato's metaphysics, cosmology and psychology, derived from an unknown but valuable neoplatonic source, in al-Shahrastānī, 283 ff. (German transl. by Th. Haarbrücker, ii, 117). On the whole, since Neoplatonism claims to be a reinterpretation of Plato, influential Neoplatonic writings deserve to be mentioned here as well, the *Theology of Aristotle*, in which Aristotle is supposed to have become a Platonist in his old age, the *Liber de causis* based on Proclus' *Elements of Theology*, the new Plotinian text discovered by P. Kraus (cf. Bibliography) and the Arabic Plotinus source discussed by F. Rosenthal [cf. ARISṬŪṬĀLĪS and AL-SHAYKH AL-YŪNĀNĪ].

A new development starts with al-Suhrawardī al-Maḳtūl [*q.v.*] and the Ishrāḳīs [*q.v.*], who, criticizing al-Fārābī and Ibn Sīnā, emphasize the mystical aspects of Platonism, or rather Neoplatonism, and make Plato the mystic the chief authority in philosophy. The Ṣūfīs now become the true followers of Plato (cf. e.g. al-Suhrawardī, *Opera Metaphysica et Mystica* (Corbin), i, p. viii, xxxiii ff.). An anonymous book *On the Platonic Ideas* (ed. ʿA. Badawī,

Cairo 1947), written probably in the 14th century (Corbin, *op. cit.*, 4, n. 79), depends on al-Suhrawardī's strange interpretation of the Platonic ideas.

Another special tradition of Platonism is represented by Muḥammad b. Zakariyyā' al-Rāzī [*q.v.*], who also claims to follow Plato as his main authority. His Platonising ethics (cf. *al-Ṭibb al-Rūḥānī*) may be connected with his study of Galen, and his rejection of the eternity of the world with the interpretation of the *Timaeus* put forward by Plutarch and Galen, but his five eternal principles are of Neopythagorean provenience, although he considered them to be Platonic. His theory of the atomic structure of matter may go back to Plato's lecture *On the Good*, it is certainly found in a neopythagorean version of Plato's metaphysics (Sextus Empiricus, *Adversus Physicos*, ii, 249 ff.).

The Arabic bibliographers list the titles of all the dialogues to be found in the Greek Corpus Platonicum, but give little information about Arabic translations. They mention a commentary on the *Republic* (translated by Ḥunayn b. Isḥāḳ); translations of the *Timaeus* by Yaḥyā b. al-Biṭrīḳ, Ḥunayn b. Isḥāḳ and Yaḥyā b. ʿAdī. (Ḥunayn wrote also a treatise *That which ought to be read before Plato's works*.) Ibn al-Nadīm also mentions a copy of the *Crito* in Yaḥyā b. ʿAdī's handwriting. Part of Proclus' commentary on the *Phaedo* (lost in the Greek original) was translated from the Syriac by Ibn Zurʿa.

No manuscripts of these or other Arabic translations of a Platonic dialogue have so far been traced. A verbal quotation from the *Republic* (apart from the more or less verbal references in Ibn Rus͟hd's paraphrase and references to its contents in works of other philosophers) occurs e.g. in the *Rasā'il Ik͟hwān al-Ṣafā'*, Cairo 1347, iv, 134 (the story about Gyges, *Rep.*, ii, 359 ff., cf. Rosenthal, 397). Al-Kindī wrote a treatise on the Platonic number (*Rep.*, viii; *Fihrist*, 256). Quotations from the *Timaeus* occur frequently, but it is difficult to decide whether they are taken from Plato or from some intermediary. For the quotations from the *Laws* to be found in al-Bīrūnī's *India* cf. F. Rosenthal, 359 f. and F. Gabrieli, *Plato Arabus*, iii, p. xii, n. 2. There are numerous quotations from the *Phaedo* in the same work. The closing section on Socrates' death is to be found e.g. in Ibn al-Kiftī, 200-6 and Ibn Abī Uṣaybiʿa, i, 45. A Persian version of the dialogue exists in Brusa (*Bell.*, 1952, 114). The Alcibiades-speech from the *Banquet* has been traced by F. Rosenthal in Istanbul, Köprülü 1608, fol. 216. Persistent research will no doubt trace more quotations of Platonic dialogues in Arabic philosophical and non-philosophical writings.

Among the pseudepigrapha of a philosophical kind can be mentioned: the neophythagorean treatise *Plato's Exhortation of young men*, probably of Greek origin (F. Rosenthal, *Orientalia*, x, 383-95), a letter by Plato addressed to Porphyry (!) about the banishment of grief, depending on a treatise on consolation by al-Kindī (*Mas͟h.*, 1922, 884-9, see H. Ritter-R. Walzer, *Memorie Ac. dei Lincei*, 1940, 388 n. 2) and Plato's will addressed to Aristotle.

But the Arabs are acquainted not only with the different interpretations of Plato's thought which are familiar to the student of Greek philosophy but also with a Plato who had been associated with the superstitions which had become an integral part of the teaching of most of the neoplatonic schools: magic, astrology and alchemy (Olympiodorus and other late Neoplatonists had dabbled in alchemy and made Plato their patron). The Arabs went a step further and made Plato the author of alchemical works. D̲j̲ābir quotes a *Musaḥḥaḥāt Aflāṭūn* in which Plato initiates his disciple Timaeus in the secrets of alchemy; but the passages of the *Timaeus* referred to by D̲j̲ābir have nothing to do with the original dialogue of Plato (P. Kraus, *Jabir et la science grecque*, 48 ff.). Another work of a similar character, a philosophical alchemical book attributed to Plato is the *Rawābiʿ Aflāṭūn* known to the West as *Liber Quartorum* and preserved in two Arabic MSS. It contains a dialogue between Ahmad b. al-Husayn b. D̲j̲ahār Buk͟htār and the well known Ḥarrānian mathematician and astronomer T͟hābit b. Ḳurra (P. Kraus, *op. cit.*, 51, 339). Another alchemical treatise, the *Liber Platonis de XIII clavibus*, is supposed to have been translated from the Arabic into Latin in A.D. 1301 (L. Thorndike, *A History of Magic*, iii, 57). Cf. also Kraus, *op. cit.*, 51, n. 9.

Among the magical treatises ascribed to Plato the *al-Nawāmīs*, which deals with artificial generation, appears to be worth mentioning (P. Kraus, *op. cit.*, 104 and n. 12), as well as *al-Sirr al-K͟hafī* (*ibid.*, 52).

(ii) The Arabic "Lives of Plato" do not add anything substantial to the material to be found in the Greek tradition as represented by Diogenes Laertius, book iii, Olympiodorus, and the *Prolegomena to the Platonic philosophy* by an anonymous Neoplatonist (cf. H. Breitenbach, F. Buddenhagen, A. Debrunner, F. von der Muehll, *Diogenes Laertius III*, 1907; J. Kirchner, *Prosopographia Attica*, no. 11855). There is, however, no direct connection between them and any of the Greek texts known. Part of the Arabic tradition can be traced back to an introductory work by Theo of Smyrna (2nd century A.D.), referred to by the *Fihrist*, 245, and quoted at length by Ibn al-Ḳifṭī, 17-9 (cf. J. Lippert, *Studien auf dem Gebiete der griechisch-arabischen Übersetzungslitteratur*, i, Braunschweig 1898, 39 ff.). The *Fihrist* refers also to (Ps.-) Plutarch, see H. Diels, *Doxographi Graeci*, 287. Al-ʿĀmirī, a philosopher of the 4th/10th century (quoted in the Abbreviation of Abū Sulaymān al-Manṭiḳī's *Ṣiwān al-Ḥikma*, introduction), probably following some lost Greek tradition, made Plato one of the five pillars of wisdom, the others being Empedocles, Pythagoras, Socrates and Aristotle (Anbāduḳlīs, Fūt͟hag͟hūras, Suḳrāṭ, Arisṭūṭālīs [*qq.v.*]); these philosophers derived their wisdom from the Prophets. According to him Plato retired in old age into solitude and prayer. He also gives an account of Plato's solution of the Delian problem (cf. Plutarch, *De gen. Socr.*, 7, p. 579; idem *De Ei ap. Delphos*, 6, p. 386; Tannery, *La Géométrie grecque*, 110; al-Ḳazwīnī, *Āthār al-Bilād* (Wüstenfeld), 45; Luṭfī al-Maktūl, *Tadʿif al-Mad͟hbaḥ* (S. Yaltkaya, A. Adnan, H. Corbin), Paris 1940). On him depends Ṣāʿid al-Andalusī, *Ṭabaḳāt al-Umam*, 23; Ṣāʿids life was used, as a minor source, by Ibn al-Ḳifṭī, *passim*.

The life in Mubas͟hs͟hir b. Fātik's *Muk͟htār al-Ḥikam* (MS Brit. Mus. Add. 25893, fol. 44 ff.; on this work cf. F. Rosenthal, in *Orientalia*, 1937, 21 ff.) was copied by Ibn Abī Uṣaybiʿa, i, 50 ff. He made both Plato's parents descendants of Asclepius, probably misinterpreting the epigram to be found in Diog. Laertius, iii, 45 (cf. E. J. and and L. Edelstein, *Asclepius*, Baltimore 1945, i, no. 322, ii, 127). Alone among the Arab biographers he mentions Plato's supposed stay in Egypt. For the physiognomical section cf. F. Rosenthal, *loc. cit.*, 38.

Ibn al-Ḳifṭī based his long and detailed life (17-27) on the *Fihrist*, on Theo of Smyrna (cf. above) and on an unidentified Greek source (19 line 16-25

l. 3). There are Greek parallels to almost everything mentioned. Stories similar to the discussions reported to have taken place at Dionysius' court (21) are to be found in Olympiodorus' *Life* and in Plutarch's *Dio*. There are a very few confusions, such as the story of Socrates' stay in Sicily and the introduction of Plato's two female disciples as his wives and the inclusion of Proclus among his pupils. The section 25^4-26^{14} is taken from al-Fārābī (cf. the anonymous *Proll. Phil. Plat.*, cap. 7-16); 26^{15}-27^{14} reproduces Ṣāʿid al-Andalusī, 19. Plato's prayer in neoplatonic language (27^{16-7}) is worth mentioning (cf. also MS Oxford, Hunt. 162, fol. 202r).

Al-S̲h̲ahrazūrī's account of Plato's life in his *Nuzhat al-Arwāḥ* (in MS) is based on Mubas̲h̲s̲h̲ir.

In later centuries Plato's tomb could be visited at Ḳonya (F. W. Hasluck, *Christianity and Islam under the Sultans*, Oxford 1929, 363 and *passim*).

(iii) The main source for the various compilations of sayings of Plato is Ḥunayn b. Isḥāḳ's *Nawādir al-Falāsifa wa 'l-Ḥukamā'* (cf. the Hebrew transl., ed. by A. Löwenthal, Frankfurt 1896, and translated by him into German, Berlin 1896; and K. Merkle, *Sinnsprüche der Philosophen*, Leipzig 1921). Another primary source is Ibn Hindū, *al-Kalim al-Rūḥāniyya fi 'l-Ḥikam al-Yūnāniyya*, Cairo 1318. The life in the Abbreviation of Abū Sulaymān's *Ṣiwān al-Ḥikma* contains only sayings. Ibn Abī Uṣaybiʿa, i, 51^7-53^{16}, reproduces the section on sayings to be found in Mubas̲h̲s̲h̲ir. Sayings attributed to Plato occur very often in Arabic literature.

(R. Walzer)

ĀFRĀG (Berber, "enclosure"), term adopted in Morocco since the Almohad period for the enclosure of cloth, which isolates the encampment of the sovereign and his suite from the rest of the camp. It corresponds to the Persian *sarāča* or *sarāparda*.

AFRĀSIYĀB, legendary king of the Tūrānians according to Iranian tradition. In the Avesta (especially *Yas̲h̲t* xix) "Frangrasyan the Turian" was an adversary of Kavi Haosrava (> Kay K̲h̲usraw), having treacherously murdered Kavi Haosrava's father Syavars̲h̲an (> Siyāwus̲h̲). He vainly desired to secure the *hvarna*, "the Glory of the Aryans", and was killed, in revenge, by Kavi Haosrava. He may have been originally a historical figure, chief of the Turian tribes (who were probably themselves of Iranian race [cf. TŪRĀN]). The Pahlavi form of the name is Frāsiyāb. Some additional details about him are given in the religious literature (*Bundahis̲h̲n*, etc.). His genealogy is given, his first ancestor being Tūč (Tūr, ancestor of the Tūrānians), son of Frēdōn (> Farīdūn [q.v.]). His incursions are said to have started in the reign of Manus̲h̲čihr: he defeated the latter and gained dominion over Iran. Subsequently Uzaw (> Zaw or Zāb) delivered Iran from his domination; Frāsiyāb tried to recapture the "Glory" and sought it in all the seven *kēs̲h̲wars*. Frāsiyāb's residence (the subterranean fortress of the *Yas̲h̲ts*, where Frangrasyan lived "surrounded by iron") is described in detail. In the end Frāsiyāb was killed by Kay K̲h̲usraw. Thus in the development of the legend after the period of the *Yas̲h̲ts* Frāsiyāb became the chief of the Tūrānians in all their wars, not only against the Kayānids but also against their predecessors, the "Pīs̲h̲dādids": he thus became a contemporary of Manus̲h̲čihr and Uzaw; his end, however, is still firmly connected with Kay K̲h̲usraw.

The Islamic authors derived their information from secular books on the national tradition, more especially the *K̲h̲wadāy-nāmak*. Many additional details are to be found. Afrāsiyāb fought with Manūs̲h̲ihr in Ṭabaristān; then they reached an agreement, making the river of Balk̲h̲ the boundary between their territories. Siyāwus̲h̲, sent by Kay Kā'ūs with an army against Afrāsiyāb, concluded an armistice with him, which was repudiated by Kay Kā'ūs. Siyāwus̲h̲ took refuge with Afrāsiyāb who married him to his daughter Wisfāfarīd̲h̲ (al-Ṭabarī; Firdawsi: Faringīs), but nevertheless murdered him, out of jealousy. Wisfāfarīd̲h̲, pregnant with Kay K̲h̲usraw, escaped and was taken back to Iran by the hero Gēw (Bayy, Waww). Rustam and Tūs then ravaged the land of Tūrān, to avenge Siyāwus̲h̲. The reign of Kay K̲h̲usraw was filled with wars against Afrāsiyāb (details in al-Ṭabarī, i, 605 ff.; cf. also index, s.v.; al-T̲h̲aʿālibī, *Histoire des rois de la Perse* (Zotenberg), 222 ff.; Firdawsī, *Shāh-nāma* (Vullers), ii, 764-iii, 1444). After the final battle Afrāsiyāb fled from Turkistān and hid in Ād̲h̲arbayd̲j̲ān, but was caught, and killed by Kay K̲h̲usraw with his own hands.

The Tūrānians having been identified with the Turks [see TŪRĀN], Afrāsiyāb was regarded as a Turk; this is strongly emphasized in the *Shāh-nāma*. Turkish dynasties therefore sometimes claimed him as their ancestor: thus the Ḳara K̲h̲ānid [q.v.] dynasty is also called Āl Afrāsiyāb, and the Sald̲j̲ūḳs claimed descent from him. (Cf. W. Barthold, *Hist. des Turcs d'Asie Centrale*, 70,84).

(S. M. Stern)

AFRĀSIYĀB founder of a line of governors of Baṣra (Āl Afrāsiyāb). He was an officer of unknown racial origin, who purchased the government of Baṣra from the local pas̲h̲a about 1021/1612. Afrāsiyāb was succeeded by his son ʿAlī in 1034/1624-5, during an attack on Baṣra by Persian forces, which failed in face of ʿAlī's resistance. A second Persian attempt in 1038/1629 was equally unsuccessful. During the Turco-Persian struggle for Bag̲h̲dād, ʿAlī Pas̲h̲a took neither part and continued to govern his province independently. The succession of his son Ḥusayn (c. 1062/1652) led to internal conflicts, of which advantage was taken by Murtaḍā Pas̲h̲a of Bag̲h̲dād to evict Ḥusayn in 1064/1654 and replace him by ʿAlī's brother Aḥmad. Murtaḍā's subsequent execution of Aḥmad led to a rising of the local population and tribesmen and the restoration of Ḥusayn Pas̲h̲a. His attempts to extend his power over al-Ḥaṣā were followed by a full-scale expedition against him led by Ibrāhīm (Ṭawīl), pas̲h̲a of Bag̲h̲dād, in 1076/1665. After a prolonged siege of Ḳurna, Ḥusayn abdicated in favour of his son Afrāsiyāb, but continued to govern as regent until a second expedition from Bag̲h̲dād under Ḳara Muṣṭafā (Firārī) Pas̲h̲a drove him out and restored the imperial government in 1078/1668.

(H. A. R. Gibb)

AFRĀSIYĀBIDS, also called (by Rabino) the Kiyās of Čulāb or Čalāb (after one of the eight *bulūks* of Āmul, and (by Sachau), the Kiyā Djalāwī, minor dynasty of Māzandarān. The eponym of the clan, Afrāsiyāb b. Kiyā Ḥasan, was a *sipāh-sālār* in the service of his brother-in-law, Fakhr al-Dawla Ḥasan Bāwand [see BĀWAND]. Kiyā Afrāsiyāb conspired with his sister, who had a daughter from a previous marriage, accused the Bāwand of taking this girl as his mistress, and obtained from the *ʿulamā* of Āmul a *fatwā* authorizing the death of the culprit. At the same time, the Bāwand put to death his minister, Kiyā Djalāl al-Dīn Aḥmad b. Djalāl, a member of the powerful family of the Kiyā-yi Djalālī. This filled the nobles with anger and consternation and obliged the Bāwand to seek the friendship of the Kiyās of Čulāb, old rivals of the Kiyā-yi Djalālī. The reconciliation of the two families gave Kiyā Afrāsiyāb liberty of action, and finally the Bāwand was assassinated in a bath, on 27 Muḥarram 750/17 April 1349, by ʿAlī and Muḥammad, sons of Afrāsiyāb (or by the latter alone, according to Justi). With the death of Fakhr al-Dawla, the dynasty of the Bāwand, which had ruled for 750 years (45-750/665-1349) came to an end, and Kiyā Afrāsiyāb took over the power in Āmul (and Sārī?; *JA*, 1943-5, 237). Seeing that most of the officers of his former master refused to submit to him, he tried to make use of religion and became the disciple of the *darwish* leader Ḳawām al-Dīn Marʿashī, called Mīr-i Buzurg, hoping that the veneration of the population of Āmul for the latter would restrain them from rebellion. After ten years of rule, however, Kiyā Afrāsiyāb was defeated and killed, together with his three sons, by the same *darwishes* in the battle of Djalālakmār-parčin, in 760/1359.

Mīr-i Buzurg established himself as governor of Āmul and thus founded the dynasty of the Marʿashī [*q.v.*] *sayyids* (760-989/1359-1581). In the same year, a member of Afrāsiyāb's clan, Kiyā Fakhr al-Dīn Djalāwī, murdered ʿAbd Allāh, son of Mīr-i Buzurg, and was himself executed with his four sons; Kiyā Gushtasp (Wishtas) also, another brother-in-law of the last Bāwand, was killed with his seven children.

The Kiyās of Čulāb re-emerge only with Iskandar-i Shaykhī, eighth son of Kiyā Afrāsiyāb, who took refuge at Harāt, led an adventurous life and eventually entered the service of Tīmūr. In 795/1392-3 Timur invaded Māzandarān, took the fortress of Māhāna-Sar near Āmul, sacked Āmul and Sārī, deported the Marʿashī *sayyids* and appointed Iskandar as governor. Having returned with the invader, Iskandar enjoyed little popularity, all the less that he ordered the mausoleum of Mīr-i Buzurg at Sārī to be demolished. In 802/1400-1 Iskandar accompanied Tīmūr on his expedition to ʿIrāḳ, Ādharbaydjān, Anatolia and Syria, then, having obtained permission to return to Āmul, he rebelled. In 805/1403-4 Tīmūr marched into Māzandarān in pursuit of Iskandar, who fled into the forest with his wife and two small children, and fearing that he might be betrayed by their cries he killed them together with their mother. Finally he was killed at Shīrūd Dū-Hazār, and the officers of Tīmūr sent his head to his son Ḥusayn Kiyā who was holding out in the fortress of Fīrūz Kūh and now hastened to surrender it. Another son, ʿAlī Kiyā, had fallen into the hands of Tīmūr's troops. Tīmūr pardoned the two brothers and Ḥusayn Kiyā continued to rule over Fīrūz Kūh. His son, Luhrasp b. Ḥusayn b. Iskandar ruled over Ṭālakān in 880/1479-80. In his turn, *amīr* Ḥusayn (Ḥasan ?; Sachau) b. ʿAlī b. Luhrasp ruled over part of Rustamdār and the mountainous region of Fīrūz Kūh, Damāwand and Harī Rūd. In 909/1503 Shāh Ismāʿīl I, after taking the fortresses of Gulkhandān and Fīrūz Kūh, laid siege to the fortress of Wusta, where the *amīr* Ḥusayn Kiyā had taken refuge. Forced to surrender, he shortly afterwards committed suicide at Aywān-i Rasūl Wād (Kabud-Gunbad). The last member of the family, *amīr* Suhrāb Čulāb, keeper of the fortress of Ardahin in Sāwdj-būlāḳ, was confirmed in his post by the Shāh.

(B. Nikitine)

AFRĪDĪ, the name of a large and powerful Paṭhān tribe, with an estimated fighting strength of 50,000, on the northwest frontier of Pākistān. The territories inhabited by the Afrīdīs stretch from the eastern spurs of the Safīd Kūh through the northern half of Tīrāh and the Khyber (Khaybar) [*q.v.*] pass to the west and south of the Peshāwar district. On the east they are bounded by the settled districts of Pākistān; on the north by the territories of the Mohmunds; on the west by the Shinwārīs; and on the south by the Ōrakzays and Bangash tribes. They are divided into eight clans. In and around the Khyber Pass are to be found the Kūkī Khēl, Malikdīn Khēl, Kambar Khel, Kamraʾīs, Zakka Khēl, and Sipāh. These six clans are generally referred to as the Khyber Afrīdīs. The Akā Khēl Afrīdīs have no connection with the Khyber and are located to the south of the Bārā river. The Ādam Khēl Afrīdīs inhabit the hills between the districts of Kohāt and Peshāwar.

The origin of the Afrīdī, or as they call themselves, Aprīdī tribes has always puzzled ethnologists. H.W. Bellew (*JRAS*, 1887, 504) identified them with the Ἀπάρυται of Herodotus. This has been accepted by G. A. Grierson (*Linguistic Survey of India*, x, 5) and A. Stein (*JRAS*, 1925, 404). But the name does not occur in the Achaemenian inscriptions, and it is doubtful whether Herodotus intended to describe the Ἀπάρυται as dwelling where the Afrīdīs now are. H. G. Raverty (*Notes on Afghanistan*, 1888, 94), relying on what are probably fictitious genealogies, believed them to be of Paṭhān or Afghān origin, the descendants of a supposed eponymous ancestor Karlān. The derivation of the name Afrīdī in the *Ḥayāt-i Afghānī* of Muḥammad Ḥayāt Khān (Engl. transl.: *Afghanistan*, Lahore 1874, 201), from *āfrīda* (a creature of God) is also evidently a modern fabrication. According to Grierson (*JRAS*, 1925, 405-16) the modern Afrīdī country of Tīrāh was at one time occupied by a people speaking a language still known as Tīrāhi which resembles the Dardic languages of the Hindū-kush. It seems probable, therefore, that the Afrīdīs, although speaking Pashto, contain a large, if not predominant racial element, which was

established in Tirāh long before the advent of those Pas͟hto-speaking Afg͟hān invaders who gradually pushed their way into the belt of hills and alluvial plains to the west of the Indus between the 13th and 16th centuries.

Their position athwart the Khyber Pass connecting India with Afg͟hānistān made it extremely difficult for the Mug͟hal emperors of Hindustān to maintain safe communications with their outlying province of Kābul. In the reign of Akbar, incited by the preaching of Bāyazīd, the founder of the Raws͟hāniyya [q.v.] sect of heretics, and of his son D̲j̲alāl al-Dīn, they attacked Mug͟hal troops and caravans passing through the Khyber. They were forced into submission by Akbar's forces in 1587 and in the following year agreed, in return for allowances, to keep the pass open for traffic. They were however only temporarily subdued and expeditions had to be undertaken against them in the reigns of D̲j̲ahāngīr and Awrangzīb. Djahāngīr deported many Afrīdīs to Hindustān and Deccan, where their descendants are still to be found. After the establishment of the Afg͟hān kingdom by Aḥmad S͟hāh Durrānī the Afridis were nominally subject to him and are mentioned in the register of his army; according to it the tribe counted 19,000 fighting men.

The first skirmish of British troops with the Afrīdīs dates back to the invasion of Afg͟hānistān during the first Afg͟hān War of 1839-42. From the annexation of the Pand̲j̲āb in 1849 to the formation of the North-West Frontier Province in 1901 no less than eight expeditions were required against these unruly clans. The first was against the Kohāt Pass Afrīdīs in 1850. In 1853, troops were sent against the D̲j̲awākī Afrīdīs, a clan of the Ādam K͟hēl Afrīdīs. Punitive measures were necessary against the Āka K͟hēl Afrīdīs in 1855. Expeditions were necessary against the D̲j̲awākī Afrīdīs in 1877 and 1878; and against the Zakka K͟hēl Afrīdīs in 1878 and 1879. The Zakka K͟hēls of the Khyber and the adjacent Bazār valley of Tirāh have been the most contumacious of all the Afrīdī clans. Inhabiting lands stretching from the slopes of the Safīd Kūh to the border of Pes͟hāwar they have been able to force their neighbours to pay exorbitant tolls for the privilege of passing through their territories. The first agreement with the Zakka K͟hēls was during the Indian Mutiny of 1857 (Aitchison, xi, 92-6). This was observed until the Second Afg͟hān War, 1878-80, when the peace of the Khyber and the whole frontier zone was abnormally disturbed. Zakka K͟hēl attacks on the Khyber lines of communication forced the British, in 1878 and 1879, to enter their country, destroy their crops, and raze their forts and villages to the ground. On 17 Febr. 1881, the Khyber Afrīdīs, together with the Loargi S͟hinwārīs of Landi Kotal, accepted responsibility for the safety of the Khyber; and in return for the recognition of their independence, agreed to have no dealings with other foreign powers. At the same time arrangements were made for the protection of the Khyber by a force of *d̲j̲azā'ilčis* (tribal levies), to be paid by the Government of India (Aitchison, xi, 97-9). The Afrīdīs were the last to join in the general frontier conflagration of 1897 and were only forced to come to terms after extremely severe fighting in the Tirāh campaign of 1897-8. At the end of this campaign the previous system of allowances which had proved so successful for seventeen years, 1881-97, were once more adopted. At the same time the Khyber Rifles were reorganized under British officers supported by a movable column at Pes͟hāwar. This agreement, under which the British became responsible for the Khyber Rifles and for the safety of the pass, regulated British relations with the Afrīdīs until the year 1908 (*Parliamentary Papers*, 1908, lxxiv, Cd. 4210, pp. 14-5).

Towards the end of 1904 large numbers of Afrīdīs visited Kābul. This was followed by small marauding incursions into British territory, in which the Zakka K͟hēls, assisted by other Afrīdī clans, by Ōrakzays, and even by bands of Afg͟hān outlaws, such as the Hazārnao gang, were the chief offenders. From 1905 to 1908 bands of well-armed Afrīdīs ravaged the British borders. An attack by a gang of about eighty men upon Pes͟hāwar city, on the night of 28 January 1908, exhausted the patience of the Government of India, and in that year, the Zakka K͟hēls were speedily coerced by troops under the command of Major-General Sir James Willcocks. The entry of Turkey into the First World War, in November 1914, created considerable excitement on the frontier. One of the great dangers on the frontier has always been the possible attitude of the Afrīdī clans whose lead in war the other tribes are usually prepared to follow. Fortunately for the peace of the Pes͟hāwar borders and possibly of the whole frontier, the mission of the so-called Turkish generals to Tirāh failed because of a shortage of funds. The danger of an Afrīdī rising was averted when, on 1 February 1915 the Government of India decided to double their allowances.

Quickly following the wake of the 1914-8 war came the Third Afg͟hān War of 1919 which was the signal for risings along the entire frontier, and for the collapse of Lord Curzon's militia scheme. By 1921 the Afrīdī clans had made full submission. The Khyber Rifles were disbanded and their place taken by *k͟hāṣṣadārs*, tribal levies paid by the Government of India but providing their own arms and ammunition. But there was a great danger of a recrudescence of Afrīdī raiding because of the intrigues of the Akā K͟hēl *mulla*, Sayyid Akbar, who denounced all tribesmen who had accepted British terms. His activities were checked when, in April 1921, the Afrīdī tribal *d̲j̲irga* accepted new allowances in compensation for the increased tribal responsability involved in the construction of the Khyber railway (*Secret Border Report*, 1921-2, p. 1). In February 1922 the Zakka K͟hēls agreed to pay a substantial fine for their past misdeeds. In the following year the peace of the Afrīdī country was rudely disturbed by the exploits of the Kōhāt gang. Members of this gang were forced to seek refuge in Afg͟hān territory where their immunity from punishment led to a diplomatic protest on the part of the Viceroy. The opening of the Khyber Railway from D̲j̲amrūd to Landī K͟hāna did not make for peace. The construction of this line had been a source of profit to the tribesmen but its completion reduced their allowances. From 1927 to its settlement in March 1930 Tirāh became the scene of a religious struggle between its Sunni and S͟hīʿite clans. In the spring of 1930 the Afrīdīs came under the influence of Indian National Congress agitators with the result that Afrīdī *las͟hkars* (tribal forces) entered the Pes͟hāwar district and attacked the city of Pes͟hāwar in June and August of that year. By the end of August all raiding gangs had been expelled from the district. Since 1947 the Government of Pakistan has been responsible for the control of the Afrīdī clans. As recently as December 1952 the Afg͟hān government has been accused of granting asylum to Afrīdī outlaws who had been organizing depredations into Pakistan.

AFRĪDŪN [see farīdūn].

ʿAFRĪN important right tributary of the Orontes (al-ʿĀṣī [*q.v.*]), which it reaches after joining with the Nahr Yāghrā (Murād Pasha) in the Lake of Antioch and the Nahr al-Aswad (Ḳara-sū), in the ʿAmk. Its wide middle valley, between the Djabal Simān and the Kurd-dagh, was known in the Middle Ages as the district of the Djūma. The importance of the valley was due to the crossing of the road, which used it to connect Antioch with the districts of the upper Euphrates, with the roads which led from Cilicia and Asia Minor towards Aleppo and inner Syria. One of these roads, after passing the Amanus at the col of Baghrās [*q.v.*] and following the shore of the Lake of Antioch, crossed the ʿAfrīn at the ford near modern Bellane (the "Ford of the Baleine" of the Crusaders). In the first centuries of Islam it was guarded on the south side by the small fortresses of Tīzīn, Artāḥ, ʿImm and since the time of the Crusades by that of Ḥārim [*q.v.*], which lay nearer to the Orontes. The other, more northern roads issued, after passing the Kurd-dagh, at the gap of ʿAzāz and passed the ʿAfrīn either at the bridge of Ḳībār (now ʿAfrīn) or further up below the old capital of the region, Ḳūriṣ (Cyrrhus). The new capitals were ʿAzāz, outside the real basin of the ʿAfrin, and Rāwandān—of which important ruins are still preserved near one of the ʿAfrīn's sources. Thus the valley of the ʿAfrin served in the classical period of Islam as the main longitudinal line of communication in the western part of the military district of the ʿAwāṣim [*q.v.*]. It was temporarily captured from Islam by the Byzantines in the 4th-5th/10th-11th centuries, and by the Crusaders in the first half of the 6th/12th century. At present it lies athwart the political and ethnical boundary between Turkey and Syria.

Bibliography: The main medieval work on the geography of northern Syria is Ibn Shaddād's *al-Aʿlāḳ al-Khāṭira fi Dhikr Umarāʾ al-Shām wa 'l-Djazīra*, partial ed. by Ledit, *Mash.*, 1935; complete ed. (for Northern Syria) by D. Sourdel, to appear shortly. Modern accounts: R. Dussaud, *Topographie historique de la Syrie*, Paris 1927; E. Honigmann, *Die Ostgrenze des byzantinischen Reiches*, Brussels 1935; Cl. Cahen, *La Syrie de Nord à l'époque des Croisades*, Paris 1940; M. Canard, *Histoire de la dynastie des Hamdanides*, i, Algiers 1951. None of these deals with the Ottoman and modern periods, for which see *Guide Bleu*: *Syrie—Palestine*. For physical geography see S. Mazloum, *L'ʿAfrin, étude hydrologique*, Paris 1939. (Cl. Cahen)

ʿAFRĪT [see ʿifrīt].

ʿAFṢ denotes, according to Arab authors, the fruit of the oak or a similar tree and the tree itself. It actually is the gall, an excrescence which forms on certain kinds of trees and shrubs as the result of the sting of various insects. The Arabic term, however, was probably applied to the oak-gall in particular. It was maintained that the *ʿafṣ* is produced either simultaneously or alternately with the acorn.

In medieval Arab medicine the gall served chiefly as an intestinal astringent and a remedy for skin diseases. It was also said to strengthen the gums and preserve the teeth from caries. In different preparations, chiefly in powdered form or boiled in vinegar or wine, it was applied both internally and externally. Frequent mention is also made of its use as a black hair-dye and as the main ingredient in the manufacture of ink. Recipes for the latter are indicated by al-Ḳalḳashandī.

Bibliography: Dāʾūd al-Anṭākī, *Tadhkira*, Cairo 1935, i, 228; Ibn al-ʿAwwām, *Filāḥa* (transl. Clément-Mullet), ii/b, 265; Ibn al-Bayṭār, *Djāmiʿ*, Būlāḳ 1291, iii, 127-8; Ḳalḳashandī, *Ṣubḥ al-Aʿshā*, ii, 464-6; Ḳazwīnī, (Wüstenfeld), i, 259; I. Löw, *Aram. Steinschneider, in *WZKM*, 1898, 220; *Tuḥfat al-Aḥbāb* (Renaud-Colin), no. 309. (L. Kopf)

AFSANTĪN, Afsintīn or, more rarely, Ifsintīn (from Greek ἀψίνθιον) mostly denotes the common wormwood (*Artemisia Absinthium L.*) but also other similar kinds of plants. In medical writings it is often called *kashūth rūmī*. The cognate form *isfinṭ* (absinth-wine) already occurs in ancient Arabic poetry (Nöldeke, in Löw, 389).

A good deal of the information which Arab authors offer on the *afsantīn* goes back to classical sources. Its different kinds were generally classified according to their origin: Persian, Nabataean, Syrian, Egyptian, Khurāsānian etc. That from Tyre and Tarsus was considered the best. The yellow flower in particular was put to diverse medicinal uses. Not only tonic and vermifugal but also laxative, diuretic and other properties were attributed to the plant. It was also recommended as an antitoxin. Externally it was used in plasters, oils etc. Its juice mixed with the ink was said to preserve the paper. In addition to many other applications it was also employed against the loss of hair (*dāʾ al-thaʿlab*).

AFSHĀR (or Awshār), Oghuz (Ghuzz [*q.v.*]) tribe, first mentioned by al-Kāshgharī, *Dīwān Lughāt al-Turk*, i, 56; cf. also Rashīd al-Dīn, *Djāmiʿ al-Tawārīkh* (Bérézine), i, 32, according to whom Awshār was the grandson of Yildiz Khān, the third son of Oghuz Khān (whence Yazīdjī-oghlu, *Saldjūḳ-nāma*, in MS; Abu 'l-Ghāzī, *Shedjere-yi Turkī* (Desmaisons), 27; idem, *Shedjere-yi Terākime*, Istanbul 1937, 42). They seem to have migrated westwards with the other Ghuzz tribes. An Afshār chieftain, Aydoghu b. Kushdoghan, known as Shumla, ruled in Khūzistān as a vassal of the Saldjūḳs (al-Bundārī (Houtsma), 230, 287; al-Rāwandī, *Rāḥat al-Ṣudūr*, 260; Ibn al-Athīr, index, s.v. Shumla; Waṣṣāf, ed. Bombay, ii, 149, writes

Ya'kūb b. Arslān al-Afshārī; "Ḥusām al-Dīn Shūhlī" in Ḥamd Allāh Mustawfī, *Ta'rīkh-i Guzīda*, i, 547—whence Bidlīsī, *Sharaf-nāma* (Velyaminov-Zarnov), i, 33—seems to refer to the same person and to be due merely to a textual error). Shumla, who ruled 543-70/1148-74, was followed by his son Ghars (or 'Izz) al-Dawla (al-Rāwandī, 377); after his death in 590/1194 the family's rule came to an end. No further information about the Afshār is available in these early centuries; this may simply be due to the fact that authors often speak of Turkmens in general without specifying their exact tribal affinity.

As is well known, the usual practice was to allocate a particular district as an *iḳṭā'* (*tiyūl*) to a chieftain, who would take with him his clan and whose office was inherited by his descendants; this practice was followed, no doubt, also in the case of the Afshār. Afshār chieftains are mentioned during the rule of the Aḳ Ḳoyunlu (e.g. Manṣūr Beg Awshār, 877/1472-3, Hasan Rūmlu, *Aḥsan al-Tawārīkh*, in MS, chapter on the Aḳ Ḳoyunlu; Dawwānī, *'Arḍ-nāma*, *MTM*, v, 298, Engl. transl. in *BSOAS*, 1940-2, 156, 174; Manṣūr Beg, district of Shīrāz, 904/1498-9, 906/1501-2, idem, ed. Seddon, Baroda 1931, 21 ff. 69; Pīrī Beg, Shīrāz, 904/1498-9, ibidem, 24). The Afshār played a part in the establishment of the Ṣafawid dynasty [cf. ḲIZIL BASH, ISMĀ'ĪL I]. High dignitaries of Afshār origin are often mentioned in the Ṣafawid chronicles (e.g. *Aḥsan al-Tawārīkh*, 236, 332, 339, 345, 438; Iskandar Munshī', *Ta'rīkh-i 'Ālam-ārā-yi 'Abbāsī*, i, 155, 185, 190, 251, 309 ff., 400, iii, 763; *Tadhkirat al-Mulūk* (Minorsky), 16).

Under the Ṣafawids we find Afshār clans in various districts, and their chieftains occupied provincial governorships. Afshār *khāns* ruled in the district of Kūh Gīlū; the tribesmen of this region belonged mainly to the Gündüzlü and Arashlu clans (see *Ta'rīkh-i 'Ālam-ārā-yi 'Abbāsī*, 199, 340-4, 358 and LUR). After the revolt of 1005/1596-7 their rule came to an end, most of the clans that escaped punishment were scattered and only small remnants survived by the beginning of the 19th century.

The Gündüzlü and Arashlu played an important role in Khūzistān. In the beginning of the 16th century we find in Dizfūl and Shushtar Afshār governors like Mahdī Ḳuli Sulṭān and Ḥaydar Sulṭān. When the governor Mahdī Ḳuli rebelled in 946/1539-40, the Afshār Ḥaydar Ḳuli was charged with his punishment (*Aḥsan al-Tawārīkh*, 294 ff.). [For the Afshār governors of Shushtar, see SHUSHTAR.] After Nādir Shah, the Afshār in this region were weakened by the continuous attacks of the Arab tribes of the neighbourhood. According to C. A. de Bode, *Travels in Luristan and Arabistan*, London 1845, some Afshārs were removed from Doruk and transferred to Kangāwar, Asadābād and Urmiya, while a smaller portion were settled in Shushtar and Dizfūl.

Afshār governors ruled for two and a half centuries, from the time of 'Abbās I till about 1250/1834-5, in Kāzarūn [*q.v.*]. We find governors belonging to various Afshār clans also in other regions: Inallu in Yazd, Kirmānshāh, Mosul and Rūmiyya, Alplu, Köse Aḥmadlu and Ḳirḳlu in Khurāsān (Abīward, Farāh, Isfīzār).

In the vicinity of Urmiya, Afshārs were settled in the time of 'Abbās I (the tradition in the text translated by Nikitine, that they came there with Tīmūr in 802/1400, has no foundation). Ḳāsim Khān, a distinguished general of 'Abbās I, chieftain of the Inanlu, settled with his tribe, shortly after 1032/1622-3, in the regions of Urmiya, Sā'īn Ḳal'a and Sulduz (*Ta'rīkh-i 'Ālam-ārā-yi 'Abbāsī*, 763). His son, Kalb-i 'Alī Khān, was governor in 1037/1627-8, and was followed by other Afshār governors; Khudādād Beg Ḳāsimlu (the Ḳāsimlu clan probably derived its name from Ḳāsim Khān) took the title of *beglerbeg* in 1119/1707. (For further details see B. Nikitine, *Les Avšar d'Urumiyeh*, *JA*, 1929, 71 ff. and URMIYA; cf. also SĀ'IN ḲAL'A.)

In general, the Afshār played an important role in the wars of the Ṣafawids against the Ottomans and the Uzbeks, though, as we have seen above, 'Abbās I, according to his policy in general, tried to break the particularist tendencies of the clans. During the reign of Nādir Shāh, who himself came of the Ḳirḳlu branch of the Abīward district, Afshār *amīrs* were prominent. Some Afshār chiefs played important roles during the troubled period after Nādir's death. Afshār contingents were an important element in the Ḳādjār army and were used in the suppresion of revolts as well as against external enemies.

According to Joannin (quoted in Langles, *Voyages du Chevalier Chardin en Perse*, Paris 1811, x, 243) the Afshār counted at the beginning of the 19th century 88,000 souls (repeated by Ritter, *Asien*, viii, 400-5; etc.)—this may, however, refer to the number of tents. (Detailed statistics according to localities are also given there.) For the same period, cf. also P. A. Jaubert, *Voyages en Arménie et en Perse*, 225; Zayn al-'Ābidīn Shirwānī, *Bustān al-Siyāḥa*², 106 (the numbers seem exaggerated). For more modern times see Mas'ūd Kayhān, *Djughrāfiyā-yi Mufaṣṣal-i Irān*, Teheren 1310-1, ii, 86 (Inanlu in Fārs, as part of the *īlāt-i khamsa*); 106 ff., 112, 363 (Inanlu and Afshār in the vicinity of Ardabīl, Mishkin, Zarand, and especially Sāwa and Ḳazwīn [cf. also SHĀH SEWAN and KHAMSA]; 90 (clan called Afshār as part of the Akadjeri in Kūh Gīlū—cf. also *Fārs-nāma-yi Nāṣirī*, ii, 270); 92 (Gündüzlü near Shushtar and Dizfūl, completely assimilated); 92, 253 (Afshār in Kirmān); cf. also 75 and 371 (their name in geographical and administrative nomenclature); Meḥmed Ḥasan Baharlu, *Āzarbaydjān*, Baku 1921, 73 (Afshār in the Republic of Ādharbaydjān; for an earlier time, cf. Ewliyā Čelebi, *Siyāḥat-nāma*, ii, 259, 859, iv, 284, 337); G. Jarring, *On the distribution of Turk tribes in Afghanistan*, Lund 1939, 61 (some Afshār settled (in Andkhūy) by 'Abbās I, others by Nādir Shāh).—Just as Afshār elements were (as noted above) attached to other tribes, so also we find Afshār clans, which, to judge by their names, must have originally belonged to other tribes: the Shāmlu and Djalā'ir in Urmiya (mentioned by Nikitine) who were probably detached from the great tribes of the same name; the same is true of the Tekelü and Imirlü (O. Mann, *Das Mujmil et-Tārīkh-i ba'd Nādirije*, 31).

Afshārs figure among the Turkmens who lived during the Mamlūk period in Syria, especially round Aleppo (cf. e.g. al-Ḳalḳashandī, *Subḥ al-A'shā*; Ibn Taghrībirdī (Popper), vi, 225, 364, 386, 557). They seem to have played a role in the establishment of the principality of the Ḳaramān-oghlu ([*q.v.*]; see Cl. Cahen, in *Byzantion*, 1939, 133). In the Ottoman period various branches of the Afshār are mentioned (Radjab-oghlu near Ḳal'at Dja'bar: Ḥādjdjī Khalīfa, *Djihān-nümā*, 593; in documents: Radjablu Awshāri, A. Refik, *Anadoluda türk aşiretleri*, Istanbul 1930, 145, 165-76, 186, 209, 239; Ḳara Awshār, Ḳara Gündüzlü Awshārī, Bahrili Awshārī', ibid., 106, 102). These tribes, who were also known under the

collective name of Yeni Il, spent the winter in Syria and the summer in Anatolia, near Zamanti. The government made continuous efforts to settle them (Aws̲h̲ār villages near Isparta, *D̲j̲ihān-nümā*, 640; also other villages in Anatolia called Aws̲h̲ār). In the 19th century Darwīs̲h̲ Pas̲h̲a after military operations against the Afs̲h̲ār tribes in the Čukur Owa settled them forcibly in the vicinity of Göksun and Ḳayseri and other places (*TTEM*, lxxxviii, 348, and the general index to the series). There remain still some small nomad groups in the regions of the Čukur Owa, Marʿas̲h̲ (cf. Besim Atalay, *Mar'aş tarihi*, Istanbul 1340, 70 ff.), Ičel and Ḳayseri in Anatolia, and near al-Raḳḳa in Syria (Ali Riza Yalman, *Cenupta türkmen oymaklari*, Adana 1939, ii, 105 ff.).

Bibliography: *IA*, s.v. Avşar (by M. F. Köprülü); Aḥmad Āḳā Tabrīzī, in *Āyanda*, iv and v, and part ii, viii, Teheran 1926-8; idem, *Ta'rīk̲h̲-i Panṣad Sāla-yi K̲h̲ūzistān*, Teheran 1312; F. W. Hasluck, *Christianity and Islam under the Sultans*, index; V. Minorsky, *Aḭnallu/Inallu, Rocznik Orientalistyczny*, 1951-2, 1 ff. (M. Fuad Köprülü)

AFS̲H̲ĪN, pre-Islamic title borne by the native princes of Us̲h̲rūsana, the mountainous district between Samarḳand and K̲h̲ud̲j̲anda, including the upper course of the Zarafs̲h̲ān river (Barthold, *Turkestan*², 165-9). The province was subjected to the Arab governors of K̲h̲urāsān by an expedition commanded by al-Faḍl b. Yaḥyā al-Barmakī in 178/794-5, but it was only after an internal conflict and a second expedition under Aḥmad b. Abī K̲h̲ālid in 207/822 that the ruling *afs̲h̲īn* Kāwūs accepted Islām. Kāwūs was succeeded by his son K̲h̲ayd̲h̲ār (in Arabic texts generally: Ḥaydār), who became universally known in Islamic historiography as *al-Afs̲h̲īn*. He first came to notice in the reign of al-Maʾmūn, when as an officer of the Caliph's brother Abū Isḥāḳ al-Muʿtaṣim, the titular governor of Egypt, he was given charge of Barḳa (Cyrenaica) and vigorously suppressed the rising of the Copts and Arabs in the Delta in 216/831. He is credited also with forming al-Muʿtaṣim's regiment of "Mag̲h̲āriba" by recruitment from the Arabs of the Delta and the Western Desert.

During the reign of al-Muʿtaṣim (218-27/833-41), the Afs̲h̲īn's chief exploit was the tenacious campaign which he maintained without interruption in 220-2/835-7 against the K̲h̲urramī rebels in Ād̲h̲arbāyd̲j̲ān led by Bābak [*q.v.*]. In reward for his success the caliph gave him a crown, two jewelled swords, and the government of Sind in addition to that of Armenia and Ād̲h̲arbāyd̲j̲ān. He played also a prominent part in the celebrated Amorium campaign conducted by al-Muʿtaṣim in person in 223/838. Subsequently, out of rivalry with ʿAbd Allāh b. Ṭāhir (as the leading native prince of the Transoxanians, he appears to have resented the control exercised over Mā warāʾ al-Nahr by the parvenu Ṭāhirids), he secretly encouraged the revolt of al-Māziyār (Muḥammad b. Ḳārin), the *iṣpahbād̲h̲* of Ṭabaristān, and was consequently involved in the latter's defeat, charged with apostasy, and after a celebrated trial starved to death in his prison at Sāmarrā in S̲h̲aʿbān 226/May-June 841.

The title of *afs̲h̲īn* was borne also by other princes in Central Asia; according to al-Yaʿḳūbī (ii, 344), G̲h̲ūrak, the prince of Samarḳand, calls himself in his treaty with Ḳutayba b. Muslim "Ik̲h̲s̲h̲īd̲h̲ of Ṣug̲h̲d, Afs̲h̲īn of Samarḳand"; cf. also B. Spuler, *Iran in früh-islamischer Zeit*, 357, n. 14.

Bibliography: Ṭabarī, iii, 1105, 1171-1318 passim; trans. Zotenberg, iv, 525-45; trans. E. Marin, *The Reign of al-Muʿtaṣim*, New Haven 1951; Balād̲h̲urī 430 f; Kindī, 189-93; Bayhaḳī (Morley), 199 ff.; Yaʿḳūbī, *Taʾrīk̲h̲*, ii, 577-84 (ed. Nad̲j̲af 1358, iii, 199-203); Yaʿḳūbī, *Buldān*, 259, 262, 293; Abū Tammām, *Dīwān*, 107, 262, 326 f.; Barthold, *Turkestan*², 210-1; Browne, i, 330 ff.; E. Herzfeld, *Gesch. der Stadt Samarra*, Berlin 1948, 101, 138-52. (W. Barthold-H. A. R. Gibb)

AFSŪN (P.), charm, incantation; for etymology and usage in old Persian, see Salemann, in *Gr.I.Ph.* i/1, 304, and especially H. W. Bailey, in *BSOAS*, 1933-5, 283 ff. This word is now used in Persia to designate especially a charm against the biting of poisonous animals; certain *darwīs̲h̲es* who pretend to have the power to charm serpents, scorpions etc., will, for some gratuity, communicate their invulnerability to other persons. Often it is one part of the body which is so protected, as for instance the right or the left hand, and it is with this that the animals of this kind must be seized (Polak, *Persien*, i, 348).

(Cl. Huart*)

AFSŪS (Afsōs), poetical name of Mīr S̲h̲īr ʿAlī, the son of Sayyid ʿAlī Muẓaffar K̲h̲ān, and descendant of the Prophet through Imām D̲j̲aʿfar al-Ṣādiḳ. His ancestors dwelt at K̲h̲ʷāf in Persia. One of them, Sayyid Badr al-Dīn, the brother of Sayyid ʿĀlim al-Din Ḥād̲j̲d̲j̲ī K̲h̲ānī, came to India and settled at Narnawl near Agra. Sayyid G̲h̲ulām Muṣṭafā, the grandfather of Afsūs, came to Delhi during the reign of Muḥammad S̲h̲āh (1719-48), and was an associate of Nawwāb Ṣamṣām al-Dawlah K̲h̲ān. Afsūs was born at Delhi and received a liberal education. On the assassination of the Nawwāb (1747), when Afsūs was 11 years of age, his father took him to Patna; later on, after 1760, they removed to Lucknow, where Afsūs settled, supported by Nawwāb Sālār D̲j̲ang the son of Isḥāḳ K̲h̲ān, and became an associate of Mīrzā D̲j̲awān-bak̲h̲t (D̲j̲ahān-dār S̲h̲āh), the eldest son of the emperor S̲h̲āh ʿĀlam.

After living some years at Lucknow, he was brought to the notice of the Resident, Colonel W. Scott, at whose recommendation he went to Calcutta in 1215/1800-1, and was appointed Head *Muns̲h̲ī* in the Hindustani department of the College at Fort William.

Afsūs wrote a Hindustani Dīwān during his residence at Lucknow. He also made there a translation of the *Gulistān* of Saʿdī, which was completed in 1216/1802, under the title of *Bāg̲h̲-i Urdū*. The introduction to this translation contains an autobiographical sketch, which is the principal source of our information regarding his life. Whilst at Calcutta, he edited the *Kulliyāt* of Sawda, and revised the Hindustani translations of Persian works, which had been prepared by *muns̲h̲īs* of the College. He also made a translation of the first part of the *K̲h̲ulāṣat al-Tawārīk̲h̲* or a Persian history of Hindustan written by Muns̲h̲ī Sud̲j̲ān Rāʾe of Patiala in 1107/1695-1696. This work, undertaken at the instance of J. H. Morington, was completed in 1220/1805 under the title *Ārāʾis̲h̲-i Maḥfil*, and was first printed at Calcutta in 1808. John Shakespear translated the first ten chapters of this work into English and included them in his *Muntak̲h̲abāt Hindī*, Dublin 1847. A complete English translation was made by M. J. Court and published at Allahābād, 1871 (2nd ed. Calcutta 1882). According to Garcin de Tassy and Sprenger (*Oudh Catalogue*, 198), Afsūs died in 1809.

(J. F. BLUMHARDT-SH. INAYATULLAH)

AFṬASIDS (BANU 'L-AFṬAS), small Hispano-Muslim dynasty of the 5th/11th century, which reigned during the period of the *mulūk al-ṭawāʾif* of al-Andalus over a vast territory in the western part of the Iberian peninsula, with Badajoz (Baṭalyaws) as its capital.

On the dismemberment of the caliphate of Cordova, the "Lower March" of al-Andalus (*al-t͟hag͟hr al-adnā*), consisting of the middle valley of the Guadiana (Wādī Ānā) and the central portion of modern Portugal, passed into the possession of a liberated slave of al-Ḥakam II, Sābūr, who, according to the custom followed in Muslim Spain at that period, took the title of *ḥād͟jib*. Sābūr, whose epitaph has been preserved and who died on 10 S͟haʿbān 413/8 November 1022, took as his minister a man of letters of Berber origin, belonging to the group of Miknāsa established in the Faḥs al-Ballūṭ, north of Cordova: ʿAbd Allāh b. Muḥammad b. Maslama, surnamed Ibn al-Afṭas. The latter did not hesitate to usurp power when Sābūr died, leaving two sons under age, and founded the dynasty of the Afṭasids of Badajoz, sometimes also called Banū Maslama.

ʿAbd Allāh, who took the honorific *laḳab* of al-Manṣūr, reigned until his death, which, according to his epitaph, also preserved, occurred in Badajoz on 19 D͟jumādā II 437/30 Dec. 1045. Few details are known of his reign, which seems to have been peaceful and fruitful for his principality at first, but was later troubled by the bad relations which soon obtained between al-Manṣūr and his neighbour in Seville, Muḥammad b. ʿAbbād (cf. ʿABBĀDIDS). The latter even captured him at Beja (Bād͟ja) and kept him prisoner for some time.

ʿAbd Allāh was succeeded by his son Muḥammad, best known under his *laḳab* of al-Muẓaffar. The historians are unanimous in praising his deep learning and literary taste, and record that he appreciated but little the contemporary poets, who in his opinion were incapable of producing anything to equal even remotely the poems of al-Mutanabbī and al-Maʿarrī. He is attributed with the authorship of a large work, no doubt an anthology, in no less than fifty volumes, entitled *al-Muẓaffarī*. The fact that the book is very rarely quoted proves that it was not widely known even in Spain.

The reign of al-Muẓaffar, which lasted for twenty years, was extremely troubled from the political angle and almost entirely occupied with a tenacious but ineffective struggle against the king of Seville, al-Muʿtaḍid. In spite of the attempts of the prince of Cordova, Ibn D͟jahwar (cf. D͟JAHWARIDS) to arbitrate in the conflict, the almost continuous hostilities greatly weakened the kingdom of Badajoz and induced Ferdinand I, king of Castile and Léon, to attack it and impose a tribute upon it. In 449/1057 the northern frontier fortresses of the Afṭasid kingdom, Vizeu and Lamego, passed in this way into the possession of the Christian king, who in 456/1063, by the capture of the city of Coimbra (Ḳulumriyya) and of the whole region between the rivers of Douro (Duero) and Mondego, marked one of the decisive stages of the Reconquista.

At the death of al-Muẓaffar, who only survived for a short time this grave amputation of his dominions, he was succeeded by his son Yaḥyā al-Manṣūr, who was challenged by his brother ʿUmar, governor of Evora (Yābūra) and soon disappeared from the scene. ʿUmar, who took the *laḳab* of al-Mutawakkil, was exposed, like all the *mulūk al-ṭawāʾif* of his epoch, to the increasing demands of the Christian king Alfonso VI, who in 471/1079 took from him the fortress of Coria (Ḳūriya). He seems to have been the first, even before the capture of Toledo by Alfonso VI, to solicit the intervention of the Almoravids in Spain, but eventually, like all his neighbours, he was unable to resist the growing aggressiveness of the Christian king, and had to comply with his demands for tribute. His attempt in 472/1080 to add the kingdom of Toledo to his dominions, following on the offer made to him by the inhabitants of Toledo themselves, failed in spite of the fact that he stayed for ten months in the D͟hu 'l-Nūnid capital. He was present at the battle of al-Zallāḳa [*q.v.*], which took place within his own territory on 12 Rad͟jab 479/23 Oct. 1086, and had a hand in the intrigues which finally decided the Almoravids to dethrone all the *mulūk al-ṭawāʾif* of al-Andalus and annex their possessions. Feeling himself menaced, ʿUmar al-Mutawakkil turned towards Alfonso VI and solicited his help, in return for the cession of Santarem (S͟hantarīn), Lisbon (al-Us͟hbūna) and Cintra (S͟hintara). But all this was in vain, and Badajoz was taken at the end of 487/1095 by the Almoravid general Sīr b. Abī Bakr, with the connivance of the inhabitants, who had had enough of the fiscal exactions of their king. Al-Mutawakkil and two of his sons, al-Faḍl and Saʿd, were taken prisoner and sent to Seville, but even before their arrival there they were executed. Another son of al-Mutawakkil, al-Manṣūr, escaped, fortified himself for some time in the castle of Montanchez, in the modern province of Cáceres, and finally, together with his followers, migrated into the dominions of Alfonso VI and was converted to Christianity.

Bibliography: All the chronicles of the period of the *mulūk al-ṭawāʾif*, especially Ibn Ḥayyān, as quoted by Ibn Bassām, *D͟hak͟hīra*; Ibn ʿId͟hārī, *Bayān*, iii, index; Ibn al-K͟haṭīb, *Aʿmāl al-Aʿlām* (Lévi-Provençal), 211-5. The narrative in the *Memoirs* of ʿAbd Allāh b. Buluggīn [*q.v.*] which relates to the reign of al-Mutawakkil is by far the most detailed and trustworthy source. Hoogvliet, *Specimen e litt. orient. .... de regia Aphtasidarum familia*, Leiden 1839, is antiquated. See also R. Dozy, *Hist. Mus. Esp.*[2], iii, index; A. Prieto y Vives, *Los reyes de taifas*, Madrid 1926, 65-8; R. Menéndez Pidal, *La España del Cid*, Madrid 1947, index; E. Lévi-Provençal, *Inscriptions arabes d'Espagne*, 53-5; idem, *Islam d'Occident*, 125-6; idem, *Hist. Esp. mus.*, iv (in preparation).

(E. LÉVI-PROVENÇAL)

AL-**AFWAH** AL-**AWDĪ**, ABŪ RABĪʿA ṢALĀʾAT B. ʿAMR, pre-Islamic Arab poet, chieftain of the Awd clan of Mad͟hḥid͟j, about the middle of the 6th century A.D. Most of his extant poetry celebrates the warlike virtues of his tribe and of its chief, while his gnomic poems caused him to be counted among the sages of the *d͟jāhiliyya*. Al-D͟jāḥiẓ, however (*al-Ḥayawān*[2], vi, 280), doubts the authenticity of the poems attributed to him, and the arguments which he presents are to the point.

Bibliography: The *dīwān* of al-Afwah al-Awdī was published in *al-Ṭarā'if al-Adabiyya*, Cairo 1937; L. Cheikho, *Shu'arā' al-Naṣrāniyya*, 70-4; it was introduced into Spain by al-Ķālī, who had received it from Ibn Durayd (*BAH*, ix, 396). Verses and biographical notes are to be found in Djāḥiẓ, *Ḥayawān*[2], index; idem, *Bayān* (Sandūbī), i, 171; Ibn Ķutayba, *Shi'r*, 110-1; idem, *'Uyūn al-Akhbār*, iii, 113; Ķālī, *Amālī*, i, 125; *Aghānī*[2], xi, 41-2; Barbier de Meynard, *Surnoms*, 45 (offprint from *JA*, 1907); Brockelmann, S I, 57; Nallino, *Scritti*, vi, 29 (French transl. 48). (CH. PELLAT)

AFYŪN, opium, from Greek ὄπιον, diminutive of ὀπός, "vegetable juice". Opium is the dried resinous juice of the unripe capsules of the oppyx (*Papaver somniferum L.*, in Arabic *khashkhāsh*), the preparation of which is already described by classical authors, e.g. by Dioscorides, iv, 64. (For opium in Antiquity see Pauly-Wissowa, s.v. Mohn.) In Islamic times it was used officinally and as a narcotic (also by *darwīshes*). The poppy had long been cultivated in Upper Egypt: according to Kūhīn al-'Aṭṭār, 128, in his time (7th/13th century) the best opium was prepared in Abū Tīdj, S. of Asyūt. The cultivation of the poppy and the preparation of opium flourished in Egypt until the beginning of the 19th century. (Cf. Lane, *Modern Egyptians* [5], i, 118, ii, 35). The cultivation of the poppy in Asia Minor does not seem to go back to the Byzantine period. It apparently spread after the Crusades, and under Turkish rule the plant was acclimatized especially in the neighbourhood of Ķara Ḥiṣār, which received the nickname of Afyūn Ķara Ḥiṣār [*q.v.*]. This town was the centre for the cultivation and the export of the opium as late as the 19th century (cf. O. Blau, *Etwas über das Opium, ZDMG*, 1869, 280). In Persia, as well as in Turkey, opium is often called *tiryāķ*, "antidote". When 'Abbās II tried to enforce the prohibition of wine, the consumption of opium grew to such dimensions that he was forced to soften the prohibition and take measures, instead, against the trade in opium (1621; P. della Valle, ii, 108). Yazd and Iṣfahān used to export opium to India and Turkey. (See Chardin, *Voyages*, Amsterdam 1735, iii, 14-5, 92 ff.; ii, 58.67; J. E. Polak, *Persien*, Leipzig 1865, ii, 248-55; and the vivid description of opium-eating by E. G. Browne, *A Year amongst the Persians*, index.) Opium played a considerable role also in India, where the decoction of the husks was called *post* (cf. J. Charpentier, *Pōst(ā)*, *BSOS*, 1935-7, 101 ff.; especially for the Mughal period). According to B. Laufer, in *T'oung Pao*, 1916, 462 (cf. also O. Franke, *Geschichte d. Chines. Reiches*, ii, 551, iii, 428) the knowledge of preparing opium came to the Chinese from (medieval) India and not from the Muslims (contrary to the assertions of scholars such as J. Edkins, *The Poppy in China*, 5; E. Bretschneider, in A. de Candolle, *Origin of Cultivated Plants*, 400; Yule and Burnes, *Hobson-Jobson*, 641; Giles, *Glossary of Reference*, 200, who derive the Chinese names of opium from the Arabic).—For the adulteration of opium by dishonest merchants (by admixture of various resins, or sandarac, etc., see E. Wiedemann, in *SBPMS Erl.*, xlvi, 1914, 176-206.

AFYŪN ĶARA ḤIṢĀR (modern spelling: AFYONKARAHISAR), more correctly AFYŪN ĶARA ḤIṢĀRĪ, "Opium Black-castle", at present also simply AFYON, formerly ĶARA ḤIṢĀR-I ṢĀḤIB (in Neshrī, ed. Ankara, 64 = ed. Berlin, 21 = Leunclavius, *Hist. Musulm.*, Frankfurt 1591, col. 140: Ṣāḥibuñ Ķara Ḥiṣār[ī], *Principis Maurocastrum*; Saibcarascar in Caterino Zeno, *Commentarii del Viaggio in Persia*, Venice 1558, 14b), town in western Anatolia, 38°50' N, 30°30' E, about 1007 m. above sea level, on the stream Akarčay, which flows into the Eber Gölü, and then into the Akshehir Gölü, at the foot of an isolated and steep trachyte cone which rises from the plain to a height of 200 m. above the town surrounding it. Ķara Ḥiṣār-i Ṣāḥib was the capital of a *sandjaķ* of the *eyālet* Anadolu (Ḥādjdjī Khalīfa, *Djihān-nümā*, 641), since 1281/1864 of a *sandjaķ* of the *wilāyet* Khudāwendigār (Brusa); in modern Turkey Afyūn Ķara Ḥiṣār is capital of the *wilāyet* (*il*) of the same name, comprising the *ķaḍās* (*ilče*) Afyūn Ķara Ḥisār, Bolwadin, Dinar Emirdagh ('Azīziyye), Ṣandīķlī and Shuhut. In 1945 the town had 29,030 (1950: 29,826), the *ķaḍā* 136, 667, the *wilāyet* 335,609 (1950: 372,600) inhabitants; the *wilāyet* has a surface of 13,555 sq. km.—The name Afyūn Ķara Ḥiṣār, formerly only in popular, but at present also in official use (Tavernier, *Les six voyages*, i, 120 has: Aphiom Carassar; Ch. Texier, *Asie Mineure*, Paris 1834: Aphioum) comes from the rich production of opium in the district, already mentioned by Belon, *Les observations de plusieurs singularitez et choses mémorables*, Paris 1555, 183 a (cf. O. Blau, in *ZDMG*, 1869, 280).

Ķara Ḥiṣār-i Ṣāḥib is identified with the Byzantine fortress of Akroïnos, Akroynos, near which in 740 A.D. the emperor Leo III defeated the Arabs, and the legendary hero Sayyid Baṭṭāl and his armies met their death (Theophanes, *Chronogr.* (de Boor), i, 390,411), and where the emperor Alexius I Comnenus negotiated in 1116 with the Saldjūķ prince Malikshāh (Anna Comnena, *Alexias* (B. Leib, Paris 1934-45, iii, 209)). It was apparently taken from the Byzantines by the Turks in the beginning of the 13th century, but no details are available. The inscription on the Altīgöz köprüsü (*RCEA*, no. 3658) shows that the town was Turkish in 606/1209. It was to Ķara Ḥiṣār that the famous Saldjūķ vizier Ṣāḥib 'Aṭā' Fakhr al-Dīn 'Alī b. al-Ḥusayn (d. 687/1288-9) from whom the town received its designation, retired with his treasures before the Ķaramānians. His sons, Tādj al-Dīn Ḥusayn and Nuṣrat al-Dīn received in fief in 1271 the whole territory of Ķara Ḥiṣār, with Kütahya, Ṣandīķlī, Ghurghurum and Aķ Shehir, later also Lādīķ (Laodicaea on the Lycus, near the modern Deñizli) and Khonas (ancient Chonae, modern Honaz); see Aķsarāyī (Osman Turan), 74; Ibn Bībī (Houtsma), 308 (also mentioned, in connection with the sons of the Ṣāḥib, p. 323, 327, 334; by Ķara Ḥiṣār Dewele our Ķara Ḥiṣār is meant). Lādīķ and Khonas fell into the hands of the Turkman 'Alī Beg during the troubles of Djimrī (1277); he was, however, defeated in a successful campaign by the Sultan and killed near Ķara Ḥiṣār (Ibn Bībī, 333). The latter descendants of the Ṣāḥib 'Aṭā' had to submit to the Germiyans and finally lost their territory to them. (Ibn Faḍl Allāh al-'Umarī, *Masālik al-Abṣār* (Taeschner) states in one passage, p. 31, that Ķarasār was in the possession of Ibn Torghud; in

another, p. 36 and 37, that Ḳarasārī was in the possession of Ibn al-Sāyib—by which no doubt the descendant of the Ṣāḥib is meant—under the suzerainty of the Germiyans; cf. also Aḥmed Tewḥīd, in *TOEM*, 1st series, ii, 563 ff.) After this Ḳara Ḥiṣār shared in the vicissitudes of the principality of Germiyan [*q.v.*], which soon became a dependency of the Ottomans and under Bāyazīd I actually belonged for a time to the Ottomans, from 792/1390 until its restoration under Tīmūr, 805/1402. Khiḍr Pasha (d. 750/1349), son of Sulaymān-shāh of Germiyan, and other members of this princely family, are mentioned as heads (*čelebi*) of the Mewlewī colonies in Ḳara Ḥiṣār (see Ghālib Dede, *Tedhkire-yi Shuʿarā*ʾ*-yi Mewlewiyye*, MS Vienna, no. 1257, fol. 54r, 90r = ʿAlī Enwer, *Semāʿkhāne-yi Edeb*, Istanbul 1309, 48 f., 102). During Tīmūr's invasion of Asia Minor after the battle of Anḳara (1401), Ḳara Ḥiṣār also suffered from the raiding parties of the conqueror (Sharaf al-Dīn ʿAlī Yazdī, *Zafar-nāma*, Calcutta 1887-8, ii, 446, 457, 484, 492 = *Histoire de Timur-Bec*, transl. Pétis de la Croix, Delft 1723, iv, 21, 31, 60, 68; Dukas, *Hist.*, Bonn, 77).

In 832/1428-9 the principality of the Germiyan-oghlu definitely fell into the hands of the Ottomans, and Ḳara Ḥiṣār with its territory became a *liwā* (*sandjaḳ*) of the *eyālet* Anadolu (cf. *Djihān-nümā*, 641). As a fortress near the Ḳaramān frontier, it was, as long as Ḳaramān remained independent, of military importance. At the beginning of the war with Uzun Ḥasan (877/1472-3) the prince Muṣṭafā retired to Ḳara Ḥiṣār and used it as a base for his expeditions against the Ḳaramān-oghlu, the allies of the Persians (ʿĀshiḳpasha-zāde, *Ta*ʾ*rīkh* (Giese), 169; Saʿd al-Dīn, *Tādj ül-Tewārīkh*, i, 534; Caterino Zeno, loc. cit), and in 895/1489-90 it served as a base for the operations of Hersek-zāde Aḥmed Pasha against the Egyptians who had invaded Ḳaramān (Saʿd al-Dīn, ii, 65). Ḳara Ḥiṣār is often mentioned in connection with the revolts and struggles of contending pashas in the 17th century (1011/1602, revolt of Djelālī, 1041/1631, revolt of Baba ʿÖmer, 1069/1658, revolt of Abāza Ḥasan Pasha). In 1833 the town was temporarily occupied by Ibrāhīm Pasha, son of Muḥammad ʿAlī Pasha. In the Greco-Turkish war in 1921-3 it was occupied by the Greeks twice (28 March-7 April 1921 and 13 July 1921-27 August 1922). The war caused great damage to the town, which was, however, restored by reconstruction on a large scale under the republic.

The greater part of the scanty antiquities from the classical period seems to have been removed to the town from the ruined sites of the vicinity, notably Seydīler (Prymnessus), Isče Ḳara Ḥiṣār (Docimium) and Čifut Ḳaṣabasī (Synnada). The town's land-mark, the steep trachyte cone with the late Byzantine fortifications restored by the Germiyan-oghlu (described by Ewliyā Čelebi, *Seyāḥat-nāme*, ix, 29-34) bore as late as at Niebuhr's time (1766) the name Bek Baran Ḳalʿesi ("the fortress which gives refuge to the Beg"). It was never properly inhabited, and is now derelict, but was used occasionally for the internment of political prisoners (ʿĀshiḳpasha-zāde, *Ta*ʾ*rīkh*, ed. Istanbul, 243 f., not in ed. Giese), and as late as 1802 for the imprisonment of the French prisoners of war from Egypt.—The other monuments from the epoch of the Saldjūḳs and the Germiyan-oghlu, such as the Ṣāḥibler Türbesi, the Ulu Djāmiʿ of Khōdja Beg and the mausoleum et Sulṭān Dīwānī, as well as the Ottoman monuments, such as the mosque of Aḥmed Gedik Pasha with its annexes (the *medrese* is at present used as a museum; Ekrem Hakki Ayverdi, *Fâtih deuri mimarisi*, Istanbul 1953, 252-58), still await detailed examination.—In addition to the inscription on the Altlgöz köprüsü, mentioned above, other inscriptions from the town are published in *RCEA*, nos. 4132, 4329, 4540 and 4667.

(J. H. Mordtmann-Fr. Taeschner)

AGA [see agha].

AGADIR, one of the names of a fortified enclosure among the Berbers, where chambers are allotted to the various families of the tribe for storage of grain, and where the tribe takes refuge in times of danger. The following are the areas where this ancient Berber institution survives: Djabal Nafūsa (under the name of *gasr* = *ḳaṣr*, or *temidelt*); Southern Tunisia (*ghurfa*); the Awrās (*gelāa* = *ḳalʿa*); and in Morocco the Rīf and more especially the Great, Middle and Anti-Atlas and the Sirwa (*agadir* among the Shluḥs and *igherm* among the Berbers of the Middle Atlas). The word *agadir* probably goes back to Phoenician *gadir* = Hebrew *gādēr* "wall" (in fact the word has in the Sūs the meaning of "strong wall").

Bibliography: R. Montagne, *Un Magasin collectif de l'Anti-Atlas*: *L'Agadir des Ikounka*, *Hesp.*, 1929; idem, *Les Berbères et le Makhzen dans le Sud du Maroc*, Paris 1930, 253 ff.; idem, *Villages et Kasbas Berbères*, Paris 1930, 9 ff.; Dj. Jacques-Meunié, *Greniers Collectifs*, *Hesp.*, 1949, 97 ff.; idem, *Greniers-Citadelles au Maroc*, Paris 1951.

AGADIR-IGHIR, Moroccan town situated at the junction of the Moroccan High Atlas with the plain of Sūs, on the Atlantic coast. The town stands at the northern end of a large bay, at the foot of a hill some 800-900 feet high which is surmounted by a fort. The population numbers 30,111, of whom 1,518 are Jews and 6,062 Europeans (1952 census).

It is not clear whether a settlement existed there before the arrival of the Portuguese, although a letter from the inhabitants of Māssa to Emmanuel I of Portugal, dated 6 July, 1510 (*Sources inédites de l'Histoire du Maroc*, *Portugal*, i, 243) speaks of an *agādīr al-arbaʿā* at that site. This suggests that an *agādīr* existed there near which a travelling market was held every Wednesday. At all events, it was of no great importance. Leo Africanus mentions the

same settlement under the name Gartguessem ("Cape Ksīma" named after a Berber tribe living round about the town).

In the second half of 1505, a Portuguese nobleman João Lopes de Sequeira, built a wooden castle there, perhaps to protect a fishing fleet, perhaps also, with the approval of his sovereign, to thwart the Spaniards in the Canary Islands who had designs of the southern coast of Morocco. The castle was situated near a spring, at the foot of the hill commanding the roadstead. This site still bears the name of Funti, although its official designation seems from the first to have been Santa Cruz del Cabo de Aguar, by reason of its relative proximity to Cape Ghir. This castle was purchased by the King of Portugal on 25 January 1513.

The establishment of the Portuguese at Santa Cruz caused a strong reaction among the Berber tribes of the Sūs. The members of the Djazūliyya order, which had established itself in the Sūs 50 years previously, were able to exploit this antipathy for the purpose of a holy war, and some of them promoted the rise of the Saʿdids (Banū Saʿd), a family of *shurafāʾ* coming from the Darʿa (Draʿ). The chief of this family, Muḥammad, later entitled al-Ḳāʾim bi-Amr Allāh, was proclaimed war leader about the year 1510.

From that date the Portuguese fortress was subjected to an intermittent, but nevertheless irksome, military and economic blockade, and to attacks which grew in severity as the power of the Saʿdids increased. In September 1540, the Saʿdid king of the Sūs, Muḥammad al-Shaykh, son of al-Ḳāʾim, captured the hill which dominated Santa Cruz and concentrated there a strong force of artillery. The siege began on 16 February 1541 and ended, on 12 March, with the surrender of the Governor, D. Guttere de Monroy, and the survivors of the garrison. A very detailed and lively account of these events can be found in the *Chronique de Santa Cruz*, the work of one of the besieged who, after 5 years' captivity at Tarūdant and elsewhere, wrote this account of his adventures.

For many years Santa Cruz-Agadir was left deserted until the Saʿdid sultan ʿAbd Allāh al-Ghālib biʾllāh (1557-74) built a fort on the top of Agadir hill to protect the anchorage from the Christian fleets. From then onwards Agadir was one of the points at which European traders regularly called, principally to take on cargoes of sugar (see especially *Sources inédites de l'Histoire du Maroc, 1ère série, France*, iii, 361). Agadir retained its role of trading port up to the founding of the Muslim town of Mogador [*q.v.*] in 1773. Since that date, Agadir harbour has been little used.

The settlement achieved momentary renown in 1911 when the German gunboat "Panther" cast anchor in the roads to assert German claims there at a time when General Moinier's column had just occupied Fez (1 July 1911). After the signing of the Protectorate agreement, Agadir was occupied by French troops in 1913. Its population was then less than 1,000.

Since then, the town has developed greatly. It has become the chief town of one of the administrative regions of Morocco which comprises nearly 700,000 inhabitants. It owes its growth chiefly to the development of its agriculture and fisheries, and to the exploitation of its mineral wealth. The port of Agadir, constructed since 1914, has recently been enlarged.

(R. LE TOURNEAU)

ĀGDĀL (Berber), a term borrowed by the Arabic of Morocco, Algeria and Tunisia from Berber, with the same meaning as in that language namely "pasturage reserved for the exclusive use of the landowner". In Morocco, however, the word has acquired the special sense of "a wide expanse of pasture lands, surrounded by high walls and adjoining the Sultan's palace, reserved for the exclusive use of his cavalry and livestock". Such enclosures exist in each of the royal cities, Fez, Meknes, Rabāṭ and Marrākush.

(G. S. COLIN)

ĀGEHĪ, Turkish poet and historian, d. 985/1577-8. His real name was Manṣūr. He was born in Yenidje-yi Wardar (Giannitsa in Greek Macedonia), which was at that time an important centre. His career as *mudarris* and *ḳāḍī* took him to various places; Gallipoli and Istanbul are mentioned by his biographers. Āgehī was a poet of considerable renown in spite of the fact that no *dīwān* of his poems seems to have existed. He owed his fame, particularly, to a *ḳaṣīda* addressed to his sweetheart, a young sailor, and composed in the professional slang of the Turkish sailors of his time and containing many terms borrowed from the nautical lingua franca, especially, terms belonging to the terminology of the galley; it was imitated by several poets of his time. Of Āgehī's only known historical work, the *Taʾrīkh-i Ghazāt-i Sigetwar*, describing Suleymān's expedition against Szigetvár, (see Babinger, 69) no manuscript is known.

Bibliography: The main sources for Āgehī's life are the contemporary collections of biographies of Ottoman poets (*Tedhkire-yi Shuʿarāʾ*, by ʿĀshīḳ Čelebi, Ḳīnalī-zāde Ḥasan Čelebi, Riyāḍī, ʿAhdī, Beyānī, Ḳāf-zāde Fāʾiḍī) and the biographical sections in ʿĀlī's *Kunh al-Akhbār*; none of these sources is published; excerpts in the article Āgehī in Saadeddin Nüzhet Ergun, *Türk şairleri*, Istanbul 1936, i, 16-8, where also several of Āgehī's poems are printed. The *ḳaṣīda* in sailors' slang is published with a commentary in A. Tietze, *xvi. asīr Türk şiirinde gemici dili, Āgehī kasidesi ve tahmisleri, Türkiyat Mecmuası*, 1951, 113-121 (with further bibliography). (A. TIETZE)

AGĒL [see ʿUḲAYL].

AGHA, a word used in eastern Turkish generally to mean "elder brother", sometimes in contrast to *ini*, "younger brother", but in Yakut (*āgā*) meaning "father" (cf. V. Thomsen, *Inscriptions de l'Orkhon Déchiffrées*, 98 (*āḳā*)), in Koybal-Karaghasī "grand-

father" and "uncle", and in Čuwash "elder sister". Among the Mongols it appears already to have been used as an honorific, the princesses of the imperial family being designated by it (cf. Quatremère, *Histoire des Mongols*, xxxix-xl).

In Ottoman Turkish *agha* (usually pronounced *ā'ā* or even *ā*) means "chief", "master" and sometimes "landowner". It is also used for the head servant of a household and occurs in combination with many words, e.g. *čarshi aghasi* ("market inspector"), *khān aghasi* ("innkeeper"), *köy aghasi* ("village headman") and *aghabey* ("elder brother" —cf. above— or "senior"). As a title, up to the reform period and in some cases even later, it was given to many persons of varying importance employed in the government service, for the most part in posts of a military, or at least a non-secretarial, character, being contrasted particularly with *efendi* [*q.v.*]. The most notable *aghas* of this kind were the *Yeničeri Aghasi* (see YENI ČERI) and most of the principal officers of the standing as opposed to the feudal army, and the *Üzengi* or *Rikāb Aghalari* and most officers of both the "Inside" and "Outside" Services of the sultan's household. But the *kāhya* (*ked-khudā*) of the Grand Vizier was also entitled *agha*, though his duties were entirely administrative and secretarial—whence, in his case, the word *efendi* was usually added to his title and he was called *Agha Efendimiz*; and so were the eunuchs of the palace service heade by the *Bāb ül-Se'ādet Aghasi* or *Kapi Aghasi* (white) and the *Dār ül-Se'ādet Aghasi* or *Kizlar Aghasi* (black), and the eunuchs attendant on the *Wālide Sulṭān* and princesses of the imperial blood. Hence eunuchs employed by officials and the well-to-do in general came usually to be known as *ḥarem* or *khādim aghalari*, till the word *agha* alome might sometimes mean "eunuch".

After the abolition of the Janissaries in 1826 and the formation by Maḥmūd II of the *'Asākir-i Menṣūre*, it became the custom to entitle *agha* illiterate officers up to the rank of *ḳā'im-maḳām*, literate officers of corresponding rank being addressed as *efendi*; and this usage was maintained among the people up to the end of the Ottoman regime. Until the establishment of the Constitution there existed a military rank intermediate between those of *yüzbashi* and *binbashi* called *ḳol aghasi* (i.e. commander of a wing).

Agha, often spelt *āḳā*, is also used in Persian, in which it again sometimes signifies "eunuch", as notably in the case of the first Ḳādjār, Āghā Muḥammad Shāh.

AGHA KHĀN, properly ĀḲĀ KHĀN, title applied to the Imāms of the Nizārī [*q.v.*] Ismā'īlīs. It was originally an honorary title at the court of the Ḳādjār Shāhs of Persia, borne by Ḥasan 'Alī Shāh, who, after the murder of his father Khalīl Allāh in 1817, gained the favour of Fatḥ 'Alī Shāh and received the hand of one of his daughters in marriage. In consequence of intrigues at the court under the reign of Muḥammad Shāh, Ḥasan 'Alī Shāh revolted in 1838 in Kirmān, but was defeated and fled in 1840 to Sind, where he rendered valuable services to Sir Ch. Napier in the Sind campaign. After an unsuccessful attempt to establish himself in Persia from the Bunpore district, he went to live in Bombay, but was removed to Calcutta at the instance of the Persian government. In 1848 he returned to Bombay, which has remained, except for a brief period at Bangalore, the headquarters of the movement headed by him and his successors. Internal conflicts among the Khodjas [*q.v.*] concerning the leadership of the Imām, led to lawsuits, culminating in the famous judgment of Sir Joseph Arnould in 1866 in favour of the Agha Khān. (It was this case, during which a great deal of information about the sect was elicited, which called the attention of western scholarship to the continued existence of the Nizārī Ismā'īlīs; cf. M. H. B. Freer, *The Khojas, the Disciples of the Old Man of the Mountain*, *Macmillan's Magazine* 1876, 431 ff.; St. Guyard, in *JA*, 1877/i, 337 ff.) Ḥasan 'Alī Shāh (d. 1881) was succeeded by his son 'Alī Shāh (d. 1885), and the latter by his son, the present Agha Khān, H. H. Sir Sulṭān Muḥammad Shāh (b. 2 Nov. 1877), the spiritual head of the Nizārī Ismā'īlīs in India (including the Khodjas), Persia, Central Asia, Syria and East Africa. Under his guidance, the organization of the Nizārī community has been greatly developed. The Agha Khān has also occupied a prominent position in public life. His heir (*walī 'ahd*) is 'Alī Khān (b. 1910).

Bibliography: J. N. Hollister, *The Shī'a of India*, London 1953, 364 ff. The memoirs of the present Agha Khān were published under the title of *World Enough and Time*, London 1954.

(H. A. R. GIBB)

ĀGHĀ MUḤAMMAD SHĀH, founder of the Ḳādjār [*q.v.*] dynasty of Persia, who was born in 1155/1742, was the elder son of Muḥammad Ḥasan Khān, hereditary chief of the powerful Ḳādjār tribe. When a child he was castrated by order of 'Ādil Shāh, Nādir Shāh's nephew, an act which warped his character in later life. On his father's murder in 1758, he became chief of the Ḳādjārs. He spent his youth at Karīm Khān's court at Shīrāz; on Karīm's death in 1779 he fled to Astarābād and engaged in a long struggle with his descendants. By 1785 he had made himself master of the north and centre of the kingdom, and in that year he made Teheran his capital because of its central position and its proximity to the Ḳādjār territories. In 1794 he captured the gallant Luṭf 'Alī Khān, the last of Karīm Khān's descendants, and put him to death after inflicting fearful tortures. In the following year he re-established Persian authority over Georgia. He was crowned Shāh in 1796. He subsequently added Khurāsān to his dominions, deposing Shāhrukh, Nādir Shāh's blind grandson; by means of torture, he forced Shāhrukh to disclose where he had hidden his grandfather's jewels. So dreadful were the unfortunate prince's sufferings that he died. Nemesis soon overtook Āghā Muḥammad, for he was assassinated in 1797. He showed great skill as a statesman and also as a military leader, but his reputation was sullied by his revengefulness, his revolting cruelty and his insatiable avarice.

Bibliography: 'Abd al-Razzāḳ b. Nadjaf Ḳulī, *Ma'āthir-i Sulṭāniyya*, Tabrīz 1826 (English translation by Sir Harford Jones Brydges entitled *The Dynasty of the Kajars*, London 1833); Riḍā

Ḳulī Khān Hidāyāt, *Rawḍat al-Ṣafā-yi Nāṣirī*, ix; Sir J. Malcolm, *History of Persia*, ii, 300-302; R. G. Watson, *A History of Persia from the Beginning of the Nineteenth Century to the Year* 1858, London 1866, 65-105; P. M. Sykes, *History of Persia*[2], ii, 289-96.

(CL. HUART-L. LOCKHART)

AGHAČ, meaning in Ottoman Turkish "a tree", "wood", in Eastern Turkish (in which the forms *yïghač*, *yïghāč* are the more frequent) means also "the male member" and "parasang"; cf. al-Kāshgharī, *Dīwān Lughāt al-Turk*, Istanbul 1933, iii, 6, and Brockelmann, *Mitteltürkische Wortschatz*, Budapest-Leipzig 1928, 87. Al-Kāshgharī shows only the forms *yïghāč* and *yïghač*, but W. Radloff, *Versuch eines Wörterbuches der Türk-Dialekte*, 1893, i, 150, shows also *aghač* and other forms of the word such as *aghatz*, *aghas* and *yaghač*, as signifying not only "tree" and "wood" but also "a measure of distance". The measure thus referred to by al-Kāshgharī as a "parasang" is said (cf. Pavet de Courteille, *Dictionnaire Turc-Oriental*, Paris 1870, 554-5) to be three times the distance at which a man standing between two others can make himself heard by them. An *aghač* in this sense is equal, according to a verse of Mīr ʿAlī Shīr Nawāʾī, to 12,000 double cubits (*ḳarī*); according to Pietro della Valle, *Voyages*, iii, 141, to a Spanish league, or four Italian miles; according to Flandin and Costa, *Voyages en Perse*, i, 111, to 6 kilometres; and according to Radloff, loc. cit., to between 6 and 7 Russian versts.

Bibliography: in addition to the references given above, Sulaymān Efendi, *Lughat-i Čaghatāʾī wa-Turkī-yi ʿUthmānī*, 15 (transl. I. Kúnos, Budapest 1902, 6, 105); H. Vámbéry, *Čagataische Sprachstudien*, 357. (CL. HUART-H. BOWEN)

AL-AGHĀNĪ [see ABŪ'L-FARADJ AL-IṢFAHĀNĪ].

AGHĀTHŪDHĪMŪN, Agathodaemon. The correct transliteration of the name occurs, e.g., in Ibn Abi Uṣaybiʿa, *ʿUyūn al-Anbāʾ*, i, 18. Other forms are Aghāthādhīmūn and similar spellings, Aghādhīmūn and similar spellings, as well as more serious distortions. In Latin translations from Arabic we find various representations of different accurateness, e.g. in the *Turba Philosophorum*: Agadimon, Adimon, Agmon.

The Graeco-Egyptian god Agathodaemon (see Ganschinietz, in Pauly-Wissowa, iii. Suppl.-Bd., s.v.) is represented in Arabic tradition as one of the ancient Egyptian sages or prophets. Already Ps.-Manetho refers to Agathodaemon as the third king of Egypt, in another place as son of Hermes the second and father of Tat. According to Ibn al-Ḳifṭī, 2, Agathodaemon was the teacher of Idrīs/Henoch/Hermes. Ibn Abī Uṣaybiʿa, on the authority of al-Mubashshir b. Fātik, says that he was the teacher of Asclepius. The Ṣābians [*q.v.*] identify him with Shīth b. Ādam. Ibn Waḥshiyya attributes to him the prohibition of fishes and beans, after him confirmed by Armisa/Hermes, and also the invention of three ancient alphabets. The Ikhwān al-Ṣafāʾ (Bombay), iv, 296, mention him together with three other sages, each of whom inaugurated one of four schools: Agathodaemon created the Pythagorean. Djābir b. Ḥayyān mentions him in several places together with Socrates, Ps.-Madjrīṭī together with other philosophers, and al-Shahrastānī quotes some teachings of his.

Agathodaemon is a great authority in the occult sciences. Djābir and Ps.-Madjrīṭī attribute to him a clock that lures snakes, scorpions, etc. out of their holes. He is mentioned by Ibn al-Nadīm amongst the alchemical authors and he is quoted in several authors on the art, even in Abū Bakr al-Rāzī's *Sirr al-Asrār*.

Many authors consider the two great pyramids the graves of Hermes and Agathodaemon [cf. HARAM].

AL-AGHLAB AL-ʿIDJLĪ (AL-AGHLAB B. ʿAMR B. ʿUBAYDA B. ḤĀRITHA B. DULAF B. DJUSHAM), Arab poet, born in the pre-Islamic era and converted to Islam, who later settled at al-Kūfa, and was killed at the battle of Nihāwand (21/642) at the reputed age of 90. He is not regarded as one of the Companions of the Prophet. Al-Aghlab is considered to be the first to have employed the *radjaz* metre in lengthy poems constructed on the pattern of the *ḳaṣīda*, but very few traces of his works remain. Critics praise particularly a poem on the prophetess Sadjāḥ [*q.v.*], and quote an anecdote which suggests that Islam afforded him little inspiration for the composition of religious poetry.

AGHLABIDS or **BANU 'L-AGHLAB**, a Muslim dynasty which throughout the 3rd/9th century held Ifrīḳiya in the name of the ʿAbbāsids and reigned at al-Ḳayrawān.

(i) General Survey; (ii) Religious Life; (iii) Chronological Survey.

(i) GENERAL SURVEY.

In 184/800 the founder of this dynasty, Ibrāhīm b. al-Aghlab, who, as governor of the Zāb, had displayed skill and energy in restoring law and order in his province, was invested with princely power by the caliph Hārūn al-Rashīd on terms advantageous to the latter. His vassal relinquished the subvention hitherto paid to Ifrīḳiya and undertook to pay a tribute of 40,000 dinars to the imperial treasury. The ties which linked the Aghlabid *amīr* to the Caliph were such as to allow him a large measure of autonomy, especially in the matter of the succession. "He bequeathed his dominions to a son or a brother as he pleased" (al-Nuwayrī), making his choice without interference from Baghdād, and this practice was followed by each of the *amīrs* who succeeded him.

Our knowledge of these Arab rulers of Ifrīḳiya is considerable, and it is possible to discern their

characters with reasonable clarity. In these high officials of the caliphs who had become independent princes, one finds the merits and defects of their masters. Although the majority were devoted to pleasure and addicted to drink, which at times incited them to outbursts of violence and bloodshed, there were among them men of culture who had a sense of greatness, shrewd statesmen, at once stern and humane, and leaders anxious to promote public works and to devote the revenues accruing to them to the welfare of the State. Under them, Ifrīķiya experienced a genuine renaissance, and many magnificent foundations still testify to their beneficent rule.

They needed energy and political skill to overcome the difficulties which confronted them. Ibrāhim b. al-Aghlab (184-97/800-12) had to extinguish the last outbreaks of Berber revolt. On the borders of Aghlabid territory, Khāridjism was in control of Southern Ifrīķiya, of the Awrās and nearly all of Central Maghrib, the Zāb forming the western boundary of the kingdom. The adherence of the Kutāma of Lesser Kabylia to Shīʿism was to cause the downfall of the dynasty. The gravest crises, however, were centred round the very heart of the Aghlabid kingdom. Tunis and even al-Ķayrawān were centres of opposition, and the most troublesome elements were the Arabs of the *djund*, who ought to have been the strongest supporters of Aghlabid power. In the towns in which they were garrisoned, they treated the indigenous population with contumely, and proved exacting and contentious in their dealings with the rulers of the country. Ibrāhīm I had to suppress two Arab revolts: that of Ḥamdīs b. ʿAbd-al-Raḥmān al-Kīndī (186/802) and that of ʿImrān b. Mukhallad (194/809), in both of which Ķayrawānīs were involved. Foreseeing the danger, the *amīr* had constructed, 2 m. south of al-Ķayrawān, al-Ķaṣr al-Ķadīm (or al-ʿAbbāsiyya [*q.v.*]) and had taken up residence there. He surrounded himself there with those elements of the *djund* considered reliable and with slaves bought for the purpose, who constituted an imposing coloured guard.

Under the third Aghlabid *amīr*, Abū Muḥammad Ziyādat Allāh (201-23/817-38), who had displayed excessive severity towards the *djund*, a new and more serious Arab revolt broke out, instigated by Manṣūr b. Naṣr al-Tunbudhī. From his fort at Tunbudha, near Tunis, he called the Arab chiefs to arms and received their support (209/824). After varying fortunes the insurgents found themselves masters of nearly the whole of Ifrīķiya except Ķābis and its surrounding district. With the help of the Berbers of the Djarīd, Ziyādat Allāh succeeded in regaining the advantage. Al-Tunbudhī surrendered and was executed. The coalition then broke up and Ziyādat Allāh pardoned the remaining rebel chiefs. Once again the Ķayrawānīs had supported the cause of the insurgents.

The hostility of the Ķayrawānīs and the policy of the Aghlabids towards them constitute another aspect of the internal history of the dynasty. This hostility was fostered mainly by the religious classes, scholars and devotees who enjoyed the confidence and regard of the people. These doctors of religion, exponents of *ḥadīth*, jurists and theologians who, for the most part, were of eastern origin, lived close to the people and guided public opinion. As professing ascetics, they criticised the morals of the *amīrs*; as champions of orthodoxy, they protested against their illegal decisions and their abuse of power. The second of the Aghlabids, Abu 'l-ʿAbbās ʿAbd Allāh b. Ibrāhīm (197-201/812-7) promulgated a financial reform which was contrary to Islamic tradition, namely, the levy on crops of a fixed sum in cash instead of the tithe in kind. This measure aroused strong protests, and the death of the *amīr* soon afterwards was regarded as a divine punishment. On the whole, the Aghlabid rulers treated the religious classes with respect and tried to conciliate them, but they rarely induced them to relax their uncompromising attitude. Apart from various architectural creations and public works (which will will be described later), which may be considered to owe their origin to this religious policy, the conquest of Byzantine Sicily can also be attributed to the same cause.

Although this conquest, the supreme military achievement of the Aghlabid *amīrs*, was undertaken by Ziyādat Allāh immediately after the revolt of Manṣūr al-Tunbudhī, and was doubtless inspired by the desire to divert the energies of the Arabs to an external theatre of operations, the expedition of 211/827 assumed the guise of a holy war. The army was entrusted to the learned jurist Asad b. al-Furāt [*q.v.*], and Sūsa [*q.v.*], where the fighters for the Faith and their followers embarked, already had the character of a *djihād* port, as the town had been furnished with a *ribāṭ* six years previously.

This *ribāṭ* still exists. An inscription at the foot of the signal tower bears the name of Ziyādat Allāh and the date 206/821. The rebuilding of the Great Mosque at al-Ķayrawān [*q.v.*] is attributed to the same *amīr*. This splendid building, founded by Uķba b. Nāfiʿ about 670, twice remodelled or rebuilt in the course of the 8th century, was in fact the work of the Aghlabids. In addition to Ziyādat Allāh, two other *amīrs*, Abū Ibrāhīm and Ibrāhīm II, carried out work there and enlarged the prayer-hall.

The Aghlabids were enthusiastic builders. Under Ziyādat Allāh's successor, Abū ʿIķāl al-Aghlab (223-6/837-40), the small mosque named after Abū Fatyāta was built at Sūsa, which acquired other new foundations about the same time. Abu 'l-ʿAbbās Muḥammad endowed it with the Great Mosque (236/850) which still exists. The ramparts, also preserved, were constructed under Abū Ibrāhīm Aḥmad (242-9/856-63), who of all the dynasty figures most prominently in the architectural history of Ifrīķiya. To him is attributed the construction of the great mosque of Tunis, which like that at al-Ķayrawān, superseded an earlier mosque which was now considered inadequate. The creative activity and the munificence of this prince were shown, above all, in his military and public works. Ibn Khaldūn, who is usually more cautious in his assertions, states that "Abū Ibrāhīm Aḥmad built in Africa nearly 10,000 forts, constructed of stone and mortar and furnished with iron gates". It is true that he constructed a large number, both along the coast and on the western frontier, many perhaps being strongholds of the Byzantine *limes* which he restored. At Sūsa, the rampart, dating, according to an inscription, from 245/859, seems to have been built on the old wall of Hadrumetum. Similarly the Burdj Yunga, on the Tunisian coast south of Mahres, which also dates from the Aghlabid era, is a Byzantine fort, the foundations of which were used by the Muslim architects.

The same thing probably applies to a number of of hydraulic undertakings, but it can be asserted that the Aghlabids carried out many of these in order to restore prosperity to regions possessing only a poor water supply, notably to the south

of the "Tunisian chain". A recent work by M. Solignac, based on an examination of the constructional methods employed and the nature of the materials used, and a comparison with those used at the neighbouring reservoirs at al-Ḳayrawān, leaves no doubt on this point.

For their public works, their defence installations, and, in general, for their buildings, the *amīrs* evidently relied on a labour force recruited locally. The superintendence of the workshops was entrusted to non-Muslim freedmen, their clients (*mawlā*), whose names are recorded on the buildings themselves. On their coins are mentioned officials of the same origin who controlled the Mint.

Although the inherited traditions of Christian Africa had a considerable influence on the construction and ornamentation of buildings (the Roman mosaic style of paving being still employed), Aghlabid architecture draws also on Oriental sources. The influence of Syria, Egypt and Mesopotamia is apparent, and a new and specifically Muslim art emerges which finds its most striking expression in the Great Mosque at al-Ḳayrawān.

The dynasty enjoyed its last years of prosperity in the reign of Abū Isḥāḳ Ibrāhīm II, who succeeded Abū ʿAbd-Allāh Muḥammad called Abu 'l-Gharāniḳ ("Father of the Cranes"), a frivolous and extravagant prince. Ibrāhīm II, in whose strange character were blended in exaggerated form the merits and defects of his line, was by turns a just sovereign, concerned for the welfare of his people, and a sadistic tyrant, whose cruelty spared no member of his family. On the command of the ʿAbbāsid Calīph al-Muʾtaḍid, who had received complaints about him, he abdicated in 289/902 in favour of his son Abu 'l-ʿAbbās ʿAbd Allāh, and devoted himself to a most edifying life of penitence. Being unable to perform the pilgrimage by the overland route, he travelled to Sicily, made himself master of Taormina, and then went on to Calabria, where he died before Cosenza (19 Dhu 'l-Ḳaʿda 289/29 Oct. 902).

During the reign of Ibrāhīm II there appeared in Ifrīḳiya the Shīʿite missionary Abū ʿAbd Allāh [*q.v.*], who was to bring about the downfall of the dynasty and secure the triumph of the Fāṭimid al-Mahdī ʿUbayd Allāh. Supported by the Kutāma Berbers, whom he had converted to Shīʿism, Abū ʿAbd Allāh set out to conquer the Aghlabid kingdom. The posts on the western frontier, some of which had been imprudently denuded of their Arab garrisons, victims of Ibrāhīm's severity, were incapable of checking these fanatical mountaineers. The *amīr* Abū Muḍar Ziyādat Allāh III perceived the danger, but his measures lacked any rational plan and were insufficient to delay the catastrophe. He restored the walls of al-Ḳayrawān and sent against the Kutāma several forces which were defeated. Then, announcing a great victory, he made preparations for flight. He left Raḳḳāda, the royal city which Ibrāhīm II had founded 4½ m. south of al-Ḳayrawān, and, taking with him what treasures he could, set out for Egypt. From there he went to Raḳḳa, but later returned to Egypt, and died at Jerusalem.

(ii) RELIGIOUS LIFE.

Al-Ḳayrawān under the Aghlabids was a great centre of Islamic religious life, scholarship and literature, both in its own right and as a half-way house between the Islamic East and West. Whilst they did not elaborate a common local interpretation of religious law of their own, the scholars of al-Ḳayrawān followed one or the other of the Eastern schools of thought, sometimes adopting an eclectic attitude. This eclecticism is attested not only by the *Asadiyya* of Ibn al-Furāt but by other works as well. ʿIrāḳian and Medinese doctrines were equally well represented in al-Ḳayrawān of the Aghlabids, but the teaching of al-Shāfiʿī never took root there. In particular, al-Ḳayrawān under the Aghlabids became the most important centre of the Mālikī school, superseding Medina and Cairo as such. Some of the most prominent specialists in religious law of the period, whose works have to a greater or lesser extent survived, are: Asad b. al-Furāt ([*q.v.*], d. 213), Saḥnūn ([*q.v.*], d. 240), author of the *Mudawwana*, the great digest of Mālikī doctrine, Yūsuf b. Yaḥyā (d. 288), Abū Zakariyyāʾ Yaḥyā b. ʿUmar al-Kinānī (d. 289), ʿĪsā b. Miskīn (d. 295), and Abū ʿUthmān Saʿīd b. Muḥammad b. al-Ḥaddād (d. 302). Manuscripts dating from the time of the Aghlabids, of the works of these and of other scholars, are still preserved in the library of the Great Mosque of al-Ḳayrawān. In the field of dogmatic theology, too, al-Ḳayrawān under the Aghlabids was the meeting-place of many opinions and the stage of lively discussions, occasionally, too, of violence and persecution, between the orthodox, the Djabariyya, the Murdjiʾa, the Muʿtazila, and last but not least the Ibāḍiyya (see these artt.). Asad b. al-Furāt, for instance, assaulted Sulaymān al-Farrāʾ who denied that the believers would see God, and when Saḥnūn became ḳāḍī, he had slowly beaten to death his predecessor ʿAbd Allāh b. Abi 'l-Djawād, who was of the opinion that the Ḳurʾān was created. Concerning this last proposition, the religious policy of the Aghlabids followed that of the Caliphs of Baghdād. Shortly after the *miḥna* [*q.v.*] in the East, the upholders of the orthodox doctrine had to undergo a similar, though milder, tribulation under the pretender Aḥmad b. al-Aghlab; Saḥnūn himself had been in danger on that occasion, but escaped serious trouble. In the same way as in the East, an orthodox reaction soon asserted itself, but Muʿtazilite doctrines were not eradicated, and a professed Muʿtazilite, such as Ibrāhīm b. Aswad al-Ṣaddīnī, was appointed ḳāḍī of al-Ḳayrawān at the end of the reign of Ibrāhīm b. Aḥmad, shortly before the end of the dynasty. Religious life proper is represented by a great number of pious persons and saints who were often

in opposition to, but still in contact with the religious scholars. Both groups were very influential under the Aghlabids, and both showed a spirit of independence and held a critical attitude towards the government. Occasionally, the ḳāḍīs were at the same time governors and military commanders. Several collections of biographies, the oldest of which are very near to the period in question, give a vivid picture of the religious and intellectual life in al-Ḳayrawān (and in the other cities of Ifrīḳiya) under the Aghlabids.

Bibliography: Abu 'l-ʿArab (d. 333), *Ṭabaḳāt ʿulamāʾ Ifrīḳiya*; the same, *Ṭabaḳāt ʿulamāʾ Tūnis*; al-Khushanī (d. 371), *Ṭabaḳāt ʿulamāʾ Ifrīḳiya* (these three ed. and transl. by M. Ben Cheneb; Paris-Algiers, 1915, 1920); Abū Bakr al-Mālikī (d. after 449), *Riyāḍ al-Nufūs* (ed. Ḥ. Muʾnis, i, Cairo, 1951); digest of the whole work by H.-R. Idris, in *REI*, 1935, 105 ff., 273 ff.; 1936, 45 ff.; Ibn al-Nādjī (d. 837), *Maʿālim al-Īmān*, Tunis, 1320-25. (J. SCHACHT)

(iii) CHRONOLOGICAL SURVEY.

The dynasty consists of the following eleven princes:

1. Ibrāhīm I b. al-Aghlab b. Sālim b. ʿIḳāl al-Tamīmī (12 Djumādā II 184/9 July 800—21 Shawwāl 196/5 July 812), the founder of the dynasty. His father al-Aghlab, a former associate of Abū Muslim, was one of the commanders in the Khurasanian corps sent to Ifrīḳiya by al-Manṣūr; in 148/785 he had succeeded Muḥammad b. al-Ashʿath as governor, and was killed in 150/767 during the revolt of al-Ḥasan b. Ḥarb. In 179/795 Ibrāhīm was appointed governor of the Zāb, and in return for his assistance in putting down a revolt against the governor Ibn Muḳātil was granted the province as a hereditary fief by Hārūn al-Rashīd. Energetic and wise, prudent and shrewd, a brave fighter as well as skilful diplomat, Ibrāhīm gave Ifrīḳiya an excellent administration. He was a man of wide culture, being, it is said, a good *faḳīh* as well as a fine orator and poet. At the time of his death, his son ʿAbd Allāh, who had been sent in 186/811 to suppress a rising of the Khāridjite Huwwāra in Tripolitania, was besieged in Tripoli by the Rustamid ʿAbd al-Wahhāb of Tāhart, and made peace with the latter by ceding the entire hinterland of Tripoli.

Supplementary bibliography: Balādhurī, *Futūḥ*, 233 f.; *K. al-ʿUyūn* (*Frag. Hist. arab.*, 302 f.); Ibn Taghrībirdī, *Nudjūm*, i, 488, 511, 528, 532; Abū Zakariyyāʾ, *Chronique*, tr. Masqueray, 121-6; Shammākhī, *Siyar*, Cairo, 159-241; for Frankish embassies to Ifrīḳiya, cf. Eginhard, *Annales Francorum*, an. 801; Reinaud, *Invasion des Sarrazins en France*, Paris 1836, 117.

2. Abu 'l-ʿAbbās ʿAbd Allāh I b. Ibrāhīm (Ṣafar 197/Oct.-Nov. 812—6 Dhu 'l-Ḥidjdja 201/25 June 817) had a reputation for beauty and ill-nature; he was blamed more especially for having imposed non-kurʾānic, and particularly heavy, taxes.

3. Abū Muḥammad Ziyādat Allāh I b. Ibrāhīm (201/817—14 Radjab 223/10 June 838) was one of the greatest princes of the dynasty. Apart from the revolt of al-Tunbudhī, the outstanding event of his reign was the conquest of Sicily, from 217/827 onwards, under the command of the *ḳāḍī* of al-Ḳayrawān, Asad b. al-Furāt [*q.v.*]. Two years later he granted an amnesty to the former rebels, and Ifrīḳiya entered on a period of general peace. To him is due also the restoration of the mosque of al-Ḳayrawān and other public works.

4. Abū ʿIḳāl al-Aghlab b. Ibrāhīm (223/838—Rabīʿ II 226/Feb. 841) was a brilliant and cultivated prince, who devoted his attention to the administration of Ifrīḳiya and gave a further impulsion to the *djihād* in Sicily.

5. Abu 'l-ʿAbbās Muḥammad I b. al-Aghlab (226/841-2 Muḥarram 242/10 May 856). Six years after his accession he was ousted by his brother Aḥmad, whom, however, he managed to defeat a year later and banished to the East, where he died. His reign was marked by two rebellions: those of Sālim b. Ghalbūn in 233/847-8 and of ʿAmr b. Sālim al-Tudjībī in 235/850. Muḥammad was a warm supporter of the Mālikites and especially of the *ḳāḍī* Saḥnūn [*q.v.*].

6. Abū Ibrāhīm Aḥmad b. Muḥammad (242/856—13 Dhu 'l-Ḳaʿda 249/28 Dec. 863) was a nephew of the preceding. He had a peaceful reign, marked especially by public works.

7. Ziyādat Allāh II b. Muḥammad (249/863—19 Dhu 'l-Ḳaʿda 250/23 Dec. 864) was a brother of the preceding.

8. Abu 'l-Gharānīḳ Muḥammad II b. Aḥmad (250/863—6 Djumādā I 261/16 Jan. 875), son of Abū Ibrāhīm, was noted for his great passion for hunting. His reign was marked by the conquest of Malta (255/868).

9. Abū Isḥāḳ Ibrāhīm II b. Aḥmad (261/875—17 Dhu 'l-Ḳaʿda 289/18 Oct. 902) was raised to the throne by popular acclamation in place of his nephew Abū ʿIḳāl. In 264/878 he built himself a new residence, Raḳḳāda [*q.v.*], which he later abandoned for Tunis. The main events of his reign are the capture of Syracuse (264/878), the defeat of an invasion of Ifrīḳiya by al-ʿAbbās, son of Aḥmad b. Ṭūlūn, by the Ibāḍites of Djabal Nafūsa (266-7/879-80), the suppression of a revolt of the Berbers of the Zāb (268/881-2), and of another rising in the north of Ifrīḳiya (280/893). His son ʿAbd Allāh, appointed governor of Sicily in 287/900, captured Palermo and Reggio, and was recalled on Ibrāhīm's abdication (see above).

10. Abu 'l-ʿAbbās ʿAbd Allāh II b. Ibrāhīm (289/902—29 Shaʿbān 290/23 July 903). He endeavoured to check the Shīʿite menace, but was assassinated at the instigation of his son Ziyādat Allāh.

11. Abū Muḍar Ziyādat Allāh III b. ʿAbd Allāh (290/903—296/909). Ascending the throne after the murder of his father and other members of his family, he was completely lacking in courage. Nevertheless, he proclaimed the *djihād* in 291/904, but, driven to despair by the fall of Laribus (18 March 909; see ABŪ ʿABD ALLĀH AL-SHĪʿĪ), he incontinently fled from the country.

ĀGHMĀT, a small town in Southern Morocco, about 25 m. south of Marrākush, on a small watercourse Wādī Ūrika or Wādī Āghmāt, at the edge of the Great Atlas range (the Djabal Daran of the Middle Ages). From the 5th/11th century the name of this place, according to the statement of the geographer Abū ʿUbayd al-Bakrī, applied to two distinct settlements 1½ m. apart, namely Āghmāt an-Waylān (the spelling given by al-Baydaq, *Doc. inédits d'hist. almohade*) or Āghmāt of the Aylān (a Berber tribe: *arabice* Haylāna) and Āghmāt Ūrīka, or Āghmāt of the Ūrīka (Warīka). To-day the latter is a small country town named simply Ūrīka. Al-Bakrī and al-Idrīsī describe Āghmāt as a flourishing town surrounded by well-irrigated gardens and inhabited by a considerable and highly industrious population. It is a fact that before the foundation of Marrākush, at the beginning of the

Almoravid expansion beyond the Great Atlas range, this town was the chief urban centre in southern Morocco and even, if one accepts the testimony of certain biographical notices in the Andalusian dictionaries, an extremely active cultural centre. In the 25 years prior to the accession of Yūsuf b. Tās͟hufīn [*q.v.*], many scholars and jurists flocked to Āg͟hmāt from Cordova and even from al-Ḳayrawān, the latter having been forced into exile in large numbers by the disturbances which had just devastated Ifrīḳiya. At that time Āg͟hmāt was the capital of a small Berber state, in the hands of a chief of the Mag͟hrāwa [*q.v.*], Laḳḳūt b. Yūsuf, who married the celebrated Zaynab al-Nafzāwiyya, the daughter of one of the emigrés from Ifrīḳiya. The latter afterwards became successively the wife of the Lamtūna chief Abū Bakr b. ʿUmar [see AL-MURĀBIṬŪN], and of his lieutenant and successor Yūsuf b. Tās͟hufīn. This intelligent and cultured princess who, according to certain chroniclers, was also something of a magician, speedily assembled at Āg͟hmāt a literary entourage and introduced the rough Lamtūna chieftains from the Sahara and their wives also to a more cultured mode of existence. Once it had been founded and become the capital of the Almoravids, Marrākus͟h attracted many members of this select circle from Āg͟hmāt, and this marked the beginning of its decline which, however, seems to have been consummated only much later. The Almoravids chose Āg͟hmāt as an enforced place of residence for two of the rulers whom they had deposed in Spain, namely the Zīrid ruler of Granada ʿAbd Allāh b. Buluggīn, and the famous al-Muʿtamid of Seville. Later, Āg͟hmāt was the last stage on the journey of the Mahdī Ibn Tūmart on his return from the East, prior to his "rising", in both a religious and a political sense, in the Great Atlas Mountains. By the time of Leo Africanus the old Berber capital was in a state of complete decline.

García Gómez has published a romantic account of his journey to Āg͟hmāt and his pilgrimage to the tomb of al-Muʿtamid entitled *El supuesto sepulcro de Muʿtamid de Sevilla en Āghmāt, And.*, 1953, 402-11.

(E. LÉVI-PROVENÇAL)

AG͟HRÎ, an East-Anatolian wilāyet (*il*) of the Turkish Republic, in large part identical with the former *sandjaḳ* of Bāyazīd [*q.v.*], and named from the Ag͟hrī Dag͟h [*q.v.*], the Biblical Ararat, which forms its N. E. boundary with the *wilāyet* of Kars and with Iran. Area: 12,659 sq. km; inhabitants in 1889 (after Sāmī): 47,236, of which 8,367 were Armenians, the rest Muslims; in 1891 (after Cuinet): 52,544, mainly Kurdish Muslims (41,471) and 10, 485 Armenians; 1945 : 133,504, all Muslims, of whom 78, 987 were Kurds and 54,473 Turks. Capital: Karaköse (1945 : 8,605 inhabitants; formerly called Ḳara Kilise). Consists of 6 *ḳaḍā's* (*ilče*): Karaköse, Diyadin, Doğubayazit (formerly Bāyazīd [*q.v.*], capital of the *sandjaḳ* of the same name), Eleşkert (formerly Ales͟hkird or Alas͟hgird), Patnos (formerly ʿAntāb), Tutak. The name is now spelled Agrı.

Bibliography: V. Cuinet, *La Turquie d'Asie*, i, 227-39; S͟h. Sāmī Fras͟hērī, *Ḳāmus ül-Aʿlām*, ii, 1235.

(F. TAESCHNER)

AG͟HRÎ DAG͟H (sometimes also EGHRÎ DAG͟H), mountain (extinct volcano) with a double peak on the eastern frontier of the Turkish Republic, 39°45 N 44°20 E, the highest point in the plateau of the region of the Aras (Araxes) and Wan (high plateau of Ararat), in Armenian Masis or Masik, in Persian Kūh-i Nūḥ; by Europeans it is called Ararat, as it was identified with the mountain of this name (Hebrew Arārāṭ, originally the name of the country of Urarṭu, later understood as the name of a mountain), on which Noah's ark is said to have alighted. (Originally Ararat was identified with Djabal Djūdī [*q.v.*] near Djazīrat Ibn ʿUmar in Mesopotamia.)

The mountain rises, almost without any intermediate ridges, over the flat plain of the Araxes, which is just over 800 m. high and extends to the east and north of the mountain. To the south and the west there extends an undulating high plateau from 1800 to over 3000 m. high, from which rise other extinct volcanoes, and ridges from which to NW and W form the transition to the system of the Eastern Taurus. The Ararat group covers an area of over 1000 square kms. and has a circumference of over 100 kms. It culminates in two summits, Great Ararat (5172 m.) in the NW and Little Ararat (3296 m.) in the SE; these are connected by a narrow, smooth-rounded saddle (2687 m.) 13-14 kms. long, called, after a spring c. 8 km. below, Serdār Bulaḳ. A pass leads over this ridge. In absolute height Ararat surpasses all the mountains of Europe, and with its relative height of over 4300 m. also many famous giants of the other continents. Seen from the north, the mountain, towering over the whole landscape, offers a majestic sight.

Great Ararat (Djabal al-Ḥārit͟h) has the form of a slightly rounded cone. From its summit, which forms an almost circular plateau with a circumference of 150-200 feet, falling off steeply on all sides, snow-fields and glaciers descend for 1000 m. (the snow line is over 4000 m. high). The NE slope of Great Ararat is cleft downwards by a steep ravine (the valley of St. James), the highest part of which is a spacious basin, enclosed by vertical walls of rock, while the lower part, now a stony desert, was formerly inhabited (the village of Arguri, 1737 m., and the monastery of St. James). Lesser Ararat (Djabal al-Ḥuwayrit͟h) has the form of a beautiful regular cone.

The district is afflicted by frequent earthquakes. The most terrible earthquake of recent centuries was that of 20 June 1840; this caused an enormous landslide, which destroyed a flourishing settlement, the ancient Arguri (old Armenian Akori; cf. Hübschmann, in *Indogerm. Forsch.*, xvi, 364, 395), with all its inhabitants (c. 1600), the small monastery of St. James 3 km. above, with all its monks, and the holy well of St. James.

The whole of the Ararat district, owing to the porousness of the cinder- and slag-stone, suffers from a considerable scarcity of water; in spite of the abundant cover of snow, there are only two springs of importance on the slope of Great Ararat (the Sardār Bulaḳ, 2290 m.; and the famous well of St. James, which emerges since 1840 at a different spot), none on Little Ararat. The latter does not

reach the region of eternal snow. It is only in the districts at the eastern and northern feet of the mountain, in the plain of the Aras, that the water oozes out and forms in parts marshy patches.

The dearth of water results in scanty vegetation. Apart from some birches, Ararat, like all the neighbouring mountains, is completely bare of forests; in this extreme form, however, this is caused by human agency. A poor fauna corresponds to the scanty flora. Since the destruction of the human settlements in the valley of St. James the district of Ararat is an uninhabited, solitary desert. In the Middle Ages the conditions were quite different. Al-Istakhrī, 191, expressly states that there was much wood and game on Ararat; al-Maḳdisī adds that there were more than 1000 hamlets on the promontories of Ararat. The Armenian historian Thomas of Artsruni (10th century) also stresses the richness of the region in deer, boars, lions and wild asses (cf. Thopdschian, in *MSOS*, 1904, ii, 150).

After the Persian wars of Selīm I and Süleymān I Ararat was for centuries the northern pillar of the Ottoman Empire against Persia, though both the summit and the northern slopes of Great Ararat, as well as the eastern slopes of Little Ararat, lay in Persian territory, or in that of the Persian vassal state of Nakhčewān. By the treaty of Turkman-čay (2-14 Febr. 1828) the plain of the Aras north of Ararat (the districts of Surmalu, Kulp and Igdir) was ceded by Persia to Russia. Thus the northern slopes together with the summit of Great Ararat fell to Russia, while Little Ararat formed the gigantic boundary stone between the three empires of Turkey, Persia and Russia. By the treaty of Moscow, 16 March 1921, between Soviet Russia and Turkey the plain of the Aras was ceded to Turkey; and in the Turco-Persian agreement (*iʾtilāf-nāma*) of 23 Jan. 1932 (which came into force on 3 Nov. 1932) Persia also ceded to Turkey a small territory, comprising the eastern slope of Little Ararat (cf. *MSOS*, 1934, ii, 116); thus at present the whole territory of the immense mountain belongs to Turkey. (Cf. G. Jäschke, *Die Nordostgrenze der Türkei und Nachitschewan*, *WI*, 1935, 111-5; idem, *Geschichte der russisch-türkischen Kaukasusgrenze*, *Archiv des Völkerrechts*, 1953, 198-206.)

(M. Streck-F. Taeschner)

ĀGRA, town, headquarters of a division and district of the name in the state of Uttar Pradēsh, is situated on the banks of the river Yamunā, 27° 1′ N, 77° 59′ E. Pop. (1951) 375,665, of whom 15.6% are Muslims. The city was for a long time the seat of residence of the Mughal emperors, and is renowned especially for its remarkable monuments of Mughal architecture.

History. Little is known about the early history of Āgra, but there is no doubt it was founded long before the Muslim invasions of India. The first reference to the city, and to an ancient fortress in it, is contained in a *ḳaṣīda* written in praise of the Ghaznawid prince Maḥmūd b. Ibrāhīm by the poet Masʿūd b. Saʿd b. Salmān (d. 515/1121 or 526/1131), wherein the conquest of the fortress (presumably during the reign of Sulṭān Masʿūd III, 493-508/1099-1115) is mentioned. The town was ruled by Rādjpūt chiefs, who, upon making their submission to the Sultanate of Delhi, were allowed to keep their control over it, under the overall command of the governor of Biyāna province. It remained unnoticed until Sultan Sikandar Lōdī (894-923/1489-1517) rebuilt the city in 911/1505 and made it the seat of his government. The place quickly gained in importance and attracted scholars and learned men from many parts of the Muslim world. Commanding routes to Gwalior and Mālwa in the south, Rādjpūtāna in the west, Delhi and the Pandjāb in the north-west, and the plain of the Ganges in the east, it soon became a strategic and trading centre. It continued to be the capital of Ibrāhīm Lōdī (923-32/1517-26) and, on his defeat in 932/1526, it became the capital of Bābur. In addition to building his palace of Čārbāgh, Bābur laid out a number of gardens in the city and constructed many baths. His nobles followed his example, and a considerable portion of the old city was levelled down. The city remained Humāyūn's and Shīr Shāh's capital, but neither Humāyūn, nor Shīr Shāh or his successors were able to spend much time there. It again became the seat of government in the third year of Akbar's reign (965/1558), when he took up residence in the citadel formerly known as Badal Gadh, and his nobles built their houses on both banks of the river. In 972/1565 the construction of the fort on the site of Badal Gadh was undertaken, but before it could be completed, the building of Fatḥpūr Sīkrī [*q.v.*] was commenced. From 982/1574 to 994/1586 Akbar lived mostly in the new city, and later, till 1006/1598, his headquarters were generally at Lahore. In the latter year he returned to Āgra. On his death in 1014/1605, Djahāngīr ascended the throne in that city and lived there almost continuously from 1016/1607 to 1022/1613. He spent another year at Āgra in 1027/1618, but later, until his death in 1037/1628, he spent most of his time in Kashmīr and Lahore. Like his father, Shāh Djahān also ascended the throne at Āgra, but had to leave for the Deccan in the following year. From 1040/1631 to 1042/1633 he again resided in the city, but after that, except for brief visits, he did not stay there for long. Thereafter, he lived mostly at Delhi, where he built

the new city of S͟hāhdjahānābād. (The name of Āgra was also changed to Akbarābād, but the latter name was never widely used.) In 1067/1657 he fell seriously ill and was brought to Āgra by his eldest son, Dārā S͟hikūh. In the war of succession that broke out, Awrangzīb was victorious and ascended the throne in 1068/1658. S͟hāh Djahān was imprisoned in the Fort, where he died in 1076/1666. On hearing the news, Awrangzīb returned to Āgra and held Court there for some time. Later, he again stayed in Āgra from 1079/1669 to 1081/1671. However, Awrangzīb's usual place of residence was, first, Delhi, and then, in the Deccan. Though, in the 17th century, the court did not remain at Āgra for long, the place was nevertheless regarded as one of the capital cities of the Empire. Most of the European travellers who visited India considered it to be one of the largest cities they had seen, comparable in size to Paris, London and Constantinople. It was a centre of trade and commerce and was well known for its textile industry, gold inlay work, stone and marble work and crystal. However the population as well as the trade diminished considerably when the court was away.

The successors of Awrangzīb lived mostly in Delhi, though Āgra continued to be important politically. During the second half of the 18th century, it suffered much from the depredations of the Djāts [*q.v.*], the Mahrattās and the Rohillāhs. Though nominal Mug͟hal sovereignty over the town continued till it was annexed by the British in 1803, except for the years 1774 to 1785 when Nadjaf K͟hān (d. 1782) and his successors were its governors, Āgra was under the occupation of the Djāts (1761-1770, and 1773-74) and the Mahrattās (1758-61, 1770-73, and 1785-1803).

Monuments. The Fort. The present fort of Āgra was built by Akbar on the site of the Lōdī fortress of Badal Gad͟h on the right bank of the Yamunā. It was constructed in about eight years (1565-73) under the superintendance of Muḥammad Ḳāsim K͟hān Mīr-i Baḥr at a cost of 35 lacs of rupees. It is in the shape of an irregular semi-circle with its base along the river. The fort is surrounded by a double wall, loop-holed for musketry, the distance between the walls being 40 ft. The outer wall, just under 70 ft. high and faced with red sand-stone, is about 1½ miles in circuit and represents the first conception of dressed stone on such a large scale. The principal gateway, the Delhi Gate, is one of the most impressive portals in India. Within the fort, according to Abu'l Faḍl, Akbar built "upward of 500 edifices of red stone in the fine styles of Bengāl and Gudjrāt". Most of these buildings were demolished by S͟hāh Djahān to make room for his marble structures, among those that still stand *Akbarī* and *Bangālī Maḥalls* are the earliest. Akbar's buildings are characterised by carved stone brackets which support the stone beams, wide eaves and flat ceilings, the arch being used sparingly. Similar in design is the *Djahāngīrī Maḥall*, a double-storeyed construction, 261 ft. by 288 ft., supposed to have been built by Akbar for Prince Salīm (later Djahāngīr) but very probably built by Djahāngīr himself for the Rādjpūt princesses of the *ḥaram*, though Cunningham thinks it was built by Ibrāhīm Lōdī. After the accession of S͟hāh Djahān architectural style underwent a radical change. With the discovery of marble quarries, red sand-stone was practically eliminated and large-scale use of marble made carved line and flowing rhythm of style possible. Instead of the beam and brackets, foliated or cusped arches became common and marble arcades of engrailed arches distinguished the buildings of S͟hāh Djahān. Among the most important of his buildings in the Fort are the *K͟hāṣṣ Maḥall* and its adjoining north and south pavilions; the *S͟hīs͟h Maḥall* a bath whose walls and ceilings are spangled over with tiny mirrors of irregular shape set in stucco relief; the *Mut͟hamman Burdj* built for the Empress Mumtāz Maḥall (in which building S͟hāh Djahān breathed his last); the *Dīwān-i K͟hāṣṣ* (or private assembly chamber); the *Dīwān-i ʿĀmm* (or public audience chamber) having a court 500 ft by 73 ft,, and a pillared hall 201 ft. by 67 ft. with an alcove of inlaid marble being the throne gallery (built of red sand-stone plastered with white marble stucco which is artistically guilded); the *Motī Masdjid* (or Pearl Mosque) a magnificent structure of white marble standing on a plinth of red sand-stone.

Not far from the fort stands the *Djāmiʿ Masdjid*, built by Djahān Ārā Bēgam, the eldest daughter of S͟hāh Djahān, in 1058/1648, a red sand-stone building having three domes and five gracefully proportioned arches, the central archway being a semi-domed double portal.

The tomb of Akbar at Sikandara, constructed in Djahāngīr's reign on a site selected by Akbar himself, stands in the middle of a well-laid garden about five miles from Āgra. Very probably some idea of the design was settled by Akbar, but the building lacks that correctness which is characteristic of the construction undertaken by that monarch. The building is 340 ft. square, consisting of five terraces diminishing as they ascend. The lowest storey is arcaded and in the centre of each side is inserted a large portico with a deeply recessed archway. The next three storeys consist of superimposed tiers of pillared arcades and kiosks built mainly of red sand-stone. The topmost storey is of white marble and is screened with perforated lattices. Each corner of this storey is surmounted by a slender kiosk.

The tomb of Djahāngīr's minister, Mirzā G͟hiyāt͟h Bēg entitled Iʿtimād al-Dawla (d. 1622), constructed by his daughter, the Empress Nūr Djahān and completed in 1628, stands in the middle of a well-laid garden on the left bank of the river. The mausoleum consists of a square lower storey 69 ft. wide with a gracefully proportioned octagonal turret, like a dwarfed minaret, thrown out from each corner; while the second storey rises in the form of a traceried pavilion covered by a canopy shaped vaulted roof sending out broad stooping eaves, surmounted by two golden pinnacles. It is the first large building in India built entirely of marble and is remarkable for the richness of its decoration and profuse *pietra dura* work.

Tādj Maḥall. The most famous building at Āgra is the *Tādj Maḥall*, the beautiful mausoleum erected by S͟hāh Djahān for his dearly loved wife, Ardjumand Bānū Bēgam, entitled Mumtāz Maḥall, popularly known to her contemporaries as Tādj Maḥall. She was the daughter of Āṣaf K͟hān, son of Iʿtimād al-Dawla, and was married to S͟hāh Djahān in 1612 at the age of nineteen. She bore him fourteen children and died in June 1631 at Burhānpūr after giving birth to a daughter. Work on the mausoleum was started almost immediately after her death and was completed in about twelve years at a cost of five million rupees, though some later writers have put the figure at 30 million rupees. According to the contemporary European traveller,

Tavernier, the structure, together with its subsidiary buildings, was completed in about twenty-two years during which period twenty thousand workmen were continuously employed on it. The best architects and craftsmen, each a specialist in his own field, available in the Empire as well as in the neighbouring countries were engaged for the work, which was carried on under the general supervision of Makramat Khān and Mīr ʿAbd al-Karīm. The tradition that the architect of the *Tādj Maḥall* was a Venetian, Geronimo Veroneo, based on a statement made by Father Manrique, finds no corroboration either in the Mughal chronicles or in the writings of the other contemporary European travellers like Tavernier, Bernier, and Thevenot, who regarded the building as a purely oriental work. Its close resemblance with the tomb of Humāyūn at Delhi, and an analysis of its architectural as well as decorative features, suggest that it was undoubtedly the culminating point in the evolution of the Indo-Muslim style of architecture, though no other building in India is quite as exquisite, elegant or beautiful.

The tomb, built of white marble from Djodhpūr, stands on a raised platform, 18 feet high and 313 feet square, faced with foliated arches. At each corner of this platform there is a beautifully proportioned cylindrical minaret, 133 ft. high girt with three galleries and finished with an open domed *čatr* throwing out broad eaves. In the centre of the platform stands the mausoleum, a square of 186 feet, with angles canted to the extent of 33 ft. 9 ins., the façade rising 92 ft. 3 ins. from the platform. In each face of the building is a high arched recessed porch. On either side of each porch, and at the canted angles, there are arched recesses of uniform size arranged in two storeys. These recesses and the porches are vaulted. Above each of the canted angles stands a domed pillared kiosk, while the centre is occupied by a beautiful bulbous dome, rising from a high circular drum, and surmounted by a gilt pinnacle finished with a crescent. The central dome, 58 ft. in diameter and rising 74 feet above the roof or 191 feet from the platform, is one of the finest in the world. Beneath the dome is the central chamber, octagonal within, buttressed at each angle by small octagonal rooms of two storeys, with the great porches in between each pair. In the middle of the central chamber is the cenotaph of Mumtāz Maḥall, and beside it that of her husband. Immediately beneath these, in the crypt, are the two graves. The cenotaphs are enclosed by a remarkable screen of trellis-work of white marble. The porches are framed in ornamental inscriptions from the Ḳurʾān, and the beauty of the whole is enhanced by copious and graceful ornamentation in *pietra dura*. All the spandrels, angles, and important architectural details are inlaid with semi-precious stones combined in wreaths, scrolls, and frets, as exquisite in design as beautiful in colour. The tomb is surrounded by a formal garden of great beauty, with long lily-ponds, also of marble, containing a row of fountains, leading from the principal entrance to the mausoleum. The river, which bounds the garden on the north, provides marvellous reflections of the building.

AGRICULTURE [see FILĀḤA].

ĀḤĀD [see KHABAR AL-WĀḤID].

AḤĀDĪTH [see ḤADĪTH].

AḤADIYYA [see ALLĀH, WAḤDA].

AHAGGAR, a Berber word denoting (a) the members (pl. *ihaggarən*) of one of the noble tribes constituting the former group of the Northern Tuaregs [*q.v.*], and (b) one of these tribes (Kəl Ahaggar or Ihaggarən), inhabiting a region to which it has given the name of Ahaggar (Hoggar).

In its widest sense, the Ahaggar is the group of territories under the dominion of the Kəl Ahaggar. It covers an area of about 200,000 sq. miles between lat. 21°-25° N and long. 3°-6° E. Bounded by mountain massifs (the Ahanəf to the E., the Tassili of the Ajjər to the N.-E., the Immidir to the N., the Adrar of the Ifoghas [*q.v.*] and the Ayr [*q.v.*] to the S.), it consists of a barren peneplain bounded by the Tassili, which stretch out in an arc both north and south, and dominated by mountain massifs, of which the highest and most important is, in the centre, the Atakor n-Ahaggar or Ahaggar proper, with a mean altitude of 7,200 ft. and with peaks rising to 9,835 ft. (Tahat, 9,835 ft.; Ilaman, 9,510 ft.; Asekrəm, 9,110 ft.). Valleys and steep gorges which debouch into shallow enclosed basins are evidence that in the past the volume of water was more considerable than at present, when the water courses are extremely irregular, and consist of subterranean channels which are easily accessible in places [see IGHARGHAR]. It has a desert climate, and the vegetation is poor and thorny. The few trees which manage to survive are stunted and apparently unable to reproduce themselves further. The fauna comprises several *ungulata*, principally gazelles, and cheetahs, jackals and hares. The people grow dates and a few cereals, breed camels and goats and employ large numbers of donkeys.

The name of the region is taken from that of the peoples who inhabit it or who rule it, the Kəl Ahaggar. The word *ahaggar* is to be related to the name of the Huwwāra [*q.v.*] tribe, the change from *ww* to *gg* being normal in Berber phonetics, and it is likely that branches of this tribe, coming from the Fazzān, established themselves during the historical era in the mountain massif which has taken their name, and reduced the inhabitants of

the region to vassal status. The problem of the origins of these peoples is still not solved [see BERBERS], and the local traditions and the theories formulated by writers at different periods about the populating of the Ahaggar must be treated with reserve. It is clear however that the country has been inhabited from remote antiquity, as witness the traces of work in stone and the many rock engraving which have been discovered (see F. de Chasseloup-Laubat, *Art rupestre au Hoggar*, Paris 1938).

The Ahaggar country was visited several times during the course of the 19th century. After the massacre of the Flatters mission (1880) and the Foureau-Lamy expedition (1898), the *aménokal* [*q.v.*] Mūsā ag Amāstan surrendered to Commandant Laperrine in 1904, and Ahaggar was placed under the control of France. It forms part of the Oasis Territory and its chief centre, Tamanrasset, comprises less than 1,000 inhabitants.

The population of the Ahaggar does not exceed 5,000. The noble tribes of the Kəl Ghəla, Taytoḳ and Tégehé Məllət, with their subdivisions and subject tribes constitute the Ahaggar confederacy, the *aménokal* being chosen from amongst the Kəl Ghəla.

The Touareg of the Ahaggar live in tents. Society is divided into three classes: the noble and suzerain tribes (Ihaggarən or Imuhagh), the subject tribes (Amghid, pl. Imghad) and slaves (akli, pl. iklan). The Ihaggarən, essentially warriors, levied tribute from the Imghad in exchange for their protection. They deputed all manual labour to them and to the slaves, and themselves lived by warfare and pillage. By putting an end to their warlike activities, the occupation of the country by France had somewhat curtailed the resources of the Ihaggarən, who nevertheless retain their prestige and continue to be supported by the Imghad.

For their writing (*tifinagh*), language (*tamahaḳḳ*), the subject of a masterly study by P. de Foucauld, and literature, see BERBERS.

Lhote, *Les Touaregs du Hoggar*, Paris 1944, which has a detailed bibliography, is an essential work. (CH. PELLAT)

ʿAHD, injunction, command; thence: obligation, engagement; thence: agreement, covenant, treaty. The term (as well as the 1st and the 3rd forms of the corresponding verb) occurs frequently in the Ḳurʾān. It is used there over the whole range of its meanings, of Allāh's covenant with men and His commands, of the religious engagement into which the believers have entered, of political agreements and undertakings of believers and unbelievers towards the Prophet and amongst each other, and of ordinary civil agreements and contracts (xvii, 34; xxiii, 8; lxx, 32); occasionally, the agreement is personified: it "will be asked" to give evidence (xvii, 34; xxxiii, 15). From the idea of God's covenant derive the Christian Arabic terms *al-ʿahd al-ʿatīḳ* and *al-ʿahd al-djadīd* for the Old and the New Testament respectively. The basic concrete concept is "joining together", whereas the synonym *ʿaḳd* derives from the concrete idea of "binding". In later usage, the latter term is commonly used of civil engagements and contracts, whereas *ʿahd* is generally restricted to political enactments and treaties, in particular to the appointment of a successor, a *walī al-ʿahd* [*q.v.*], by a ruler, and to treaties of alliance with non-Muslims outside the Islamic state, who are therefore called *ahl al-ʿahd*; this last term is occasionally extended, on one side to the *mustaʾmin* [see AMĀN], and on the other to the *dhimmīs* [see DHIMMA]; both *amān* and *dhimma* are, indeed, a political *ʿahd* with religious sanction.

AL-**AHDAL** (plur. Mahādila, < *Mahdalī for am-Ahdalī(?); on etym. cf. al-Muḥibbī, i ,67, Wüstenfeld, 6), a family of sayyids living mostly in SW Arabia, descended from the sixth ʿAlid *imām* Djaʿfar al-Ṣādiḳ. Their ancestor, ʿAlī b. ʿUmar b. Muḥ. al-Ahdal, called Ḳuṭb al-Yaman, and his son Abū Bakr (d. 700/1300) were famous ṣūfīs, living in the little town of Murāwaʿa (*TA*) or Marāwiʿa (al-Muḥibbī) N (*ḳibliyya*) of Bayt al-Faḳīh Ibn ʿUdjayl, where their graves are visited by pilgrims. To this clan belong the following ṣūfī scholars:

1. Ḥusayn b. ʿAbd al-Raḥmān b. Muḥ., Badr al-Dīn (b. in Ḳuḥriyya 779/1377, d. as Muftī in Abyāt Ḥusayn 855/1451). Among eighteen titles enumerated by al-Sakhāwī, *Ḍawʾ* iii, 146 f. are *Tuḥfat al-Zaman fī Taʾrīkh Sādāt al-Yaman* (*Aʿyān Ahl al-Y.*, Ḥādjdjī Khalīfa), an adaptation and continuation of al-Djanadī's *Taʾrīkh* (*al-Sulūk*); a similar revision of al-Yāfiʿī, *Mirʾāt al-Djanān* was called *Ghirbāl al-Zamān*. Cf. Brockelmann, II, 185, S II, 238 f.; F. Rosenthal, *A history of Muslim historiography*, 248, 355, 407.

2. Ḥusayn b. al-Siddīḳ b. Ḥusayn (grandson of 1) (b. 850/1446 in Abyāt Ḥusayn, d. 903/1497 in ʿAdan) abridged, according to his pupil Abū Makhrama, his grandfather's *Taʾrīkh* (i.e. *Tuḥfat al-Zaman*). A mosque was built in ʿAdan in his memory in 1847. Cf. Brockelmann, S II, 251 (incorrect), *Nūr*, 27-30, *Ḍawʾ*, iii, 144.

3. Ṭāhir b. Ḥusayn b. ʿAbd al-Raḥmān, Djamāl al-Dīn (b. 914/1508 in Murāwaʿa, d. 998/1590 in Zabīd), a jurist and traditionist, abridged a work of his ancestor Ḥusayn (no. 1) called *Maṭālib Ahl al-Ḳurba fī Sharḥ Duʿāʾ al-Walī Abī Ḥarba* (*Nūr*, 447 ff., cf. *Ḍawʾ*, iii, 146). His son

4. Muḥ. b. Ṭāhir wrote *Bughyat al-Ṭālib bi-Maʿrifat Awlād ʿAlī b. Abī Ṭālib* (Wüst., 7; Brockelmann, S II, 239 is incorrect).

5. Ḥātim b. Aḥmad b. Mūsā b. Abiʾl-Ḳāsim b. Muḥ. (d. 1013/1604 in the seaport Makhāʾ (Mukha), where he had lived for 37 years), famous ṣūfī and scholar, "the Ibn ʿArabi of his time", according to his disciple ʿAbd al-Ḳādir al-ʿAydarūs (*Nūr*, 161-475), who published their correspondence in the work *al-Darr al-Bāsim min Rawḍ al-Sayyid Ḥātim*. His improvised poems were collected into a *dīwān*. Cf. Brockelmann, II, 407, S II, 565; al-Muḥibbī, i, 496-500, Wüst., 114, Serjeant, *Materials*, ii, 585 f.

6. Abū Bakr b. Abiʾl-Ḳāsim b. Aḥmad (b. 984/1576, d. 1035/1626) had a *zāwiya* in al-Maḥaṭṭ (Wādī Rimaʿ). Among his works are: *Nafḥat al-Mandal* (*fī Tarādjim Sādāt al-Ahdal*, Ism. Pasha, *Dhayl*) and *al-Aḥsāb al-ʿAliyya fiʾl-Ansāb al-Ahdaliyya*. Cf. Brockelmann, II, 544; al-Muḥibbī, i, 64-8, Wüst., 112 f.

7. ʿAbd al-Raḥmān b. Sulaymān (d. 1250/1835) is mentioned with eight titles in Brockelmann, S III, 1311. Another work, *al-Nafas al-Yamānī fī Idjāzat Baniʾl-Shawkānī*, cited by Serjeant, *Materials*, ii, 587.

For two more members of this family, with the nisba al-Mūsawī, Muḥ. al-Kāẓim in the 9/15th century, the other in recent time, see Brockelmann, S II, 239, 865. A collection of traditions on South Arabia, *Nathr al-Durr al-Maknūn min Faḍā'il al-Yaman al-Maymūn*, was published ca. 1350/1931 in Cairo by Muḥ. b. ʿAlī al-Ahdalī al-Ḥusaynī al-Azharī.

Bibliography: Shardjī, *Ṭabaḳāt al-Khawāṣṣ*, 80, 173, 190; Sakhāwī, *al-Ḍaw' al-Lāmiʿ*, iii, 144-7; ʿAbd al-Ḳādir al-ʿAydarūs(ī), *al-Nūr al-Sāfir*, passim; Muḥibbī, *Khulāṣat al-Athar*, passim; F. Wüstenfeld, *Die Çufiten in Süd-Arabien im XI.* (*XVII.*) *Jahrhundert*, 111-5; H. C. Kay, *Yaman*, xviii f.; O. Löfgren, in *MO*, xxv, 129 f.; idem, *Arab. Texte zur Kenntnis der Stadt Aden*, introd., 22 f. and passim ;R. B. Serjeant, *Materials for South Arabian history*, i-ii, *BSOAS*, 1950, 281-307, 581-601). (O. LÖFGREN)

AḤDĀTH, literally "young men", a kind of urban militia which plays a considerable role in the cities of Syria and Upper Mesopotamia from the 4th/10th to the 6th/12th centuries, and is particularly well known at Aleppo and Damascus. Officially, its role is that of a police, charged with public order, fire-fighting, etc., and also, in time of need, with military defence in reinforcement of the regular troops. For these services the *aḥdāth* receive stipends allocated from the product of certain urban taxes. The only distinction between them and any ordinary police is the local nonprofessional nature of their recruitment, but it is precisely this which gives them an effective function, much more important and often quite different from that of a police. As armed and pugnacious men of the native-born population, they constitute in face of the political authorities (usually foreigners, or in any case from outside the city) the dynamic element of "municipal" oppositions. It is for this reason that we repeatedly find them rising against the domination of the princes, and sometimes, when the latter are weak, forcing upon them in effect a regime of condominium in the city. In relation to the population, however, they do not always represent the same strata. At critical moments, for example at Damascus immediately after the Fāṭimid occupation, they are dominated by popular elements; more often they appear to accept the direction of the bourgoisie, and form more especially a body of supporters for one or two great families, from whom is drawn their chief, the *ra'īs*. This *ra'īs* forces the authorities to recognize him as *ra'īs al-balad*, a kind of mayor, whose influence counterbalances, and sometimes exceeds, that of the *ḳāḍī*, also a local notable. Out of this there may thus emerge finally veritable urban dynasties, such as (parallel to the Banū ʿAmmār of Tripoli, arising out of the *ḳāḍīs* of that city) the Banū Nīsān of Āmid, hereditary chiefs of Āmid in the 6th/12th century under the nominal suzerainty of the Inālid Turkman princes. The portrait of the cities of Syria and the Djazīra furnished to us by these facts is evidently at some remove from the common view which presents them as lacking any kind of municipal structure. The *aḥdāth* were, of course, most active at times and places in which a professional police (*shurṭa* [*q.v.*]) could not be maintained, and for this reason neither Baghdād nor Cairo offer us a comparable picture. Their final decadence begins with the establishment by the Saldjūḳids or their successors of military commandants (*shiḥna* [*q.v.*]) at the head of each city, supported by garrisons drawn from the regular army. About the same period the term *aḥdāth* is applied also to armed bands of the Bāṭiniyya or "Assassins" in Syria.

The term is found in earlier centuries in ʿIrāḳ, especially in Baṣra and Kūfa in the 2nd/8th century, but also in Baghdād and elsewhere. The officer in charge of the *aḥdāth* was responsible for public order, but the term *aḥdāth* in this case has generally been taken (following the opinion of Dozy, s.v.) in the other sense, equally justified by etymology, of blameworthy "innovations" of such a nature as to disturb public order and whose authors should be seized and punished. In general use, the term certainly has in given contexts the sense of "crime", but equally certainly in other contexts the sense of groups of "young men", vaguely specified. In the light of the materials described above, Dozy's view must be regarded as open to question; but up to the present time no text has come to notice which allows of a definite decision.

The further question arises of the relations between the Syrian and Mesopotamian *aḥdāth* and the *fityān* (see FATĀ) and *ʿayyārūn* (see ʿAYYĀR) whose existence is documented in ʿIrāḳ and the Iranian regions throughout the Middle Ages, and who also were especially active from the 4th/10th to 6th/12th centuries. These certainly played the role of "active wing" of the popular oppositions to the official authorities, parallel to, but more vigorously pressed than, that of the *aḥdāth*; the Iranian cities, moreover, all had apparently a *ra'īs*, who seems sometimes to have been the *ra'īs* of the *fityān* in his city. Etymologically also, *aḥdāth* and *fityān* have the same meaning. Nevertheless, though there is often convergence in fact, the two institutions differ in their origin, and these differences persisted. *Fityān* and *ʿayyārūn* were essentially private groups, recruited from the depressed classes and more violent in action, and it was only by gradual stages that they sometimes succeeded in drawing certain bourgeois or aristocratic elements in their train, or in replacing the military police. They often formed organized bodies with initiatory rites, within which there developed the peculiar ideology of the *futuwwa* [*q.v.*]. No parallel to this has yet been found among the *aḥdāth*. It may not be accidental that the boundary between cities with *fityān* and those with *aḥdāth* corresponds very closely to the ancient Byzantine-Sasanid frontier, a fact which suggests that the *aḥdāth* may possibly be related to the ancient "factions" of the Later Roman empire. The whole question can, however, only be investigated in the framework of the general social study of the Islamic cities, on which little work has yet been done.

Bibliography: Numerous references to *aḥdāth* in Ibn al-Ḳalānisī, *Dhayl Ta'rīkh Dimashḳ* (Amedroz) (Eng.tr. by H. A. R. Gibb, *The Damascus Chronicle of the Crusades*, London 1932; Fr. tr. by R. Le Tourneau, *Damas de* 1075 *à* 1154, Paris 1952); also in Ibn al-ʿAdīm, *Ta'rīkh Ḥalab* (Dahan), Ibn Abī Ṭayyi (ap. Ibn al-Furāt, in MS), Ibn al-Athīr, Yaḥyā al-Anṭāḳī (Kratchkowsky & Vasiliev), Sibṭ b. al-Djawzī, and other Syrian sources. For the ʿIrāḳī problem see esp. Ṭabarī, *passim*, and Māwardī, *al-Aḥkām al-Sulṭāniyya*, ch. xix. Summary in *Recueil de la Soc. Jean Bodin*, vi, by Cl. Cahen, who is preparing a more complete study; remarks by Reinaud in *JA*, 1848/ii, 231; indications by Gibb and Le Tourneau in their introductions to translations of Ibn al-Ḳalānisī; J. Sauvaget, *Alep*, 96, 103, 139. See also AKHĪ, ʿAYYĀR, FATĀ. (CL. CAHEN)

ĀHĪ, Turkish poet, whose real name seems to have been Beñli Ḥasan ("Ḥasan with the mole"). His father Sīdī Khodja was a merchant in Trstenik (not far from Nicopolis). After the latter's death Āhī went to Istanbul and chose for himself the career of a scholar, but for a long time advanced no further than the rank of candidate (*mulāzim*), because he declined the position of *müderris* in Bāyazīd Pasha's *medrese* in Brusa. Finally he obtained the less important position of *müderris* in Ḳara Ferya (Berrhoea), where he died in 923/1517. He left two unfinished poetical works, of which the titles are: *Shīrīn we-Perwīz* (imitating Sheykhī's *Khusrew u-Shīrīn*), and *Ḥusn u-Dil* (Istanbul 1277). The latter work is an allegorical poem written in prose interspersed with verses, and is an imitation of Fattāḥī's [*q.v.*] work of the same title. Gibb has epitomized its contents.

Bibliography: Sehī, 108; Laṭīfī (Chabert), 105; ʿĀshīḳ Čelebi and Ḳīnalī-zāde, s v.; Gibb, ii, 286 ff.; Hammer-Purgstall, *Gesch. d. Osman. Dichtkunst*, i, 209; *Yeni Medjmūʿa*, 1918, no. 54; *Istanbul Kitaplīklarī Türkçe Yazma divanlar kataloğu*, no. 33.

AL-**AḤḲĀF**, the title of Sūra xlvi of the Ḳurʾān, and a geographical term the meaning and application of which have been generally misunderstood. The Sūra derives its title from verse 21, which speaks of ʿĀd as warning his people in al-Aḥḳāf. The word *aḥḳāf* is usually interpreted in dictionaries, books of *tafsīr*, and translations of the Ḳurʾān as meaning curved sand dunes. Medieval Arab geographers considered al-Aḥḳāf to be the name of a sand desert in Southern Arabia, said to lie between Ḥaḍramawt and ʿUmān, i.e., in the eastern part of al-Ramla or al-Rubʿ al-Khālī [*q.v.*]. Modern Western geographers, on the other hand, have inclined towards the identification of al-Aḥḳāf with the whole of al-Ramla or just its western half. C. Landberg (*Ḥaḍramoût*, 146-160) showed that al-Aḥḳāf as a regional name is used in Southern Arabia as roughly synonymous with Ḥaḍramawt in the broadest sense and is not applied to the sands farther north. The southern bedouins define Barr al-Aḥḳāf as the mountainous area running behind the coast from Ẓufār west to Aden, the central valley of which is Wādī Ḥaḍramawt; to them the word *aḥḳāf* means simply mountains and is not associated either with dunes or, as suggested by Landberg, with caves (*kuhūf*). A statement made to ʿAlī b. Abī Ṭālib by a man of Ḥaḍramawt, as recounted by Ibn al-Kalbī and repeated by al-Bakrī and Yāḳūt (s.v.), indicates that even in ancient times *aḥḳāf* may have been used in Southern Arabia in this connection rather than as a name for dunes in the Great Desert.

(G. RENTZ)

AḤKĀM, pl. of *ḥukm*, decision, judgment. [See also ḤAKAM.] In the Ḳurʾān, the word occurs only in the singular, and is used (as is the corresponding verb) of Allāh, the Prophets, and other men. Used of Allāh, it denotes both individual ordinances and the whole of His dispensation (iii, 79; xlv, 16; lx, 10). In the ultimate sense, final jurisdiction belongs to Allāh alone [see AL-MUḤAKKIMA], but He has given authority to make decisions to His Prophets. The jurisdiction of Muḥammad, in particular, is opposed to that of paganism (v, 50). So *ḥukm* comes to mean the authority, imperium, of the Islamic government and, on the other hand, the judgment of a ḳāḍī on a concrete case.

From *ḥukm* in the sense of a judicial decision derive the meanings of a logical judgment concerning a thing, of a status to be predicated of a thing or of a person, and of a rule in religious law, in grammar, and in other sciences. In all these meanings, the term is freely used in the plural. In particular, one speaks of *al-aḥkām al-khamsa*, the "five qualifications" (obligatory, recommended, indifferent, reprehensible, forbidden), by one or the other of which every act of man is qualified in religious law [see SHARĪʿA]. In a broader sense, *aḥkām* means the sum of the rules pertaining to any given subject (cf. the titles of books such as *aḥkām al-awḳāf* "On Waḳf", *al-aḥkām al-sulṭāniyya* "On Government", also *aḥkām al-ākhira* "On the Next World"; *aḥkām al-nudjūm* "astrology", etc.). In the field of religious law, *aḥkām* is therefore synonymous with the *furūʿ*, the positive law as opposed to legal theory or jurisprudence [see FIḲH]; but as it also means judicial decisions, the term is more specifically used of the application of legal rules to concrete cases.

Jeffery, in *MW*, 1950, 121 f.; R. Bell, *Introduction to the Qurʾān*, 153; L. Gardet, *La Cité musulmane*, index, s.v. *aḥkām* and *ḥukm*. (J. SCHACHT)

AHL (A.), originally meaning "those who occupy with one the same tent (Hebrew *ōhel*)", thus "family, inmates". Therefore *ahl al-Bayt* means literally "the household of the Prophet". When the *ahl* (pl. *ahālī*) of a town or a country is spoken of it denotes its inhabitants, sometimes, as in Medina (according to Burton), specially those who were born there and own houses. But this word is often connected with other concepts, and is in these combinations more loosely used, so that it may come to mean "sharing in a thing, belonging to it", or "owner of the same", etc. Some of the compounds with *ahl* most in use follow here.

AHL AL-**AHWĀʾ** (A.; sing. *hawā*, "predilection, inclination of the soul"; comp. Ḳurʾān vi, 151) is a term applied by the orthodox theologians to those followers of Islām, whose religious tenets in certain details deviate from the general ordinances of the Sunnite confession (cf. *ZDMG*, 1898, 159). As examples there are mentioned: Djabariyya, Ḳadariyya, Rawāfiḍ, Khawāridj, anthropomorphists, Muʿaṭṭila. From the above definition it may be inferred that in the sense of Muslim theology it is not proper to designate these tendencies as sects.

(I. GOLDZIHER)

AHL AL-**BAYT**, ĀL AL-BAYT, "the people of the House", ĀL AL-NABĪ, "the family of the Prophet", all mean the same; the term *Āl Yāsīn* also occurs. The origin of the phrase is to be found in the strong clan sense of the pre-Islamic Arabs, among whom the term *al-bayt* was applied to or adopted by the ruling family of a tribe (by derivation from an ancient right of guardianship of the symbol of the tribal deity, according to H. Lammens, *Le Culte des Bétyles*, in *L'Arabie occidentale avant l'Hégire*, Beirut 1928, 136 ff., 154 ff.), and survived into later centuries in the plural form *al-buyūtāt* for the noble tribal families [see AHL AL-BUYŪTAT and ĀL]. In early Islamic times the term *bayt* was applied to themselves by a number of families, e.g. by ʿAbd Allāh b. ʿUmar to the house of ʿUmar (Ibn ʿAbd al-Ḥakam, *Sīrat ʿUmar b. ʿAbd al-ʿAzīz*, Cairo 1927, 19), and by ʿUmar II to the Umayyad house (*innamā al-Ḥadjdjādju minnā ahlu 'l-bayti*: ibid. 24). In the Ḳurʾān the phrase *ahla 'l-bayti* occurs twice: once in xi, 73, applied to the house of Ibrāhīm; the

second passage, xxxiii, 33 ("God desires only to remove filthiness from you (masc. pl.), *ahl^a 'l-bayt^i*, and with cleansing to cleanse you"), serves as the proof-text for its application to the house of Muḥammad (but see R. Paret, in *Orientalische Studien Enno Littmann .... überreicht*, Leiden 1935, 127-20).

The precise interpretation of the term in xxxiii, 33, gave rise to differences of opinion. In one tradition, according to which Salmān al-Fārisī [*q.v.*] is included among the *ahl al-bayt* (Ibn Hishām, *Sira* (Cairo), iii, 241; Ibn Saʿd, iv/1, 59,), it is opposed to *muhādjirūn* and *anṣār*. Among the Shīʿa (and generally in circles friendly to ʿAlī) it was applied to Muḥammad, ʿAlī, Fāṭima, al-Ḥasan and al-Ḥusayn (cf. already al-Kumayt, *Hāshimiyyāt* (Horovitz), 38 l. 30; cf. 92, l. 67) by interpreting the verse through the wellknown "tradition of the mantle" (*ḥadīth al-kisāʾ*, *ḥadīth al-ʿabāʾ*), which was accepted also in Sunnī circles [see AHL AL-KISĀʾ]. In keeping with an explanation of the Ḳurʾānic phrase as referring to the Prophet's wives and dependents, attributed to Ibn ʿAbbās and ʿIkrima, Umm Salama is, in some versions of this tradition, recognized by the Prophet as belonging to the *ahl al-bayt*. It is given a still wider application in a version of the so-called *ḥadīth al-thaḳalayn*, where the term is applied to those to whom (including their *mawālī*) a share in the *ṣadaḳa* is forbidden; among these are definitely mentioned the families (*āl*) of ʿAlī, of his brothers ʿAḳīl and Djaʿfar, and of al-ʿAbbās. In this tradition, therefore, the *ahl al-bayt* includes the Ṭālibids and ʿAbbāsids, historically the most important families of the Banū Hāshim; and in order to strengthen their claim to inclusion in the verse of purification, the ʿAbbāsids also had their counterpart of the *ḥadīth al-kisāʾ*. Mālik and Abū Ḥanīfa extended it to include all the Banū Hāshim and al-Shāfiʿī extended it to the Banū Muṭṭalib also, while others make it include the whole community. The current orthodox view is based on a harmonizing opinion, according to which the term *ahl al-bayt* includes the *ahl al-ʿabāʾ*, i.e. the Prophet, ʿAlī, Fāṭima, al-Ḥasan and al-Ḥusayn, together with the wives of the Prophet.

The Shīʿa limit the family (which they call by preference *ʿitra*) to the *ahl al-kisāʾ* and their descendants, making devotion to them an essential, or even the main, part of religion. In one version of the "Farewell Sermon" Muḥammad is represented as saying that God has given two safeguards to the world: His Book and the Prophet's *sunna*; in another version, this is replaced by: His Book and the Prophet's *ʿitra*. The official creed of the Shīʿa does not go beyond this, but popular belief ascribes cosmological importance to the family as in traditions like: "The stars are a pledge to the world that it will not be drowned, and my family are a pledge to the community that it will not go astray"; "God would not have created heaven, earth, paradise, Adam, Eve, the angels, nor anything else but for them (the family)". They have the same saving function as Noah's ark. The heads of the family are the Imāms [*q.v.*], infallible and sinless. The extreme Manṣūriyya called the family heaven and the Shīʿa earth (al-ʿAshʿarī, *Maḳālāt*, 9).

The ideas of the Shīʿa found their way into later collections of *ḥadīth*, although the Sunna declares that love for the family is of no avail without obedience to the *sunna*. Al-Maḳrīzī is quoted as saying: "Beware of finding fault with one of the family, for no heresy, no default in the performance of religious duties, and no sin deprives him of his sonship."

The form *Āl* is used more especially in the invocation: "O God, bless (*ṣalli ʿalā*) Muḥammad and his *āl*" (cf. I. Goldziher, in *ZDMG*, L, 114-7). The definition of those comprehended in this expression has produced controversies similar to those about the *ahl al-bayt*. Ibn Khālawayh enumerated twenty-five classes in his *K. al-Āl* (G. Flügel, *Die grammatischen Schulen d. Araber*, 231; citation in Baḥrānī, *Manār al-Hudā*, Bombay 1320, 200). See also al-Ṭūsī, *List of Shyʿa Books*, no. 294.

(I. GOLDZIHER-C. VAN ARENDONK-A. S. TRITTON)

AHL AL-BUYŪTĀT (A.), originally denoted those that belong to Persian families of the highest nobility (Nöldeke, *Gesch. d. Perser u. Araber zur Zeit der Sassaniden*, 71), then, the nobles in general. Other meanings are given by Dozy, *Supplément*, i, 131.

AHL AL-DĀR (A.) = "the people of the house", in the Almohad hierarchy the 6th order [see AL-MUWAḤḤIDŪN].

AHL AL-DHIMMA (A.), the Jews and Christians, between whom and the Muslims there is according to Muslim law a certain legal relation [see DHIMMA].

AHL AL-FARḌ [see MĪRĀTH].

AHL AL-ḤADĪTH, also AṢḤĀB AL-ḤADĪTH, the partisans of traditions [see ḤADĪTH]. Traditionalism in Islam manifested itself first in the re-emergence of the old Arabian concept of *sunna* [*q.v.*], the normative custom of the community, which was in due course identified with the *sunna* of the Prophet. This normative custom found its expression in the "living tradition" of the ancient schools of religious law, which came into being at the very beginning of the second century of Islam. In opposition to the ancient schools and their extensive use of human reasoning and personal opinion [see AṢḤĀB AL-RAʾY and RAʾY), the *ahl al-ḥadīth*, who appeared on the stage a little later, claimed that formal traditions from the Prophet, even though they were transmitted only by isolated individuals [see KHABAR AL-WĀḤID], superseded the "living tradition". The traditionists themselves were responsible for putting into circulation many traditions which purported to go back to the Prophet, and they specialised in collecting, perfecting, transmitting and studying them; long journeys were made in search of traditions. Though hardly any of this material, as far as religious law is concerned, can be regarded as authentic by the standards of historical research, the Muslims, from the 3rd/9th century onwards, have accepted its essential parts as genuine.

The movement of the traditionists was the most

important event in the history of Islamic religious law in the second century of Islam. The ancient schools opposed it strongly at first, and the discussion concerning the authority of formal traditions from the Prophet, as against the "living tradition" of the schools, occupied most of that century. Once consciously formulated, however, the thesis of the traditionists, invoking as it did the highest possible authority under the Ḳur'ān, was assured of success, and the ancient schools had no real defence against the rising tide of traditions. Al-Shāfi'ī [*q.v.*] adopted the thesis of the traditionists and the other schools accepted it too, though they did not necessarily change their established doctrine accordingly. Only the doctrine of Aḥmad b. Ḥanbal [*q.v.*] is purely traditionist. The final theory of religious law represents a compromise, insofar as the thesis of the traditionists, while accepted in principle, was made dependent in its application on the consensus of the scholars [see UṢŪL].

The main material aim of the traditionists was the same as that of the ancient schools, that is, to subordinate the legal subject-matter to religious and ethical considerations. On occasion, they showed themselves interested in purely legal issues as well. Al-Shāfi'ī had reason to complain that their standards of reasoning in general were inferior to those of the ancient schools, and in particular, he disavowed those extreme traditionists who accepted all traditions indiscriminately. The majority of traditionists, however, attempted to discriminate between reliable and unreliable traditions by criticism of the *isnād* [*q.v.*]; this criticism was directed against the ancient schools whose standards, by the nature of things, were less exacting in this respect. This traditional criticism of the *isnād* has no direct bearing on determining the historical authenticity of a tradition.

As early as the 2nd/8th century, the study of traditions from the Prophet became an end in itself, and the science of traditions, no longer opposed but complementary to the science of positive religious law (*fiḳh* [*q.v.*]), became an important and assiduously cultivated branch of Islamic religious scholarship. The usual term for a technical specialist in traditions is *muḥaddith*.

Bibliography: Shāfi'ī, *K. al-Umm*, vii, passim; Ibn Ḳutayba, *Ta'wīl Mukhtalif al-Ḥadīth*, 88 ff. (defence of the traditionists); idem, *Ma'ārif* (Wüstenfeld), 251 ff. (transl. Bercher, *Études sur la tradition islamique*, 91 ff.); A. Guillaume, *The Traditions of Islam*, 69 f.; J. Fück, in *ZDMG*, 1939, 1 ff. (represents a very conservative point of view); J. Schacht, *Origins of Muhammadan Jurisprudence*, 253 ff. and passim; idem, *Esquisse d'une histoire du droit musulman*, 31 ff.

(J. SCHACHT)

AHL-I ḤADĪTH, "the followers of the Prophetic tradition", is a designation used in India and Pakistan for the members of a Muslim sect, who profess to hold the same views as the early *aṣḥāb al-ḥadīth* or *ahl al-ḥadīth* [*q.v.*] (as opposed to *ahl al-ra'y*). They do not hold themselves bound by *taḳlīd* or obedience to any of the four recognized *imāms* of the *fiḳh*-schools but consider themselves free to seek guidance in matters of religious faith and practice from the authentic traditions, which together with the Ḳur'ān are in their view the only worthy guide for true Muslims. They disregard the opinions of the founders of the four schools when they find them unsupported by or at variance with traditions, transmitted on the authority of the Companions of the Prophet. They have thus earned the name of *ghayr muḳallid*, which appellation, though disowned by them, nevertheless admirably defines their position in relation to other sects. They reject also the common notion that the *idjtihād* or legal conclusions of the founders of these schools are of final authority; and rather contend that every believer is free to follow his own interpretations of the Ḳur'ān and the traditions, provided he has sufficient learning to enable him to give a valid interpretation. Consequently, they do not regard the *idjmā'* or consensus of the preceding generations of Muslims as binding on them. As a result of their characteristic attitude, they have found themselves in conflict chiefly with the Ḥanafīs or followers (*muḳallids*) of Abū Ḥanīfa, who constitute the majority of Sunnī Muslims in India and Pakistan. Their controversy has, however, been confined in actual practice to certain minor points of ritual (such as *raf' al-yadayn, āmīn bi'l-djahr*) and belief, there being a substantial agreement on really important theological and doctrinal questions.

The Ahl-i Ḥadīth try to go back to first principles and to restore the original simplicity and purity of faith and practice. Emphasis is, accordingly, laid in particular on the reassertion of *tawḥīd* or the unity of Allāh and the denial of occult powers and knowledge of the hidden things (*'ilm al-ghayb*) to any of his creatures. This involves a rejection of the miraculous powers of saints and of the exaggerated veneration paid to them. They also make every effort to eradicate customs that may be traced either to innovation (*bid'a*) or to Hindu or other non-Islamic systems. In all this, their reformist programme bears a striking resemblance to that of the Wahhābīs of Arabia; and as a matter of fact their adversaries often nickname them Wahhābīs, an appellation which they repudiate, on the ground that their tenets are not derived from the Arabian Wahhābīs, who are themselves *muḳallids* in the sense that they follow the opinions of Ahmad b. Ḥanbal in legal matters.

The Ahl-i Ḥadīth made their first appearance as a distinct sect in the last century, partly through the influence of the writings of Nawwāb Ṣiddīḳ Ḥasan Khān ([*q.v.*]; d. 1307/1890) and partly through the teaching of Sayyid Nadhīr Ḥusayn (d. 1320/1902), an eminent theologian who specialized in the science of *Ḥadīth* and lectured on it for more than half a century at Delhi. Among his numerous pupils, who became influential teachers and writers in their own turn and propagated his ideas in different parts of the country, special mention is due to Mawlawī 'Abd Allāh Ghaznawī (d. 1298/1881), who was banished from his native country of Afghānistān for his views and settled in Amritsar (Pandjāb); Mawlawī Muḥammad Ḥusayn of Batāla (d. 1338/1919), who edited the monthly *Ishā'at al-Sunna* for many years; and Mawlawī Abu 'l-Wafā Thanā Allāh (d. 1367/1948), who edited the weekly *Ahl al-Ḥadīth* till 1947 and made a great name for himself as a controversialist and an expositor of the views of the school. The last named also took a leading part in organizing the All-India Ahl-i Hadith Conference with its head-quarters at Delhi, where its first annual meeting was held in 1912.

The Ahl-i Ḥadīth have their own journals, mosques and seminaries, and are distinguished by (1) their zealous effort, only partly successful, to purify the

religious life of the Muslims by ridding it of its innovations, superstitions and unnatural accretions, (2) their active promotion of the study of Ḥadīth literature, the importance of which had already been recognized by Shaykh ʿAbd al-Ḥaḳḳ Muḥaddith of Delhi [*q.v.*], and (3) their polemics against the Ārya-Samādjist Hindus, the Christian missionaries and the Aḥmadīs (Ḳādiyānīs).

AHL-I ḤAḲḲ, "Men of God", a secret religion prevalent mainly in western Persia. Ahl-i Ḥaḳḳ would seem to be a rather imprecise name for this sect, because it is used, for example, by the Ḥurūfīs (see Cl. Huart, *Textes persans relatifs à la secte des Ḥurûfî*, 1909, 40), and because it has an affinity with such ṣūfī terms as *Ahl-i Ḥaḳīḳa*, a term which is also used by the Ahl-i Ḥaḳḳ. In the strict sense, however, Ahl-i Ḥaḳḳ is the name properly given to initiates of the religion described in the present article. The name ʿAlī Ilāhī [*q.v.*] applied to them by their neighbours is an unsuitable title, because ʿAlī is not the dominant figure in the religion of the Ahl-i Ḥaḳḳ, and further because the term ʿAlī Ilāhī is also used in relation to sects whose connection with the Ahl-i Ḥaḳḳ has not yet been established.

The only reliable method is to describe the sect on the basis of the authentic sources, supplemented by material drawn from the narratives of travellers. The difficulties of this task arise firstly from the fact that the number of texts available is still limited (besides being often in dialect and bristling with abstruse terms) and secondly from the existence of numerous subsects. The Ahl-i Ḥaḳḳ church has no canonical unity, but resembles rather a federation of associated movements (see a provisional list of these subdivisions in Minorsky, *Notes*, 46 [33]). There are twelve main *khānadāns* or *silsilas* (v. infra), but there are branches which are not included in this list, cf. the Sayyid Djalālī (Minorsky, *Notes*, 48 [35]) and the Tūmārī (a highly abnormal group) (*Minorsky*, *Études*, I). The account by Gobineau, the *Firḳān* and the text published by W. Ivanow reveal a religious system more philosophical than the naive legends of the *Sarandjām* (in the Ātash-begī version). Since, at the moment, however, this branch is better known to us, the following account will be based primarily on the Ātash-begī documents, to be supplemented later by material from the *Firḳān*, the author of which was a Khāmūshī (?).

The Dogmas. The central point in the dogmas of the Ahl-i Ḥaḳḳ is the belief in the successive manifestations of the Divinity, the number of these being seven. The manifestations of God are compared to garments put on by the Divinity: "to become incarnate" means "to come (to dwell) in a garment" (*libās*, *djāma*, *dūn* < Turk. **don*).

On each occasion the Divinity appears with a following of Four (or Five) Angels (*yārān-i čār-malak*) with whom he forms a close group.

The table of theophanies according to the MS. of the *Sarandjām* is given below.

In pre-eternity (*azal*) the Divinity was enclosed in a Pearl (*durr*). He made his first external appearance in the person of Khāwandagār, the Creator of the world. The second avatar was in the person of ʿAlī. From the beginning of the third epoch the list becomes quite original and typically Ahl-i Ḥaḳḳ. The first four epochs correspond to the stages of religious knowledge: *sharīʿa*, *ṭarīḳa*, *maʿrifa* and *ḥaḳīḳa*. According to all branches of the sect, the representative of the last and the highest stage is Sulṭān Ṣohāk. On the other hand, several differences of opinion regarding the successors of Sulṭān Ṣohāk are recorded.

Just as the divine essence reappears in each of the seven "garments", the angels (cf. the vertical columns in the table) are avatars of one another. For this reason their names are interchangeable and Salmān is often spoken of in the epoch of Sulṭān Ṣohāk or Benyāmīn in the epoch of Khāwandagār. The angels are emanations of the Divinity: the first of them was produced by Khāwandagār from his armpit, the second from his mouth, the third from his breath, the fourth and

	I	II	III	IV	V
1. Khāwandagār	Djibrāʾīl	Mīkāʾīl	Isrāfīl	ʿAzrāʾīl	?
2. Murtaḍā ʿAlī	Salmān	Ḳanbar	Ḥaḍrat-i Muḥammad	Nuṣayr	Fāṭima
3. Shāh Khoshīn	Bābā Buzurg	Kākā Reḍā (Riḍā)	Kore-Faḳī	Bābā Ṭāhir	Māmā Djalāla
4. Sulṭān Ṣohāk	Benyāmīn	Dāwūd	Pīr-i Mūsī	Muṣṭafā Dowdān	Khātūn Dāyira
5. Ḳirmīzī (Shāh Ways Ḳulī)	Kāmarīdjān	Yārīdjān	Yārālī	Shāh Sawār Agha	Razbār
6. Mamad-beg	Djamshīd-beg	Almās-beg	Abdāl-beg	?	Parī-khān-i Shart
7. Khān Ātash	Khān Djamshīd	Khān Almās	Khān Abdāl	?	Dūstī Khānum

fifth from his perspiration and his light respectively (cf. the *Sarandjām*). According to another version, Benyāmīn was created from the perspiration, which is characteristic of modesty; Dāwūd — from the breath (anger); Mūsī — from the moustache (pity); Razbār — from the pulse (charity). The angels play the part of ministers to the Divinity: Benyāmīn is the deputy (*wakīl*) and the *pīr*; Dāwūd is the overseer (*nāẓir*) and judge (?); Pīr Mūsī is the *wazīr* who records good and evil; Muṣṭafā Dowdān (= Nuṣayr) is the Angel of Death.

The angels are usually said to be four in number (in some lists and in certain periods this number is reduced to three) but in fact a fifth angel is especially charged with the supervision of worship. This angel's symbolical name is Razbār, Raẓbār or Ramzbār ("entrusted with mysteries") and her feminine character is indisputable; but the sex in Razbār is not emphasized. One of the informants even alleges that Razbār is a hermaphrodite (*khunthā*). Razbār is the mystical name of Khātūn Dāyira, mother of Sulṭān Ṣohāk, and the compiler of the list quoted above is wrong in relegating her to the fifth epoch.

Metempsychosis and Eschatology. The belief in the reincarnation of the theophanies finds its parallel in the general belief in metempsychosis. "Men! Do not fear the punishment of death! The death of man is like the dive which the duck makes".

Human beings must pass through the cycle of 1,001 incarnations, in the course of which they receive the reward of their actions (*Notes*, p. 131 [251]). According to the *Firḳān* (i, 32, 35, 57, 68), however, the possibilities of purification are essentially limited by the very nature of beings; of whom some, created out of yellow clay (*zarda-gil*), are good, and the others, created out of black earth (*siyāh khāk*), are evil. "The more (the former) go through the world of garments and the more they suffer, the more they approach God and the more their luminous state increases", while the "Dark ones" shall never see the Sun. As a complement to these beliefs, the Ahl-i Ḥaḳḳ eagerly await the advent of the Lord of Time who shall come "to accomplish the desires of the Friends and embrace (*iḥāṭa*) the Universe". There are a number of prophetic *kalām*s which announce the coming of the Messiah. The scene of the Last Judgment, (*sān*, "review") will be the plain of Shahrizūr [*q.v.*] or that of Sulṭāniyya [*q.v.*] where the "sulṭāns shall be exterminated" (*Notes*, p. 44 [31]). According to the *Firḳān*, i, 57, the Good shall enter Paradise (which is the contemplation) of the beauty of the Lord of Generosities, while the Wicked shall be annihilated (*maʿdūm*).

Rites. The Ahl-i Ḥaḳḳ have a number of practices which are quite original.

1. We find little mention of individual prayer; on the other hand, the Ahl-i Ḥaḳḳ attach tremendous importance to assemblies (*djam* < *djamʿ*) in which "all difficulties find their solution". The life of the community is eminently collective and the assemblies are held at fixed intervals and in connection with all important events. *Kalām*s are recited at them to the accompaniment of music.

2. On solemn occasions sessions of *dhikr* [*q.v.*] are held. Specially qualified darwīshes to the sounds of music (*sāz*) enter into a state of ecstasy, accompanied by anaesthesia, which enables them to walk over burning coals, to handle them, etc.

3. The indispensable features of these assemblies are the offerings and the sacrifices: *nadhr wa-niyāz* (raw offerings, uncooked, including animals of the male sex, oxen, sheep, cocks, intended for sacrifice) or *khayr wa-khidmat* (cooked or prepared victuals, like sugar, bread, etc.). The *Firḳān*, i, 74 counts fourteen kinds of bloody or bloodless sacrifices (*ḳurbānī-yi khūndār wa-bī-khūn*). The ritual of sacrifice is regulated and the flesh is separated from the bones, which are buried. The boiled meat and the other offerings are distributed among those present and dedicatory formulae (*khuṭba*) are repeated. The term *sabz namūdan*, "to render green, i.e. living, to reanimate", is applied to the ceremony (*Notes*, p. 210 [90]).

4. "Just as every dervish must have a spiritual director (*murshid*) so the head of every Ahl-i Ḥaḳḳ has to be commended to a *pīr*". In the course of this ceremony (*sar sipurdan*) the persons symbolising the "Five (sic!) Angels" stand round the infant. A Muscat nut (*djawz-i buwā*) is broken by the celebrant as a substitute for the head. It is then worn as an amulet, with a piece of silver called *hawīza* bearing the Shīʿa form of the profession of faith (*hawīza* from the Shīʿa town of Hawīza in Khūzistān; cf. *Notes*, p. 227 [107], and W. Caskel, *Ein Mahdī des 15. Jahrhunderts*, in *Islamica*, 1931, 48-93, and the art. MUSHAʿSHAʿ). Links recalling blood relationship are established between him whose head is commended and the line of the *shaykh* to whom the head has been commended. This spiritual relationship carries with it the prohibition of marriage between the individual dedicated and the family of the *pīr*.

5. With the object of attaining moral perfection special unions (nuclei) are formed between a man (or several men) and a woman who are called brother and sister (*sharṭ-i iḳrār*). The union is said to be formed in anticipation of the Day of Resurrection: *Notes*, p. 230 [110]; cf. the *akh wa-ukht al-ākhira* among the Yazīdīs [*q.v.*].

6. Fasting is rigorously observed but lasts only for three days, as among the Yazīdīs [*q.v.*]. It takes place in winter and is followed by a feast. Among the divisions of the sect, only the Ātash-begī do not observe the fast "for the days of the (final) advent are near" and instead of fasting they say one ought to feast.

For the other rites and customs see the *Notes* by Minorsky (*Bibl.*).

Firḳān al-Akhbār. The author of this treatise was Ḥādjdjī Niʿmat Allāh of Djayḥūn-ābād near Dīnawar (1871-1920) who belonged to the Khāmūshī division and who believed the time had come to reveal the Real Truth (*ḥaḳīḳat*). His son Nūr ʿAlī Shāh (b. 1313/1895) wrote the biography of his father and an introduction to the *Firḳān* under the title of *Kashf al-Ḥaḳāʾiḳ*. While confirming much that was already known, the *Firḳān* represents a tradition different from that of the Ātash-begī in as much as it makes no mention of "seven" epochs and reserves a special position for Khāwandagār and Sulṭān Ṣohāk while the number of manifestations of less importance is increased (Bābā Nāʿūth, etc.).

The *Firḳān* consists of 4 parts. The first deals with the fundamental principles of the *ḥaḳīḳat* established in pre-eternity by the Divinity who in the stage of "*yā-yi ghaybat*" became externalised in the garment of Khāwandagār. The law remained concealed till the coming of Sulṭān Isḥāḳ (Ṣoḥāk). Then the *daftardār*s recorded these doctrines but each in his own way and according to the sources which were accessible to him. As a result the Ahl-i Ḥaḳḳ community has no [single?] sacred book and

its divisions are distinguished by different views. The Ahl-i Ḥaḳḳ required a *ḳuṭb-i kull* which would be unique. So after 1324/1906 Niʿmat Allāh, by God's command, abandoned the world and became the "messenger of the Lord of the Hour", i.e. of Pīr Benyāmīn (explained as *bin* + *yā* + *amīn* "faithful son of Yā"). Then comes the explanation of metempsychosis (*gardis̲h̲-i dūn bi-dūn* = "going from one garment to another").

The creatures of the world are divided into two distinct categories according to their original element (*zarda-gil* or *k̲h̲āk-i siyāh*). To the first belong the Saved and Luminous beings whose respective *sardārs* are Benyāmīn and Sayyid Muḥammad (in his avatar of Buzurg-sawār). To the other category belong beings of Fire and Darkness whose respective *sardārs* are Iblīs and K̲h̲annās, with whom are associated the first three caliphs, Muʿāwiya, ʿĀʾis̲h̲a, etc. The intermixture of the two categories of beings produces combinations which may be recognised even externally.

The second part of the treatise is mainly concerned with the correspondence of the avatars through the ages. Thus the manifestations of Benyāmīn are Noah, Jesus and provisionally (*mihmān*) Rustam of the Persian epic; those of Razbār: Bilḳīs, the queen of Sabaʾ, Mary, etc.; those of Sayyid Muḥammad: Zoroaster, the prophet Muḥammad, etc. Next we are given the history of Sulṭān Isḥāḳ (Ṣohāk) and of his successors.

The third part relates the personal experiences of Niʿmat Allāh and the commandments which he received from God during his journey "to the beyond" (*safar-i ʿuḳbā*), notably his mission to unite the *k̲h̲ānadāns*, to give absolution from sins (*az k̲h̲iyānat pāk namūdān*) and to intercede (*s̲h̲ifāʿat*) with the Lord of Time.

The fourth part is the very full description of the rites and customs (*amr wa-nahy*), with the Gūrānī text of the formulae recited on each occasion.

Distribution. The principal centres of the Ahl-i Ḥaḳḳ are in the west of Persia, in Luristān, Kurdistān (land of the Gūrān east of Zohāb, town of Kerend) and in Ād̲h̲arbāyd̲j̲ān (Tabrīz, Mākū, with ramifications in Transcaucasia especially Ḳarabag̲h̲). Little colonies of Ahl-i Ḥaḳḳ are found almost everywhere in Persia (at Hamad̲h̲ān, Teheran, at Māzandarān, Fārs and even in K̲h̲urāsān, to which, according to tradition, one of the brothers of K̲h̲ān Ātas̲h̲ had gone). In ʿIrāḳ there are Ahl-i Ḥaḳḳ among the Kurd and Turkoman tribes of the region of Kirkūk, of Sulaymāniyya and probably at Mosul.

Very little is known of the connection between the Ahl-i Ḥaḳḳ and the sects popularly known under the name of ʿAlī Ilāhī or by contemptuous terms like *čirāg̲h̲-söndüren* ("extinguishers of lights"), *k̲h̲urūs-kus̲h̲ān* ("slaughterers of cocks") etc. [see BEKTĀS̲H̲, ḲÎZÎL-BAS̲H̲, SĀRLI, S̲H̲ABBAK). In any case, it is a striking fact that the direct influence of Ahl-i Ḥaḳḳ preachers of the district of Zohāb could be traced among the ʿAlawī (Ḳîzîlbas̲h̲) of ʿAyntāb; cf. Trowbridge, *The Alevis*, *Harvard Theol. Review*, 1909, 340-55, repr. in *MW*, 1921, 253-66.

Religious History. The Ahl-i Ḥaḳḳ possess a wealth of legends arranged according to the manifestations of the Divinity. The collections of these legends are known as *Sarand̲j̲ām*. The epoch of K̲h̲āwandagār is interesting only for its cosmogonic myths. The traditions relating to the epoch of ʿAlī (which does not in any way form the central point) are inspired by the extreme S̲h̲īʿa. The epoch of K̲h̲os̲h̲īn is placed in a typically Lur [*q.v.*] environment, the geographical nomenclature showing an excellent knowledge of the localities of Luristān. One of the angels of K̲h̲os̲h̲īn is Bābā Ṭāhir [*q.v.*] whose quatrains in dialect are quoted. The fourth epoch is placed in the land of the Gūrān close to the river Sīrwān. The sayings attributed to Sulṭān Ṣohāk are in Gūrānī, which is the sacred language of the Ahl-i Ḥaḳḳ (cf. *Firḳān*, i, 3; see Minorsky, *The Guran*, *BSOS*, 1943, 77-103). The greatest sanctuaries of the sect: Bābā-Yādegār and Perdiwar, are situated in the same region. In the later epochs the scene is transferred to Ād̲h̲arbāyd̲j̲ān and the *kalāms* relating to these epochs are in Ād̲h̲arī Turkish. From these facts it may be concluded that the stages of propagation and development of the religion have been: Luristān — land of the Gūrān — Ād̲h̲arbāyd̲j̲ān.

Exact dates are naturally difficult to obtain and we shall endeavour to proceed from the known to the unknown. K̲h̲ān Ātas̲h̲, born at Ad̲j̲ari (north of Marāg̲h̲a) and buried in the village of Ātas̲h̲-beg in the district of Has̲h̲ta-rūd, northeast of Mount Sahand, is said to have lived at the beginning of the 18th century (*Notes*, p. 41 [27]). This line was continued by his direct descendants of whom the seventh was called Sayyid ʿAbd al-ʿAẓīm Mīrzā (Ag̲h̲ā-bak̲h̲s̲h̲) and lived at Garrabān (also called Dorū) on the Gāmāsāb to the south of Bisūtūn, where O. Mann visited him. He died in 1917 and was succeeded by his son Muḥammad Ḥasan Mīrzā. The popularity of the Turkish poems of S̲h̲āh Ismāʿīl Ṣafawī is significant; the *kalām*, known as *Ḳuṭb-nāma*, calls S̲h̲āh Ismāʿīl the "*pīr* of Turkistān" (= Ād̲h̲arbāyd̲j̲ān where Turkish is spoken). The spread of Ahl-i Ḥaḳḳ doctrines among the Turkoman tribes seems in any case to go back to an earlier period, that of the Ḳara Ḳoyunlu rulers. The remnants of these Turkomans who live in a district in the centre of Mākū are Ahl-i Ḥaḳḳ. Similarly in Transcaucasia the Ḳara-Ḳoyunlu in the region of Gand̲j̲a live in the close neighbourhood of the G'öran (< Gūrān!). S̲h̲āh Ibrāhīm, whom many of the Ahl-i Ḥaḳḳ regard as the successor of Sulṭān Ṣohāk, and who lived in Bag̲h̲dād and whose acolyte angel was Ḳus̲h̲či-og̲h̲li (author of Turkish *kalāms*), is perhaps responsible for the dissemination of Ahl-i Ḥaḳḳ teaching among the Turkomans north of the Tigris.

Tradition places immediately before S̲h̲āh Ibrāhīm the famous Sulṭān Ṣohāk who (outwardly) was the son of S̲h̲ayk̲h̲ ʿĪsī and K̲h̲ātūn Dāyira (Dāyarāk), daughter of Ḥasan Beg D̲j̲ald, chief of the tribe of D̲j̲āf-i Murād. His real name is said to have been Sayyid ʿAbd al-Sayyid. Barzind̲j̲a, north of Sulaymāniyya, is said to have been his birthplace. He is said to have had seven sons from his wife K̲h̲ātūna Bas̲h̲īr, who are named *hafttan*. His tomb is at Perdiwar (in Awramān-i luhūn, see SENNE), on the right bank of the Sīrwān.

The Kākāʾī chiefs of Taʾūḳ claim to be his direct descendants (see al-ʿAzzāwī, *al-Kākāʾiyya*). S̲h̲ayk̲h̲ Maḥmūd, who after the World War proclaimed himself "King of Kurdistān" [cf. the article KURDS], claimed to be descended from the brother of Sulṭān Ṣohāk in the twelfth generation. At Kirkuk Minorsky found a MS containing a genealogy of that family.

The only definite indication of Bābā K̲h̲os̲h̲īn's date would be his association with the poet Bābā Ṭāhir (11th century) but here tradition is on very uncertain ground.

The Elements of the System. The religion of the Ahl-i Ḥaḳḳ is typically syncretist. At its foundations we find S̲h̲īʿa extremism. It should be

noted that the Ahl-i Ḥaḳḳ always speak of the 12 imāms and as a result ought not (at least directly) to be connected with Ismāʿīlism. According to the *Firḳān*, the "religion of Truth" simply re-establishes the contents of the 10 *djuz'* which were suppresed in the received text of the Ḳur'ān, but in fact the Ahl-i Ḥaḳḳ deviate from the orthodox Shīʿa to the extent of forming a separate religious system. The religion of the Ahl-i Ḥaḳḳ has in common with those of the Druzes and the Nuṣayrīs the worship of ʿAlī, but ʿAlī is completely overshadowed by Sulṭān Ṣohāk.

The other obvious element in the formation of the Ahl-i Ḥaḳḳ is the rites of the Ṣūfī darwīshes: election of the *pīr*, agapes with *dhikr* and distribution of food, brotherly unions.

From the social point of view, the religion of the Ahl-i Ḥaḳḳ is professed particularly by the lower classes, nomads, villagers, inhabitants of the poorer quarters, darwīshes etc. From this probably comes the hope that on the day of the last judgment "the sulṭāns" will be punished (*Notes*, p. 44 [31]). On the other hand, the eminently popular character of the religion is apparent in the exuberance of the miraculous and folklore element in the traditions of the Ahl-i Ḥaḳḳ. Amid the country people in the remote provinces which have at all times been outside the control of central governments, it is natural to expect to find survivals from olden times. The Divinity enclosed in the Pearl is a Manichaean idea (personal communication by Th. Nöldeke), like the belief in the purification of the "Luminous" in the course of their transmigrations. The belief in metempsychosis cannot be directly Indian for it was already in existence in Ismāʿīlism. The division of beings into two distinct categories is perhaps a later development of Zoroastrian ideas. The sacrifice of the cock has been several times connected with the corresponding Jewish rite (cf. I. Scheftelowitz, *Das stellvertretende Huhnopfer*, Giessen 1914), while the Biblical names (Dāwūd, Mūsī) may have come through the intermediary of the Ḳur'ān. The alleged Christian influence ought not to be exaggerated: if the Ahl-i Ḥaḳḳ in their conversations with missionaries talk of Jesus and Mary, it should be remembered that, apart from these possibly being simply reminiscences of the Ḳur'ān, the Ahl-i Ḥaḳḳ regard them merely as avatars of their own pantheon. For the agapes it is not necessary to go farther back than the known darwīsh practices (e.g. the Bektashī). The elasticity of the system of metempsychosis is responsible for the appearance of unexpected names in the myths. W. Ivanow has called attention to the name of Malak Ṭā'ūs [cf. YAZĪDĪS] in a fragment containing traditions, found at Shīrāz.

Bibliography: The first references to the genuine Ahl-i Ḥaḳḳ are found in the European travellers at the beginning of the 19th century: Macdonald Kinneir, *A geographical memoir of the Persian Empire*, 1813, 141; G. Keppel, *Personal narrative of a journey from India to England*, 1817, ii, 61 ff. H. Rawlinson, who commanded a regiment recruited from the tribe of Gūrān (Ahl-i Ḥaḳḳ), was the first to give any reliable information about the sect, *Notes on a march from Zohab*, *JRGS*, 1839, 36, 39, 53, 57, 95, 97, 99, 105, 109. The Baron de Bode visited the shrine of Bābā Yādegār, *Biblioteka dl'a čteniya*, St. Petersburg 1854, t. cxxiii, p. 45, cf. also his *Travels in Luristan*, 1845, i, 371-8, ii, 180. The first general outline of the doctrines of the Ahl-i Ḥaḳḳ is in *Trois ans en Asie* by Gobineau, Paris 1859, 338-70, who was in direct contact with the representative of the sect in Teheran, see Schemann, *Gobineau, eine Biographie*, Strasburg, 1913, i, 506-7, and Minorsky, *Gobineau et la Perse*, in *Europe*, Paris, Oct. 1923, 116-27. A very interesting anonymous article (signed: Sh.) on the Ahl-i Ḥaḳḳ of Tabrīz appeared in the journal *Kavkaz*, Tiflis, 1876, nos. 27, 29 and 30. The first authentic document of the Ahl-i Ḥaḳḳ (a *Kalām* of 34 verses, "the Credo") was published with important notes by V. A. Žukowsky in the *Zap.*, 1887, 1-25. The American missionary S. G. Wilson, *Persian Life and Customs*, 1896, collected a certain amount of information at first hand. In 1902 Minorsky acquired in Teheran an authentic Ahl-i Ḥaḳḳ MS., dated 1295/1843 and containing a collection of religious legends listed under epochs (see above), (*Kitāb-i Sarandjām* "Book of the End, or Fulfilment") in Persian, and also a number of *Kalāms* in Turkish (translated and published in Russian with a French summary: V. Minorsky, *Materiali dl'a izučeniya persidskoy sekti "L'udi Istinï ili "Ali-Ilahi"*, Moscow, 1911, published as fasc. xxxiii of *Trudi po vostokovedeniyu izdavayemiye Lazarevskim Institutom*; id., *Notes sur la secte des Ahle-Haqq*, in *RMM*, 1920, 20-97 (p. 61-84: detailed bibliography containing 54 items), and *RMM*, 1921, 205-302 (also published in book form with certain additions); a review by F. Cumont in *Syria*, 1922, 262; V. Minorsky, *Un traité de polémique Béhaï-Ahle-Haqq*, in *JA*, 1921, 165-7; D. Saeed-Khan, *The sect of Ahl-i Haqq*, *MW*, 1927, 31-42; Gordlevsky, *Kara-koyunlu*, in *Izv. Obščestva izučeniya Azerbaydjana*, Baku, 1927; Ajarian, *Gyorans and Toumaris, a newly found religion in Persia*, *Bull. de l'Université d'Erivan*, French translation by F. Macler in *RHR*, 1926, 204-307; Minorsky, *Études sur les Ahl-i Haqq*, i, "*Toumari*" = *Ahl-i Haqq*, *RHR*, 1928, 90-105; F. M. Stead, *The Ali-Ilahi sect in Persia*, *MW*, 1932, 184-9; Y. N. Marr, *Radeniye sektï L'udi istinï* (in Y. Marr. *Statyi i soobščeniya*, ii, 1939, 248-54); Ch. P. Pittmann, *The final word of the Ahl-i Haqq*, *MW*, 1937, 147-63 (makes use of a text of the *Sarandjām* which corresponds closely to that translated by Minorsky): W. Ivanow, *An Ali-Ilahi fragment*, *Collectanea* (The Ismā'īlī Society), I, 1948, 147-84, idem, *The Truth Worshippers of Kurdistan, Ahl-i Haqq*, Texts, Bombay 1953, (a third version of the *Sarandjām*); ʿAbbās al-Azzāwī, *al-Kākā'iyya fi'l-Ta'rīkh*, Baghdad 1368/1949 (the Ahl-i Ḥaḳḳ of Kirkūk considered jointly with various ʿAlī Ilāhī; cf. *Oriens*, 1953, 407 ff.); Minorsky, *Un poème Ahl-i Ḥaqq en turk*, *Westliche Abhandlungen R. Tschudi*, 1954, 258. The results of the researches of Minorsky amongst the Ahl-i Ḥaḳḳ (Teheran, Tabrīz, Mākū, Kurdistān) and of his visits to the sanctuaries of the sect (Bābā-Yādegār, Perdiwar) have been set forth in his *Notes* (see above). In the same work there is a translation of the Bahā'ī polemic tract directed against the Ahl-i Ḥaḳḳ. Minorsky's other materials comprise numerous *Kalām* (in Gūrānī and Turkish), and the important account of the collection of dogmas *Firḳān al-Akhbār* (see above), as well as an account of his visits to the sanctuaries of Kirkūk and Kirind (1934).

(V. MINORSKY)

AHL AL-ḤALL WA'L-ʿAḲD (this, though illogical, is the normal order of the words), "those who are qualified to unbind and to bind", the representatives of the community of the Muslims who act on their behalf in appointing and deposing a caliph or

another ruler [see BAYʿA]. They must be Muslims, male, of age, free, *ʿadl* [*q.v.*], and capable of judging who is best qualified to hold the office. No fixed number of "electors" is required; according to the prevailing opinion, even the appointment made by one "elector" in the presence of two qualified witnesses is valid. This is the theory; in fact, all through the history of Islam, the *ahl al-ḥall wa'l-ʿaḳd* have consisted of the persons who wielded political power in the capital, acting in association with the notables and prominent religious scholars. The thought of modernists and reformers occasionally identifies them with the whole of the community, or nation, with parliament, or with the body of religious scholars.

Bibliography: Juynboll, *Handbuch*, 332; id., *Handleiding*, 335 f.; Santillana, *Istituzioni*, i, book I, § 13; H. Laoust, *Le Califat dans la doctrine de Rašīd Riḍā*, Beirut 1938, index, s.v.; E. Tyan, *Institutions du droit public musulman*, i, Paris 1953, 172 ff., 334 ff.; L. Gardet, *La Cité musulmane*, Paris 1954, index s.v. (ED.)

AHL AL-KAHF [see AṢḤĀB AL-KAHF].

AHL AL-ḲIBLA (A.) = "the people of the *ḳibla*" [*q.v.*], appellation of the Muslims.

AHL AL-KISĀʾ, the people of the cloak. According to a tradition Muḥammad went out one morning—at the time of the visit of the Nadjrān delegation in 10/631 [cf. MUBĀHALA]—wearing a figured black cloak; first Fāṭima, then ʿAlī and then al-Ḥasan and al-Ḥusayn came and he took them under his cloak, hugging them and quoting from Ḳurʾān, xxxiii, 32: "God only desireth to put away filthiness from you as his household, and with cleansing to cleanse you". The Sunnīs explains filthiness as unbelief but the Shīʿa explain it as intercourse with the impure world, a parallel to the statement that the family lost the visible caliphate to win the invisible. Another version says that Muḥammad threw his cloak over his uncle ʿAbbās and his sons saying: "Hide them from hell fire as I hide them with my cloak".

Bibliography: See AHL AL-BAYT, and L. Massignon, in *Vivre et penser*, Paris 1941, 1 ff. (A. S. TRITTON)

AHL AL-KITĀB, "possessors of the Scripture" (or "people of the Book"). This term, in the Ḳurʾān and the resultant Muslim terminology, denotes the Jews and the Christians, repositories of the earlier revealed books, *al-Tawrāt* [*q.v.*] = the Torah, *al-Zabūr* [*q.v.*] = the Psalms, and *al-Indjīl* [*q.v.*] = the Gospel. The use of this term was later extended to the Sabeans (*al-Ṣābiʾa* [*q.v.*])—both the genuine Sabeans, mentioned in the Ḳurʾān alongside the Jews and the Christians (= Mandeans), and the spurious Sabeans (star-worshippers of Ḥarrān)—to the Zoroastrians (*Madjūs* [*q.v.*]), and, in India, even to idolaters.

This article deals only with the doctrinal position of the Ḳurʾān, the *ḥadīth* and the controversialists concerning the Jews and the Christians. For their legal status as protected persons (*ahl al-dhimma*) on the fringe of the Muslim community, see DHIMMA and DJIZYA.

In the Ḳurʾān, the term does not occur before the end of the Meccan period. A possibly slightly earlier expression is *ahl al-dhikr*, "possessors of edification", witnesses of previous revelations (xv, 43 (45); xxi, 7), but *kitāb* already denotes generally the Pentateuch and the Psalms.

The Ḳurʾān emphasises the community of faith between the possessors of the earlier scriptures and the adherents of the new revelation. It occasionally pays tribute to their religious and moral virtues and calls on the Prophet to interrogate them. More often, however, as a result of the disappointment of Muḥammad at the intransigence of the Jews of Medina and of the Christians with regard to his mission, he puts the emphasis on their failure to comprehend the message which they possess but do not put into practice, just as they fail to comprehend the new teaching which fulfils that message, on their exclusiveness, and on their impotent jealousy; they are therefore not to be treated as allies, but to be fought with: xxix, 45-7 (44-6); xlii, 14 (13); x, 93-5; ii, 105 (99), 109 (103), 111 (105), 135 (129); xcviii, i, 4, 6; iii, 19 (17), 23 (22), 64-5 (57-8), 69-73 (62-7), 75-6 (68-9), 77 (71), 98-100 (93-5), 110 (106), 113 (109), 199 (198); lviii, 29; iv, 153 (152), 171 (169); lix, 11; ix, 29; v, 5 (7), 15 (18), 19 (22), 57-9 (62-4), 65 (70), 68 (72).

The Ḳurʾānic texts which mention the adherents of these two religions by their proper names (*Banū Isrāʾīl* [*q.v.*] and *Yahūd* [*q.v.*] for the Israelites of biblical history and the contemporary Jews of Medina respectively, *Naṣārā* [*q.v.*] for the Christians) adopt similar viewpoints and determine the entire future attitude of Islam towards these two groups. The children of Israel are God's chosen people, recipients of his bounty, admitted to his covenant, beneficiaries under his law, to whom Paradise is assured. The Ḳurʾān recognises several episodes of their history: the bondage in Egypt, the crossing of the Red Sea, their wanderings in the wilderness, their sojourn before the Mount, their division into twelve tribes, their entry into the Promised Land and into the Holy City and the City by the Sea. But they distinguish themselves by their rebellious spirit and unbelief; they worship the golden calf, they demand to see God and they clamour for idols. Instead of believing in the prophets, they persecute them. They violate the Sabbath and infringe the Law; they are uncircumcised in heart. Though guardians of the Scriptures, they alter them, conceal them and pervert their meaning; they are signalized by their opposition to all further revelations, and they are themselves divided into factions. Cursed by the Lord, metamorphosed into apes, punished in this world where they are doomed to humiliation, they are moreover consigned to Hell. They can only be saved by righteousness; they have on the other hand given rise to a just community.

This picture is coloured, like all Muḥammad's conceptions of religious history, by his experiences and disappointments, which are expressed still more clearly in his pronouncements concerning the contemporary Jews and Christians.

At first the Ḳurʾān admits that Jews, Christians and Sabeans can, like Muslims, achieve salvation through the performance of the rites of their respective religions, but this standpoint is not maintained. At Medina, the Ḳurʾān admonishes the Jews (recalling especially the divine protection vouchsafed to their ancestors) and summons them to Islam. Although certain Jews are praised and granted forgiveness, the tension, and finally the breach and conflict between the Jews and Muḥammad, are reflected by the condemnation of their doctrines, by maledictions, and the ban on association between them and believers. Their sins fall into the moral as well as the religious category. Their attitude resembles that of their ancestors: eager to enjoy life, they fear death; ungrateful for God's blessings, they are careless too of the welfare of their doctors of religion; they practise usury, war among themselves, and

rush into iniquity and corruption. They preserve and study their Law, but do not hesitate to transgress it, to distort its phraseology and to conceal the truth. The prohibitions concerning food have been imposed on them as a punishment. Their enmity towards the Christians is not forgotten. Even their monotheism is questionable; they believe in the *Djibt* and *Ṭāghūt* and deify ʿUzayr [*q.v.*]. They ally themselves with the polytheists. Their attitude towards the Ḳurʾānic revelation, the advent of which has caused disunity amongst them, is compounded of hostility and unbelief. They are the worst enemies of Islām; they bandy words with the Prophet, are jealous of the believers, and are conspicuous for their mockery, their machinations, and their treachery. Assured of obloquy in this world, they are destined to Gehenna. [See also YAHŪD.]

As regards the Christians, God has made a convenant with them, and their salvation through their faith is admitted in several passages. Muḥammad at one time credited them with a leaning towards Islam, and they are declared to be superior to the Jews, to whom they are opposed. But the condemnation of their doctrines is no less outspoken. Their exclusive claim to salvation and to the true religion is severely criticised; it would be a grave error to adopt their religion. The divinity of Jesus (ʿĪsā [*q.v.*]), the reality of his Passion, the Trinity and monasticism are all rejected. They are threatened with Hell; affiliation with them is forbidden, and recourse to imprecation (*mubāhala* [*q.v.*]) is proposed to them. The dissension between the Christian sects is not forgotten. [See also NADJRĀN, NAṢĀRĀ.]

The attitude of Islām towards the Jews and Christians, as reflected in the *ḥadīth*, is one of mistrust. It stresses the importance of differentiating at all costs, as regards religious and social conduct, between the believers and these two religious groups, which are rather superficially understood. Moreover there is noticeable in Muslim tradition a clear tendency to stress the originality of those Muslim institutions which invite comparison with similar (mainly Jewish) institutions. Finally, the *ḥadīth* sometimes puts into a polemical context the condemnation of various abuses prevalent among the Muslims, as well as certain positions taken up in many internal controversies within the Muslim community. The principles and processes employed betray more than once their Jewish origin. The basic rule is: "do not act as do the people of the Book" (*khālifūhum*), which corresponds to the Talmudic ban on following the practices of the Gentiles (*ḥukḳōt ha-gōy*). By virtue of this principle, the *ḥadīth* condemns numerous practices of little consequence in themselves. But to Jewish rigorism it opposes a certain degree of Muslim laxity, especially in sexual matters. It claims as purely Muslim (if it does not date back to "Israelite" antiquity or to pre-Islamic Arabia) an institution like the fast of ʿ*Āshūrā* [*q.v.*], which is in fact derived from the Jewish *Yōm Kippūr* and is moreover virtually supplanted by Ramaḍān [*q.v.*], which again is found to have its origin in Jewish and Christian institutions. Developing and aggravating the grievances uttered in the Ḳurʾān, Muslim tradition willingly underlines above all the enmity of the Jews, but also that of the Christians, ranging from certain episodes in the Prophet's life to eschatological disputes. Although Muslim tradition rarely gives evidence of direct acquaintance with large portions of the Judaeo-Christian Scriptures (information of this type stemmed from intercourse with the *ahl al-kitāb* or was supplied by converts), this does not prevent it from accusing the inheritors of those Scriptures of suppressing certain portions which had fallen into desuetude (capital punishment for adultery in Deuteromony) or which foretold the mission of Muḥammad, and also of interpreting passages falsely and even of materially altering their sense. Discussion with the *ahl al-kitāb* is regarded with dislike, and consultation of their religious documents is deprecated as much by reason of the probable fraudulency of their owners as from the fact of the autarchy of the Ḳurʾānic revelation, which abrogates all that is antiquated in previous revelations and renders the remainder superfluous by superseding it. In contrast, the edifying stories connected with the antiquity of the *ahl al-kitāb* (*Isrāʾīliyyāt* [*q.v.*]) are tolerated.

The anti-Jewish and anti-Christian polemics of Islām display a remarkable consistency in their major themes from the writings of the controversialists of the 3rd/9th-4th/10th centuries down to contemporary apologetics. Unlike the *ḥadīth*, they make use of a scriptural, theological, historical and sometimes liturgical knowledge which is ample if not always exact.

As regards their use of the two Testaments, Muslim polemics continually waver between two opinions: (a) the Judaeo-Christian Scriptures in their existing form are authentic documents which only require a suitable exegesis; (b) they are not to be trusted, either because their actual meaning has been falsified [see TAḤRĪF], or because their recension and transmission do not afford the necessary guarantee of sincerity and authenticity, so that they cannot be accepted as the Torah and Gospel as actually revealed to Moses and Jesus. The first view prevailed in the 9th-10th centuries (whatever one thinks of the authenticity of "The Book of Religion and Empire", attributed to ʿAlī b. Rabbān al-Ṭabarī, which includes a huge mass of scriptural arguments), whereas Ibn Ḥazm wrote the most penetrating literary, historical, theological and moral criticism of the Judaeo-Christian Scriptures. This method has been followed down to the modern polemic writers, who in addition utilise the rationalist bible-criticism of the 19th century in their attacks on Judaism and Christianity.

In the anti-Jewish polemics the chief theological problem is the abrogation (*naskh*) [*q.v.*] of previous divine revelations, which does not imply *badāʾ* [*q.v.*] (alteration of God's purpose). The principal charge levelled at Judaism, in most of the traditional compositions, is that of the anthropomorphic conception of the Deity.

The anti-Christian polemics are much richer in historical and theological argument. The message of Jesus has been altered by Paul, and the historical position of the Christian community has been falsified by Constantine. The christological controversies between the Melkites, the Nestorians and the Jacobites afforded ample material to the Muslim polemic writers. The Trinity, taken to mean tritheism, is irreconcilable with divine unity; the incarnation is a blasphemous offence against divine transcendence. Jesus may have had the prerogative of theopathic speech, but nothing more than a moral union can be involved (al-Ghazzālī). Muḥammad is the Paraclete foretold by the Gospel [see AḤMAD], and in addition several messianic and eschatological prophecies of the Old Testament are similarly fulfilled in his person. Historically and sociologically, the astonishing success of Muslim arms and the superiority

of Muslim civilisation are proofs of the truth and superiority of Islam. In al-Djāḥiẓ, there is a "sociological" study of Christianity and Judaism within the framework of Muslim society.

AHL AL-NAẒAR, "those who apply reasoning". This term originally denotes the Mu'tazila [*q.v.*], and it is probable that they coined it themselves. It occurs in Ibn Ḳutayba, *Ta'wīl Mukhtalif al-Ḥadīth*, passim; al-Mas'ūdī speaks of *ahl al-baḥth wa 'l-naẓar*; synonyms are *ahl al-kalām* (in al-Shāfi'ī) and *al-mutakallimūn* (in al-Ash'arī). Later, *ahl* (or *aṣḥāb*) *al-naẓar* came to denote the careful scholars who held a sound, well-reasoned opinion on any particular question. See also NAẒAR. (ED.)

AHL AL-RA'Y [see AṢḤĀB AL-RA'Y].

AHL AL-ṢUFFA, a group of Muḥammad's Companions, mentioned chiefly in ascetic and mystical writings, where they have come to typify the ideal of poverty and piety. The *ṣuffa* or *ẓulla* (often rendered 'bench', 'banquette', etc.) was, according to Lane, a long, covered portico or vestibule, which formed part of the mosque at Medina. This—so the legend ran—was the sole home of these men, and they spent their time in study and worship, except when in obedience to a command from Muḥammad they went out to fight. They are sometimes said to have been as many as 400; Lane (s.v. *ṣuffa*) quotes al-Sayyid Murtaḍā as saying in *TA* that he had made a list of 92 or 93 names. Abū 'Abd al-Raḥmān Muḥammad b. Ḥusayn al-Sulamī (cf. Brockelmann, I, 200) wrote a history of them (al-Hudjwīrī, *Kashf al-Maḥdjūb* tr. R. A. Nicholson, Leyden and London, 1911, 81; Abū Nu'aym, *Ḥilyat al-Awliyā'*, i, 337-47). According to L. Massignon (*Essai sur les Origines du Lexique Technique de la Mystique Musulmane*, Paris 1922, 140), al-Muḥāsibī, Ibn Karrām and al-Tustarī admitted the authenticity of the legend, and it was defended by Abū Nu'aym, Ibn Ṭāhir, al-Maḳdisī and al-Subkī. (For the latter cf. Brockelmann, II, 87.) It also appears in al-Ghazālī, where there is an anecdote contrasting the *ahl al-ṣuffa* with *al-mu'allafa ḳulūbuhum*, 'those whose hearts are reconciled' (*Iḥyā'*, iv, book 34, *bayān faḍīlat al-faḳr muṭlaḳan*; cf. al-Sayyid Murtaḍā, *Itḥāf al-Sāda*, ix, 277-8). Ibn Taymiyya, though in the main an opponent of *taṣawwuf* or mysticism, developed his conception of the true nature of the religious or devotional life by describing the piety of the Companions, and in this gave a prominent place to the men of the *ṣuffa* (esp. *Risāla fī Ahl al-Ṣuffa*, in *Madjmū' min al-Rasā'il wa-'l-Masā'il al-Kayyima*, Cairo 1349/1930, i, 25-60). The supporters of the legend claimed that Ḳur'ān, ii, 273/4 (and other verses such as vi, 52, xviii, 28/7, and xlii, 27/6) referred to this group; but the orthodox commentators express hesitation about this attribution (cf. al-Bayḍāwī on ii, 273/4, 'it is said') or neglect it al-together (al-Ṭabarī on the same).

The factual grounds for the legend are slight. The later lists include names of persons who were either poor or pious but not necessarily both; among the 34 persons mentioned by al-Hudjwīrī (l.c. 81-2) is Abū Lubāba, one of the most influential men in Medina, who was wealthy enough to present a balcony to the *masdjid al-ḍirār* (al-Wāḳidī, tr. Wellhausen, 410). In the early account in Ibn Sa'd, i/2, 13-4, those named are Wāthila b. al-Aska', Abū Hurayra, Abū Dharr and Ḳays b. Ṭihfa al-Ghifārī; while from the (possibly not exhaustive) index to Ibn Sa'd (s.v. *ṣuffa*, ix/2, 26) we learn that 'Abd al-Raḥmān (b. Ka'b) al-Aṣamm, Djarhad b. Razāḥ al-Aslamī, Rabī'a b. Ka'b al-Aslamī, Asmā' b. Ḥāritha al-Aslamī and Ṭalḥa b. 'Abdallāh (or b. 'Amr) al-Naḍrī al-Laythī belonged to the *ahl al-ṣuffa* (Ibn Sa'd, i/2, 48; iv/2, 33, 44, 51; vii/1, 35). The first report in Ibn Sa'd, i/2, 13 f. emphasizes not the poverty of the men of the *ṣuffa* but the fact that they had no dwelling in Medina, but other parts of the material there speak of their ragged clothing. This suggests that those who slept (perhaps only temporarily) in the *ṣuffa* were men from the less influential tribes round Medina who had no confederates to put them up in Medina apart from Muḥammad. Some of them were prominent in their tribes, and so presumably not poverty-stricken. Muḥammad apparently also invited a few poor followers to share his meal, but this probably happened only occasionally (cf. Ibn Sa'd, l.c.; al-Bukhārī, *Mawāḳīt al-Ṣalāt*, 41).

The legend must have begun to grow before the time of al-Wāḳidī (d. 207/822), himself an Aslamī, since Ibn Sa'd's material on this point comes from him. The statement that Ḳur'ān, ii, 273/4 referred to the *ahl al-ṣuffa* is passed on as from Muḥammad b. Ka'b al-Ḳuraẓī. Though scholars are now agreed that *ṣūfī* is derived from *ṣūf*, wool, the similarity in sound of *ṣuffa* encouraged the legend, and it was said, for example, that a *ṣūfī* was one who resembled the *ahl al-ṣuffa* in character (al-Kalābādhī, *al-Ta'arruf*, ed. and tr. A. J. Arberry, Cairo 1934, and Cambridge 1935, ch. 1; cf. al-Hudjwīrī, op. cit. 30).

Bibliography: works mentioned in the article; also Sarrādj, *Luma*ʿ (Nicholson), 132 f.; Ibn al-Djawzī, *Talbīs Iblīs*, Cairo 1928, 176 f.; Wensinck, *Handbook*, s.v. Ṣuffa; H. Laoust, *Essai sur les doctrines ... d'Ibn Taimīya*, Cairo, 1939, see index. (W. MONTGOMERY WATT)

AHL AL-SUNNA, the "Sunnites", i.e. the orthodox Muslims [see SUNNA].

AHL-I WĀRIS, in general use among the Muḥammadan peoples of Indonesia with the meaning of Arabic *wārith*. The word is taken from the Persian usage and has reached the East Indian archipelago via India.

AḤLĀF [see ḤILF].

AḤMAD, one of the names of the Prophet Muḥammad and a proper name used by Muslims. Formally, it is the elative of Maḥmūd or Ḥamīd and means "more, or most, worthy of praise", or, less probably, of Ḥāmid, in which case it would mean "praising [God] to a higher, or the highest, degree". As a proper name it is, however, distinct from the other, etymologically connected forms, including the name Muḥammad. It occurs occasionally, and less frequently than Muḥammad, among the pre-Islamic Arabs. In the Ṣafāitic North-Arabian inscriptions of the Syrian borderland, names of this form seem to occur as abbreviations of composite theophoric names of the scheme "God is praiseworthy"; but whether the same is true of literary Arabic in the Ḥidjāz is subject to doubt.

The basis of its use in Islām is Ḳurʾān, lxi, 6: "And when Jesus, son of Mary, said: 'O Children of Israel, I am God's messenger to you, confirming the Torah which was before me, and announcing the good tidings of a messenger who will come after me, whose name is Aḥmad'." There is no obvious parallel to this passage in the New Testament. It has therefore been suggested that Aḥmad is the translation of *periklutos* "celebrated", which in its turn would be a corruption of *paraklētos* "the Paraclete" in John, xiv, 16, xv, 23-7. But the history of the text and of the translations of the Gospel, together with the fact that *periklutos* was not common in contemporary Greek, shows this to be impossible. The Muslims did indeed apply to Muḥammad the prediction of the Paraclete, before the middle of the 2nd century A. H. (Ibn Hishām, 150, quoting Ibn Isḥāḳ); but the terms used are either the Greek *paraklētos* or its correct Aramaic translation *mᵉnaḥḥᵉmānā*; this identification is based only on the assonance between the Aramaic word and the name Muḥammad, and seems to have been suggested by Christian converts to Islām.

Whereas the name Muḥammad was used by Muslims from the lifetime of the Prophet onwards, and the forms Maḥmūd, Ḥamīd and Ḥumayd occur in the first century of Islām too, the use of Aḥmad as a proper name among Muslims seems to begin only about 125/740. From this it has been concluded that the word *aḥmad* in Ḳurʾān, lxi, 6 is to be taken not as a proper name but as an adjective (the verse might then contain an obscure reference to John, xiv, 12), and that it was understood as a proper name only after Muḥammad had been identified with the Paraclete. Occasional references to the Prophet as Aḥmad in the poetry of the first century are accordingly explained as caused by the necessity of the metre. Traditions which state that the name of the Prophet was Aḥmad (Ibn Saʿd, i/1, 64 f.) are regarded as proposing an interpretation which had not always been obvious. But the original hesitation of the Muslims to use the name Aḥmad is sufficiently accounted for by the form of the word as an elative, even though it was a proper name from the beginning.

AḤMAD I, fourteenth Ottoman sultan. Eldest son of Meḥmed (Muḥammad) III, born at Manisa 22 Djumādā II, 998/18 April 1590, succeeded his father 18 Radjab 1012/22 Jan. 1603. The chroniclers have noted that on his accession, contrary to established custom, he did not put to death his brother Muṣṭafā, and the latter later succeeded him. One of the first acts of the sovereign was the confinement in the old *Serāy* of his grandmother Ṣāfiya Sulṭān (the Venetian Baffa), the prime mover in the Ottoman administration under Murād III and Meḥmed (Muḥammad) III. Aḥmad sent an army under the command of Čighāle-zāde Sinān Pasha [*q.v.*] against the Persian troops of Shāh ʿAbbās I, who had just gained possession of Eriwān and Kars but had been repulsed in front of Aḳīsḳa. Sinān Pasha, however, was defeated at Salmās (9 Sept. 1605) and shortly afterwards died of chagrin in Diyārbakr, while Shāh ʿAbbās profited by his victory to recover Gandja and Shīrwān. In Hungary the Grand-Vizier Lālā Meḥmed Pasha [see MUḤAMMAD PASHA], after experiencing setbacks before Pest and Esterghon (Esztergom, Gran), captured Wač (Vác, Waitzen). In a seond campaign, in which he was supported by the ruler of Transylvania, Stephan Bocskay, he was able to isolate and storm the fortress of Esterghon (4 Nov. 1605), while Tiryākī Ḥasan Pasha entered Wesprim (Veszprém) and Palota. Bocskay was invested with the principalities of Transylvania and Hungary. Soon afterwards the Grand-Vizier died, and his post was held successively by Darwīsh Pasha and Murād Pasha [*q.v.*] surnamed Ḳuyudju ("the well-sinker"), who signed the treaty of Zsitvatorok (11 Nov. 1606) with the Austrians, whereby the Ottomans were left in possession of the territory which they had conquered and received in a single, definitive payment an indemnity of 200,000 *ḳara ghurūsh*, but contracted to accord the Austrian sovereign the title of "Emperor" and not merely "King", a step which would give him equality of status with the Sulṭān. Conferences were held at Neuhäusel in 1608 to settle the final details of the treaty, and at Vienna in July 1615 and March 1616 to extend its validity. Internal difficulties had forced the Ottomans to sign it; revolts, caused by repeated military levies and by the exactions of certain governors, had broken out in various parts of the empire. Ḳuyudju Murād Pasha was despatched against the rebels, and triumphed over Muṣlī Čawush at Lāranda, over Djamshīd at Adana, and notably over Djānbūlād-oghlū ʿAlī Pasha in the plain of Orūdj, near Beylān (24 Dec. 1607). In the west, he attacked Ḳalender-oghlū Meḥmed (Muḥammad) Pasha, who held the districts of Brusa and Manisa, and defeated him at Alāčāyïr (5 Aug. 1608). In Syria, the Turkish forces launched themselves against the Druse amīr Fakhr al-Dīn b. Maʿn [*q.v.*], but could not win a decisive victory. The Grand-Vizier, at the age of 90, then set out for Tabrīz, but shortly after opening peace negotiations with the Shāh of Iran,

he died. His successor Naṣūḥ Pasha [q.v.] concluded in 1611 a peace treaty which fixed the demarcation of the frontier on the basis of the settlement made during the reign of Selīm II, but hostilities were resumed four years later. At sea, the Grand-Admiral Khalīl Pasha [q.v.] achieved important successes against the Florentine and Maltese fleets. In 1609, six Maltese galleons were captured in Cypriot waters, including the "red galleon" of Commander Fressinet (battle of Ḳara Djahannam); in 1610, the Turks suffered a setback at Lepanto, and the Maltese Corsairs were checked at Cos; in 1612 a Florentine squadron raided the Cilician coast, near the port of Aghālīmān, and 1614 Khalīl Pasha inflicted some losses at Malta. In the Black Sea, the Cossacks, who had sacked Sinope, were overtaken and defeated at the mouth of the Don by Shāḳshāḳī Ibrāhīm Pasha; another Cossack attack in Moldavia was checked by Iskender Pasha, and peace was signed at Bussa, on the Dniester, on 27 Sept. 1617. Under Aḥmad I, the capitulations with France, England and Venice were renewed (1604), and similar capitulations were concluded for the first time with the Netherlands (1612). The use of tobacco became widespread in Turkey during his reign. Aḥmad I devoted himself to the promulgation of a *Ḳānūn-nāme* designed to establish an authoritative code of the administrative and commercial regulations of the empire, hitherto not co-ordinated. He constructed (1609-1616) in the At Meydānī at Istanbul the magnificent mosque which bears his name. He died 23 Dhu'l-Ḳa'da 1026/22 Nov. 1617 after a two months' illness. Of a violent and changeable nature, and easily swayed, Aḥmad I was not always capable of appreciating the services of his most able ministers; a pious man, he established numerous religious foundations, and even furnished the Ka'ba with ornaments. He was passionately fond of hunting and *djarīd*, and took a close interest in poetry.

(R. Mantran)

AḤMAD II, twenty-first Ottoman sultan. Son of sultan Ibrāhīm and Mu'azzaz Sulṭān, born, according to Na'īmā, 6 Dhu'l Ḥidjdja 1052/25 Feb. 1643 (according to Rashīd 5 Djumādā I 1052/1 Aug. 1642), succeeded his brother Sulaymān II on 26 Ramaḍān 1102/23 June 1691. He confirmed the Grand-Vizier Köprülü-zāde [q.v.] Fāḍil Muṣṭafā Pasha in his post, and the latter resumed hostilities against the Imperial Powers, but was defeated and killed at the battle of Slankamen (19 Aug. 1691). 'Arabadjī 'Alī Pasha succeeded him, but was soon replaced by Ḥādjdjī 'Alī Pasha who, in 1692, conducted his campaign with great caution. In the same year, the Venetians made an unsuccessful attempt on Canea. As the result of a dispute with the sultan, Ḥādjdjī 'Alī Pasha was dismissed from office, and his post given to Bozoḳlu Muṣṭafā Pasha, who forced the Austrians to raise the siege of Belgrade (1693). Dismissed in his turn, he was succeeded by Sürmeli 'Alī Pasha [q.v.], who failed in an attempt to capture the fortress of Peterwardein (1694), while the Venetians gained control of Gabella in Dalmatia and of the important island of Chios. During the reign of Aḥmad II, there were disturbances in 'Irāḳ and the Ḥidjāz and, in the west, Tunis was attacked by both Tripoli and Algiers. A sovereign of weak personality, and continually swayed by his entourage, Aḥmad II was in addition addicted to drink, and died of dropsy 22 Djumādā II, 1106/6 Feb. 1695 at Adrianople. He was buried in the *türbe* of Ḳānūnī Sulaymān at Istanbul.

AḤMAD III, twenty-third Ottoman sultan, son of Meḥmed IV (Muḥammad IV, [q.v.]). Born in 1084/1673, he succeeded his brother Muṣṭafā II [q.v.] on 10 Rabī' II 1115/21 August 1703, when the latter abdicated in consequence of a rising of the Janissaries. The leaders of this rising were soon got rid of by the new sultan on his immediate re-establishment of Istanbul as the habitual residence of the court; and for the next few years large numbers of persons known to have, or suspected of having, been implicated in it continued to be dismissed, banished, or executed, to the detriment of governmental efficiency. Aḥmad's resolve to break the power of the soldiery was also shown by his dismissal from the palace service of 700 *bostandjīs* and their replacement by *dewshirme* conscripts (this being the last application of the *dewshirme*), as well as by his later drastic reduction of the Janissary establishment. Nevertheless during the first half of his twenty-seven years' reign in particular he lived in a morbid dread of "revolutionaries" (*fitnedjiler*); for three years he was unable, though making four changes in the Grand Vizierate, to find a capable minister; and it was only with the appointment in Muḥarram 1118/May 1706 of Čorlulu 'Alī Pasha [q.v.] that the government regained some stability. During this period, and indeed for the following eight or nine years, his actions were largely influenced by a palace camarilla, headed by the Wālide Sulṭān, the Ḳīzlar Aghasī, and the sultan's favourite, later to be known as (Shehīd) Silāḥdār Dāmād 'Alī Pasha [q.v.]. The sultan and the camarilla were always uneasy at the appointment to the Grand-Vizierate of "outsiders"—i.e. persons not of the palace service, such as Köprülü Nu'mān Pasha (see below), and took fright at any initiative they might display.

No event of much note occurred during the reign until July 1709, when, after being defeated by Tsar Peter the Great at Poltava, King Charles XII of Sweden, nicknamed in Turkish *demir bash*, "Iron Head", sought refuge at Bender on the Dniester in Ottoman territory. The Porte had so far made no attempt at profiting either by the preoccupation of Austria and the western powers with the War of the Spanish Succession to recover any of the territory lost to the sultan in 1699 by the Treaty of Carlovitz, or by the preoccupation of Russia with the "Great Northern War" to nullify the concessions to the Tsar's Black-Sea ambitions agreed to in the Russo-Ottoman treaty of 1700. Charles, however, in order to retrieve his fortunes, soon began urging the

sultan to take up arms against Peter, an action to which the Porte was also incited by successive ambassadors of Louis XIV and the Venetian representative at Istanbul, with the result that in June 1710 Čorlulu ʿAlī, who had but recently renewed the Russian treaty, was dismissed, and that though his successor, Köprülü [*q.v.*] Nuʿmān Pas̲h̲a, proving too independent for the taste of the camarilla, fell in turn two months later, his replacement in September by the pliant intriguer Balṭad̲j̲ī Meḥmed Pas̲h̲a [see MUḤAMMAD PAS̲H̲A], who had shown his incapacity when in office earlier, was followed on 20 Nov. by a a declaration of war, the main Ottoman grievances being the Tsar's construction of warships at Azov, his erection of a number of fortresses along the Ottoman frontiers, his interference with the Tatars subject to the *K̲h̲ān* of the Crimea, and his incitement of the sultan's Orthodox subjects to disaffection.

The opposed armies met only in July 1711, after Peter had been enabled to overrun most of Moldavia owing to the treachery of the Hospodar Demetrius Cantemir [*q.v.*]. But by then he had run gravely short of food supplies and was surprised by the main Ottoman army when marching south along the Pruth with the intention of seizing Ibrāʾīl; was forced to retreat; and was eventually surrounded and obliged to sue for peace. A treaty was signed forthwith by which Peter agreed to retrocede Azov and raze the other objectionable fortresses, to interfere no further either with the Tatars or in the affairs of Poland, no longer to maintain an ambassador at Istanbul, and to cease intriguing with the sultan's Orthodox subjects. Since, however, the Grand Vizier could have forced the Tsar to almost any concession, he fell under suspicion of having been bribed into the acceptance of such lenient terms and was dismissed three months later, largely as the result of further intrigues on the part of Charles, whose hopes had been disappointed by the treaty. Charles continued indeed for most of the next three years to incite the Porte to a renewal of hostilities, a task made easier by Peter's failure to observe his undertakings. Largely as a result of the king's efforts war on Russia was again actually declared no less than three times (in Dec. 1711, Nov. 1712 and April 1713), though it was always averted by Russian concessions. A final agreement with Peter was reached only in June 1713, with the signature at Adrianople of a treaty, to remain in force for twenty-five years, whereby the terms of the Treaty of the Pruth were confirmed and peace with Russia was in the event established for a long period. Charles, persisting in a refusal to quit Ottoman territory unless provided with money and troops with which to recover his losses in Poland, was at length, in the spring of 1714, removed forcibly from Bender to Demotika and then to Demirṭas̲h̲ Pas̲h̲a Sarayī near Adrianople, and was obliged in the autumn to return home with his Swedish troops via Wallachia, Transylvania and Hungary.

Meanwhile, on 27 April 1713, Aḥmad's favourite and son-in-law, Silāḥdār ʿAlī Pas̲h̲a, had been appointed Grand Vizier himself; and it was by his policy that peace was thus re-established with Russia, so that the Porte might seek to regain what had been lost to Venice at Carlovitz. Venetian rule had proved exceedingly unpopular in the Morea, the Orthodox inhabitants of which had sent repeated appeals to the Porte for deliverance from their new masters. But a suitable pretext for war against the republic occurred only in 1714, when, after the suppression of a Russian-instigated rebellion in Montenegro, the Venetian government refused to extradite the Vladika and other eminent Montenegrins who had sought refuge in Venetian territory. War was declared on 9 Dec. 1714; and in the following summer within two months (June-July) an Ottoman army under Silāḥdār ʿAlī's own command, operating in conjunction with the sultan's fleet, reconquered the whole province with but little serious fighting, while the fleet also took the islands of Tenos, Aegina, Cerigo and Santa Maura, and reduced Suda and Spinalonga (in Crete), which had remained till then in Venetian hands.

These Ottoman successes, and the possibility that Corfu and the Venetian possessions in Dalmatia might also fall into the sultan's grasp, alarmed Austria. In April 1716, accordingly, the Emperor Charles VI concluded a treaty of mutual assistance with Venice, and in June provoked the Porte by an ultimatum into a declaration of war. It opened with an unsuccessful attack by the Ḳapudan Pas̲h̲a on Corfu; and this was followed in August by a rout at the hands of Eugène of Savoy near Peterwardein of the Ottoman main army commanded by Silāḥdār ʿAlī, who was mortally wounded on the field. Eugène followed up this victory with the reduction of Temesvar and the occupation of the Banat and Little Wallachia in the autumn; and in the summer of 1717 laid siege to Belgrade, where on 16 August he completely routed a superior Ottoman relieving force. The Belgrade garrison surrendered three days later, after which, though the Austrians failed in an attempt to overrun Bosnia, there was no fighting of importance. The Porte soon made proposals for an armistice; and peace was eventually signed, on 21 July 1718, at Passarovitz (Pasarofča, Požarevac), whereby Belgrade and the region about it, the Banat, and little Wallachia were ceded by the Porte to Austria, while the Morea, the Cretan ports and Tenos, as well as the south-eastern districts of the Hercegovina were ceded to the Porte by Venice, which for its part received Cerigo and the strongholds the Venetians had captured in Albania and Dalmatia. A commercial treaty further secured to Austrian and Venetian traders certain advantages they had not till then enjoyed.

The Grand Vizier responsible for this treaty was another favourite of Aḥmad's: News̲h̲ehirli Ibrāhīm Pas̲h̲a [*q.v.*], who by marrying the sultan's thirteen-year-old daughter, Fāṭime Sulṭān, formerly the nominal wife of Silāḥdār ʿAlī, had also become a *dāmād*; and for the remaining twelve years of the reign, which with this entered upon its second phase, he entirely dominated the court. Ahmad was of a pleasure- and art-loving nature, and with Ibrāhīm, who shared his tastes, was able, as he had not been able with the warlike Silāḥdār, to indulge them and set new fashions for Ottoman society. The gradual abandonment of the *dews̲h̲irme* during the 17th century had led, with the occupation of the chief governmental posts by free-born Muslims, to a growth of interest among the powerful in the arts and learning, side by side with a decline in military and administrative efficiency. Moreover the Greek community of the Phanar quarter had at the same time acquired both a stronger influence than before in metropolitan society and some familiarity with contemporary western thought. In consequence the twelve years ensuing on the peace of Passarovitz witnessed a remarkable change of taste in poetry, music and architecture and a new inclination to profit by European example. During this short

period—known as *lāle dewri*, "the Age of Tulips", the cultivation of which became for some years a "craze", and the secular spirit of which is exemplified by the poet Nadīm [*q.v.*] in the verse "Let us laugh and play and enjoy the world!"—pavilions and gardens were more often built than mosques and mausoleums, and they were built to designs imported from the west. An ambassador accredited to Louis XV received specific instructions to study French institutions and report on those adaptable to Ottoman use; and in 1724 his son assisted Ibrāhīm Muteferriḳa [*q.v.*] to establish the first printing press in Istanbul. A French officer of Engineers was invited by the Porte to prepare plans for the reform of the army on western lines, while a French convert to Islam organized a fire service (the *odjaḳ* of the *tulumbadjis*); and though the reform of the army came to nothing, the organization of the Admiralty was overhauled and the building of three-decker men-o'-war was undertaken for the first time. Some of the *ʿulamā* further founded a society for the translation of books (from Arabic and Persian); the export of rare manuscripts was prohibited for educational reasons; and no less than five libraries were founded at the capital, including the sultan's own Enderūn-ü Hümāyūn Kütüb-khānesi, of which Nadīm was made curator. China factories at Kütahya and Izmid were revived and a new one founded at Tekfūr Sarayl at Istanbul; extensive repairs to the Byzantine walls were carried out from 1722 to 1724; and a barrage was built to provide water for the capital from springs at Belgrade. The most notable extant architectural monuments of the period are the mosque built by Aḥmad III for his mother at Üsküdar and his *česhme* outside the Bāb-i Hümāyūn of the Ṭopḳapl Sarayl, for which he composed the chronogram himself.

It was Ibrāhīm Pasha's policy to avoid war. Nevertheless the Tulip Age saw the temporary extension of Ottoman rule over large tracts of western Persia. The decline of the Ṣafawids and the Afghān invasion of their dominions, culminating in the capture of Iṣfahān in 1135/1722, had plunged the country into a state of anarchy tempting to both Russia and the Porte. In 1135/1723 Ottoman forces occupied Tiflīs, and on Russia's seizing Darband and Bākū in the same year, in 1724, after a period of tension during which a fresh war between Aḥmad and the Tsar came near to breaking out, another Russo-Ottoman treaty was concluded, providing for a partition that should leave Peter in possession of Darband, Bākū and Gīlān and the sultan in that of Georgia, Eriwān, Shīrwān, Ādharbaydjān and all Persian territory west of the line Ardabīl-Hamadān. Ottoman forces in fact took over all this vast region, the Porte forming it into some ten new *eyālets*. But when in April 1725 the Afghān Ashraf proclaimed himself shāh, he demanded the relinquishment of these conquests; and on the Porte's refusal eventually, in November 1726, defeated Aḥmad Pasha [*q.v.*] commanding the Ottoman forces in Persia. However, a year later Ashraf was obliged to make peace; and the sultan's sovereignty over the conquered provinces was recognized. From then until 1730, accordingly, these regions formed part of the Ottoman Empire. But in 1729 Ashraf was overthrown by the future Nādir Shāh, who in the following year also defeated the Ottomans and obliged them to relinquish all their gains.

The result was a revolt of the people at Istanbul, to suppress which Ibrāhīm and the sultan hesitated until it was too late. The Muslims of the capital, though they had at first disapproved the Persian conquests, were now indignant at their loss. But Ibrāhīm Pasha was anxious to avoid further fighting and prepared for it only under pressure from public opinion; moreover he was already unpopular for the nepotism he practised to secure his own position and for the fiscal policy he had pursued; the new luxurious and "Frankish" manners of the court were disliked by the conservative and resented by the poor; and the project of army reform had alarmed the Janissaries. The leader of the revolt was a Janissary "affiliate", an Albanian, formerly a *lewend* and hence [cf. BAḤRIYYA] called Patrona Khalīl, who acted under the influence of two disaffected *ʿulamā* and with the approval of many Janissary officers. It began on 28 Sept. 1730; and in a few hours a partially armed crowd of thousands had gathered in the At Meydānl. Aḥmad and Ibrāhīm were in camp at Üsküdar; but on learning of the outbreak in the evening, they returned to the palace at night. For the next two days fruitless attempts were made to parley with the rebels, who demanded the delivery up to them of the Grand Vizier, the Shaykh al-Islām, the Ḳapudan Pasha, the Kāhya Bey and others, till, during the night of 30 Sept., the sultan, finding no support in any of his troops, decided to sacrifice his favourite, whose corpse, together with those of the Ḳapudan and the Kāhya, was brought out to them in the morning. Aḥmad himself agreed to abdicate on condition that his own life and the lives of his sons should be spared, and was accordingly succeeded on 1 Oct./18 Rabīʿ I 1143 by his nephew Maḥmūd I [*q.v.*]. He died, in the retirement that was henceforth his lot, in 1149/1736.

Aḥmad III was handsome of person and an accomplished calligraphist, letter-writer and poet. Though normally of a mild disposition, he was ruthless in the treatment of those whom he feared or who had incurred his displeasure. He had no taste for war, partly because of the expense it entailed; for he was exceedingly fond of money and applied himself to the accumulation of treasure. His love of amusement and display ran counter to this propensity. But Dāmād Ibrāhīm Pasha contrived to minister to both his avarice and his extravagance by increasing the revenues and curtailing other expenditure in ways that contributed to his unpopularity. Aḥmad was greatly attached to his harem, to which he gave much of his attention, but he did not allow its members to influence public affairs as some of his predecessors had done. He had no less than thirty-one children; and his reign was consequently distinguished by frequent festivities to celebrate the circumcision of his sons and the marriage of his daughters, which lent it a special air of gaiety.

Minor events of the reign were a revolt of the Muntafiḳ [*q.v.*] Arabs in the neighbourhood of al-Baṣra in 1117/1705; the suppression of another Arab revolt in the same region in 1727-8; the affirmation of Ottoman sovereignty over certain areas of the Caucasus bordering on the Black Sea early in the reign; the conquest of Oran (Wahrān) from Spain by Algerian forces in 1708; recurrent troubles in the Armenian *millet* occasioned by Jesuit propaganda (particularly in 1706-7 and 1727-8); and two insurrections in Egypt (in 1712-3 and 1727-8). Successive *khāns* of the Crimea played a considerable part in the events of the period, more especially in the war with Russia, the *khān* Dewlet Girāy [*q.v.*] in particular strongly supporting Charles XII in his anti-Russian schemes. During the war with Austria

the Porte accepted an offer of assistance from Francis Rákóczy, the Prince of Transylvania, after the final failure of his attempts to secure the independence of Hungary, but he reached Istanbul too late to be made use of. Finally the treachery of Cantemir and his fellow-Hospodar of Wallachia during the campaign of the Pruth resulted in the appointment from 1716 onwards of Phanariote Greeks to the governorship of the Principalities.

(H. Bowen)

AḤMAD b. ABĪ BAKR [see MUḤTĀD͟JIDS].

AḤMAD b. ABĪ DUʾĀD al-Iyādī, Abū ʿAbd Allāh, Muʿtazilite ḳāḍī born at Baṣra about 160/776. Through his own merit and also, it is said, through the good offices of Yaḥyā b. Akt͟ham [*q.v.*], who introduced him to the Court at Bag͟hdād, he reached a position of great honour under the Caliph al-Maʾmūn, soon becoming one of the Caliph's closest friends. Shortly before his death, the Caliph recommended his brother and successor al-Muʿtaṣim to admit Aḥmad, a fervent follower of the Muʿtazilite doctrine, to the circle of his advisers, and as a result al-Muʿtaṣim, after his accession (218/833) made Aḥmad his Chief Ḳāḍī. In the latter capacity he presided over cases heard before the court of inquisition which had been set up by al-Maʾmūn after the elevation of Muʿtazilism to the status of the state religion [see MIḤNA], and he consequently played an important part in the examination of Aḥmad b. Ḥanbal [*q.v.*]. In the discharge of his duties he nevertheless displayed a tolerance and humanity unusual at that time. He retained his post under al-Wāt͟hiḳ; at the death of the latter several high officials and officers wished to place his son, a minor, on the throne, but at the instance of the commander of the Turkish guard, Waṣīf, the brother of the late Caliph, D͟jaʿfar, was proclaimed Caliph, and Aḥmad himself gave him the title of al-Mutawakkil. The new Caliph, however, gradually adopted a hostile attitude towards the Muʿtazilites and established amicable relationships with the Sunnīs, with the result that the Chief Ḳāḍī could not maintain his position of influence. A short while after the accession of al-Mutawakkil, he suffered an attack of apoplexy, and handed over his office to his son Abu 'l-Walīd Muḥammad, who had been his *nāʾib* since 218/833 (L. Massignon, in *WZKM*, 1948, 107). The latter was dismissed in 237/851-2 and, with his brothers, thrown into prison, and all the property of Ibn Abī Duʾād was confiscated. The prisoners were eventually released, but Aḥmad and his son did not long survive their disgrace; Muḥammad died at the end of 239/May-June 854, and his father three weeks later, in Muḥarram 240/June 854.

Sunnī writers naturally pass a severe judgement on Aḥmad b. Abī Duʾād and, in the religious sphere, do not conceal their hostility towards him, but all recognize his great learning and magnanimity. Himself endowed with some poetic talent, he was courted by the poets of his own circle. He was the patron of various men of letters notably of al-D͟jāḥiẓ [*q.v.*], who dedicated to him *inter alia* his *al-Bayān wa 'l-Tabyīn*, and addressed to him, either directly or through his son Abu 'l-Walīd, *risālas* in which he dwelt at length on the details of Muʿtazilite doctrine, and furnished the Ḳāḍī with arguments with which to confront the Sunnīs subject to his inquisition (on the relations between al-D͟jāḥiẓ and Ibn Abī Duʾād, see Ch. Pellat, in *RSO*, 1952, 55 ff.; idem, in *AIEO*, Algiers 1952, 302 ff.; and idem, in *Mas͟h.*, 1953, 281 ff.).

(K. V. Zetterstéen-Ch. Pellat)

AḤMAD b. ABĪ K͟HĀLID al-AḤWAL, secretary to al-Maʾmūn, was of Syrian origin and the son of a secretary of Abū ʿUbayd Allāh. He took advantage of his former connections with the Barmakids to enter the service of al-Faḍl b. Sahl. Indeed the Barmakids were already under an obligation to his father, and he himself had managed to be of service to the disgraced Yaḥyā. Apparently even before the capture of Bag͟hdād he went to K͟hurāsān and, as the result of a letter of recommendation which Yaḥyā had given to him before his death, he was placed in charge of several *dīwāns* at Marw. After the return of the caliph to ʿIrāḳ, profiting by the support of T͟humāma b. As͟hras, he assisted al-Ḥasan b. Sahl in the direction of the administration, and later replaced him. A man of doubtful integrity, easily corrupted, notorious for his greed and his harshness towards his subordinates, he was, nevertheless, up to his death in 211/826-7, the right-hand man of al-Maʾmūn. It is not possible, however, to state definitely whether he acquired the rank of *wazīr*. Doubtless his ability was the reason why the Caliph, who was fully aware of his faults, still retained him in his service.

He played an important part in the political intrigues which secured in 205/821 the nomination of Ṭāhir b. al-Ḥusayn, then governor of Bag͟hdād, to the governorship of K͟hurāsān in place of G͟hassān b.

ʿAbbād. When Ṭāhir asserted his independence in 207/822, al-Maʾmūn ordered his secretary to proceed at once to Khurāsān and to bring back the governor whose loyalty he had guaranteed. Aḥmad with much difficulty secured a respite of 24 hours, and, before his departure, the news of the death of Ṭāhir is said to have reached the city. Everything points to the fact that, as some chroniclers aver, Aḥmad was privy to this sudden death. He secured the appointment of Ṭāhir's son Ṭalḥa as governor, but al-Maʾmūn sent Aḥmad himself to Khurāsān to assist, or rather to keep watch on Ṭalḥa. The secretary, furnished with military powers, penetrated on this occasion as far as Transoxania, and conquered Ushrūsana. Aḥmad also used his influence to obtain a pardon for al-Maʾmūn's uncle, Ibrāhīm b. al-Mahdī, who had laid claim to the throne and who had for several years succeeded in eluding the caliph's police.

AḤMAD b. ABĪ ṬĀHIR ṬAYFŪR [see ibn abī ṭāhir].

AḤMAD b. ḤĀBIṬ (rather than Ḥāʾiṭ, if the position in the alphabetical order given to him by al-ʿAsḳalānī is taken into consideration), a theologian ranked among the Muʿtazilites; he was the pupil of al-Naẓẓām [*q.v.*], and the teacher, in particular, of al-Faḍl al-Ḥadathī. Nothing is known about his life, and only his "innovations" are partly known to us. His doctrine, evolved before 232/846-7, seems to differ from Muʿtazilite teaching on the following two fundamental dogmas, which are borrowed from systems alien to Islam but which, in the eyes of Ibn Ḥābiṭ, found justification in the Ḳurʾān. (1) On the basis of Ḳurʾān lxxix, 22 (23); ii, 210 (206); and v, 110, he affirms the divinity of Jesus, from which heresiographers infer that, for him, the world has two creators, God and the Messiah. (2) He professes the doctrine of *kurūr*, or the reincarnation of souls, sprung from the Universal Spirit, in forms which will be more beautiful or more ugly according to the merits they have acquired in their previous incarnation. This theory involves the existence of five stages: a place of damnation (Hell); a place of testing (this world); two places of relative reward; and, finally, Paradise, where the souls were created. According to Ḳurʾān vii, 34 (32); x, 49 (50); xvi, 61 (63), souls which have "filled to the brim the cup" of good or evil go eventually to Paradise or Hell. Ibn Ḥābiṭ, who accepts incarnation in animals, is obliged to concede its corollary, the doctrine of the *taklīf* of animals, of their individual responsibility, which can be justified only if they have had prophetes to teach them; verses vi, 38; xvi, 68 (70) and xxxv, 24 (22), enable him to put forward this opinion. The heresiographers, of course, have passed a severe judgement on this theologian, to whom they deny the name of Muslim.

AḤMAD b. ḤANBAL, "the imām of Baghdād", celebrated theologian, jurist and traditionist (164-241/780-855), and one of the most vigorous personalities of Islam, which he has profoundly influenced both in its historical development and its modern revival. Founder of one of the four major Sunnī schools, the Ḥanbalī, he was, through his disciple Ibn Taymiyya [*q.v.*], the distant progenitor of Wahhābism, and has inspired also in a certain degree the conservative reform movement of the Salafiyya.

1. Life. Aḥmad b. Ḥanbal was an Arab, belonging to the Banū Shaybān, of Rabīʿa, who had played an active role in the conquest of al-ʿIrāḳ and Khurāsān. His family, first resident in Baṣra, moved to Marw with Aḥmad's grandfather, Ḥanbal b. Hilāl, governor of Sarakhs under the Umayyads and one of the early ʿAbbāsid propagandists. Aḥmad was born in Rabīʿ ii 164/Dec. 780, a few months after his father Muḥammad b. Ḥanbal, who was serving in the army of Khurāsān, had removed to Baghdād, where he died three years later. Aḥmad inherited, however, a small family estate which allowed him a modest but independent livelihood. After studying in Baghdād lexicography, jurisprudence and tradition, he devoted himself from 179/795 to the study of tradition, in pursuit of which he made a series of journeys in al-ʿIrāk, Ḥidjāz, Yaman, and Syria. His visits to Īrān, Khurāsān, and even to the distant Maghrib must be dismissed as legendary. Already in 183 he had visited Kūfa. He stayed more frequently in Baṣra; after a first visit in 186, he returned there in 190, 194 and 200. He was more often still at Mecca, where he made the Pilgrimage on five occasions: in 187, 191, 196, 197 (followed by a pious retreat (*mudjāwara*) at Medina), and 198, followed by a second *mudjāwara* into the year 199, after which he visited the traditionist ʿAbd al-Razzāḳ at Ṣanʿāʾ (*Manāḳib*, 22-3; *Tardjama*, 13-24).

His studies of *fiḳh* and *ḥadīth* were made under a great many teachers, whose names have been preserved (*Manāḳib*, 33-6; *Tardjama*, 13-24). At Baghdād he attended the courses of the ḳāḍī Abū Yūsuf [*q.v.*] d. 182/798), by whom he was not profoundly influenced, and studied regularly under Hushaym b. Bashīr, a disciple of Ibrāhīm al-Nakhaʿī, from 179 to 183 (*Manāḳib*, 52; *Bidāya*, x, 183-4). His principal teacher thereafter was Sufyān b. ʿUyayna (d. 198/813-4), the greatest authority of the school of the Ḥidjāz. Others of his more important teachers were ʿAbd al-Raḥmān b. Mahdī of Baṣra (d. 198/813-4) and Wāḳiʿ b. al-Djarrāḥ (d. 197/812-3) of Kūfa. But, as Ibn Taymiyya noted (*Minhādj al-Sunna*, iv, 143), his juristic formation is due, above all, to the school of ḥadīth and of the Ḥidjāz. He cannot therefore be regarded, as is sometimes done, simply as a disciple of al-Shāfiʿī, whose juridical work he knew, at least partially, but whom he seems to have met only once, at Baghdād in 195 (*Bidāya*, x, 251-5, 326-7).

The policy adopted by the caliph al-Maʾmūn, towards the end of his reign, under the influence of Bishr al-Marīsī, of giving official support to the doctrine of the Muʿtazila [*q.v.*], inaugurated for Ibn Ḥanbal a period of persecution, which was to gain for him a resounding reputation [see al-maʾmūn, al-miḥna]. Ibn Ḥanbal vigorously refused to accept the dogma of the creation of the Ḳurʾān, contrary to orthodoxy. Al-Maʾmūn, then at Ṭarsūs, on hearing of this, ordered that Ibn Ḥanbal should be sent to him, together with another objector, Muḥammad b. Nūḥ. They were put in chains and sent off, but shortly after leaving Raḳḳa they

received the news of the caliph's death. They were then sent back to Baghdād; Ibn Nūḥ died on the journey, and Ibn Ḥanbal, on arrival in the capital, was imprisoned first at the Yāsiriyya, then in a house of the Dār ʿUmāra, and finally in the common prison of the Darb al-Mawṣilī (*Manāḳib*, 308-317; *Tardjama*, 40-56; *Bidāya*, x, 272-280).

The new caliph, al-Muʿtaṣim, though inclined to abandon the inquisition, was, it is said, persuaded by the Muʿtazilite ḳāḍī Aḥmad b. Abī Duʾād of the danger to the authority of the State of surrendering a position now officially taken up. Ibn Ḥanbal was therefore summoned to appear before the caliph in Ramaḍān 219. Still stoutly refusing to acknowledge the creation of the Ḳurʾān, he was severely beaten but permitted to return to his home after an imprisonment of some two years in all. During the whole of al-Muʿtaṣim's reign he lived in retirement and disisted from giving lectures on Tradition. On the accession of al-Wāthiḳ (227/842), he attempted to resume his courses of lectures, but almost at once preferred to discontinue them, though not officially forbidden to give them, lest he should be exposed by further reprisals by the Muʿtazilite ḳāḍī. He continued therefore to remain in retirement, sometimes even (it is said) in hiding, in order to escape from his enemies (*Manāḳib*, 348-9).

With the reinstatement of Sunnism by al-Mutawakkil on his accession in 232/847, Ibn Ḥanbal was able to resume his teaching activity. He does not, however, appear among the traditionists appointed by the caliph in 234 to oppose the Djahmiyya and the Muʿtazila (*Manāḳib*, 356). The disappearence of the leading figures of the era of persecution opened the way to an association between the caliph and the independent-minded theologian. Aḥmad b. Abī Duʾād was removed from office in 237/852, and his successor Ibn Aktham is even said, in certain traditions, to have been recommended to the caliph by Ibn Ḥanbal (*Bidāya*, x, 315-6, 319-29). After a first unsuccessful approach to the court, the date and circumstances of which remain obscure (*Manāḳib*, 359-62), Ibn Ḥanbal was invited in 237 to Sāmarrā by al-Mutawakkil. It appears that the caliph wished him to give lessons in *ḥadīth* to the young prince al-Muʿtazz, and it may also be supposed that he had some idea of utilizing the famous theologian for his policy of restoration of the *sunna*. This journey to Sāmarrā gave Ibn Ḥanbal the occasion for making contact with the personalities of the court, without danger of compromise. The extant narratives show him welcomed on his arrival by the ḥādjib Waṣīf, installed in the luxurious palace of Ītākh, loaded with gifts, presented to al-Muʿtazz, but eventually exempted, on his own request, from any special charge on account of his age and health. After a short stay, he returned to Baghdād without seeing the caliph (*Manāḳib*, 372-8; *Tardjama*, 58-75; *Bidāya*, x 314, 316, 337-40).

Aḥmad b. Ḥanbal died in Rabīʿ i 241/July 855, at the age of 75, after a short illness, and was buried in the Martyrs' cemetery (*Maḳābir al-Shuhadāʾ*) near the Ḥarb gate. The traditions which surround the account of his funeral, although partly legendary in character, convey the impression of a genuine popular emotion, and his tomb was the scene of demonstrations of such ardent devotion that the cemetery had to be guarded by the civil authorities (*Manāḳib* 409-18; *Tardjama*, 75-82; *Bidāya*, x, 340-3). His tomb became one of the most frequented places of pilgrimage in Baghdād. In 574/1178-9 the caliph al-Mustaḍīʾ furnished it with an inscription glorifying the celebrated traditionist as the most faithful defender of the Sunna (*Bidāya*, xii, 300). It was washed away by a flood on the Tigris in the 8th/14th century (Le Strange, *Baghdad*, 166).

By each of his two legitimate wives Ibn Ḥanbal had one son, Ṣāliḥ and ʿAbd Allāh, besides six children by a concubine, who are not otherwise known (*Manāḳib*, 298-306). Ṣāliḥ (born in Baghdād 203/818-9, died as ḳāḍī of Iṣfahān 266/879-80) is said to have transmitted a large part of Aḥmad's *fiḳh* (*Ṭabaḳāt*, i, 173-6). ʿAbd Allāh (b. 213/828) was chiefly interested in ḥadīth, and through him the major part of Aḥmad's literary work was transmitted. He died in Baghdād in 290/903 and was buried in the Ḳuraysh cemetery, and to his tomb was transferred the veneration enjoyed by that of his father when the latter was swept away (*Ṭabaḳāt*, i, 180-8). Both sons, who were closely associated with the intellectual life of their father, were amongst the chief architects of that collective structure which constitutes the Ḥanbalī *madhhab*.

2. Works. The most celebrated of Ibn Ḥanbal's works is his collection of traditions, the *Musnad* (1st ed., Cairo 1311; new edition by Aḥmad Shākir in publ. since 1368/1948). Although Aḥmad himself gave an exceptional importance to this work, it was his son ʿAbd Allāh who collected and classified the enormous accumulation of material, and himself made some additions. His Baghdād disciple Abū Bakr al-Ḳaṭīʿī (d. 368/978-9) transmitted this recension with some further additions. In this vast collection the traditions are classified not according to subjects, as in the *Ṣaḥīḥs* of al-Bukhārī and Muslim, but under the names of the first guarantor; it thus consists of a number of particular *musnads* juxtaposed, and includes those of Abū Bakr, ʿUmar, ʿUthmān, ʿAlī and the principal Companions, and ends with the *musnads* of the Anṣār, the Meccans, the Medinians, the people of Kūfa and Baṣra, and the Syrians.

This order, though evidence of an effort of intellectual probity, made it difficult to use by those who did not know it by heart. It was therefore sometimes reshaped. In his *K. fī Djamʿ al-Masānīd al-ʿAshra* the traditionist Ibn Kathīr classified, in alphabetical order of the Companions, the traditions contained in Ibn Ḥanbal's *Musnad*, in the "Six Books", al-Ṭabarānī's *Muʿdjam* and the *Musnads* of al-Bazzār and Abū Yaʿlā al-Mawṣilī (*Shadharāt*, vi, 231). Ibn Zuknūn (d. 837/1433-4; *Shadharāt*, vii, 222-3) follows, in his *K. al-Darāri*, the order of the chapters of al-Bukhārī, and has the great merit of having inserted among the ḥadīths which he quotes extracts from numerous Ḥanbalī works, especially of Ibn Ḳudāma, Ibn Taymiyya, and Ibn al-Ḳayyim. This voluminous compilation, preserved in the Ẓāhiriyya in Damascus, has served as a mine for numerous editions of Ḥanbalī texts in the last fifty years.

Within the framework of Tradition, Aḥmad b. Ḥanbal is to be regarded as an "independent *mudjtahid*" (*mustaḳill*), who as Ibn Taymiyya has remarked (*Minhādj*, iv, 143), was able, from amongst the mass of traditions and opinions received from many teachers, to form his own doctrine (*ikhtāra li-nafsih*). In no sense can he be regarded, in the manner of al-Ṭabarī, as merely a traditionist, and nothing of a jurisconsult (*faḳīh*) concerned with normative rules. As already pointed out by Ibn ʿAḳīl, "certain positions adopted (*ikhtiyārāt*) by Ibn Ḥanbal are supported by him on traditions with such consummate skill as few have equalled, and certain of his decisions bear witness to a juridical subtlety without parallel" (*Manāḳib*, 64-6). "Fol-

lowers of tradition" (*aṣḥāb al-ḥadīth*) must not be too systematically contrasted with "followers of opinion" (*aṣḥāb al-ra'y*), since it is hardly possible to acquire an understanding of ḥadīths and to resolve their contradictions and divergences, or to deduce from them the consequences which may derive from them, without using a minimum of personal judgment.

The two fundamental treatises for the study of Ibn Ḥanbal's dogmatic position are the short *Radd ʿala'l-Djahmiyya wa'l-Zanādiḳa* and the *K. al-Sunna* (both printed together, Cairo n.d., a longer version of the *K. al-Sunna* in Mekka 1349). In the former of these, he expounds and refutes the doctrines of Djahm b. Ṣafwān [*q.v.*], whose ideas, widely circulated in Khurāsān, were adopted by certain disciples of Abū Ḥanīfa and of ʿAmr b. ʿUbayd. In the *K. al-Sunna* he re-examines some of the theological questions already raised in the *Radd* and unequivocally defines his own position on all the principal points of his creed (cf. also *Ṭabaḳāt*, i, 24-36). Of his other surviving doctrinal works, the *K. al-Ṣalāt* (Cairo 1323 and 1347), on the importance of the communal prayer and rules for its correct observance, was transmitted by Muhannā b. Yaḥyā al-Shāmī, one of his early disciples, and extracted from the bio-bibliographical repertory of the ḳāḍī Abu 'l-Ḥusayn (*Ṭabaḳāt*, i, 345-80). Two unpublished MSS should be noted: the *Musnad min Masā'il Aḥmad b. Ḥanbal* (B.M.; cf. Brock., S I, 311), transmitted by Abū Bakr al-Khallāl, which may possibly be a fragment of the *K. al-Djāmiʿ* (see below) and is important for the study of Ibn Ḥanbal's politico-religious ideas; and the *K. al-Amr*, transmitted by Ghulām al-Khallāl (MS Ẓāhiriyya).

In the *K. al-Waraʿ* (Cairo 1340; partial trans. by G.-H. Bousquet and P. Charles-Dominique in *Hespéris*, 1952, 97-112), there are to be found, in the form of roughly-classified notes, the opinions of Ibn Ḥanbal on certain cases where scrupulosity (*waraʿ*) seems necessary in his view. Their reporter, Abū Bakr al-Marwazī, has added the opinions of other doctors on the same or related subjects, with the apologetic object, it seems, of showing that Ibn Ḥanbal's teaching in the matter of pious scruples, the ascetic life and devotion, can be compared with advantage to that of his contemporaries Ibrāhīm b. Adham, Fuḍayl b. ʿIyāḍ, or Dhu'l-Nūn al-Miṣrī. This work, it has been noted (cf. Abd al-Jalil, *Aspects intérieurs de l'Islam*, 228, n. 193), is extensively quoted by Abū Ṭālib al-Makkī in *Ḳūt al-Ḳulūb*, and taken up again by al-Ghazālī in *Iḥyā' ʿUlūm al-Dīn*.

The *Masā'il*. Aḥmad b. Ḥanbal was constantly consulted on questions (*masā'il*) of all sorts relating to dogmatics, ethics or law. Although he may not have prohibited the writing down of his opinions as formally as certain traditions assert, it is certain that he warned his questioners against the danger of a codifying of his thought (*tadwīn al-ra'y*) which might then replace the principles of conduct traced by the Ḳur'ān and the Sunna; he himself, in contrast to al-Shāfiʿī, never sought to present it systematically as a body of doctrine. The fundamental purpose of his teaching is to be seen as a reaction against the codification of the *fiḳh*. Since primitive Muslim law was a doctrine of essentially oral transmission, which on a common substructure left a wide latitude to individual variations, any systematic codification, such as to impose it in the terms of thought of any particular representative or to congeal it by fixation, was to change its inner character.

The written redaction of his *responsa* and their classification under the general headings of the *fiḳh* was the work of Ṣāliḥ and ʿAbd Allāh and of the following other disciples of Ibn Ḥanbal: 1) Isḥāḳ b. Manṣūr al-Kawsadj (d. 251/865-6; *Ṭab.*, i, 113-5); 2) Abū Bakr al-Athram (d. 260/873-4 or 273/886-7; i, 66-74); 3) Ḥanbal b. Isḥāḳ (d. 273; i, 143-5); 4) ʿAbd al-Malik al-Maymūnī (d. 274/887-8; i, 212-6); 5) Abū Bakr al-Marwazī (d. 275/888-9; i, 56-63); 6) Abū Dā'ūd al-Sidjistānī (d. 275; i, 156-63; printed in Cairo, 1353/1934); 7) Ḥarb al-Kirmānī (d. 280/873-4; i, 145-6); 8) Ibrāhīm b. Isḥāḳ al-Harbī (d. 285/898-9; i, 86-93). There are also other collections, and in addition the *Ṭabaḳāt* of Ibn Abī Yaʿlā contains the replies given by Ibn Ḥanbal to numerous visitors.

These dispersed materials were assembled in the *K. al-Djāmiʿ li-ʿUlūm al-Imām Aḥmad*, by a disciple of Abū Bakr al-Marwazī, the traditionist Abū Bakr al-Khallāl (d. 311/923-4), who taught at Baghdād in the mosque of al-Mahdī (*Ṭab.*, ii, 12-15; *Ta'rīkh Baghdād*, v, 112-3). Al-Khallāl's role has been well appreciated by Ibn Taymiyya, who says (*K. al-Īmān*, 158) that his *K. al-Sunna* is the fullest possible source for a knowledge of Ibn Ḥanbal's dogmatic views (*uṣūl dīniyya*), and his *K. fi'l-ʿIlm* the most valuable repository for the study of law (*uṣūl fiḳhiyya*); these are no doubt subdivisions, or a rehandling, of *K. al-Djāmiʿ*. According to Ibn Ḳayyim al-Djawziyya (*Iʿlām al-Muwaḳḳiʿīn*, Cairo, i, 31), the *K. al-Djāmiʿ* consisted of twenty volumes. To our present knowledge, the work is lost, except for the fragment referred to above; but as it has entered deeply into the output of Ibn Taymiyya and Ibn Ḳayyim, the study of these two writers may partially compensate for its loss in assisting an evaluation of Ibn Ḥanbal's thought.

Al-Khallāl's work was completed by his disciple ʿAbd al-ʿAzīz b. Djaʿfar (d. 363/973-4), better known as Ghulām al-Khallāl, who did not always accept his master's interpretations of Ibn Ḥanbal's thought, and whose *Zād al-Musāfir*, though less important than the *Djāmiʿ*, presents a body of supplementary materials often consulted. The divergences which this *Corpus* has allowed to remain in the exposition of Ibn Ḥanbal's thought explain why the Ḥanbalīs distinguish between the text (*naṣṣ*) of the founder of the school, the teachings ascribed to him (*riwāyāt*), the indications (*tanbīhāt*) suggested by him, and what are simply points of view (*awdjāh*) of his disciples.

Ibn al-Djawzī (*Manāḳib*, 191) cites a *Tafsīr* based upon 120,000 ḥadīths, and other works now lost. See also Brockelmann, I, 193; S I, 309-10.

3. Doctrine. Ḥanbalism has sometimes suffered from a slightly fanaticized turbulence among certain of its followers, or an extravagant literalism adopted by others through ignorance or as a challenge. It has been exposed throughout its history to numerous and powerful opponents in the various schools whose principles it opposed, who, when they did not deliberately disregard it, have united to attack it or to muffle it with insidious suspicions. Western orientalism has taken little interest in it, and has been no less severe. It has become the received opinion to see in Ibn Ḥanbal's doctrine a ferociously anthropomorphist theodicy, a traditionalism so sectarian as to be no longer viable, a spirit of frenzied intolerance, a fundamental lack of social adjustment, and a kind of permanent inability to accept the established order. A direct study of his works shows that it is not in these summary judg-

ments that the governing objectives of his teaching are to be sought.

The Attributes of God. For Ibn Ḥanbal, God is the God of the Ḳur'ān: to believe in God is to believe in the description which God has given of Himself in His Book. Not only, therefore, must the attributes of God, such as hearing, sight, speech, omnipotence, will, wisdom, etc., be affirmed as realities (*ḥaḳḳ*), but also all the terms called "ambiguous" (*mutashābih*) which speak of God's hand, throne, omnipresence, and vision by the Believers on the day of resurrection. In conformity with tradition, also, it must be affirmed that God descends to the lowest heaven in the last third of every night to hearken to the prayers of his worshippers, and at the same time, with the literal text of the Ḳur'ān (cf. *sūra* cxii), that God, the Unique, the Absolute, is not comparable to anything in the world of His creatures (*K. al-Sunna*, 37; *Manāḳib*, 155). Ibn Ḥanbal therefore vigorously rejects the negative theology (*taʿṭīl*) of the Djahmiyya and their allegorizing exegesis (*ta'wīl*) of the Ḳur'ān and of tradition, and no less emphatically rejects the anthropomorphism (*tashbīh*) of the Mushabbiha, amongst whom he includes, in the scope of his polemics, the Djahmiyya as unconscious anthropomorphists. In the fideism of Ibn Ḥanbal, one must believe in God without seeking to know the "mode" of the theologoumena (*bilā kayf*), and leave to God the understanding of his own mystery, renouncing the vain and dangerous subtleties of dogmatic theology (*kalām*) (*K. al-Sunna*, 37; *Manāḳib*, 155-6). So simple, and at the same time so strong, was this position from the Ḳur'ānic angle, that al-Ashʿarī, on abandoning Muʿtazilism, seeks, either for tactical reasons or in sincere acceptance, to place himself under the patronage of Ibn Ḥanbal before making certain concessions to his former *credo*, concessions successively enlarged by his disciples, on the problem of the attributes, the Ḳur'ān, and the legitimacy of dogmatic theology.

The Ḳur'ān. The Ḳur'ān is the uncreated Word of God (*kalām Allāh ghayr makhlūḳ*). To affirm simply that the Ḳur'ān is the Word of God, without further specification, is to refuse to take up a position, and to fall into the heresy of the *wāḳifiyya*, the "Abstentionists", which, because of the doubt which it inspires, is a graver sin than the more open heresy of the Djahmiyya (*K. al-Sunna*, 37-8). By Ḳur'ān is to be understood, not just an abstract idea, but the Ḳur'ān with its letters, words, expressions, ideas—the Ḳur'ān in all its living reality, whose nature in itself eludes our understanding.

The Pronunciation of the Ḳur'ān. It is difficult to define Ibn Ḥanbal's position on this question. Some traditions assert that he regarded its pronunciation as uncreated (*lafẓī bi'l-Ḳur'ān ghayr makhlūḳ*). In *K. al-Sunna* (38) he goes no further than to say: "Whoso asserts that our words, when we recite the Ḳur'ān, and that our reading of the Ḳur'ān are created, seeing that the Ḳur'ān is the Word of God, is a Djahmī". While formally condemning the *lafẓiyya*, who held the pronunciation of the Ḳur'ān to be created, he gives no more positive formulation of his own doctrine, to the embarrassment of the later Ḥanbalīs. Ibn Taymiyya regards this question as the first on which a real division existed among the Ancients (cf. H. Laoust, *Essai sur . . . Ibn Taymiyya*, 172) and states that Ibn Ḥanbal avoided taking up a position. He himself gives, in *al-Wāsiṭiyya*, the cautious formula which appears to him to be in conformity with the spirit of Ḥanbalism: "When men recite the Ḳur'ān or write it on leaves, the Ḳur'ān remains always and in reality the Word of God. A word cannot in fact be really attributed except to the one who first formulated it, and not to anyone who transmits or carries it."

Methodology. Ibn Ḥanbal, unlike al-Shāfiʿī, wrote no treatise on ethico-juristic methodology (*uṣūl al-fiḳh*), and the well-known later works of his school, composed with elaborate technique and in an atmosphere of discussion with other schools, cannot be accepted as rigorously expressing his thought. His own doctrine, as it may be elucidated from the *Masā'il*, is more rudimentary than the later elaborations, but has the merit of setting out the first principles of the methodology of the school.

Ḳur'ān and Sunna. This doctrine claims to rest above all on the Ḳur'ān, literally understood, without any allegorical exegesis, and on the Sunna, i.e. the total of traditions which can be regarded as deriving from the Prophet. From his own statement (*Musnad*, i, 56-7), Ibn Ḥanbal aimed to collect in his *Musnad* the *ḥadīths* generally received (*mashhūr*) in his time. In this work , therefore, there are found, to use his own terminology, *ḥadīths* whose authenticity is properly established and which may be regarded as perfectly sound (*ṣaḥīḥ*), and *ḥadīths* which benefit only from a presumption of authenticity and for whose rejection (as *ḍaʿīf*) there is no positive reason, or, to use the classification established by al-Tirmidhī, sound *ḥadīths* and "good" (*ḥasan*) *ḥadīths*. It was only much later, when the criticism of Tradition had reached, with Ibn al-Djawzī, the climax of formalist rigour, that Ibn Ḥanbal was reproached with admitting apocryphal (*mawḍūʿ*) *ḥadīths*—an accusation contested by many traditionists, as, for example, Ibn Taymiyya and Ibn Ḥadjar al-ʿAsḳalānī. The opinion which has come to prevail is that in the *Musnad* there are found, along with "sound" traditions, "good" or "rare" (*gharīb*) traditions, none of which, however, are strictly speaking unacceptable.

The Fatāwā *of the Companions and* Idjmāʿ. Ḳur'ān and Sunna find their continuation in a third source, derived and complementary: the *consulta* (*fatāwā*) of the Companions. The reasons which, for Ibn Ḥanbal, sustain the legitimacy of this new source of doctrine, are clear: the Companions knew, understood, and put into practice the Ḳur'ān and the Sunna much better than later generations, and all of them are worthy of respect. The Prophet also, in his *waṣiyya*, had recommended the Muslims to follow, together with his own Sunna, that of the "rightly-guided" (*rāshidūn*) caliphs who should succeed him, and to avoid all innovation (*bidʿa*). Where the Companions disagree, it is easy to determine the juster view by reference to the Ḳur'ān and the Sunna, or by taking into account their order of pre-eminence (*Manāḳib*, 161).

In hierarchical order (*tafḍīl*), Ibn Ḥanbal puts Abū Bakr first, then ʿUmar, then the six *aṣḥāb al-shūrā* appointed by ʿUmar "all of whom were worthy of the caliphate and merit the title of *imām*": ʿUthmān, ʿAlī, Zubayr, Ṭalḥa, ʿAbd al-Raḥmān b. ʿAwf, and Saʿd b. Abī Waḳḳāṣ; then the fighters at Badr, the Muhādjirs and the Anṣār (*K. al-Sunna*, 38; *Manāḳib*, 159-61). This doctrine of Sunnī reconciliation acknowledges the eminent position of ʿAlī and the legitimacy of his caliphate, but also rehabilitates his enemies, and in the first place Muʿāwiya, whose historical role in the consolidation of Islam has always been indulgently evaluated in the Ḥanbalī school, and whose decisions are not necessarily to be discarded.

The decisions of the most authorized representatives of the later generations (*tābiʿūn*) also deserve to be taken into consideration as evidence of plausible interpretations. The consensus of the Community, in such a doctrine, expresses a general concentration around a truth founded on Ḳurʾān and Sunna; it does not constitute in itself, properly speaking, an independent source of law. A community may well fall into error collectively, if not guided by the light of revelation transmitted by the Tradition (cf. *Essai*, 239-42).

Function of the muftī. The first duty laid upon the jurisconsult is to follow faithfully the spiritual legacy transmitted by the Elders, by avoiding any spirit of creation or innovation. Ibn Ḥanbal therefore condemns *raʾy*, the gratuitous expression of personal opinion (Abū Dāʾūd, *Masāʾil*, 275-7), but without requiring as a rule of conduct an absolute and impossible passivity in face of the texts. He does not reject analogical reasoning (*ḳiyās*), but does not fully appreciate its value as an instrument of juridical systematization and discovery, as Ibn Taymiyya and Ibn Ḳayyim were to do later, under intellectualizing influences.

Ibn Ḥanbal made an extensive use of *istiṣḥāb*, a method of reasoning which consists in maintaining a given juridical status so long as no new circumstance arises to authorize its modification, and of *dh̲arāʾiʿ*, another method of reasoning to the effect that, when a command or prohibition has been decreed by God, everything that is indispensable to the execution of that order or leads to infringement of that prohibition must also, as a consequence, be commanded or prohibited.—The notion of *maṣlaḥa*, or recognized common interest, which allows the limitation or extension of a juridical status, is also in conformity with his doctrine, although he did not himself extend and regulate its use as Ibn Taymiyya and his disciple al-Ṭūfī were to do.

To repeat a comparison of Ibn Ḳayyim's, which seems to us to characterize very successfully the double care for tradition and for realism shown by Ibn Ḥanbal: the *muftī*, like the physician who must adapt his treatment to the state of his patient, must make a constant personal effort (*id̲j̲tihād*) to draw from the sources of the law the moral prescriptions which should be applied to a given case. Thus, if the great Ḥanbalīs have never called for the reopening of *id̲j̲tihād*, it is because they have held that its continual use was indispensable to the understanding and application of legal doctrine.

The Caliphate and the Arabs. Ibn Ḥanbal's political views, directed essentially against the Kh̲āridj̲ites and the Sh̲īʿites (*rawāfiḍ*) affirm first and foremost the legitimacy of the Ḳurays̲h̲ite caliphate: "No person has any claim to contest this right with them, or to rebel against them, or to recognize any others until the Day of Resurrection" (*K. al-Sunna*, 35). In the quarrel of races (*s̲h̲uʿūbiyya*) which was raging in his time, he defended the Arabs, but without proclaiming their superiority: "We must give the Arabs credit for their rights, their merits, and their former services. We must love them, by reason of the very love which we bear for the Apostle of God. To insult the Arabs is hypocrisy; to hate them is hypocrisy" (ibid., 38)—hypocrisy because, behind the insults or the hatred, there was concealed a more secret aim, to destroy Islam by reviving the ancient empires or reinstating other forms of culture.

On the precedents furnished by Abū Bakr and ʿUmar, Ibn Ḥanbal founded the legality of a caliph's designation of his successor, but any such designation, to become effective, should be followed by a contract (*mubāyaʿa*) in which the imām and the authorized representatives of public opinion swear to mutual fidelity in respect for the Word of God (cf. *Essai*, 287). His view of the functions of the imām follows the general lines of the legal expositions, but leaves to the imām, within the framework of the prescriptions of the Ḳurʾān and the Sunna, a wide freedom of action to take, for the common good (*maṣlaḥa*), all the measures which he considers necessary to improve the material and moral conditions of the community. In this lies the germ of that important concept of "juridical policy" (*siyāsa s̲h̲arʿiyya*), which was methodically taken up by Ibn ʿAḳīl, Ibn Taymiyya and Ibn Ḳayyim al-Dj̲awziyya.

The members of the community owe obedience to the imām and may not refuse it to him by disputing his moral quality. "The *dj̲ihād* should be pursued alongside all imāms, whether good men or evildoers; the injustice of the tyrant or the justice of the just matters little. The Friday prayer, the Pilgrimage, the two Feasts should be made with those who possess authority, even if they are not good, just or pious. The legal alms, the tithe, the land taxes, the *fayʾ*, are due to the amīrs, whether they put them to right use or not" (*K. al-Sunna*, 35). If the ruler seeks to impose a disobedience to God (*maʿṣiya*), he must be met on this point with a refusal to obey, but without calling for an armed revolt, which cannot be justified so long as the imām has the prayer regularly observed. But every member of the community has also the duty, according to his knowledge and his means, of commanding to the good and prohibiting the evil. By their apostolate, therefore, the doctors of the law, while remaining within the limits of loyalty, may revive the Sunna, keep public opinion vigilant, and impose on the prince respect for the prescriptions of religion.

The Spirit of Community. Ibn Ḥanbal's policy is one of communal concentration and confessional solidarity; to the *fitna*, disunity, which weakens the community, he opposes the concept of *dj̲amāʿa*, of group unity and cohesion. He goes so far as to adopt, on the problem of excommunication (*takfīr*), an attitude of tolerance which links up with the laxism of the Murdj̲iʾa. One may not exclude from the community, he states, any Muslim guilty of a grave sin except on the authority of a *ḥadīth* which must be interpreted with a restrictive literalism (*K. al-Sunna*, 35-6). He cites only three sins which involve excommunication: non-observance of prayer, consumption of fermented liquors, and spreading of heresies contrary to the dogmas of Islam, among which he mentions none but the Dj̲ahmiyya and the Ḳadariyya. As to excommunication properly speaking, he replaces it by a systematic refusal to associate with the heretical within the bosom of the community. "I do not like (he wrote) that prayer should be made behind innovators, nor that the prayer for the dead should be said over them" (*K. al-Sunna*, 35-6).

Ethics. Ibn Ḥanbal's doctrine is entirely dominated by ethical preoccupations. The end of action is to serve God (*ʿibāda*). In opposition to the Dj̲ahmiyya and the Murdj̲iʾa, he asserted that faith (*al-īmān*) "is word, act, intention, and attachment to the Sunna" (*K. al-Sunna*, 34). It may therefore vary in intensity, "increase or diminish", and it implies so total an engagement of the being that no man may possibly call himself a Believer without making his affirmation in a conditional form (*istit̲h̲nāʾ*), by

adding "if God wills". Faith is, therefore, not a simple body of rites, but implies a whole system of strong moral convictions: an absolute sincerity brought to the service of God (*ikhlāṣ*); renunciation of the world, with refinement of feeling and a spirit of poverty (*zuhd, fiḳr*); a moral courage which lies in "relinquishing what one desires for what one fears" (*futuwwa*); fear of God; a scrupulous mind, which leads one to avoid dubious things (*shubuhāt*) between the two well-marked limits of the licit and the illicit (cf. *Manāḳib*, 194-269). Ibn Ḥanbal's belief has, therefore, nothing of a pedantic juristic literalism.

Religious practices and Customs. This is not the place in which to analyse in detail the juridico-moral prescriptions which constitute the applied doctrine of Ibn Ḥanbal (*furūʿ*) in the two domains which come within this discipline: that of religious practices (*ʿibādāt*) and that of usages and customs (*ʿādāt, muʿāmalāt*). The methodical exposition of them contained in *al-Mukhtaṣar* of al-Khiraḳī does no more than reproduce single opinions of Ibn Ḥanbal and presents a restrictive codification of his thought. The same is to be said of the *ʿUmda* of Ibn Ḳudāma, precious as it may be for a knowledge of Ḥanbalism in the 7th/13th century. (See Laoust, *Précis de droit d'Ibn Qudāma*, Damascus 1950.)

But there is one very important rule which Ibn Taymiyya has brought out and which seems to us characteristic of primitive Ḥanbalism: nothing is to be regarded as imposing social obligations but the religious practices which God has explicitly prescribed; inversely, nothing can be lawfully forbidden but the practices which have been prohibited by God in the Ḳurʾān and the Sunna. This is the dual principle which Ibn Taymiyya resumes in the formula: *tawḳīf fi 'l-ʿibādāt wa-ʿafw fi 'l-muʿāmalāt*, i.e. the most rigorous strictness in regard to religious obligations and a wide tolerance in all matters of usage (cf. *Essai*, 444). A wide liberty should therefore be left to both parties in drawing up the conditions of a contract, especially in regard to transactions, in which no stipulations can be nullified except those contrary to the formal interdiction in the Ḳurʾān and the Sunna of speculation (*maysir*) and usury (*ribā*). In the *Kitāb al-Sunna* (38), Ibn Ḥanbal, reacting against al-Muḥāsibī, regards the free pursuit of an honest profit as an obligation of religion.

On the other hand, in the domain of religious practices those alone are lawful which are prescribed by the Ḳurʾān and the Sunna, and only in the manner in which they are prescribed. The rigorism of the Ḥanbalī school is to be explained less by the spirit of devotion and of attention to detail which it seeks to bring to the performance of religious duties, than by its refusal to recognize any legal value to forms of worship introduced by the *idjtihād* of ascetics or mystics, or even by the arbitrary decision of the administrative authorities. This attitude of hostility to innovations (*bidʿa*)—vestiges of paganism, inventions of later generations, or infiltrations from foreign civilizations—showed itself with especial violence in al-Barbahārī and the early Wahhābiyya.

Bibliography: (a) Biography: a chapter in Abū Bakr al-Khallāl's (d. 311/923-4) history of Ḥanbalism, of which a few pages are preserved in the Ẓāhiriyya in Damascus; the monograph of Abū Bakr al-Bayhaḳī (d. 458/1065-6), of which large extracts are quoted in Ibn Kathīr, *Bidāya*, x, 234-43. (A biography is also attributed to al-Harawī, d. 481/1087-8.) Two extensive biographies: Ibn al-Djawzī, *Manāḳib al-Imām Aḥmad b. Ḥanbal*, Cairo 1349/1931; Dhahabī, excerpt from his great history, ed. separately by A. M. Shākir, *Tardjamat al-Imām Aḥmad*, Cairo 1365/1946 (reprinted in vol. i of the *Musnad*); they contain abundant documentation going back to Ibn Ḥanbal's sons and first disciples, but are in the first instance laudatory biographies and often lack precision in chronology. (b) Works: mentioned in the article. (c) Studies: W. M. Patton, *Aḥmed ibn Ḥanbal and the Miḥna*, Leiden 1897; I. Goldziher, *Zur Geschichte der ḥanbalitischen Bewegungen*, *ZDMG*, 1908, 1-28; idem, in EI[1]; Muḥammad Abū Zuhra, *Ibn Ḥanbal*, Cairo 1949.

(H. Laoust)

AḤMAD B. IDRĪS, Moroccan sharīf and mystic, a disciple of ʿAbd al-ʿAzīz al-Dabbāgh, the founder of the Khaḍiriyya order, himself founded a religious congregation, the Idrīsiyya, in ʿAsīr, where in 1823, he initiated the founder of the Sanūsiyya [*q.v.*]. He died in Ṣabyā (ʿAsīr) in 1253/1837, after founding a kind of semi-religious and semi-military state, the two last heads of which were his great-grandson Sayyid Muḥammad b. ʿAlī b. Muḥ. b. Aḥmad (1892-1923), and the latter's son ʿAlī (from 1923), who was forced to submit to Saʿūdī Arabia by a pretectorate agreement, negotiated by the Sanūsī leader Aḥmad Sharīf [see Idrīsīs].

The Idrīsiyya order is at present strongly represented in former Italian Somaliland (Merca), in Djibūti, among the Banū ʿĀmir (Khatmiyya) in Eritrea, and among the Gallas (where their missionary, Nūr Ḥusayn, enjoys great veneration). The Idrīsiyya order maintains fraternal relations with the other congregations derived from the Khaḍiriyya, particularly the Mirghāniyya of the Sudan.

Bibliography: *Awrād, Aḥzāb, wa-Rasāʾil*, lith. Cairo 1318; Nallino, *Scritti*, ii, 387 f., 397 f., and especially 403-7; *Annuaire du Monde Musulman*[4], 1954, 27, 380, 385, 387, 392-3; ʿAbd al-Wāsiʿ b. Yaḥyā al-Wāsiʿī al-Yamānī, *Taʾrīkh al-Yaman*, Cairo 1346, 338-43. (L. Massignon)

AḤMAD B. ʿĪSĀ b. Muḥ. b. ʿAlī b. al-ʿAriḍ b. Djaʿfar al-Ṣādiḳ (the great-grand-son of ʿAlī), called al-Muhādjir "the Emigrant", saint and legendary ancestor of the Ḥaḍramī *sayyids*. He left Baṣra in 317/929 accompanied by Muḥammad b. Sulaymān (alleged ancestor of the Banū Ahdal [*q.v.*]) and Sālim b. ʿAbdallāh (ancestor of Banū Ḳudaym), was prevented from visiting Mecca until next year by Abū Ṭāhir al-Ḳarmaṭī's occupation and settled with his companions in Western Yaman (region of Surdud and Sahām). In 340/951 he left with his son ʿUbayd Allāh for Ḥaḍramawt, and lived at first near Tarīm in al-Hadjarēn, then in Ḳārat Banī Djushayr and finally in Ḥusayyisa, where he bought the territory of Ṣawf above the town of Bawr and where, after vigorously supporting the cause of the *Sunna* against the heresies of the Khawāridj and Ibāḍiyya he died in 345/956 (according to al-Shillī). His grave and that of Aḥmad b. Muḥammad al-Ḥabshī in Shiʿb Mukhaddam (Shiʿb Aḥmad) outside Ḥusayyisa are visited by pilgrims. His grandsons Baṣrī, Djadīd, and ʿAlawī settled in Sumal, six miles from Tarīm. Since 521/1127 this town is the centre of the (Bā) ʿAlawī [*q.v.*] family in its wider sense, i.e. the offspring of the ʿAlawī mentioned above.

For another Aḥmad b. ʿĪsā, ʿAmūd al-Dīn, ancestor of the Ḥaḍramī family al-ʿAmūdī, see v. d. Berg, *Ḥadhramout*, 41, 85.

(O. LÖFGREN)

AḤMAD B. KHĀLID [see AḤMAD AL-NĀṢIRĪ].

AḤMAD B. MUḤAMMAD B. ʿABD AL-ṢAMAD ABŪ NAṢR, vizier of the Ghaznawid Masʿūd b. Maḥmūd (after the death of his celebrated predecessor al-Maymandī (423/1032). He began his career as steward (*katkhudā*) of Khʷārizm Shāh Altūntāsh, and having become the vizier of Masʿūd he managed to retain this office during the latter's reign. After the defeat at Dandānaḳān, Masʿūd, who himself retired to India, sent him as attendant of his son Mawdūd to Balkh in order to defend this city against the Saldjūḳs. Also after the accession of Mawdūd (432/1041) he officiated for some time as vizier until al-Maymandī's son received that office. The year of his death is unknown.

Bibliography: Bayhaḳī (Morley); Ibn al-Athīr, ix; De Biberstein-Kazimirski, *Diwan Menoutchehri*, preface.

AḤMAD B. MUḤAMMAD ʿIRFĀN [see AḤMAD BRĒLWĪ].

AḤMAD B. MUḤAMMAD AL-MANṢŪR [see AḤMAD AL-MANṢŪR].

AḤMAD B. SAHL B. HĀSHIM, of the aristocratic dihḳān family Kāmkāriyān (who had settled near Marw), which boasted of Sāsānian descent, governor of Khurāsān. In order to avenge the death of his brother, fallen in a fight between Persians and Arabs (in Marw), he had under ʿAmr b. al-Layth stirred up a rising of the people. He was taken prisoner and brought to Sīstān, whence he escaped by means of an adventurous flight, and after a new attempt at a rising in Marw he fled for refuge to the Sāmānid Ismāʿīl b. Aḥmad in Bukhārā. Aḥmad took an active part in the battles of Khurāsān and Rayy under Ismāʿīl, and in the conquest of Sīstān under Aḥmad b. Ismāʿīl. Having been sent under the command of Naṣr b. Aḥmad against the rebellious governor of Khurāsān, Ḥusayn b. ʿAlī al-Marwarrūdī, he defeated his antagonist in Rabīʿ I 306/Aug.-Sept. 918. But shortly afterwards he rebelled himself against the Sāmānids, was vanquished on the Murghāb by the commander-in-chief Ḥamūya b. ʿAlī and sent to Bukhārā, where he died in prison in Dhu'l-Ḥidjdja 307/May-June 919.

Bibliography: Ibn al-Athīr (ed. Tornb., viii. 86 ff.) and the same information in a somewhat more circumstantial wording in Gardīzī, *Zayn al-Akhbār* (ed. Nazim, 1928, 27-9); evidently there is a common source, probably al-Sallāmī's *Taʾrīkh Wulāt Khurāsān*.

(W. BARTHOLD)

AḤMAD B. SAʿĪD [see BŪ SAʿĪD].

AḤMAD B. ṬŪLŪN, founder of the Ṭūlūnid [*q.v.*] dynasty, the first Muslim governor of Egypt to annex Syria. Vassal in name only of the ʿAbbāsid caliph, he is a typical example of the Turkish slaves who from the time of Hārūn al-Rashīd were enlisted in the private service of the caliph and the principal officers of state, and whose ambition and spirit of intrigue and independance were soon to make them the real masters of Islam. Aḥmad's father Ṭūlūn is said to have been included in the tribute sent by the governor of Bukhārā to the caliph al-Maʾmūn c. 200/815-6, and rose to command the caliph's private guard. Aḥmad, born in Ramaḍān 220/Sept. 835, received his military training at Sāmarrā and afterwards studied theology at Ṭarsūs. By his bravery he gained the favour of the caliph al-Mustaʿīn, who, on his abdication in 251/866, chose to go into exile under the guard of Aḥmad. The latter had no hand in the subsequent murder of al-Mustaʿīn, probably because his cooperation had not been invited. In 254/868 the caliph al-Muʿtazz gave Egypt as apanage to the Turkish general Bākbāk, who had married Ṭūlūn's widow. Aḥmad was appointed as lieutenant of his father-in-law, and entered Fusṭāṭ on 23 Ramaḍān 254/15 Sept. 868.

For the next four years Aḥmad was engaged in seeking to obtain control of the administration from Ibn al-Mudabbir, the powerful and skilful intendant of finance, whose intolerable exactions, cunning and greed had earned the hatred of the Egyptians. The struggle was fought out mainly through the medium of their agents and relations at Sāmarrā, and ended with the removal of Ibn al-Mudabbir. After the murder of Bākbāk Egypt was given as apanage to Yardjūkh, who had married one of his daughters to Ibn Ṭūlūn; he confirmed Aḥmad in his post as vice-governor, and invested him also with authority over Alexandria, Barḳa, and the frontier districts, which had hitherto lain outside his government. The revolt of Amādjūr, governor of Palestine, gave Aḥmad the opportunity to obtain the caliph's authorization to purchase a large number of slaves in order to subjugate the rebel. Although the task was subsequently confided to another, this intact army constituted the foundation of Ibn Ṭūlūn's power. For the first time, Egypt possessed a large military force which was independent of the caliphate. By liberal gifts, Aḥmad gained the favour of the ʿAbbāsid courtiers, and succeeded in obtaining the annulment of an order of recall issued by the caliph. It was to Ibn Ṭūlūn, and not to Ibn al-Mudabbir's successor, that the caliph addressed his requests for the Egyptian contributions to the treasury. In order that he might have the personal use of them by keeping their sum a secret from his brother al-Muwaffaḳ, he placed the financial administration of Egypt and the Syrian Marches under Aḥmad. In 258/872, the caliph's son Djaʿfar (later entitled al-Mufawwaḍ) succeeded Yardjūkh as apanagist of Egypt; al-Muʿtamid had recognized his brother al-Muwaffaḳ as heir to the throne after his own son and had divided the empire between the two heirs-presumptive, al-Muwaffaḳ receiving the eastern provinces as his apanage, and al-Mufawwaḍ the western; a regent, the Turk Mūsā b. Bughā was appointed as coadjutor of the latter. In fact, al-Muwaffaḳ exercised the supreme power. But while the caliphate was threatened in the east by attacks and movements of independence, and in the south by the revolt of the Zindj which engaged the forces of al-Muwaffaḳ, he himself, the only man capable of making a stand against Ibn Ṭūlūn, was threatened above all by the disorders in the administration and by the internal conflicts between the caliph and himself on the one hand, and the captains of the Turkish regiments on the other.

Such was the state of the caliphate at the moment selected by Ibn Ṭūlūn for his essay at independence, after gaining the financial control of his territories. On account of the long and costly campaigns against the Zindj the commander-in-chief al-Muwaffaḳ considered himself entitled to obtain financial assistance from all the provinces belonging to the caliphate. On receiving a sum from Ibn Ṭūlūn which he considered unsatisfactory, he sent a force of troops under Mūsā b. Bughā to remove him (263/877), but the demands of the soldiers and the fears inspired

by Ibn Ṭūlūn's forces led to the abandonment of the attempt. Aḥmad was now encouraged to occupy Syria (264/878), under the pretext of engaging in the holy war and of defending the frontiers in Asia Minor against the Byzantines. But he had to return to Egypt shortly after to deal with a revolt by his son ʿAbbās, whom he had appointed as his lieutenant in Egypt.

After the Syrian campaign, Ibn Ṭūlūn began to add his own name to those of the caliph and of D̲j̲aʿfar on his gold coinage. (It should be noted that Ibn Ṭūlūn always recognized the caliph al-Muʿtamid himself, perhaps just because he was powerless.) In 269/882 Aḥmad invited the caliph to take refuge with him, aiming by this means to concentrate the whole sovereign authority in Egypt and to gain the merit of being the saviour of the caliph, now a shadow. But the latter's flight was intercepted, and al-Muwaffaḳ nominated Isḥāḳ b. Kundād̲j̲ as governor of Egypt and Syria. Aḥmad retaliated by proclaiming through an assembly of jurists which met at Damascus the forfeiture of al-Muwaffaḳ's succession to the throne. Al-Muwaffaḳ thereupon compelled the caliph to have Aḥmad cursed in the mosques, while Aḥmad had the same measure applied to al-Muwaffaḳ in the mosques of Egypt and Syria. But al-Muwaffaḳ, though finally victorious in his war with the Zind̲j̲, sought to have the *status quo* recognized, in the hope of gaining from Aḥmad by mildness and diplomacy what he had failed to gain by war. Aḥmad gave a favourable response to his first approaches, but died in D̲h̲u 'l-Ḳaʿda 270/March 884.

Ibn Ṭūlūn owes his success not only to his talents, his cleverness, and the strength of his Turkish and Sudanese slave-armies, but also to the Zind̲j̲ rebellion, which prevented al-Muwaffaḳ from devoting himself to counter his encroachments. His agrarian and administrative reforms were directed to encouraging the peasants to cultivate their lands with zeal, in spite of the heavy charges which were still laid upon their produce. He put an end to the exactions of the officers of the fiscal administration for their personal profit. The prosperity of Egypt under Ibn Ṭūlūn was due principally to the fact that the greater part of the revenues of the state were no longer drained off to the metropolis; they were thus employed to stimulate commerce and industry and to found, to the north of Fusṭāṭ, a new quarter, called al-Ḳaṭāʾiʿ, which was the seat of government under the Ṭūlūnids and in which the great mosque built by Ibn Ṭūlūn was situated.

(Zaky M. Hassan)

AḤMAD b. YŪSUF b. al-Ḳāsim b. Ṣubayḥ, Abū D̲j̲aʿfar, secretary to al-Maʾmūn. He belonged to a *mawālī* family of secretaries and poets originating from the neighbourhood of al-Kūfa. His father, Yūsuf, was secretary to ʿAbd Allāh b. ʿAlī, then to Yaʿḳūb b. Dāwūd, and finally to Yaḥyā the Barmakid. It appears that Aḥmad held a secretarial post in ʿIrāḳ at the end of the caliphate of al-Maʾmūn. He was presented to al-Maʾmūn by his friend Aḥmad b. Abī K̲h̲ālid, and soon attracted notice by his eloquence. He became an intimate of al-Maʾmūn, and at a date impossible to determine accurately, was placed in charge of the *dīwān al-sirr* (rather than the *dīwān al-rasāʾil*, which was entrusted to ʿAmr b. Masʿada). As private secretary to the caliph he occupied a position of such importance that some historians have styled him "vizier", a title, however, which he does not appear to have held. He came into conflict with the future caliph al-Muʿtaṣim, and died, it seems, in Ramaḍān 213/Nov.-Dec. 828. Various letters, terse remarks, aphorisms and verses by which he achieved fame as a "secretary-poet" are attributed to him.

Bibliography: D̲j̲āḥiẓ, *Fī D̲h̲amm Ak̲h̲lāḳ al-Kuttāb*, 48, *Bayān*, ii, 263; Ibn Ṭayfūr, Ṭabarī, iii, D̲j̲ahs̲h̲iyārī, indexes; Ṣūlī, *Awrāḳ* (*Poets*), 143, 156, 206-36; Masʿūdī, *al-Tanbīh*, 352; *Ag̲h̲ānī*, Tables; Yāḳūt, *Irs̲h̲ād*, ii, 160-71.

AḤMAD b. ZAYNĪ DAḤLĀN [see dahlān].

AḤMAD AMĪN, Egyptian scholar and writer, b. in Cairo 2 Muḥarram 1304/1 Oct. 1886, d. 30 Ramaḍān 1373/30 May 1954. After studying in al-Azhar and the School of S̲h̲arʿī Law, he served as a magistrate in the Native Courts, and in 1926 was appointed to the staff of the Egyptian University (U. of Cairo), where from 1936-1946 he was professor of Arabic Literature. In 1947 he became Director of the Cultural Section of the Arab League. Aḥmad Amīn was one of the founders and most active members of the *Lad̲j̲nat al-taʾlīf wa'l-tard̲j̲ama wa'l-nas̲h̲r* (see U. Rizzitano, in *OM*, 1940, 31-8), for which he edited and produced (in collaboration) a number of classical Arabic texts and general works on literary history. As a scholar, his most important production was a history of Islamic civilization to the end of the 4th/10th century (in three parts: *Fad̲j̲r al-Islām*, 1st ed., Cairo 1928; *Ḍuḥa'l-Islām*, 1st ed., Cairo 1933-6; *Ẓuhr al-Islām*, Cairo 1945-53), notable as the first comprehensive attempt to introduce critical method into modern Muslim Arabic historiography. From 1933 he collaborated in the weekly literary journal *al-Risāla*, and from 1939 edited a similar journal *al-T̲h̲aḳāfa*; his essays on literary, social and other topics in these journals were later collected and issued in book form (*Fayḍ al-K̲h̲āṭir*, 8 vols., Cairo 1937 ff.). Of his many other works special mention should be made of his dictionary of Egyptian folklore (*Ḳāmūs al-ʿĀdāt wa'l-Taḳālīd wa'l-Taʿābīr al-Miṣriyya*, Cairo 1953), and his autobiography *Ḥayātī* (Cairo 1950).

Bibliography: Autobiography (see above; Eng. tr. by A. J. M. Craig to be published); U. Rizzitano, in *OM*, 1955, 76-89; Brockelmann, S III, 305.

(H. A. R. Gibb)

AḤMAD BĀBĀ, otherwise Abu'l-ʿAbbās Aḥmad b. Aḥmad al-Takrūrī al-Massūfī, Sudanese jurist and biographer belonging to the Ṣinhād̲j̲ī family of the Āḳīt, born at Tinbuktū (now Timbuktu) 21 D̲h̲u'l-Ḥid̲j̲d̲j̲a 963/26 Oct. 1556. All his ancestors in the male line were *imāms* or *ḳāḍīs* in the Sudanese capital in the 15th and 16th centuries, and he himself rapidly became a *faḳīh* of repute in learned circles in his country. At the time of the conquest of the Sudan by the Saʿdid Sulṭān of Morocco Aḥmad al-Manṣūr [*q.v.*] in 1000/1592, Aḥmad Bābā refused

to recognise the authority of the court of Marrākush and, two years later, the governor Maḥmūd Zarḳūn arrested him on the Sulṭān's orders, and accused him of fomenting a revolt at Tinbuktū against the new rulers. Taken in chains to Morocco with several of his compatriots, Aḥmad Bābā was not long in regaining his liberty, but he was required to reside in Marrākush (1004/1596). He began to give instruction in *fiḳh* and *ḥadīth*, and formulated legal opinions (*fatwā*). His renown soon spread throughout the Maghrib. At the death of Aḥmad al-Manṣūr in 1016/1607, his successor Mawlāy Zaydān allowed Aḥmad and the other Sudanese exiles to return to Tinbuktū. It was no doubt at this time that he went on pilgrimage to Mecca, and returned to his native town where he died on 6 Shaʿbān 1036/22 April 1627.

Aḥmad Bābā was the author of some 50 works on Mālikite law, grammar and other subjects. But his chief work is his supplement to the biographical dictionary of the *faḳīhs* of the school of Mālik b. Anas, composed in the second half of the 14th century by Ibn Farḥūn [*q.v.*] and entitled *al-Dībādj al-Mudhahhab fi Maʿrifat Aʿyān ʿUlamāʾ al-Madhhab*. Aḥmad Bābā gave his supplement the name of *Nayl al-Ibtihādj bi-Taṭrīz al-Dībādj*. He completed it at Marrākush in 1005/1596, and later issued an abridged version dealing only with those Mālikite *faḳīhs* not represented in Ibn Farḥūn, called *Kifāyat al-Muḥtādj li-Maʿrifat mā laysa fi'l-Dībādj*. The *Nayl* was lithographed at Fās in 1317 and printed at Cairo in 1329, in the margins of the *Dībādj*.

Aḥmad Bābā's dictionary is one of the main sources for a bio-bibliographical survey of the Maghrib up to the 16th century, and contains, apart from the Mālikite doctors, a certain amount of information on the great Moroccan saints (*awliyāʾ*) of the period. The extensive library which he built up in the Sudan has still not been entirely dispersed, and it was one of his own copies of which particular use was made in the publication of the materials relating to Spain in *al-Rawḍ al-Miʿṭār* of Ibn ʿAbd al-Munʿim al-Ḥimyarī (Lévi-Provençal, *La Péninsule ibérique au Moyen Âge*, Leiden, 1938 p. xii-xiii).

Bibliography: Lévi-Provençal, *Chorfa*, 250-5; idem, *Arabica Occidentalia*, iv, in *Arabica*, ii (1955), 89-96; Muḥibbī, *Khulāṣat al-Athar*, i, 170 ff.; al-Ifrānī, *Nuzhat al-Ḥādī*, Fez, 81 ff.; idem, *Ṣafwat man intashar*, Fez, 52 ff.; Ḳādirī, *Nashr al-Mathānī*, Fez 1310, i, 151 ff.; Aḥmad Nāṣirī, *Istiḳṣāʾ*, Cairo 1312, iii, 63; Saʿdī, *Taʾrīkh al-Sūdān* (Houdas), i, 35-6, 244; transl. 57-9, 379; M. Ben Cheneb, *Idjāza*, § 94; idem, in *IE*[1], i, 191 (with a complete list of the works of Aḥmad Bābā); Brockelmann, II, 618, S II, 715-6. (E. Lévi Provençal)

AḤMAD al-BADAWĪ (in modern Egyptian Arabic il-Bedawī), with the *kunya* Abu 'l-Fityān, is the most popular saint of the Muslims in Egypt and has been so for about 700 years. By the people he is often called simply *is-sayyid*; in a song in his honour (ed. Littmann) he has the title of *shēkh il-ʿArab* because of his name al-Badawī, and this name was given to him because he wore a veil like the bedouin of the Maghrib. As a Ṣūfī he was called *al-ḳuṭb*, «the pole».
